MoPac South
ENVIRONMENTAL STUDY

Don't forget to join us for an Open House on Nov. 10

WHAT: Open House
WHEN: Tuesday, Nov. 10, 2015, 3 - 7 p.m.
WHERE: Palmer Events Center, 900 Barton Springs Road
Meeting Rooms 1 - 5, Level 2

Parking is complimentary in the Palmer Parking Garage adjacent to the facility with two entrances (from Barton Springs Road or Riverside Drive).

A Virtual Open House is available on www.MoPacSouth.com/voh now - Nov. 20

OPEN HOUSE DETAILS

The Central Texas Regional Mobility Authority and the Texas Department of Transportation will host a fourth Open House for the MoPac South Environmental Study to share how community input is helping shape potential mobility improvements along MoPac from Cesar Chavez Street to Slaughter Lane. No formal presentation will be given, so please come and go at your convenience.

The study team responded to the community's request for additional analysis of the proposed Express Lanes Alternative and will share information about several potential operational configuration options as well as several enhancements that were incorporated into the proposed project as a result of your input. A No Build – or Do Nothing – Alternative continues to be considered.

In addition, attendees will be able to review the results of a traffic operations analysis that was conducted by the University of Texas at Austin Center for Transportation Research to determine how the addition of Express Lanes might impact the downtown street network. We hope to see you on Nov. 10!

VIRTUAL OPEN HOUSE NOW AVAILABLE

A Virtual Open House is available online at www.MoPacSouth.com/voh through midnight on Friday, November 20, 2015. All of the information presented at the in-person Open House is available online through the Virtual Open House. All of the information presented at the in-person Open House is available online through the Virtual Open House.

Visitors can review exhibits, watch informational videos and submit comments and questions. We've made some additions and updates to the Virtual Open House since it launched on October 21st, including the addition of a new rendering and videos on the operational configurations page. To see these new materials, click here: http://www.mopacsouth.com/voh/alternatives.php

A NOTE ON THE OFFICIAL COMMENT PERIOD

Please note, the official comment period for the Open House began on Oct. 21, 2015 and will end on Nov. 20, 2015. All comments and questions submitted during the official comment period for the Open House will be recorded and responded to as part of the Summary Report for the meeting. All comments and questions submitted at any other time during the study will also be shared with and considered by the study team, and will become part of the official project file for the Environmental Study.

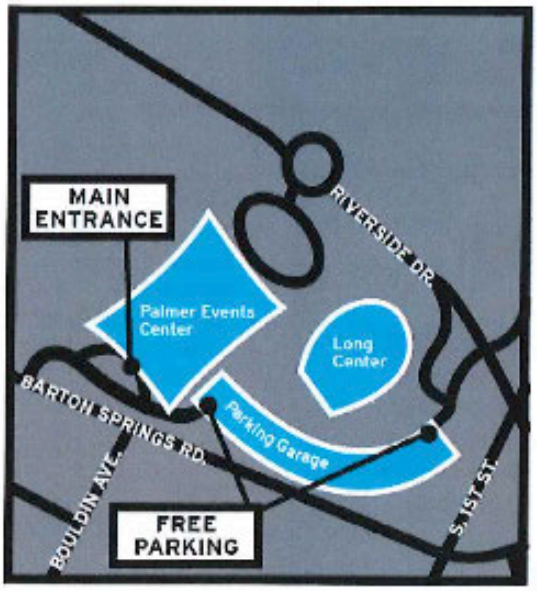
MoPac South
ENVIRONMENTAL STUDY



Get the latest on the MoPac South Environmental Study at a Nov. 10 Open House

WHAT: Open House
WHEN: Tuesday, Nov. 10, 2015, 3 - 7 p.m.
WHERE: Palmer Events Center, 900 Barton Springs Road
Meeting Rooms 1 - 5, Level 2

Parking is complimentary in the Palmer Parking Garage adjacent to the facility with two entrances (from Barton Springs Road or Riverside Drive).

A Virtual Open House will be available on the project website at www.MoPacSouth.com from Oct. 21 - Nov. 20, 2015.

OPEN HOUSE DETAILS

Join the Central Texas Regional Mobility Authority and the Texas Department of Transportation at our fourth Open House for the MoPac South Environmental Study to learn how community input is helping shape potential mobility improvements along MoPac from Cesar Chavez Street to Slaughter Lane. No formal presentation will be given, so please come and go at your convenience.

The study team responded to the community's request for additional analysis of the proposed Express Lanes concept and will share information about several potential operational configuration options as well as several enhancements that were incorporated into the proposed project as a result of your input. A No Build – or Do Nothing – Alternative continues to be considered.

In addition, attendees will be able to review the results of a traffic operations analysis that was conducted to determine how the addition of Express Lanes might impact the downtown street network. We hope to see you on Nov. 10!

VISIT OUR VIRTUAL OPEN HOUSE

Between Wednesday, October 21 and Friday, November 20, 2015, a Virtual Open House will be available on the project website at www.MoPacSouth.com. Virtual Open House visitors can review exhibits, watch informational videos and submit comments and questions. All of the information presented at the in-person Open House will be available online through the Virtual Open House.

GET INVOLVED IN CONTEXT SENSITIVE SOLUTIONS

The upcoming Open House is an opportunity for you to continue to weigh in on the Context Sensitive Solutions (CSS) for MoPac

A NOTE ON THE OFFICIAL COMMENT PERIOD

Please note, the official comment period for the Open House begins on Oct. 21, 2015 and will end on Nov. 20, 2015. All comments and questions submitted during the official comment period for the Open House will be recorded and responded to as part of the Summary Report for the meeting. All comments and questions submitted at any other time during the study will also be shared with and considered by the study team, and will become part of the official project file for the Environmental Study.

South. So what's CSS?

CSS is a collaborative approach to develop transportation facilities that fit within their surroundings. The goal is to preserve and enhance scenic, aesthetic, historic, community and environmental resources while improving safety and mobility. During our February 2015 Open House and Virtual Open House, the community provided input on:

- Visual preferences for features like streetscape enhancements, public art and landscaping
- What the CSS priorities for the project should be, including water quality enhancements, pedestrian and bicycle access and environmental sustainability

As the study progresses, we'll be looking for community input on potential enhancements that could be made to Zilker Park as part of the MoPac South project. Over the last several months, the study team has identified several possible opportunities, including:

- Implementing erosion abatement and prevention, and water quality enhancements to the parking lots on the north and south sides of Lady Bird Lake.
- Incorporating a future bicycle and pedestrian trailhead on the southwest side of Lady Bird Lake. This could include widening the existing bicycle and pedestrian bridge under MoPac or building a second bridge to address the overcrowding that occurs during events and on weekends.
- Where feasible, upgrading shared use path widths and sidewalks to meet ADA standards within the project right-of way.
- Implementing rain gardens, vegetated filter strips, stormwater planters, and natural buffers in this area to improve environmental controls for water quality enhancement and stormwater runoff treatment.
- Improving and/or repairing trail connections to adjacent trails (such as Johnson Creek, WAYA fields and Austin High School); and continue wayfinding systems along these trail connections within the project right-of-way.

These are just a few ideas, but we need your thoughts about other possibilities. You can share your input about enhancements to Zilker Park and throughout the project corridor during the upcoming Open House and Virtual Open House.

MoPac South
Environmental Study

MoPac South Environmental Study: What's Happening Now

In May 2015, the Central Texas Regional Mobility Authority announced the extension of the MoPac South Environmental Study process to allow for additional community input and engineering analysis on the study's Express Lanes Alternative. Since then, the project team worked to gather additional data and conduct detailed analysis on several configuration options proposed by various stakeholder groups and local governments that could be incorporated into the Express Lanes alternative. These configuration options include input from the City of Rollingwood and a proposal from the City of Austin. We will host our fourth Open House to share the results in November.

CONFIGURATION OPTIONS

Through work with transportation partners and the public, several configuration options were identified for further study and analysis. Right now, we are studying the following configuration options:

- Two Express Lanes in each direction and a direct connection to downtown
- Two Express Lanes in each direction without a direct connection to downtown
- One Express Lane in each direction with a direct connection to downtown
- One Express Lane in each direction without a direct connection to downtown
- Two Express Lanes in each direction with elevated access ramps near Barton Skyway

Ultimately, the Express Lanes Alternative could prove to be a combination of elements from several of the options under consideration. The project team is committed to identifying and moving forward with the best configuration for the Express Lanes Alternative. As required by the environmental process a No Build - or Do Nothing - Alternative is also still under consideration.

DATA AND DETAILED ANALYSIS UNDERWAY

The Mobility Authority is working with the Capital Area Metropolitan Planning Organization (CAMPO) and the Center for Transportation Research (CTR) at the University of Texas to conduct a traffic operations analysis to determine how the addition of Express Lanes might impact the downtown street network, especially Cesar Chavez Street.

In addition to traffic analysis, the Mobility Authority is working to analyze the benefits and drawbacks of each of these options from the perspective of public transit. Creating a dependable and consistent route for transit is a very important component of the project.

WEIGH IN ON OUR EFFORTS

Stay tuned for information about our next Open House in November. At the event, we will present detailed information about the project team's recent efforts and progress. The public will also have an opportunity to provide feedback as part of the official comment period for the Open House. Please note that all comments and questions submitted at any other time during the study will also be shared with and considered by the study team, and will become part of the official record for the Environmental Study.

We appreciate your patience as we evaluate these configurations, and we look forward to sharing the results and gaining your feedback.

ADDITONAL OUTREACH PLANNED FOR ENVIRONMENTAL STUDY

In response to community feedback for additional public involvement, the Central Texas Regional Mobility Authority extended the MoPac South Environmental Study process to allow for additional community input and engineering analysis on the project. The Mobility Authority will hold an additional Open House in late summer and will extend the study's time frame by up to six months.

Keep an eye on the website and your MoPac South Environmental Study emails, and we will announce Open House details as they are finalized.

You may have seen some information that Mobility Authority Executive Director Mike Heiligenstein shared about the project, including a video interview with Neal Spelce. You can view the interview and additional material on Mike's Mobility Matters blog.

NEW FREQUENTLY ASKED QUESTIONS

There is a lot of information being circulated in the community about the project and some of it is not accurate. As the Environmental Study continues and we have more information to share, a good source is the project's FAQs list, found on MoPacSouth.com. These FAQs are regularly updated to keep you informed.

CHECK OUT SOME OF OUR RECENTLY ADDED FAQS:

Why can't we build general purpose lanes instead of Express Lanes?
Even if funding were available to construct general purpose lanes, latent traffic demand, or drivers who currently use other routes to avoid MoPac South congestion, would quickly fill these lanes and they would become congested like the existing general purpose lanes on MoPac. The approach to solving congestion by simply adding multiple lanes of pavement is not sustainable and has not proven to be effective in managing traffic and promoting transit. Express Lanes are being implemented around Texas and other states to manage congestion rather than patching the problem just to face the same challenges in a few years.

What is being proposed at Lady Bird Lake (connection to downtown)?
Providing direct access from the Express Lanes to downtown is important to ensure that the project facilitates reliable emergency response and provides a dependable and consistent route for transit. Additionally, providing direct access from the Express Lanes to downtown increases safety for all drivers by eliminating the need for Express Lane traffic to merge into the general purpose lanes to access downtown. Although the preliminary concept initially proposed includes an elevated direct connection from the Express Lanes to and from downtown via Cesar Chavez Street, the Mobility Authority has heard the community's concerns about the impact of an elevated connection. The project team is evaluating alternative concepts which are expected to be made available at this summer's open house.

Why should the project have two Express Lanes in each direction, rather than one?
Many agencies avoid, if possible, providing only one lane in each direction, for several reasons.
Reliability: Constructing only one lane in each direction makes it more likely that drivers who use the project will experience disruptions in reliability. Minor incidents, even a flat tire, could easily disrupt the flow of traffic and speed in the Express Lane. Additionally, drivers who choose to travel at slow speeds in the Express Lane would impact the travel time reliability of all trailing vehicles.
Incident management: Constructing two lanes in each direction provides the additional capacity needed to enable a faster and easier response to incidents in the corridor.
Access: With two lanes in each direction, one is available to support entering and exiting traffic and one lane can support through traffic. A project with only one lane in each direction is much more likely to experience disruptions in the traffic flow.

While providing two Express Lanes each direction is optimal, the MoPac North project will only have one Express Lane in each direction due to restricted right-of-way from RM 2222 to Cesar Chavez.

What impact will the Express Lanes have on traffic on Cesar Chavez Street and Austin High School?
The Mobility Authority arranged for an independent traffic study to evaluate the impact that the Express Lanes will have not only on Cesar Chavez and the traffic near Austin High, but

the Express Lanes will have not only on Cesar Chavez and the traffic near Austin High, but on the downtown street grid. The study will provide important data and information that will help the project team understand the potential impacts on downtown traffic.

Will the Express Lanes attract truck traffic?
Large trucks and vehicles with trailers will not be allowed in the Express Lanes.

Is it too late to provide feedback?
The project team continues to take comments from the public through the project website. At the next Open House this summer, the public will be able to review the proposed mobility improvements, speak with the project team and submit another round of official comments. We would also be happy to meet with any neighborhood or community group to share information about the project and receive input. If you would like to schedule a meeting, contact us.

WHAT'S HAPPENING NOW?

The MoPac South Team received more than 330 comments and questions from interested stakeholders, both in person and online during the official comment period for the February 26 Open House. Have you ever wondered what we do with all of those comments?

First, each comment is sorted and categorized to ensure that the project team counts each perspective and vets each idea. Design ideas and suggestions are shared with the design team, who evaluates whether the suggested design changes or additions would be beneficial and feasible.

After all the comments are sorted, categorized and routed to the correct team members, responses are developed for each comment. All comments and responses will be published as part of the Open House Comment and Response Summary in the coming months. It takes time and manpower to work through all of your comments, questions and suggestions, but we greatly appreciate all of your ideas and feedback to make this project the best it can be.

WE ARE ALWAYS HAPPY TO MEET WITH COMMUNITY STAKEHOLDERS

In addition to hosting three project Open Houses, the MoPac South Environmental Study team conducted or presented at more than 40 meetings and community events since the study began in 2013. We've heard from a lot of community members, but we know we haven't reached everyone. Check out the list below. If your neighborhood or organization has an interest in MoPac South and isn't on it, contact us to schedule a meeting.

MoPac South Environmental Study: A Video Interview with Mike Heiligenstein

by Central Texas Mobility Matters on May 2, 2015 with 0 Comments in Uncategorized

Trusted Austin broadcast journalist and community leader Neal Spelce interviews Mobility Authority Executive Director Mike Heiligenstein about community concerns over proposed Express Lanes on MoPac Boulevard between Slaughter Lane and downtown Austin.

Click the image to watch the video

An Open Letter from Executive Director Mike Heiligenstein

Friends:

You may have heard some discussion in the community about the Mobility Authority's MoPac South Project, an Environmental Study to improve 8.7 miles of south MoPac from Cesar Chavez Street to Slaughter Lane. Well, the Mobility Authority has too. We have been studying options to address increasing congestion on this important route to downtown Austin since 2013.

We believe it's important to allow more time for us to evaluate options and for the public to fully understand the plan and provide input. In addition to the extra Open House, we will be holding special neighborhood meetings and issue specific workshops to listen and share information.

Why are we proposing this project, you may ask? The Mobility Authority took on the MoPac South Study as part of a special transportation funding initiative by the Texas Legislature, which identified the corridor as one of the most congested in Texas. If we do nothing, travel times from Cesar Chavez to Slaughter Lane will quadruple by 2035. Additionally, this route is included as a priority in the CAMPO long-range transportation plan for the region, and the Mobility Authority is the transportation authority charged with implementing this project. We recognize the significance of constructing a project like this over an environmentally sensitive area – specifically the Edwards Aquifer. I assure you that we are working to find the right solution that meets the needs of commuters while protecting our environmental and cultural resources.

MoPac South Environmental Study

Both state and local leaders recognize the need. So do the more than 130,000 commuters who travel this corridor daily. However, some community members opposed to the project have called the credibility of our agency into question, and made it their goal to disseminate misinformation about the project. To help you better understand the MoPac South Environmental Study, our team has prepared a special fact sheet about the project. I encourage you to take a few moments to review it, and share it with neighbors, friends and colleagues.

On behalf of our Board of Directors, we thank you for the confidence and trust you have placed in the Mobility Authority. We are dedicated to the task of tackling our region's number one challenge: traffic congestion. It's not an easy task, and we couldn't do it without you.

Sincerely,

Type and hit enter to search ...

About Mike Heiligenstein

Mike Heiligenstein is the Executive Director of the Central Texas Regional Mobility Authority, a multimodal transportation agency. Mike has served the Mobility Authority since 2003, overseeing its growth from a startup transportation agency to a nationally recognized leader in toll road operations.

A Message from Mike Heiligenstein at the Central Texas Regional Mobility Authority

CENTRAL TEXAS
Regional Mobility Authority

EXPRESSWAY NEWS

May 1, 2015

MESSAGE FROM MIKE

An open letter from Mike Heiligenstein, Executive Director of the Central Texas Regional Mobility Authority, about the MoPac South Environmental Study

MoPac South
Environmental Study

Friends,

You may have heard some discussion in the community about the Mobility Authority's MoPac South Project, an Environmental Study to improve 8.7 miles of south MoPac from Cesar Chavez Street to Slaughter Lane. Well, the Mobility Authority has too. We have been studying options to address increasing congestion on this important route to downtown Austin since 2013.

In response to community feedback for additional public involvement, the Central Texas

Regional Mobility Authority has extended the MoPac South Environmental Study process to allow for additional community input and engineering analysis on the project. The Mobility Authority will hold an additional Open House in late summer and will extend the study's time frame by three to six months.

We believe it's important to allow more time for us to evaluate options and for the public to fully understand the plan and provide input. In addition to the extra Open House, we will be holding special neighborhood meetings and issue specific workshops to listen and share information.

Why are we proposing this project, you may ask? The Mobility Authority took on the MoPac South Study as part of a special transportation funding initiative by the Texas Legislature, which identified the corridor as one of the most congested in Texas. If we do nothing, travel times from Cesar Chavez to Slaughter Lane will quadruple by 2035. Additionally, this route is included as a priority in the CAMPO long-range transportation plan for the region, and the Mobility Authority is the transportation authority charged with implementing this project. We recognize the significance of constructing a project like this over an environmentally sensitive area – specifically the Edwards Aquifer. I assure you that we are working to find the right solution that meets the needs of commuters while protecting our environmental and cultural resources.

Both state and local leaders recognize the need. So do the more than 130,000 commuters who travel this corridor daily. However, some community members opposed to the project have called the credibility of our agency into question, and made it their goal to disseminate misinformation about the project. To help you better understand the MoPac South Environmental Study, our team has prepared a special fact sheet about the project. I encourage you to take a few moments to review it, and share it with neighbors, friends and colleagues.

On behalf of our Board of Directors, we thank you for the confidence and trust you have placed in the Mobility Authority. We are dedicated to the task of tackling our region's number one challenge: traffic congestion. It's not an easy task, and we couldn't do it without you.

Sincerely,

Mike Heiligenstein

Mobility Authority to Present New Operational Configuration Options for MoPac South

Virtual Open House to be available online starting October 21, in-person Open House November 10

What: The Central Texas Regional Mobility Authority and the Texas Department of Transportation will hold an Open House and a Virtual Open House on the MoPac South Environmental Study. The study team will share information about several potential operational configuration options, as well as several enhancements that were incorporated into the proposed project as a result of community input. Members of the public can review exhibits, watch informational videos, and submit comments and questions.

All of the information presented at the Open House will be available online through the Virtual Open House. The Open House will provide citizens the opportunity to learn about the potential operational configurations and to continue to weigh in on the Context Sensitive Solutions for MoPac South. In addition, attendees will be able to review the results of a traffic operations analysis that was conducted to determine how the addition of Express Lanes might impact the downtown street network.

When: The Virtual Open House will be available from Oct. 21–Nov. 20. The Open House meeting will take place Nov. 10 from 3-7 p.m. No formal presentation will be given. The official public comment period is Oct. 21 to Nov. 20, 2015.

Where: The Virtual Open House will be available on www.mopacsouth.com. The in-person Open House will be held at the Palmer Events Center, 900 Barton Springs Road, meeting rooms 1-5, level 2. Parking is complimentary in the Palmer Parking Garage adjacent to the facility with two entrances, from Barton Springs Road or Riverside Drive.

About the Mobility Authority

The Central Texas Regional Mobility Authority is a local, independent government agency created in 2002 to improve the regional transportation system in Travis and Williamson Counties. The Mobility Authority implements innovative and sustainable transportation options to enhance quality of life and economic vitality in Central Texas. The Mobility Authority operates 183A Toll in Williamson County and 290 Toll (Manor Expressway) in east Austin and is constructing Express Lanes on MoPac Expressway. For more information about the Mobility Authority, visit www.MobilityAuthority.com.

About the Texas Department of Transportation

The Texas Department of Transportation is responsible for maintaining 80,000 miles of road and for supporting aviation, rail, and public transportation across the state. TxDOT and its 12,000 employees are committed to working with others to provide safe and reliable transportation solutions for Texas by maintaining a safe system, addressing congestion, connecting Texas communities, and being a Best in Class state agency. Find out more at TxDOT.gov.

MoPAC SOUTH ENVIRONMENTAL STUDY OPEN HOUSE

NOV. 10, 2015
3 - 7 P.M.

PALMER EVENTS CENTER
900 BARTON SPRINGS ROAD
LEVEL 2, MEETING ROOMS 1-5

Visit the Virtual Open House at www.MoPacSouth.com to view materials and provide feedback.

OCT. 21 - NOV. 20, 2015

Join the Central Texas Regional Mobility Authority and the Texas Department of Transportation for an Open House to learn how community input is helping to shape mobility improvements along MoPac from Cesar Chavez Street to Slaughter Lane. Information about several potential mobility concepts will be available for review and study team members will be on hand to answer questions and hear your feedback. No formal presentation is planned, so please stop by at your convenience.

Parking is complimentary at the Palmer parking garage adjacent to the facility. If you plan to attend and have special communication or accommodation needs, please call (512) 996-9778.

The environmental review, consultation, and other actions required by applicable Federal environmental laws for this project are being, or have been, carried out by TxDOT pursuant to 23 U.S.C. 327 and a Memorandum of Understanding dated December 16, 2014, and executed by FHWA and TxDOT.

Austin officials look to Atlanta for South MoPac toll lane support

Resize text A A A

Posted: 3:32 p.m. Tuesday, Nov. 3, 2015

Email 1 Share 206 Tweet 7 ShareThis 276

By Ben Wear - American-Statesman Staff

Chris Tomlinson has had four years to see how express toll lanes work in the real world. Or, at least, in Atlanta.

With Austin moving toward having its first such lanes on North MoPac Boulevard, and two years into a study of doing the same on South MoPac, supporters of those projects brought in Tomlinson, head of Georgia's Road and Tollway Authority, to share how Atlanta's first such project is doing.

In this file photo, traffic crawls along Interstate 85 south from Indian Trail Lilburn Road towards downtown Atlanta. Some Atlanta commuters ... Read More

Tomlinson was part of a South MoPac panel discussion Tuesday at a downtown hotel, hosted by the Greater Austin Chamber of Commerce and moderated by Austin state Sen. Kirk Watson.

The pair of lanes on Interstate 85 in Georgia, one on each side, is doing just fine, Tomlinson said, drawing 26,000 vehicles a day to the road in Atlanta's northeastern suburbs, despite variable tolls that average

more than $4 during rush hour. The toll rate, he said, sometimes spikes as high as $11 for the entire 16 miles. The lanes are so popular, he said, that even the highest tolls, designed to discourage enough traffic to keep the lane flowing at 45 mph or more, sometimes fail to do that job.

Tomlinson said that the lanes on I-85 meet or exceed that 45 mph target 87 percent of the time.

- Slow road to MoPac tolls: A look at what went wrong on delayed project
- With MoPac delays piling up, contractor, agency debate who's to blame
- TxDOT planning for MoPac underpasses at Slaughter, La Crosse

"The lanes are more popular than ever," Tomlinson said. "But if I could go back and change anything, I wish we had built two lanes a side."

That testimony plays into the hopes of the Central Texas Regional Mobility Authority, which is about halfway through a $200 million, 11-mile-long project to build one express toll lane on each side of North MoPac, between Lady Bird Lake and Parmer Lane.

The toll agency is in the midst of an environmental study of express lanes on South MoPac between the lake and Slaughter Lane, a distance of about 8 miles, and the six scenarios still on the table include versions that have one lane on each side and others with two lanes on each side.

Mobility authority officials contend that building two lanes on each side is the wisest choice, both to add capacity to a highway that already has significant rush hour congestion and as a way to keep tolls lower. In express lanes, tolls vary moment to moment in response to traffic speeds up ahead, and doubling the capacity of the toll lanes would tend to keep speeds higher.

Bill Bunch, executive director of the Save Our Springs Alliance, told about the chamber event later, wasn't impressed by the arguments.

Bunch likes none of the six scenarios for express lanes, suggesting instead that free-to-drive, high-occupancy vehicle lanes could be created instead "at a fraction of the cost." Bunch also argues that South MoPac's environmental impact shouldn't be studied in isolation.

Highway officials, Bunch said, have made it clear in public documents that their ultimate intention is to connect the southern end of South MoPac directly to Interstate 35 by extending Texas 45 Southwest to the east. Thus, Bunch said, the entire southwest loop should be evaluated as a unit.

Tomlinson also buttressed another mobility authority talking point: Adding express lanes that maintain good speeds through variable tolling will encourage people to trade car commuting for Capital Metro bus commuting. The mobility authority, which has two toll roads operating in Central Texas, allows transit buses and registered van pools to use its toll roads for free.

The I-85 toll lanes now have eight express bus routes, said Tomlinson, who is also executive director of the Georgia Regional Transportation Authority. About 2 percent of the vehicles that use the lanes are buses, he said, but those buses carry an estimated 26 percent of people traveling in the lanes.

Todd Hemingson, Capital Metro's vice president of strategic planning and development, said at the chamber lunch that transit agency officials here have been talking to the mobility authority about building park-and-ride lots near Slaughter Lane and even farther south where South MoPac meets Texas 45 Southwest.

"We're very excited about the express lanes coming because it will allow us to expand service," Hemingson said.

Four years in, the I-85 toll lanes have been so successful, Tomlinson said, that the Atlanta area now has another 52 miles under construction.

"This is a transportation strategy," he said, "that we believe works."

Coming Sunday

The American-Statesman will provide an in-depth look at the proposal to add toll lanes to South MoPac Boulevard, including the different options on the table for providing access to downtown.

Six options for South MoPac toll project now on the table

Posted: 2:49 p.m. Saturday, Nov. 7, 2015

By Ben Wear - American-Statesman Staff

Get ready for the Battle of South MoPac, Part II.

After a first-try design to add toll lanes to South MoPac Boulevard met stiff public head winds early this year, highway designers went back to their drawing boards and came up with four more options. None of these new alternatives have the flyover bridges over Lake Bird Lake that caused so much angst with environmentalists, Rollingwood residents and the Austin High School community.

Rush hour traffic along MoPac Boulevard. The Central Texas Regional Mobility Authority proposes adding toll lanes and has several design options ... Read More

Even so, as the Central Texas Regional Mobility Authority prepares for an open house Tuesday night on the four new proposals, along with two versions of the original flyover approach, all of those groups remain unsatisfied to varying degrees.

"They all impact Austin High, so we're trying to figure out the one that least affects us," said Sara Marler, who works in environmental education and serves on the board of the school's parent-teacher association. "We are completely focused on the safety of our students. Getting into and out of Austin High, with all the ramps, is dangerous."

Travis County Commissioner Brigid Shea, a long-time environmental activist who helped form Keep MoPac Local, has called for scrapping the ongoing environmental analysis of the 8-mile project to add toll lanes from the lake to near Slaughter Lane.

Rollingwood Mayor Thara Farrell, from left, with his wife, Sandra, Treasurer resident Courtney Moss ... and lead engineer Stephanie Massaro review South ... Read More

She and Save Our Springs Alliance executive director Bill Bunch have argued the traffic and environmental effects of expanding South MoPac should be considered in conjunction with the planned construction of Texas 45 Southwest, and a potential future extension connecting that road to Interstate 35.

"They're not telling people it's just one piece of a massive highway toll road project that would divert interstate trucks and cars from I-35 over to MoPac, adding tens of thousands of extra vehicles a day onto our local roads," Shea said, pointing to a pair of studies projecting 30,000 to 44,000 trips a day on Texas 45 Southwest, which will connect to South MoPac.

Mobility authority officials say that their consultants have forecast that

an ultimate connection of Texas 45 Southwest to I-35, if it happens, would not produce that massive influx of cars that Shea predicts. Those studies have not been made public.

- Six options for expanding South MoPac
- Poll: What should be done about South MoPac?

Shea also said the mobility authority "did not seriously consider the cheapest alternative that's available almost immediately with a bucket of paint: restriping South MoPac and the (river) bridge to create bus and (high-occupancy-vehicle) lanes." She said that based on a University of Texas study her staff saw, South MoPac (including the shoulders) is wide enough to add a transit and high-occupancy-vehicle lane while keeping the three existing general purpose lanes on each side.

The middle option: Merge

Rollingwood Mayor Thom Farrell, meanwhile, has occupied the middle ground.

Farrell said he and his council are not against adding toll lanes to South MoPac, even the two on each side that mobility authority officials prefer. But he said his city will endorse one particular option that would not directly connect drivers in the toll lanes to West Cesar Chavez Street and thus to downtown. Instead, drivers in those toll lanes, set closest to the median, would have to merge across three free lanes to exit on West Cesar Chavez.

Farrell opposes an alternative to those flyovers over the lake, the so-called "wishbone" proposal that includes 25-foot-high bridges between Bee Cave Road and Barton Skyway that would allow drivers to quickly access the toll lanes southbound and, on the northbound side, get to the West Cesar Chavez exit without weaving across the free traffic lanes. That proposal, similar to bridges included in a design offered by the city of Austin, moves the potentially unsightly bridge structure more than a half mile south of the riverfront.

Farrell notes that in 2035, that weaving adds only three to five minutes to the travel time in those free lanes from Slaughter Lane to the lake, according to mobility authority calculations. And adding the bridges would create aesthetic and noise problems for his small city west of South MoPac.

"When we get down to a couple of minutes on this, let's be realistic: that doesn't mean anything," Farrell said. "And when you get onto Cesar Chavez, you're going to stop either way."

Mobility authority officials, responding to concerns about what the project might mean to West Chavez Chavez and downtown traffic in general, this spring commissioned a study by the University of Texas' Center for Transportation Research. That study, according to an executive summary on the project website, says that adding toll lanes to South MoPac would have little impact on downtown travel times in 2020.

The full study has not been posted on the website.

Next steps

Mike Heiligenstein, the mobility authority executive director, stopped short of endorsing any particular option. But he said agency officials do not like the versions that would require toll lane drivers to merge across three lanes to reach downtown.

"Everybody in the industry would tell you that when you don't have a direct connection, it is just horrendous," Heiligenstein said. "It's a safety issue. It's a congestion issue. It's a capacity issue."

The mobility authority and its consultants have been working on the environmental study of South MoPac since 2013 and, early this year, thought they might be nearing its completion. But after the adverse reaction to the flyover proposal over the lake, the environmental analysis has slowed by six to nine months.

The city of Austin this summer submitted one of the designs on the

table. The mobility authority has since incorporated some of those features into its other designs: tolled flyover connections from U.S. 290 to South MoPac, revamped exit and entrance ramps at Bee Cave Road and Loop 360, and an added free lane on southbound MoPac south of Bee Cave Road that should ease congestion caused by heavily used entrance ramps south of Bee Cave and Barton Skyway.

But the authority has concerns about another aspect of the city proposal. Because it adds new bridges over the lake, it would require taking almost 4 acres of Zilker Park. That would trigger a number of reviews under state and federal law, officials say, and likely would be rejected because other alternatives would not require taking Zilker acreage.

After Tuesday's open house and the online comment period running through Nov. 20, the mobility authority likely won't come forward with another recommended design until the spring, officials said. Then there would be a public hearing and a final version of the environmental analysis.

Officials say construction on the $300 million to $350 million project is unlikely to begin until well into 2017.

Expert reporting

Ben Wear has covered transportation since 2003 as Austin's explosive growth has put more strain on area roads. He has scrutinized the spending at Capital Metro, tracked the tug-of-war over plans to build Texas 45 Southwest and most recently explained why the construction project on North MoPac fell so far behind schedule.

What's your pick?

To examine the different South MoPac options and weigh in on your favorite, visit our poll at statesman.com/mopac-poll.

JSD82 Report
Brigid Shea is such a fear-mongering liar! Tractor trailers are not going to use MoPac over I-35 or 130. Bunch is no better, as he's been making the same argument that he, too, knows is a complete fabrication.
6:55 p.m. Nov. 7, 2015

Agora Report
The only viable option is the original proposal. Dress-up the bridge and it'll be fine. Noise from the flyover is unlikely to be significant at the slower speeds of an interchange.
6:28 p.m. Nov. 7, 2015

YouKnowThatGuy Report

Those bridges are the best way. Sorry if a small number of Rollingwood mansions are affected. Welcome to the real world.

10:09 p.m. Nov. 7, 2015

ur12 Report

JSC82 - Shea and Bunch are very knowledgeable people and know a hell of a lot more what they are talking about than you do.

3:54 a.m. Nov. 8, 2015

austinwengirl Report

Everyone can probably agree traffic is bad and we need to do something! The best case scenario is that we can find a solution that addresses our serious traffic problems and has the least impact on the natural spaces that we all know and love -- Zilker Park, Nature & Science Center, Lady Bird Lake, Botanical gardens.

CTRMA has provided an option with no elevated lanes than provides travel times in 2035 that are within 3-5 minutes of the double decker options. Why build a double decker over Lady Bird Lake which will cost and additional 40 Million dollars, or 2 double deckers over MoPac which will cost and additional 30 million when we can get the same results (within 3-5 minutes) without going UP?!

7:15 a.m. Nov. 8, 2015

EverybodyJustShutUp Report

@UR12 No. They are not knowledgeable about traffic solutions. They only want to stop the needed improvements. Morons like those two are why we are in this mess. Don't build it and they won't come. Unless we turn Austin into a horrible place like Detroit they will come.

8:27 a.m. Nov. 8, 2015

JohnAlden Report

Yes, "they" will still come. But don't build "it," it costs a ton and doesn't do enough. Build some other forms of transit that will take the load off the "one person-one car into downtown at 60 mph", model. That may inconvenience some current motorists, but it will help a many other and varied types of people (such as those that can't drive) if we build alternate transit systems into Austin's future. As the beneficiaries of ANY new transit improvements are primarily future residents and those not yet driving this route, we owe it to them to take innovative actions now that will work even after the car becomes untenable for many intra-city moves. Otherwise, we condemn Austin to be being one more city that missed its chance.

10:52 a.m. Nov. 8, 2015

Statesmansub Report

Double decker is the way to go. 3 minutes can save a life. It can also save a job, make you not late to school and give you more quality time with whomever you like to spend it with.

10:54 a.m. Nov. 8, 2015

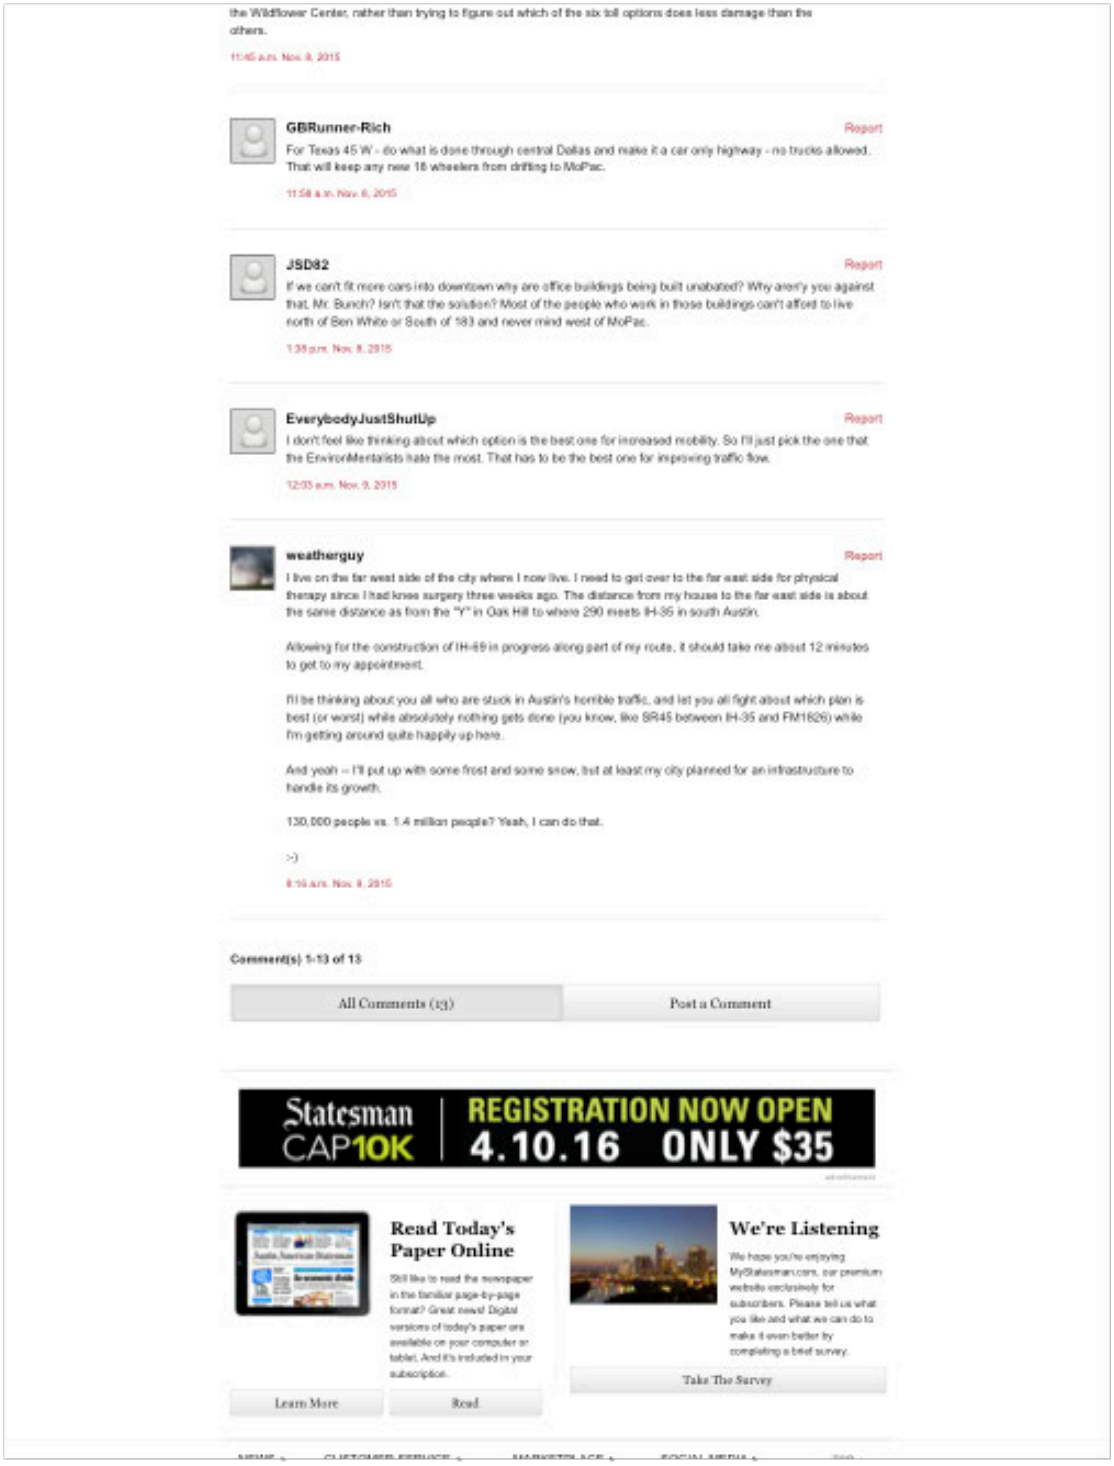
BillBunch Report

The toll road builders measure of success is "it won't hurt us more than doing nothing." That's very low threshold for success -- and one that wastes many hundreds of millions of tax dollars.

What they aren't telling us: under all scenarios, traffic gets much worse, not better. The toll agency makes more money the worse traffic gets on the free lanes. Tolls only cover a fraction of the costs -- our limited tax dollars pay the rest, subsidizing the few that can afford to pay $10 to $13 one way during rush hours. And none of their analyses look at what happens when you connect south Mopac to I-35, even though they are planning to finish that loop by 2025.

Finally, the "if you don't build it" mantra is false (either myth or fabrication, depending on whether the speaker knows better or not). It is a fact that we have expanded our roadway network slightly faster than population growth -- breakneck pace. Traffic is worse because the roads we build encourage people to live farther away from their work. We can't stuff more cars into downtown -- and like every other big city, it is impossible to pave enough land for people to drive around, one-person, one car, wherever they want.

Like the hammer, where everything looks like a nail, for the toll road agency, everything looks like a tolling opportunity. That's why all six options they want us to choose from are tolled. The best option is a combination of much more affordable, less damaging options that benefit everyone and use the existing pavement more efficiently. We should be protecting Austin High, Lady Bird Lake, Zilker Park, Barton Springs, downtown, and



the Wildflower Center, rather than trying to figure out which of the six toll options does less damage than the others.

11:45 a.m. Nov. 8, 2015

GBRunner-Rich Report

For Texas 45 W - do what is done through central Dallas and make it a car only highway - no trucks allowed. That will keep any new 18 wheelers from drifting to MoPac.

11:58 a.m. Nov. 8, 2015

JSD82 Report

If we can't fit more cars into downtown why are office buildings being built unabated? Why aren't you against that, Mr. Bunch? Isn't that the solution? Most of the people who work in those buildings can't afford to live north of Ben White or South of 183 and never mind west of MoPac.

1:38 p.m. Nov. 8, 2015

EverybodyJustShutUp Report

I don't feel like thinking about which option is the best one for increased mobility. So I'll just pick the one that the EnvironMentalists hate the most. That has to be the best one for improving traffic flow.

12:03 a.m. Nov. 9, 2015

weatherguy Report

I live on the far west side of the city where I now live. I need to get over to the far east side for physical therapy since I had knee surgery three weeks ago. The distance from my house to the far east side is about the same distance as from the "Y" in Oak Hill to where 290 meets IH-35 in south Austin.

Allowing for the construction of IH-69 in progress along part of my route, it should take me about 12 minutes to get to my appointment.

I'll be thinking about you all who are stuck in Austin's horrible traffic, and let you all fight about which plan is best (or worst) while absolutely nothing gets done (you know, like SR45 between IH-35 and FM1626) while I'm getting around quite happily up here.

And yeah -- I'll put up with some frost and some snow, but at least my city planned for an infrastructure to handle its growth.

130,000 people vs. 1.4 million people? Yeah, I can do that.

:-)

Commuters, critics give their two cents on South MoPac toll lane plans

Resize text A A A

Posted: 5:58 p.m. Tuesday, Nov. 10, 2015

Email 1 Share 42 Tweet 6 ShareThis 85

By Ben Wear - American-Statesman Staff

The thought of adding up to four lanes to South MoPac Boulevard — four toll lanes — isn't easy for Peter Geranios to accept. And the array of options for how to do that, laid out on giant maps at the Palmer Events Center, was a lot to digest Tuesday afternoon.

But with the growth that has happened, and will happen, the Whole Foods worker and South MoPac commuter said he'll just have to adjust.

Gordon Miller, left, speaks with Art Bedrosian about various design options for adding toll lanes to South MoPac. The Central Texas ... Read More

"It's tough to consider the change this represents to the city," Geranios said as he left an open house where the Central Texas Regional Mobility Authority presented six options for adding tolled express lanes to the highway south of the river. "But with the growth, there's no way around it. I'm not a huge fan of tolling. But if it gets the job done, it gets the job done."

Tuesday's open house was part of a month-long process to get public reaction to the design options. The authority on Oct. 21 began a virtual open house on www.mopacsouth.com, and the public can comment online through Nov. 20.

Some of the options would add two toll lanes to each side of South MoPac from Lady Bird Lake to north of Slaughter Lane, others one lane. And the differ in how they connect to West Cesar Chavez Street for downtown commuter, as well as cost: $275 million to $350 million for construction alone.

- Six options for South MoPac toll project now on the table
- Six options for expanding South MoPac
- Poll: What should be done about South MoPac?
- Austin officials look to Atlanta for South MoPac toll lane support

As of Tuesday morning, 215 people had commented online. About three hours into the open house at Palmer Events Center, about 155 had shown up to peruse the maps, renderings and lists, and to offer their comments as well.

The month of public input will lead to the mobility authority devising a recommended option. Then the authority will aim to issue a draft environmental report in the spring, hold a final public hearing next summer, and then issue a final version for approval by the Texas Department of Transportation.

Agency officials don't foresee construction until well into 2017, at the earliest. Construction would take three to four years, they said.

- Official: MoPac, 45 tollway noise threatens wildflower center's future
- Slow road to MoPac tolls: A look at what went wrong on delayed project

On Monday evening, in anticipation of Tuesday's open house, about 150 people showed up at Austin High School, at the instigation of Travis County Commissioner Brigid Shea and a group called Keep MoPac Local, run by SOS Alliance executive director Bill Bunch, to hear and applaud arguments against building any of the mobility authority's six scenarios.

The toll lane options on the table, Shea said, "lock us into a last-century model." She has suggested South MoPac is wide enough that a high-occupancy vehicle lane could be added simply by restriping the road.

But thinning the lanes through restriping "would not provide a safe alternative for drivers," mobility authority spokeswoman Dee Anne Heath said Tuesday. As for high-occupancy-vehicle lanes, particularly just one on a side, they tend to be underused initially and then

In presidential campaign, it's now terrorism, not taxes

7 things to know now: France launches massive airstrike; Alabama says no refugees

Carson: Democratic policies are killing us

ultimately over-used, Heath said, leading to the same sort of congestion now found in South MoPac's free lanes during peak periods and undercutting the lanes' utility for transit bus routes.

The variable toll rates that the mobility authority has in mind, on the other hand, would be designed to keep traffic — and buses — moving at 45 mph or more.

Shea said that the mobility authority is proposing toll lanes on South MoPac not because that approach is necessarily the best solution, but because what the agency does is build toll roads.

"If you're a hammer, everything's a nail," Shea said.

Austin City Council Member Leslie Pool, who also attended the Keep MoPac Local meeting on Monday, called the South MoPac options "troubling" and said that the project, along with the construction of Texas 45 Southwest from South MoPac to Interstate 35 sometime in the future, would put 35,000 more vehicles a day onto the westside highway. Shea had earlier put that figure at 30,000 to 44,000, and a flier passed out by Keep MoPac Local prophesied 60,000 a day. Bunch said traffic would "literally explode" on South MoPac.

Mobility authority officials, based on a traffic analysis done earlier this year, say the effect of extending Texas 45 Southwest to I-35 would be "minimal," only a few thousand vehicles a day.

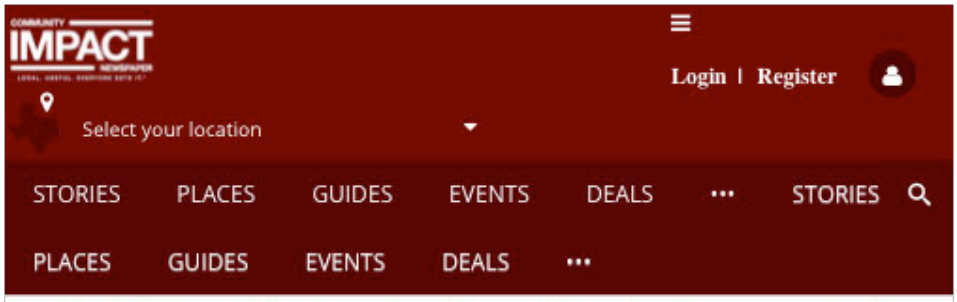
State Sen. Kirk Watson, panelists discuss MoPac South express lanes

One or two toll lanes under consideration for transportation project

By Joseph Basco November 3, 2015

The Greater Austin Chamber of Commerce hosted a transportation panel Nov. 3 to discuss six



State Sen. Kirk Watson, D-Austin, moderated the panel discussion with representatives from the Mobility Authority, Texas A&M Transportation Institute and Georgia Regional Transportation Authority, all of whom explained the benefits of express lanes, such as the ones proposed for the MoPac South project and currently under construction on MoPac between Parmer Lane and Cesar Chavez.

Mobility Authority Executive Director Mike Heiligenstein explained existing traffic congestion issues and challenges on MoPac South.

"We know from our modeling that a South MoPac trip from La Crosse Avenue or Slaughter Lane to [Lady Bird Lake] is going to take an additional 30-40 minutes in the next 10-15 years," Heiligenstein said. "If we don't do something, we're going to see very unreliable travel times"

MOPAC SOUTH ENVIRONMENTAL STUDY OPEN HOUSE

Heiligenstein said express lanes lanes could alleviate traffic on the nontolled lanes because two express lanes in each direction can carry between 25,000 and 30,000 vehicles per day. Heiligenstein also differentiated between building one or two express lanes.

"If we only build one express lane, the cost and pricing of that express lane will be much, much greater than if we build two," Heiligenstein said. "While I believe we're building Chevrolet or Ford lanes, if we only go with one lane, we're building a Cadillac lane, and I don't think that's right. I think we're doing a disservice to the citizens of Austin to do just one lane."

Ginger Goodin, director of the Transportation Policy Research Center at Texas A&M Transportation Institute, said there are 29 express lane projects nationwide, 10 of which are in Texas cities.

"Variable tolling is a very powerful tool, the most powerful tool I think in managing congestion to ensure that you have that level of performance, whether it's achieving 45 mph [traffic flow]

PLACES GUIDES EVENTS DEALS •••
Tomlinson said tolls can reach $11 because traffic counts have grown in the last several years in Atlanta and only one express lane was constructed. He added that he wished two express lanes had been built.
After the panel discussion, Watson said the MoPac South project could be beneficial to Southwest Austinites.
"Anybody who lives in [Southwest Austin] knows with certainty how unreliable South MoPac is, and what this project will do is open it up to reliability," he said.
The Mobility Authority is hosting an open house Nov. 10 for the public to view the six proposed concepts of the MoPac South project environmental study.

1. MoPac toll lanes
Upon completion the highway will have one new lane in each direction from Parmer Lane to Cesar Chavez Street that will be tolled. The federal- and state-funded project includes bridge widening, building sound walls, installing conduit and cables to support the toll-collection and intelligent transportation systems, and completing the relocation of temporary ramps. The $204 million project began in October 2013 but was delayed from a projected fall 2015 completion to late 2016.

2. Flint Rock Road
Improvements to the two-lane road between RR 620 at Lakeway Regional Medical Center and Serene Hills Drive include widening the roadway, adding an asphalt shoulder and enhancing its turn and grade. The city of Lakeway partnered with Travis County for the $9 million project that began construction in October 2015 and is slated for a late 2016 completion.

3. Loop 360 auxiliary lanes
The $6.44 million project will add auxiliary lanes, or extended turn lanes, along Loop 360 to improve roadway intersections with Walsh Tarlton Lane, the Barton Creek Square Mall entrance, MoPac and the intersection just south of MoPac. A left-turn lane on the northbound frontage road of MoPac at Loop 360 will also be added. The project, slated to be complete in spring 2017, is funded jointly by the Texas Department of Transportation and the city of Austin.

4. RR 620 improvements
The $1.4 million TxDOT-funded project was announced Oct. 2 and will improve traffic flow between Ladera Boulevard in Bee Cave and Lohmans Crossing Road in Lakeway. An extended entrance/exit lane southbound will be added from Lohmans Crossing Road to Spillman Loop. The project, expected to be complete by early 2016, will also add dual left-turn lanes onto RR 620 from the intersections of Falconhead Boulevard and Ladera Boulevard.

5. Partial completion of Hwy. 71 lanes
TxDOT opened new lanes of Hwy. 71 on Sept. 2 as part of an overall $15.9 million project. Once complete, the construction will result in a four-lane roadway with two lanes in each direction from Thomas Springs Road to Southwest Parkway, expansion of a center turn lane, widening of

Mobility authority to unveil MoPac South options

The Central Texas Regional Mobility Authority has announced that it will roll out a slew of new MoPac South alternatives online on Oct. 21 in preparation for an open house on Nov. 10 at the Palmer Events Center.

Members of the public will be able to provide comments on the alternatives as part of the forthcoming "virtual open house" as well as in person at the planned event.

MoPac South is a proposed expansion of the MoPac Expressway between Cesar Chavez Street and Slaughter Lane. The expansion could add as many as four tolled express lanes to the highway.

The project received scrutiny this spring when city of Austin and Travis County residents and officials raised concerns about the mobility authority's proposal to "double-deck" – in the words of Travis County Commissioner Brigid Shea – the highway by adding two raised lanes over Lady Bird Lake and Zilker Park and a flyover connection with East Cesar Chavez.

Justin Word, director of project management with the mobility authority, told the City Council Mobility Committee on Oct. 7 that the organization will outline six options for the project. These include the "double-deck" proposal presented in February and an alternative that the Austin Transportation Department drafted without the raised lanes or East Cesar Chavez flyover.

Both of those options involve adding two express lanes in each direction to that strip of highway.

The other four alternatives consist of adding one express lane per direction with connections to and from Cesar Chavez; one express lane per direction without Cesar Chavez connections; two express lanes per direction with connections to and from Cesar Chavez; and two express lanes per direction without Cesar Chavez connections.

Word said that the mobility authority has taken into account suggestions from the city of Austin, the city of Rollingwood, Travis County and other stakeholders. These suggestions include adding direct connector ramps at U.S. 290, adding additional bicycle and pedestrian facilities north of R.M. 2244 and adding improvements at Lake Austin Boulevard and Fifth Street.

This one too!

MoPac South Environmental Study Open House - November 10

Tomorrow, Nov. 10, from 3-7 p.m., join the Central Texas Regional Mobility Authority and the Texas Department of Transportation for the MoPac South Environmental Study Open House.

MoPac South Environmental Study Open House
Tuesday, Nov. 10, 3-7 p.m.
Palmer Events Center, Meeting Rooms 1 - 5, Level 2
900 Barton Springs Road

Come learn how community input is helping shape potential mobility improvements along MoPac from Cesar Chavez Street to Slaughter Lane. No formal presentation will be given, so attendees can come and go at their convenience.

Unable to come? Check out the Virtual Open House on the **project website**, available until Friday, Nov. 20, 2015. Virtual Open House visitors can review exhibits, watch informational videos and submit comments and questions

---

Check it out: MoPac #MusicThatMovesYou playlist

Have you been driving your daily commute in silence? The Central Texas Regional Mobility Authority has you covered. On the road or off, Austinites can visit **www.mopacexpress.com** or look up the **MoPac Music playlist** on mobile devices to access the project's Spotify playlist.

Users are asked to tweet their favorite driving song using the hashtag, #MusicThatMovesYou to be added to the playlist. From the ever appropriate, "Crosstown Traffic" by Jimi Hendrix to more recent tracks like "The Traveling Song" by The Avett Brothers, they playlist is a good pick-me-up when traffic has you down!

Nearing 73% completion, the project is set to give drivers the option to bypass congestion on the 11-mile stretch of MoPac between Parmer Lane and Cesar Chevez Street. The express lanes are scheduled to open in 2016.

MoPac South Open House: Tuesday, November 10

Join the Central Texas Regional Mobility Authority and TxDOT for an Open House to learn how community input is helping to shape mobility improvements along MoPac from Cesar Chavez Street to Slaughter Lane. Information about several potential mobility concepts will be made available for review and study team members will be on hand to answer questions and hear your feedback. No formal presentation is planned, so please stop by at your convenience.

MoPac South Environmental Study Open House
November 10, 2015
3 - 7 p.m.
Palmer Events Center
900 Barton Springs Road, Level 2, Meeting Rooms 1-5

A Virtual Open House, which will feature all of the materials available at the Open House, will be online from October 21 - November 20, 2015. Feedback and comments can also be submitted through the virtual open house.

OCTOBER UPDATE
Be there! -- Community Meeting, Monday Nov. 9, Austin High School, 6 – 8 p.m.
Be there! -- CTRMA Open House on Mopac South, Tuesday Nov. 10,, Palmer Events Center
Please plan to attend both of these meetings; in the interim please send an updated message to our local officials here.
Meanwhile, legal, financial, and political road blocks are mounting for the SH 45SW/South Mopac tolled loop while the Keep Mopac Local coalition continues to expand. The Zilker Neighborhood Association signed on to the coalition in September and made significant contributions to the effort, along with Save Barton Creek Association.
CTRMA has delayed its planned construction start for SH 45 SW, Phase I to the middle of next year (2016). The Mopac South environmental review process has been pushed back to conclude in the summer of 2016, with construction some time after that. Officially, the timeline for the so-called "Mopac Intersections" project is somewhere between the two.
All three of these active segments of the proposed 45W/Mopac tolled loop threaten the Lady Bird Johnson Wildflower Center with noise, traffic, air, and visual pollution. This pollution would, quite literally, ruin the Wildflower Center.
In late August Wildflower Center director Michael Abkowitz wrote a sharp letter to TxDOT and CTRMA stating that construction of these three segments would have cumulative effects on the Wildflower Center, and that even building just Phase I of SH 45 SW would "jeopardize" the existence of the Center.
The Wildflower Center letter goes on to argue that, because the Center's mission depends on quiet and beauty in its gardens, the proposed 45 SW and South Mopac toll expansions would exact a "constructive taking" of the Wildflower Center, which is prohibited under federal highway law.

SOLUTIONS
To our knowledge, TxDOT and CTRMA have had no meaningful response to the Wildflower Center's letter. The letter was endorsed by senior officials at the University of Texas, which operates the Center as a research, outdoor education, and community center.
CTRMA and TxDOT faced further bad news in late summer, when biologists found a listed "endangered" Barton Springs salamander in a water well a short distance from the proposed SH 45 SW Phase I right-of-way. The location of the protected salamander, as well as one other in Blowing Sink cave, makes it clear that construction of the proposed SH 45 SW, South Mopac, and US 290 West and SH 71 West toll projects threaten the survival of both the Barton Springs and Austin blind salamanders.
In listing these species as "endangered," the U.S. Fish & Wildlife Service identified pollution from highway construction, from chronic highway and right of way run off and recharge, from catastrophic spills, and from secondary growth induced by large highway projects in the Barton Springs watershed as threatening the survival and recovery of these aquatic species. This additional, nearby location of the Barton Springs salamander makes clear that CTRMA and TxDOT must back up and secure a federal "incidental take" permit for harming salamanders before moving forward.
CTRMA and TxDOT are still working to conceal their plans to push the last piece of the 18-mile long 45SW/Mopac toll expansion loop right behind these three active pieces. The RMA in particular has insisted it has "no plans" to build Phase II of SH 45 SW (from FM 1626 to I-35), which would link South Mopac to I-35. However, Keep Mopac Local discovered last month that TxDOT and CTRMA officials have told Wall Street that this last piece of the 45SW/Mopac loop would be completed by 2025.
TxDOT's January 31, 2015 bond prospectus for refunding bonds used to finance the SH 130, SH 45 SE, SH 45 North, and Loop 1 North toll roads includes a Traffic & Revenue Study identifying the planned construction date. This is important because the completed 45SW/South Mopac loop would feed more traffic on (and thus generate more revenue for) SH 45 SE, SH 130 and Loop 1 North.
At the same time, CTRMA is concealing a Traffic & Revenue Study on the Mopac South toll lanes, triggering a lawsuit by the Save Our Springs Alliance to force release of the traffic study. The Austin American Statesman editorial board urged CTRMA to quit hiding this information from the public.

TAKE ACTION
Whether or not you previously sent an email to our local officials, please send another one today, with the suggested text below or (better yet) with your own message. Please send your message before the next CTRMA Board meeting on October 28th. (And please plan to attend the community meeting at Austin High on November 9th and the CTRMA Open House meeting November 10th.)
Your message will help slow down the piece-meal rush to expand South Mopac with four-toll lanes and a double-decker bridge over Lady Bird Lake and to convert Mopac into a second I-35 through Austin.
Our local and Austin-area state and federal officials need to know that the Austin community will not tolerate this deceptive, backdoor approach to building a second Interstate 35 through Austin. Please encourage your friends, neighbors , and family members to send a similar message.
Please also consider making a tax-deductible donation to the Keep Mopac Local campaign today. With your financial support we can make sure that the truth comes out and that we win an honest and thorough analysis of improving north-south traffic flow without converting Mopac to a second I-35. (Just enter "for Keep Mopac Local" on the donation page.)

SAVE OUR SPRINGS

Austin's water watchdog since 1992

Tame the Mopac Monster (before it kills again!); Oppose the Hose news . . .

You can make a difference starting today in determining whether a second Interstate 35 is built through Austin.

You might think "Pshaw, mere hyperbolic scare tactics!" Wish again, our water loving friends. Read on, learn more (with a few laughs from **this video short**), **send an updated email message** to our local leaders, **and make a donation to help fend off Austin's worst nightmare in decades!**

Gargamel himself could scarcely dream up a more diabolical scheme for chewing up and paving over much of what we love about Austin.

From the Lady Bird Johnson Wildflower Center, Flint Ridge Cave and endangered species habitat at the south end, to Barton Springs, Lady Bird Lake, Zilker Park, and Austin High School in central Austin, to neighborhoods and businesses from Circle C to 183, the Mopac monster will spare nothing in its path.

But only if we let it. Starting today, and leading up to **two key community meetings on November 9th and 10th,** you can help expose and defang the Mopac monster that menaces Austin's future. **Share this flyer** with friends and neighbors. **"Read the Overview"** and **October 2015 Update** at the **KeepMopacLocal** website. **Read what the toll road agency, CTRMA, says** about the Mopac options it is currently considering.

Most importantly, help spread the word and plan to attend the Monday, November 9th community meeting at Austin High School, 6 to 8 p.m., and the Tuesday, November 10th TxDOT/CTRMA sponsored "Open House" at Palmer Events Center.

The more you look the scarier and more outrageous it gets.

And then there is the San Antonio Water Hose Hydra threatening the region with unrestrained water waste and depletion and exurban sprawl from east of Austin to Blanco and Comal counties. **Read the recent Texas Tribune** and **Statesman** stories on San Antonio's "Vista Ridge" water pipeline scheme and **watch this new documentary video from the League of Independent Voters of Texas** on the "San Antonio hose." This battle is heating up, and Save Our Springs is working with civic, religious, and other groups from across the region to "oppose the hose."

Please help us continue the work of our lawyers, scientists and activists to help Save Our Springs for ourselves and for future generations.

Subject: MoPac South Environmental Study Update
To: Mario Espinoza <mespinoza@mobilityauthority.com>
Cc: Mike Heiligenstein <mstein@mobilityauthority.com>, "Melissa Hurst (mhurst@rifeline.com)" <mhurst@rifeline.com>, "Jessica Engelhardt (jengelhardt@rifeline.com)" <jengelhardt@rifeline.com>, Dee Anne Heath <dheath@mobilityauthority.com>, Laura Bohl <lbohl@mobilityauthority.com>, Abby Tomlinson <atomlinson@hntb.com>

Good afternoon,

I want to provide you with an update on the MoPac South Environmental Study. As you may know, the Central Texas Regional Mobility Authority extended the MoPac South Environmental Study process to allow for additional community input and engineering analysis on the proposed Express Lanes Alternative. Since our last Open House in February, the Mobility Authority has been working with the community to develop four additional operational configurations for the Express Lanes Alternative, in addition to the one that was presented in February (two Express Lanes in each direction with direct connections to downtown). These additional configurations include:

* One Express Lane in each direction with direct connections to and from Cesar Chavez St.
* One Express Lane in each direction without a direct connection to and from Cesar Chavez St.
* Two Express Lanes in each direction without a direct connection to and

from Cesar Chavez St.

* Two Express Lanes in each direction without a direct connection to or from Cesar Chavez St., but with ramps near Barton Skyway

All of these Express Lane configurations have been improved upon using input from community stakeholders and local governments, including ideas presented as part of a concept submitted to the Mobility Authority by the City of Austin. These improvements include:

* Suggested by City of Austin:
  * Addition of direct connection ramps at US 290
  * Addition of a new collector distributor, or bypass lane, at Loop 360
* Suggested by Austin Independent School District:
  * Direct connection touchdown shifted farther east on Cesar Chavez St.
* Suggested by City of Rollingwood:
  * Texas Turnarounds at Barton Skyway
  * Reconfiguration of RM 2244 southbound exit ramp
  * Additional Bike/Pedestrian facilities north of RM 2244
* Suggested by Travis County:
  * Improvements at Lake Austin Blvd. and 5th St.
* Suggested by Community Stakeholders:
  * Ramp improvements at William Cannon Dr.
  * Additional general-purpose lane south of William Cannon Dr.

The Mobility Authority is excited to share these operational configurations with the community through a series of public outreach events, including meetings with numerous stakeholders, a series of workshops, an Open House on November 10, 2015 at the Palmer Events Center, and a concurrent 30-day Virtual Open House that begins on Wednesday, October 21, 2015. In addition to the operational configuration options, we will also share results of additional analyses conducted, including information from the University of Texas's Center for Transportation Research regarding any potential impacts to downtown traffic patterns resulting from this project. The Open House will be held:
Tuesday, November 10, 2015

3 - 7 p.m.
Palmer Events Center, Meeting Rooms 1 - 5, Level 2
900 Barton Springs Road, Austin, TX 78704
A map of the location and additional Open House information is available at www.MoPacSouth.com <http://www.MoPacSouth.com> <http://www.mopacsouth.com/>.
Free parking for the Open House is available in the Palmer Parking Garage.
No formal presentation is planned, and attendees are welcome to come and go at their convenience.
A Virtual Open House will also be available between Wednesday, October 21 and Friday, November 20, 2015 at www.MoPacSouth.com <http://www.MoPacSouth.com> <http://www.mopacsouth.com/>. Virtual Open House visitors will be able to review exhibits, watch informational videos, and submit comments and questions.
Please note that the official comment period for the Open House begins on October 21, 2015 with the launch of the Virtual Open House. The official comment period for the Open House will end on November 20, 2015. All comments and questions submitted during the official comment period for the Open House will be recorded and responded to as part of the Summary Report for the meeting. All comments and questions submitted at any other time during the study will also be shared with and considered by the study team, and will become part of the official project file for the Environmental Study.
If you have any questions or concerns about the project, I would be happy to schedule a meeting with you or your staff at your convenience. ? ?
Sincerely,
Mario Espinoza, Deputy Executive Director
Central Texas Regional Mobility Authority

UPDATES AND UPCOMING EVENTS
JOIN THE CONVERSATION
The Mobility Authority and TxDOT will host numerous open house meetings for those interested in learning more about the MoPac South Environmental Study. Information will be provided about the status of the Study, and attendees will have the opportunity to review materials, speak with project staff and provide feedback. Check back frequently for information about upcoming events.
UPCOMING MOPAC SOUTH ENVIRONMENTAL STUDY EVENTS:
Join the Mobility Authority and TxDOT for an Open House to learn how community input is helping to shape mobility improvements along MoPac from Cesar Chavez Street to Slaughter Lane. Information about several potential mobility concepts will be made available for review and study team members will be on hand to answer questions and hear your feedback. No formal presentation is planned, so please stop by at your convenience.
MoPac South Environmental Study Open House
November 10, 2015
3 - 7 p.m.
Palmer Events Center
900 Barton Springs Road
Level 2, Meeting Rooms 1-5
Location map
A Virtual Open House which will feature all of the materials available at the Open House, will be online from October 21 - November 20, 2015.
Parking is complimentary at the Palmer parking garage adjacent to the facility, which has two entrances, one from Barton Springs Road and one from Riverside Drive. If you plan to attend and have communication or accommodation needs, please contact us.
Learn more about the event through the MoPac South Environmental Study E-newsletter distributed on October 12.

Where: Palmer Events Center
Meeting Rooms 1-5, Level 2
900 Barton Springs Road
Austin, TX 78704
When: Tuesday, Nov. 10, 2015
3 p.m. - 7 p.m.
Complimentary parking available in the Palmer parking garage (entrances from Barton Springs Road and Riverside Drive)
Purpose: TxDOT and the Central Texas Regional Mobility Authority (Mobility Authority) are hosting an open house for the MoPac South corridor between Cesar Chavez Street and Slaughter Lane.
The open house is an opportunity to provide feedback about potential mobility improvements to the MoPac south corridor from Cesar Chavez Street to Slaughter Lane. The study team has responded to the community's request for additional analysis of the proposed express lanes concept and will share information about several potential operational configuration options. A No-Build, or Do-Nothing Alternative continues to be considered as required by the environmental process.
At the open house, project team members will be on hand to answer questions and provide information. No formal presentation will be given, and attendees are invited to come and go at their convenience.
If you can't attend the open house in person, you can review exhibits, watch informational videos and submit comments and questions through the virtual open house between Wednesday, Oct. 21 and Friday, Nov. 20, 2015.
Visit MoPac South for more information and to sign up for regular project updates and additional event information.
Description: The MoPac corridor south of Lady Bird Lake is a vital artery for Austin commuters and neighbors, as well as visitors to our region. Constructed between 1975 and 1992 as a four- to six-lane divided highway, it attracts up to 150,000 cars and trucks per day. Over time, population growth and development have increased and are negatively impacting the quality of life for corridor travelers.
The Mobility Authority and TxDOT are developing the environmental study and are working with the city of Austin, Capital Metro and other local partners to improve safety and mobility for drivers, transit riders, bicyclists and pedestrians in a manner that promotes environmental stewardship and sustainability.

MoPac South
Environmental Study

PURPOSE OF THE OPEN HOUSE

- Learn more about the MoPac South Environmental Study
- Review and provide input on operational configurations for the Express Lanes Alternative

The Mobility Authority responded to the community's call for more analysis of the Express Lanes Alternative and extended the project schedule to look at additional operational configurations and conduct more detailed analyses.

MoPac South
Environmental Study

COMMUNITY INPUT WAS INCORPORATED

- Added a direct connection at US 290 – *City of Austin*
- Added a new collector-distributor road at Loop 360 – *City of Austin*
- Shifted direct connection touchdown farther east on Cesar Chavez Street – *Austin ISD*
- Added a Texas Turnaround at Barton Skyway – *City of Rollingwood*
- Lengthened the Texas Turnaround at Loop 360 to increase capacity – *Stakeholder Comment*
- Reconfigured RM 2244 southbound exit ramp – *City of Rollingwood* and *Stakeholder Comment*
- Made ramp improvements at William Cannon Drive – *Stakeholder Comment*
- Added a third southbound general purpose lane south of William Cannon Drive – *Stakeholder Comment*
- Incorporated improvements at Lake Austin Boulevard – *Travis County*
- Added more Bike/Pedestrian facilities north of RM 2244 – *City of Rollingwood*

AGENCIES & THEIR ROLES IN THE ENVIRONMENTAL PROCESS

Who They Are	What They Do
Decision Making Agency TxDOT Environmental Division	• Review and approve the Environmental Assessment and technical reports
Lead Agencies Central Texas Regional Mobility Authority TxDOT Austin District	• Manage environmental and engineering process • Provide technical review and guidance
National Environmental Policy Act Technical Work Group ● U.S. Army Corps of Engineers ● Texas Historical Commission Texas Parks and Wildlife Department Barton Springs Edwards Aquifer Conservation District Capital Area Metropolitan Planning Organization* Capital Metro City of Austin City of Rollingwood City of West Lake Hills **Invited:** ● U.S. Fish and Wildlife Service ● U.S. Department of Agriculture - Natural Resources Conservation Service ● U.S. Department of Interior - Office of Environmental Policy and Compliance U.S. Environmental Protection Agency ● Texas Commission on Environmental Quality Lower Colorado River Authority Travis County City of Sunset Valley LBJ Wildflower Center	• Provide input on the: Purpose and Need for the project; screening and development of alternatives; methodologies to define impacts; and identification of the preferred alternative. • Review the draft and final EA

● Agencies that provide potential permits and other approvals for this project.

* Capital Area Metropolitan Planning Organization prepares the Long-Range Transportation Plan that identifies potential projects and allocates state and federal funding for both environmental studies and construction projects.

MoPac South
Environmental Study

WHAT ARE WE TRYING TO DO?
(PROJECT PURPOSE)

- Provide an opportunity for reliable travel times
- Improve operational efficiency
- Create a dependable and consistent route for transit
- Facilitate reliable emergency response

85% of respondents agree or strongly agree that the Draft Purpose and Need for this project are appropriate.

Source: Community Survey, spring 2014

MoPac South
Environmental Study

PROJECT GOALS AND OBJECTIVES

- Provide consistency with local and regional plans
- Reduce congestion delay and provide travel time savings for all roadway users
- Be constructible without unnecessary impacts to the natural and human environment*
- Avoid and minimize impacts to water quality*
- Deliver relief in a timely manner*
- Facilitate congestion management*
  - Increase opportunities for transit and ridesharing
  - Increase opportunities for pedestrians and bicyclists

**Major theme identified through public input provided via fall 2013 and spring 2014 Community Surveys.*

MoPac South
Environmental Study

WHAT PROBLEMS NEED TO BE ADDRESSED? (PROJECT NEED)

- Current and forecasted congestion levels are creating unreliable travel times
- Under the No Build Alternative (Do Nothing), it could take an **additional 35 minutes** to drive from Cesar Chavez Street to Slaughter Lane in 2035

TRAVEL TIME (IN MINUTES)
between Cesar Chavez Street and Slaughter Lane

	2015	2035 (NO BUILD)	ADDITIONAL TRAVEL TIME
Northbound			+29
Southbound			+35

Morning peak period northbound (7-9 a.m.)

Evening peak period southbound (4-6:30 p.m.)

MoPac South
Environmental Study

EXPRESS LANES

EXPRESS LANES ALTERNATIVE is recommended for the following reasons:

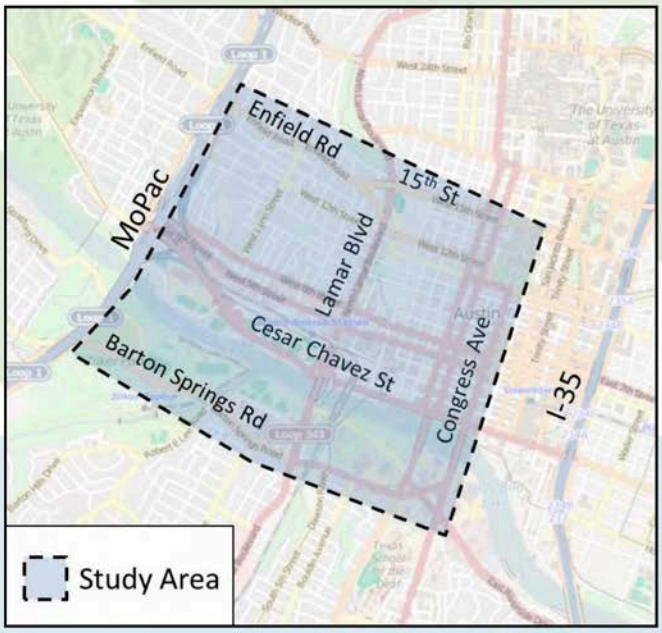
- Offers reliable travel times for single occupancy vehicles, high occupancy vehicles, vanpools, buses and emergency vehicles
- Provides the shortest peak period travel time for all vehicles, including those using the general purpose lanes
- Configurations with two Express Lanes in each direction and a downtown direct connection reduce annual delay by over 3.5 million vehicle hours of travel; twice that of the HOV Lane Alternative and 15 times more than the Transit Only Lane Alternative. Configurations with one Express Lane in each direction or no downtown direct connection reduce annual delay by over 2.5 million vehicle hours of travel; 50% more than the HOV Lane Alternative and 10 times as much as the Transit Only Lane Alternative.
- Avoids unnecessary impacts to the natural and human environment, and avoids and minimizes impacts to water quality
- Delivers relief in a timely manner
- Increases opportunities for transit and ridesharing and includes new bicycle and pedestrian facilities

In accordance with the National Environmental Policy Act, the No Build (Do Nothing) Alternative will continue to move forward as a baseline for comparison.

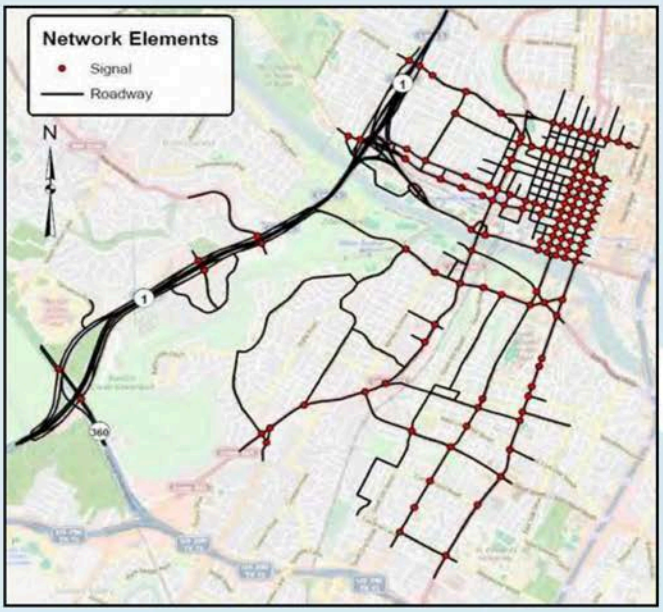
MoPac South
Environmental Study

DYNAMIC TRAFFIC ASSIGNMENT STUDY

University of Texas' Center for Transportation Research analyzed how the addition of Express Lanes might impact traffic patterns on downtown streets.



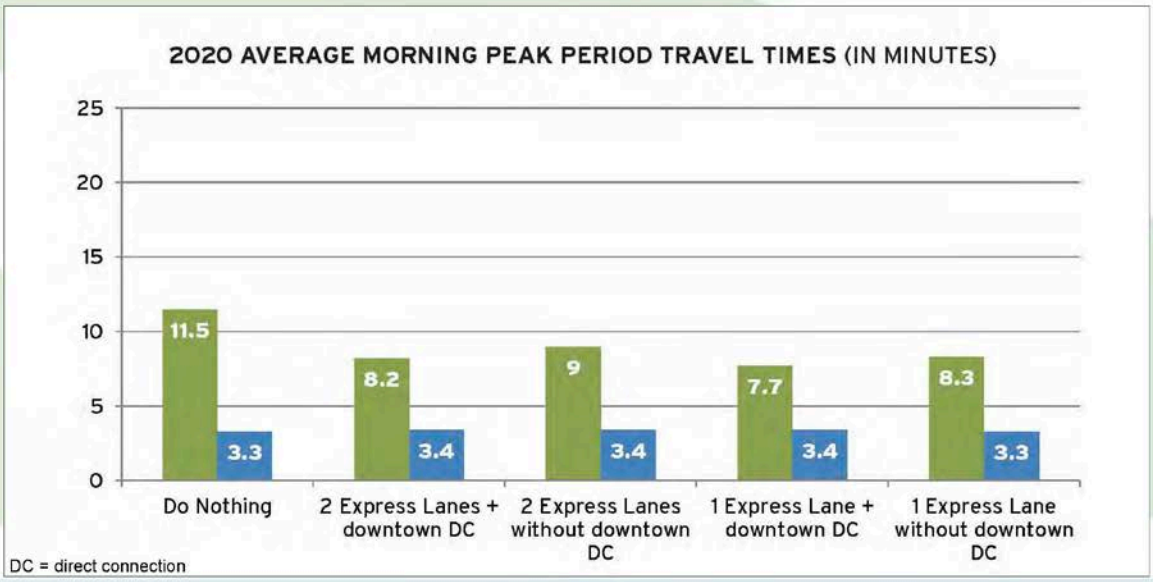
Downtown study area: Street-level travel time evaluations were conducted on the major streets in this zone.

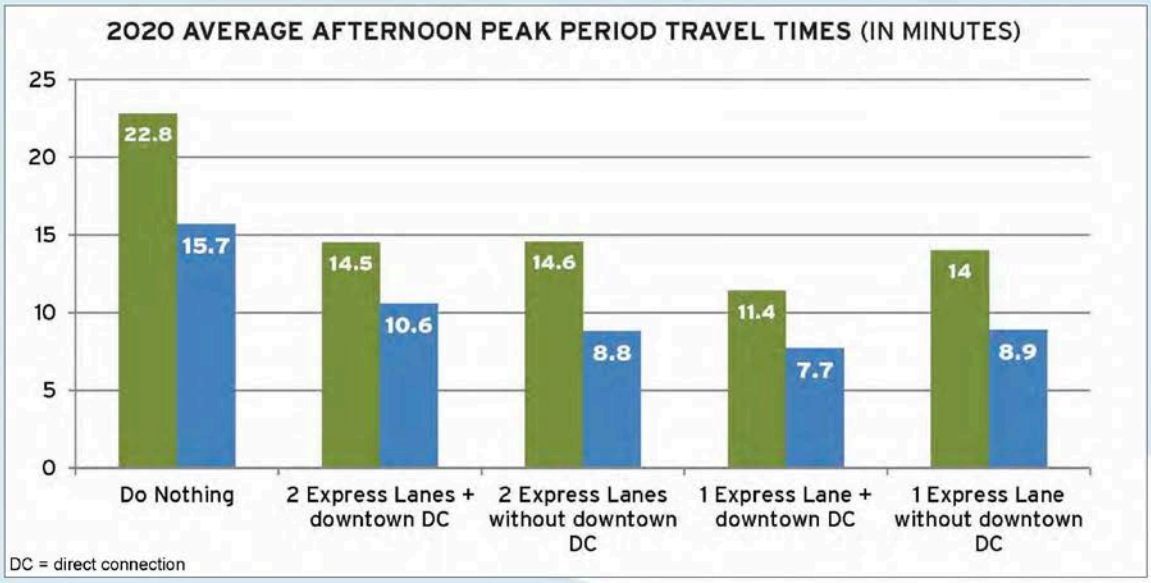


Model area: To properly analyze the impacts of the MoPac South Express Lanes on the study area, the limits of the model area extend beyond the Study Area boundaries.

MoPac South
Environmental Study

DYNAMIC TRAFFIC ASSIGNMENT STUDY RESULTS



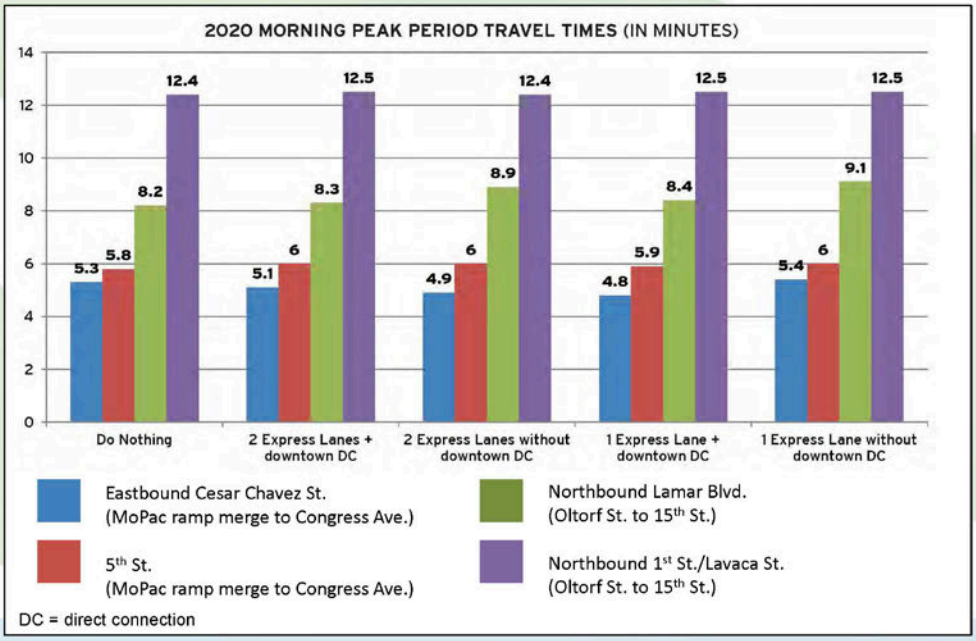


Model Area

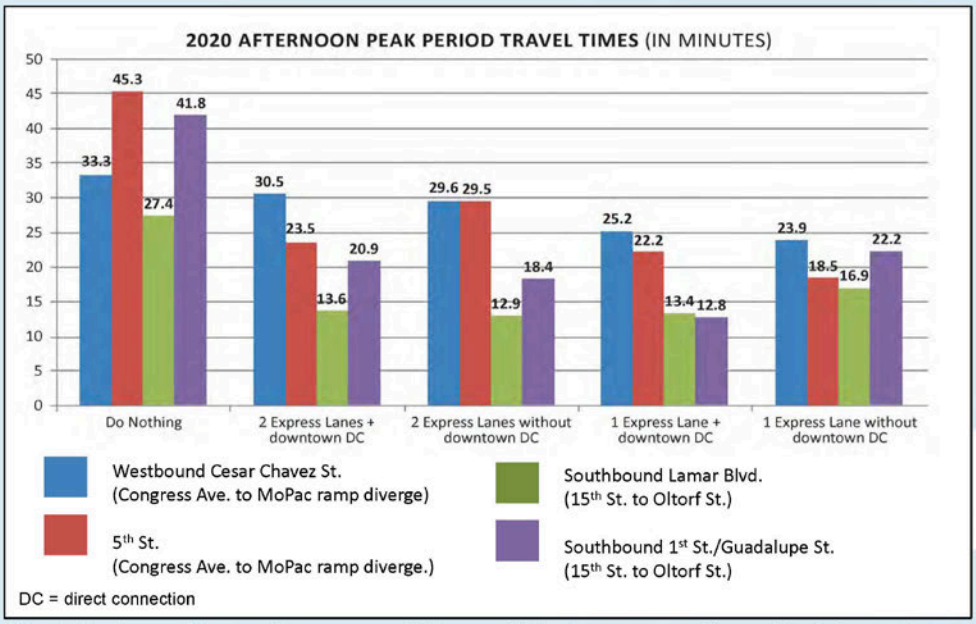
Downtown Study Area

MoPac South Environmental Study

DYNAMIC TRAFFIC ASSIGNMENT STUDY RESULTS



Modeled configurations present travel times on all routes within one minute of the No Build (Do Nothing) Alternative.



Modeled configurations would result in lower peak period travel times when compared to the No Build (Do Nothing) Alternative.

MoPac South
ENVIRONMENTAL STUDY

WHICH OPERATIONAL CONFIGURATION WILL MOVE FORWARD?

The following goals and objectives will be used to further develop and evaluate the Express Lanes Alternative:

- Reduce congestion delay and provide travel time savings for all roadway users
  - Reduce congestion delay and optimize capacity utilization
  - Maximize travel time savings
  - Serve all roadway users
- Be constructible without unnecessary impacts to the natural and human environment
- Facilitate congestion management
  - Increase opportunities for transit and ridesharing

MoPac South
Environmental Study

OPERATIONAL CONFIGURATIONS

ONE EXPRESS LANE + DOWNTOWN DIRECT CONNECTION

ONE EXPRESS LANE WITHOUT DOWNTOWN DIRECT CONNECTION

TWO EXPRESS LANES + DOWNTOWN DIRECT CONNECTION

TWO EXPRESS LANES WITHOUT DOWNTOWN DIRECT CONNECTION

TWO EXPRESS LANES + ELEVATED RAMPS NEAR BARTON SKYWAY

CITY OF AUSTIN PROPOSAL

MoPac South
Environmental Study

A preliminary layout was presented on tables for each of the six operational configurations from Cesar Chavez to Slaughter Lane

ONE EXPRESS LANE + DOWNTOWN DIRECT CONNECTION

- **Number of Express Lanes in Each Direction:** One
- **Access to Downtown:** One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- **New Elevated Structure:** One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

2035 Travel Time

TRAVEL TIMES (peak period in minutes)
between Cesar Chavez Street and Slaughter Lane

	A.M. (Northbound)	P.M. (Southbound)
Today	23	16
2035 No Build	52	51
2035 General Purpose Lanes	38	36
2035 Express Lanes	10	10

Morning peak period northbound (7-9 a.m.) — Evening peak period southbound (4-6:30 p.m.)

Estimated Additional Right-of-Way

- *From* Zilker Park — **none**
- *From* Lady Bird Lake — **none**
- *From* Lamar Beach Park (along Cesar Chavez Street) — **1.0 acre**

Conversion of park land to transportation use would require approval by the City of Austin.

- *From* commercial property (for Shared Use Path) — **0.02 acres**

Total additional right-of-way — 1.02 acres

Construction Cost Estimate: $315 M*

** Does not include final design, right-of-way acquisition, utility adjustments and other project development costs.*

MoPac South
Environmental Study

ONE EXPRESS LANE WITHOUT DOWNTOWN DIRECT CONNECTION

- **Number of Express Lanes in Each Direction:** One
- **Access to Downtown (Northbound):** Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- **Access from Downtown (Southbound):** Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- **New Elevated Structure**: None

• *From* Lady Bird Lake	**none**
• *From* Lamar Beach Park	**none**
• *From* commercial property (for Shared Use Path)	**0.02 acres**
Total additional right-of-way	**0.02 acres**

Construction Cost Estimate: $275 M*

** Does not include final design, right-of-way acquisition, utility adjustments and other project development costs.*

MoPac South
Environmental Study

BENEFITS OF PROVIDING TWO EXPRESS LANES IN EACH DIRECTION

There is sufficient right-of-way to add two Express Lanes in each direction along MoPac South. While adding one Express Lane would significantly improve mobility, adding two Express Lanes would better meet the Purpose and Need of the project of providing reliable travel times for vehicles, transit and emergency responders.

- More than double the number of vehicles would be able to move through the Express Lanes if two lanes in each direction are provided instead of one. (*FHWA 2003*)
- Building two Express Lanes would increase the cost of the project by less than 10%. Costs would be significantly higher to construct a second Express Lane in the future.
- A second Express Lane would require an additional 24 feet of pavement. This would not significantly change the environmental impacts of the project.
- The corridor would be disturbed again if a second Express Lane is constructed in the future, impacting the environment, traffic flow and neighboring homes and businesses.
- With two Express Lanes, toll rates would be lower because more vehicles would be able to use them.
- Facilities with two Express Lanes in each direction allow for more efficient and safer incident management.

MoPac South
Environmental Study

TWO EXPRESS LANES + DOWNTOWN DIRECT CONNECTION

- **Number of Express Lanes in Each Direction:** Two
- **Access to Downtown:** One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- **New Elevated Structure**: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

Environmental Study

CITY OF AUSTIN PROPOSAL

Characteristics Unique to Concept:

- Westbound Lake Austin Boulevard turnaround to southbound collector-distributor road
- From Bee Cave Road, eastbound to northbound movement is only for access to downtown.
- Access to northbound MoPac via turnaround at Barton Skyway and northbound entrance ramp
- Northbound collector-distributor road for the Bee Cave Road entrance ramp, Express Lane and general purpose lane exit ramps trying to access Cesar Chavez Street/5th Street
- Southbound collector-distributor road for Cesar Chavez Street /5th Street and Lake Austin Blvd entrance ramps accessing the general purpose lane entrance ramp, Express Lane entrance ramp and Bee Cave Road exit ramp
- Southbound collector-distributor road for Bee Cave Road and Barton Skyway entrance ramps to southbound Express Lane, eastbound Loop 360 and southbound MoPac general purpose lanes
- Entrance and exit ramp between Barton Skyway and Loop 360 are reversed. No access from Loop 360 to northbound Express Lane
- No MoPac general purpose lane or ramp improvements south of US 290

CITY OF AUSTIN PROPOSAL

- **Number of Express Lanes in Each Direction:** Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- **Access to Downtown (Northbound):** Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector-distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez Street/5th Street exit
- **Access from Downtown (Southbound):** From Lake Austin Boulevard, enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- **New Elevated Structure**: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

2035 Travel Time

TRAVEL TIMES (peak period in minutes)
between Cesar Chavez Street and Slaughter Lane

	A.M. (Northbound)	P.M. (Southbound)
Today	23	16
2035 No Build	52	51
2035 General Purpose Lanes	41	37
2035 Express Lanes	11	11

Morning peak period northbound (7-9 a.m.) Evening peak period southbound (4-6:30 p.m.)

Estimated Additional Right-of-Way

- *From* Zilker Park **3.94 acres**

Conversion of Zilker Park Historic District land to transportation use would require the approval of the City of Austin and State Historic Preservation Officer.

- *From* Lady Bird Lake **0.33 acres**

Conversion of Lady Bird Lake to transportation use would require approval from the National Park Service.

- *From* Lamar Beach Park **none**
- *From* commercial property (for Shared Use Path) **0.02 acres**

Total additional right-of-way **4.29 acres**

Construction Cost Estimate: $335 M*

* ***Does not include final design, right-of-way acquisition, utility adjustments and other project development costs.***

CONNECTIONS TO DOWNTOWN

A downtown connection to/from the Express Lanes could be included with the project and is being evaluated as part of this study. It is not dependent on the number of Express Lanes that would be constructed in each direction (one or two).

- 40% of MoPac South traffic heads downtown in the morning. 51% of traffic leaving downtown is heading to MoPac South. This traffic utilizes Cesar Chavez Street, 5th/6th Streets, and Enfield Road. (CDM Smith 2014)
- A downtown connection eliminates a weaving condition that would be created by Express Lane traffic (including buses and emergency responders) that would merge into general purpose lane traffic to access downtown ramps. This weaving condition would negatively impact both Express Lane and general purpose lane traffic.
- A downtown connection would provide a more reliable trip for transit riders, emergency responders and drivers because it would eliminate the need to utilize the general purpose lanes for any portion of the trip.

Direct connections into downtown would improve travel times for Express Lane drivers by **up to 4 minutes** in the morning and **10 minutes** in the evening.

Direct connections into downtown reduce weaving on the general purpose lanes, resulting in improved travel times for general purpose lane drivers by **up to 3 minutes** in the morning and **7 minutes** in the evening.

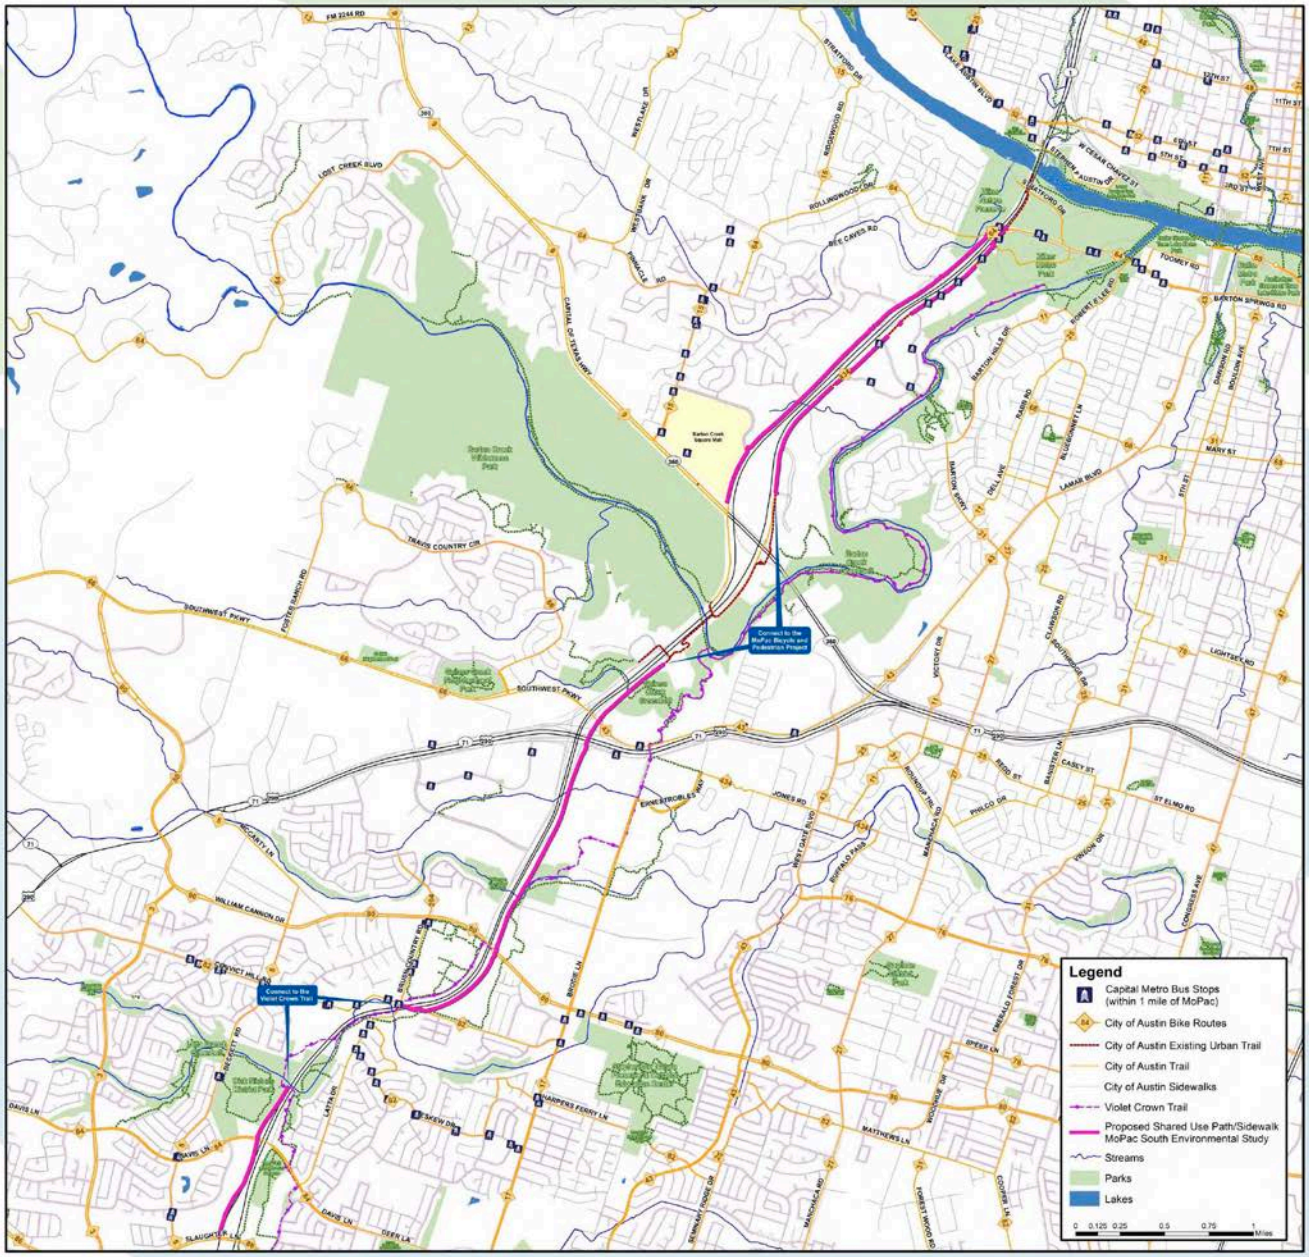
BIKE AND PEDESTRIAN SYSTEM

Proposed bicycle and pedestrian improvements connect with existing city of Austin facilities and the Violet Crown Trail to provide a continuous bike/pedestrian system from Slaughter Lane to downtown.



ENVIRONMENTAL STUDIES

These social, economic, and environmental issues are being considered:

Air Quality & Traffic Noise

Water Resources

Archeological & Historic Resources

Land Use & Parkland

Vegetation & Wildlife

Threatened & Endangered Species

Indirect & Cumulative Impacts

Social & Community Impacts

Hazardous Materials

The environmental review, consultation, and other actions required by applicable Federal environmental laws for this project are being, or have been, carried out by TxDOT pursuant to 23 U.S.C. 327 and a Memorandum of Understanding dated December 16, 2014, and executed by FHWA and TxDOT.

MoPac South
ENVIRONMENTAL STUDY

THREATENED AND ENDANGERED SPECIES

Field surveys were conducted in the project area. **No listed threatened or endangered species were encountered.**

Birds

Golden-cheeked Warbler *(Dendroica chrysoparia)*

Karst species

Harvestman *(Texella* sp.)

Fresh water mussels

Texas Fatmucket *(Lampsilis bracteata)*

Salamanders

Barton Springs Salamander *(Eurycea sosorum)*

MoPac South
Environmental Study

CULTURAL RESOURCES

Section 106 of the National Historic Preservation Act and 36 CFR 800 requires Federal agencies to:

- Take into account the effects of their undertakings on historic properties (36 CFR 800.1)
- Complete the 106 process prior to the approval of the expenditure of funds or issuance of a license
- Seek and consider the views, comments and input of the public on effects on historic properties
- Involve consulting parties in findings, determinations and resolutions of any adverse effects made during the 106 process

Section 106 Consulting Parties identified for the MoPac South Environmental Study include:

- Texas Historical Commission
- City of Austin
- Preservation Austin

Several other organizations have expressed an interest in the Section 106 process. **If you or your organization would like to receive updates on this topic, please sign up for the project mailing list at www.MoPacSouth.com.**

MoPac South
ENVIRONMENTAL STUDY

CULTURAL RESOURCES

Tasks completed:

- Prepared the archeological background study
- Consulted with federally-recognized tribes
- Established areas of potential effect

Next Steps:

- Complete reconnaissance survey for non-archeological historic properties
- Eligibility consultation with Texas Historical Commission, city of Austin and Preservation Austin
- Identify a Build Alternative
- Effects consultation with Texas Historical Commission, city of Austin and Preservation Austin

MoPac South
Environmental Study

WATER QUALITY

The Mobility Authority plans to meet water quality standards on this project to protect the Barton Springs segment of the Edwards Aquifer Recharge Zone, as required by the Texas Commission on Environmental Quality.

Water quality treatment measures on MoPac could be enhanced by this project by implementing the latest, most modern technologies available:

- Permeable Friction Course (PFC) Pavement
- Water Quality Ponds
- Vegetative Controls
- Hazardous Materials Traps

MoPac South
Environmental Study

BARTON CREEK

- All Operational Configurations feature travel lanes on new bridges over Barton Creek within the existing MoPac South right-of-way.
- New bridges would span the creek and columns would be placed outside the water channel.

Photo by MoPac South Study Team

- To protect water quality, a Stormwater Pollution Prevention Plan and a Water Pollution Abatement Plan will be developed for approval by the Texas Commission on Environmental Quality.
- The Study Team has been working with the MoPac Bicycle and Pedestrian Bridge Project Team to implement lessons learned from that project.
- If the project is approved for construction, a geotechnical investigation would be conducted to determine subsurface soil and rock conditions, determine if there are any karst features in the footprint of the proposed bridge foundations, and provide foundation recommendations for the bridge supports. Guidelines for karst feature protection would be developed, similar to the geotechnical investigation conducted for the MoPac Bicycle Bridge Project.

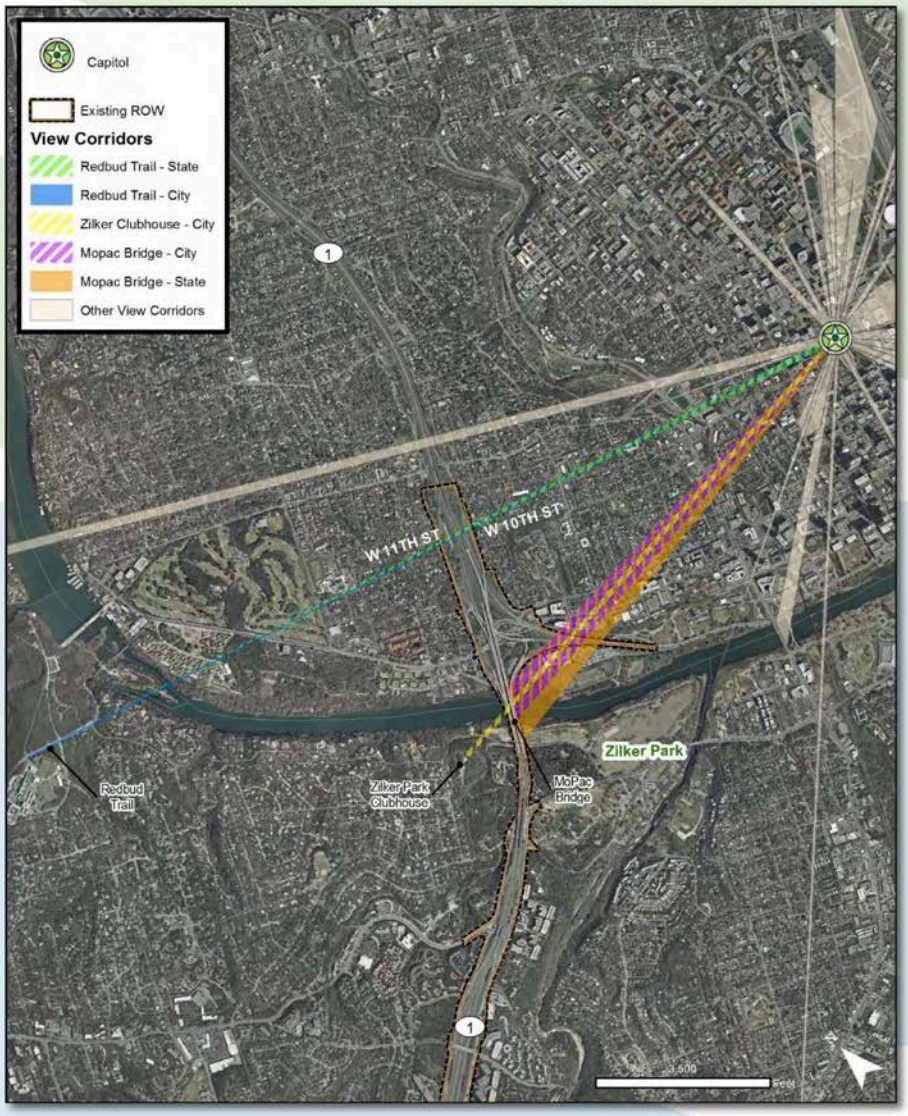
MoPac South
ENVIRONMENTAL STUDY

CAPITOL VIEW CORRIDORS

None of the operational configurations under consideration would impact your view of the Capitol.



The Capitol View Corridor is a plane that extends from a defined viewpoint or points to the base of the Capitol dome.

In 1983, protections were placed on the remaining views of the Texas State Capitol building, called Capitol View Corridors.
(TEX GV. CODE ANN. § 3151.002: Texas Statutes – Section 3151.002)

MoPac South
Environmental Study

TRAFFIC NOISE

Given the 98% projected population growth in Travis and Hays counties by 2040 (CAMPO 2015), traffic noise along MoPac is going to continue to increase over time, regardless of whether or not we build improvements. A detailed noise analysis will be conducted once a recommended Express Lane configuration has been determined. The community will be engaged in next steps after the analysis is complete.

MoPac South
Environmental Study

NEXT STEPS

- Compile and consider input from tonight's meeting
- Continue to listen to and engage the community
- Identify the best operational configuration for the Express Lanes Alternative based on the project's Purpose and Need, goals and objectives, and public comments

MOPAC SOUTH
TRAIL ENHANCEMENT OPPORTUNITIES ALONG THE PROJECT CORRIDOR
What items are most important to you?
MoPac South
Environmental Study

- Use the permeable friction coarse (PFC) for the connector path between the VCTrail and the pedestrian walk/path for better traction and drainage

- Add airport graphic sign on sign at interchange of 71E/Congress/S. First St.

- Also, add “airport left lane” w/ graphic at Todd Ln. exit to allow time for drivers to move into the correct lane sooner

- Need lane designation sign on road behind barton square creek mall to intersection of 360 and So. MoPac. Drivers need to know before coming around that blind corner which lane they need

- These cars turing left have nowhere to go! (drawing of intersection at corner of Goodwill/Jims and HEB, arrows included)

- Make road designation signs more consistent. Not just “loop 1” or MoPac but “Loop1/MoPac Exp.”

- Oak Hill Y intersection add more time for traffic to clear – enough for cars at cross street after RT 71E turns

red

- Don’t completely run the Deep Eddy Pool and Hike and Bike experience with noise, smog and light
- I second this ^^
- 1) Bicycle and pedestrian facilities
- 2) Water quality enhancements
- Provide safe bike lanes separate from automobile lanes
- I want to be able to safely bike to work (Davis Ln. to Bee Cave Rd.)
- Consider elevated bike bridge over SW Pkwy. And MoPac on the west side
- Need a continuous path that is paved the entire length. Smooth joints – not bumpy sidewalk.
- Bicycle and pedestrian safety
- Seamless bicycle connectivity
- Fill gaps (4) in proposed shared use path/sidewalk in MoPac South study area
- Build the YBC Trail (fund it)
- Inhibit improvements being used by downtown developers as reasons for more up zoning and density in urban core

OPEN HOUSE #3 SURVEY
RESULTS SUMMARY

TOP PRIORITIES

Water Quality Enhancements:
Selected by 77% of
148 respondents

Bicycle and Pedestrian Facilities:
Selected by 76% of
130 respondents

Roadway Signage:
Selected by 69% of
120 respondents

Landscaping:
Selected by 60% of

LOWEST PRIORITIES

Wall Textures:
Selected by 34% of
47 respondents

Public Art:
Selected by 33% of
57 respondents

TOP PREFERENCES

Water Quality Enhancements
"When possible, more options like this would be aesthetically pleasing versus concrete detention."

Water Quality Enhancements:
Bio-Filtration Pond
131 Respondents

Landscaping:
Wildflower Plantings
121 Respondents

Landscaping:
Tree Grouping
125 Respondents

Bicycle and Pedestrian Facilities:
Path Along Roadway
117 Respondents

Landscaping
"Please take the ecological function into consideration as these plans move forward. Not doing so would be a major failure!"

Bicycle and Pedestrian Facilities
"There should be protected bicycle roadways along MoPac."

Bridge Enhancements
"Bridge enhancements are very pleasing, just keep natural colors."

LOWEST PREFERENCES

Defining Characteristics
"Decreased impact of noise and lighting; sidewalks along service roads; landscaping with Texas trees; materials to reduce sound and runoff toxicity into streams."

Water Quality Enhancements:
Concrete Box Detention
134 Respondents

Roadway Signage:
Standard Overhead Structure
106 Respondents

Bridge Enhancements:
Existing Standard Construction
96 Respondents

Wall Textures
"You really notice the need and quality after installation."

MoPac South
ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Which viewpoint is closest to your own? (select one):

____I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

____We don't need to address the traffic issues on MoPac South because improvements will encourage more development. We should encourage people to change their driving behaviors.

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one):

____Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

____Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

____Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

____Connecting the Express Lanes to downtown Austin is unimportant. No part of MoPac should be elevated anywhere as part of this project.

In order to arrive at a recommended configuration for the Express Lanes Alternative, each configuration will be evaluated using the following criteria:

- *Reduce congestion delay and provide travel time savings for all roadway users*
  - *Reduce congestion delay and optimize capacity utilization*
  - *Maximize travel time savings*
  - *Serve all roadway users*
- *Be constructible without unnecessary impacts to the natural and human environment.*
- *Facilitate congestion management*
  - *Increase opportunities for transit and ridesharing*

Please indicate how much you agree with the following statement. (select one):

	Strongly Agree	Agree	Undecided	Disagree	Strongly Disagree
These criteria listed above are appropriate.	○	○	○	○	○

With help from community stakeholders, local governments and transportation partners, the study team has incorporated several improvements into the Express Lane Alternative. Please indicate how important each of the following improvements are to you. (select one):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
Address existing congestion problems in the vicinity of William Cannon Dr. and MoPac by improving entrance and exit ramps.	○	○	○	○	○
Add Texas Turnarounds at Barton Skyway to better facilitate access to MoPac, especially during events at Zilker Park.	○	○	○	○	○
Add an additional southbound general purpose lane south of William Cannon Dr.	○	○	○	○	○
Add new bypass lanes at Loop 360 in order to relieve back-ups at this exit.	○	○	○	○	○
Add direct connections from the Express Lanes to and from US 290.	○	○	○	○	○
The point where the Express Lane traffic would merge onto Cesar Chavez St. from the direct connection should shift farther east past Austin High School.	○	○	○	○	○
Reconfigure the southbound RM 2244 exit ramp to allow for more time to access RM 2244 from MoPac.	○	○	○	○	○
Add more bike/pedestrian facilities north of RM 2244 to better facilitate access, especially during events at Zilker Park.	○	○	○	○	○
New bridges over Barton Creek should span the creek and bridge columns should be placed outside of the water channel.	○	○	○	○	○
Implement improvements at Lake Austin Blvd. and 5th St. to reduce congestion at this intersection.	○	○	○	○	○

Please indicate how important the following facts are to you. (select one answer per question/statement):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
The MoPac South Environmental Study team is developing Best Management Practices to protect water quality in the Edwards Aquifer.	○	○	○	○	○
The MoPac South Environmental Study team is conducting biological surveys related to vegetation and threatened and endangered species.	○	○	○	○	○
The MoPac South Environmental Study team is conducting research on historic resources along the corridor, such as Zilker Park.	○	○	○	○	○
The MoPac South Environmental Study team is performing traffic noise and air quality analyses.	○	○	○	○	○

ENVIRONMENTAL STUDY

HELP SHAPE MOBILITY IMPROVEMENTS ALONG MOPAC

THE PROBLEM

The MoPac Expressway south of Lady Bird Lake is a vital artery for Austin commuters and neighbors, as well as visitors to our region. Constructed between 1973 and 2013 as a four to six lane divided highway, it attracts up to 130,000 cars and trucks per day. Over time, expanding population as well as residential, retail and commercial development in the corridor has led to increased traffic congestion, negatively impacting mobility and quality of life for the traveling public and adjacent neighborhoods.

IDENTIFYING A SUSTAINABLE SOLUTION

The Central Texas Regional Mobility Authority and the Texas Department of Transportation are working with local partners to improve approximately eight miles of the MoPac Expressway from Cesar Chavez Street to Slaughter Lane.

PURPOSE OF AND NEED FOR IMPROVEMENTS TO MOPAC

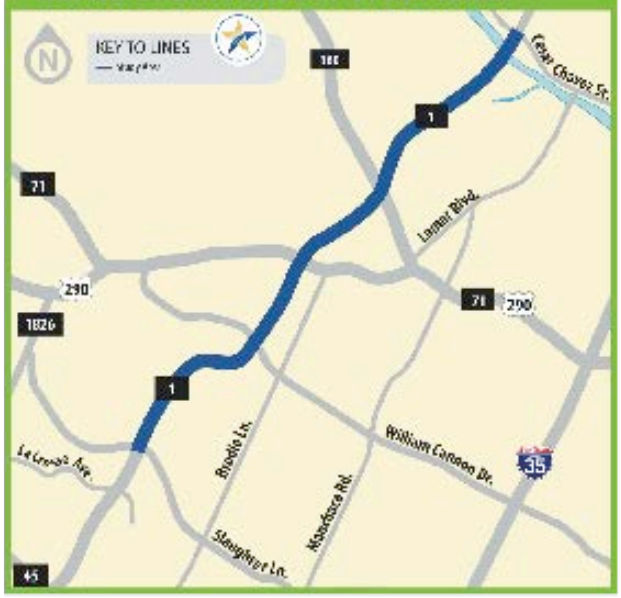
What are we trying to do?

- Provide an opportunity for reliable travel times
- Improve operational efficiency
- Create a dependable and consistent route for transit
- Facilitate reliable emergency response

What problem are we trying to address?

- Current congestion levels are creating unreliable travel times
- The total population of Travis and Hays counties is expected to increase 98% by 2040
- Emergency response times are impacted by traffic congestion
- If we do nothing, it could take an additional 35 minutes to drive from Cesar Chavez Street to Slaughter Lane in 2035

MOPAC SOUTH PROJECT STUDY AREA



ENVIRONMENTAL CONSIDERATIONS

The study will assess the potential impacts of proposed transportation improvements on the environment. The following resources will be studied: threatened and endangered species and other wildlife, water quality, trees and other vegetation, cultural resources, traffic noise, air quality, socio-economic resources, geology and soils, visual and aesthetic resources, parkland and other recreational facilities.

PROJECT GOALS AND OBJECTIVES

- Provide consistency with local and regional plans
- Reduce congestion delay and provide travel time savings for all roadway users
- Be constructible without unnecessary impacts to the natural and human environment
- Avoid and minimize impacts to water quality
- Deliver relief in a timely manner
- Facilitate congestion management
- Increase opportunities for transit, ridesharing, pedestrians and bicyclists

November 2015

ALTERNATIVES EVALUATION

Preliminary Alternatives

The study team evaluated six preliminary alternatives. Among others, these alternatives included the addition of General Purpose Lanes, HOV Lanes, Express Lanes or Transit Only Lanes.

Alternative Recommended

The Express Lanes Alternative best meets the Purpose and Need and is recommended because it:

- Offers reliable travel times for single occupancy vehicles, high occupancy vehicles, vanpools, buses and emergency vehicles
- Provides the shortest peak period travel time for all vehicles, including those using the general purpose lanes
- Provides over three million hours of annual travel time savings for all users compared to the No Build Alternative. That's about 1.7 times more savings than HOV Lanes and 13 times more savings than Transit Only Lanes.
- Avoids unnecessary impacts to the natural and human environment and avoids and minimizes impacts to water quality
- Increases opportunities for transit and ridesharing and includes new bicycle and pedestrian facilities

Continuing Engineering Analysis and Community Input

The Mobility Authority responded to the call for more analysis of the Express Lanes Alternative, and extended the project schedule to work with the community and local governments to look at additional operational configurations. These operational configurations are:

- One Express Lane in each direction with a downtown direct connection
- One Express Lane in each direction without a downtown direct connection
- Two Express Lanes in each direction with a downtown direct connection
- Two Express Lanes in each direction without a downtown direct connection
- Two Express Lanes in each direction with elevated ramps near Barton Skyway
- A configuration proposed by the city of Austin

A No Build (Do Nothing) Alternative continues to be considered.

DATA AND DETAILED ANALYSIS RESULTS AVAILABLE

The Mobility Authority worked with the Center for Transportation Research (CTR) at the University of Texas to conduct a dynamic traffic assignment study (DTA) to determine how the addition of Express Lanes might impact the downtown street network. The DTA shows that the addition of Express Lanes on MoPac would not adversely affect congestion on Austin's downtown street grid as a whole. All operational configuration options studied either presented an overall improvement or resulted in overall negligible changes in travel times within the downtown network.

The study team also analyzed how the six different operational configurations under consideration could impact travel times on MoPac South in the morning and afternoon peak periods between the merge onto the MoPac ramps at Cesar Chavez Street and Slaughter Lane. All configurations studied improve peak period travel times on the general purpose lanes when compared to the No Build (Do Nothing) Alternative. Express Lane travel times range from nine - 20 minutes depending on the configuration selected.

To review the full results of the analysis, visit **www.MoPacSouth.com**.

STAY INVOLVED

We welcome your feedback and questions about the MoPac South Environmental Study. To learn more or to request a presentation for your group, please contact us by email at *www.MoPacSouth.com/contact/* or by phone at (512) 996-9778.

METRO

November 2015

PUBLIC INPUT SUMMARY

PUBLIC INPUT/FEEDBACK	HOW WE RESPONDED
Remove elevated ramps over Lady Bird Lake. (*Stakeholder Comment*)	Developed and evaluated other options for providing downtown access to and from the Express Lanes. (see Operational Configurations)
Provide only one Express Lane in each direction. (*Stakeholder Comment*)	Developed and evaluated additional operational configurations including some with one Express Lane in each direction. (see Operational Configurations)
How will the project impact traffic on Cesar Chavez Street and other downtown streets? (*Stakeholder Comment*)	Commissioned a study led by University of Texas Center for Transportation Research. Study concluded that no adverse impacts to downtown would result from the proposed project. (see Dynamic Traffic Assignment Study)
Will the downtown connection on Cesar Chavez Street conflict with traffic to and from Austin High School? (*Austin High School Comment*)	Shifted direct connection touchdown farther east on Cesar Chavez Street and added barrier separation to eliminate Austin High School conflict points. (see Operational Configurations that feature a downtown direct connection)
Add direct connection ramps for Bee Cave Road Express Lane access. (*City of Rollingwood Comment*)	Evaluated and determined not feasible due to the proximity of the northbound MoPac entrance ramp at Bee Cave Road.
Add a southbound-to-northbound Texas Turnaround at Barton Skyway. (*City of Rollingwood Comment*)	Included in all operational configurations. (see Operational Configurations)
Add a third northbound general purpose lane between Davis Lane and William Cannon Drive. (*Stakeholder Comment*)	TxDOT will add an auxiliary lane by restriping MoPac northbound from Davis Lane to William Cannon Drive under a separate project. Construction is anticipated to begin in spring 2016.
Lengthen the Texas Turnaround at Loop 360 to increase capacity. (*Stakeholder Comment*)	Included in all operational configurations. (see Operational Configurations)
Reduce southbound congestion between Bee Cave Road and Loop 360. (*City of Austin Comment*)	Added a collector-distributor road to all operational configurations connecting southbound entrance ramps from Bee Cave Road and Barton Skyway to southbound Express Lane, eastbound Loop 360 and southbound MoPac general purpose lanes. (see Operational Configurations except the City of Austin Proposal)
Address southbound MoPac congestion between US 290 and William Cannon Drive. (*Stakeholder Comment*)	Made ramp improvements and added a short section of collector-distributor road to all operational configurations. (see Operational Configurations)
Provide connection between US 290 and proposed MoPac South Express Lanes. (*City of Austin* and *Capital Metro Comment*)	Added direct connection from eastbound US 290 to northbound Express Lanes and southbound Express Lanes to westbound US 290. (see Operational Configurations)

(continued on back)

MoPac South

PUBLIC INPUT/FEEDBACK	HOW WE RESPONDED
Add sidewalk connection to RM 2244 on west side of MoPac. (*City of Rollingwood Comment*)	Included sidewalk connection in all operational configurations. (see Operational Configurations)
Address congestion at northbound entrance ramp from Southwest Parkway. (*Stakeholder Comment*)	This would require widening to the east, which is not feasible due to proximity of the new bike and pedestrian bridge over Barton Creek.
Provide additional southbound general purpose lane south of William Cannon Drive. (*Stakeholder Comment*)	Incorporated the third southbound general purpose lane between William Cannon Drive and Davis Lane into all operational configurations. (see Operational Configurations except the City of Austin Proposal)
Add Davis Lane southbound entrance ramp and northbound exit ramp. (*Stakeholder Comment*)	There is not enough distance between this location and Slaughter Lane to install an entrance ramp. A minimum weaving length of 2,000 feet is required (TxDOT Roadway Design Manual 2014). Other ramping arrangements are constrained by adjacent parkland.
Shared Use Path should be separated from traffic. (*Travis County Comment*)	A Shared Use Path that is separated from traffic is included where feasible in all operational configurations. (see Operational Configurations)
Improvements are needed to the intersection of 5th St./ Lake Austin Blvd. at the northbound MoPac exit. (*Travis County Comment*)	VISSIM modeling conducted did not show a significant improvement with a traffic signal for the northbound MoPac exit ramp at 5th Street and Lake Austin Boulevard. Discussions with Travis County will continue. These improvements could be implemented independent of this project.
Make improvements to the southbound MoPac entrance ramp at Lake Austin Boulevard. (*Travis County Comment*)	An extended left-turn bay located on westbound Lake Austin Boulevard at the southbound MoPac frontage road has been incorporated into all operational configurations. (see Operational Configurations) Adding a right turn on eastbound Lake Austin Boulevard at the southbound MoPac frontage road may require additional right-of-way on Lake Austin Boulevard which would likely be outside the scope of this study. Discussions with city of Austin, TxDOT, and Travis County will continue.
Consider building high capacity transit (e.g., rail) instead of Express Lanes. (*Stakeholder Comment*)	Held meetings with Capital Metro. Their plans for the MoPac South corridor continue to focus on express bus service to downtown from park-and-ride facilities.
Construct a park-and-ride near Slaughter Lane. (*Travis County Comment*)	The Mobility Authority continues to meet regularly with Capital Metro to discuss the most appropriate locations for future park-and-ride lots.

Some of the feedback and input we have received suggest improvements that are outside the scope of this project. We have referred those comments to the agencies with jurisdiction over those areas (TxDOT and/or city of Austin).

- Provide pedestrian crossing signal on northbound and/or southbound frontage road near Rollingwood Drive. (*City of Rollingwood Comment*)
- Add stop signs at Rollingwood Drive for MoPac northbound and southbound frontage roads. (*City of Rollingwood Comment*)
- Redesign intersections at Bee Cave Road and MoPac frontage roads. (*City of Rollingwood Comment*)
- Add another right-turn lane on southbound frontage road approach to William Cannon Drive intersection. (*Stakeholder Comment*)
- Add eastbound capacity on Cesar Chavez Street from MoPac to Lamar Boulevard. (*Travis County Comment*)
- Add direct connection to Loop 360. (*Stakeholder Comment*)

MoPac South

NOVEMBER 2015

DYNAMIC TRAFFIC ASSIGNMENT STUDY

The Central Texas Regional Mobility Authority (Mobility Authority) and the Texas Department of Transportation (TxDOT) are working with local partners on the MoPac South Environmental Study to determine the best alternative for providing reliability and safety on approximately eight miles of MoPac from Cesar Chavez Street to Slaughter Lane. When Express Lanes were identified as the Recommended Build Alternative, the Mobility Authority commissioned a local dynamic traffic assignment (DTA) study by the University of Texas at Austin Center for Transportation Research to evaluate how different operational configurations could impact travel times within the downtown area.

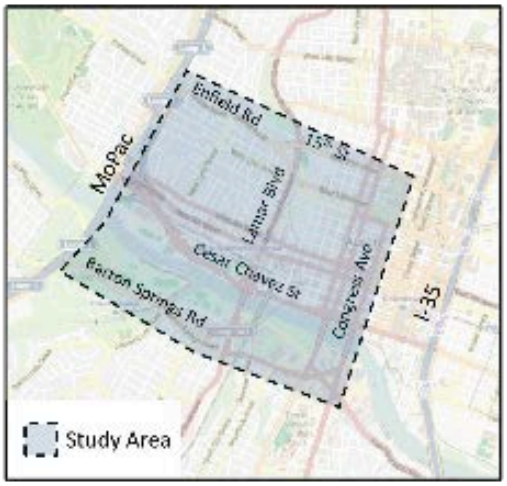
What is a Dynamic Traffic Assignment (DTA)?

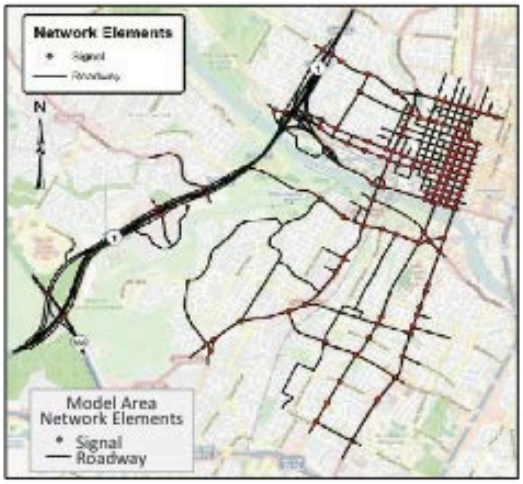
DTAs are traffic models that examine how drivers modify their travel patterns to take advantage of the least congested routes when changes are made in a transportation network. The DTA for MoPac South was conducted for the year 2020 (the earliest possible date that the project could open to traffic).

The model looks at two areas:

Downtown study area: Defined by MoPac to the west, Enfield Rd./15th St. to the north, Congress Ave. to the east, and Barton Springs Rd. to the south. Street-level travel time evaluations were conducted on the major streets in this zone.

Model area: The limits of the model area extend beyond the boundaries of the downtown study area in order to properly analyze how drivers would choose their routes if Express Lanes were available on south MoPac. The model area looks at all the major north/south arteries from north of SH 71 to Enfield Rd./15th St. and all major east/west corridors from MoPac to Congress Ave. Along MoPac, the model area extends just south of Loop 360 to include the entrances and exits between the proposed Express Lanes and the general-purpose lanes south of Cesar Chavez St.





MoPac South Environmental Study

DYNAMIC TRAFFIC ASSIGNMENT STUDY

What Express Lane Configurations Were Modeled?

- **1 Express Lane + downtown DC:** Includes one Express Lane in each direction, and a one-lane, elevated direct connect ramp in each direction, from Cesar Chavez St.
- **1 Express Lane without downtown DC:** Includes one Express Lane in each direction. Traffic with a downtown destination will exit the Express Lanes south of Barton Skyway into the left-most general purpose lane and weave across three lanes to access the existing Cesar Chavez St. exit. Leaving downtown, southbound MoPac drivers will enter the general purpose lanes using the existing Lake Austin Blvd. entrance ramp and weave across three lanes to access the Express Lane south of Barton Skyway.
- **2 Express Lanes + downtown DC:** Includes two Express Lanes in each direction, and a one-lane, elevated direct connect ramp in each direction, from Cesar Chavez St.
- **2 Express Lanes without downtown DC:** Includes two Express Lanes in each direction. Access to and from the downtown area will function similarly to the 1 Express Lane without downtown DC configuration.
- **No Build (do nothing) Alternative:** Analyzed as a baseline for comparison.

Two additional configurations are also being considered as part of the study, but were not specifically analyzed by the DTA:

2 Express Lanes + Elevated Ramps near Barton Skyway and Bee Cave Road: Includes two Express Lanes in each direction and adds elevated ramps near Barton Skyway. Drivers with a downtown destination would exit the Express Lanes into the right-most general purpose lane south of Lady Bird Lake. Leaving downtown, southbound MoPac drivers will enter the right-most general purpose lane to access an Express Lane ramp near Barton Skyway. This operational configuration was not directly included in the DTA analysis, but would function similarly within the study area to the 2 Express Lanes without downtown DC configuration that was modeled.

City of Austin Proposal: The project team also refined an operational configuration presented by the City of Austin. Because work on this configuration was still ongoing when the DTA analysis was conducted, it was not modeled. However, it would provide access to and from downtown that does not require drivers to weave through MoPac general purpose lanes.

SUMMARY OF RESULTS

The DTA shows that the addition of Express Lanes on south MoPac would not adversely affect congestion on Austin's downtown street grid as a whole. This is true for any of the operational configurations evaluated. All configurations either improved or had negligible impacts to travel times within the downtown network.

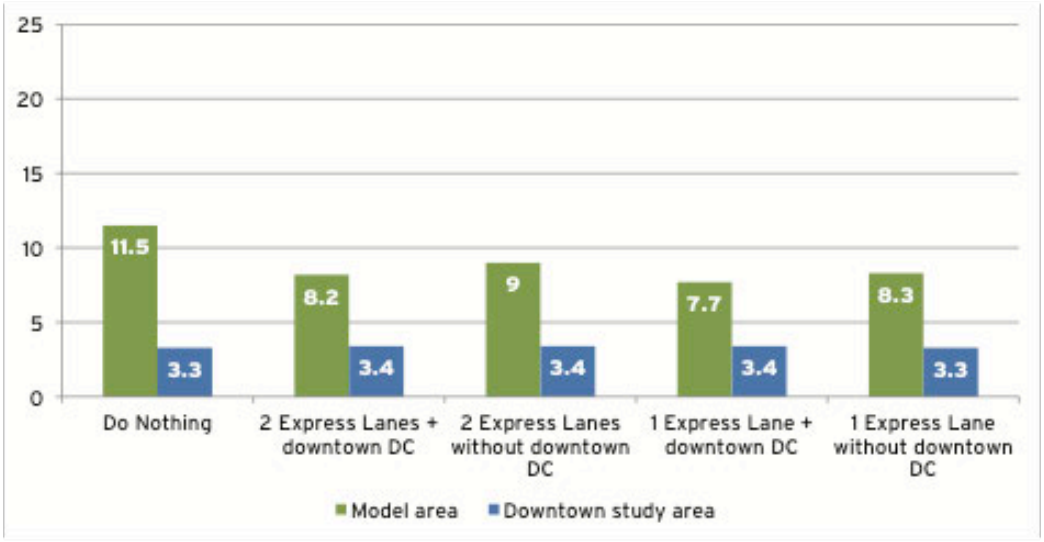
AM peak period (6 - 9 a.m.):

- When compared to the No Build Alternative, drivers would save an average of two and a half minutes in the model area.
- Travel times on eastbound Cesar Chavez St., eastbound 5th St., northbound Lamar Blvd. and northbound 1st St. /Lavaca St. would remain within one minute of the No Build Alternative, regardless of the Express Lane configuration.

PM peak period (3:30 - 6:30 p.m.):

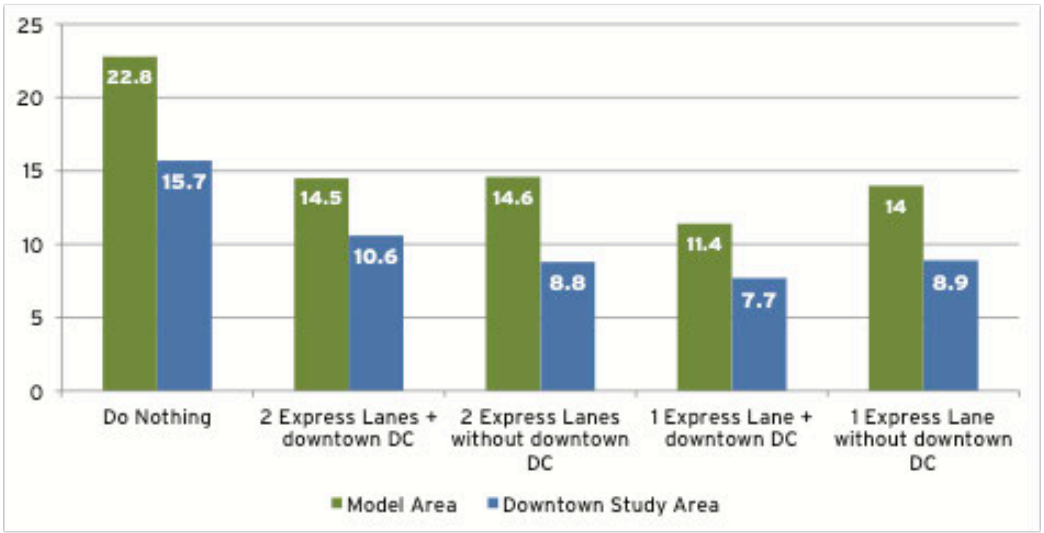
- When compared to the No Build Alternative, drivers would save an average of eight minutes in the model area.
- All Express Lane configurations would provide better travel times on westbound Cesar Chavez St., westbound 6th St., southbound Lamar Blvd. and southbound 1st St./Guadalupe St. as compared to the No Build Alternative.

2020 AVERAGE MORNING PEAK PERIOD TRAVEL TIMES (IN MINUTES)

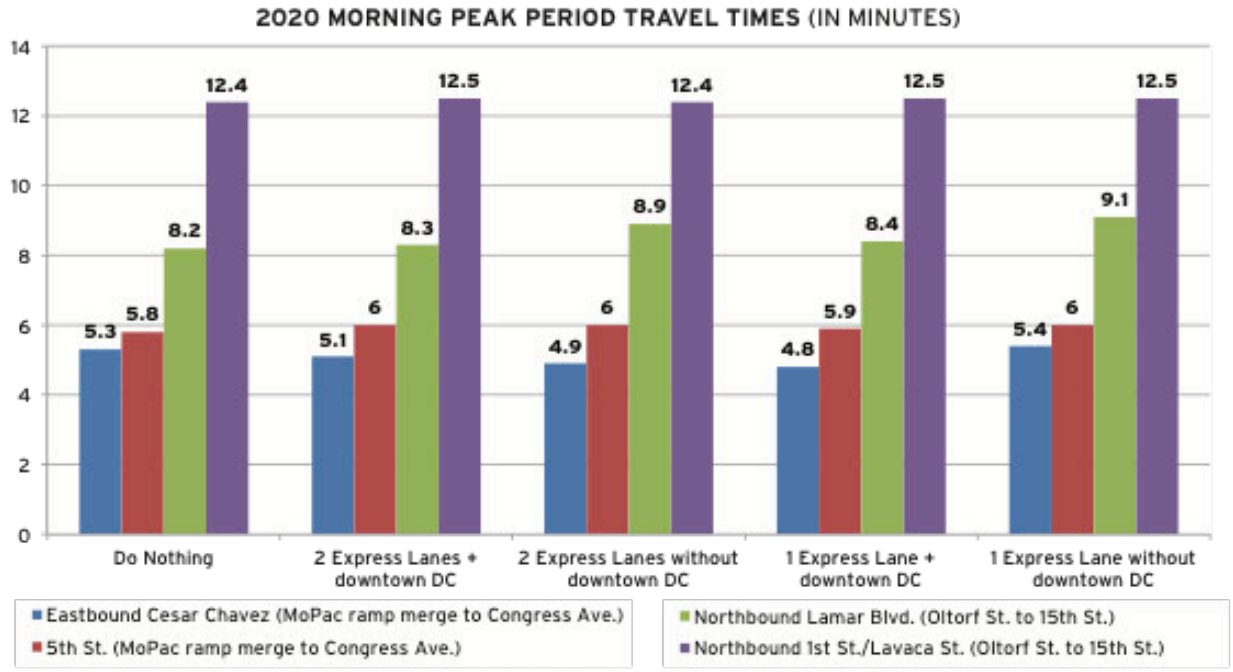


- **Model area:** Drivers would save an average of 2.5 minutes for all of the modeled configurations as compared to the Do Nothing scenario. The 1 Express Lane + downtown DC configuration would save drivers approximately 30 seconds more than the other configurations.
- **Downtown study area:** All modeled configurations present average travel times within six seconds of the Do Nothing scenario.

2020 AVERAGE AFTERNOON PEAK PERIOD TRAVEL TIMES (IN MINUTES)

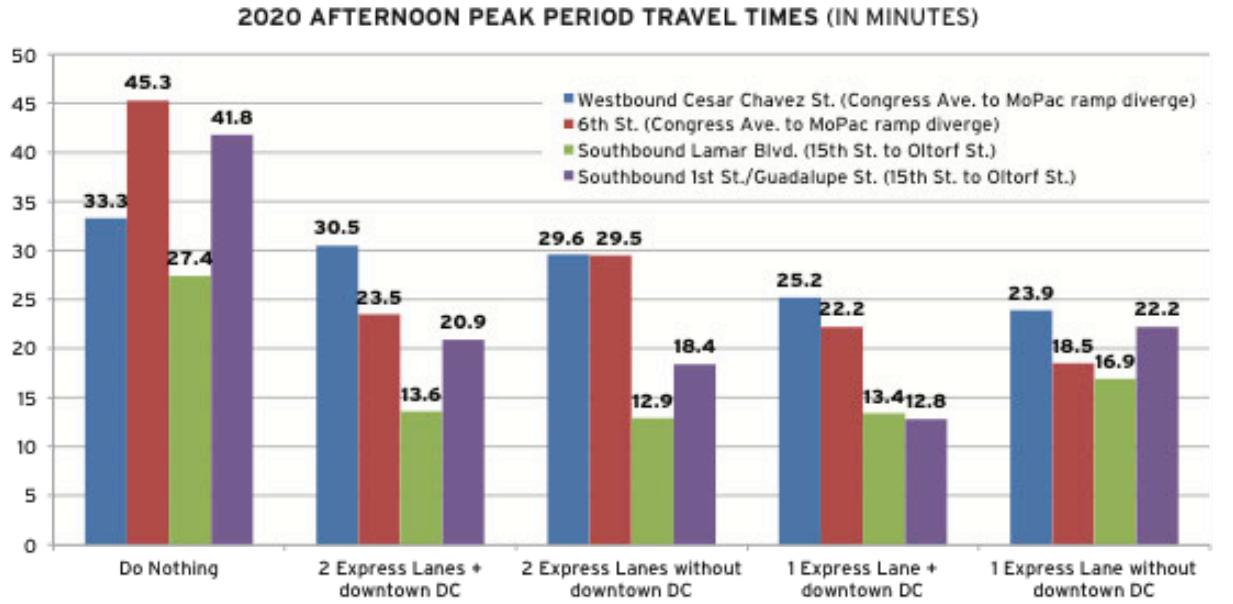


- **Model area:** Drivers would save an average of eight minutes for all of the modeled configurations as compared to the Do Nothing scenario. The 1 Express Lane + downtown DC configuration would save drivers approximately two and a half minutes more than the other configurations.
- **Downtown study area:** Drivers would save an average of at least five minutes for all of the modeled configurations as compared to the Do Nothing scenario.



Results: Modeled configurations present travel times on all routes within one minute of the Do Nothing scenario.

- Eastbound Cesar Chavez: Within 30 seconds of the Do Nothing scenario.
- 5th St.: Within 12 seconds of the Do Nothing scenario.
- Northbound Lamar Blvd.: Within 54 seconds of the Do Nothing scenario.
- Northbound 1st St./Lavaca St.: Within six seconds of the Do Nothing scenario.



Results: All modeled configurations present lower peak period travel times when compared to the Do Nothing scenario.

- Westbound Cesar Chavez: As much as 9.4 minutes saved over the Do Nothing scenario.
- 6th St.: As much as 26.8 minutes saved over the Do Nothing scenario.
- Southbound Lamar Blvd.: As much as 14.5 minutes saved over the Do Nothing scenario.
- Southbound 1st St./Guadalupe St.: As much as 29 minutes saved over the Do Nothing scenario.

MoPac South
ENVIRONMENTAL STUDY

Community Survey Summary

Conducted for Open House #4

Held November 10, 2015 at Palmer Events Center, Austin, Texas

During the Open House and concurrent Virtual Open House, participants were afforded the opportunity to provide additional input via a community survey. The survey is not a scientific poll. The results only reflect the view of those Open House and Virtual Open House participants that chose to participate.

Summary

- Forty seven community surveys were received between October 31, 2015 and November 19, 2015. Twenty-seven were received via www.MoPacSouth.com and twenty were received at the Open House on November 10, 2015.
- Sixteen of twenty-six respondents do not like the One Express Lane + Downtown Direct Connection configuration. Four out of twenty-six specifically prefer two lanes over one.
- Common suggestions made for improving the One Express Lane + Downtown Direct Connection configuration are building two express lanes, building HOV lanes, and adding mass transit including busses and light rail.
- Major concerns for the One Express Lane + Downtown Direct Connection configuration include elevating the roadway over the Lady Bird Lake; loss of native vegetation along the west ROW of MoPac between Bee Caves and Liberty Park Drive; destruction of Zilker Park; and tolling.
- Fourteen of twenty respondents did not like the One Express Lane Without Downtown Direct Connection configuration, several citing a need for downtown access and greater potential for traffic jams and bottlenecks.
- Suggestions for improving the One Express Lane Without Downtown Direct Connection configuration include preventing the necessity to weave over three lanes, building a direct connection to downtown, and making the new lanes general purpose lanes rather than tolled express lanes.
- Twelve of twenty-two respondents like some aspect of the Two Express Lanes + Downtown Direct Connection configuration, most citing allowance for growth, easier access in and out of downtown, and more efficient travel time.
- Common concerns for the Two Express Lanes + Downtown Direct Connection configuration are the visual impacts of the elevated DCs.
- Fourteen out of fifteen respondents did not like the Two Express Lanes Without Downtown Direct Connection configuration, the majority citing that it would create a traffic bottleneck.
- Major concerns for the Two Express Lanes Without Downtown Direct Connection configuration are lack of access to downtown and general environmental concerns.

- Seven out of sixteen respondents like the Two Express Lanes + Elevated Ramps Near Barton Skyway configuration. Common reasons include improved travel time, no weaving, and no elevated structures over the lake.

- Eight out of sixteen respondents did not like the City of Austin Proposal citing opposition to the elevated ramps and no good access from Bee Cave Road to MoPac NB. Six respondents like the configuration citing the lack of elevated roads and good access to downtown.

- Common concerns about the City of Austin Proposal include taking parkland, negative impact on nearby residents, and creation of bottlenecks.

- When given a choice, the majority of respondents agree that traffic issues on MoPac South should be addressed by adding the maximum additional capacity possible within the existing right-of-way, as opposed to not addressing the issues because improvements would encourage more development.

- Forty-six percent of respondents agree that connecting express lanes to downtown Austin is important and don't have any concerns about elevating sections of the express lanes. Twenty-nine percent think that connecting the express lanes to downtown Austin is unimportant and no part of MoPac should be elevated anywhere as part of this project.

- The majority of respondents agree or strongly agree that the criteria evaluated for arriving at a recommended configuration for the Express lanes Alternative are appropriate.

- Respondents indicated the following improvements are the most important to them: addressing congestion problems in the vicinity of William Cannon Drive and MoPac by improving entrance and exit ramps; adding Texas Turnarounds at Barton Skyway to better facilitate access to MoPac (especially during events at Zilker Park); and adding an additional southbound general purpose lane south of William Cannon Drive.

- Responses to which environmental resources are of greatest concern were almost equal, with water quality, vegetation and threatened & endangered species, historic resources, and traffic, noise and air quality analyses all being considered "very important".

- The majority of respondents live in Southwest Austin and work in Central Austin.

- The majority of respondents heard about the Open House through the newspaper, and secondly, from email.

CONFIGURATION: One Express Lane + Downtown Direct Connection

Question 1:

What do you like about this configuration?

1	Nothing.
2	Not much. Instead turning MoPac into "I35 West", buyout toll road 130 and route thru traffic on it. The entire plan does not address how to reduce increasing traffic volume. Building more roads will just attract more car use.
3	Note – I am not responding to these questions because they all assume I agree with the fundamental assumption that the solution must be primarily automobile-centric – GK
4	Improves travel time
5	Downtown Direct Connect No Elevated Roads
6	Nothing – bad configuration
7	Nothing
8	It seems safe and makes sense.
9	I do not support this option.
10	Added lanes south of 71
11	Need 2 lanes
12	Nothing
13	Cesar Chavez is an important access to downtown
14	I do not like any of these plans
15	I guess it will move traffic faster and therefore encourage more vehicular traffic into the already-congested downtown area. It will also make the developers who are contributing to our southwesterly urban sprawl happy. It does seem less disruptive and damaging to the environment than any of the other options except the No Build alternative.
16	less visual impact downtown access
17	There is nothing that I like about this configuration.
18	New lanes
19	Nothing
20	Do not like this alternative. Prefer the two lanes in each direction alternative.
21	I do not like this configuration due to the elevated ramp in each direction.
22	The configuration is TERRIBLE! Everything you do makes traffic worse.
23	Direct access to Cesar Chavez
24	Nothing, Build two express lanes.
25	Improves the traffic flow into downtown from the south.
26	Not efficient. Does not add enough additional capacity for the cost.

Question 2:

What suggestions do you have for improving this configuration?

1	Do Not Build! Instead: HOV lanes & better mass transit!
2	Where are light rail options?
3	More Lanes
4	Hopeless – dump it
5	Exit at Rollingwood/Bee Caves, is tricky
6	More NB lanes crossing 71
7	No tolls
8	Can 15th St/Enfield also get easier?
9	I would recommend spending a whole lot less money on something that will actually serve to decrease traffic congestion. Toll roads for a limited few take next to no cars off other lanes. An HOV lane and extra express bus park and rides would reduce the number of cars on the road and preserve tax dollars and green space.
10	This configuration is probably the best option other than the No Build option so I don't have any suggestions for improving it. I live in a condo adjacent to the southbound MoPac service road between Bee Caves and Liberty Park I am very concerned about increased noise levels and exhaust pollution that will be generated by high-speed traffic coming off the bridge and heading south. Noise is already a big problem and black soot-like residue settles on my balcony and windows every day. I can't imagine how much worse the situation will be with even more traffic being encouraged to utilize this route. Be sure to maintain the existing native vegetation that serves as a buffer along the southbound service road between Bee Caves and Liberty Park Drive.
11	access to 5th/ 6th street
12	I would like to see another north-south roadway built that can take pressure off of mopac altogether. ONE extra lane going either way is a band aid that will not help enough right now and will not carry us into the next decade even. The disruption to mopac during the process will not be tolerable for a period of time long enough to complete this project. The area around Zilker park and the greenbelt needs to be left alone, not destroyed by construction crews.
13	Make both lanes switch to northbound at midnight and to southbound at noon. Off-peak we still have plenty of capacity in either direction. It's the commuter swing that matters.
14	None
15	Eliminate elevated ramps.
16	STOP adding toll lanes!
17	N/A
18	Build two express lanes.
19	Adopt a two lane version.

Question 3:

Please list any comments or questions you may have about this configuration.

1	Concerns: Edwards Aquifer recharge zone – negative impact to environment. Negative impact to Austin High School & Townlake Trail. The proposed plan will not help traffic flow; it will just make the gridlock @ Cesar Chavez & Townlake worse!
2	Inadequate selection options provided throughout this survey. Where are the no build or light rail or other mass transit options?
3	Single lane express lane between Cesar Chavez and US 290 is bad – big bottleneck for drivers from/to north of downtown
4	I understand that Rollingwood residents have already nixed the idea. I tend to agree given that the lake and trail are the heart of our city.
5	I support no build, express/HOV lane created with paint, better bus service for outlying areas through investing in park and rides.
6	Go back to the environmental studies; 35-45-mopac
7	No further elevation over the lake please
8	Does Cesar Chavez backup
9	Please make a serious, concerted effort to maintain the existing vegetation on the west ROW of MoPac between Bee Caves and Liberty Park Drive. This native vegetation is dense and tall and provides excellent sound and sight buffering between the Liberty Park condominiums and the southbound traffic on MoPac. This existing natural buffer is far taller and more effective than any wall you might construct to protect our neighborhood. Please be sure it is not damaged during any construction activity. Thank you.
10	How does this impact Austin High?
11	Would any new roads (no matter what the configuration) be tolled? That is not a viable solution. Any new road that is built needs to be paid in some other way than tolls to solve the traffic problem as fully as possible. We have already seen that people are not willing to use tolled roads as readily as free (130). Charging desperate people a toll is just cruel.
12	I think that there must already be plans for alternative to adding a second level to the span crossing Lady Bird lake. That second level is extraordinarily intrusive from the Zilker park point of view.
13	Study the entire loop and it's effect on north Mopac
14	Again it is a terrible idea. As always, whatever the people want and need you do NOT do. Austin traffic is horrible and you idiots make it worse and worse with every corporate idea you come up with. You have already been told a thousand times what could make traffic better. But, you do not care. You are corporate controlled.
15	Why add 1 lane when you can add 2? Austin is growing, not shrinking.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

Question 4:

What do you like about this configuration?

1	Nothing
2	Not much. HOV preferred to more toll lanes.
3	N/A – Don't Build
4	Nothing – bad configuration
5	This is a recipe for injuries and deaths with people trying to cross lanes of traffic
6	Least efficient – would be obsolete before completion
7	I don't think DC are needed
8	Nothing
9	Nothing
10	No new elevated structure; No new downtown access -
11	It seems like this will slow down traffic and create more of a bottleneck than currently exists.
12	access to North Austin
13	Nothing
14	NA
15	I like that there is no elevated ramp.
16	There's an express lane
17	We need downtown access, do not build this.
18	This option will give better protection to neighborhoods and to our almost sacred spaces – Barton Creek, the Hike and Bike Trail, Zilker Park, and Lady Bird Lake. . . than elevated structures and two lanes in each direction.
19	Not a thing. A crazy idea and a waste of money.
20	Makes even less sense as the majority of traffic at peak periods is going to or coming from downtown and this alternative would cause a traffic jam trying to merge back out of express lanes in time to cross to old exit ramps.

Question 5:

What suggestions do you have for improving this configuration?

1	Do Not Build!
2	Do not build.
3	Don't Build
4	None – dump it
5	Build frontage from 71 to 360
6	Do a complete environmental study
7	Skips downtown, but Austin downtown is growing and a top asset
8	I prefer the No Build option so I don't have any suggestions for improving it. I live in a condo adjacent to the southbound MoPac service road between Bee Caves and Liberty Park I am very concerned about increased noise levels and exhaust pollution that will be generated by high-speed traffic coming off the bridge and heading south. Noise is already a big problem and black soot-like residue settles on my balcony and windows every day. I can't imagine how much worse the situation will be with even more traffic being encouraged to utilize this route. Be sure to maintain the existing native vegetation that serves as a buffer along the southbound service road between Bee Caves and Liberty Park Drive.
9	prevent weaving / trying to get over three lanes
10	None
11	Move the entrance to the express lanes even farther south to allow more time for merging but yikes still
12	Build a direct connection to Downtown.
13	Make the new lanes just new general purpose lanes and not tolled express lanes.
14	Extend it to 1st street (Ceasar ChAVez) and can the weave across.
15	Reject this alternative.

Question 6:

Please list any comments or questions you may have about this configuration.

1	Many, see 1st configuration, paint/build HOV lanes
2	I don't like the N.B. access from the express lanes to downtown as they have to weave across the general purpose lanes. Likewise, SB traffic from downtown has to weave across the gen. purpose lanes to access the express lanes.
3	N/A
4	See previous comments
5	Really – is this even an option?
6	Please make a serious, concerted effort to maintain the existing vegetation on the west ROW of MoPac between Bee Caves and Liberty Park Drive. This native vegetation is dense and tall and provides excellent sound and sight buffering between the Liberty Park condominiums and the southbound traffic on MoPac. This existing natural buffer is far taller and more effective than any wall you might construct to protect our neighborhood. Please be sure it is not damaged during any construction activity. Thank you.
7	Reevaluate all options
8	The whole merging across three lanes idea is not good, even if you have a mile to do so, traffic studies show merging cars cause traffic back up, if everyone for instance on IH 35 downtown that was not exiting downtown was forced to use the left most lane, there would be a smidgen of improvement!
9	PLEASE!
10	Who thought of this idea? Someone with a helicopter?
11	Why add 1 lane when you can add 2? Austin is growing, not shrinking.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

Question 7:

What do you like about this configuration?

1	Nothing
2	HOV lane options over toll roads.
3	Capacity for future growth of Austin and direct connector will help insurance reliable travel time to the CBD.
4	Great access in and out of downtown w/o impacting the general purpose lanes. Best travel times.
5	Nice w/multiple access points
6	Great option – DCs make sense except for "visual" impact
7	Most logical and efficient.
8	I do not support this option
9	No
10	This is the most efficient alternative by far.
11	Nothing
12	True two lane with access to downtown
13	This is the least desirable alternative. I do not like anything about it. It encourages too much traffic into the already congested downtown area.
14	move traffic, access to downtown
15	Build this.
16	Nothing
17	Allows for express connection into downtown and connection to North MoPac lanes
18	I do not like this configuration because there is an elevated ramp.
19	More express lanes!
20	Like two express lanes and the direct 12onnect.
21	Nothing. It will ruin the look and feel of Lady Bird Lake, Zilker Park, the Hike and Bike Trail and Barton Springs.
22	Seems to allow for some future growth.

Question 8:

What suggestions do you have for improving this configuration?

1	Do not build! No elevated structures! Build HOV lanes.
2	Eliminate north bound entrance ramp for Barton Skyway. Ramp serves as a que jumper and merge lane is too short.
3	Keeps the 3 lanes from Monterey Oaks to Davis!! Big ++
4	None – has great lane balance – no apparent bottleneck, except for access from downtown to G.P. lanes – needs improvement
5	None at this time.
6	See above
7	I live in a condo adjacent to the southbound MoPac service road between Bee Caves and Liberty Park I am very concerned about increased noise levels and exhaust pollution that will be generated by high-speed traffic coming off the bridge and heading south. Noise is already a big problem and black soot-like residue settles on my balcony and windows every day. I can't imagine how much worse the situation will be with even more traffic being encouraged to utilize this route. Be sure to maintain the existing native vegetation that serves as a buffer along the southbound service road between Bee Caves and Liberty Park Drive.
8	None
9	Reduce the impacts to Lamar Beach
10	Eliminate elevated ramp.
11	For the two express lanes which must merge to one to exit Cesar Chavez, make sure there's lots of room for them to merge into one
12	Do not construct any elevated roads or bridges.

Question 9:

Please list any comments or questions you may have about this configuration.

1	See above (1st configuration). Do paint HOV lanes!
2	I've heard that many folks are not in support of this option out of concern for visual height of the DCs. It's important to point out that MoPac to the north is much higher than these DCs would be. Also, users of the hike/bike bridge under MoPac would have a difficult time even seeing the new DC bridge.
3	Don't like the Elevated Road
4	The "Two Express lanes + elevated ramps near Barton Skyway" is a bit better option – because it seems to accomplish same LOS, but without the visual impact @ the lake.
5	I don't think 2 lanes and DC are needed
6	Does Cesar Chavez backup
7	How would you propose to ameliorate the negative impact of noise and additional pollution on the residents living in the Liberty Park Condominiums adjacent to MoPac south of the river between Bee Caves and Liberty Park Drive? How will you protect the existing noise and pollution barrier provided by the native vegetation on the ROW west of the southbound service road in this area?
8	Impact on Austin High?
9	Study the full loop and evaluate all options
10	I do not like the elevated structure around Zilker and prefer the Barton Skyway elevated ramp plan.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

Question 10:

What do you like about this configuration?

1	Nothing
2	No more toll roads. Buyout existing toll roads to encourage their use.
3	No
4	Not good. Do not like it – will create a bottleneck NB where the ML exits S. of Barton Skyway.
5	I do not support this option
6	No
7	Nothing
8	No dwtwn connection; No new elevated structure
9	Not much. Seems like it will create a major bottleneck in the area.
10	Must have direst connections to downtown!
11	Nothing
12	NA
13	I like that there is no elevated ramp and no direct access to express lanes from downtown. This option is probably best option being considered because it would allow express lane to continue north uninterrupted and have a second lane for merging to exit ramp.
14	Two Express lanes!
15	NOTHING

Question 11:

What suggestions do you have for improving this configuration?

1	Do Not Build!
2	Dump it
3	See previous comments.
4	None
5	Eliminate the toll.
6	See my comments for configuration two- similar to this configuration but with only one express lane
7	Do not build it!
8	Add a direct connection and can the weave. That is, add a fly-over.

Question 12:

Please list any comments or questions you may have about this configuration.

1	Environmental concerns!!!! This configuration will not help gridlock!
2	DCs are needed in/out of downtown.
3	No improvements for access from downtown to MoPac South – not good
4	I do not think the merge option is safe! For AHS kids or people merging onto MoPac who need to drive north. It will only make a bad situation worse.
5	Do a complete environmental study of what connecting 35 to 45 to mopac
6	Will access into downtown work? Will Cesar Chavez backup
7	See previous comments.
8	Study the entire loop and honestly evaluate the effect on the environment, the neighborhoods and Austin
9	This is the best option with the least amount of damage to the city of Austin.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

Question 13:

What do you like about this configuration?

1	Nothing
2	Nothing. HOV lanes are preferable.
3	This is my second favorite option – provides great improvement in travel time and no weave across the main lanes for access to the express lanes.
4	No
5	Best Option. Excellent option – good lane balance, no apparent bottlenecks NB.
6	Like the 1st option, it makes sense and seems safe. I think it's better to move the flyover south. It will be less impactful for those enjoying the lake or trail on Town lake. It seems like a thoughtful plan and solution.
7	I do not support this option.
8	Moves elevation off lake, maintains good access.
9	This was the best one. Good job.
10	Nothing
11	TERRIBLE! Too much negative impact to residents adjacent to MoPac in the Liberty Park Condominiums.
12	Nothing
13	I do not like this option because there are elevated ramps.
14	I need a visual but this sounds like the express lane NB empties into far right lane so no merging required to get to Cesar Chavez, that's good
15	YES, YES, YES. We need to invest in the two express lanes, include a direct connect to Downtown. I like the elevated structures at Barton Skyway where they do not impact the views of downtown and zilker park.
16	Not much. It seems to help south of Barton Skyway, but not improve things very much going north of Barton Skyway into downtown. Since I see little traffic exiting at Barton Skyway or Bee Caves (no more than enters on the north bound ramp), I see little value on this proposal.

Question 14:

What suggestions do you have for improving this configuration?

1	Do Not Build.
2	No toll roads.
3	Need to improve access from downtown on 5th Street – check out city's "jug handle" idea
4	Southbound exit at Rollingwood/Bee Caves is very tricky – with people coming up the road from Rollingwood at Zilker. Would a yield sign help? How will you manage a bottleneck of people entering toll road vs exiting MoPac?
5	Do a complete survey on what connecting 35 to 45 to mopac!
6	Eliminate it from consideration.
7	None
8	Eliminate the elevated ramps.
9	Add a ramp to extend direct access from toll lanes to Cesar ChaVez.

Question 15:

Please list any comments or questions you may have about this configuration.

1	No elevated structures! No dbl. decker! No fly overs!
2	Best option!
3	This makes drivers have to commit too soon.
4	Thank you for adding sidewalk! I live in Treemont and people park there for ACL. It's important to keep people , cyclists, and drivers safe.
5	Concerned about weave between Bee Cave and Downtown Ramps
6	TERRIBLE! Too much negative impact to residents adjacent to MoPac in the Liberty Park Condominiums.
7	Be creative and evaluate how technology can help. Don't be Houston! It does not work!!
8	Please build this.

CONFIGURATION: City of Austin Proposal

Question 16:

What do you like about this configuration?

1	Nothing! Do Not Build! No to fly overs, dbl.. deckers & more toll lanes!
2	Express lane connection to/from US 290 west
3	No elevated roads – visually better; More lanes the better – as soon as they build the connect from Buda to SH 45 South this will be perfect
4	It is ingenous but has problems associated with it, like no good access from Bee Caves road to MoPac NB
5	I do not support this option, but it keeps flyovers away from the waterfront.
6	I like this [member indicates bottom bullet under configuration description: "Access from downtown…"]
7	I like this too.
8	This is the absolute worst proposal and will have the most negative impact on homeowners in the Liberty Park Condominiums between Bee Caves and Liberty Park Drive.
9	Lamar and 6th Street need help! What about road separation and pedestrian safety?
10	Nothing
11	nothing
12	I do not like this option because it includes elevated ramps.
13	Works for me
14	2nd best option, but still prefer the Barton Skyway plan.
15	Nothing.
16	LAB turnaround to enable 6th St traffic to go south on Mopac without the left turn light. That light causes significant backups. This turnaround could be added to any of the plans without modification.

Question 17:

What suggestions do you have for improving this configuration?

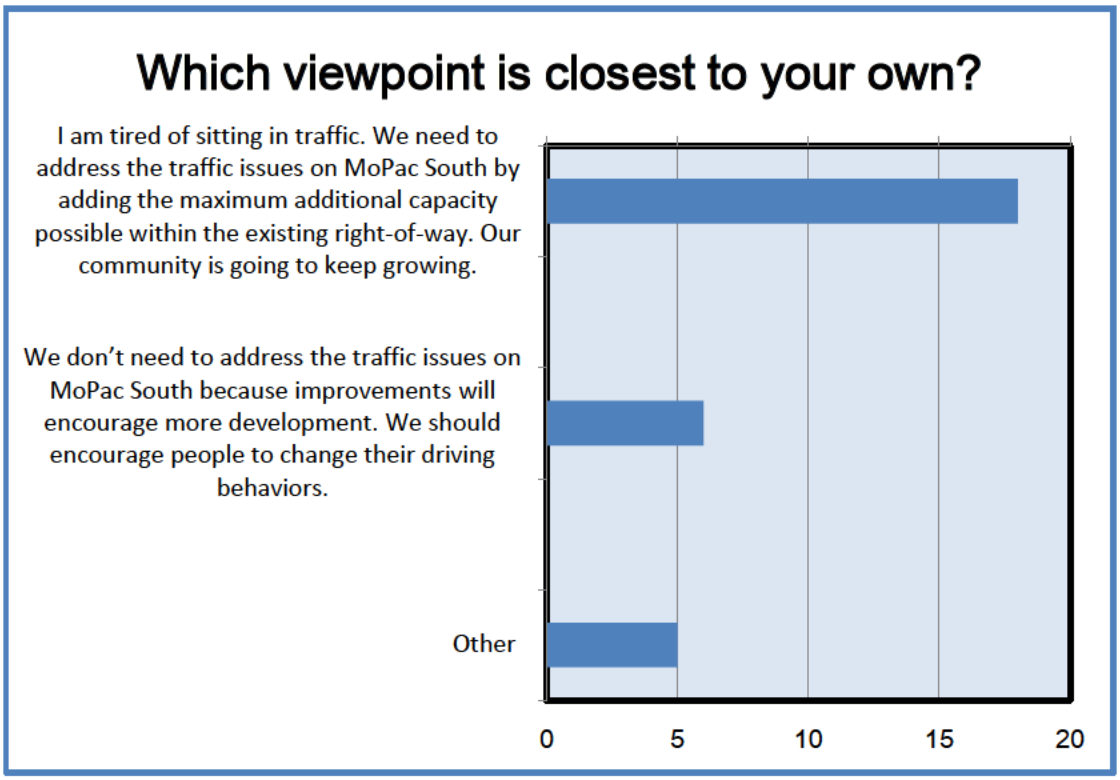
1	Do Not Build! Instead: paint HOV lanes; invest in rapid transit (better busses and light rail)
2	Keep 3 lanes from Monterey Oaks Blvd to Davis Lane; Keep 3 lanes from Gaines Ranch to Monterey Oaks; If you build it they will use it.
3	None – like the jug handle idea for the connection from 5th St. to go south on MoPac.
4	Reduce the height of the elevated structures or put the new lanes underground.
5	None
6	Eliminate the elevated ramps.
7	NO elevated structures.
8	Make it two lane in both directions, all segments. Make access lanes two lanes. Change south bound tie in point to north of the river.
9	Preventing westbound Bee Cave from going northbound on Mopac without first diverting south the the Skyway turnaround is a horrible idea. That specific combination has extremely high traffic, and this will make it worse. Southbound Mopac suggestions would get the job done, but seems to be excessively complicated.

Question 18:

Please list any comments or questions you may have about this configuration.

1	Study all of the connecting segments as a whole, before any of it is built.
2	I don't understand how parkland can be acquired for the project when there are other viable alternatives.
3	Express way exit to Davis Lane needs to be closer to William Cannon. Too many people will try to cross 3 lanes of traffic to exit Davis going south.
4	Single lane South of US 290 makes sense to avoid bottlenecks at the ML junctions w/290; overall, a well thought out option
5	Not truly realistic
6	Please do not take any part of the lake or Zilker. These are important parts of our city and must be preserved.
7	Bottleneck at SB William Cannon; design speed is awful for some ramps; Bee Cave connection is under designed
8	How can this be accomplished with tremendous negative impact on nearby residents. Noise and pollution area already a big problem for those of us living next to MoPac.
9	This is not the city of Austin's proposal. The Council does not endorse this.
10	What is not shown here, or I guess on any of these descriptions in this survey, is right-of-way requirements, I read elsewhere this one takes land from Zilker Park but as long as its just open parkland that's fine by me
11	From Barton Skyway to the North there are many residential units that would be ruined by all this. I live I one of 46 condos - not million dollar homes but units that are very modest in price -- at Liberty Park Drive. The noise, the innate ugliness, the loss of what little land and trees we currently have to protect us from Mopac - these are compelling reasons for not choosing this configuration.
12	Should the last word in the 2nd bullet be "exit" and not "exist"

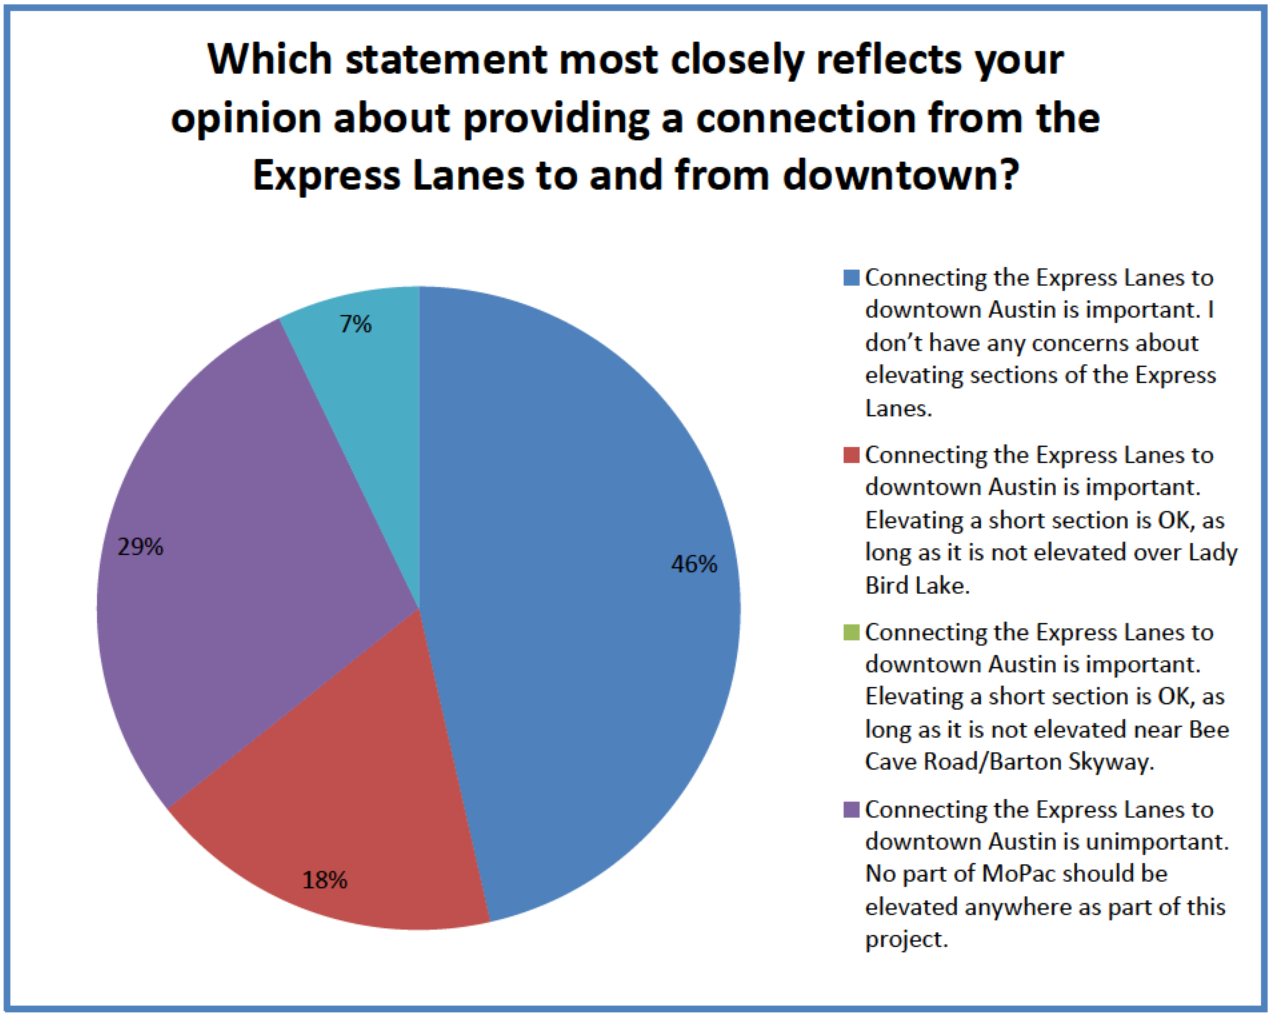
Question 19:



Other/Comments:

1. Inadequate choices! I am tired of traffic. We need HOV Lanes and better rapid transit.
2. No more toll roads.
3. Think outside this box you have painted.
4. Some of both.
5. I drive approx. 200-300 miles per wk between 35 N + Southwest Parkway and live in Treemont.
6. No build.
7. But these plans do not adequately solve the problem when toll is designed for very few cars to keep toll road moving.
8. I am tired of traffic. We should encourage people to change their driving behaviors. [circled by member]

Question 20:



Comments:

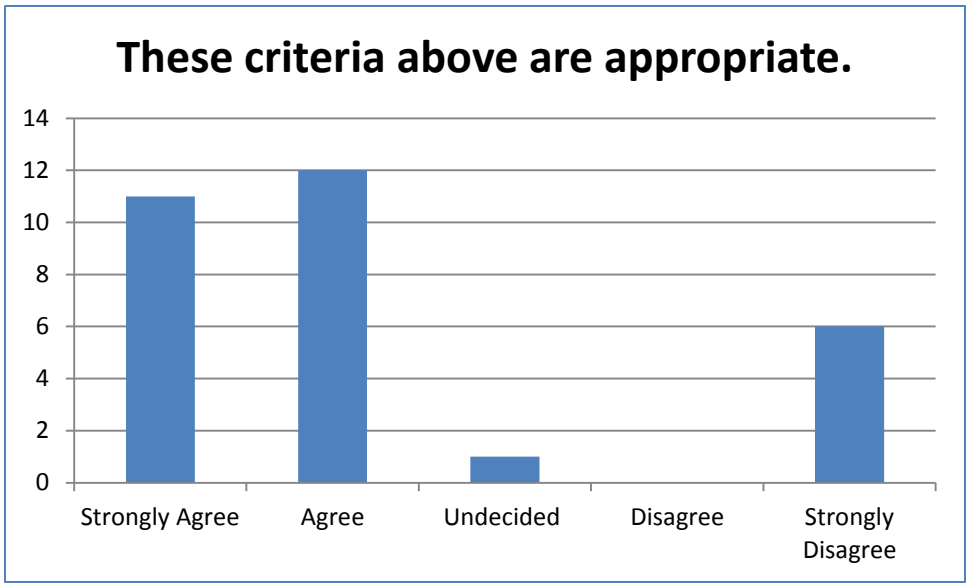
1. No more toll roads! No elevated roads!
2. None of the above.
3. We need to direct people downtown so we have an urban core rather than sprawl.
4. Express lanes/HOV lane by restriping, build park & rides, not new lanes.

Question 21:

In order to arrive at a recommended configuration for the Express lanes Alternative, each configuration will be evaluated using the following criteria:

- Reduce Congestion delay and provide travel time savings for all roadway users
    - Reduce congestion delay and optimize capacity utilization
    - Maximize travel time savings
    - Serve all roadway users
- Be constructible without unnecessary impacts to the natural and human environment
- Facilitate congestion management
    - Increase opportunities for transit and ridesharing

Please indicate how much you agree with the following statement.

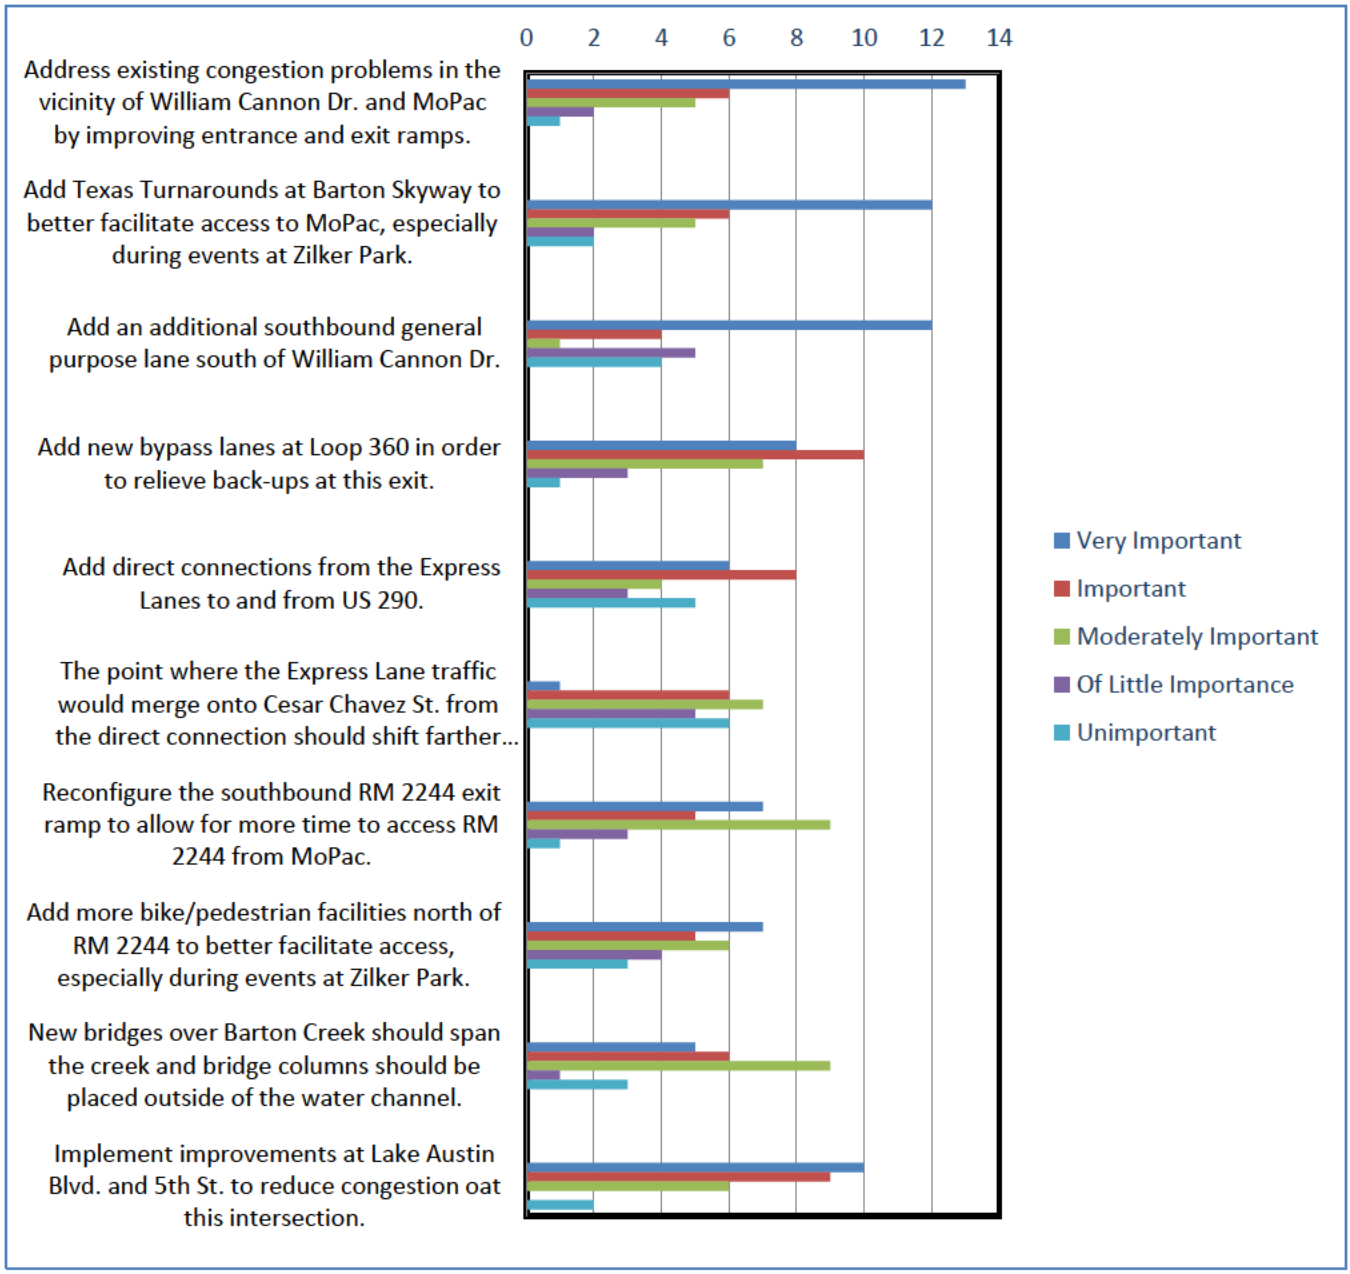


Comment(s):

1. Our quality of life (and that of our environment) are being assaulted in these proposals!!! We need HOV lanes and better rapid transit (busses and light rail, gondola, etc.)

Question 22:

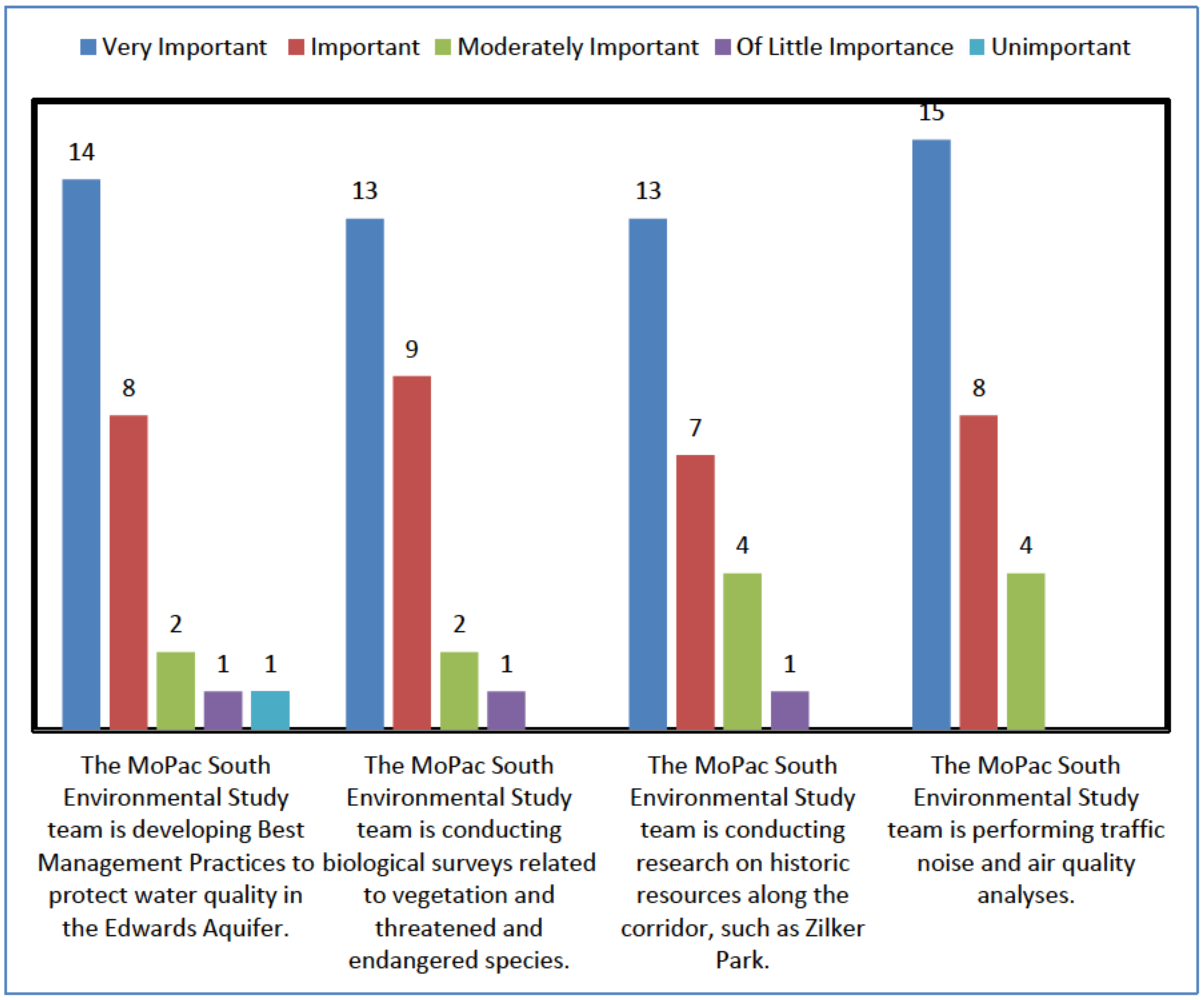
Please indicate how important each of the following improvements are to you.



Comments:

1. Assumes an express la.
2. Kids should be prioritized
3. Do partner w/Austin for best local solution
4. No express lanes downtown – so they can sit in traffic?
5. No further elevation
6. Restripe Mopac

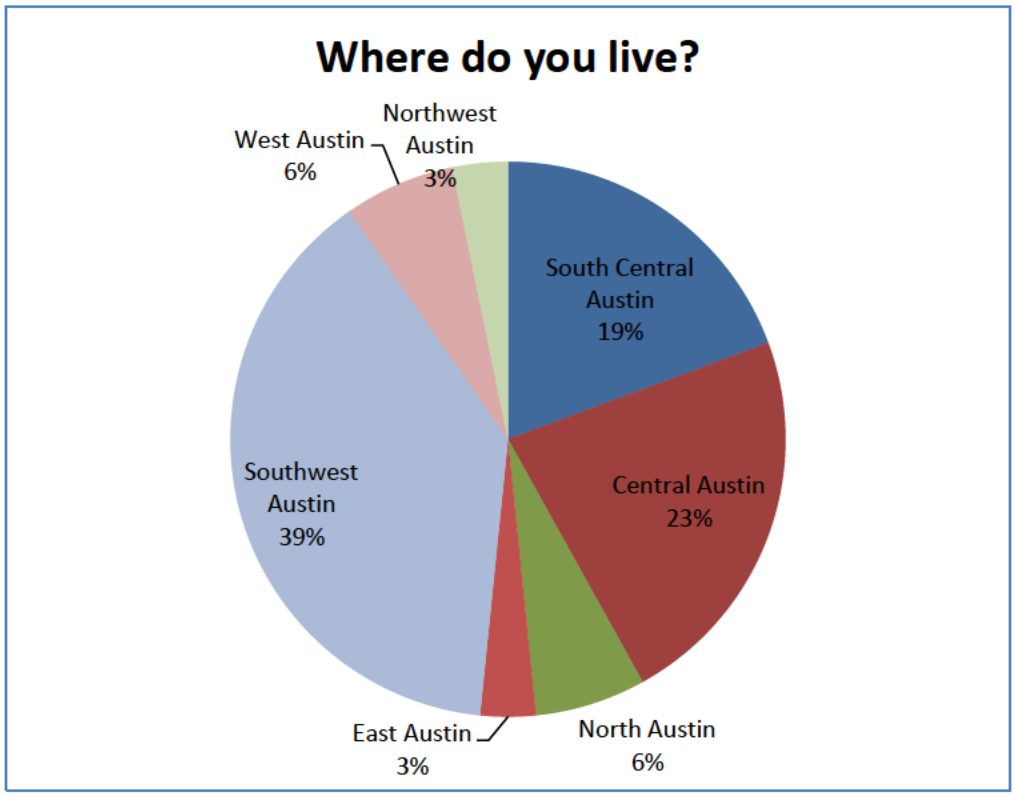
Question 23:
Please indicate how important the following facts are to you.



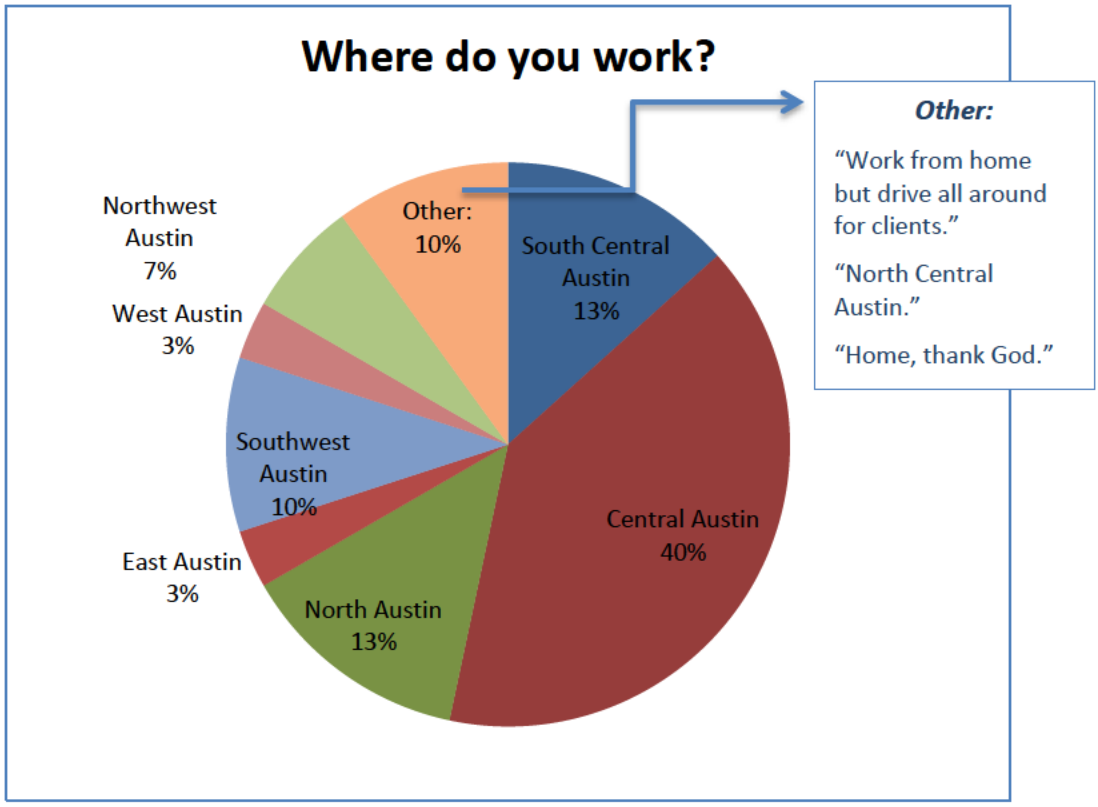
Comments:

1. Light rail options?
2. Are these facts? DISAGREE
3. Study 35-45-MoPac

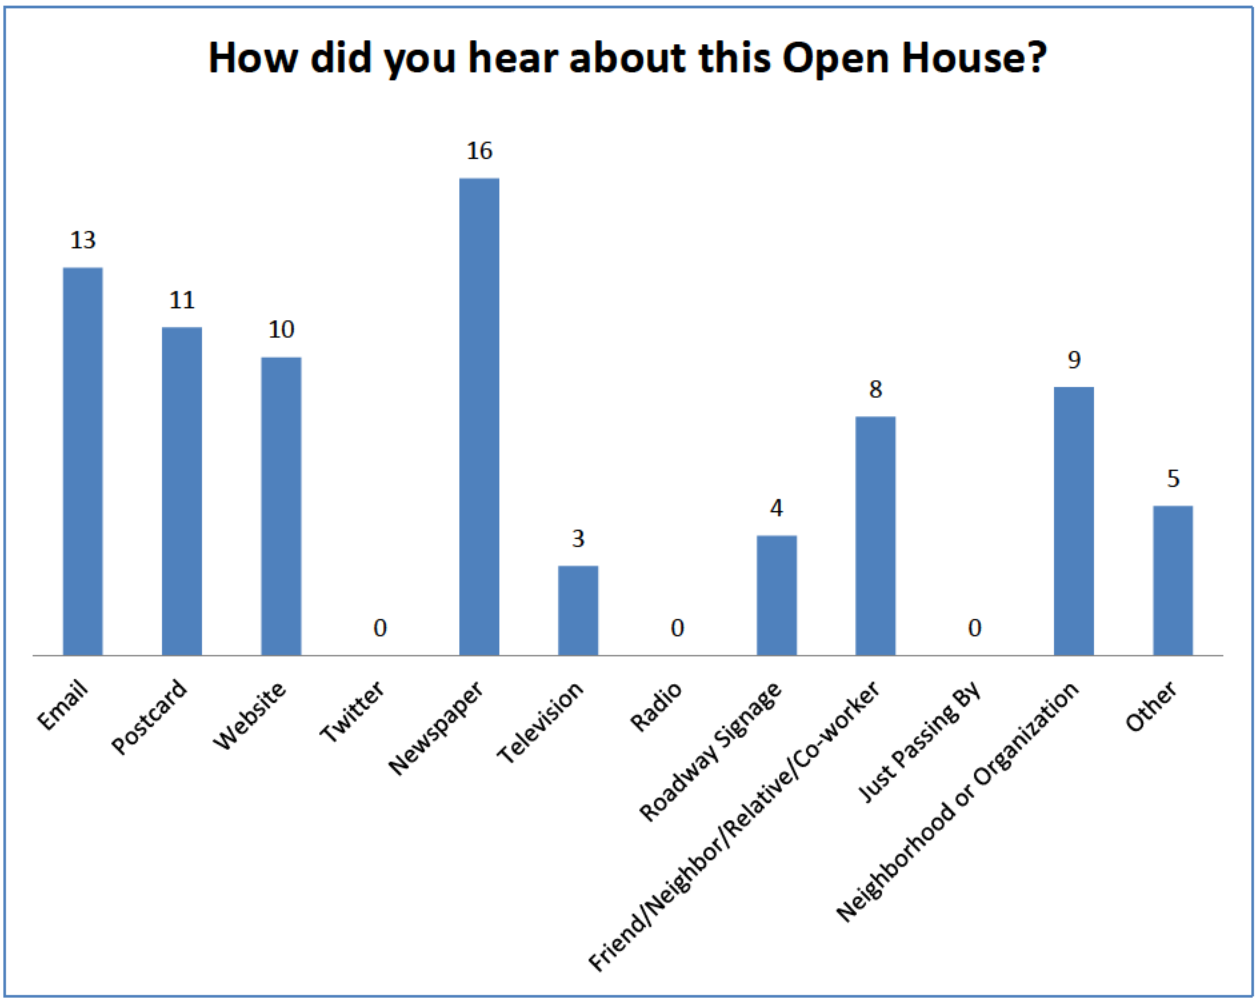
Question 24:



Question 25:



Question 26:



Other:

1. CNU, AIA, APT
2. Chamber briefing by CTRMA
3. I follow road work ideas due to living South
4. City of Austin Mobility News

Neighborhood Organizations:

1. SoBro (South Brodie Neighborhood Alliance)
2. Nextdoor email listserve
3. West Austin Neighborhood Group

Comments:

1. Great coverage in Austin Statesman 11/8/15.
2. This whole questionnaire is biased toward building more roads – not on moving people more efficiently. We need HOV lanes and better mass transit (busses and rail/gondola, etc.). Not more roads at all costs!!!

MoPac South
ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

NOTHING

What suggestions do you have for improving this configuration?

DO NOT BUILD!
Instead: HOV lanes + better mass transit!

Please list any comments or questions you may have about this configuration.

Concerns: Edwards Aquifer recharge zone — negative impact to envirnment. Negative impact to Austin High School + Townlake Trail. The proposed plan will not help traffic flow; it will just make the gridlock @ Cesar Chavez + Townlake worse.!

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

NOTHING

#1

What suggestions do you have for improving this configuration?

Do NOT BUILD!

Please list any comments or questions you may have about this configuration.

many, see 1st configuration
part/build HOV Lanes

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

NOTHING

What suggestions do you have for improving this configuration?

Do NOT BUILD!
No elevated structures! BUILD HOV Lanes.

Please list any comments or questions you may have about this configuration.

See above (1st configuration)

Do part / ~~Do not~~ HOV Lanes!

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

Nothing!

What suggestions do you have for improving this configuration?

Do Not Build!

Please list any comments or questions you may have about this configuration.

Environmental concerns!!!!
This Configuration will Not help gridlock!

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

Nothing!

What suggestions do you have for improving this configuration?

Do Not Build.

Please list any comments or questions you may have about this configuration.

No elevated structures!
No dbl. decker! No fly overs!

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

Nothing! Do Not Build!
No to fly overs, dbl. deckers & MORE toll lanes!

What suggestions do you have for improving this configuration?

Do NOT BUILD!
Instead: paint HOV lanes; invest in rapid transit (better busses AND Light RAIL)

Please list any comments or questions you may have about this configuration.

Study all of the connecting segments as a whole, before ANY of it is built.

MOPAC SOUTH ENVIRONMENTAL STUDY COMMUNITY SURVEY

Inadequate choices!

Which viewpoint is closest to your own? (select one):

____I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

____We don't need to address the traffic issues on MoPac South because improvements will encourage more development. We should encourage people to change their driving behaviors.

A – I am tired of traffic. We need HOV Lanes + better rapid transit

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one):

____Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

____Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

____Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

____Connecting the Express Lanes to downtown Austin is unimportant. No part of MoPac should be elevated anywhere as part of this project. NO MORE TOLL ROADS! NO Elevated Roads!

In order to arrive at a recommended configuration for the Express Lanes Alternative, each configuration will be evaluated using the following criteria:

- *Reduce congestion delay and provide travel time savings for all roadway users*
  - *Reduce congestion delay and optimize capacity utilization*
  - *Maximize travel time savings*
  - *Serve all roadway users*
- *Be constructible without unnecessary impacts to the natural and human environment.*
- *Facilitate congestion management*
  - *Increase opportunities for transit and ridesharing*

Please indicate how much you agree with the following statement. (select one):

	Strongly Agree	Agree	Undecided	Disagree	Strongly Disagree
These criteria listed above are appropriate.	○	○	○	○	●

Our Quality of Life (and that of our environment) are being assaulted in these proposals!!! We need HOV Lanes and better rapid transit (buses + light rail, gondola etc.

With help from community stakeholders, local governments and transportation partners, the study team has incorporated several improvements into the Express Lane Alternative. Please indicate how important each of the following improvements are to you. (select one):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
Address existing congestion problems in the vicinity of William Cannon Dr. and MoPac by improving entrance and exit ramps.	○	○	○	○	●
Add Texas Turnarounds at Barton Skyway to better facilitate access to MoPac, especially during events at Zilker Park.	○	○	○	○	●
Add an additional southbound general purpose lane south of William Cannon Dr.	○	○	○	○	●
Add new bypass lanes at Loop 360 in order to relieve back-ups at this exit.	○	○	●	○	○
Add direct connections from the Express Lanes to and from US 290.	○	○	○	○	●
The point where the Express Lane traffic would merge onto Cesar Chavez St. from the direct connection should shift farther east past Austin High School.	○	○	○	○	●
Reconfigure the southbound RM 2244 exit ramp to allow for more time to access RM 2244 from MoPac.	○	○	○	○	●
Add more bike/pedestrian facilities north of RM 2244 to better facilitate access, especially during events at Zilker Park.	●	○	○	○	○
New bridges over Barton Creek should span the creek and bridge columns should be placed outside of the water channel.	●	○	○	○	○
Implement improvements at Lake Austin Blvd. and 5th St. to reduce congestion at this intersection.	●	○	○	○	○

Please indicate how important the following facts are to you. (select one answer per question/statement):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
The MoPac South Environmental Study team is developing Best Management Practices to protect water quality in the Edwards Aquifer.	●	○	○	○	○
The MoPac South Environmental Study team is conducting biological surveys related to vegetation and threatened and endangered species.	●	○	○	○	○
The MoPac South Environmental Study team is conducting research on historic resources along the corridor, such as Zilker Park.	●	○	○	○	○
The MoPac South Environmental Study team is performing traffic noise and air quality analyses.	●	○	○	○	○

Very important!!!

MoPac South
ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration? NOT MUCH. INSTEAD TURN 6 MOPAC INTO "I35 WEST", BUYOUT TOLL ROAD 130 AND ROUTE THRU TRAFFIC ON IT.

THE ENTIRE PLAN DOES NOT ADDRESS HOW TO REDUCE INCREASING TRAFFIC VOLUME. BUILDING MORE ROADS WILL JUST ATTRACT MORE CAR USE.

What suggestions do you have for improving this configuration? WHERE ARE 48 LIGHT RAIL OPTIONS?

Please list any comments or questions you may have about this configuration.

INADEQUATE SELECTION OPTIONS PROVIDED THROUGHOUT THIS SURVEY. WHERE ARE THE NO BUILD OR LIGHT RAIL OR OTHER MASS TRANSIT OPTIONS?

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration? NOT MUCH.

HOV PREFERRED TO MORE TOLL LANES.

What suggestions do you have for improving this configuration?

DO NOT BUILD.

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

HOV LANE OPTIONS OVER TOLL ROADS.

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

NO MORE TOLL ROADS.
BUYOUT EXISTING TOLL ROADS TO ENCOURAGE THEIR USE.

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

NOTHING. HOV LANES ARE PREFERABLE.

What suggestions do you have for improving this configuration?

NO TOLL ROADS.

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Which viewpoint is closest to your own? (select one):

____I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

____We don't need to address the traffic issues on MoPac South because improvements will encourage more development. We should encourage people to change their driving behaviors.

✓ NO MORE TOLL ROADS.

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one):

____Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

____Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

____Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

____Connecting the Express Lanes to downtown Austin is unimportant. No part of MoPac should be elevated anywhere as part of this project.

✓ NONE OF THE ABOVE

In order to arrive at a recommended configuration for the Express Lanes Alternative, each configuration will be evaluated using the following criteria:

- *Reduce congestion delay and provide travel time savings for all roadway users*
  - *Reduce congestion delay and optimize capacity utilization*
  - *Maximize travel time savings*
  - *Serve all roadway users*
- *Be constructible without unnecessary impacts to the natural and human environment.*
- *Facilitate congestion management*
  - *Increase opportunities for transit and ridesharing*

MoPac South
ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

NOTE – I AM NOT RESPONDING TO THESE QUESTIONS THE WAY THEY ARE ASKED BECAUSE I AGREE ALL ASSUME I WITH THE FUNDAMENTAL ASSUMPTION THAT THE SOLUTION MUST BE PRIMARILY AUTOMOBILE-CENTRIC (ETC

Please list any comments or questions you may have about this configuration.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Which viewpoint is closest to your own? (select one):

____I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

____We don't need to address the traffic issues on MoPac South because ~~improvements will encourage more development.~~ We should encourage people to change their driving behaviors.

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one):

____Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

____Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

____Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

____Connecting the Express Lanes to downtown Austin is unimportant. No part of MoPac should be elevated anywhere as part of this project.

In order to arrive at a recommended configuration for the Express Lanes Alternative, each configuration will be evaluated using the following criteria:

- *Reduce congestion delay and provide travel time savings for all roadway users*
  - *Reduce congestion delay and optimize capacity utilization*
  - *Maximize travel time savings*
  - *Serve all roadway users*
- *Be constructible without unnecessary impacts to the natural and human environment.*
- *Facilitate congestion management*
  - *Increase opportunities for transit and ridesharing*

Please indicate how much you agree with the following statement. (select one):

	Strongly Agree	Agree	Undecided	Disagree	Strongly Disagree
These criteria listed above are appropriate.	○	○	○	○	◉

With help from community stakeholders, local governments and transportation partners, the study team has incorporated several improvements into the Express Lane Alternative. Please indicate how important each of the following improvements are to you. (select one):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
Address existing congestion problems in the vicinity of William Cannon Dr. and MoPac by improving entrance and exit ramps.	○	●	○	○	○
Add Texas Turnarounds at Barton Skyway to better facilitate access to MoPac, especially during events at Zilker Park.	○	●	○	○	○
Add an additional southbound general purpose lane south of William Cannon Dr.	○	○	○	○	●
Add new bypass lanes at Loop 360 in order to relieve back-ups at this exit.	○	○	●	○	○
Add direct connections from the Express Lanes to and from US 290.	○	○	○	○	●
The point where the Express Lane traffic would merge onto Cesar Chavez St. from the direct connection should shift farther east past Austin High School.	AGAIN ○	○	AND EXPOSE US TO		
Reconfigure the southbound RM 2244 exit ramp to allow for more time to access RM 2244 from MoPac.	○	○	●	○	○
Add more bike/pedestrian facilities north of RM 2244 to better facilitate access, especially during events at Zilker Park.	●	○	○	○	○
New bridges over Barton Creek should span the creek and bridge columns should be placed outside of the water channel.	○	○	●	○	○
Implement improvements at Lake Austin Blvd. and 5th St. to reduce congestion at this intersection.	○	○	●	○	○

Please indicate how important the following facts are to you. (select one answer per question/statement):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
The MoPac South Environmental Study team is developing Best Management Practices to protect water quality in the Edwards Aquifer.	✓	○	○	○	○
The MoPac South Environmental Study team is conducting biological surveys related to vegetation and threatened and endangered species.	✓	○	○	○	○
The MoPac South Environmental Study team is conducting research on historic resources along the corridor, such as Zilker Park.	✓	○	○	○	○
The MoPac South Environmental Study team is performing traffic noise and air quality analyses.	✓	○	○	○	○

MoPac South
Environmental Study

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

Capacity for future growth of Austin & Direct connector will help ensure reliable travel time to the CBD

What suggestions do you have for improving this configuration?

Eliminate North Bound Entrance Ramp for Barton Skyway. Ramp serves as a que jumper & merge lane is too short.

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

MoPac South
ENVIRONMENTAL STUDY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

nothing - bad configuration

What suggestions do you have for improving this configuration?

hopeless - dump it

Please list any comments or questions you may have about this configuration.

Single lane express lane between Cesar Chavez & US 290 is bad - big bottleneck for drivers from/to north of downtown.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

nothing - bad configuration

What suggestions do you have for improving this configuration?

none - dump it.

Please list any comments or questions you may have about this configuration.

see previous comments

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

Great option - DCs make sense except for "visual" impact

What suggestions do you have for improving this configuration?

none-has great lane balance - no apparent bottleneck, except for access from downtown to G.P. lanes - needs improvement

Please list any comments or questions you may have about this configuration.

the "Two Express lanes + elevated ramps near Barton Skyway" is a bit better option - because it seems to accomplish same LOS, but without the visual impact @ the Lake.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection X

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit Not good
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

Do not like it - will create a bottleneck NB where the ML exits S. of Barton Skyway.

What suggestions do you have for improving this configuration?

Jump it

Please list any comments or questions you may have about this configuration.

no improvements for access from downtown to Mopac South - not good

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway ✓ BEST OPTION

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

- Excellent option - good lane balance, no apparent bottlenecks NB. ~~Keeps traffic on~~ ~~only preferred option a bottleneck coming~~ ~~from downtown to go South, same as~~ ~~existing~~ good option

Which viewpoint is closest to your own? (select one):

X I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

___We don't need to address the traffic issues on MoPac South because improvements will encourage more development. We should encourage people to change their driving behaviors.

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one):

X Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

___Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

___Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

___Connecting the Express Lanes to downtown Austin is unimportant. No part of MoPac should be elevated anywhere as part of this project.

In order to arrive at a recommended configuration for the Express Lanes Alternative, each configuration will be evaluated using the following criteria:

MoPac South
ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

Down town Direct Connect

NO Elevated Roads

What suggestions do you have for improving this configuration?

More Lanes

Please list any comments or questions you may have about this configuration.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

N/A - Don't Build

#6a

What suggestions do you have for improving this configuration?

Dont Build

Please list any comments or questions you may have about this configuration.

N/A

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

Nice w/ multiple Access points

What suggestions do you have for improving this configuration?

Keeps the 3 lanes Am Monterey Oaks → Davis!!

Big ++

Please list any comments or questions you may have about this configuration.

Don't like the Elevated Road

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

No Elevated Roads - Visually Better
More Lanes the Better - As soon as they Build
the Connect from Bndo to SH 45 South this will be perfect

What suggestions do you have for improving this configuration?

+ Keep 3 Lanes from Manterey Oaks Blvd → Davis Lane
+ Keep 3 Lanes from Grains Ranch → manterey Oaks

If you build it they will use it.

Please list any comments or questions you may have about this configuration.

Express Way exit to Davis Lane needs tobe closer to
William Cannon. Too Many People will try to Cross 3 lanes
of traffic to Exit Davis going South

Which viewpoint is closest to your own? (select one):

__✓__ I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

____ We don't need to address the traffic issues on MoPac South because improvements will encourage more development. We should encourage people to change their driving behaviors.

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one):

____ Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

__✓__ Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

____ Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

____ Connecting the Express Lanes to downtown Austin is unimportant. No part of MoPac should be elevated anywhere as part of this project.

In order to arrive at a recommended configuration for the Express Lanes Alternative, each configuration will be evaluated using the following criteria:

- *Reduce congestion delay and provide travel time savings for all roadway users*
  - *Reduce congestion delay and optimize capacity utilization*
  - *Maximize travel time savings*
  - *Serve all roadway users*
- *Be constructible without unnecessary impacts to the natural and human environment.*
- *Facilitate congestion management*
  - *Increase opportunities for transit and ridesharing*

Please indicate how much you agree with the following statement. (select one):

	Strongly Agree	Agree	Undecided	Disagree	Strongly Disagree
These criteria listed above are appropriate.	⊘	○	○	○	○

With help from community stakeholders, local governments and transportation partners, the study team has incorporated several improvements into the Express Lane Alternative. Please indicate how important each of the following improvements are to you. (select one):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
Address existing congestion problems in the vicinity of William Cannon Dr. and MoPac by improving entrance and exit ramps.	✓	○	○	○	○
Add Texas Turnarounds at Barton Skyway to better facilitate access to MoPac, especially during events at Zilker Park.	✓	○	○	○	○
Add an additional southbound general purpose lane south of William Cannon Dr.	✓	○	○	○	○
Add new bypass lanes at Loop 360 in order to relieve back-ups at this exit.	○	✓	○	○	○
Add direct connections from the Express Lanes to and from US 290.	○	○	✓	○	○
The point where the Express Lane traffic would merge onto Cesar Chavez St. from the direct connection should shift farther east past Austin High School.	○	✓	○	○	○
Reconfigure the southbound RM 2244 exit ramp to allow for more time to access RM 2244 from MoPac.	✓	○	○	○	○
Add more bike/pedestrian facilities north of RM 2244 to better facilitate access, especially during events at Zilker Park.	○	○	○	✓	○
New bridges over Barton Creek should span the creek and bridge columns should be placed outside of the water channel.	✓	○	○	○	○
Implement improvements at Lake Austin Blvd. and 5th St. to reduce congestion at this intersection.	✓	○	○	○	○

Please indicate how important the following facts are to you. (select one answer per question/statement):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
The MoPac South Environmental Study team is developing Best Management Practices to protect water quality in the Edwards Aquifer.	○	○	○	○	○

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

I don't like the N.B. access from the express lanes to downtown as they have to weave across the general purpose lanes. Likewise, SB traffic from downtown has to weave across the gen. purpose lanes to access the express lanes.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

Great access in and out of downtown w/o impacting the general purpose lanes. Best travel times.

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

I've heard that many folks are not in support of this option out of concern for visual height of the pc's. It's important to point out that MoPac to the north is much higher than these pc's would be. Also, users of the hike/bike bridge under MoPac would have a difficult time even seeing the new pc bridge.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

DCs are needed in/out of downtown.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

This is my second favorite option - provides great improvement in travel time + no weave across the main lanes for access to the express lanes.

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

Express lane connection to/from US 290 west

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

I don't understand how parkland can be acquired for the project when there are other viable alternatives.

What suggestions do you have for improving this configuration?

Need to improve access from downtown on 5th street – check out a city's "jug handle" idea

Please list any comments or questions you may have about this configuration.

Best option!

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

It is ingenous but has problems associated with it, like no good access from Bee Caves road to Mopac NB

What suggestions do you have for improving this configuration?

none - Like the jug handle idea for the connection from 5th St. to go south on Mopac.

Please list any comments or questions you may have about this configuration.

Single lane South of US 290 makes sense to avoid bottlenecks at the ML junctions w/ 290
overall, a well thought out option

Which viewpoint is closest to your own? (select one):

✓ I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

___ We don't need to address the traffic issues on MoPac South because improvements will encourage more development. We should encourage people to change basic driving behaviors.

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one):

✓ Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

✓ Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

___ Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

MoPac South
ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

Nothing's

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

This is a recipe for injuries & deaths with people trying to cross lanes of traffic —

#8

MoPac South
ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

Least effective - would be obsolete before completion

#9

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Really - is this even an option?

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

most logical and efficient.

What suggestions do you have for improving this configuration?

None at this time

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Not Truly Realistic

Which viewpoint is closest to your own? (select one):

✓ I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

___We don't need to address the traffic issues on MoPac South because improvements will encourage more development. We should encourage people to change their driving behaviors.

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one):

✓ Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

___Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

___Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

___Connecting the Express Lanes to downtown Austin is unimportant. No part of MoPac should be elevated anywhere as part of this project.

In order to arrive at a recommended configuration for the Express Lanes Alternative, each configuration will be evaluated using the following criteria:

- *Reduce congestion delay and provide travel time savings for all roadway users*
  - *Reduce congestion delay and optimize capacity utilization*
  - *Maximize travel time savings*
  - *Serve all roadway users*
- *Be constructible without unnecessary impacts to the natural and human environment.*
- *Facilitate congestion management*
  - *Increase opportunities for transit and ridesharing*

Please indicate how much you agree with the following statement. (select one):

	Strongly Agree	Agree	Undecided	Disagree	Strongly Disagree
These criteria listed above are appropriate.	○	◉	○	○	○

With help from community stakeholders, local governments and transportation partners, the study team has incorporated several improvements into the Express Lane Alternative. Please indicate how important each of the following improvements are to you. (select one):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
Address existing congestion problems in the vicinity of William Cannon Dr. and MoPac by improving entrance and exit ramps.	●	○	○	○	○
Add Texas Turnarounds at Barton Skyway to better facilitate access to MoPac, especially during events at Zilker Park.	●	○	○	○	○
Add an additional southbound general purpose lane south of William Cannon Dr.	●	○	○	○	○
Add new bypass lanes at Loop 360 in order to relieve back-ups at this exit.	○	○	●	○	○
Add direct connections from the Express Lanes to and from US 290.	○	●	○	○	○
The point where the Express Lane traffic would merge onto Cesar Chavez St. from the direct connection should shift farther east past Austin High School.	○	●	○	○	○
Reconfigure the southbound RM 2244 exit ramp to allow for more time to access RM 2244 from MoPac.	○	○	○	○	○
Add more bike/pedestrian facilities north of RM 2244 to better facilitate access, especially during events at Zilker Park.	○	●	○	○	○
New bridges over Barton Creek should span the creek and bridge columns should be placed outside of the water channel.	○	●	○	○	○
Implement improvements at Lake Austin Blvd. and 5th St. to reduce congestion at this intersection.	○	●	○	○	○

Please indicate how important the following facts are to you. (select one answer per question/statement):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
The MoPac South Environmental Study team is developing Best Management Practices to protect water quality in the Edwards Aquifer.	○	●	○	○	○
The MoPac South Environmental Study team is conducting biological surveys related to vegetation and threatened and endangered species.	○	○	●	○	○
The MoPac South Environmental Study team is conducting research on historic resources along the corridor, such as Zilker Park.	○	○	●	○	○
The MoPac South Environmental Study team is performing traffic noise and air quality analyses.	○	○	●	○	○

MoPac South
Environmental Study

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

It seems safe and makes sense.

What suggestions do you have for improving this configuration?

exit at Rollingwood / Bee Caves, is tricky

Please list any comments or questions you may have about this configuration.

I understand that Rollingwood Residents have already nixed the idea. Tend to agree, since that the Lanes & Trail are The heart of our city.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

#10

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

I do not think the merge ophow is safe!

What suggestions do you have for improving this configuration?

For AHS kids or people merging on to MoPac who need to drive north, it will only make a bad situation worse.

Please list any comments or questions you may have about this configuration.

X **CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway**

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

Like the Ophow, it makes sense and seems safe. I think it's better to move the flyover south. It will be less unsightly for those enjoying the Lake or trail on Town Lake. It seems like a thoughtful plan and solution.

What suggestions do you have for improving this configuration?

South bound exit at Rollingwood/Bee Caves is very tricky — with people coming up the road from Rollingwood & Alker.

Please list any comments or questions you may have about this configuration.

Thank you for adding Sidewalks! I live in Tremont and people park there for ACL. It's important to keep people, cyclists, drivers safe.

would a yield sign help?

How will you manage a bottleneck of people exiting toll road vs. existing Mopac?

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please do not take any part of the Lake OR Zilker. These are important parts of our city and must be preserved.

Please list any comments or questions you may have about this configuration.

I drive approx 200-300 mi/wk between 35th + southern parkway + live in Fremont.

Which viewpoint is closest to your own? (select one):

✓ I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

___ We don't need to address the traffic issues on MoPac South because improvements will encourage more development. We should encourage people to change their driving behaviors.

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one): We need to direct people downtown so we have an urban core, rather than sprawl.

✓ Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

WW Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

___ Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

___ Connecting the Express Lanes to downtown Austin is unimportant. No part of MoPac should be elevated anywhere as part of this project.

In order to arrive at a recommended configuration for the Express Lanes Alternative, each configuration will be evaluated using the following criteria:

- *Reduce congestion delay and provide travel time savings for all roadway users*
  - *Reduce congestion delay and optimize capacity utilization*
  - *Maximize travel time savings*
  - *Serve all roadway users*
- *Be constructible without unnecessary impacts to the natural and human environment.*
- *Facilitate congestion management*
  - *Increase opportunities for transit and ridesharing*

Please indicate how much you agree with the following statement. (select one):

	Strongly Agree	Agree	Undecided	Disagree	Strongly Disagree
These criteria listed above are appropriate.	○	⊗	○	○	○

With help from community stakeholders, local governments and transportation partners, the study team has incorporated several improvements into the Express Lane Alternative. Please indicate how important each of the following improvements are to you. (select one):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
Address existing congestion problems in the vicinity of William Cannon Dr. and MoPac by improving entrance and exit ramps.	○	✓	○	○	○
Add Texas Turnarounds at Barton Skyway to better facilitate access to MoPac, especially during events at Zilker Park.	○	✓	○	○	○
Add an additional southbound general purpose lane south of William Cannon Dr.	○	✓	○	○	○
Add new bypass lanes at Loop 360 in order to relieve back-ups at this exit.		✓	○	○	○
Add direct connections from the Express Lanes to and from US 290. ?	○	○	○	○	○
The point where the Express Lane traffic would merge onto Cesar Chavez St. from the direct connection should shift farther east past Austin High School. ?	○	○	○	○	○
Reconfigure the southbound RM 2244 exit ramp to allow for more time to access RM 2244 from MoPac.		✓	○	○	○
Add more bike/pedestrian facilities north of RM 2244 to better facilitate access, especially during events at Zilker Park.		✓	○	○	○
New bridges over Barton Creek should span the creek and bridge columns should be placed outside of the water channel.	○	○	○	○	○
Implement improvements at Lake Austin Blvd. and 5th St. to reduce congestion at this intersection.		✓	○	○	○

Kids should be priority #1

Please indicate how important the following facts are to you. (select one answer per question/statement):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
The MoPac South Environmental Study team is developing Best Management Practices to protect water quality in the Edwards Aquifer.	✓	○	○	○	○
The MoPac South Environmental Study team is conducting biological surveys related to vegetation and threatened and endangered species.	✓	○	○	○	○

MoPac South
Environmental Study

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

Maes elevation off Lake, maintains good access.

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Which viewpoint is closest to your own? (select one):

X I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

MoPac South
ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

added lanes south of 71

What suggestions do you have for improving this configuration?

more NB lanes crossing 71

Please list any comments or questions you may have about this configuration.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

I don't think DC Asc needed

What suggestions do you have for improving this configuration?

b/t frontge from 71 to 360

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

I don't think 2 have & DC are needd

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

this was the best one. good job.

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

- bottle neck at SB with Cameron
- design speed is awful for some ramps
- Bee Cave connection is under design

Which viewpoint is closest to your own? (select one):

X I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

___We don't need to address the traffic issues on MoPac South because improvements will encourage more development. We should encourage people to change their driving behaviors.

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one):

___Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

___Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

___Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

X Connecting the Express Lanes to downtown Austin is unimportant. No part of MoPac should be elevated anywhere as part of this project.

In order to arrive at a recommended configuration for the Express Lanes Alternative, each configuration will be evaluated using the following criteria:

- *Reduce congestion delay and provide travel time savings for all roadway users*
  - *Reduce congestion delay and optimize capacity utilization*
  - *Maximize travel time savings*
  - *Serve all roadway users*
- *Be constructible without unnecessary impacts to the natural and human environment.*
- *Facilitate congestion management*
  - *Increase opportunities for transit and ridesharing*

Please indicate how much you agree with the following statement. (select one):

	Strongly Agree	Agree	Undecided	Disagree	Strongly Disagree
These criteria listed above are appropriate.	○	⊘	○	○	○

With help from community stakeholders, local governments and transportation partners, the study team has incorporated several improvements into the Express Lane Alternative. Please indicate how important each of the following improvements are to you. (select one):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
Address existing congestion problems in the vicinity of William Cannon Dr. and MoPac by improving entrance and exit ramps.	○	○	○	○	○
Add Texas Turnarounds at Barton Skyway to better facilitate access to MoPac, especially during events at Zilker Park.	○	○	○	○	○
Add an additional southbound general purpose lane south of William Cannon Dr.	○	○	○	○	○
Add new bypass lanes at Loop 360 in order to relieve back-ups at this exit.	○	○	○	○	○
Add direct connections from the Express Lanes to and from US 290.	○	○	○	○	○
The point where the Express Lane traffic would merge onto Cesar Chavez St. from the direct connection should shift farther east past Austin High School.	○	○	○	○	○
Reconfigure the southbound RM 2244 exit ramp to allow for more time to access RM 2244 from MoPac.	○	○	○	○	○
Add more bike/pedestrian facilities north of RM 2244 to better facilitate access, especially during events at Zilker Park.	○	○	○	○	○
New bridges over Barton Creek should span the creek and bridge columns should be placed outside of the water channel.	○	○	○	○	○
Implement improvements at Lake Austin Blvd. and 5th St. to reduce congestion at this intersection.	○	○	○	○	○

Please indicate how important the following facts are to you. (select one answer per question/statement):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
The MoPac South Environmental Study team is developing Best Management Practices to protect water quality in the Edwards Aquifer.	○	○	○	○	○
The MoPac South Environmental Study team is conducting biological surveys related to vegetation and threatened and endangered species.	○	○	○	○	○
The MoPac South Environmental Study team is conducting research on historic resources along the corridor, such as Zilker Park.	○	○	○	○	○
The MoPac South Environmental Study team is performing traffic noise and air quality analyses.	○	○	○	○	○

MoPac South
ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

No tolls

Please list any comments or questions you may have about this configuration.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

Nothing

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

No

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

No

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez SU5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Which viewpoint is closest to your own? (select one):

X I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

___We don't need to address the traffic issues on MoPac South because improvements will encourage more development. We should encourage people to change their driving behaviors.

X Think outside this box you have painted.

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one):

___Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

___Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

___Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

X Connecting the Express Lanes to downtown Austin is unimportant. No part of MoPac should be elevated anywhere as part of this project.

In order to arrive at a recommended configuration for the Express Lanes Alternative, each configuration will be evaluated using the following criteria:

- *Reduce congestion delay and provide travel time savings for all roadway users*
  - *Reduce congestion delay and optimize capacity utilization*
  - *Maximize travel time savings*

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

Need more

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

This is the most efficient alternative by far.

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

MoPac South
ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

nothing

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

go back to the enviromental studies
35-45-mopac

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

nothing

#16

What suggestions do you have for improving this configuration?

Do a complete enviromental study

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

nothing

What suggestions do you have for improving this configuration?

see above

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

nothing

What suggestions do you have for improving this configuration?

Do a complete enviromental study of what connecting 35 to 43 to mopac

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

nothing

What suggestions do you have for improving this configuration?

DO A complete survey on what connecting 35-45-mopac !

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Which viewpoint is closest to your own? (select one):

____I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

__V__We don't need to address the traffic issues on MoPac South because improvements will encourage more development. We should encourage people to change their driving behaviors.

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one):

____Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

____Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

____Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

__V__Connecting the Express Lanes to downtown Austin is unimportant. No part of MoPac should be elevated anywhere as part of this project.

In order to arrive at a recommended configuration for the Express Lanes Alternative, each configuration will be evaluated using the following criteria:

- *Reduce congestion delay and provide travel time savings for all roadway users*
  - *Reduce congestion delay and optimize capacity utilization*
  - *Maximize travel time savings*
  - *Serve all roadway users*
- *Be constructible without unnecessary impacts to the natural and human environment*
- *Facilitate congestion management*
  - *Increase opportunities for transit and ridesharing*

Please indicate how much you agree with the following statement. (select one):

	Strongly Agree	Agree	Undecided	Disagree	Strongly Disagree
These criteria listed above are appropriate.	○	○	○	○	○

With help from community stakeholders, local governments and transportation partners, the study team has incorporated several improvements into the Express Lane Alternative. Please indicate how important each of the following improvements are to you. (select one):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
Address existing congestion problems in the vicinity of William Cannon Dr. and MoPac by improving entrance and exit ramps.	○	●	○	○	○
Add Texas Turnarounds at Barton Skyway to better facilitate access to MoPac, especially during events at Zilker Park.	○	●	○	○	○
Add an additional southbound general purpose lane south of William Cannon Dr.	○	●	○	○	○
Add new bypass lanes at Loop 360 in order to relieve back-ups at this exit.	○	●	○	○	○
Add direct connections from the Express Lanes to and from US 290.	○	○	○	○	●
The point where the Express Lane traffic would merge onto Cesar Chavez St. from the direct connection should shift farther east past Austin High School.	○	○	○	○	●
Reconfigure the southbound RM 2244 exit ramp to allow for more time to access RM 2244 from MoPac.	○	○	●	○	○
Add more bike/pedestrian facilities north of RM 2244 to better facilitate access, especially during events at Zilker Park.	○	●	○	○	○
New bridges over Barton Creek should span the creek and bridge columns should be placed outside of the water channel.	○	○	○	○	●
Implement improvements at Lake Austin Blvd. and 5th St. to reduce congestion at this intersection.	○	○	○	○	●

No express lane down here

No express lanes downtown-so they can sit in traffic?

Please indicate how important the following facts are to you. (select one answer per question/statement):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
The MoPac South Environmental Study team is developing Best Management Practices to protect water quality in the Edwards Aquifer.	●	○	○	○	○
The MoPac South Environmental Study team is conducting biological surveys related to vegetation and threatened and endangered species.	●	○	○	○	○
The MoPac South Environmental Study team is conducting research on historic resources along the corridor, such as Zilker Park.	●	○	○	○	○
The MoPac South Environmental Study team is performing traffic noise and air quality analyses.	●	○	○	○	○

MoPac South
ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

~~NO~~

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

No elevation over the lake please further

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

No new elevated structure
No new downtown access

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

NO downtown connection
NO new elevated structure

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

I like this

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Which viewpoint is closest to your own? (select one):

____I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

Cesar Chavez is an important access to downtown

What suggestions do you have for improving this configuration?

Can 15th St / Enfield also get easier?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

#16

What suggestions do you have for improving this configuration?

Stripe downtown, but Austin downtown is growing & a top asset

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

MoPac South
ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Does cesar chavez Backup

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

True two lane with access to downtown

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Does Cesar Chavez Backup

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Will access into downtown work? will Cesar Chavez backup

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Concerned about weave between Bee Cave & Downtown Ramps

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Which viewpoint is closest to your own? (select one):

___I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing.

___We don't need to address the traffic issues on MoPac South because improvements will encourage more development. We should encourage people to change their driving behaviors.

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one):

✓ Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

___Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

___Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

___Connecting the Express Lanes to downtown Austin is unimportant. No part of MoPac should be elevated anywhere as part of this project.

In order to arrive at a recommended configuration for the Express Lanes Alternative, each configuration will be evaluated using the following criteria:

- *Reduce congestion delay and provide travel time savings for all roadway users*
  - *Reduce congestion delay and optimize capacity utilization*
  - *Maximize travel time savings*
  - *Serve all roadway users*
- *Be constructible without unnecessary impacts to the natural and human environment.*
- *Facilitate congestion management*
  - *Increase opportunities for transit and ridesharing*

Please indicate how much you agree with the following statement. (select one):

	Strongly Agree	Agree	Undecided	Disagree	Strongly Disagree
These criteria listed above are appropriate.	⊘	○	○	○	○

With help from community stakeholders, local governments and transportation partners, the study team has incorporated several improvements into the Express Lane Alternative. Please indicate how important each of the following improvements are to you. (select one):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
Address existing congestion problems in the vicinity of William Cannon Dr. and MoPac by improving entrance and exit ramps.	X	○	○	○	○
Add Texas Turnarounds at Barton Skyway to better facilitate access to MoPac, especially during events at Zilker Park.	○	○	X	○	○
Add an additional southbound general purpose lane south of William Cannon Dr.	X	○	○	○	○
Add new bypass lanes at Loop 360 in order to relieve back-ups at this exit.	○	X	○	○	○
Add direct connections from the Express Lanes to and from US 290.	○	X	○	○	○
The point where the Express Lane traffic would merge onto Cesar Chavez St. from the direct connection should shift farther east past Austin High School.	○	○	X	○	○
Reconfigure the southbound RM 2244 exit ramp to allow for more time to access RM 2244 from MoPac.	○	○	X	○	○
Add more bike/pedestrian facilities north of RM 2244 to better facilitate access, especially during events at Zilker Park.	○	○	X	○	○
New bridges over Barton Creek should span the creek and bridge columns should be placed outside of the water channel.	○	○	X	○	○
Implement improvements at Lake Austin Blvd. and 5th St. to reduce congestion at this intersection.	X	○	○	○	○

Please indicate how important the following facts are to you. (select one answer per question/statement):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
The MoPac South Environmental Study team is developing Best Management Practices to protect water quality in the Edwards Aquifer.	○	X	○	○	○

MoPac South
ENVIRONMENTAL STUDY

Open House – November 10, 2015

COMMUNITY SURVEY

Your feedback is critical to the success of the MoPac South Environmental Study. Please share your thoughts with the study team.

Several operational configurations for the Express Lanes Alternative have been evaluated by the study team. Please review the Open House exhibits to learn more about each configuration, then answer the following questions.

CONFIGURATION: One Express Lane + Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

I do not like any of these plans

What suggestions do you have for improving this configuration?

I would recommend spending a whole lot less money on something that will actually serve to decrease traffic congestion. Toll roads for a limited few take next to no cars off other lanes. An HOV lane and extra express bus/park and ride would reduce the number of cars on the road and preserve tax dollars and green space,

Please list any comments or questions you may have about this configuration.

CONFIGURATION: One Express Lane Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: One
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown: One-lane, elevated direct connect ramp in each direction, to and from Cesar Chavez Street
- New Elevated Structure: One northbound and one southbound ramp near Cesar Chavez Street. (approximately 30 feet above existing pavement; lower than two existing structures in the intersection)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes Without Downtown Direct Connection

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes south of Barton Skyway into left-most general purpose lane and weave across three lanes to access existing Cesar Chavez Street exit
- Access from Downtown (Southbound): Enter general purpose lanes using existing Lake Austin Boulevard entrance ramp and weave across three lanes to access Express Lane south of Barton Skyway
- New Elevated Structure: None

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: Two Express Lanes + Elevated Ramps Near Barton Skyway

- Number of Express Lanes in Each Direction: Two
- Access to Downtown (Northbound): Exit Express Lanes using new elevated ramp near Barton Skyway and enter right-most general purpose lane south of Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exit
- Access from Downtown (Southbound): Once on southbound MoPac, get in the right-most general purpose lane in order to enter the Express Lanes using new elevated ramp near Barton Skyway
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement)

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

CONFIGURATION: City of Austin Proposal

- Number of Express Lanes in Each Direction: Two between Cesar Chavez Street and US 290; One between US 290 and Slaughter Lane
- Access to Downtown (Northbound): Exit Express Lanes using new one-lane, elevated exit ramp to northbound collector distributor road north of Barton Skyway and over Lady Bird Lake in order to access the existing Cesar Chavez St./5th St. exist
- Access from Downtown (Southbound): From Lake Austin Blvd., enter the new collector-distributor road over Lady Bird Lake and use the new one-lane, elevated entrance ramp north of Barton Skyway to enter the Express Lanes
- New Elevated Structure: One northbound and one southbound ramp near Barton Skyway (approximately 30 feet above existing pavement); new northbound and southbound collector-distributor road bridges over Lady Bird Lake

What do you like about this configuration?

What suggestions do you have for improving this configuration?

Please list any comments or questions you may have about this configuration.

Which viewpoint is closest to your own? (select one):

✓ I am tired of sitting in traffic. We need to address the traffic issues on MoPac South by adding the maximum additional capacity possible within the existing right-of-way. Our community is going to keep growing. But these plans do not adequately solve the problem when I-11 is developed. Few cars to keep this road moving

___We don't need to address the traffic issues on MoPac South because improvements will encourage more development. We should encourage people to change their driving behaviors.

Which statement most closely reflects your opinion about providing a connection from the Express Lanes to and from downtown? (select one):

___Connecting the Express Lanes to downtown Austin is important. I don't have any concerns about elevating sections of the Express Lanes.

___Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated over Lady Bird Lake.

___Connecting the Express Lanes to downtown Austin is important. Elevating a short section is OK, as long as it is not elevated near Bee Cave Road/Barton Skyway.

✓ Connecting the Express Lanes to downtown Austin is unimportant. No part of MoPac should be elevated anywhere as part of this project.

In order to arrive at a recommended configuration for the Express Lanes Alternative, each configuration will be evaluated using the following criteria:

- *Reduce congestion delay and provide travel time savings for all roadway users*
  - *Reduce congestion delay and optimize capacity utilization*
  - *Maximize travel time savings*
  - *Serve all roadway users*
- *Be constructible without unnecessary impacts to the natural and human environment.*
- *Facilitate congestion management*
  - *Increase opportunities for transit and ridesharing*

Please indicate how much you agree with the following statement. (select one):

	Strongly Agree	Agree	Undecided	Disagree	Strongly Disagree
These criteria listed above are appropriate.	○	◉	○	○	○

With help from community stakeholders, local governments and transportation partners, the study team has incorporated several improvements into the Express Lane Alternative. Please indicate how important each of the following improvements are to you. (select one):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
Address existing congestion problems in the vicinity of William Cannon Dr. and MoPac by improving entrance and exit ramps.	○	●	○	○	○
Add Texas Turnarounds at Barton Skyway to better facilitate access to MoPac, especially during events at Zilker Park.	○	○	○	●	○
Add an additional southbound general purpose lane south of William Cannon Dr.	○	○	○	●	○
Add new bypass lanes at Loop 360 in order to relieve back-ups at this exit.	○	○	○	●	○
Add direct connections from the Express Lanes to and from US 290.	○	○	○	●	○
The point where the Express Lane traffic would merge onto Cesar Chavez St. from the direct connection should shift farther east past Austin High School.	○	○	○	●	○
Reconfigure the southbound RM 2244 exit ramp to allow for more time to access RM 2244 from MoPac.	○	○	○	●	○
Add more bike/pedestrian facilities north of RM 2244 to better facilitate access, especially during events at Zilker Park.	○	○	●	○	○
New bridges over Barton Creek should span the creek and bridge columns should be placed outside of the water channel.	○	○	●	○	○
Implement improvements at Lake Austin Blvd. and 5th St. to reduce congestion at this intersection.	○	○	●	○	○

Please indicate how important the following facts are to you. (select one answer per question/statement):

	Very Important	Important	Moderately Important	Of Little Importance	Unimportant
The MoPac South Environmental Study team is developing Best Management Practices to protect water quality in the Edwards Aquifer.	●	○	○	○	○
The MoPac South Environmental Study team is conducting biological surveys related to vegetation and threatened and endangered species.	●	○	○	○	○
The MoPac South Environmental Study team is conducting research on historic resources along the corridor, such as Zilker Park.	●	○	○	○	○
The MoPac South Environmental Study team is performing traffic noise and air quality analyses.	●	○	○	○	○

AUSTIN HIGH COMMUNITY INPUT
November 2015
Concerning Proposals of the Central Texas Regional Mobility Authority to expand MoPac by adding toll lanes from Cesar Chavez to Slaughter Lane

Austin High leaders seek your comments, questions and concerns since many members of our Austin High community will not be able to attend the official Open House of the CTRMA, or may not complete their on-line survey. Thank you!

Are you an: AHS Parent | AHS Student | AHS Faculty/Staff | AHS Community Member

Do you or your child drive regularly to/from Austin High?
If yes:
Which seems worse?: morning traffic | 4:15-5 PM traffic | 5-5:45PM traffic

In the afternoon when school lets out, how long do you typically wait on SF Austin/Veterans Drive to get onto Lake Austin Blvd (traveling west) or Cesar Chavez (traveling east)? 20 min

What are your greatest traffic concerns for the area around Austin High?

How informed do you feel about the current MoPac South proposals?

Well informed | I know some about them | I know a little | This is new to me

Will you use the proposed Slaughter Lane to Cesar Chavez toll lanes? Why or why not? NO, not worth it

Do you think a toll road is the best solution for this stretch of roadway? YES NO

Do you support proposed variable pricing (with no upper limit)? YES NO

Do you support an "upper deck" design? YES NO

Do you prefer no toll lanes, one toll lane or two toll lanes? NONE ONE TWO

Would you prefer an HOV lane to proposed toll lanes? YES NO

Would you likely use a Park & Ride service if it were available? YES NO

Do you have other ideas you wish would be explored to alleviate traffic on MoPac or to alleviate traffic around our school? Public Transit

Do you like a specific proposal offered by CTRMA?
Which one(s)?

What do you like about it?

Do you oppose a specific proposal of the CTRMA?
Which one(s)?

What are your concerns?

Would you like to stay informed by Austin High's Traffic & Safety Committee? If so, please provide your:

In the afternoon when school lets out, how long do you typically wait on SF Austin/Veterans Drive to get onto Lake Austin Blvd (traveling west) or Cesar Chavez (traveling east)?
30 minutes
What are your greatest traffic concerns for the area around Austin High?
That the small merging lanes create more traffic.
How informed do you feel about the current MoPac South proposals?

(Well informed) I know some about them I know a little This is new to me

Will you use the proposed Slaughter Lane to Cesar Chavez toll lanes? Why or why not?
No, It will create more traffic

Do you think a toll road is the best solution for this stretch of roadway?	YES	(NO)
Do you support proposed variable pricing (with no upper limit)?	(YES)	NO
Do you support an "upper deck" design?	YES	(NO)
Do you prefer no toll lanes, one toll lane or two toll lanes?	(NONE) ONE	TWO
Would you prefer an HOV lane to proposed toll lanes?	(YES)	NO
Would you likely use a Park & Ride service if it were available?	(YES)	NO

Do you have other ideas you wish would be explored to alleviate traffic on MoPac or to alleviate traffic around our school? Better merging lanes, at least two

Do you like a specific proposal offered by CTRMA? Which one(s)?	Do you oppose a specific proposal of the CTRMA? Which one(s)? Connecting ramps to 3-35
What do you like about it?	What are your concerns? The most traffic

November 2015
Concerning Proposals of the Central Texas Regional Mobility Authority to expand MoPac by adding toll lanes from Cesar Chavez to Slaughter Lane

Austin High leaders seek your comments, questions and concerns since many members of our Austin High community will not be able to attend the official Open House of the CTRMA, or may not complete their on-line survey. Thank you!

Are you an: AHS Parent AHS Student AHS Faculty/Staff AHS Community Member

Do you or your child drive regularly to/from Austin High?
If yes:
Which seems worse?: morning traffic 4:15-5 PM traffic 5-5:45PM traffic

In the afternoon when school lets out, how long do you typically wait on SF Austin/Veterans Drive to get onto Lake Austin Blvd (traveling west) or Cesar Chavez (traveling east)? 15-30 minutes (depends)

What are your greatest traffic concerns for the area around Austin High? Safety with all the roads merging and splitting.

How informed do you feel about the current MoPac South proposals?

Well informed I know some about them I know a little This is new to me

Will you use the proposed Slaughter Lane to Cesar Chavez toll lanes? Why or why not?
No, changing toll prices and being unlimited is very much a deterrent.

Do you think a toll road is the best solution for this stretch of roadway?	YES	NO
Do you support proposed variable pricing (with no upper limit)?	YES	NO
Do you support an "upper deck" design?	YES	NO
Do you prefer no toll lanes, one toll lane or two toll lanes?	NONE	ONE TWO
Would you prefer an HOV lane to proposed toll lanes?	YES	NO
Would you likely use a Park & Ride service if it were available?	YES	NO

I would need more information. It would need to be manageable for students in all extracurricular programs too.

Do you have other ideas you wish would be explored to alleviate traffic on MoPac or to alleviate traffic around our school?

Do you like a specific proposal offered by CTRMA?
Which one(s)?

What do you like about it?

Do you oppose a specific proposal of the CTRMA?
Which one(s)?

What are your concerns?

Each time I will most likely wait on Veterans for a while.

It depends. If I get in my car right after the 4:15 bell rings I can beat the traffic.

Parking spaces will be harder to find and leaving school at 4:15 will take longer.

Are you an: (AHS Parent) AHS Student AHS Faculty/Staff AHS Community Member

Do you or your child drive regularly to/from Austin High?
If yes:
Which seems worse?: morning traffic (3:15-6 PM traffic) (5-5:45PM traffic)

In the afternoon when school lets out, how long do you typically wait on SF Austin/Veterans Drive to get onto Lake Austin Blvd (traveling west) or Cesar Chavez (traveling east)? 10-15 mins (but I go left on LAB - much longer if you go right)

What are your greatest traffic concerns for the area around Austin High?
The toll proposals increase traffic on SF Austin/Veterans Drive making the area unsafe for pedestrians

How informed do you feel about the current MoPac South proposals?

Well informed | I know some about them | I know a little | This is new to me

not from the facts I figure - there is a lot of information

Will you use the proposed Slaughter Lane to Cesar Chavez toll lanes? Why or why not?
NO, because the current plan will increase traffic in & around Austin

Do you think a toll road is the best solution for this stretch of roadway? YES (NO)
Because the current proposal adds traffic to Cesar Chavez & Veterans

Do you support proposed variable pricing (with no upper limit)? YES (NO)
** see below

Do you support an "upper deck" design? YES (NO)

Do you prefer no toll lanes, one toll lane or two toll lanes? NONE ONE TWO
personally, I am not against toll, but these proposals impact negatively

Would you prefer an HOV lane to proposed toll lanes? (YES) NO
As long as it is just not restriping -

Would you likely use a Park & Ride service if it were available? YES (NO)

Do you have other ideas you wish would be explored to alleviate traffic on MoPac or to alleviate traffic around our school?
Figure out a way to alleviate traffic while protecting AHS & the lake

Do you like a specific proposal offered by CTRMA?
Which one(s)? No

What do you like about it?
Not much

Do you oppose a specific proposal of the CTRMA?
Which one(s)?
No concerns are increased traffic around AHS & bikes

What are your concerns?
Park Trail - with inexperienced drivers already dodging peds & dogs & cars - an increase in cars will be a disaster.

Would you like to stay informed by Austin High's Traffic & Safety Committee? If so, please provide your:

November 2015
Concerning Proposals of the Central Texas Regional Mobility Authority to expand MoPac by adding toll lanes from Cesar Chavez to Slaughter Lane

Austin High leaders seek your comments, questions and concerns since many members of our Austin High community will not be able to attend the official Open House of the CTRMA, or may not complete their on-line survey. Thank you!

Are you an: (AHS Parent) AHS Student AHS Faculty/Staff AHS Community Member

Do you or your child drive regularly to/from Austin High? (Yes)
If yes:
Which seems worse?: morning traffic — 4:15-5 PM traffic — 5-5:45PM traffic → During exploratory Gyrs this can vary day to day.

In the afternoon when school lets out, how long do you typically wait on SF Austin/Veterans Drive to get onto Lake Austin Blvd (traveling west) or Cesar Chavez (traveling east)? 5-10 min

What are your greatest traffic concerns for the area around Austin High? Ped new construction doesn't encroach onto the school grounds

How informed do you feel about the current MoPac South proposals?

Well informed | I know some about them | (I know a little) | This is new to me

Will you use the proposed Slaughter Lane to Cesar Chavez toll lanes? Why or why not?
Most likely not due to toll requirement not cost effective

Do you think a toll road is the best solution for this stretch of roadway? YES (NO) it may depend on the limit of toll & how it is paid.

Do you support proposed variable pricing (with no upper limit)? YES (NO)

Do you support an "upper deck" design? only if no other option YES NO

Do you prefer no toll lanes, one toll lane or two toll lanes? (NONE) ONE TWO

Would you prefer an HOV lane to proposed toll lanes? (YES) NO

Would you likely use a Park & Ride service if it were available? YES (NO)

Do you have other ideas you wish would be explored to alleviate traffic on MoPac or to alleviate traffic around our school? Is Relocating Austin High a feasible option?

Do you like a specific proposal offered by CTRMA?
Which one(s)? Not at this time

What do you like about it?

Do you oppose a specific proposal of the CTRMA?
Which one(s)?

What are your concerns? Tolls not being affordable; current solutions not developed by those who actually live in the area & use these roads & resources.

Do you or your child drive regularly to/from Austin High? Yes
If yes:
Which seems worse?: morning traffic 4:15-5 PM traffic 5-5:45PM traffic
Hard to say, it's all terrible!
In the afternoon when school lets out, how long do you typically wait on SF Austin/Veterans Drive to get onto Lake Austin Blvd (traveling west) or Cesar Chavez (traveling east)? 20 - 30 minutes

What are your greatest traffic concerns for the area around Austin High? Egress

How informed do you feel about the current MoPac South proposals?

Well informed (I know some about them) I know a little This is new to me

Will you use the proposed Slaughter Lane to Cesar Chavez toll lanes? Why or why not?
No. From SW Parkway to C Chavez not worth it, too difficult to exit Express Lanes & get to SFA HS turn off.

Do you think a toll road is the best solution for this stretch of roadway?	YES	(NO)
Do you support proposed variable pricing (with no upper limit)?	YES	(NO)
Do you support an "upper deck" design?	YES	(NO)
Do you prefer no toll lanes, one toll lane or two toll lanes?	(NONE) ONE	TWO
Would you prefer an HOV lane to proposed toll lanes?	(YES)	NO
Would you likely use a Park & Ride service if it were available?	YES	(NO) I doubt it. Depends on where it went-

Do you have other ideas you wish would be explored to alleviate traffic on MoPac or to alleviate traffic around our school?

Do you like a specific proposal offered by CTRMA?
Which one(s)?

What do you like about it?
I prefer HOV lanes & added free lanes.

Do you oppose a specific proposal of the CTRMA? I don't like the Tolls, they
Which one(s)? wrongly rewand the few (5%?) that can afford it.
What are your concerns?

Are you an: AHS Parent AHS Student AHS Faculty/Staff ✓ AHS Community Member

Do you or your child drive regularly to/from Austin High?
If yes:
Which seems worse?: morning traffic 4:15-5 PM traffic 5-5:45PM traffic

In the afternoon when school lets out, how long do you typically wait on SF Austin/Veterans Drive to get onto Lake Austin Blvd (traveling west) or Cesar Chavez (traveling east)?

What are your greatest traffic concerns for the area around Austin High?

How informed do you feel about the current MoPac South proposals?

✓ Well informed I know some about them I know a little This is new to me

Will you use the proposed Slaughter Lane to Cesar Chavez toll lanes? Why or why not?
Probably if we are not able to prevent them. Because they would delay us time,

Do you think a toll road is the best solution for this stretch of roadway? (YES?) NO → possibly

Do you support proposed variable pricing (with no upper limit)? (YES) NO

Do you support an "upper deck" design? YES (NO)

Do you prefer no toll lanes, one toll lane or two toll lanes? NONE (ONE) TWO

Would you prefer an HOV lane to proposed toll lanes? (YES) → (NO) → There could be both

Would you likely use a Park & Ride service if it were available? (YES) NO

Do you have other ideas you wish would be explored to alleviate traffic on MoPac or to alleviate traffic around our school? Much greater emphasis on Transit.

Do you like a specific proposal offered by CTRMA?
Which one(s)? No.

What do you like about it? - -

Do you oppose a specific proposal of the CTRMA?
Which one(s)? All.

What are your concerns? We need a "no-brainer" solution & commuters exiting have to the VA transit tower.

Austin High leaders seek your comments, questions and concerns since many members of our Austin High community will not be able to attend the official Open House of the CTRMA, or may not complete their on-line survey. Thank you!

Are you an: (AHS Parent) AHS Student AHS Faculty/Staff AHS Community Member

Do you or your child drive regularly to/from Austin High? about once a week.
If yes:
Which seems worse?: morning traffic 4:15-5 PM traffic (5-5:45PM traffic)

In the afternoon when school lets out, how long do you typically wait on SF Austin/Veterans Drive to get onto Lake Austin Blvd (traveling west) or Cesar Chavez (traveling east)? I don't wait long to get to Cesar Chavez. Towards Mopac South but scary crossing the 2 fast moving lanes that are going North to merge into the one lane moving slowly South.

What are your greatest traffic concerns for the area around Austin High? The merging to Mopac South is my concern.

How informed do you feel about the current MoPac South proposals?

Well informed (I know some about them) I know a little This is new to me

Will you use the proposed Slaughter Lane to Cesar Chavez toll lanes? Why or why not? Probably because of cost. I would use this toll road only if time is of the essence.

Do you think a toll road is the best solution for this stretch of roadway? YES (NO)

Do you support proposed variable pricing (with no upper limit)? YES (NO)

Do you support an "upper deck" design? YES (NO)

Do you prefer no toll lanes, one toll lane or two toll lanes? (NONE) ONE TWO

Would you prefer an HOV lane to proposed toll lanes? (YES) NO

Would you likely use a Park & Ride service if it were available? (YES) NO

Do you have other ideas you wish would be explored to alleviate traffic on MoPac or to alleviate traffic around our school? Explore restriping Mopac, and Park and Ride options

Do you like a specific proposal offered by CTRMA?
Which one(s)?

What do you like about it?

Do you oppose a specific proposal of the CTRMA? Oppose toll roads here because it damages Which one(s)? help local commuters

Adding an upper deck would be unsightly.

What are your concerns? Spending a lot of money to build roads that do nothing for those who travel Mopac most.

If yes:
Which seems worse?: morning traffic (4:15-6 PM traffic) 5-5:45PM traffic

In the afternoon when school lets out, how long do you typically wait on SF Austin/Veterans Drive to get onto Lake Austin Blvd (traveling west) or Cesar Chavez (traveling east)?

What are your greatest traffic concerns for the area around Austin High? NO FLYOVER!

How informed do you feel about the current MoPac South proposals? NO DBL DECKER

(Well informed) I know some about them I know a little This is new to me

Will you use the proposed Slaughter Lane to Cesar Chavez toll lanes? Why or why not?
Mostly I walk & like prefer to protect the aquifer

Do you think a toll road is the best solution for this stretch of roadway? YES NO

Do you support proposed variable pricing (with no upper limit)? YES (NO)

Do you support an "upper deck" design? YES (NO)

Do you prefer no toll lanes, one toll lane or two toll lanes? NONE ONE (TWO)

Would you prefer an HOV lane to proposed toll lanes? (YES) NO

Would you likely use a Park & Ride service if it were available? (YES) NO
if job allowed/necessitated

Do you have other ideas you wish would be explored to alleviate traffic on MoPac or to alleviate traffic around our school?
HOV Lanes; better bus/rail options

Do you like a specific proposal offered by CTRMA?
Which one(s)? NO

What do you like about it?

Do you oppose a specific proposal of the CTRMA?
Which one(s)? YES
What are your concerns?
Double decker, fly over, more toll lanes, aquifer & more traffic

Would you like to stay informed by Austin High's Traffic & Safety Committee? If so, please provide your:

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

- MAKE PUBLIC ALL THE TRAFFIC IMPACT & ENVIRONMENTAL STUDIES THAT HAVE BEEN CONDUCTED SO FAR.
- OPEN SH-130 TO FREE TRAFFIC
- DEVELOP PARK & RIDE FACILITIES @ KEY POINTS AROUND THE CITY & WORK W/ CAP METRO TO DEVELOP HOV LANES THAT ENCOURAGE PEOPLE TO USE PUBLIC TRANSIT
- STUDY ALL OF THE PROPOSED HIGHWAY PROJECTS (THE TWO ON MOPAC & SH-45) AS A SINGLE PROJECT. IT WOULD BE A SINGLE SYSTEM WITH ENORMOUS CUMULATIVE IMPACTS TO THE ENTIRE CITY & DESERVES A FULL, TRANSPARENT STUDY
- MEET ALL FEDERAL STANDARDS WHEN PERFORMING ENVIRONMENTAL STUDIES

COMMENTS ON VIRTUAL OPEN HOUSE

Maria	Abernathy	11/17/15	After viewing maps, reading, and participating in discussions of the CTRMA proposals for South Mopac, I still do not support any elevated lanes over MoPac in the area of Lady Bird Lake and Zilker Park. IF any of the proferred options must be chosen, the option with toll lanes but no elevated lanes would be the least offensive. However, I don't agree that any of these options, which add huge amounts of pavement to this beautiful and environmentally sensitive area of Austin, must be built - I urge CTRMA, businesses, and local governments to consider other ways to reduce congestion on Mopac during peak commute hours: staggered work schedules, increased use of telecommuting, rail lines, and NO connection of MoPac to IH35 through the extension of SH45. Please consider also that diverting large truck traffic to TX 130 (and making it toll-free) could significantly contribute to faster commuter traffic on MoPac and IH35. Thank you.

Subject: MoPac South Improvement Project support

Nov 19, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mrs. Amy Ables

Subject: Study the whole loop project first before building SH 45 SW
Date: Tuesday, November 10, 2015 9:40:15 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Adam Abrams

COMMENTS ON VIRTUAL OPEN HOUSE

Marie	Acuña	10/23/15	First off, I was glad to see an update on the status of the environmental study. As a resident of SW Austin and user of South MoPac I'd like to also mention the following: -Have lived in Austin since early 80s. I remember SOS alliance & the process of getting protections of environmentallying sensitive areas in place. When we got ready to buy a home in the late 90s, a big factor in choosing our neighborhood were the environmentally sensitive areas. We bought an already built home and as a believer in natural gardening/landscaping methods, I was confident we would be good stewards of the land. That has been proven out since then. We are more than willing to accept what others might consider negative aspects of living in SW Austin for the thrill of getting to live in such a beautiful part of the city. These are things like: more mosquitos when it rains (retaining ponds) & large variety of wildlife that visit our yard. We live about half a dozen houses from a greenbelt. In our back yard we see: red fox, racoons, squirrels, possum, owls, doves, blue jays, hummingbirds and butterflies. We want that to continue. -The greenbelt near our home will eventually become part of the Violet Crown Trail. I was pleased to see connectivity to that trail in the materials. -Also appreciated the fact that the proposals mention Congestion Management vs just more roads. In non-rush hour traffic we can get from our driveway to City Hall in 17 minutes. That tells me we don't have a road issue we have a capacity issue. And that can be addressed much differently. -I support the focus the materials place on public transit. Hubby catches a CapMetro flyer leaving the Park/Ride near the "Y" in Oak Hill. So his bus is on South MoPac every work day. A dedicated process to move buses quicker would be a big plus. -In conclusion, my first thought is the no build option WITH the proposed monies going towards: working with CapMetro to increase bus service from the SW part of town into downtown via South Mopac, use funds to educate the public on benefits of using transit, create a dedicated bus lane, etc.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 3:55:58 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Cristina Adams

What about last cal emergency medical services? What about local weather disasters?
Who's going to make money off the toll ways?
Have I -35 overcrowding use the tollway 130(?) east of Austin and make it free to use. It's already built but has little use. Because the I-35 truckers can't afford the toll charges @ 1 toll for each axle. Make it free even if a government entity has to pay to ft the investors that party paid for it to begin with!
I live 3 black cod east of MoPac. After almost 2 years of reconstruction .
I am tired being a citizen , taxpayer, and voter who
sees money being the motivator for the politicians
Not the voters and citizens!

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. COMMENTS ON VIRTUAL OPEN HOUSE

Ammar	Ahmed	11/10/15	My question has to do with affects on lane closures and traffic on Mo-Pac South during the construction phase. From my understanding, during the Mo-Pac North project it was anticipated that during daytime hours the regular number of lanes would be open throughout the construction phase, but it seems that has not been the case, often with just one or two lanes open in either direction, even during the daytime, with resultant traffic delays. Regarding the Mo-Pac South project, will there be a more disciplined effort to keep the current number of lanes open (except for late night) throughout the construction phase?

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

I find it distressing that CTRMA continues not to offer an option of a completely non-tolled expansion of Mopac South. The construction of tolled lanes adds very significant cost to the project to maintain segretation, provide additional infrastructure and ROW to sustain existing free passage in the presence of the tollway, and to create tolling and toll enforcement mechanisms. Moreover the permanent costs of collecting and administering tolls, along with their enforcement, falls largely on the public. This overhead expense of time and money (above the fare costs themselves) is kept completely off the project books, a hidden tax on the public for which CMTRA claims absolutely no responsibility. Why pursue the significantly more expensive way to add capacity? Why foist all this additional cost on the public for no additional capacity?

Furthermore, the very nature of the toll lanes, which is based on limited access and limited use, only means that the reduced utilization of tolled lanes irrefutably implies increased utilization of non-tolled lanes under the same traffic volumes.

Tolled lanes on public roads represent a complete breakdown of reasonable, public-oriented governance in road building. Their existence means the State of Texas finance system for road construction is a failure.

Subject: Please do NOT build elevated lanes over Mopac!
Date: Friday, November 20, 2015 8:46:10 AM

Dear CTRMA Staff and Board Members,

As a resident of [redacted] my family and I would like to express our full support [illegible] in any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two overpass bridges over MoPac. Elevated lanes will destroy the hill country feel [illegible] and charm of the Town of Lake Park and our beautiful downtown Austin area. It will [illegible] transform the character of this unique part of town from peaceful and green to congested and unsightly. Defeating every proposal that Lucy Rios and her team were trying to create for our wonderful part of our city.

Please do not be short sighted. Our children and grandchildren deserve a beautiful green space for [illegible] to enjoy. Please do not destroy it with more pollution, noise and congestion. Please vote no on 2610 that would add elevated lanes over MoPac.

Please consider my plea for these changes. I would love to talk with you in person if you would like to [illegible].

Sincerely,
Leah Alberti
[redacted]

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Leah Alberti

Leah Alberti, [redacted]

Printed Name Address

Additional Comments:

Our family of five has lived in Rollingwood for many years & we are invested in our neighborhood & community. Elevated lanes would RUIN the beauty we all know & love about Lady Bird Lake & Zilker Park. Please consider only expanding Mopac to 3 Lanes in each direction !!

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

Merritt Alberti [redacted]

Printed Name Address

Additional Comments:

Elevated Toll lanes over Lady Bird Lake will ruin the beauty & character Lady Bird Johnson worked so tirelessly to create with Lady Bird Lake & Zilker Park. Not only will it increase pollution & noise to one of the greatest center points of Austin

it will destroy the character, look & and feel of such a green & peaceful place such as Zilker Park.

In my opinion, the only palatable option that should be considered is expanding to 3 lanes in each direction WITHOUT elevated lanes

The area around Barton Skyway should utilized for Toll entrance and exit, not Bee Cave Rd.

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Ms. Shannon Albright
[redacted]

COMMENTS ON VIRTUAL OPEN HOUSE

Robyn	Alcorta	11/2/15	Dear CTRMA Staff and Board Members, Please do not add a double-decker over Lady Bird Lake or Double Decker Wishbone bridges over MoPac. I support the addition of 2 Toll lanes each direction without elevated lanes: The 2-lane each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use and with the 2040 Long Range Plan. The 2-lane each direction without elevated lanes option has the lowest impact to the parks and neighborhoods while still significantly improving travel times and capacity on our roadway. The 2-lane each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with a Double decker over Lady Bird Lake. The 2-lane each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with 40-50 feet elevated Wishbone bridges over MoPac. The 2-lane each direction without elevated lanes option cost is $30 Million less than the Wishbone concept and $40 million less lane the Double Decker Decker concept. The 2-lane each direction without elevated lanes option minimizes impact to our water quality and lowers the impact on the natural and human environment by not building elevated structures near neighborhoods or Lady Bird Lake. The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. I also support the addition of the sidewalk on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of an 8' sidewalk I would like an 11' multi-use path to accommodate bikes and pedestrians and connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project. Please make sure to fully consider the social, economic, and environmental consequences. Please ensure the plans you choose support our public park land use, green spaces and community values! Sincerely, Robyn Alcorta

COMMENTS ON VIRTUAL OPEN HOUSE

Mary	Allaway	11/3/15	Austin has a beautiful lake, springs and park around it. These areas must be valued and preserved. Do not burden our lake with a mass of concrete. Please, no double decker highway/tollway over Lady Bird Lake. Preserve the view. Preserve the fresh air. Preserve nature while you can. Add fewer lanes to Mopac. Take the expanded roadways out further west. Do something reasonable so that traffic uses the huge new highway/tollway east of I35! This is what you told us was the purpose of that road!! Be smart. Preserve the beautiful natural features of Austin.

Subject: Preserve Austin's beautiful natural features in Mopac South Expansion design

Austin has a beautiful lake, natural springs and park in the center of our city. These natural resources bring much life and zeal to our area. Preserve our natural areas. It is up to you and now is the time.

Protect these natural areas and keep the massive concrete highway/tollway from taking over our park view and natural areas. Do not allow double decker lanes and so many new other lanes on Mopac.

Take action to see that the new highway/tollway east of I35 is used. 130 was constructed to move 18 wheeler traffic from the center of our city and trucks don't use it because it costs too much. For heaven's sake, figure out how to make this roadway used. More space would be made on I35 and it would move faster. This alone would improve traffic in our city and we already have it!

Preserve the beauty that is Austin.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 1:01:07 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Monday, October 26, 2015 9:15:15 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Romalda Allsup

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Emma Anderson

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 12, 2015 9:30:19 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Mary Anderson

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 9:50:47 PM

Dear TxDOT and CTRMA officials:
Comments for MoPac South Environmental Study- Open House Public Comment Period
Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on these routes.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, the Flint Ridge Cave recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs watersheds, over Town Lake, over our greenbelt parkland hike-bike trails, and essentially over Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin Pets Alive, the Edwards Aquifer, Barton Springs pool, multiple plant, water and wildlife species, many endangered species, and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker bridge on MoPac over Lady Bird Lake from the transportation plans. We vote for the no build option.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues

will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances. What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. --We say NO to building a second Interstate 35 through Austin to ruin the heart and soul of Austin along the way.
We want to Keep MoPac Local,

Sincerely,
Mary Anderson

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 6:30:27 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Regina Anderson

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mrs. Kay Andrews

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 2:20:26 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Name: Julie Applewhite

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

(Sent via

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Mary Arnold

COMMENTS ON VIRTUAL OPEN HOUSE

I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road.
A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school.
I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.
With the significant changes** in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option. Along with a no-build scenario, options such as expanding telecommuting, ride sharing, and rail should be considered.
**The data below looks at the travel time information CTRMA provided to the public at the February 25, 2015 open house. The data sources cited were: CDM-Smith 2014 INXR speed data, CAMPO 2035 Travel Demand Model, observed congested speeds in October 2013 and Bluetooth data. The February 25, 2015 data is compared to travel time information provided to the public at the October 21, 2015 open house. The data source cited is CDM Smith 2015 - Using BlueTooth Data
General Purpose Lanes
**Feb 26, 2015 MoPac South Open house peak period traffic data between Cesar Chavez and Slaughter Lane was (2013):

- Northbound morning (7-9am) 15 minute drive ; 2035 no build 47 minute drive
- Southbound evening (4-6:30pm) 12 minute drive ; 2035 no build 45 minute drive

**October 21, 2015 MoPac South Open House, peak period traffic data between Cesar Chavez and Slaughter Lane is (2015):

- Northbound morning (7-9am) 23 minute drive (8 minute/53% increase from 2013) ; 2035 no build 52 minute drive (5 minute/11% increase from 2013) - Note the biggest increase in where CTRMA wants to justify the elevated lanes
- Southbound evening (4-6:30pm) 16 minute drive (4 minute/33% increase from 2013) ; 2035 no build 51 minute drive (6 minute/13% increase from 2013)

2 lanes each direction with elevated lanes over Lady Bird Lake
**Feb 26, 2015 MoPac South Open house peak period traffic data between Cesar Chavez and Slaughter Lane was (2013):

- Northbound morning (7-9am) 8 minute drive ; General Purpose: 37 minute drive
- Southbound evening (4-6:30pm) 8 minute drive ; 2035 no build 26 minute drive

**October 21, 2015 MoPac South Open House, peak period traffic data between Cesar Chavez and Slaughter Lane is (2015):

- Northbound morning (7-9am) 9 minute drive (1 minute/12% increase from 2013) ; General Purpose 32 minute drive (5 minute/15% decrease from 2013) - The N. bound general purpose Lane showed a decrease from 2013?
- Southbound evening (4-6:30pm) 9 minute drive (1 minute/12% increase from 2013) ; General Purpose 29 minute drive (3 minute/10% increase from 2013)

Traffic data should include the SH-45 road project and the ultimate connection of MoPac to IH-35, that is mentioned in the CAMPO 2040 plan.

COMMENTS ON VIRTUAL OPEN HOUSE

)ebbie	Arnow	11/19/15	If toll lanes must be built, the 2 Toll lanes each direction without elevated lanes option will have the least impact to the park, schools, recreation centers and neighborhoods: • The 2-lanes each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA and this option is consistent with the CAMPO 2040 Long Range Plan. Providing direct access to toll users into the downtown area is not a goal or objective identified by CTRMA or CAMPO for this project. • The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use because it has the least impact to the park land. Adding elevated lanes damages Austin's parks, restricts community members who use the open spaces, and damages neighboring neighborhoods. • The 2-lanes each direction without elevated lanes option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options. • The 2-lanes each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 with results comparable to both the Double decker over Lady Bird Lake and double decker wishbone bridges. If free lanes are added to match the capacity of other plans, more congestion and time savings can be achieved without building elevated lanes. • The 2-lanes each direction without elevated lanes is the more fiscally responsible option because the cost is $30 Million less than the double decker wishbone bridges and $40 million less lane the double decker over Lady Bird Lake concept, but the results are almost identical. The 2-lanes each direction without elevated lanes option minimizes impact to our water quality because it will mean less construction and less concrete over our aquifer and near Lady Bird Lake than if elevated structures were built. • The 2-lane each direction without elevated lanes option lowers the impact on the natural and human environment because there will be less impact to the park and neighborhoods, less noise pollution, less light pollution and less ascetically unattractive bridges than if elevated structures were built. • The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. There will also be more support from neighboring cities and residents if elevated structures are not included in the plan. • The 2-lane each direction without elevated lanes provides toll road users and emergency vehicles plenty of time and ability to safely maneuver and exit downtown. If there is an accident on the elevated portion of the toll lane it could actually make response times slower or impossible for emergency responders as there will be no way to exit the elevated structures until fully descended. I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project. Please make sure to fully consider the social, economic, and environmental consequences of building up. Please ensure the plans you choose support our public park land use, green spaces and community values.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

- Look at every aspect + impact on our established city. Don't mow over us. Please - it's expensive enough to live here.
- Comprehensive, Studies are needed. & environmental
- Non-toll versions are needed! HOV lanes would be better. (Commuter rail would have been better,
- None of studies have looked at traffic on IH 35. Do that first. Traffic will explode on Mopac as a result of connector - NO! Citizens do not want this bypass.
- Do not impact land dedicated to Austin High School, Barton Springs, Wildflower Center, Zilker Park!
- BE CLEAR - For Free Lanes Congestion Gets Worse. This is not acceptable. Tolls only help long-distance commuters.
- Recharge Zones will be threatened. Rethink this! You have the funding for alternatives, like public transit.
- Make 130 free.
- Study before you Do anything.
- Don't convert Mopac to a second IH 35
- HOV Lanes on Mopac would be a better alternative.
- Alternative bike lanes - consider this.

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 6:50:11 AM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Mostly I would like to add my voice to study all options, including HOV and mixed use (pedestrian, cyclist) alternatives to the current options. I would really like to see the impact of paying off SH-130 as a toll road. It seems as that would be a far cheaper / faster option to divert I-35 traffic around the city of Austin. The options presented here appear only to increase traffic into downtown Austin on roads that are not intended for such high use. We must also do a serious study regarding the effect on Austin High School.

COMMENTS ON VIRTUAL OPEN HOUSE

Neely	Ashmun	11/15/15	We live on the outskirts of the Barton Creek Greenbelt in Barton Hills, and behind the trees is the Mopac Loop 1 highway. This highway is already an environmental burden (rainwater runoff, trash from the highway, chemical, sound and air pollution), and to add to the existing disruption with more highway is the opposite of far sightedness and judicious urban planning. I respectfully beg the community and the committees deciding this issue to consider those of us that live in the affected area, some of us for many years with hopes of more to come, to decide agains the expansion of Mopac over --if not alleviate the pressure on this sensitive environmental zone, at a minimum not add to it for the benefit of pass through transit. Haven't we already constructed an eastern bypass that is SH130? Why must we completely surround Austin with highway? Thank you for your consideration of this very important topic.

Subject: MOPAC/LOOP 1 SOUTH
Date: Sunday, November 15, 2015 11:34:11 AM

Hello,

I am writing to express my opposition to the proposed development of MOPAC/LOOP 1 SOUTH.

I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road.

The suggestion to do so is shortsighted and will do nothing but further deteriorate the quality of life for which Austin is known.

A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school.

Thank you,
Lucy Atkinson

Nov 19, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Charlie Avant

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 2:10:32 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

MoPac South
ENVIRONMENTAL STUDY

MoPac South from Cesar Chavez Street to Slaughter Lane
Open House – November 10, 2015

COMMENT FORM

DEADLINE for Comments: Friday, November 20, 2015

Written comments will also be accepted through the website at www.MoPacSouth.com, by fax to 512-996-9784 or mail to: Central Texas Regional Mobility Authority, C/O MoPac South Environmental Study, 3300 North IH-35, Suite 300, Austin, Texas 78705.

NAME (PLEASE PRINT): Pamela Baggett

ADDRESS: [redacted]

COMMENTS: 1) Build for the future, not just tomorrow. That means 2 toll lanes in each direction. It will never get less expensive & the need will only grow.
2) Zoning by denying roads has not & will not work.
3) Safety first. ~~Do~~ Do not force toll lane drivers to cross lanes of regular traffic to access downtown
4) South Austin deserves the same roads as North Austin.
5) Edwards Aquifer runs under all of Austin. It does not mysteriously disappear under the city.
6) People didn't want the original MoPac nor the I-35 upper decks. Yet ~~to~~ no one can imagine living w/o them now.
7) Traffic is in the top 2 problems affecting Austin quality of life.
So build 2 toll lanes each direction with flyovers to downtown while improving eastern edge to minimize effect on Austin HS.

This form may be used to provide written comments on this project. Any questions placed on this form will not be considered an open records request and will not be treated as such. If you have an open records request, it must be submitted under a separate letter.

Subject: Mopac/Loop 1 South

Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial. Elevated lanes will completely destroy the beautiful aesthetic of central and west Austin.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

Please consider adding adequate pedestrian thoroughfares along the west side of Zilker Park/Mopac to encourage green commuting and discourage vehicle traffic.

Please ensure the plan you choose support our public parkland use, green spaces and community values. Please listen to the community.

Sincerely,
Dawn Bain

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 1:15:16 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Brandie Baker

From: [redacted]
To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 12:35:50 PM

Dear TxDOT and CTRMA officials:

The CTRMA is now intent on issuing new toll road bond debt for roads like MoPac South, and SH 45 SW, road debt that they admit is now too risky to continue to insure, as they had done with their first toll road bonds. Here is my detailed documentation on that situation for inclusion in the official record:

http://www.theragblog.com/roger-baker-metro-risky-business-in-central-texas-the-toll-road-bond-gamble/

The risk to Travis County and its own bond credit is that bond default doesn't occur in a vacuum. Even if Travis is not formally liable for the CTRMA toll road bonds, a local bond default is noticed by the rating agencies and is seen as a bad sign and a black mark for the region and the parties that agreed to issue the debt.

This piece below was written primarily to describe increasing risk of corporate debt, but it also describes the evolving toll road municipal bond situation quite well. The CTRMA toll road bonds pay nearly five percent only because of high risk, in a credit market that actually rewards risky debt, so long as it stays out of non-investment grade "junk bond" territory. But now the credit market psychology is shifting away from risk.

http://www.marketwatch.com/story/the-bond-market-is-no-longer-a-safe-haven-for-investors-2015-11-18

...Near-zero interest rates have prompted corporations to issue trillions of dollars of debt. They have found eager buyers in individual investors desperate for yield and pension fund managers and life insurers who need longer-term bonds to meet future obligations.

But now some of the same Wall Street firms that have reaped big underwriting fees from helping companies sell those bonds are warning of rising risk in that market.

And though even the worst that has befallen bonds is nowhere near as bad as what can happen to stocks, bonds are supposed to stabilize your portfolio when everything else is going to hell. So it would be a very big deal if bonds are no longer the safe haven investors expect them to be...

The prospect that the CTRMA higher yielding toll road bond debt can be repaid is, in effect, the same as placing a bet that the suburban traffic generating areas surrounding the city of Austin will keep growing at the current rapid rate based on tech jobs and generating new toll road revenue to support these bonds for decades to come. What is the evidence that this will happen?

As the CTRMA admits, these revenue projections are based on CAMPO's 2035 and 2040 population distribution estimates. These projections are not based on expert demographic opinion. These projections are based on little more than politics, on a vote of CAMPO Policy

Board members. CAMPO is a policy body with a geographic makeup that reflects a bias toward approving publicly funded road debt to serve private real estate development interests.

This kind of toll road debt is much too risky for me to support, speaking as both a Travis County and Austin taxpayer.

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Please address Cesar Chavez congestion issue which is not addressed in any of the CTRMA proposals. Increased traffic will be pushed to Cesar Chavez under any proposal as Austin High is dependent on the ability to access Cesar Chavez to enter and exit our school.

I do not support any proposals that will draw traffic congestion off I-35 and to Mopac.

Date: Wednesday, November 18, 2015 7:45:26 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. John Barksdale

COMMENTS ON VIRTUAL OPEN HOUSE

Jacob	Barrett	10/23/15	I would like y'all to recommend the one- or two-lane options of the original proposal with the elevated structure and the direct downtown connector. Those seem to make the most sense.

From: [redacted]
To: [redacted]
Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, October 23, 2015 12:20:13 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Veronica Barrio

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Linda Barstow

LINDA BARSTOW [redacted]

Printed Name Addr[redacted]

Additional Comments:

I question the reasonableness of even planning toll lanes. There is a toll route east of Austin (130) that apparently is being minimally used.

Why on earth do you want to make MoPAC I 35 ??? TRAffic on Mopac is horrid as it is now - So why do you want to make it worse by adding even more traffic!!! — We all know that toll WAY 4 will connect to I 35 — thus bringing MORE traffic to MoPAC because tolls will be so expensive very small % will use toll road - thus increasing traffic on all other La

* How about just putting in HOV lanes in both directions for Buses, Vehicles w/ more than 2 people & Emergency vehicles. It will certainly cost less; it will improve traffic flow; it will NOT add to Noise pollution or environmental pollution to our neighborhoods. It will NOT cost the traveling public ridiculously High amount of money to travel on TOLL lanes.

- Pay off SH 130 toll road debt & MAKE it TOLL FREE !! TRUCKS will use it then easing traffic on I 35 along w/ autos.

- CPRMA & Tx. Dot need to be more transparent & honest w/ Citizens (re: Connecting Mopac to 45 → SH 45 to I 35) Work w/ city planners. the impact of all the added traffic will impact city streets, Schools, Parks, Lakes you need to be respectful of all the people & place [illegible] toll Roads, Bike lo. meaningful impact

I think the plan to ignore adding more lanes for general usage is short-sighted. For each major on-ramp to Mopac one additional lane is required. Coming from Circle C, for example, you have Slaughter, Wm Cannon, US290, Southwest Pkwy, 360, and Bee Caves Rd, all entering Mopac heading north. Consequently, the baseline should have 2 for Slaughter and Wm Cannon + 1 for US290, 1 for SW Pkwy, 1 for 360, and 1 for Bee Caves for a total of 6 lanes northbound. Lanes can be reduced for each off ramp such as Cesar Chavez, 38th St, leaving 4 lanes going north. To create 6 lanes, I recommend repurposing southbound lanes during morning rush hour and northbound lanes during evening rush hour. These could be made into express lanes for Cesar Chavez and 38th street.

COMMENTS ON VIRTUAL OPEN HOUSE

Jeffrey	Batchelor	11/9/15	All of the plans are silly. There are perfectly good service roads that are vastly underutilized from 360 to Cesar Chavez. Furthermore, tolls don't actually solve the problem--people don't pay and just sit in traffic while a few rich folks go zooming along. Lastly, one can see that summer traffic is much lower than when school is in. Setting school start times (UT and Stephen F. Austin) later in the morning would help too.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I oppose expansion of MoPac. Spend the money elsewhere, or preferably, on mass transit. We can move people more efficiently than in single occupant vehicles.

Expanding Mopac will have detrimental effects on traffic patterns as it funnels tens of thousands more cars into that corridor. How do you plan to handle the increased volume on streets connecting to MoPac?

Hasn't Central Texas spent more on new roads than any other region in the country? If we want Central Texas to continue to attract ~~the~~ talent, we need to spend our transportation dollars on Mass Transit

(over)

to avoid discouragingly long commutes; increased noise pollution and air pollution; and paving over the beautiful Hill Country.

I have heard of several options such as moving thru traffic on I-35 to SH130; building more Park+Ride lots with express bus service to downtown; painting (not building) a new HOV/Bus/Express lane. I support these options over construction of more/new highway lanes.

Thank you for consideration of alternatives to adding new lanes.

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Howell Beaver

COMMENTS ON VIRTUAL OPEN HOUSE

James	Beckett	11/20/15	From the Goals and Objectives sheet. 1. How does this report provide consistency with local and regional plans? No mention is made outside of the CC to Slthr Lane boundary. There is new traffic based upon the New North Mopac and new traffic based upon the building of SH 45. Without unnecessary impacts: Only the City plan or the Barton Skyway ramp plans seem to minimize impacts to existing structure. Your goals state "avoid and minimize impacts to water quality". That seems a little loose. Also flooding is a bigger and bigger concern to residents and no speculation is even allowed in these alternatives about which plans would do the best for that. The Hays county population and employment numbers seem to be underestimated. Also not included is change in traffic patterns after the road is built. This plan seems to say Nothing will be better if we do not have toll express lanes. Then why are you not looking at better public transportation to be built with the money spent here. Is there any improvement in the general lanes after the express lanes are built? Does this plan collapse in 2040 when even the express lanes can't handle the load? Will downtown be able to handle the traffic you are modeling?

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

With the significant changes in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option. Along with a no-build scenario, options such as expanding telecommuting, ride sharing, and rail should be considered.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

Diana Beckham

COMMENTS: This project should result in the General Purpose lanes operating at a level of service C or less in Design Year 2035. I believe two additional General Purpose lanes are needed to accomplish this. Also, two express lanes should be built to accommodate future growth and people that want to drive faster yet. These improvements will enable the road to remain viable until 2050. Anything less will be undersized and outdated before it opens in 2035.

This form may be used to provide written comments on this project. Any questions placed on this form will not be considered an open records request and will not be treated as such. If you have an open records request, it must be submitted under a separate letter.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 8:40:20 PM

Dear CAMPO, TxDOT and CTRMA officials:

"Express" is simply a euphemism for "toll."Â CTRMA flacks refuse to say"the T word."Â They're not being honest.

It's ethically wrong and hypocritical, but it's all too typical of how the "public business" gets done these days. It can and must change.

If you just added two standard lanes in the middle, not "express," then you don't need expensive flyovers anywhere, either north or south of the river. The only reason for these expensive and ruinous flyover bridges is to allow a privileged toll paying driver to vault over all the other peasants presently stuck in general purpose lanes. To make the few travel faster at the many's expense.

There's also over $4 billion in our taxpayer money per year now available (Prop 1, already passed in 2014) and soon to be available (Prop 7, pending in November 3 election) earmarked exclusively for construction of non-tolled new capacity.Â So no legal, practical, or financial necessity presently exists to build tolled lanes and flyovers, even if new capacity were deemed necessary.

Why are we doing this? Is it because CTRMA is an almost exclusively toll funded agency?Â Then, if that's all they can build, this project needs to be taken out of their hands and given to either TxDOT or CAMPO to vet and complete because that means the RMA is structurally incapable of an objective review--as federal law requires. To avoid the appearance (or fact) of a conflict of interest, the RMA toll agency needs to turn over the preparation of the Mopac EIS to another entity.

The best alternative option to the proposed action is taking these phased steps, in order, as the traffic grows:

1. first, abandon or defer the SH 45 Southwest project to prevent even more traffic from being diverted over to Mopac from I-35 and SH 130
2. then, free SH 130 from tolls to see how traffic rearranges itself & what traffic that diverts from I-35 and Mopac
3. expand Mopac capacity within the existing footprint, using existing wide shoulders where they exist and squeezing new lanes out by repainting lines and some spot widening of the pavement.
4. then, build two non-tolled reversible flow lanes paid for by our state tax dollars,Â once that is actually needed
5. Also, initiate passenger commuter rail service on the parallel, existing Union Pacific freight lane, if and when that option ever would become available.
6. Support more land acquisition and restrictive regulations further south in the aquifer area that is the presently existing 'commute shed' for this road (without SH 45 being completed).

This is a reasonable 20-year plan.Â Fifty or hundred year provisions AREN'T reasonable,

given the uncertainties about the future and the state of finances for the '99 percent' today.Â If we grow wildly after 2040, then all that robust and prosperous new development can pay for the highway expansions that will benefit them then -- rather than financially strapped taxpaying drivers today

Some Mopac neighbors in Tarrytown finally got soundwalls to shield the noise from a ground level freeway -- only 35 years after it was built. However, the noise from elevated highway lanes or flyovers CAN'T be effectivelyÂ mitigated with soundwalls. Everything good about central Austin -- neighborhoods, hike & bike trail, lake shore, Zilker, Barton Springs -- faces the threat of ruin by this thoughtless, destructive, elitist, and unnecessary project.

Study all of it before building any of it. And make it an independent study that considers non-toll alternatives fairly.

Thank you,

Stephen K. Beers
Austin, Texas

November 12, 2015 at 9:34 PM
[redacted]

Name: Joelle Beisner

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members,

First, I want to state clearly that I do not support elevated toll lanes--in any form or fashion--over MOPAC. Please don't create a double decker roadway over Lady Bird Lake! And please don't construct two wishbone bridges over MOPAC, either. Elevated lanes will negatively impact the aesthetic of this unique part of downtown Austin, and it will not solve--and actually will create more--congestion problems.

If toll lanes are the only option you can offer, the "2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and surrounding neighborhoods, while still improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please choose the plan that supports the community and its values--not just commerce!

Sincerely,
Joelle Beisner

ADDRESS: [redacted]

COMMENTS: (1) I like the "wishbone" solutions to lower the visual impact of the Direct connect lanes over Lake Ladybird. I AM NOT AGAINST the loss of Parkland for this in this location.

(2) Better signage is needed to assist callers to 911 reporting emergencies like collisions, car fires and the like. Specifically I would recommend,

(1) mile markers every 2/10s mile

(2) Labeled bridges over ALL Freeways

(3) Large Wayfinding signs for major intersections farther out --- more lead time for Drivers.

(4) specific sign change → over

This form may be used to provide written comments on this project. Any questions placed on this form will not be considered an open records request and will not be treated as such. If you have an open records request, it must be submitted under a separate letter.

From: [redacted]
To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 4:10:14 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
T Bell

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Brenda Bellocchio

YES! TO PUBLIC TRANSPORTATION

STUDY ALL OF IT BEFORE BUILDING ANY OF IT!

MAKE S-H-130 FREE

PAINT RUSH HOUR HOV LANES on MOPAC.

DON'T CONVERT MOPAC TO A 2ND IH 35.

ENCOURAGE CARPOOLING!!!

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Nov 19, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Daryle Benkendorfer

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 12:30:50 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Ann Bernard [redacted]
South Mopac Project
November 17, 2015 at 10:54 AM
[redacted]

To Whom it may Concern,

My name is Ann Bernard and I live in Rollingwood Texas. I have lived in Austin for 26 years and I have owned a home in Rollingwood for 8 years. As a concerned citizen who loves our city deeply, I respectfully request that you do not support any plans for any elevated sections to be created in the South Mopac expansion project. In addition, please do not add any "wishbone" lanes that expand the freeway outward or add any elevation to the existing highway.

The Mopac South project seems to be the compilation of ideas from various entities: CAMPO, CTRMA, and Tx DOT. It seems to be interested in solving traffic congestion problems in Austin, but at what cost? The area in question is one of the most treasured parts of our cities. It seems that the project is using the same "cookie-cutter" schemes that they have used in many other major Texas cities: toll roads, toll lanes, elevated sections of highway, etc. These projects create a generic, cement filled highway area that is not aesthetically pleasing to anyone. Have the congestion problems of Houston and Dallas been solved by these projects? No, of course not. Have the toll companies profited? Yes, of course they have.

From what we can gather, the only people who are actually supporting these plans are the ones who work directly for CAMPO, CTRMA, or TX DOT. The City of Austin has opposed the elevated sections and many surrounding neighborhoods, including Rollingwood, have opposed the plans. Most of the citizens of Austin who love and appreciate Lady Bird Lake, Zilker Park, and the hike and bike trail are horrified when the plans are presented to them.

Not only are the plans upsetting aesthetically, but the argument that they will "solve" traffic problems is ridiculous. If you actually drive on any of these roadways, you will be aware that funneling more cars onto 5th/1st street (Cesar Chavez) is not going to alleviate any congestion. Cesar Chavez is a land-locked street that has no plans for expansion. If you build more roads, more cars will indeed come, but they will have no where to go. Ultimately this will create more bottlenecks and congestion. Reducing traffic can be achieved through much less expensive and much less intrusive means. Simple steps can be implemented to increase public transportation and stagger business start times. Why are these not being investigated by your entities? Because they will not be profitable to CTRMA.

Why, then, are you pushing these South Mopac plans through when the people they will most affect are opposing them? Are you seriously interested in pushing a proposed highway change that is so dramatic and that will change the landscape of our city so much when the entire city is against it? That does not show democratic leadership, but instead a despicable amount of greed and ignorance on the part of the entities in charge.

Please oppose the elevated lanes in the South Mopac project. If lanes are expanded, please allow the expansion to be limited to one lane in each direction with NO elevated sections. I respectfully request that you seriously consider all of the public comment that you receive before making such a dramatic and damaging change to our beloved section of roadway - where Mopac (Loop1) goes over beautiful Lady Bird Lake, with Zilker park below it. You have an enormous amount of power to do the correct and honorable thing - to preserve a section of our city that embodies why so many people love our town. Please do not ruin it with more cement and roadway that will not effectively solve any of our traffic issues.

Thank you for your time,

Ann Bernard
[redacted]

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Ann D. Bernard

Ann Bernard [redacted]

Printed Name Address

Additional Comments:

As a twenty six year resident of Austin, I understand that we need to make changes to accomodate the growth that our city is experiencing I do not support any elevated lanes to be developed on Mopac (Loop 1) from Loop 360 north to 5TH/1ST street exit or over Lady Bird Lake. The area that your current

Mopac South project focuses on is one of the most prized public areas of our city. Lady Bird Lake, the hike and bike trail, Zilker Park, the Zilker Garde. and the City of Austin Nature and Science Center would all be directly and negatively affected by elevated lanes. Please support the plan that includes one addition lane on the north and south sides, with NO elevated sections. There have not been enough studies to show the traffic impact of funneling more cars to Ceasar Chavez. There are easier and less expensive ways to alleviate traffic issues. Please do not add elevated sections or two wish bone bridges over Mopac.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

No toll roads.

- Since toll roads can only be used by people with money to spare, they should only be used for purposes that are only for luxury travel.
- Since money is so scarce for transportation, no projects that are only for luxury purposes should be built.
- Therefore, toll roads are a bad idea.
- I don't use toll roads – except by accident
- If a toll is higher than minimum wage, then it would cost a minimum wage worker at least two hours of their daily pay to use the roads. It is blatant inequality.

Do not close 45 loop.

- Closing the 45 loop – in one piece or in individual pieces will create huge traffic problems and circumvents the expressed will of the public – as established in the original 1980's planning and votes (and 1990s). The inner city will be destroyed by the resulting traffic and cross roads. The city's most important tax base will be destroyed and replaced by illegal industries that don't care if the inner city is a rotten place to live. – Inner dwellers

Alternate transportation

- Improve light rail and buses. Improve bike trails. Put in sidewalks, making it easier to walk between bus routes, trains, etc.
- Put parking garages near train depots, bus hubs etc. so that people can park & ride more easily.

Protect the Environment

- No double decks on Mopac.
- No confiscation or destruction of

November 18, 2015 at 9:45 AM
[redacted]

Name: Elizabeth Bezanson

Email Address: [redacted]

Subject: MoPac/Loop 1 South

Message: Dear CTRMA Staff and Board Members:

I am against doubledecking over Town Lake.
I am decidedly opposed to interests mostly outside of Austin dictating the demise of Austin's premier park. Walkability/connectedness in the vicinity of MoPac at the lake is surprisingly good, and that will be completely eroded as well. The plans - all of them - are strangely outdated relics of another era in freeway-building. Odd for a supposedly forward-thinking city, and a mirror of what Austin is considering expensive ways to undo on I35.
Further, I am opposed to further expansion of MoPac for the convenience of a paying few. I am not opposed to congestion pricing, or the idea that those who use, should pay, but if there is community consensus that a few people deserve to get from the suburbs to central Austin quickly, rather than being personally inconvenienced to move or rearrange their lives to reduce their commute, then that should be done with existing lanes so as not to destroy the greenery and medians that exist along South MoPac and make it so much more humane than most urban freeways.
You might wish to include in your modeling of Austin's future demographics, that growth from within the USA will slow if we continue to choose to make Austin uglier, since so many people who move here come not for jobs, which have by no means kept pace with population, but for the putative quality of life. Just a thought. Your decisions could themselves negatively influence domestic migration to Austin.

Cordially,
Elizabeth Bezanson

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I may be in the minority, but I like South MoPac the way it is: the greenery, the medians, and the number of traffic lanes. Driving on it doesn't feel like a life-and-death struggle as driving on Houston's freeways does.

An unelected body consisting largely of non-Austin residents should not have the power to despoil Austin's civic spaces by fiat.

If Austin is going to hell — and it probably is — that should be Austin's decision.

I oppose all S. MoPac expansion plans.

Cordially,

Elizabeth Bezanson

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 3:45:36 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Mollie Biddison

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 11, 2015 4:40:14 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Sandra Bieri

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. James Bierschwale

COMMENTS ON VIRTUAL OPEN HOUSE

Blake	Billman	11/12/15	Hello, I am encouraged by the initial designs and plans for the project and would like to make a few more suggestions that I think could be easily incorporated into the design at minimal cost along with one overriding concern. Design suggestions: where the mopac frontage roads meet cross streets (for example: 360, SW Pkwy, William Cannon, etc going south and the same going north) the left turn lanes that are u-turn only going under mopac only need to be lengthened by 100-200%. This is always a backup and would cost very little to fix. At SW Pkwy there are huge ruts in the grass where people consistently cut the corner bc the lanes are not long enough. Please fix this in the final design. We like the u turn only lanes being suggested for the bridge over Barton Skyway. Ditto the suggested change to the entrance to mopac from 6th street. We are ambivalent about the number of toll lanes added, but do have concerns about noise and the height of the lanes as they cross the river. We would prefer that the mopac bridge get wider rather than taller, flyover lanes. My main concern: We live between bee cave Rd and 360 just west of mopac, our biggest concern is road noise and we want the largest sound barrier possible placed near the road, similar to what is being done in Tarrytown. We would also prefer some type of landscaping incorporated into the project to mitigate noise. The Chisom Train toll road project in SW Fort Worth has done a good job of this with drought tolerant plants if you would like an example.

COMMENTS ON VIRTUAL OPEN HOUSE

Sinclair	Black	11/20/15	Building new lanes on South Mopac simply isn't necessary. Painting an existing lane for express buses, van pools and HOV would quickly create a significant volume for moving people not vehicles. A painted lane and a robust system of park&rides would more than compensate for the loss of the one redirected general purpose lane. The new park&ride fees would likely cost 30% less than parking in Downtown or at UT, and generate far more income than CTRMA's tolls. Furthermore, the park&ride infrastructure is very inexpensive - only about 5% of toll lane.

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I strongly support the officials named above, and Keep Mopac Local, in their concern about the impact of this project on everything we hold dear — and tout as the "heart and soul of Austin" — Ladybird Lake, Barton Springs, Zilker Park, and other cherished public centers and areas along the Mopac corridor. This I-35 "western bypass" will destroy Austin's quality of life and turn it into the next Houston. Please consider other options, such as restriping Mopac to create HOV lanes, and using the new TxDOT money to pay off the toll debt and make 130 free.

This project will trash our environment and Barton Springs. None of the options offered thus far are acceptable. Please work with the citizens to think outside the box and come up with a solution as unique as Austin is. FORWARD THINKING!!!

To: [redacted]
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 1:05:17 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project. I have lived in Central Austin for more than 30 years now, less than a mile from the inside of Mopac and less than 3 miles from Barton Springs Pool. I have watched four long-time (15 + years) neighbors on my block move west and far north in just the last two years. Before moving to Austin I lived in suburban Philadelphia and watched the Blue Route ruin the neighborhoods of my school days. It's amazing that Austin, without the protection that zoning laws in Pennsylvania seemed to offer, has resisted this highway sprawl as long as it has. This is a chance to avoid irreparable destruction and mistakes that kill the place we love.

Building SH 45 SW first will make MoPac and festival traffic even worse, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center. And these toll roads, is MoPac to be an elite escape from IH-35? Consider implementing TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with (enforced) rush hour HOV lanes, at least. I take the 18 bus to work and the bus lane south on Guadalupe has really made a difference in travel times this year.

Sincerely,

M Blockley

COMMENTS ON VIRTUAL OPEN HOUSE

Barry	Bone	11/17/15	The alternatives presented with Direct Connection to Cesar Chavez should not be permitted. Cesar Chavez does not have capacity for another lane of traffic and it places toll traffic in front of free lanes. Static modeling along with Dynamic modeling studies should have been presented to the public in their entirety before the Public Comment Period. One Express Lane without Direct Connection to Cesar Chavez is the best alternative. Two Express Lanes without Direct Connection to Cesar Chavez is the second best alternative The Austin proposal requires new right of way from Zilker Park and should not be considered. The Two Lanes with Elevated Ramps at Barton Skyway should also not be considered. The Toll Lane taking traffic downtown ends where the free traffic entrance to MOPAC coming from Bee Caves Road and other points south. This will take 50% of the free lane capacity and divert it to the toll traffic.

COMMENTS ON VIRTUAL OPEN HOUSE

Jeff	Bonyun	11/19/15	My main comment is to encourage the CTRMA engineers to solve the traffic problem first and foremost. Too many citizens are opposed to the project for reasons that, in my opinion, do not outweigh the enormous traffic nightmare that is brewing if we do not choose the best road configurations. To that end, I encourage two express lanes in each direction. These are clearly the winners for improving travel time. In terms of cost and environmental impact, the second toll lane is negligible. It would be horribly wasteful to go through this construction project and end up with only one toll lane. Most notably, it is the general purpose lanes -- those not paying tolls -- that would suffer most in the traffic created by only a single lane. Everyone should be in favor of two express lanes in each direction. Also to that end, I encourage some form of direct toll-to-downtown connection. I believe that the "double-decker" option (2A) is better than the elevated ramps at Skyway (2C), but think both have their merits. Without such a connection, Mopac will be dangerous and slow where express lanes have to weave across 3+ lanes of traffic to make their exit. Downtown traffic will be growing, and missing this opportunity to enable that traffic flow will result in more accidents and more wait times for decades to come. To those concerned about the environmental impact of this construction, consider the environmental impact of traffic congestion. It is better to have more cars get to their destination swiftly, than to have fewer cars idling on the highway for extended periods. Toll lanes, with appropriate connections, will also enable better public transportation, allowing more commuters to leave their cars behind. Better for the environment, and better for people. To those concerned about the aesthetics of the double-decker, consider that Zilker Park and the surrounding area already has a view of an elevated highway. Adding flyovers -- as exist at many, many highway intersections throughout Austin -- will not make the bridge any uglier. And It will not make Zilker Park any less beautiful. I would also especially like to discount the concern of residents with wonderful views from the surrounding hills. They are a tiny group compared to the thousands of people who will benefit from the highway every day. And they already have a view of a highway, so it isn't going to be much worse. I also have some specific suggestions for improvement: - The COA proposal had one marvelous feature: the Lake Austin Blvd turnaround to enable 6th St traffic to access southbound Mopac without a stoplight. This can and should be added to whatever final design is chosen. - The Barton Skyway turnaround might be a good idea. But why build a new bridge? The existing bridge is over-sized for local traffic, built to handle the original vision of Barton Skyway crossing the creek. It has five lanes: 2 each direction, 1 split for left turns. Convert one of those lanes to the turnaround. That leaves two lanes in each direction. At least consult with users of this interchange, and measure traffic on it, before building a new bridge. - Consider a flyover connection from southbound Mopac to westbound Bee Cave. This route is heavily traveled and currently involves excessive weaving across the frontage road. Instead of moving the exit from Mopac further north, put a flyover near Rollingwood Dr to move that traffic to the outside before going up the hill. To the extent this requires more space, use the right-of-way between Mopac and the frontage road. Maintain the current exit for those headed to Barton Springs via the turnaround. For similar cost, it would serve more people than a new turnaround bridge at Skyway. And I have some specific commendations, for good design decisions: - The addition of sidewalk/shared-use trails along Barton Springs near Rollingwood Dr, especially on the north and west sides, will help with crazy pedestrian traffic during festivals/events in Zilker Park. - Lengthening the entrance lane to the southbound-Mopac-to-northbound-Mopac turnaround at 360 will prevent backups at the stoplight from stopping users of the turnaround. Everyone wins, and it's a very easy fix. - The collector-distributor between Skyway and 360 will enable eastbound Bee Cave users to access the southbound Mopac toll lanes and Hwy 71 without weaving across Mopac, which is currently a problem. In conclusion, thank you, CTRMA, for focusing on the long term traffic needs of the whole region. I appreciate the time and attention you have given to concerned citizens -- myself included. But ultimately it's important to serve the needs of the entire region.

Date: Wednesday, November 18, 2015 2:45:49 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Carina Boston Pinales

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Monday, November 16, 2015 9:00:31 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
David Brady

Ms. Abby Tomlinson
Austin, TX

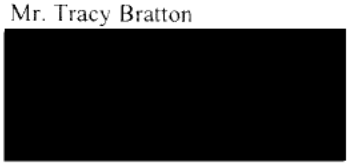
Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Tracy Bratton



Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Subject: Please, take a moment to look at the bigger picture - and into our future

Good evening-

Please do consider community feedback seriously. Your responsibility to shepherd our city and our children's future quality of life must be unbiased and reflective of what best serves AUSTIN without consideration for special interest groups or georgraphical areas that don't have to LIVE with Mopac on a daily basis.

.FIRST AND FOREMOST - PLEASE CONSIDER AN ENTIRE PLAN FOR OUR CITIES HIGHWAYS RATHER THAN PIECEMEAL APPROVALS THAT ONLY SERVICE SPECIAL INTEREST GROUPS.

THESE INDIVIDUAL PLANS SHOULD NOT BE CONSIDERED UNTIL THE INITIAL PLANS FOR ROADS LIKE 130 ARE COMPLETED AND UNTIL THEY ACTUALLY LINK UP TOGETHER TO MAKE SENSE. WHY START MORE PROJECTS WHEN WE HAVEN'T FIGURED OUT HOW TO PROPERLY USE THOSE WE JUST BUILT? WHY FUND INDIVIDUAL CONTRACTS WHEN THEY DON'T ALL MAKE SENSE TOGETHER?

URBAN PLANNING IS NOT SUCCESSFULLY DONE THIS WAY

Please do not add a double-decker over Lady Bird Lake or Double Decker Wishbone bridges over MoPac. I support the addition of 2 Toll lanes each direction without elevated lanes:

- The 2-lane each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA
- The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use and with the 2040 Long Range Plan.

- he 2 lane [illegible] irection with [illegible] evated [illegible] s option ha [illegible] the lo [illegible] [illegible] ets and [illegible] ghborh ds - h [illegible] r
  par ks and l [illegible] ving e xpe ri [illegible] s and [illegible] ty ex perience.

- he 2 lane [illegible] irection without [illegible] vated [illegible] s option pro vides s du [illegible] [illegible] nd travel t me saving fo [illegible] a
  t ota l o f 26 [illegible] is only slight [illegible] wer th [illegible] e option with a Do uble [illegible] [illegible] nd Lad e

- The 2 lane each direction without Elevated Lanes option provides reduced [illegible] [illegible] nd travel time savings for all roadways
  t ota l in 2035 [illegible] is only slightly lower than the option with 40-50 [illegible] [illegible] hone bridges over MoPac

- The 2-lane each direction without elevated lanes option cost is $30 Million less than the Wishbone concept and $40 million less than the Double Decker Decker concept

- The 2-lane each direction without elevated lanes option minimizes impact to our water quality and lowers the impact on the natural and human environment by not building elevated structures near neighborhoods or Lady Bird Lake

- The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park

I also support the addition of the sidewalk on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of an 8' sidewalk I would like an 11' multi-use path to accommodate bikes and pedestrians and connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project.

Please make sure to fully consider the social, economic, and environmental consequences. Please ensure the plans you choose support our public parkland, our green spaces and community values!

Thank you in advance for your careful consideration.

Elizabeth Bray

COMMENTS ON VIRTUAL OPEN HOUSE

Elizabeth	Bray	11/3/15	FIRST AND FOREMOST - PLEASE CONSIDER AN ENTIRE PLAN FOR OUR CITIES HIGHWAYS RATHER THAN PIECEMEAL APPROVALS THAT ONLY SERVICE SPECIAL INTEREST GROUPS. COMMENTS ON VIRTUAL OPEN HOUSE

Elizabeth	Bray	11/11/15	I am really struggling to find the point of any of this work? We are talking about the two mile portion of Mopac that currently has the LEAST traffic. I travel these lanes both ways every single day. To go from Bee Caves to Caesar Chavez - in either direction takes between 3-7 minutes at virtually any time of day. This is not where the bottle neck occurs, so why are we increasing the express opportunity in this sector simply to dump a higher volume of cars out directly into the areas where the blockage does in fact occur? Further, why create express anything for just a couple of miles when it cannot continue? It truly serves no purpose.

Dear TxDOT and CTRMA officials:

Please include my comments in the public record on the proposed 8-mile long "Mopac South" project. Please improve South Mopac traffic today. All you have to do is only use a little paint to repaint the lanes to make Slaughter Lane through to Ben White 3 lanes because the cement is already there. Period. That cheap, easy & quick "paint job" would significantly IMPROVE traffic along that extremely congested root. You obviously don't have to sit in this stop & go traffic, twice a day, EVERYDAY, so that it takes 30 minutes just to get from Davis Lane through the South Mopac & 71/290 overpass by Sunset Valley to Ben White which is only a few miles. Please install 1 camera on that overpass facing South towards Slaughter so that you'll be forced to face this daily reality that so many Austinites have to endure every single weekday. We waste so much time time (2-3 hours / weekday), money, productivity, along with road & vehicle wear & tear. Please repaint the Mopac South lanes, just like you did heading North on Mopac at Enfield which helps the traffic move better through the area. Please add rush hour HOV lanes, park and rides, enhanced ride sharing and improve intersections at Slaughter Lane which backs up traffic for miles in both directions every day. Please built & complete the roads BEFORE waisting any time & money on the "sound barrier walls" which should be basic common sense. Another problem with these expensive, large and ugly so called sound barriers is that they block driver's view of the road so that we can't see that traffic is completely stopped on Mopac from the frontage road so that we can then avoid joining the parking lot on Mopac & will then opt to take a different root therefore not adding to the problem.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now by repainting the lanes so there's three all the way through Ben White, with adding rush hour HOV lanes, park and rides, enhanced ride sharing and improve intersections at Slaughter Lane and LaCrosse.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Paula Jan Breland

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 11, 2015 10:10:16 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Pamela Brochhausen

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

NAME (PLEASE PRINT): Roger C Brown

ADDRESS: [redacted]

COMMENTS: First - Great Presentation of Options

2 other Comments

- The elevated exit to down town is only option that allows unrestricted exits without crossing other Traffic lanes at some point. Others will create another merging traffic obsticle to Through traffic.
- All options leave exits and entrances at Davis and Slaughter unchanged. They need improved also.

Again Great Job! Explain why, and proceed!

Thanks

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 12, 2015 10:30:14 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
stewart browning

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Victoria Brunow

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Michael Bruns

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 3:06:12 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

The South MoPac loop needs to be considered as a total 18 mile project instead of breaking it up into 4 separate pieces. We don't want MoPac to become I-35 W. Pay off the 130 toll road with money approved by voters and let that become I-35 E.

Zilker, Wildflower Center, Austin Nature Center and Lady Bird Lake are too precious. Don't allow them to be inundated with noise and pollution!!

Follow the recomendations of your own 2011 Blue Ribbon Advisory group and make 130 Toll Free!!

Don't let Mopac become I 35 west!!!

Do a complete study of all of it before doing piecemeal parts. Look at other alternatives which won't destroy our beautiful city!

No upper limits on tolls is totally unacceptable and unjust

Don't destroy Austin High School!

To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, October 30, 2015 9:10:28 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Bill Bunch

Re: Request to consider action on the proposed SH 45 SW/Mopac tolled expansion loop at next week's City Council meeting

Dear Mayor Farrell:

Please place on the Rollingwood City Council's agenda for its regularly scheduled meeting next week consideration and possible action concerning the proposed SH 45 SW/Mopac partially-tolled expansion loop. It is my understanding that this may already be on the agenda, and if so, thank you. I would also appreciate the opportunity to speak to the council on this matter as part of your regular citizen participation procedures.

It is my understanding that you and the council have copies of the January 2014 TxDOT bond prospectus that incorporates a traffic & revenue study stating a plan to complete the SH 45 SW connection of the southern terminus of Mopac over to Interstate 35 by 2025.

In support of this request, I am providing a copy of a resolution recently passed by the West Austin Neighborhood Group as an example of what a number of neighborhood and other entities are saying in calling for an end to the current TxDOT and CTRMA piecemeal approach to the expansion and extension of South Mopac. WANG represents the neighborhoods just across the river from Rollingwood, west of Mopac from the river up to West 35th street.

`Thank you for your consideration and for your work on this issue.

Sincerely,

Bill Bunch

Enclosure

RESOLUTION

WHEREAS, because of limited access at the south end of Mopac, Mopac currently operates as a local highway serving primarily local commuters; and

WHEREAS, the conversion of Mopac from a local commuter highway to a western loop, or western Interstate 35 alternative, has never been studied or carefully considered by CAMPO, the City of Austin, Travis County, the CTRMA, TxDOT, or the Austin community; and

WHEREAS, in light of Mopac traffic already exceeding capacity during peak hours, it raises serious questions about the propriety of adding more traffic to South Mopac by constructing the SH 45 SW toll road at this time and prior to having a comprehensive plan for South Mopac and the Lady Bird Lake bridge; and

WHEREAS, any increase in traffic on South Mopac will add more traffic on Lady Bird Lake bridge and North MoPac, resulting in increased congestion, noise, light, cut-through traffic, and air pollution effects directly affecting our neighborhood; and

WHEREAS, the Central West Austin Combined Neighborhood Plan calls for transportation investments in MoPac that are "compatible with the neighborhood and its environment," recognizing that expansion of MoPac has been one of the most important transportation issues affecting our neighborhood; and

WHEREAS the Austin City Council, upon recommendations from the Imagine Austin Citizens Task Force, voted to exclude the proposed SH 45 SW toll from the Imagine Austin plan; and

WHEREAS, the Lady Bird Johnson Wildflower Center has identified the proposed construction of SH 45 SW Phase I as posing a threat to the viability of the Center as a result of the added traffic, noise, and other impacts that would be added to South Mopac, and

WHEREAS, the currently under construction "managed lanes" project on North Mopac is not yet complete, and the operation of the completed lanes, particularly the entrances and exits to and from the new "managed lanes," together with the changes to remaining lanes, have yet to be tested in real time and evaluated; and

WHEREAS, the proposed construction of SW45 will use Travis County taxpayer funds to subsidize sprawl for the benefit of Hays County residents in direct contradiction to the community values expressed in Imagine Austin by promoting additional traffic and development over the environmentally sensitive Barton Springs Edwards Aquifer recharge zone; and

WHEREAS, West Austin Neighborhood Group (WANG) is a non-profit organization of neighborhood residents with the shared goal of preserving the character of West Austin and protecting it from deterioration, and is concerned with community development, ecology, safety,

and many other matters that indirectly and directly affect the quality and character of our neighborhood and the City of Austin;

NOW, THEREFORE, BE IT RESOLVED, that the West Austin Neighborhood Group Board of Directors calls for any SW/Mopac tolled loop expansion to improve north-south traffic flow on I-35, SH 130, and Mopac not divert I-35 traffic to Mopac via the proposed SH 45 SW; and

BE IT FURTHER RESOLVED that the Board of Directors opposes expanding and connecting MoPac to SH 45 SW to prevent the expanded traffic on MoPac which will adversely affect the West Austin residential neighborhood through increased traffic congestion, noise, and air pollution and which will also cause environmental damage to the environmentally sensitive park areas enjoyed by residents of our neighborhood, including Barton Creek, Zilker Park, and other areas in the Barton Springs Edwards Aquifer recharge zone; and

BE IT FURTHER RESOLVED that the Board of Directors asks the above persons and entities to work with the Board and others to initiate non-tolled improvements to Mopac that would (or could) include restriping of existing shoulders to add a lane; designating a lane a High Occupancy Vehicle lane during peak hours; providing transit and park and ride options; strengthening ride share and telecommute opportunities; and improving intersections, all without taking any additional right-of-way to laterally or vertically expand MoPac on the north or south sides of or over Lady Bird Lake.

ADOPTED: November 4, 2015 ATTESTED: Catherine Kyle

November 15, 2015 at 5:55 PM
[redacted]

Name: Leah Buratti

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members,

I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road.

A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

With the significant changes in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option. Along with a no-build scenario, options such as expanding telecommuting, ride sharing, and rail should be considered.

Best regards,
Leah Buratti

Subject: MOPAC/LOOP 1 SOUTH
Date: Sunday, November 15, 2015 6:00:03 PM

Dear CTRMA Staff and Board Members,

I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road.

A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

With the significant changes in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option. Along with a no-build scenario, options such as expanding telecommuting, ride sharing, and rail should be considered.

Best regards,

Leah Buratti

John Whitfield

Nov 20, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Rusty Burnett

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,
Molly Burnette
Lynne Storm

Additional Comments:

The elevated lanes are the worst, ugliest possible idea to improve the efficiency of Mopac. Please, please do not force this monstrous eye-sore on the citizens of Southwest Austin.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 12:20:19 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Steve Burns

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 9:20:32 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

The Austin Chamber of Commerce supports a vision for MoPac South that includes two express lanes in each direction with a direct connection to Downtown. This option makes the greatest impact on congestion and reduces time in gridlock for express and free lane drivers alike. Additionally, this project provides our transportation agencies with sustainable, flexible revenue without placing additional long-term costs on taxpayers. Above all, the Chamber applauds the Mobility Authority's commitment to craft multimodal solutions - prioritizing transit on express lanes and adding over eight miles of pedestrian and bicycle facilities. The other configurations require similar investment while delivering a fraction of the benefit. MoPac South is worth doing; it's especially worth doing right.

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Laura Carbonneau

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Saturday, November 07, 2015 9:00:19 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Jeff Cariker

Nov 18, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Andy Carlson

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 6:45:18 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

I live about one mile from MoPac now, close to the small "mini-city" that the "pending" Austin Oaks PUD wants to be part of. We in Northwest Hills don't need more traffic, more congestion and more crime. Great way to turn a first-class neighborhood into an outer-city slum. I don't want any of this. I also don't like the sneaky way this piece-by-piece construction is trying to deceive us until it's too late to go back. So try following the plan below:

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

I support the position of Keep Mopac Local in opposing the piecemeal approval of the South Mopac project. This project will have a profound impact on traffic patterns in our neighborhood in Southwest Austin, where residents depend upon Mopac to commute to work, school, and medical appointments. This highway is too important to the daily lives of our citizens to be subject to tolls, especially at a time when legislation and public sentiment are moving away from reliance on toll funding for highway improvement and maintenance.

Administration of the project by the CTRMA, the agency specifically responsible for toll road construction, means the project will be designed and constructed as a toll road with separation of non-tolled and toll lanes and issues of access that would not be necessary from a simple expansion of the highway. This in turn means added cost which requires additional tolls. I would urge removing the tolled requirement and studying the project simply as a means of moving traffic. Non tolled alternatives must be included in any review of the design. The project must also be reviewed in its full context as part of a system linking SH 45 SW with Central and North Austin with feeders bringing traffic from the Oak Hill, Dripping Springs, and Bee Caves areas and having profound consequences for the Edwards Aquifer.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

We need environmental impact studies for the whole of the 845 SW/MoPac loop before any more changes to existing roads take place.

We need transportation systems that TAKE PEOPLE, TRUCKS AND CARS OFF THE ROADS – that is: railroads, trams, trolleys, underground rail etc.

REMOVE THE TOLLS FROM SH 130

Add rush hour HOV lanes, park and rides, not more toll lanes.

This proposal for your toll roads negatively impacts the environment in the city of Austin. The health of the environment should be THE TOP PRIORITY

At the moment not many big trucks use MoPac. This situation is what we want and must remain.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 05, 2015 12:20:34 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Marion Cimbala

Re: MoPac South Project

Dear Sirs:

This letter provides our comments on the materials, presentations, and statements of the Central Texas Regional Mobility Authority ("CTRMA") and its representatives related to the CTRMA's October 21, 2015 presentation to the Rollingwood City Council, the CTRMA's October 22, 2015 Rollingwood Area Workshop, the CTRMA's November 10, 2015 MoPac South Environmental Study Open House, and the CTRMA's MoPac South Environmental Study Virtual Open House, which was launched online on October 21, 2015.

We would first like to briefly respond to the CTRMA's August 6, 2015 letter, which was sent from Mike Heiligenstein to Mayor Farrell. Thank you for noting that you "appreciate the City's support for mobility and safety improvements to the MoPac South corridor and your willingness to partner with us as we further develop our Express Lanes alternative." We appreciate your ongoing communication and your desire to partner with us as you develop the plans for the MoPac South Project (the "Project") and conduct the Environmental Study for the Project in accordance with the National Environmental Policy Act ("NEPA").

We were, however, a bit puzzled by the following statement contained in the CTRMA's August 6 letter: "While I understand your concerns regarding the elevated lanes, if the original MoPac had never been built due to similar concerns, we would have had an additional 150,000 vehicles winding their way through neighborhoods and city streets on their way to downtown and area employment centers." We have consistently voiced our support for needed improvements to MoPac South that serve to increase mobility and safety, while being sustainable and sensitive to both the human and natural environment. As we have stated, Rollingwood supports a sustainable solution to improve mobility and safety, and has previously expressed its support for a number of aspects of the Project, including improved traffic flow on MoPac near the City, and increased safety at the entrance and exit ramps to and from FM 2244. However, we want to make sure that the design of the roadway does not repeat the mistakes of the past in ways more fully discussed below.

In addition, the CTRMA's August 6 letter states that: "You are correct to point out that CAMPO supports the two express lanes in each direction — in fact it was a unanimous vote." It is important to keep in mind that the CAMPO 2035 Regional Transportation Plan included only one express lane in each direction for MoPac. The CTRMA requested an amendment to the CAMPO 2035 Plan, which would have changed the scope of the MoPac South project in the CAMPO 2035 Plan from one express lane each direction to two express lanes each direction, and which would have aligned the CAMPO 2035 Plan with the CTRMA "Preferred Alternative". The proposed amendment to the CAMPO 2035 Plan was withdrawn on or about March 30, 2015. The CAMPO 2035 Plan still contains one express lane in each direction for MoPac; however, the CAMPO 2040 Plan, which was adopted by unanimous vote, does include two express lanes in each direction.

The City of Rollingwood does not support elevated lanes of any kind over MoPac.

Cities across the country are actively addressing the negative impacts associated with urban elevated highways. These elevated highways were designed and built during the 1950's, 1960's, and 1970's in an effort to move people living in suburban areas to downtown centers. Cities like New York, Milwaukee, Portland, and San Francisco have all torn down and redesigned elevated urban highways and overpasses in order to improve livability, aesthetics, noise, and transportation. Right here in Texas, both Dallas (I-345) and Houston (I-45 Pierce Elevated) are actively engaged with TxDOT in planning efforts to remove elevated portions of highways that are eyesores, divide neighborhoods, create noise and light pollution, are expensive to maintain, and add little or no transportation efficiency.

Our City and the greater Austin community values and wants to preserve and promote what are our innate strengths in this unique area: walkability, urban parks, bike paths, and the clustering of many different uses close together. With this in mind, we are keenly aware that the noisy, hulking presence of an elevated urban highway, or elevated toll lanes, will only degrade the value of what is perhaps the greater Austin community's most unique, valued and productive land. In this irreplaceable setting, elevated, limited-access toll lanes connecting to downtown, with their small number of entry and exit points, will not move car traffic any more efficiently during rush hour than does the two-express lane option without elevated, direct connect toll lanes, with its multiplicity of route options. In addition, due to its elevated nature and small number of entry and exit points, the elevated, limited-access toll lanes connecting to downtown does not serve to facilitate reliable emergency response in any way.

Elevated "double decker" lanes directly adjacent to Zilker Park and spanning over Lady Bird Lake will soar approximately 45 to 50 feet above ground level and will destroy the viewshed and natural beauty of this special and unique part of the Austin area. It will also adversely impact historic properties, most notably the Zilker Park Historic District, and will transform the character, look and feel from peaceful and green to austere and industrial. In addition to being an eyesore, elevated toll lanes over MoPac will almost certainly increase noise and light pollution to the Zilker Park Historic District, the Nature and Science Center, Zilker Botanical Gardens, Deep Eddy Pool, Lady Bird Lake, Austin High School, and nearby parks and residential neighborhoods, including Rollingwood Park and the City of Rollingwood.

Likewise, the newly introduced proposal to add two, elevated "wishbone" tolled lanes which also would soar 40 to 50 feet above ground level are not a viable alternative. Like the original double decker design over Zilker Park and Lady Bird Lake, these alternative "double decked" lanes over MoPac will also be an eyesore, will create an austere and industrial feel in this area, and will almost certainly increase noise and light pollution directly to nearby parks and residential neighborhoods, including Rollingwood Park and the City of Rollingwood. Shifting the elevated toll lanes to the south will not improve or overcome all of the negative impacts that will result. In addition, this design will cost an additional $30 million over and above the two express lane design without elevated, tolled lanes and will not achieve any real benefit to justify either the financial cost or the significant impacts to the human and natural environment.

Throughout the initial MoPac South environmental planning process, the CTRMA has promoted its use of a "Context Sensitive Solutions (CSS) process" to ensure that "any mobility improvements not only meet the needs of the community they serve, but fit into the physical setting while reflecting the unique features and characteristics of the project area." According to the CTRMA's materials, CSS is a collaborative approach to develop transportation facilities that fit within its surroundings." In addition, the CTRMA touts that CSS "is an approach that **leads to preserving and enhancing scenic, aesthetic, historic, community and environmental resources**, while improving or maintaining safety, mobility and infrastructure conditions." (emphasis added). Both of the elevated toll lane proposals will directly conflict with the physical setting and destroy the unique features and characteristics of the project area. They will also diminish or destroy the scenic, aesthetic, historic, community and environmental resources of this special area. For these reasons, the CTRMA should not pursue either of the elevated toll lane proposals as a preferred alternative.

As we indicated in our previous correspondence, the City still believes that a "direct connect" to or from Cesar Chavez via elevated lanes will not improve traffic flow into or out of downtown Austin, or on MoPac, and has not been provided with any relevant 2040 traffic studies that demonstrate otherwise. Travis County and the City of Austin do not appear to have any plans to make improvements to Cesar Chavez, meaning a tolled "direct connect" to Cesar Chavez will likely only serve to increase traffic problems near Austin High School. In addition, the entire notion of elevated, tolled lanes directly connecting to Cesar Chavez appears to be contrary to the vision that the City of Austin has for the downtown area. The City of Austin has consistently promoted a denser downtown with an increased number of housing units in the urban core, while emphasizing walkability and bicycling. At the same time, the City of Austin has been reducing or eliminating the amount and availability of public parking in downtown Austin. With this in mind, it seems rather counterintuitive to put any priority on designing and potentially building elevated, limited access, direct connect toll lanes for private vehicle traffic to go directly downtown when the policy of the City of Austin appears to prioritize a reduction in the amount of private vehicles downtown.

The two express lanes alternative with no elevated, direct connect lanes to downtown is the best option that has been presented by the CTRMA.

The alternative which contains two express toll lanes each direction without "double decker" elevated lanes should be the preferred option at this time. It is the option which fully meets all of the MoPac South project "goals and objectives" while having the fewest adverse impacts to the human and natural environment. It will have significantly less impact to historic sites, Zilker Park, schools, and neighborhoods than either of the double decker options while still significantly improving travel times and capacity on our roadway with estimated 2035 travel times that are within minutes of either of the double decker options. This alternative will also undoubtedly result in significantly less public controversy and "push back" from nearby neighborhoods, businesses, and residents specifically because elevated freeway lanes are not part of the design.

This alternative is also fully consistent with the CAMPO 2040 Regional Transportation Plan. The CAMPO 2040 plan does not include the provision of direct, tolled access into downtown as a goal. Likewise, the provision of direct, tolled access into downtown is not part of the purpose or need for the MoPac South Project. In addition, this alternative is also more fiscally responsible because it will cost an estimated $30 million less than the elevated "wishbone" concept and an estimated $40 million less than the double decker over Lady Bird Lake concept, while achieving similar results in transportation efficiency. This alternative will provide tolled express lane users and emergency vehicles plenty of time and ability to safely maneuver and exit downtown.

In contrast to the alternatives which employ elevated toll lanes, the two toll lanes alternative without any elevated lanes much better meets the stated goals of the CSS process. This alternative will meet the needs of the Austin area community they serve, but also fit into the physical setting while reflecting the unique features and characteristics of the project area. In addition, this alternative does a much better job of preserving and enhancing scenic, aesthetic,

historic, community and environmental resources, while improving or maintaining safety, mobility and infrastructure conditions.

CAMPO and its consultants should use 2040 traffic data to analyze the alternatives and their impacts to the human and natural environment.

During this initial phase of this planning process for MoPac South, CTRMA and its consultants have used various different traffic studies to analyze the alternatives and forecast anticipated travel times. Most recently the CTRMA utilized a draft 2020 downtown study performed by the University of Texas to evaluate the various alternatives and forecast travel times. In addition, the CTRMA has at times been utilizing "2015 Bluetooth Data" provided by CDM Smith to evaluate the alternatives. We have serious reservations regarding the use of these studies to analyze the various alternatives. This is especially true in the case of the 2015 Bluetooth Data. This sort of data should not be utilized in any manner to analyze alternatives or forecast travel times because it is heavily skewed for a variety of reasons, not the least of which is the fact that the data is being gathered during a time in which significant traffic delays on MoPac South are being caused by the ongoing construction on the MoPac North Project.

In addition, the CTRMA has been using 2035 traffic data to analyze the alternatives and forecast travel times, which was evident at both the February 2015 Open House and at the November 2015 Open House. As noted above, the CAMPO 2040 Plan is now being utilized as the basis for the purpose and need for the MoPac South Project. As such, the analysis of the project should fully include all traffic impacts from all of the roadways contained in the CAMPO 2040 Regional Plan, including any roads which will serve to connect I-35 and MoPac. In addition, all analysis and forecasted travel times should employ the use of 2040 traffic data in order to be complete, accurate, and fully transparent to the public.

On a related note, the traffic data used on the "baseball cards" distributed by the CTRMA at the City of Rollingwood Workshop contained inaccurate information regarding travel times. The CTRMA staff and consultants initially speculated that the inaccurate information was likely the result of a rounding error, and then later indicated that it was likely an error that was made when the data was incorporated into the marketing and graphic materials.

High Occupancy Vehicle (HOV) and transit only lanes need to be studied and objectively evaluated.

The CTRMA has not done any evaluation regarding what the anticipated forecasted travel times would be for alternatives employing HOV, transit only lanes, or additional free lane capacity. The CTRMA has apparently based the decision not to analyze these alternatives on their position that no regional funding is available for this Project to provide free lanes. As noted above, the goals and objectives of the MoPac South Project are to ease congestion and provide relief for all roadway users. Under NEPA, the CTRMA should rigorously explore and objectively evaluate all reasonable alternatives, including alternatives employing HOV, transit only lanes, or additional free lane capacity. In addition, the CTRMA should devote substantial treatment in detail to each alternative that employs HOV, transit only lanes, or additional free lane capacity so that reviewers may evaluate their comparative merits against the other

alternatives that have been proposed. Finally, the alternatives which would employ HOV, transit only lanes, or additional free lane capacity should be included even if they are not within the jurisdiction of the CTRMA for funding or other reasons.

We therefore ask that the CTRMA rigorously explore and objectively evaluate alternatives employing HOV, transit only lanes, and additional free lane capacity. In addition, the HOV and transit only lanes should be compared with the toll and general purpose lane options as part of the environmental study. This is especially true in light of the fact that 2040 traffic data should be employed, and there now appears to be additional regional funding available to fund the construction of roads that are free to the public.

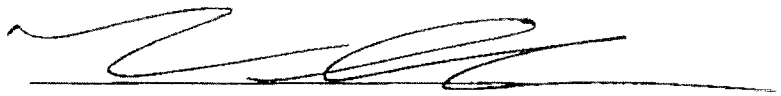
The City of Rollingwood supports a multi-use path on the west side of the MoPac access road.

The City fully supports the addition of a multi-use path to be located on the west side of the MoPac access road, from Lady Bird Lake to Barton Creek Mall. However, instead of the proposed 8-foot wide sidewalk, the City proposes the construction of a 11-foot wide multi-use path designed to accommodate both bicyclists and pedestrians, and which will seamlessly connect with Phase III of the MoPac bicycle and Pedestrian project.

Finally, we look forward to continuing to work closely with the CTRMA, as well as other state and local governmental officials and employees to fully participate in the NEPA planning process for the MoPac South Project.

Please continue to keep us informed about the next NEPA Technical Working Group meeting, as well as any additional Open Houses or other public meetings scheduled for this important Project.

Sincerely,



Thom Farrell, Mayor
City of Rollingwood

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 10:40:17 AM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Stephen L. Clark

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I won't bother to say that building CTRMA's tolled MoPac west loop will ruin Austin, even though that is NOT hyperbole.

I simply want to emphasize that we already have a tolled expressway as alternate for IH-35. That bypass, that carries public money debt, could be paid off. I've been told for less than $1 billion. If that is incorrect, tell us. But no matter what, that option and others must be discussed honestly (that ought to go without saying).

I find it difficult to believe that the quality of the capital of Texas itself, not to mention the quality of life here, can be considered so unimportant in these plans. Frankly, it seems that CTRMA does not feel obligated to do any consideration at all, except for where the next toll project is. And honesty about the west loop off of IH-35 definitely being the real plan would at least be refreshing.

Margot Clarke

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 4:05:39 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Amanda Clements

Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Jeff Coddington

Message: Dear CTRMA staff and Board members,

I am begging you to please, please please NOT build any double decker or elevated lanes or wishbone bridges over Mopac or Lady Bird Lake. I feel that double deckers and elevated lanes will destroy our beautiful river and parks area!

If toll lanes must be built, I strongly urge you to choose the 2-toll-lane each direction WITHOUT elevated lanes* option that has the lowest impact to the park, lake and neighborhoods, but will improve travel times and capacity within 3-5 minutes of the elevated options!

Thank you.

Sincerely
Gerda Coetzee

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

If you build it, they will come - we would be forfeiting green space (and recreation areas (and funding that could be going towards a solution that works) for a system that would reach capacity and increase traffic in the long run.

The citizens of Austin do not want this - voters and taxpayers don't want an expensive, destructive "solution" that does not work. We don't want to lose the gem of the city, Barton Springs, to highway pollution, to lose the wildflower center to traffic congestion.

PLEASE - don't let Mopac become IH35 - make SH130 free, add smart lanes. Fix IH35

I am 29 years old - please don't leave me to inherit a broken system that will lead to the destruction of what I love in this community; give us real options and let my generation have a say in what happens to our community.

To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 11, 2015 2:40:26 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Judy Coffin

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Hello: I attended the open house at Mopac South at Hill Country middle school but was unable to attend the open house at parmer event center. It seems that the central texas mobility authority is determined to build tolled express lanes to penalize people who drive downtown to work. Texas has been for years (up until 2000) a model for their excellent Freeway system. Then in 2000; Tdot shifted their focus to toll roads Andarza least in travis & williamson county, the majority of new roads have been tow roads. I do not agree with the central texas regional mobility conclusion that widening mopac with additional lanes would not help the traffic congestion problem. If we are to have an express lane, then have an express lane reserve for high occupancy vehicles. I strongly oppose toll lanes on mopac south but encourage Adding more free lanes. If tx dot & the texas regional mobility authority can't do that now, then I advocate leaving mopac alone until this state has the funds to expand mopac with more free lanes. Thank you.

COMMENTS ON VIRTUAL OPEN HOUSE

Kevin	Conrad	11/6/15	I spend 1.5 to 2 hours daily sitting in traffic on Mopac, travelling back and forth from my home just past the southern terminus of Mopac and my office at Mopac and Spicewood Springs. It's been frustrating to see the amount of cars/traffic increase exponentially every year, with little solution to address Austin's Southwestern growth. I see millions of dollars being spent on ridiculous bicycle lanes which do nothing to address the major issues of vehicle traffic in this City. If Austin wants to be a "World-Class City", then make the proactive decision to address one of (if not) the biggest negatives of this City. The Mopac South plan should include two lanes in each direction for the entire length of Mopac, with connections to downtown. It's time to help the car-driving majority of this town. Get it right the first time.

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mrs. Bette Cook

Date: Sunday, November 08, 2015 7:25:17 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route.

The current, piecemeal approach covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

Sincerely,
Christopher Cook

Date: Wednesday, November 18, 2015 4:25:35 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Stacy Coplin

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Your South Mopac plans are like out of the middle age here in our "high tech" city. Lots of alternate lower cost plans seem very possible but not being considered. Like high tech bus service (could be free service) like high tech (uber-like) ride sharing technologies - like high tech self-driving electric pod-like vehicles.

We don't want any more lanes added to South Mopac - we want serious low-cost high-tech solutions. Make the right move by doing/building no more concrete lanes.

Thank you Robert Corbin

Date: Thursday, November 19, 2015 11:30:14 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.
I HAVE FOLLOWED THE MOPAC "IMPROVEMENTS" FOR A COUPLE OF YEARS NOW. PEOPLE IN MY AREA (SOUTH MOPAC/CIRCLE C) DESPERATELY NEED TRAFFIC RELIEF ON MOPAC AND THE IMPROVEMENTS WOULD BE WELCOME IF THEY WERE BEING DONE TO RELIEVE EXISTING TRAFFIC. BUT THEY ARE NOT BEING DONE TO RELIEVE EXISTING TRAFFIC, RATHER THEY ARE BEING DONE TO INCREASE CAPACITY SO THAT I-35 TRAFFIC CAN TURN MOPAC INTO AN I-35 WESTERN LOOP.
THERE ARE ALTERNATIVES THAT HAVE BEEN IGNORED BECAUSE CTRMA WANTS TO BUILD PROFITABLE TOLL ROADS. I-35 TRUCK TRAFFIC COULD BE FORCED TO USE SH130.
THESE AND OTHER ALTERNATIVES NEED TO BE STUDIED.
BUT MOST OF ALL, THE IMPACT OF ALL THE PROPOSED MOPAC IMPROVEMENTS PLUS SH45-LINKING-TO-I35 NEEDS TO BE STUDIED AS A WHOLE, NOT PIECEMEAL AS IF THE PROJECTS HAD NOTHING TO DO WITH EACH OTHER.

RELIEVING TRAFFIC ON MOPAC IS NOT DONE BY BRINGING IN MORE TRAFFIC.

THANK YOU FOR INCLUDING THIS IN THE OFFICIAL COMMENTS.
CLAUDIA CORUM
CIRCLE C RESIDENT

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I have attended CTRMA workshops over + over, for years. We are presented with big maps with roads going through them. All portrayed in small, piecemeal projects — the underpasses @ LaCrosse and Slaughter, the toll lanes from Davis to downtown, SH 45, etc.

These silo-ed projects are not to alleviate present congestion — they are all part of a huge loop project to facilitate traffic — 1000's of cars, from I-35.

People living on the beleaguered Brodie lane have been exploited as part of the plan to sell SH45SW. There have been no alternatives studied or suggested to them to alleviate their traffic, some of which comes from Hayes Co.

There are alternatives — simple, less costly and certainly more rational than trying to alleviate MoPac traffic by bringing in more traffic.

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Douglas Cotner

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the "2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Annie Courtney

Annie Courtney [redacted]

Printed Name Address

Additional Comments:

We need improvements, but I'm opposed to double-decker Lanes. It will bring too much noise and light into the Rollingwood neighborhood. This creates a negative aspect to →

our neighborhood. We will support a plan where elevated structures are not included.

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

CHRIS COURTALEY [redacted]

Printed Name Address

Additional Comments:

PLEASE DO NOT PUT IN ELEVATED TOLL LANES. IT WILL CREATE THE LOOK OF AN INDUSTRIAL DOWNTOWN, WHICH WILL AFFECT OUR NEIGHBORHOOD NEGATIVELY. IT IS A LESS EXPENSIVE PROJECT AS WELL.

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 5:50:27 PM

Dear TxDOT and CTRMA officials:

Instead of altering this message from it's format, I read through it. I'm sure you have read one similar to it. I completely agree with all that is stated in this letter.
Please continue reading past my signature. Having been in a number of other cities recently, I have seen what HOV lanes can do to help the flow of traffic. Please look at this project as a whole, instead of piecemeal.

-Cynthia Coward
Concerned driver in SouthWest Austin

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I am deeply concerned by the proposals for South Mopac, especially when TxDOT acknowledges in their ~~2015~~ 2015 - 2019 Strategic plan that this region cannot build its way out of congestion. CTRMA needs to be truthful about the plan to connect Mopac to I-35, to induce greater congestion, while [redacted] tolls are too high for most to afford. I do not support this plan in any form, nor do I appreciate CTRMA packaging this plan as being friendly to transit simply because city buses (NOT van pools or school buses) will be able to ride for free. There needs to be investment in transit infrastructure to improve service for those areas that are using Mopac as a local commuter highway. It is within CTRMA's purview to make transit investments. I do not support any plan that calls for new highway infrastructure. We ~~not~~ need to use the infrastructure we already have in a more efficient way.

I do not support ~~a~~ expansion or new highway lanes through parkland, ~~s~~ environmentally →

We are all looking for more information about this process and we are grateful for the opportunity to share our thoughts and ideas with you during this planning phase of the projects for MoPac.

From: [redacted]
To: [redacted]
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, October 28, 2015 12:40:13 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Melissa Cubria

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Gary Culpepper

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 3:30:38 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Many people are worried that that the current proposed options will divert traffic from I-35 to mopac, which will end up increasing traffic. They suggested better, non-tolled options that they claim are being ignored. Even though there will be revenues made from making these expansions toll roads, they will only pay for a fraction of the cost of their construction. There are also concerns about building on/near the watersheds that protect Barton Springs and the enviroment, which need to be addressed for the health of the community. A non-constructional solution could be removing tolls from SH 130, which will appeal to interregional traffic & reduce traffic off of I-35, and in turn make the current suggested plans more plausable.

COMMENTS ON VIRTUAL OPEN HOUSE

Nicole	David	11/20/15	Dear CTRMA Staff and Board Members, In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial. The tall walls that have been recently erected are eyesore enough. If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options. The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use because it has the least impact to the park land. Adding elevated lanes damages Austin's parks, restricts community members who use the open spaces, and damages neighboring neighborhoods. I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods. Please ensure the plan you choose support our public parkland use, green spaces and community values. Sincerely, Nicole and Delu David

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

The DK proposed "alternatives" do not vary enough. They're all variations of 1 proposal — adding lanes that are tolled.

Do not build a double deck bridge over MoPac. This will have significant negative consequences for Zilker Park, Lady Bird Lake, the Hike & Bike Trail, the Botanical Gardens, the Austin Nature & Science Center, & Austin High School.

TxDOT should use recently approved funds to pay off SH 130 debt & have SH 130 function as it was intended — as an eastern bypass for I-35 north-south traffic.

Conduct a comprehensive study of the environmental impacts of the connected series of road projects — MoPac South, Mopac Intersections, Mopac Improvement Projects, SH 45 SW from Mopac to 1626, and SH 45 SW from 1626 to I-35. The projects are connected geographically, temporally, and by their stated (in large part) in the Edwards Aquifer/Barton Springs Recharge Zone.

Many citizens, including myself, are skeptical of the conclusions stated in the executive summary of the downtown traffic study. Lamar, Guadalupe and 5th/6th Streets should not be the only east/west routes that are studied. The focus will be a concept of direct connectors that cars will disperse through the rest of the downtown network. Downtown during rush hour cannot accommodate more traffic. Projects designed for single-occupancy vehicles will only perpetuate congestion.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

1. Please publicize and study the entire project's scope - to connect Mopac with I-35 before beginning to build ANY of the project.
2. Utilize new funding for non-tolled options.
3. Pay off 130 to make it the I-35 bypass it was intended to be.
4. If tolling is done, make it FIXED tolls, not "dynamic."

11/20/2015

COMMENTS ON VIRTUAL OPEN HOUSE

Sara	Davis	11/20/15	Please do not implement any toll lane alternative on south MoPac, at least not any that include "express Lanes" with "dynamic pricing" to discourage drivers from using the new lanes and cramming more people onto the existing lanes (or fewer lanes than currently exist). Please use the funding recently approved by voters to pay off I-30 to either eliminate or reduce tolls on that road to make it actually the I-35 bypass it was intended to be. DON'T extend MoPac to Slaughter with the intention of further extending it to I-35 in the future without thoroughly studying the impact of that on the entire road. Don't allow 18-wheelers on MoPac. Sincerely, Sara Davis

From: [redacted]
To: [redacted]
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Monday, November 09, 2015 2:20:22 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
TAMMY DAVIS

To: Abby Tomlinson
Subject: MoPac South Improvement Project support

Nov 13, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Peter Dawson

The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

MoPac South
ENVIRONMENTAL STUDY

MoPac South from Cesar Chavez Street to Slaughter Lane
Open House – November 10, 2015

COMMENT FORM

DEADLINE for Comments: Friday, November 20, 2015

Written comments will also be accepted through the website at www.MoPacSouth.com, by fax to 512-996-9784 or mail to: Central Texas Regional Mobility Authority, C/O MoPac South Environmental Study, 3300 North IH-35, Suite 300, Austin, Texas 78705.

NAME (PLEASE PRINT): Joanne Day

ADDRESS: [redacted]

COMMENTS: Go back to the drawing board. These options do not need to be so complex. Express tolls as will only be used by people who can afford $3 peak hour fee for the 8 miles stretch. We would be better served by more park & ride / bus options; restripe South MoPac to add HOV lanes. Make SH 130 free - no tolls to relieve congestion ~~too~~ on IH35 - ~~to~~ shifting the regional traffic off these would also relieve traffic on MOPAC. Do not connect IH35 & MOPAC via SH45. These options will be smart. Can Oxen for central Austin - Stand still - clusters...

This form may be used to provide written comments on this project. Any questions placed on this form will not be considered an open records request and will not be treated as such. If you have an open records request, it must be submitted under a separate letter.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

More toll roads are not the answer to alleviate Austin's Traffic woes. As more people (and businesses) locate here traffic congestion increases. The South MOPAC tollway will not reduce this congestion. CTRMA has stated that these plans are not offered to relieve congestion only options to allow some traffic to flow at a faster rate only if you can afford to pay for it. We need to think outside the box on getting traffic moving in Austin. We need a complete study on all TOLL projects for Austin before you start building any more pieces. Let's phase off SH130 - get rid of the tolls on just trucks on IH35. Re stripe South Mopac to get HOV lanes. Add more park n rides. Add ~~Express~~ Bus routes. Add metro rail. Bring Back the Dillos. There are so many options we could use. No toll roads. No tolled by pass of IH35 by connecting mopac to IH35 via SH45. Shifting traffic from one highway to another will not improve traffic congestion in the region. Get people out of their cars. That is the only way to reduce traffic congestion.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 2:25:22 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely, Kim Dean

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Ms. Elsa Decker

Name: Jade DeKinder

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over Lady Bird Lake. Elevated lanes will impact the beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

Jade DeKinder

COMMENTS ON VIRTUAL OPEN HOUSE

Noah	Deneau	11/20/15	On the southbound frontage road north of 290, please extend the proposed shared-use path down to Southwest Parkway, and ideally all the way across 290 to Target. This would be a big help to cyclists and pedestrians heading west Mopac. I sometimes commute by bicycle through there, and the disappearing shoulder on the frontage road approaching Southwest Pkwy is the worst part. A shoulder or side path would be a huge help.

Fix IH-35 first!

Free tolls on 130 - it's already built!

~~Toll lanes~~

~~(IH) lanes should be used for~~

Why can't Cap Metro buses use express lanes (toll lanes) for free? This should be something allowed to encourage transit & free up capacity.

To: [redacted]
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 9:35:21 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Comments for MoPac South Environmental Study- Open House Public Comment Period

Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase 1 of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on these routes.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, the Flint Ridge Cave recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs watersheds, over Town Lake, over our greenbelt parkland hike-bike trails, and essentially over Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin Pets Alive, the Edwards Aquifer, Barton Springs pool, multiple plant, water and wildlife species, many endangered species, and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker

bridge on MoPac over Lady Bird Lake from the transportation plans. We vote for the no build option.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. --We say NO to buildi

Sincerely,
Pam Dickinson

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Charles Dicks

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

MUST MAKE SH-130 FREE. BY DOING SO, I-35 WILL HAVE IMMEDIATE IMPROVEMENT

SUPRESS I-35 TO UNDERGROUND ALONG AUSTIN DOWNTOWN. AND ALLOW MORE EAST-WEST BRIDGES AND COVERAGE OVER SUPRESED I-35 TO ALLOW BUSINESSES AND MIXED USE AND HOUSING TO GROW.

DO NOT CONVERT MOPAC TO ANOTHER I-35 REGIONAL BYPASS. KEEP MOPAC LOCAL USE HOV LANES.

ABSOLUTELY NO DOUBLE-DECKING ANYWHERE. WASHINGTON D.C. DOES NOT HAVE ANY DOUBLE DECKING OVER ANY BRIDGES. AUSTIN CAN AVOID DOUBLE DECKING ALSO. HAVE A HOLISTIC APPROACH TO TRANSPORTATION AUSTIN CAN DO BETTER!!!

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

It is my belief that enlarging Mopac by building more lanes, and connecting it ~~eventually~~ eventually to IH 35 by means of the road called 45 SW (projected for completion by 2025), will INCREASE TRAFFIC ... not relieve it. People who are frustrated by traffic on IH 35 will use it as an alternative IH 35.

This will also drive more development over a sensitive recharge zone for Barton Springs which is really the crown jewel of the beauty of Austin.

Please, use human ingenuity and creativity to solve this issue from all aspects, keeping Barton

the vision of a livable city and an enjoyable environment for the citizens who live here.

We were supposed to have made a choice of either a denser inner city or a sprawled city. This plan ensures both. (It also imperils the campus of Austin High, and the Lady Bird Wildflower Center.)

We can do better.

Sincerely,

Tracy DiSpirito

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Krista Dillard [redacted]

Printed Name Address

Additional Comments:

I do not support a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Rd. I do support some sort of solution to help alleviate traffic but not a solution that adds more noise, light pollution & transforms the character, look & feel of Austin's most prized attributes: Lady Bird Lake & Zilker Park &

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. I can't think of anything more destructive to the beauty and charm of our city. Elevated lanes will impact the hill country feel of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values. This is most important to the local residents of this downtown area.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

I also strongly agree that these changes will only complicate issues surrounding Cesar Chavez and 5th Street traffic.

Sincerely,

Debbie Dillion

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 3:16:28 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project. You owe the citizens of Austin an honest explanation of the true plans and possible impacts of converting MoPac into a major N/S thoroughfare through Austin and Travis County. You also owe the citizens of Austin better options than ones that will severely damage two of it's crown jewels: the Barton Creek Greenbelt and Zilker Park.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Nov. 10, 2015

Dear CTRMA Staff and Board Members,

I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road.

Elevated lanes will add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

With the significant changes** in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option. Along with a no-build scenario, options such as expanding telecommuting, ride sharing, and rail should be considered.

Sincerely,

Eric Dopkins

Court Reporter Comment:

MR. PHILIP DORR:

I moved back here three years ago from Chicago, and I had 26 years of observing toll authorities up there. And they're rife with corruption, abuse, cronyism, the unions. You know, it's just the whole thing just -- I'm not a fan of tolls. I've asked a couple of people -- and I shared with a couple of people in here -- as I digress, but when I lived here back in the mid '80s, I-35 south of Lady Bird Lake to 290 or Ben White was a nightmare back then. It's still the same old piece-of-crap road. The leadership hasn't figured out how to fix that, which makes me kind of question leadership in general. And that to me is one of the biggest impediments to traffic through the whole area. But that being said, when I see TxDOT stuff, I want to give them credence, but I also -- and here again, I digress, but, you know, I-35, they're fixing it between here and Hillsboro, and they're making it three lanes each way, but the experts tell us the state's going from 26 million to 50 million people over the next 30 years or whatever. And their sign in there says if we make this new expansion on Mopac four lanes -- or two new lanes each way would be four lanes, it's only 10 percent more cost. Well, why didn't TxDOT do that with I-35, knowing that we're going to double the size of the state in the next 30 years? So was there a lack of leadership there, or are these numbers misleading? You know, what do I -- who do I trust? I think they're probably fairly accurate with this 10 percent more here, you know. And I think, you know, it should be widened because obviously traffic is an issue, and it's going to continue to be. But again, to me, it's kind of a trust issue by their examples. And then it's -- the conclusion -- concluding remark is, I was -- I shared with them in here, why not just go ahead and put a fifth lane in and out, and for a portion of it from downtown Austin to Sunset Valley or somewhere, put in a light rail system and let the light rail system compete against the HOV bus lane thing, whatever, on the toll lane or whatever, and see what one the people want. And then do analysis on the cost benefit -- do a cost benefit analysis of that and see if it makes sense to then take that fifth lane from Sunset Valley all the way south wherever they're going with this thing and make a light rail all the way out, or you take that fifth lane in a few years when you've outgrown the four lanes and turn that into an additional road for cars, a lane for cars. And I don't see anything that has to do with light railing in this proposal. And I know none of this is cheap or free, but somewhere in here, there has to be another -- another alternative than just add lanes for cars because, you know -- like, again, I've said repeatedly in here, pickup trucks are getting bigger; SUVs are getting bigger; cars are getting bigger. There's more of them. And as much as we romanticize and fantasize about everybody riding a bicycle to work, it ain't going to happen.

From: [redacted]
To: [redacted]
Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 10:35:21 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Michelle Doty

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 2:10:10 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Casey Douglas

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Please keep toll roads off of mopac. Keep Mopac local. No south extension of toll roads onto Mopac. Protect our watersheds. Protect Austin High Egress and approach and green spaces. Ensure the safety of Austin High school students, both pedestrians and new young drivers. Don't increase traffic and pollution. Protect the recharge zones. Coordinate with the city traffic planners. Look for lower cost plans+solutions. I oppose any toll road on mopac. Non tolled Rush hour HOV lanes would be good. I oppose all of the TxDot toll options MAKE I-30 Toll free and divert thru town trucks and traffic to it. Focus your time, money and effort to mass transportation and alternative modes of transport.

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

COMMENTS ON VIRTUAL OPEN HOUSE

Glenn	Dukes	11/5/15	Please build 2 additional lanes in each direction on Mopac South. We need more roads: cutting the project back to 1 lane will improve but not solve the problem, and adding a second lane at a later date will cost much more (in both $ and time). Fix it once, Fix it right.

To: [redacted]
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Monday, November 16, 2015 9:10:14 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Genevieve Duncan

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

- Adding toll lanes to Mopac will not alleviate commuter traffic, But will only add cars to the current gridlock. It won't help locals.
- An upper deck is unsightly and contributes to an atmosphere of urban blight - exactly what is not needed around Austin High School and the hike and bike trail.
- Adding traffic around Austin High School for toll road access is dangerous, to put it mildly. Difficult to get to S Mopac in evenings
- The current proposals would draw those driving through Austin, adding traffic along Mopac, destroying the local feel and views we enjoy from Mopac.
- Cesar Chavez is backed up morning and evening. How can it hold more traffic from toll ramps?
- Study free alternatives.
- Who will benefit from these toll roads? Investors & I live close to Mopac but don't expect any relief in my drive times.

Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Andrew Durke

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 7:30:12 AM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Subject: Study the whole loop project first before building SH 45 SW
Date: Monday, November 16, 2015 10:06:25 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

- Please study & share the whole Austin story.
- Safety around Austin High is Primary w/ so MANY New drivers!
- MAKE 130 toll Free.
- Austin is known for creative unique solutions & building consortiums to resolve issues. Let use some of those resources!

Thank you,

Louise

Message: Dear CTRMA Staff and Board Members,

I am firmly against the creation of toll roads in general. But, in addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

Dana El Kurd, PhD Candidate, The University of Texas at Austin

(Sent via

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Rachel Elder

Additional Comments:

I understand the congestion on Mopac, but feel the light & noise pollution will significantly increase living near the park. I feel this would be detrimit to our neighborhood. While I feel any increase in roads in general actually only causes more traffic, congestion and expense, if expansion

is necessary, I'd like you to consider widening the lanes on either side by 2 AND keeping Shopac local & not connecting it w/ I35.

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 12, 2015 9:16:11 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 10:20:24 PM

Dear TxDOT and CTRMA officials:

Comments for MoPac South Environmental Study- Open House Public Comment Period
Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on these routes.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, the Flint Ridge Cave recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs watersheds, over Town Lake, over our greenbelt parkland hike-bike trails, and essentially over Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin Pets Alive, the Edwards Aquifer, Barton Springs pool, multiple plant, water and wildlife species, many endangered species, and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker bridge on MoPac over Lady Bird Lake from the transportation plans. We vote for the no build option.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on

projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.
What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. --We say NO to building a second Interstate 35 through Austin to ruin the heart and soul of Austin along the way.
We want to Keep MoPac

Sincerely,
George Eliot

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members,

I want to express that I strongly do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

A successful urban city today is one that embraces green spaces, urban parks and trails, bike lanes, sidewalks, and inviting public gathering spaces. It also encourages alternatives to driving. There is abundant evidence to suggest that these are the elements that create a thriving city. People do not want to sit in cars and sit in traffic, people do not want to drive to everything, and people do not want poor air quality. People do want meaningful personal relationships, places to build movement into daily life, and ways to get to work and shopping that do not involve cars. This is the way successful cities are moving. Austin has the opportunity to attract a diverse and highly skilled workforce, but it will require a strong continued move toward this ethos of development. Consider the cities of today that have remade themselves into highly attractive places, like Chicago and Minneapolis. They did this not by building 8 lane freeways in the middle of the city. Instead, they created abundant green spaces, rich public gathering venues, they support lots of transportation options, they invested in bike lanes and sidewalks, mixed use walkable development .. they built a city for people, not for cars. Austin sits at this juncture. Are we a city for people or a city for cars? Austinites want a city for people. CTRMA should embrace this.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,
Jules Elkins

Date: Thursday, November 19, 2015 10:29:31 PM

Hi,

I understand that you are involved in the decision to build elevated lanes on Mopac over Lady Bird Lake. I rarely involve myself in local policy issues, but I wanted to let you know that I am very concerned these plans.

I recognize that traffic congestion has become a problem in Austin, but I sense that building more highways will come at a high cost to our quality of life. I have seen what increased lanes and flyover highways have done to other parts of Austin, and I shudder to think of such structures destroying the character and charm of the Lady Bird Lake area that so many of us treasure. I would much prefer that we put our energy into alleviating pressure by exploring alternative transportation modes, telecommuting, etc.

I appreciate your consideration.

Best wishes,
Zach Elkins

Hi,

I understand that you are involved in the decision to build elevated lanes on Mopac over Lady Bird Lake. I rarely involve myself in local policy issues, but I wanted to let you know that I am very concerned these plans.

I recognize that traffic congestion has become a problem in Austin, but I sense that building more highways will come at a high cost to our quality of life. I have seen what increased lanes and flyover highways have done to other parts of Austin, and I shudder to think of such structures destroying the character and charm of the Lady Bird Lake area that so many of us treasure. I would much prefer that we put our energy into alleviating pressure by exploring alternative transportation modes, telecommuting, etc.

I appreciate your consideration.

Best wishes,
Zach Elkins

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 11:25:17 AM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Glenda Embree

COMMENTS ON VIRTUAL OPEN HOUSE

Bill	English	11/18/15	Project is very necessary to solving our transportation problems that currently exist. The two lane with direct downtown access option appears to be the best to handle both current and future traffic demand.

From: [redacted]
To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 1:00:25 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Celeste Epstein

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Brian Estes

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Signed:

Subject: Please Stop the Double-Decking of Mopac

Message: Dear Staff and Board Members,

I oppose the double-decking of Mopac. We need transportation solutions that preserve the features of our city that make it such a great place to live. A double deck will obstruct the view of the violet crown, our beautiful skyline facing the hill country. Please reconsider this!!! We're surely smart enough to come up with a better solution for $350 million dollars. I love this city. We can't fight all of the changes that Austin has experienced in the last 15 years, but this plan for Mopac is within our control.

Rhonda Evans, Austinite

Best,
Rhonda Evans

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

I implore you to take a holistic approach to traffic in all of the Austin area to stop piece meal decisions and the destruction of the beauty of central and West Austin. We need a full analysis of all options and I believe we are FAR too reliant on toll lanes to solve our problem. All toll lanes do is help the small percentage of people that can afford it and use it and puts MORE traffic on the free lanes. We all pay our taxes to have our road and traffic problems solved--and not exclusively by toll lanes that make the companies who operate it richer and the rest of us stopped in traffic. You also need to come up with solutions that utilize SH 130 to a FAR more extensive degree than it is now. It's a fully built highway that is only partially utilized and it needs to be studied and, I believe, tolls removed to encourage traffic to use it to bypass the horrors of Austin traffic. The same thing applies to SH45. All those roads should be free or at least mostly free with a few toll lanes to handle rush hour traffic.

A holistic approach would also figure ways to improve park and ride services, ridesharing and improved intersections at Slaughter and La Crosse.

Bottom line, FULLY utilize all the existing, already built highways we have around Austin (SH 45 and SH130) and stop driving traffic onto already nightmarishly congested roads like Mopac and IH 35.

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Printed Name

Address

Additional Comments:

DOUBLE DECKER LANES OVER THE LADY BIRD LAKE WOULD BE SO UGLY FOR OUR BEAUTIFUL CITY. LET'S NOT COMPROMISE OUR CITY'S BEAUTY BY MAKING THIS HORRIBLE MISTAKE!

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

The double decker over Lady Bird Lake or two bridges over Mopac at Bee Caves Road will drastically affect the quality of life for neighboring areas such as Collingwood. The structures would negatively impact the hill country feel, beauty and charm of this special read and will transform the hike and bike trail from peaceful and green to highly urbanized and industrical This would add more noise and light pollution to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School, and homes in Rollingwood.

I request CTRMA perform an EIS instead of an EA so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will SIGNIFICANTLY impact the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School, the City of Austin and City of Rollingwood.

Thank you,
Cristina Feldott
Third Generation Native Austinite and Rollingwood Resident

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Walt Ferguson

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 7:20:16 AM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Due to the extensive expansion of Circle C, I think the highest priorities should be:

1. Have an overpass for Mopac at Slaughter Lane so that southbound Mopac traffic does not stop for red lights

2. Have an overpass for Mopac at La crosse Ave so that southbound Mopac traffic does not stop for red lights

3. Extend Highway 45 from the intersection at Mopac all the way to I-35

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

COMMENTS ON VIRTUAL OPEN HOUSE

Marnie	Fitzgerald	11/10/15	Dear CTRMA Staff and Board Members, I live in West Lake Hills, the surrounding neighborhood of the proposed MoPac expansion. I DO NOT support elevated toll lanes of any kind over MoPac. Please DO NOT add a double decker over Lady Bird Lake or two double decker Wishbone bridges over MoPac, they will impact the surrounding parks and neighborhoods with too much noise and light pollution. The "2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options. Please ensure the plans you choose support our public park land use, green spaces and the voices of the community writing to you! Marnie Fitzgerald

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

- study the proposed addition of toll lanes to S Mopac SH45 SW phases 1+2 before building any of it
- NO widening of Mopac over the recharge zone
- Build Long Star Rail first
- eliminate tolls on SH130 so it can carry more traffic
- re-stripe ~~to~~ Mopac to create a bus-only express lane

From: [redacted]
To: [redacted]
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 12:45:17 PM

KEEP MOPAC LOCAL is perfect. Do not divert I35 traffic or traffic from the other toll roads onto Mopac. DO NOT MAKE ANY PART OF MOPAC A TOLL ROAD. Austin is tired of the high fees and we don't need to be charged to go from one end of Austin to the other.

Dear TxDOT and CTRMA officials:

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I lived about 8 blocks from I-35 from 1994-200
The noise of 18 wheelers, the pollution from the traffic and the resulting "parking lots" created by those trying to exit/enter were unbearable.
I decided to get away from that by moving to 2222 and Mopac, where the highway is still local and gives easy access to downtown with out the noise and pollution of I-35.
Now there are proposals to turn MOPAC into a second "I-35 West". This is a bad idea that will change the character of the West side of town irrevocably for the worse.
Add to that the environmental damage done to our parks, schools, and homes along the way.
Please take the long view - choose an alternative that keeps MoPAC local - not another I-55.
As our leaders we expect that you will choose wisely and not submit more Austinites to the degradation of another I-35 in our beautiful city.

Thanks for your consideration,

Pete & Amanda Fredriksen

From: Randy Fromberg
To: Randy
Subject: MoPac public comment
Date: Wednesday, November 18, 2015 4:08:24 PM

Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the "2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

I also request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

Randall E. Fromberg, AIA, CEFP

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 12:10:41 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Will Furgeson

COMMENTS ON VIRTUAL OPEN HOUSE

Glenn	Gadbois	11/18/15	The narrow definition of "scope" for this environmental study has two significant challenges that should be addressed. For the public (particularly the 40% going downtown) to appreciate the value of a public investment on a project of this size, people should be able to understand the return on investment in realistic terms for how they may use the facility. Provide travel times for the entire trip in downtown to say Congress Ave (since this is what CTR used for their modeling) and provide personal vehicle as well as transit travel times. The presentation I hear from CTRMA clouds what will become a serious frustration if people are made aware that Cesar Chavez will be no worse, only because it is at capacity and physically can only become worse on amount of time it is "at capacity." For CTRMA to claim any "people through put" benefits from transit in this corridor it seems inappropriate that the environmental study does not have all the facilities (on ramping for key transit routes, park&rides, etc.) and operational costs to run the services needed for transit to actually carry its potential capacity in an express lane. The planning, design and financing of high capacity transit services in this corridor should be fully integrated in this process. The public funding used to conduct the environmental study (much of which was Rider 42 funding) established a policy precent to look at all solutions when addressing a congested corridor. IF Transit is not fully integrated into this environmental sturdy that means new funding will be required for an environmental study of Park&Rides and other related infrastructure, that design and financing will be on separate tracks and that is a colossal misstep highlighted by CTRMA's own selling points which so prominent feature the benefits of transit in this corridor.

Form Submission - New Form - Alternatives to all south MoPac "improvements"
November 16, 2015 at 2:24 PM
[redacted]

Name: Elliott Gaines

Email Address [redacted]

Subject: Alternatives to all south MoPac "improvements"

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

In addition, please postpone the start of the SH45SW project until more studies can be done on the impact of the increased traffic on those of us who live along south MoPac. The solution to traffic on MoPac is NOT to add more traffic

Thank you, Elliott Gaines
Southwest Austin

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 11, 2015 7:40:16 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Jim Galbreath

COMMENTS ON VIRTUAL OPEN HOUSE

Stacey	Gardner	11/15/15	Additional tolls on south Mopac over town lake are not the answer. A lot of the north south Mopac problems could be alleviated by building bypasses over or under the lights on HWY360. There is plenty of room to widen and that road can move just as many if not more cars than putting decks on Mopac if you take the stop lights at intersections out of the way.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Monday, November 09, 2015 10:45:17 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

We donâ€™t need to expand MoPac and build new freeways. Instead, Austin could start to develop plans to be an early adapter of technologies that are will be available soon. Autonomous vehicles, driverless cars, driverless vans/busses. Think about a public transportation system with an Uber-like interface on your phone that allows you to summon a vehicle (the car you own, a private "taxi" vehicle, a shared van) to take you to your destination. Public transportation systems will use computer intelligence to efficiently direct shared driverless vans to move large numbers of people to their destinations.

Imagine the fast lanes on the freeway being restricted to driverless vehicles, vehicles designed to tailgate at 70-miles/hour, much like one car of a train "tailgates" the car in front of it. This allows the currently built freeways to support much much more traffic than they can handle with human-driven cars.

As more cars become driverless-capable, additional freeway lanes can be converted to "driverless" lanes, much like toll roads in Texas gradually transitioned to have more automatic TollTag lanes.

This technology is not ready for prime time this decade, but it is on the way. Spending hundreds of millions of dollars to create more concrete (or fixed rail like Prop 1 last fall) is a waste of our resources. The CTRMA could start its planning now to make Austin a leader in this new field.

I am hopeful that you will work against a plan to upgrade MoPac South, for the following reasons:
1) It is an awful idea to turn the MoPac / Lady Bird Lake interchange into concrete monstrosity
2) It is an awful idea to turn MoPac into I35 bypass
3) New technology will exist within the next few years which will make this new construction unnecessary.
4) Texas 130 exists today to provide I35 traffic bypass. Letâ€™s use the money to buy out the private contract covering 130 and convert it into a toll-free freeway.

Thank you,
Steve Gerson

Sincerely,
steve gerson

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mrs. Anne Giles

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 12:06:42 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Eliza Gilkyson

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 04, 2015 7:25:14 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

You are out of step with the Austin way!! This is not the solution. Try again!

Sincerely,
Jane Gilley

Subject: MoPac South Improvement Project support
Date: Friday, November 06, 2015 1:03:29 PM

Nov 6, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Ms. Greta Goldsby

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 9:25:12 AM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

ENVIRONMENTAL STUDY

MoPac South from Cesar Chavez Street to Slaughter Lane
Open House – November 10, 2015
COMMENT FORM

DEADLINE for Comments: Friday, November 20, 2015

Written comments will also be accepted through the website at www.MoPacSouth.com, by fax to 512-996-9784 or mail to: Central Texas Regional Mobility Authority, C/O MoPac South Environmental Study, 3300 North IH-35, Suite 300, Austin, Texas 78705.

NAME (PLEASE PRINT): Shelby Goodrum

ADDRESS [redacted]

COMMENTS:

- My preference, even though it impacts me directly is the Wishbone option (elevated lanes at Barton Skyway) - it makes sense and seems safe.
- I do not think the merge option is safe.
- I do not think we should take any part of Zilker or Lady Bird Lake. Town Lake is the heartbeat of our city and we need to preserve it.
- We all need to compromise for the long term benefit of our city.

This form may be used to provide written comments on this project. Any questions placed on this form will not be considered an open records request and will not be treated as such. If you have an open records request, it must be submitted under a separate letter.

Dear TxDOT and CTRMA officials:

I am writing to you because I have seen the plans for all the improvements for MOPAC and IH 35. I am very concerned about the plan to connect IH 35 and MOPAC via the proposed SH 45. There is no way i can see that people will not take it to go to MOPAC rather than 130. Everybody dreads IH 35. I can't do anything about that but I don't want you all to fix things so that MOPAC becomes like IH 35 with the trucks and gridlock. Please let us see ALL the proposed plans and give you feedback. I agree with the following.

Pllease include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.
.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I am concerned about the horrible traffic that has developed in Austin within the last 10 yrs. I do not like toll roads because I believe they are unfair ~~to~~ to those who are low income. I think ~~this~~ there are other ways to manage traffic such as HOV lanes, abundant park & ride stations with reliable & adequate public transportation. We can't just keep building more roads - it just encourages more cars which necessitate more roads - and it just goes on like a loop.

I want those in charge of this MOPAC improvement project to include the proposed completion of SH 45 SW ~~in~~ and all other proposed pieces of the MOPAC improvement. Because they are all part of one piece. I am concerned about the effect of the SH 45 SW project. I believe it will divert traffic from IH-35 to MOPAC. Then MOPAC will be as bad as IH-35. I live about a half mile from MOPAC & do not want this to happen.

Please think outside the box and try something different that conserves our environmental beauty, reduces pollution & traffic without toll roads. Pay off the 130 toll road & send the trucks there - not to MOPAC.

COMMENTS ON VIRTUAL OPEN HOUSE

Jon	Green	11/4/15	Dear CTRMA Staff and Board Members, Please do not add a double-decker over Lady Bird Lake or Double Decker Wishbone bridges over MoPac. I support the addition of 2 Toll lanes each direction without elevated lanes. This balanced solution best addresses traffic needs while keeping the interests of neighborhoods and the community at large at the top of the priority list, where they belong, and it offers a superior cost:benefit ratio versus double-decker options. I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall to accommodate bikes and pedestrians, connected seamlessly with Phase III of the MoPac bicycle and Pedestrian project. Please be sure to fully consider ALL social, economic, and environmental consequences and ensure the plans you choose support public park land use, green spaces and community values.

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear STRMA Staff and Board Members,

I was disturbed to hear about the proposals for elevated toll lanes over MoPac because I don't believe they have the best interest of Austin residents in mind. Please record that I strongly oppose the proposed double decker roadways over Lady Bird Lake and two wishbone bridges over MoPac. At a time when cities that built such road systems decades ago are now dismantling them in favor of usable community spaces, I am appalled that plans to build such structures over the loveliest parts of the city would be considered.

Please oppose these plans and seek other options that would have little or not impact on the most beautiful, renowned aspects of Austin: Ladybird Lake, the greenbelt and Zilker Park, and the neighborhoods that surround the area.

More generally, I want to see public transit options; I don't want to have Austin start looking like Houston, with the kinds of disastrous affects on neighborhoods and communities that occurred when that built its highway system.

Sincerely,

Laurie Green

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 6:10:14 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Ryan Green

We need as many lanes as possible added to MoPac now. You are building for the future, not just today, and constructing for future needs now is not only less expensive, it avoids the traffic delays construction in the future will cause if you adopt a piecemeal approach. I have often wondered why transportation agencies have lacked foresight to build for long term needs as I sit through periodic upgrades of streets and highways.

Those opposing added capacity to MoPac were the same folks who opposed the highway to begin with, yet they must admit it is certainly necessary and well used today. We read that traffic due to inadequate roads is the biggest complaint of citizens, yet the activist class seeks to stifle increasing transportation resources like the proposed MoPac South roadways. Please utilize the option that provides the greatest capacity increase.

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Signed: Joan Griffith

Form Submission - New Form - MOPAC/LOOP 1 South
November 13, 2015 at 11:23 AM
[redacted]

Name: Lea Grisemer

Email Address: [redacted]

Subject: MOPAC/LOOP 1 South

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial. In addition, it will have an adverse effect on Austin High School.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.
I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

Sincerely,

Lea v. Grisemer
Rollingwood, TX

Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. William Gump

November 20, 2015

Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

I ask you to ensure that the plan you choose supports our public parkland use, green spaces and community values. It is vitally important to the future of Austin that you to consider the social, economic, and environmental consequences of building up. Please make sure that the plans you choose support our public park land use, green spaces and community values or you will destroy the very thing that makes Austin special.

Finally, I request CTRMA perform an Environmental Impact Statement due to the unprecedented scope of this project and the resulting harm it will do to the crown jewel of Austin – Zilker Park and its environs. An Environmental Assessment is simply inadequate for a proposed plan of this magnitude.

Sincerely,

Jill Hall
A Concerned Citizen

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 5:35:30 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear CAMPO, CTRMA, and TxDOT officials,

"Express" is simply a euphemism for "toll." The CTRMA flacks refuse to say"the T word." They're not being honest about that.

If you just added two standard lanes in the middle, not "express," then you don't need expensive flyovers anywhere, either north or south of the river.

The only reason for these flyovers is to allow a privileged toll paying driver to vault over all the other peasants presently stuck in general purpose lanes. To make the few travel faster at the many's expense.
There's also over $4 billion in our taxpayer money per year now available (Prop 1, passed in 2014) and soon to be available (Prop 7, passed in November 2015 election) earmarked exclusively for construction of non-tolled new capacity.

So no legal, practical, or financial necessity presently exists to build tolled lanes and flyovers, even if new capacity is deemed necessary.

Why are we doing this?

Is it because CTRMA is an almost exclusively toll funded agency? Then if that's all they can build, this project needs to be taken out of their hands and given to either TxDOT or CAMPO for a fair and objective review, as the federal law requires.

The best alternative option is taking these phased steps, in order, as the traffic grows:
first, defer or abandon the SH 45 Southwest tollroad project to prevent even more traffic being diverted over to Mopac from I-35 and SH 130
then, free SH 130 from tolls to see how traffic rearranges itself & what traffic diverts from I-35 and Mopac
expand Mopac capacity within the existing footprint using existing wide shoulders where they exist, narrowing lanes with restriping in places, and spot widening of the pavement in others.
then, build two new non-tolled lanes paid for by our state tax dollars, once that is actually needed
initiate passenger commuter rail service on the parallel, existing Union Pacific freight lane, if and when that option ever would become available.
Support more land acquisition and restrictive development regulations further south in the environmentally sensitive aquifer area that is the presently existing 'commute shed' for this road (without SH 45 being completed).
This is a reasonable 20-year plan. Fifty or hundred year provisions aren't reasonable, given the uncertainties about the future and the state of finances for the '99 percent' today.

If we grow wildly after 2040, then all that robust and prosperous new development can pay for the highway expansions that will benefit them then -- not financially strapped taxpaying drivers today.

[Image]

Some Mopac neighbors in Tarrytown finally got soundwalls to shield the noise from a ground level freeway -- only 35 years after it was built. However, the noise from elevated highway lanes or flyovers can't be effectively mitigated with soundwalls.

Everything distinctive and good about central Austin -- neighborhoods, hike & bike trail, lake shore, Zilker, Barton Springs -- faces the threat of ruin by this thoughtless, destructive, elitist, and unnecessary project.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 12, 2015 9:25:59 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Freeman Handee

To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 9:55:31 PM

Dear TxDOT and CTRMA officials:

Comments for MoPac South Environmental Study- Open House Public Comment Period
Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on these routes.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, the Flint Ridge Cave recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs watersheds, over Town Lake, over our greenbelt parkland hike-bike trails, and essentially over Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin Pets Alive, the Edwards Aquifer, Barton Springs pool, multiple plant, water and wildlife species, many endangered species, and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker bridge on MoPac over Lady Bird Lake from the transportation plans. We vote for the no build option.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on

projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.
What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. --We say NO to building a second Interstate 35 through Austin to ruin the heart and soul of Austin along the way.
We want to Keep MoPac

Sincerely,
Freeman Handee

Nov 20, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Michael Hanrahan
[redacted]

COMMENTS ON VIRTUAL OPEN HOUSE

Sridhar	Hariharan	11/13/15	I would like to vote for the 2 lanes in EACH direction option. I commute to downtown every day and my wife commutes to Palmer and its a parking lot in rush hour. It is severely affectedly our quality of life and we are contemplating moving away from S.Austin. This is a badly needed solution.

COMMENTS ON VIRTUAL OPEN HOUSE

lames	Harris	11/1/15	Dear CTRMA Staff and Board Members, As long time residents of the City of Rollingwood, my wife Catherine and I oppose double decker construction over Mo-Pac. For many years since 1981, we have been told that Mo-Pac was a parkway, for local use only----not to be connected to I-35 or any major thoroughfare. Seems there is a change of plans now. Plans made by too many who are not aware of the uniqueness of Austin among Texas cities. We are not Houston, Dallas, San Antonio-----never were and hope we never will be. Austin has hills, rivers, natural beauty that Dallas and Houston never had. Don't destroy the unique character of Austin. Cities on flat lands in Texas have options different from cities with natural beauty and barriers. PLEASE RESPECT WHAT HAS ALWAYS MADE AUSTIN UNIQUE and DO NOT IMITATE MODELS of Texas cities with very different characteristics. We watched as Zilker Park became an even more popular attraction than it was in the 1980's---improvements to the trail, boat docks, easy walking connection to downtown, improved Nature Center, Botanical Gardens-----so much effort, time, money has been spent on making these areas attractive and essentially showcase areas for Austin. Why, now, to save commuters a few minutes, should all of these efforts be at risk from heavy traffic on a double decker highway? We are puzzled at the direction planning is taking in our beautiful Capital city. We don't want Austin to become Houston or Dallas. Houston allowed the state to steal private property, tear up perfectly good railroad tracks from Katy, TX to downtown Houston and replace them with a 16 lane IH-10---just to satisfy commuters who live miles from downtown. They could have, instead of removing the tracks, established a commuter train----what a waste that they did not. Austin should look for better ways than highways. Here are some suggestions: 1. Require employers to stagger the schedules of their employees; or better yet, move to online work----reduce the size of the physical office. 2. Expect State agencies to move many of their operations away from central Austin; even years ago there was a move to locate state agencies away from the Capitol. What happened? 3. Move toward a pedestrian only city center----as many cities in Europe are and some cities in the U.S. A double-decker highway over Lady Bird Lake or Double Decker Wishbone bridges over MoPac would be a disaster. Such highways should never be close to the center of a city---only useful away from towns. We find toll lanes in Texas to be offensive --- on numerous trips to Houston, we find the toll lanes frustrating as the exits are not well marked---just as in north Austin---it is too easy to end up on a toll lane by mistake. CTRMA Goals should be realistic enough that toll lanes are not needed. If we have to choose among toll lanes, we prefer the addition of one toll lane each direction without elevated lanes. MoPac South project "goals and objectives" set by CTRMA need to be consistent with local plans for park land use and the original intent of MoPac. One "fast" lane each direction, without elevated lanes,has the lowest impact to the parks and neighborhoods----it may improve travel time but only until increased population leads to the number of vehicles going off the chart! What happens then? More lanes? PLEASE--not another Houston! Remember, Austin is unique among Texas cities. Reluctantly, we would support 2 Toll lanes each direction without elevated lanes. This option accomplishes the following: -meets MoPac South project "goals and objectives" set by CTRMA -provides consistency with local plans for park land use and with the 2040 Long Range Plan. -has a low immediate impact to the parks and neighborhoods while still significantly improving travel times and capacity on our roadway. - provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with a Double decker over Lady Bird Lake. -provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with 40-50 feet elevated Wishbone bridges over MoPac. - cost is $30 Million less than the Wishbone concept and $40 million less lane the Double Decker Decker concept. - minimizes impact to our water quality and lowers the impact on the natural and human environment by not building elevated structures near neighborhoods or Lady Bird Lake. - will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. We also support the addition of the sidewalk on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of an 8' sidewalk we would like an 11' multi-use path to accommodate bikes and pedestrians and connect seamlessly with Phase III of the MoPac bicycle and Pedestrian project. Please make sure to fully consider the social, economic, and environmental consequences. Please ensure the plans you choose support our public park land use, green spaces and community values! We are also puzzled that all this planning and money is not aimed at FIRST improving IH35. After all---it is not just commuters, it is traffic from Minneapolis to Laredo! Respectfully submitted, Jim and Catherine Harris, City of Rollingwood

Jim and Catherine Harris
[redacted]

Dear CTRMA Staff and Board Members,

As long time residents of the City of Rollingwood, my wife Catherine and I oppose double decker construction over Mo-Pac. For many years since 1981, we have been told that Mo-Pac was a parkway, for local use only----not to be connected to I-35 or any major thoroughfare.

Seems there is a change of plans now. Plans made by too many who are not aware of the uniqueness of Austin among Texas cities. We are not Houston, Dallas, San Antonio-----never were and hope we never will be. Austin has hills, rivers, natural beauty that Dallas and Houston never had. Don't destroy the unique character of Austin. Cities on flat lands in Texas have options different from cities with natural beauty and barriers. PLEASE

RESPECT WHAT HAS ALWAYS MADE AUSTIN UNIQUE and DO NOT IMITATE MODELS of Texas cities with very different characteristics.

We watched as Zilker Park became an even more popular attraction than it was in the 1980's---improvements to the trail, boat docks, easy walking connection to downtown, improved Nature Center, Botanical Gardens-----so much effort, time, money has been spent on making these areas attractive and essentially showcase areas for Austin.

Why, now, to save commuters a few minutes, should all of these efforts be at risk from heavy traffic on a double decker highway? We are puzzled at the direction planning is taking in our beautiful Capital city. We don't want Austin to become Houston or Dallas.

Houston allowed the state to steal private property, tear up perfectly good railroad tracks from Katy, TX to downtown Houston and replace them with a 16 lane IH-10---just to satisfy commuters who live miles from downtown. They could have, instead of removing the tracks, established a commuter train----what a waste that they did not. Austin should look for better ways than highways. Here are some suggestions:

1. Require employers to stagger the schedules of their employees; or better yet, move to online work----reduce the size of the physical office.

2. Expect State agencies to move many of their operations away from central Austin; even years ago there was a move to locate state agencies away from the Capitol. What happened?

3. Move toward a pedestrian only city center----as many cities in Europe are and some cities in the U.S.

A double-decker highway over Lady Bird Lake or Double Decker Wishbone bridges over MoPac would be a disaster. Such highways should never be close to the center of a city---only useful away from towns.

We find toll lanes in Texas to be offensive --- on numerous trips to Houston, we find the toll lanes frustrating as the exits are not well marked---just as in north Austin--- it is too easy to end up on a toll lane by mistake. CTRMA Goals should be realistic enough that toll lanes are not needed.

If we have to choose among toll lanes, we prefer the addition of one toll lane each direction without elevated lanes. MoPac South project "goals and objectives" set by CTRMA need to be consistent with local plans for park land use and the original intent of MoPac.

One "fast" lane each direction, without elevated lanes,has the lowest impact to the parks and neighborhoods----it may improve travel time but only until increased population leads to the number of vehicles going off the chart! What happens then? More lanes? PLEASE--not another Houston! Remember, Austin is unique among Texas cities.

Reluctantly, we would support 2 Toll lanes each direction without elevated lanes. This

option accomplishes the following:

-meets MoPac South project "goals and objectives" set by CTRMA

-provides consistency with local plans for park land use and with the 2040 Long Range Plan.

-has a low immediate impact to the parks and neighborhoods while still significantly improving travel times and capacity on our roadway.

- provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with a Double decker over Lady Bird Lake.

-provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with 40-50 feet elevated Wishbone bridges over MoPac.

- cost is $30 Million less than the Wishbone concept and $40 million less lane the Double Decker Decker concept.

- minimizes impact to our water quality and lowers the impact on the natural and human environment by not building elevated structures near neighborhoods or Lady Bird Lake.

- will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park.

We also support the addition of the sidewalk on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of an 8' sidewalk we would like an 11' multi-use path to accommodate bikes and pedestrians and connect seamlessly with Phase III of the MoPac bicycle and Pedestrian project.

Please make sure to fully consider the social, economic, and environmental consequences. Please ensure the plans you choose support our public park land use, green spaces and community values!

We are also puzzled that all this planning and money is not aimed at FIRST improving IH35. After all---it is not just commuters, it is traffic from Minneapolis to Laredo!

Respectfully submitted,

Jim and Catherine Harris, City of Rollingwood

Nov 6, 2015

Ms. Abby Tomlinson
Austin, TX

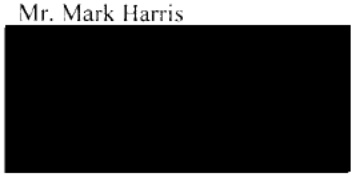
Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Mark Harris



Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Subject: MOPAC/Loop 1 South comments on proposed plans

Message: Dear CTRMA Staff and Board Members,

I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will completely destroy the aesthetic of the cities' beloved outdoor spaces including Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, the hike and bike trail and Lady Bird Lake; as well as negatively impacting Austin High school. Austin is known for its outdoor green spaces. These spaces differentiate us from other cities and are a large part of what makes Austin such a special place. Please do not turn us into Dallas or Houston by building elevated lanes through the heart of Austin. Many of us chose to live in Austin, as opposed to Dallas or Houston, because of it's beauty, outdoor spaces and comparative lack of concrete infrastructure and strip malls that are all over Dallas and Houston. In Austin you can see trees and green spaces and water. In Dallas and Houston you see highways and flyovers and more highways and flyovers. Please please do not ruin Mopac and surrounding green spaces and neighborhoods with elevated lanes.

Additionally, with the significant changes in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin, City of Rollingwood and surrounding neighborhoods.

If toll lanes must be built the "2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway.

Additionally, I feel more information needs to be shared with the public about why elevated lanes are recommended for the Cesar Chavez exit, but not for the many other toll lane exit points along Mopac? The toll road exit point that you are proposing placing before the Enfield exit on northbound Mopac is an inside lane exit with a very very short ramp for cars to exit the toll road and merge into general northbound traffic. It is positioned at a point where northbound traffic merges down from 4 lanes to 3 lanes over the river, and where there is already congestion during morning and afternoon peak times. This inside toll lane exit, positioned before Enfield road, is the exit for all toll lane traffic planning to exit at Windsor, Westover, 35th, 45th, and 2222 to use – one toll lane exit servicing 5 Mopac exits. Where is the information to support the need for expensive, industrial elevated lanes to service a single exit at Cesar Chavez? Additionally, this proposed toll lane exit before Enfield creates a new, potentially dangerous bottleneck into Mopac North right after the river that will potentially back up traffic across the bridge

Also, in reviewing the traffic data provided by CTRMA there is twice as much daily volume of cars exiting and entering Bee Caves at Mopac than at Cesar Chavez. Improvements to the Bee Caves Road interchange need to be considered as part of the plan if we are going to take a comprehensive approach to Mopac South. Bee Caves Road is a major artery into Mopac South, and by not considering this intersection I feel the CTRMA plan is very short-sighted.

I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project.

Thank you for your time

Sincerely,

Natasha Harris
Please make sure to fully consider the social, economic, and environmental consequences of building up. Please ensure the plans you choose support our public park land use, green spaces and community values.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Sunday, November 08, 2015 11:05:16 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Andrew Harrod

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 8:30:41 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Christine Hawkes

I live in Circle C Ranch, On the Park....I've read about some of the work being proposed to help reduce noise for the proposed new intersections at Slaughter and LaCrosse. Is there a reason why a lot of the existing vegetation could not be left to also block noise...I know it must be easier to remove but one of the great things about Circle C is the extra effort and work that was done to preserve as many trees/natural vegetation in area...don't know why this would not continue with the road improvements?

What I have not seen and would be interested to learn more about is the proposed lighting for the new intersections. Again, one of the great things about Circle C is that the community has been very sensitive to minimizing light pollution in the neighborhood...a really awesome feature of the community is that you can go in your backyard at night and still see lots and lots of starts....I live in "On the Park" and I am very fearful that way too many lights are going to line to the new roads and that there will be a crazy number of stadium lights to "brighten" the intersections that will significant contribute unnecessary light pollution in our great neighborhood. Would be very interested to hear how the project managers are planning to use the least amount of roadway lighting possible in this area to preserve the night sky for families in the neighborhoods.

Final comment, who can we talk to in order to get the multi-use path proposed between Slaughter and LaCross extended all the way around the rest of the loop ending at 1826? Many, many bikers use MoPAC between LaCross and 18126 and a multi-use path that continues around is really needed from a safe travel perspective.

Thank you for soliciting feedback on this important work.

Best,

John

Court Reporter Comment:

MR. JAVED HELALI:

As I said, we are paying toll twice. Once to enter it, once to come out of it. That means to use it and not to use it, we are paying toll. And my second point is, when does the toll end? I mean, you take the toll because of – you want to finish -- replenish the cost of the thing. The cost is never replenished? Once a toll road is there, it's always a toll road. It never becomes non-toll. So what I'm trying to say is that once that amount of money which has been spent on the bridge or whatever it is has been recouped, the toll should stop.

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

STUDY ALL OF IT BEFORE BUILDING ANY OF IT
- COMBINE ENVIRONMENTAL STUDIES OF ALL PARTS OF PROPOSED SH 45 SW BEFORE POURING CONCRETE

NONE OF THE ABOVE
- DO NOT RESTRICT OPTIONS TO THE SIX PROPOSED TOLL ROAD OPTIONS

CONSIDER RUSH-HOUR HOV LANES, PARK AND RIDES, PUBLIC TRANSIT OPTIONS, IMPROVED INTERSECTIONS, AND ABOVE ALL WAIT TO SEE THE IMPACT OF THE UNFINISHED EXPRESS LANES ON MOPAC.

TRY HARDER TO GET TRAFFIC TO USE SH-130

INVEST IN IMPROVING IH35 INSTEAD

INVEST IN URBAN HOUSING OVER NEW SUBURBS TO SHORTEN AVERAGE JOURNEYS

PLEASE DO NOT DESTROY BEAUTIFUL AUSTIN!

A Helen

Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. James Herrin

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 12:05:30 AM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Raul Gonzalez

COMMENT FORM

DEADLINE for Comments: Friday, November 20, 2015

Written comments will also be accepted through the website at www.MoPacSouth.com, by fax to 512-996-9784 or mail to: Central Texas Regional Mobility Authority, C/O MoPac South Environmental Study, 3300 North IH-35, Suite 300, Austin, Texas 78705.

NAME (PLEASE PRINT): Sherry Goodrum

ADDRESS: [redacted]

COMMENTS:

- My preference, even though it impacts me directly is the wishbone option (elevated lanes at Barton Skyway) - it makes sense and seems safe.
- I do not think the merge option is safe.
- I do not think we should take any part of Zilker or Lady Bird Lake. Town Lake is the heartbeat of our city and we need to preserve it.
- We all need to compromise for the long term benefit of our city.

This form may be used to provide written comments on this project. Any questions placed on this form will not be considered an open records request and will not be treated as such. If you have an open records request, it must be submitted under a separate letter.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 3:45:37 PM

Dear TxDOT and CTRMA officials:

I am writing to you because I have seen the plans for all the improvements for MOPAC and IH 35. I am very concerned about the plan to connect IH 35 and MOPAC via the proposed SH 45. There is no way i can see that people will not take it to go to MOPAC rather than 130. Everybody dreads IH 35. I can't do anything about that but I don't want you all to fix things so that MOPAC becomes like IH 35 with the trucks and gridlock. Please let us see ALL the proposed plans and give you feedback. I agree with the following.

Pllease include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I am concerned about the horrible traffic that has developed in Austin within the last 10 yrs. I do not like toll roads because I believe they are unfair ~~to~~ to those who are low income. I think ~~this~~ there are other ways to manage traffic such as HOV lanes, abundant park & ride stations with reliable & adequate public transportation. We can't just keep building more roads - it just encourages more cars which necessitate more roads - and it just goes on like a loop.

I want those in charge of this MOPAC improvement project to include the proposed completion of SH 45 SW too and all other proposed pieces of the MOPAC improvement. Because they are all part of one piece. I am concerned about the effect of the SH 45 SW project. I believe it will divert traffic from IH-35 to MOPAC. Then MOPAC will be as bad as IH-35. I live about a half mile from MOPAC & do not want this to happen.

Please think outside the box and try something different that conserves our environmental beauty, reduces pollution & traffic without toll roads. Pay off the 130 toll road & send the trucks there - not to MOPAC.

Good afternoon - I wanted to express my support for the MOPAC South extension. WE MUST do something about our traffic in Austin, NOW! Waiting for the perfect solution that everyone can agree on doesn't seem to be happening!! Every day we wait, is one more day that we all feel the affects of gridlock that negatively impacts our City, our lives, our environment, etc. Something has to happen, NOW.

Thank you.

COMMENTS ON VIRTUAL OPEN HOUSE

Jon	Green	11/4/15	Dear CTRMA Staff and Board Members, Please do not add a double-decker over Lady Bird Lake or Double Decker Wishbone bridges over MoPac. I support the addition of 2 Toll lanes each direction without elevated lanes. This balanced solution best addresses traffic needs while keeping the interests of neighborhoods and the community at large at the top of the priority list, where they belong, and it offers a superior cost:benefit ratio versus double-decker options. I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall to accommodate bikes and pedestrians, connected seamlessly with Phase III of the MoPac bicycle and Pedestrian project. Please be sure to fully consider ALL social, economic, and environmental consequences and ensure the plans you choose support public park land use, green spaces and community values.

Name: Laurie Green

Email Address [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear STRMA Staff and Board Members,

I was disturbed to hear about the proposals for elevated toll lanes over MoPac because I don't believe they have the best interest of Austin residents in mind. Please record that I strongly oppose the proposed double decker roadways over Lady Bird Lake and two wishbone bridges over MoPac. At a time when cities that built such road systems decades ago are now dismantling them in favor of usable community spaces, I am appalled that plans to build such structures over the loveliest parts of the city would be considered.

Please oppose these plans and seek other options that would have little or not impact on the most beautiful, renowned aspects of Austin: Ladybird Lake, the greenbelt and Zilker Park, and the neighborhoods that surround the area.

More generally, I want to see public transit options; I don't want to have Austin start looking like Houston, with the kinds of disastrous affects on neighborhoods and communities that occurred when that built its highway system.

Sincerely,

Laurie Green

The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 2:45:16 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

We need as many lanes as possible added to MoPac now. You are building for the future, not just today, and constructing for future needs now is not only less expensive, it avoids the traffic delays construction in the future will cause if you adopt a piecemeal approach. I have often wondered why transportation agencies have lacked foresight to build for long term needs as I sit through periodic upgrades of streets and highways.

Those opposing added capacity to MoPac were the same folks who opposed the highway to begin with, yet they must admit it is certainly necessary and well used today. We read that traffic due to inadequate roads is the biggest complaint of citizens, yet the activist class seeks to stifle increasing transportation resources like the proposed MoPac South roadways. Please utilize the option that provides the greatest capacity increase.

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Form Submission - New Form - MOPAC/LOOP 1 South
November 13, 2015 at 11:23 AM
[redacted]

Name: Lea Grisemer

Email Address: [redacted]

Subject: MOPAC/LOOP 1 South

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial. In addition, it will have an adverse effect on Austin High School.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.
I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

Sincerely,

Lea v. Grisemer
Rollingwood, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. William Gump

PHONE [redacted] FAX: [redacted]

November 20, 2015

Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

I ask you to ensure that the plan you choose supports our public parkland use, green spaces and community values. It is vitally important to the future of Austin that you to consider the social, economic, and environmental consequences of building up. Please make sure that the plans you choose support our public park land use, green spaces and community values or you will destroy the very thing that makes Austin special.

Finally, I request CTRMA perform an Environmental Impact Statement due to the unprecedented scope of this project and the resulting harm it will do to the crown jewel of Austin – Zilker Park and its environs. An Environmental Assessment is simply inadequate for a proposed plan of this magnitude.

Sincerely,

Jill Hall
A Concerned Citizen

The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear CAMPO, CTRMA, and TxDOT officials,

"Express" is simply a euphemism for "toll." The CTRMA flacks refuse to say"the T word." They're not being honest about that.

If you just added two standard lanes in the middle, not "express," then you don't need expensive flyovers anywhere, either north or south of the river.

The only reason for these flyovers is to allow a privileged toll paying driver to vault over all the other peasants presently stuck in general purpose lanes. To make the few travel faster at the many's expense.
There's also over $4 billion in our taxpayer money per year now available (Prop 1, passed in 2014) and soon to be available (Prop 7, passed in November 2015 election) earmarked exclusively for construction of non-tolled new capacity.

So no legal, practical, or financial necessity presently exists to build tolled lanes and flyovers, even if new capacity is deemed necessary.

Why are we doing this?

Is it because CTRMA is an almost exclusively toll funded agency? Then if that's all they can build, this project needs to be taken out of their hands and given to either TxDOT or CAMPO for a fair and objective review, as the federal law requires.

The best alternative option is taking these phased steps, in order, as the traffic grows:
first, defer or abandon the SH 45 Southwest tollroad project to prevent even more traffic being diverted over to Mopac from I-35 and SH 130
then, free SH 130 from tolls to see how traffic rearranges itself & what traffic diverts from I-35 and Mopac
expand Mopac capacity within the existing footprint using existing wide shoulders where they exist, narrowing lanes with restriping in places, and spot widening of the pavement in others.
then, build two new non-tolled lanes paid for by our state tax dollars, once that is actually needed
initiate passenger commuter rail service on the parallel, existing Union Pacific freight lane, if and when that option ever would become available.
Support more land acquisition and restrictive development regulations further south in the environmentally sensitive aquifer area that is the presently existing 'commute shed' for this road (without SH 45 being completed).
This is a reasonable 20-year plan. Fifty or hundred year provisions aren't reasonable, given the uncertainties about the future and the state of finances for the '99 percent' today.

If we grow wildly after 2040, then all that robust and prosperous new development can pay for the highway expansions that will benefit them then -- not financially strapped taxpaying drivers today.

[Image]

Some Mopac neighbors in Tarrytown finally got soundwalls to shield the noise from a ground level freeway -- only 35 years after it was built. However, the noise from elevated highway lanes or flyovers can't be effectively mitigated with soundwalls.

Everything distinctive and good about central Austin -- neighborhoods, hike & bike trail, lake shore, Zilker, Barton Springs -- faces the threat of ruin by this thoughtless, destructive, elitist, and unnecessary project.

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 4:25:55 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 12, 2015 9:25:59 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Freeman Handee

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 9:55:31 PM

Dear TxDOT and CTRMA officials:

Comments for MoPac South Environmental Study- Open House Public Comment Period
Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase 1 of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on these routes.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, the Flint Ridge Cave recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs watersheds, over Town Lake, over our greenbelt parkland hike-bike trails, and essentially over Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin Pets Alive, the Edwards Aquifer, Barton Springs pool, multiple plant, water and wildlife species, many endangered species, and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker bridge on MoPac over Lady Bird Lake from the transportation plans. We vote for the no build option.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on

projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.
What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. --We say NO to building a second Interstate 35 through Austin to ruin the heart and soul of Austin along the way.
We want to Keep MoPac

Sincerely,
Freeman Handee

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Michael Hanrahan
[redacted]

COMMENTS ON VIRTUAL OPEN HOUSE

Sridhar	Hariharan	11/13/15	I would like to vote for the 2 lanes in EACH direction option. I commute to downtown every day and my wife commutes to Palmer and its a parking lot in rush hour. It is severely affectedly our quality of life and we are contemplating moving away from S.Austin. This is a badly needed solution.

Form Submission - New Form - MOPAC/LOOP 1 SOUTH
November 19, 2015 at 10:13 PM
[redacted]

Name: Glen Harris

Email Address [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members,

I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road. The 2-lanes each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA and this option is consistent with the CAMPO 2040 Long Range Plan. Providing direct access to toll users into the downtown area is not a goal or objective identified by CTRMA or CAMPO for this project

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,
Glen Harris

COMMENTS ON VIRTUAL OPEN HOUSE

ames	Harris	11/1/15	Dear CTRMA Staff and Board Members, As long time residents of the City of Rollingwood, my wife Catherine and I oppose double decker construction over Mo-Pac. For many years since 1981, we have been told that Mo-Pac was a parkway, for local use only----not to be connected to I-35 or any major thoroughfare. Seems there is a change of plans now. Plans made by too many who are not aware of the uniqueness of Austin among Texas cities. We are not Houston, Dallas, San Antonio-----never were and hope we never will be. Austin has hills, rivers, natural beauty that Dallas and Houston never had. Don't destroy the unique character of Austin. Cities on flat lands in Texas have options different from cities with natural beauty and barriers. PLEASE RESPECT WHAT HAS ALWAYS MADE AUSTIN UNIQUE and DO NOT IMITATE MODELS of Texas cities with very different characteristics. We watched as Zilker Park became an even more popular attraction than it was in the 1980's---improvements to the trail, boat docks, easy walking connection to downtown, improved Nature Center, Botanical Gardens-----so much effort, time, money has been spent on making these areas attractive and essentially showcase areas for Austin. Why, now, to save commuters a few minutes, should all of these efforts be at risk from heavy traffic on a double decker highway? We are puzzled at the direction planning is taking in our beautiful Capital city. We don't want Austin to become Houston or Dallas. Houston allowed the state to steal private property, tear up perfectly good railroad tracks from Katy, TX to downtown Houston and replace them with a 16 lane IH-10---just to satisfy commuters who live miles from downtown. They could have, instead of removing the tracks, established a commuter train----what a waste that they did not. Austin should look for better ways than highways. Here are some suggestions: 1. Require employers to stagger the schedules of their employees; or better yet, move to online work----reduce the size of the physical office. 2. Expect State agencies to move many of their operations away from central Austin; even years ago there was a move to locate state agencies away from the Capitol. What happened? 3. Move toward a pedestrian only city center----as many cities in Europe are and some cities in the U.S. A double-decker highway over Lady Bird Lake or Double Decker Wishbone bridges over MoPac would be a disaster. Such highways should never be close to the center of a city---only useful away from towns. We find toll lanes in Texas to be offensive --- on numerous trips to Houston, we find the toll lanes frustrating as the exits are not well marked---just as in north Austin---it is too easy to end up on a toll lane by mistake. CTRMA Goals should be realistic enough that toll lanes are not needed. If we have to choose among toll lanes, we prefer the addition of one toll lane each direction without elevated lanes. MoPac South project "goals and objectives" set by CTRMA need to be consistent with local plans for park land use and the original intent of MoPac. One "fast" lane each direction, without elevated lanes,has the lowest impact to the parks and neighborhoods----it may improve travel time but only until increased population leads to the number of vehicles going off the chart! What happens then? More lanes? PLEASE--not another Houston! Remember, Austin is unique among Texas cities. Reluctantly, we would support 2 Toll lanes each direction without elevated lanes. This option accomplishes the following: -meets MoPac South project "goals and objectives" set by CTRMA -provides consistency with local plans for park land use and with the 2040 Long Range Plan. -has a low immediate impact to the parks and neighborhoods while still significantly improving travel times and capacity on our roadway. - provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with a Double decker over Lady Bird Lake. -provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with 40-50 feet elevated Wishbone bridges over MoPac. - cost is $30 Million less than the Wishbone concept and $40 million less lane the Double Decker Decker concept. - minimizes impact to our water quality and lowers the impact on the natural and human environment by not building elevated structures near neighborhoods or Lady Bird Lake. - will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. We also support the addition of the sidewalk on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of an 8' sidewalk we would like an 11' multi-use path to accommodate bikes and pedestrians and connect seamlessly with Phase III of the MoPac bicycle and Pedestrian project. Please make sure to fully consider the social, economic, and environmental consequences. Please ensure the plans you choose support our public park land use, green spaces and community values! We are also puzzled that all this planning and money is not aimed at FIRST improving IH35. After all---it is not just commuters, it is traffic from Minneapolis to Laredo! Respectfully submitted, Jim and Catherine Harris, City of Rollingwood

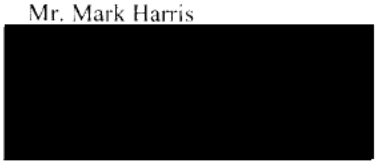
We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Mark Harris



Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Signed: Dorothy Harris

Subject: MOPAC/Loop 1 South comments on proposed plans

Message: Dear CTRMA Staff and Board Members,

I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will completely destroy the aesthetic of the cities' beloved outdoor spaces including Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, the hike and bike trail and Lady Bird Lake; as well as negatively impacting Austin High school. Austin is known for its outdoor green spaces. These spaces differentiate us from other cities and are a large part of what makes Austin such a special place. Please do not turn us into Dallas or Houston by building elevated lanes through the heart of Austin. Many of us chose to live in Austin, as opposed to Dallas or Houston, because of it's beauty, outdoor spaces and comparative lack of concrete infrastructure and strip malls that are all over Dallas and Houston. In Austin you can see trees and green spaces and water. In Dallas and Houston you see highways and flyovers and more highways and flyovers. Please please do not ruin Mopac and surrounding green spaces and neighborhoods with elevated lanes.

Additionally, with the significant changes in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin, City of Rollingwood and surrounding neighborhoods.

If toll lanes must be built the "2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway.

Additionally, I feel more information needs to be shared with the public about why elevated lanes are recommended for the Cesar Chavez exit, but not for the many other toll lane exit points along Mopac? The toll road exit point that you are proposing placing before the Enfield exit on northbound Mopac is an inside lane exit with a very very short ramp for cars to exit the toll road and merge into general northbound traffic. It is positioned at a point where northbound traffic merges down from 4 lanes to 3 lanes over the river, and where there is already congestion during morning and afternoon peak times. This inside toll lane exit, positioned before Enfield road, is the exit for all toll lane traffic planning to exit at Windsor, Westover, 35th, 45th, and 2222 to use – one toll lane exit servicing 5 Mopac exits. Where is the information to support the need for expensive, industrial elevated lanes to service a single exit at Cesar Chavez? Additionally, this proposed toll lane exit before Enfield creates a new, potentially dangerous bottleneck into Mopac North right after the river that will potentially back up traffic across the bridge

Also, in reviewing the traffic data provided by CTRMA there is twice as much daily volume of cars exiting and entering Bee Caves at Mopac than at Cesar Chavez. Improvements to the Bee Caves Road interchange need to be considered as part of the plan if we are going to take a comprehensive approach to Mopac South. Bee Caves Road is a major artery into Mopac South, and by not considering this intersection I feel the CTRMA plan is very short-sighted.

I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project.

Thank you for your time

Sincerely,

Natasha Harris
Please make sure to fully consider the social, economic, and environmental consequences of building up. Please ensure the plans you choose support our public park land use, green spaces and community values.

From: [redacted]
To: [redacted]
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Sunday, November 08, 2015 11:05:16 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Andrew Harrod

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 8:30:41 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

I live in Circle C Ranch, On the Park....I've read about some of the work being proposed to help reduce noise for the proposed new intersections at Slaughter and LaCrosse. Is there a reason why a lot of the existing vegetation could not be left to also block noise...I know it must be easier to remove but one of the great things about Circle C is the extra effort and work that was done to preserve as many trees/natural vegetation in area...don't know why this would not continue with the road improvements?

What I have not seen and would be interested to learn more about is the proposed lighting for the new intersections. Again, one of the great things about Circle C is that the community has been very sensitive to minimizing light pollution in the neighborhood...a really awesome feature of the community is that you can go in your backyard at night and still see lots and lots of starts....I live in "On the Park" and I am very fearful that way too many lights are going to line to the new roads and that there will be a crazy number of stadium lights to "brighten" the intersections that will significant contribute unnecessary light pollution in our great neighborhood. Would be very interested to hear how the project managers are planning to use the least amount of roadway lighting possible in this area to preserve the night sky for families in the neighborhoods.

Final comment, who can we talk to in order to get the multi-use path proposed between Slaughter and LaCross extended all the way around the rest of the loop ending at 1826? Many, many bikers use MoPAC between LaCross and 18126 and a multi-use path that continues around is really needed from a safe travel perspective.

Thank you for soliciting feedback on this important work.

Best,

John

Court Reporter Comment:

MR. JAVED HELALI:

As I said, we are paying toll twice. Once to enter it, once to come out of it. That means to use it and not to use it, we are paying toll. And my second point is, when does the toll end? I mean, you take the toll because of – you want to finish -- replenish the cost of the thing. The cost is never replenished? Once a toll road is there, it's always a toll road. It never becomes non-toll. So what I'm trying to say is that once that amount of money which has been spent on the bridge or whatever it is has been recouped, the toll should stop.

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

STUDY ALL OF IT BEFORE BUILDING ANY OF IT
- COMBINE ENVIRONMENTAL STUDIES of ALL PARTS OF PROPOSED SH 45 SW BEFORE POURING CONCRETE

NONE OF THE ABOVE
- DO NOT RESTRICT OPTIONS TO THE SIX PROPOSED TOLL ROAD OPTIONS

CONSIDER RUSH-HOUR HOV LANES, PARK AND RIDES, PUBLIC TRANSIT OPTIONS, IMPROVED INTERSECTIONS, AND ABOVE ALL WAIT TO SEE THE IMPACT OF THE UNFINISHED EXPRESS LANES ON MOPAC.

TRY HARDER TO GET TRAFFIC TO USE SH-130

INVEST IN IMPROVING IH 35 INSTEAD

INVEST IN URBAN HOUSING OVER NEW SUBURBS TO SHORTEN AVERAGE JOURNEYS

PLEASE DO NOT DESTROY BEAUTIFUL AUSTIN!

A Helen

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Lesley Heurkins

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mrs. Susan Hewlitt

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Garland Hill [redacted]

Additional Comments:

The elevated freeway lanes will severely impact my value of my home. The added noise and visual impact will affect my property and my use & enjoyment of the property. At the moment, there is no visual impact to us, there ~~are~~ is some noise which is already enough - any more

Noise would decrease my property value AND affect my enjoyment of the property. I oppose ANY elevated lanes of any kind. I support the added lanes that are not elevated.

In addition, elevated lanes will affect Zilker Park, The Nature Center and the Austin Botanical Gardens by increasing noise severely and being ugly visually. Please do not ruin our community OR our treasures (parks & greenspace). Do not turn this into Houston or Dallas.

Thank you

Additional Comments:

Any elevated lanes of any kind will impact Rollingwood with increased noise, it will be visually ugly and will impact our use and enjoyment of our homes. This in turn will lower our values all over Rollingwood, as well as my property/home which is near the freeway. I do not support

I support the 2 added lanes in both directions which are NOT elevated.

Thank you,

Shaneen

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 2:30:27 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 1:00:50 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 10:05:54 PM

Dear TxDOT and CTRMA officials:

Comments for MoPac South Environmental Study- Open House Public Comment Period
Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on these routes.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, the Flint Ridge Cave recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs watersheds, over Town Lake, over our greenbelt parkland hike-bike trails, and essentially over Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin Pets Alive, the Edwards Aquifer, Barton Springs pool, multiple plant, water and wildlife species, many endangered species, and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker bridge on MoPac over Lady Bird Lake from the transportation plans. We vote for the no build option.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on

projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.
What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. --We say NO to building a second Interstate 35 through Austin to ruin the heart and soul of Austin along the way.
We want to Keep MoPac

Sincerely,
Linda Holder

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
MM Holder

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 9:45:26 PM

Dear TxDOT and CTRMA officials:
Comments for MoPac South Environmental Study- Open House Public Comment Period
Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on these routes.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, the Flint Ridge Cave recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs watersheds, over Town Lake, over our greenbelt parkland hike-bike trails, and essentially over Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin Pets Alive, the Edwards Aquifer, Barton Springs pool, multiple plant, water and wildlife species, many endangered species, and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker bridge on MoPac over Lady Bird Lake from the transportation plans. We vote for the no build option.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues

will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.
What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. --We say NO to building a second Interstate 35 through Austin to ruin the heart and soul of Austin along the way.
We want to Keep MoPac Local,

Sincerely,
MM Holder

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 12, 2015 9:10:27 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Margaret Holder

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Take taxes off 130.
Take the truth about what roads you plan on building.
Stop ruining the neighborhoods on MOPAC, Barton Springs / LADY BIRD LAKE.
AUSTIN HIGH SCHOOL. ZILKER PARK, WILD FLOWER CENTER LA
STOP SHIFTING TRAFFIC FROM I35 to MOPAC.
2,000 CHILDEN AT AUSTIN HIGH.

BIGGER HIGHWAYS DO NOT FIX TRAFFIC
THEY MAK TRAFFIC WORSE.
You are converting MOPAC to a second 135.
WE NEED A TUNNEL AT AUSTIN HIGH SCHOOL
DO NOT BUILD 45.SW.

STUDY ALL OF THE BUILDING OF ROADS.
DONT BUILD SH45SW, UNTIL THERE IS REAL STUDY OF THE WHOLE LOOP PROJECT.
DONT CONVERT MOPAC TO A SECOND I-35

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Luke Holding

ADDRESS: [redacted]

COMMENTS: We need a continuous bike path that is smoothly paved (not bumpy sidewalk type) for the entire length of the project. The Violet crown trail is not a suitable substitute in any area such as south of Convict Hill. 8ft width is fine in right ROW

Please allow other modes of transportation such as bikes with electric assist. bikes are a very viable means to go from the suburbs to DT as long as the route isn't filled with obstacles or dangerous interaction with high speed autos. Thank You

This form may be used to provide written comments on this project. Any questions placed on this form will not be considered an open records request and will not be treated as such. If you have an open records request, it must be submitted under a separate letter.

(Texas Transportation Code, §201.811(a)(5)): Check each of the following boxes that apply to you:

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 12:46:27 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Name: Dana Hollingsworth

Email Address: [redacted]

Subject: South MOPAC Road Study

Message: November 12, 2015

To Whom It May Concern,

I do not support elevated toll lanes of any kind over MOPAC. Please do not add any double decked lanes over Lady Bird Lake. Also, please do not add elevated wishbone bridges over MOPAC. Elevated lanes will negatively impact Zilker Park, the Botanical Gardens, Lady Bird Lake, the hike and bike trail system by Lady Bird Lake, Austin High School, and the neighborhoods that are located near these wonderful Austin jewels.

These elevated structures will negatively impact the very unique beauty of this area of Austin. I object to turning Austin into another Dallas or Houston. Dallas and Houston are highly urbanized and industrial. In contrast, Austin attracts new residents and visitors precisely because it is not another Dallas or Houston but offers unique green spaces that would be destroyed if elevated lanes are added.

Double deck highways and elevated bridges strip Austin of the precise things that attract hundreds of new residents and thousands of visitors every month.

With so much more money approved for road construction in the recent election, CTRMA, Travis County, TX DOT and the City of Austin should go back to the drawing board and consider options other than toll roads. The estimated tolls that are forecast in the CTRMA informational materials appear to be so high that most commuters will not be able to afford to use the toll lanes. Pursuing CTRMA's toll road plan appears to be a recipe for more toll roads that are not used by the exact people that the roads are intended to be used by.

Please keep roads public infrastructure that are supported by State dollars and are open for use by all for the good of all. Don't turn roads into private assets that only the wealthy can afford to use.

If toll lanes must be built then the option that includes 2 toll lanes in each direction without elevated lanes is the least harmful to the uniqueness of Austin and provides benefits comparable to the benefits projected for elevated lanes.

Please do not destroy the priceless and unique assets that Austin offers to new residents and visitors.

Thank you,

Dana Hollingsworth

Subject: Study the whole loop project first before building SH 45 SW
Date: Saturday, November 07, 2015 9:20:12 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Mary Holman

COMMENTS ON VIRTUAL OPEN HOUSE

Wes	Hook	11/17/15	Proposition 7 passed to expand the south part of Mopac. How far does this get us to easing traffic? Don't we need to try this first? what is the cost of elevated roads versus non-elevated roads? My concern is the light, sound, and view restrictions any elevated road will create between the hills west of Austin and the city. (Looking either way...._ My recommendation is to get as far as we can with non elevated roads both for cost and aesthetics. Regards, Wes Hook

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. James Hopke

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Sincerely, [redacted]

Do not expand SH 45 SW capacity. More thru traffic ono Mopac will create massive traffic delays, increased accidents, and more pollution in one of the most environmentally sensitive areas in Texas. It is illogical to create a new i-35 alternative through the heart of Austin.

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Aaron Howe [redacted]

Email * [redacted]

Address

Message * I travel south on MoPac every weekday. It seems to bottle-neck starting early afternoon just north of the Barton Skyway overpass as traffic from Bee Cave enters onto MoPac at the very short entrance ramp. If that entrance ramp was extended, preferably to connect with the 360 exit ramp, I believe this would significantly improve traffic flow in this area. Since there is an uphill climb right after the Barton Skyway overpass, slowing traffic at this bottleneck right before the hill compounds the problem.

Thanks, in advance.

COMMENTS ON VIRTUAL OPEN HOUSE

Clare R	Hudspeth	11/16/15	When I moved to Austin since 1963 from Virginia, I was told that Austin was the only city in Texas where I would be happy – because it had trees and hills and lakes, plus a lot of greenspace. Please don't destroy this and have Austin end up looking like Dallas or Houston or San Antonio (or Atlanta as recently pictured in the Austin-Statesman). I treasure the beauty of this city and especially its trees and greenspace. Living between Bee Cave Road and Barton Skyway, I treasure regular jogging on the Hike and Bike Trail as well as enjoying Zilker Park and Barton Springs. And Lady Bird Lake! PLEASE do not ruin these very special places with double-decker bridges, and winged flyovers. Please add no more than a single lane on each side of Mopac. I realize you are wanting two on each side, but a single lane on each side without a toll, open to all comers, or HOV and transit lanes, would provide ample room for traffic for many years to come. Two lanes simply destroy too much greenspace and too many trees. My final plea is that all ideas of linking Mopac to IH-35 be ended. When it was built we were promised no 18-wheelers, and no connection to IH-35. Please honor this promise. Thank you for considering this opinion!

Austin, TX 78705

When I moved to Austin since 1963 from Virginia, I was told that Austin was the only city in Texas where I would be happy – because it had trees and hills and lakes, plus a lot of greenspace. Please don't destroy this and have Austin end up like Dallas, Houston, San Antonio, or Atlanta (as pictured in the Austin-Statesman).

I treasure the beauty of this city and especially its trees and greenspace. Living between Bee Cave Road and Barton Skyway, I enjoy regular jogging on the Hike and Bike Trail as well as the open space of Zilker Park, Barton Springs, and Lady Bird Lake! PLEASE do not ruin these very special places with elevated double-decker bridges and "wishbone" flyovers. The bridge and accompanying light and noise pollution will ruin one of the prettiest parts of Austin, ruining views of downtown, the Capitol, and the University of Texas Tower.

Please add no more than a single lane on each side of Mopac. I realize you are wanting two on each side, but a single lane on each side without a toll, open to all comers, or a single HOV and transit lane, would provide ample room for traffic for many years to come. Two lanes simply destroy too much green space, too many trees. Income from tolls is not worth the destruction of our city's beauty. If you must have tolls, exempt HOV's and transit to encourage their use.

A great many people from South of Lady Bird Lake will never use the north bound express lanes, because they don't want to go all the way to 2222. Toll income is great but the public would be better served by a single additional non-tolled lane.

Finally, we who live a stone's throw from Mopac now have a real mess on our hands when there are special events at Zilker Park. Parts of Bee Cave Road and Barton Springs Road are closed for long stretches and traffic really backs up. One new lane on Mopac's East side may allow room for traffic to reach the U-turn underpass to get to homes on Liberty Park Drive and in Treemont.

My final plea is that plans to link Mopac to IH-35 be ended. When it was built we were promised no 18-wheelers, no connection to IH-35. Please honor this promise

With sincere thanks,
Clare R. Hudspeth

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. reagen hughes

COMMENTS ON VIRTUAL OPEN HOUSE

Dear CTRMA Board of Directors and Staff, 11-19-2015 Thank you for your service to our community. I know the MoPac South project has received a lot of attention and I hope that during this public collaboration we can find middle ground and a solution to our real traffic issues. I believe the public has a right to a fair and collaborative look at the issues surrounding this 300 Million + toll way project which will result in significant impacts to the natural and human environment. I want to let you know that I am deeply concerned about the plans to build elevated toll lanes over MoPac. It seems to me that these solutions in other parts of Austin have had negative effects of the character of the city that we all know and love. I would much prefer that we try more concertedly to alleviate traffic in more resourceful and creative ways -- ways that preserve the peace and charm of Austin. I doubt that I am alone and I would urge you to reconsider these plans. I am really against adding any more elevated lanes of any kind over MoPac near downtown. The elevated lanes will impact the hill country feel, beauty and charm of this special Austin area, and will transform the character from peaceful and green to highly urbanized and industrial. Asking the public to consider and collaborate on a $300 million + toll lane project with elevated lanes that will forever change the look and feel of downtown Austin while not providing any noise analysis for any of the options under consideration, until a final design is chosen, does not give the public adequate information to understand the impacts that any of the proposed plans will have on the parks and neighborhoods surrounding the elevated lanes near downtown. In addition providing an incomplete traffic study that uses only 2015 Blue Tooth Data that has clearly been impacted by the North MoPac Improvement project and is calibrated using the former 2035 Travel Demand Model instead of the new 2040 Travel Demand Model is misleading. The surrounding municipalities and the public are supposed to be collaborators in this environmental assessment but it appears that TxDot and CTRMA are the only ones collaborating in this process. The public wants a chance to really understand the goals and purposes of this project and to collaborate to find a solution to our real traffic problems that also support our public parkland use, green spaces and community values. Currently, the CTRMA staff has failed to provide the public with sufficient or reliable information about each of the 6 alternatives upon which the public can collaborate with CTRMA to evaluate the benefits and significant impacts of each alternative. CTRMA staff have failed to treat each of the 6 alternatives evenly and have failed to evenly include TSM into the 2 express lanes each way without direct connection that could significantly reduce the travel times of those intending to use the toll lanes and the general traveling public. In addition, CTRMA staff have failed to provide a rationale to support the decision to recommend elevated lanes for the Cesar Chavez toll exit lanes, but to use inner lane toll lane exits at other points along Mopac that have a higher volume of exiting traffic than is predicted for Cesar Chavez. I support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project. Project Goals and Objectives • Provide consistency with local and regional plans. CTRMA has not provided consistency with regional plans. Feb 26, 2015 open house CTRMA presented their "preferred alternative" of 2-toll lanes each direction with a double Lady Bird Lake. The 2-year study information and preferred alternative CTRMA presented to the public was not aligned with the scope of the 2035 regional transportation plan. Being consistent with the Regional Transportation Plan is a requirement CTRMA must meet. Instead of making sure their plan was consistent with the regional plan, CTRMA tried to make an amendment March 2, 2015 to the 2035 regional plan to align the regional plan with the CTRMA "Preferred Alternative" (it's supposed to happen the other way around). This would have changed the description of the project in the 2035 plan from one managed lane in each direction to two managed lanes in each direction. March 30, 2015, CTRMA decided to withdraw their amendment request after receiving

COMMENTS ON VIRTUAL OPEN HOUSE

a lot of public inquiry about the change from 1-lane each direction to 2-lanes each direction and the proposed double decker over Lady Bird Lake. As a result, CTRMA has to redo much of their 2-year study that was done under assumptions made in the 2035 Long Range Plan (which does not show a connection of MoPac to IH-35) to make sure all the study information is aligned with the newly adopted 2040 CAMPO Regional Transportation Plan. July 13, 2015, an additional $460,922 was approved by the CTRMA Board of Directors to align the previous environmental assessment with the new. This has been a costly mistake both in delivering relief in a timely manner and the financial impact. The CTMRA toll-lane project with direct connections that drop traffic ½ mile into the City of Austin do not support local plans for the Austin area. This area of the city of Austin is a prized scenic entrance into downtown Austin with a lot of history and local landmarks surrounding it, including the Zilker Park Historic District, Lady Bird Lake, The Nature and Science Center, Zilker Botanical Gardens, Deep Eddy Pool, the protected Zilker Clubhouse, Austin High School and nearby neighborhoods which have deep and interesting histories. • Reduce congestion delay and provide travel times savings for all roadway users CTRMA is presenting questionable traffic data that seems to be inflated to justify elevated lanes over an environmentally sensitive and beloved part of downtown Austin. This area will be connected with SH 45 SW and then with SH 45 SW-E. The environmental impact to SH 45 SW, and MoPac South will be cumulative. CTRMA has also told the public that noise studies will not be completed until after a preferred alternative is selected The 2/26/15 peak period traffic data between Cesar Chavez and Slaughter Lane in 2013, the Northbound morning (7-9am) travel times were given as a 15 minute drive; The 2035 "no build" drive time was estimated to be a 47 minute drive. The southbound evening (4-6:30pm) from Cesar Chavez to slaughter is estimated as a 12 minute drive; and the 2035 "no build" is estimated as a 45 minute drive. The 10/21/15 peak period traffic data between Cesar Chavez and Slaughter Lane in 2015, the Northbound morning (7-9am) travel times were given as a 23 minute drive, which is an 8 minute increase or 53% increase from the 2013 estimate given using the same 2035 travel demand model. The 2035 no build is a 52 minute drive (5 minute/11% increase from 2013). The Southbound evening (4-6:30pm) is a 16 minute drive (4 minute/33% increase from 2013, the 2035 no build is 51 minute drive (6 minute/13% increase from 2013) The most inflated and biggest increase in traffic is shown where CTRMA wants to justify the elevated lanes. Did the North MoPac construction impact the 2015 Bluetooth Study? Express Lanes & Capacity According to CDM Smith in a document released via a public information request. In order for the Express Lanes to operate at 60 MPH there is a maximum allowed 1,600 vehicles per hour per lane. The AM Peak Period is 7am 9am so the total number of vehicles that can be removed from free lanes during the entire AM Peak Period is 6,400. The total number of vehicles removed from free lanes during PM Peak Period 4pm - 6:30pm is 7,200. That is a very small portion of the CAMPO 2013 daily traffic count. For Toll Users, the 2035 Time Savings benefit will be getting from Slaughter to Cesar Chaves 14 Minutes faster or 60% faster than one would get from Slaughter to Cesar Chavez today. The General Purpose "Free Lanes" Time is actually 9 minutes or 39% slower than one would get from Slaughter to Cesar Chavez today. According to CTRMA 70% of drivers are single occupancy vehicles but only a small percentage of those drivers will be willing or able to pay peak period toll rates that will become more expensive for the purpose of discouraging drivers from entering them. Also, When looking at traffic data consideration should be given to studying the Northbound PM traffic, especially as it relates to traffic that utilized Cesar Chaves because the afternoon tends to be the period when the most substantial delays in that area occur. Justify Need for Direct Connection to Downtown when other exits have a higher demand I feel more information needs to be shared with the public about why elevated lanes are recommended for the Cesar Chavez exit, but not for the many other toll lane exit points along Mopac? The toll road exit point that CTRMA is proposing placing before the Enfield on northbound Mopac is an inside lane exit with a very ,very short ramp for cars to exit the toll road and merge into general northbound traffic. It is positioned at a point where northbound traffic merges down from 4 lanes to 3 lanes over the river, and where there is already

COMMENTS ON VIRTUAL OPEN HOUSE

congestion during morning and afternoon peak times. This inside toll lane exit, positioned before Enfield road, is the exit for all toll lane traffic planning to exit at Windsor, Westover, 35th, 45th, and 2222 to use – one toll lane exit servicing 5 Mopac exits. Where is the information to support the need for expensive, industrial elevated lanes to service a single exit at Cesar Chavez? Additionally, this proposed toll lane exit before Enfield creates a new, potentially dangerous bottleneck into Mopac North right after the river that will potentially back up traffic across the bridge. Also, in reviewing the traffic data provided by CTRMA there is twice as much daily volume of cars exiting and entering Bee Caves at Mopac than at Cesar Chavez. Improvements to the Bee Caves Road interchange need to be considered as part of the plan if we are going to take a comprehensive approach to Mopac South. Bee Caves Road is a major artery into Mopac South, and by not considering this intersection I feel the CTRMA plan is very short-sighted. Connection between IH 35 do to MoPac A the series of "separate" projects to complete a toll loop around Austin were set in a calculated manner in order to make sure they are all considered separately and the cumulative effects of traffic can't be considered. The mistake by CTRMA on the MoPac South project seems to have upset the order and the consequence of pulling the amendment is CTRMA to the MoPac South "Environmental Assessment" is the newly adopted 2040 regional plan now includes the connection of MoPac to IH-35. The list of projects in the "fiscally constrained" portion of the CAMPO 2040 Regional Transportation Plan and the CTRMA bond prospectus show the connection of MoPac South project to IH-35. CTRMA has to align the MoPac South "Environmental Study" (which was completed with 2035 plan traffic modeling data) with the new 2040 regional plan which includes the connection of MoPac to IH-35. This traffic study won't be available until after January 2017. How can CTRMA choose a preferred alternative without knowing what the impact of the addition traffic will do to general purpose lane travel times. Will toll lanes be the best option with all the new traffic? New traffic engineering work was approved by the CTRMA Board July 13, 2015 — only 4 months ago. CTRMA has made argument in the past for not using the traffic data for the connection to IH-35, stating the "SH-45 SW-E" project (which is the connection from the new SH-45 SW road to IH-35), is listed as "design only". — SH-45 SW, the connection between MoPac South and 1626, moved forward March 5, 2015, with the Texas Department of Transportation issuing a Record of Decision (ROD) which allowed the SH 45SW project to proceed to final design and construction. — SH 45 SW-E, the connection from 1626 to IH-35, is in the fiscally restrained portion of the 2040 plan (not illustrative) with a "Let Date" of 2025. (Projects listed in the fiscally constrained portion of the 2040 plan are projects expected to be funded between 2015 and 2040) — The TxDot January 2015 Bond Prospectus states "The only toll road planned to be opened in the 2021 – 2030 period is the SH 45 SW Phase 2 Project between FM 1626 and IH-35, scheduled for completion in 2025." (attached: "5 CTTS Official Statement including T&R Study" —p. 2.13, 2021 – 2030 Key Network Improvements.) In the Buda and Hays planning documents they are even calling the existing road FM 1626 that connects at IH 35 and runs up to Brodie a "trucking bypass": https://www.co.hays.tx.us/Data/Sites/1/media/pdf/road-projects/txdotpartnership/buda-truck-bypass.pdf. This trucking bypass will be connected to the new 45SW and MoPac. Hays county Transportation Plan also shows three new roads connecting to SH45 SW. Have the effects of those connections been considered in the study? According to a recent traffic study released, Stantec, among other things the study has said opening the road all the way to I-35, would increase traffic on Texas 45 Southwest by about 5,800 vehicles a day in 2030 and 8,400 a day by 2040. If the current "2015 CDM Smith Bluetooth Data" was used to calibrate these results I question the accuracy of the study given the inflated travel time data that has been presented using the Bluetooth method. Consider Other Options With the significant changes** in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the

COMMENTS ON VIRTUAL OPEN HOUSE

public an understanding of why toll lanes are being considered as the only option. Along with a no-build scenario, options such as expanding telecommuting, ride sharing, and rail should be considered. Options other than toll roads should be thoroughly vetted and compared with the proposed toll lanes. Especially considering this environmental study is being paid for using Rider 42 funds, which came from Proposition 12 funds that were intended for non-tolled roadway projects. Are we really being offered a fair look at all the alternatives to Toll Lanes? Some investigative reporting might be able to answer this: CTRMA has ruled out HOV and Transit only lanes saying they are 50% less effective than toll lanes. They compared an "HOV lane" with 2-toll lanes each direction. CTRMA has ruled out HOV and Transit only lanes saying the "HOV lane" is 50% less effective than the preferred alternative of 2 toll lanes each direction. When CTRMA is making the comparison are you comparing 1 HOV lane each direction with 1-toll lanes each direction and 2 HOV lanes with 2-Toll lanes each direction? Apples to Apples? Because if they you are comparing 1 HOV lane with 2 Toll Lanes it would make sense to say the toll lane option would would be 50% less effective than 2 toll lanes. One of the 4 conclusions reached to not recommend HOV and transit only lanes during the Cannot open house was "Cannot deliver relief in a timely manner (without major change to regional funding). The passing of Prop 1 and Prop 7 represent a significant change in regional funding) During the Feb 26, 2015 Open House studied HOV and Transit Only lanes using traffic data from CDM-Smith 2014 INXR speed data, CAMPO 2035 Travel Demand Model, observed congested speeds in October 2013 and Bluetooth data. During the October 21, 2015 Open House CTRMA only studied toll lane options and hasn't cited any traffic data sources other than CDM Smith 2015 - Using BlueTooth Data. What data did you use to study HOV options during this current open house. The public has a right to review traffic studies and receive real answers about the effects what Texas Department of Transportation calls the Central Texas Turnpike System, the system that includes four existing tollways on the metro area's eastern and northern sides: Texas 45 North, Loop 1, Texas 130 and Texas 45 Southeast will have when it's Western Loop runs directly over our Aquifer. Like the rest of the hydrological karst that defines the Balcones Escarpment of the Hill Country, the area is covered in caves and passages that funnel water directly into the aquifer - which is one reason why the Edwards Aquifer is so vulnerable to surface pollution (both point and non-point sources). • Be constructible without unnecessary impacts to the natural and human environment A successful urban city today is one that embraces green spaces, urban parks and trails, bike lanes, sidewalks, and inviting public gathering spaces. It also encourages alternatives to driving. There is abundant evidence to suggest that these are the elements that create a thriving city. People do not want to sit in cars and sit in traffic, people do not want to drive to everything, and people do not want poor air quality. People do want meaningful personal relationships, places to build movement into daily life, and ways to get to work and shopping that do not involve cars. This is the way successful cities are moving. Austin has the opportunity to attract a diverse and highly skilled workforce, but it will require a strong continued move toward this ethos of development. Consider the cities of today that have remade themselves into highly attractive places, like Chicago and Minneapolis. They did this not by building 8 lane freeways in the middle of the city. Instead, they created abundant green spaces, rich public gathering venues, they support lots of transportation options, they invested in bike lanes and sidewalks, mixed use walkable development .. they built a city for people, not for cars. Austin sits at this juncture. Are we a city for people or a city for cars? Austinites are clear – we want a city for people. CTRMA should embrace this. A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school. In addition, please serve the community by providing an Environmental Impact Statement for the Mopac South

COMMENTS ON VIRTUAL OPEN HOUSE

Environmental Study. There will be a significant impact, which will be impossible to mitigate by barriers and buffers, to the natural resources, environment, water quality, and quality of life of residents and businesses in Rollingwood and the surrounding areas of Austin if Mopac South is modified in any way. Please address the significant impacts to the environment identified in the attachments to this letter in an Environmental Impact Statement. CTRMA needs to clearly provide the public with specific information about the studies of areas where there could be impact to the natural and human environment. Currently CTRMA has merely provided summary statements. CTRMA needs to provide the public with additional information about the necessary impacts to the natural and human environment that cannot be mitigated. Optimize the 2-Toll Lanes Each Direction Option The designs with elevated lanes that CTRMA seems to be pushing are optimized to provide the greatest travel times savings for toll and general purpose lane users. The same design consideration to optimize efficiency should be given to the design with no elevated lanes. If toll lanes must be built, the 2 Toll lanes each direction without elevated lanes option will have the least impact to the park, schools, recreation centers and neighborhoods: The 2-lanes each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA and this option is consistent with the CAMPO 2040 Long Range Plan. Providing direct access to toll users into the downtown area is not a goal or objective identified by CTRMA or CAMPO for this project. The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use because it has the least impact to the park land. Adding elevated lanes damages Austin's parks, restricts community members who use the open spaces, and damages neighboring neighborhoods. • Deliver Relief in a timely manner CTRMA failing to align the preferred alternative selected with the adopted regional plan has caused delay and a lot of taxpayer money. July 13, 2015, the CTRMA board of directors approved a new contract with Jacob's to fix the mistake, which has delayed the project by more than three years. The 2035 CAMPO Regional plan "let year" for the project was 2017 but had to be adjusted to a "let year" of 2020 in order for CTRMA to align the environmental study with the 2040 Regional Transportation Plan. The toll lane projects have become so controversial with lawsuits and repeated NEPA studies that is seems these toll projects are not delivering relief in a timely manner. Would less controversial options be able to be completed in a faster timeframe? Public information requests for information on obtaining the traffic data/studies used to get the current and projected travel time that were published to the public during the October 21, 2015 open house have been answered with CTRMA sending the requests to the Attorney General who has ruled the data does not need to be released because "the study isn't complete" or "the information is confidential" According to the Austin Monitor, "CTRMA attorney Andy Martin said his agency did not want to release the draft document because it does not represent what the agency will finally decide to build. He said it would release a final document in about a year to 18 months that would be "an investment grade traffic and revenue study." According to Martin, CTRMA is considering suggestions made by the cities of Austin and Rollingwood as well as Travis County. The agency will also be holding open houses in October to get input from the public, he said". (Source: http://www.austinmonitor.com/stories/2015/10/sos-sues-toll-road-agency-again/). Questionable Travel Time Data Wishbone and Double Decker Options show exact same "travel time" for express lanes —Wishbone option has to merge with traffic and double decker doesn't, so identical travel time is questionable. The data distributed shows that both toll-lane options will have identical travel times 9 minutes in and 9 minutes out in the afternoon peak period (Source: http://www.mopacsouth.com/voh/alternatives.php) There are other ways to alleviate the transportation problem in Austin. We ask that you look at options without elevated toll lanes in particular so that we can retain the look and feel of our beloved city. Please ensure the plans you choose support our public park land use, green spaces and community values. I respectfully request that you seriously consider all of the public comment that you receive before making such a dramatic and damaging change to our beloved section of roadway - where Mopac (Loop1) goes over beautiful Lady Bird Lake, with Zilker park below it.

COMMENTS ON VIRTUAL OPEN HOUSE

Thank you for your time and consideration. Best Regards, Wendi Hundley 2502 Bettis Blvd Below are some details relevant to my letter above: CTRMA - Prop 12/ Rider 42 Funding: History of Prop 12/Rider 42 funding November 2007, Texas voters approved Proposition 12, which authorized the issuance of up to $5 billion in general obligation bonds. June 2009, The 81st Texas Legislature approved Senate Bill 1, authorizing TxDOT to go to contract on approximately $2 billion in voter-approved bonds for non-tolled highway projects. July 2009, Senate Bill 1 signed by Governor Perry, authorizing the issuance of $2 billion in general obligation bonds August 2009, TxDOT briefed Texas Transportation Commission on potential uses of Prop 12 funds. Commission directed staff to meet with Metropolitan Planning Organizations (MPOs) to develop guiding principles for project selection priorities. September 2009, TxDOT met with MPOs to develop guiding principles for project selection priorities. TxDOT briefed Texas Transportation Commission on guiding principles developed. Commission directed TxDOT to develop a list of the highest priority projects. October 2009, TxDOT identifies $2 billion in projects recommended for Prop12 funding to the Texas Transportation Commission. November 2009, Texas Transportation Commission takes final vote on approved list of Prop12-funded projects. April 2010, First Prop 12 project contracts will be set for bids. June 2010, First Prop 12 projects will begin construction. June 2011, Rider 42 authorized by Gov. Perry and the Legislature August 2011, TxDOT Districts and MPOs began grassroots effort to identify and select project by working with rural planning organizations, elected officials and the public. September 2011, Formal public involvement begins. September 29, 2011, Texas Transportation Commission authorizes allocations and projects in accordance with Rider 42. Summer of 2012, Construction bids accepted on first Proposition 12 Program 2 projects. History of CTRMA use of Rider 42 Funding February 29, 2012, CTRMA, our toll-road authority authorized money from their general fun - reimbursed with Rider 42 funds to pay for a 2-year study of the MoPac South project to build from Cesar Chaves to Slaughter. December 5, 2012, the CTRMA Board of Directors approved Jacob's and authorized negotiation of a contract for preliminary engineering and environmental services. February 29, 2013, CTRMA amended contract with Jacob's engineering adding $191,671 to reclassify from Categorical Exclusion (CE) to Environmental Assessment (EA) for new total of $6,190,876 (attached: CTRMA & Jacobs $6,190,876). March 27, 2013, the CTRMA Board of Directors authorized the Executive Director to finalize and execute a professional services contract with Jacobs Engineering Group Inc. ("Jacobs") for preliminary engineering and environmental services for development of the MoPac South ProjectThis contract provides for the alternatives development and evaluation, environmental studies, public involvement, preliminary engineering, design, field survey, hydraulic studies, and schematic development for the proposed MoPac South Project and MoPac South Overpasses Project (Projects) located in Travis County, Texas (attached: "CTRMA & Jacobs $5,999,205 - Rider 42 Funds"). February 26, 2015: Jacobs and CTRMA proceeded with the 2-year study and at presented to the public the "preferred alternative" of 2-toll lanes each direction with elevated lanes over Lady Bird Lake at the Feb 26, 2015 open house The "preferred alternative" of 2-toll lanes each direction with elevated lanes over Lady Bird Lake was presented to the public at the open house. The 2-year study information and preferred alternative CTRMA presented to the public was not aligned with the scope of the 2035 regional transportation plan. Being aligned with the Regional Transportation Plan is a requirement CTRMA must meet. The CAMPO Long range plan in effect at this time was the 2035 Regional Transportation Plan (RTP) plan which described the project as adding 1-toll lane each direction from Cesar Chavez to Slaughter. (source: http://www.campotexas.org/plans-programs/campo-plan-2035/)The CAMPO 2040 Regional Transportation Plan (RTP) March 2, 2015, CTRMA requested an amendment to the 2035 plan, to align the regional plan with the CTRMA "Preferred Alternative" which would have changed the scope of the MoPac South project from 1-toll lane each direction to 2-toll lanes each direction (attached: "CTRMA pulls 2035 amendment from CAMPO RTP.png"). CTRMA made a mistake because their preferred alternative should have been aligned with the 2035 Regional Plan — the RTP shouldn't be changed to align with projects. The

COMMENTS ON VIRTUAL OPEN HOUSE

Wendi	Hundley	11/20/15	amendment would have changed the description of the project in the 2035 plan from one managed lane in each direction to two managed lanes in each direction. (attached: "CTRMA pulls 2035 amendment from CAMPO RTP.png") March 27, 2015, I called and spoke with Alex Kone. He is a Senior Planner at CAMPO in charge of the amendments. I asked why CTRMA requested the amendment to the 2035 Plan instead of making the amendment to the 2040 Plan. He told me: The CTRMA MoPac South Project "qualitative" analysis is supposed to be based on the 2035 plan but their preferred alternative does not align with the plan. The requested Amendment has to be made to the 2035 plan, while it's still active, before the 2040 plan is adopted May 2015 meeting; otherwise CTRMA has to start their study all over from Square 1 and cost a half a million dollars He casually said our groups would prefer the amendment not be made because the 2040 traffic data would be better for "you guys" March 30, 2015, CTRMA decided to withdraw their amendment request on after receiving a lot of public inquiry about the change from 1-lane each direction to 2-lanes each direction and the proposed double decker over Lady Bird Lake. CAMPO staff removed the item from the TPB's April 13, 2015 agenda as a result of the CTRMA request. (attached: "CTRMA pulls 2035 amendment from CAMPO RTP.png") March 30, 2015, CTRMA extended their study period saying "In response to community feedback for additional public involvement on the MoPac South Environmental Study, the Central Texas Regional Mobility Authority will extend environmental study process to allow for additional community input and engineering analysis on the project.", (attached: "CTRMA Extends Study). May 14, 2015, The CAMPO 2040 Regional Transportation Plan (RTP) was adopted May 14, 2015, with a new description/scope of the MoPac South — changed from 1-lane in each direction to 2-lanes each direction along with a footnote "*Study all options for the proposed MoPac South expansion including both 1 and 2 Express Lanes in each direction, as well as no-build". The 2040 plan was adopted without the CTRMA amendment being made to the 2035 plan (attached: "CTRMA pulls 2035 amendment from CAMPO RTP.png"). The CAMPO Mopac South project changed to "Let Year" 2020 when the 2040 plan was adopted. The 2035 plan had the "Let Year" as 2015, open year 2017. Ben Wear reported 11/10/15 "Agency officials don't foresee construction until well into 2017, at the earliest. Construction would take three to four years, they said." The report was not consistent with the 2040 plan which lists the "let" year as 2020. (Source: CAMPO 2040 Long Range Plan - Table 32 Road Projects Pg. 169) The consequence of pulling the amendment is CTRMA has to align the MoPac South "Environmental Assessment" with the newly adopted 2040 regional plan, which includes the connection of MoPac to IH-35. July 13, 2015, An additional $460,922 was approved by the CTRMA Board of Directors (attached: "CTRMA & Jacobs July 13, 2015") to align the previous environmental assessment with the new The contact directs Jacob's Engineering to redo much of the "Environmental Study" for the Mopac South Project, including new traffic engineering and public outreach. CTRMA has expressed this time period extension is "In response to community feedback for additional public involvement on the MoPac South Environmental Study" but it is fixing an expensive mistake made with taxpayer Rider 42 funding because they had to re-initiate the environmental study to align the data with the 2040 Regional Transportation Plan. Wishbone Design: Merge with 2244 Traffic - AM Peak Period Merge with Northbound Traffic and enter express lanes right before 2244 - PM Peak Period (photo could not attach using this comment form) Direct Connection Over Lady Bird Lake Design - Dropped right at Cesar Chavez with no merge AM & PM periods (photo could not attach using this comment form) 2015 Bluetooth data provided by CDM Smith Questionable A public information request shows • "big difference

Dear CTRMA,

Most federal, state and local planning organizations have a portal for citizens to upload comment letters via .pdf files. CTRMA allows comment only through a form on www.mopacsouth.com which doesn't allow for attachments.

CTRMA allows electronic method of faxing in comments. However, I noticed today, Friday November 20, 2015 **the fax maching is not functioning.**

I request you improve your public comment protocols to make this process more accessible to the public and allow the public a reasonable way to submit public comment on these very important issues. It would be helpful if the online portal could support comments that include the ability to comment directly on engineering maps or snapshots of the maps.

Respectfully,

Wendi Hundley

HOW TO SUBMIT COMMENTS

Today at the Open House:

- Give comments verbally to the court reporter
- Fill out a comment form

Electronic Method:

- Go to the website: ***www.MoPacSouth.com***
- Send a fax to 512-996-9784

Mail:

Central Texas Regional Mobility Authority
c/o MoPac South Environmental Study
3300 North I-35, Suite 300
Austin, Texas 78705

All comments must be received by **November 20, 2015** to be part of the official record of the Open House

Attachments:	Dear CTRMA Board of Directors and Staff.pdf

Dear CTRMA,

Attached is my public comment on the MoPac South project. I request this letter and the attachment be included in the official public comment and administrative record for the MoPac South Project.

Respectfully,

Wendi Hundley

Subject: CTRMA & CAMPO Public Comment
Date: Friday, November 20, 2015 7:50:08 PM
Attachments: CAMPO comments not included in public record.pdf

Dear CTRMA Board of Directors and Staff,

March 2, 2015, CTRMA requested an amendment to the 2035 CAMPO plan, to align the regional plan with the CTRMA "Preferred Alternative" which would have changed the scope of the MoPac South project from 1-toll lane each direction to 2-toll lanes each direction in the 2035 CAMPO plan. The public comment period for this amendment was March 9, 2015 to April 2, 2015.

The information released by CTRMA at the public open house on **February 26, 2015,** reflected the preferred alternative CTRMA chose was 2-lanes each direction with elevated lanes over Lady Bird Lake.

March 30, 2013, 3 days before the close of the official public comment period for the CAMPO 2035 plan, CTRMA withdrew their amendment request to the CAMPO 2035 plan, after receiving a lot of public inquiry about the change from 1-lane each direction to 2-lanes each direction and the proposed double decker over Lady Bird Lake.

This decision by CTRMA caused confusion among those who had taken the time to write unique comments to CTRMA and CAMPO regarding the change from 1-toll lane in each direction to 2-toll lanes in each direction and the addition of a double decker over Lady bird lake, which was added to take traffic into downtown when the two toll lanes cut down to 1-toll lane.

After an overlapping public comment period was over for both the CAMPO 2035 and CAMPO 2040 plans, any public comment that CTRMA staff, using their own discretion, deemed to be associated with the withdrawn amendment to the CAMPO 2035 plan were categorized and not made part of the "official public comments" for the 2040 Long Range Plan.

The compilation of emails that were excluded from the 2040 CAMPO plan official public comment were allegedly provided to the public and board by CAMPO prior to the Transportation policy board meeting but were not included in the official 2040 plan administrative record.

The attached letters have a clear connection to the current MoPac South project and are specific to the design and elevated lanes. Those who wrote to CTRMA and CAMPO regarding this issue have a right to have their voices heard.

I request this letter and the entire compendium of comments attached be included in the official public comment and administrative record for the MoPac South Project.

Respectfully,

Wendi Hundley

P.S. The letter and attachments have been mailed and hand delivered, in addition to this email.

Comments Received at the March 9, 2015 Public Hearing

CAMPO held a Public Hearing during the March 9, 2015 Transportation Policy Board meeting. The following is a summary of the comments given at the Public Hearing.

Bobby Lewinski – Donated time to Bill Bunch to speak on his behalf.

Susan Pantell – Signed in to speak and was not present.

Bill Bunch – Director of Save Our Springs– Requested that no action be taken in April on the 2035 Plan amendments but be pushed out to the May meeting due to the lack of public notification. Mr. Bunch on behalf of Save Our Springs opposes the amendment of the Loop 1 Express lanes

Craig Smith – Director of Pct. 5 of the Barton Springs Edwards Aquifer Conservation District – Requested that the studies for, MoPac South, Intersections of MoPac at La Crosse and Slaughter, Oak Hill Pkwy, and SH 45 (SW) be studied and examined as a cumulative impact on the Aquifer.

Barbara Myers – Had some concerns on the double decking of MoPac and the impact of flyovers at the major intersection. She also felt that the lack of public input was scarce due to lack of notification.

Mary Anderson – Requested not to connect IH-35 to MoPac and not to put toll lanes on MoPac, especially elevated toll lanes. Please extend the comment period.

Hester Pollard - Signed in to speak and was not present.

Stephen Winnington - Signed in to speak and was not present.

Comments Received from Online Survey

The following are the survey results from the online survey that was open during the March 2, 2015 through April 2, 2015 Public Comment Period. The results are organized by question type. The questions with an answer set provided are shown first. All of the open ended and demographic questions are shown after the questions with answer sets provided.

Table 1: Summary of Online Survey Responses

		Support	Do Not Support	No Opinion
2035 Regional Transportation Plan	US 183 (N) Express Lanes	93	83	35
	Loop 1 Express Lanes (Phase II)	96	83	35

Open Ended Comments (as received)

- I fully support both amendments. We need to move forward and allow SW Austin the ability to move. Thank you!
- Support the express lane amendment but not the delayed timing.
- These should be toll lanes, and tolls should vary by amount of congestion -- that is, they should continue to be "managed," not just "express."
- Great idea!
- I oppose all toll roads of every kind. Public transportation should remain property of the public.
- We need more roads and more lanes, not more tolls!
- Any additional lanes should be FREE access to the public. Not toll lanes.
- Support, but NO MORE TOLLS, please.
- Focus on where the congestion is...the inner city.
- While I support the addition of new lanes to both of these roadways, I do not support the expansion as managed lanes that are tolled.
- I support the need for new lanes. I do not support the new lanes as toll roads. Austin needs more roads, not more tolls!
- I cannot find information on the difference between a "Managed" lane and "express" lanes. I am opposed to adding 2 toll lanes but would be open to the idea of a free HOV lane.
- The use of managed toll,lanes might work but as of yet is unproven in Austin. Additional lanes across the Lake really could help though. The delay of starting the project is concerning as the delay will increase costs and delay the benefit.
- Why, with $B in added budget for infrastructure this year do these roads have to be toll roads?? Don't cut taxes for the wealthy, do your job for ALL citizens of this state, poor or rich.
- I support the additional lanes, just not the lanes being toll lanes.
- no detailed description was provided, how does this impact the lake?
- I would support HOV lanes (with access during certain hours (essentially drive times)) restricted to vehicles carrying 2 or more persons. This improves energy conservation and

rewards the right behaviors, in contrast with "Lexus Lanes" that only reward wealth (even though I own two Lexus vehicles).

- We need more lanes but not TOLL lanes.
- 1 Toll lane each side is enough on both Loop 1 and 183.
- While I support more lanes, I do NOT support more tolls
- Support with the caveat that these are not tolled lanes.
- Please add a tollway that connects Serene Hills Blvd and TX 45 on South Austin.
- I think the state should find a way to improve traffic without allowing citizens to be robbed by tolls....no more toll roads
- I am totally opposed to any extension over Zilker Park and the Green Belt.
- I am against all tolls on mopac and I think that raised lanes over town lake would be ugly and ruin the view of capital and downtown
- I am totally against the Toll feature of additional lanes on Mopac.
- I can't say I fully support the addition of these lanes. I think we need to add more lanes, but I don't think they should be tolled. We have enough toll lanes. I also don't think it's good to add more lanes on 183 dumping onto MoPac south-bound from 183 without adding more lanes to MoPac (also non-tolled). No other city in Texas has as many toll lanes as Austin - and every new lane we get to support our burgeoning population (outside the city limits) is tolled. Residents inside the city who have lived here our entire lives can no longer get around because all the new people use our neighborhood streets to cut through, and our highways are FULL. We need more lanes - NON TOLLED LANES.
- i think so, but depends on how those lanes would be managed. for example, tolling just economically stratifies the public road. Is there enough express traffic to go that full distance and smooth out the traffic flow? Having an express outlet at Slaughter will just encourage development further south, right?
- how does this improve traffic if there are no changes to the downtown area? More cars getting there faster d/n help situation. Plus, there does not appear to be help offered to cars entering Mopac a S of 183 or north of 290 instersections
- We need the lanes but they should not be tolled! This is ridiculous! Someone driving from Cedar Pk to downtown to work every day (highly likely scenario) is going to pay a TON in tolls. BUILD THE LANES WITH NO TOLLS! You're the government! We need more infrastructure for EVERYONE!
- Is the plan to add addition lanes going from Mopac to 183A? Adding more downstream doesn't seem like it would address the bottleneck in the overpasses

Comments Received from the Keep Mopac Local Electronic Form Letter: Signatories

The following individuals submitted an electronic version of a Keep Mopac Local form letter. These letters were submitted by via email or had copies of hand delivered. Subject : Study the whole Mopac/45SW toll loop first; keep Mopac local
Message : Dear City, County, TxDOT, CTRMA and CAMPO officials:
As you may know,TxDOT and our local toll road authority, the CTRMA, are trying to build a continuous tolled loop around Austin, but they don't want to be honest with the public on this loop plan. Instead, they have chopped up their tolled loop plan into four pieces. CTRMA and TxDOT are now asking for public comments on just one piece of the proposed toll loop: adding two toll lanes in each direction along Mopac from Cesar Chavez south to Slaughter Lane. Please join us in telling CTRMA and TxDOT to:
1. Tell the truth – Study the whole proposed Mopac expansion/SH 45 SW toll loop as a loop project; stop the piece meal approach;

2. Study ALL of the impacts and ALL of the costs first – before building SH 45 SW or any piece of the propose 45SW/Mopac toll loop;

3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway; and

4. Any Mopac expansion should be limited, without double decker flyovers through West Austin, Zilker Park, and Austin High School

Subject : 4 toll lanes and a double decker bridge? no thanks!

who in the world came up with this new, last minute plan to put a double decker bridge over lady bird lake??!?? why in the world are we catering to traffic by building more capacity? i'm sure you, being traffic engineer professionals, are aware that this will not create any long term congestion solution for mopac or any part of austin. there is not a study on earth that shows that adding more roads (and ultimately more cars) will reduce traffic. you are just spending all our tax dollars on failed ideas. we need transportation infrastructure ideas that work, not the same old tired ideas that gobble up our open spaces and pave everything so people can sit alone in their cars, bumper to bumper. look at california! look at i-10 through houston! these are tired old ideas that solve nothing. smart transportation options are what we need - stop incentivizing sprawl and rewarding people for choosing to commute across town every day.

Subject : 2035 Amendments - Please Slow Down

Dear City, County, TxDOT, CTRMA and CAMPO officials:

The CAMPO board is supposed to vote on the 2035 Plan proposal (and whether or not to include the Mopac amendments) April 1st. This leaves many people in West Austin with no public testimony contemplated at that time. We just found out about the Double Decker February 26th, 2015. Then CAMPO scheduled a "workshop" withthe City of Rollingwood March 11th that had no new information but was more likely a distraction tactic to draw attention away from the March 9th CAMPO Public Input session. Our city was not invited to this public meeting.

I beg the CAMPO Board to slow down this process so that our community may have time to learn more about the proposal and provide input to the decision. This Double Decker will be built over our parks and our residential community.

Best Regards,
Wendi Hundley

From: Amy Rung
To: Capital Area Metropolitan Planning Organization
Subject: Alternative plans for Mopac are needed!
Date: Tuesday, March 31, 2015 9:35:04 PM

Dear CAMPO, City, County and State officials:

Our local toll road authority's (CTRMA) recent proposal to add four toll lanes on Mopac, from Cesar Chavez across Lady Bird Lake and south to Slaughter Lane, if built, will require a double decking of Mopac over Lady Bird Lake, with flyovers connecting to Cesar Chavez alongside Austin High School. This will create additional air, noise & light pollution in my neighborhood of Rollingwood. It's also going to negatively impact our public spaces including the Hike & Bike Trail, Ladybird Lake, Zilker Park, Barton Springs & Austin High School. These are Austin treasures that make our city unique. Please delay this vote and provide alternative plans. The city needs to invest in alternative ways for people to commute and reduce the amount of cars on the roads. Austin is supposed to set an example for other cities on environmental issues! I am also 100% against connecting I-35 to Mopac by way of extending 45. Putting more traffic including 18-wheelers onto Mopac is not the answer! It seems like the proposal is a way to assist creating MORE traffic for generations to come. Surrounding cities (Cedar Park, Oak Hill, Leander, etc.) should have incentives to use public transportation to commute downtown. A light rail system should be a long term plan.

Sincerely,

Amy Rung

Rollingwood Resident since 2004

From: Susan Pantell
To: Kone, Alex
Subject: Amendments to the CAMPO 2035 Regional Transportation Plan
Date: Thursday, March 12, 2015 2:41:14 PM

Mr. Kone,

I attended the board meeting but was not able to stay to comment on the 2035 plan amendments, and the staff said I should send them to you, so they are as follows.

Your questionnaire for the public on the 2035 RTP Amendments does not provide a space for comments, and that should be provided.

Regarding the Loop 1 project, the CTRMA information focuses on travel times but does not provide sufficient information on other impacts. They should provide a complete discussion of the costs and benefits of going from one to two lanes.The Loop 1 proposal should be evaluated along with SH 45SW, since it would be one connected project. In particular, the cumulative impacts of both projects on the Edwards Aquifer should be evaluated.

The analysis should also include a more thorough evaluation of the pros and cons of HOV versus express lanes. The TSM and TDM alternative should be evaluated and compared with the others since it would have the lowest financial and environmental costs. The equity impacts of the toll roads should also be presented.

This analysis should be thoroughly vetted with the public before proceeding further. Because of the incomplete information on the impacts to traffic and the environment, the ability of the public to comment on the project is unreasonably limited.

Sincerely,

Susan Pantell

Subject: Oppose Mopac 4 toll lanes expansion loop; keep Mopac local

-------- Original Message --------

Name : Karl and Janice Buesing
Email : [redacted]
Subject : Oppose Mopac 4 toll lanes expansion loop; keep Mopac local
Message : Dear CAMPO, City, County and State officials:

In May and April CAM PO is set to vote on a request from our local toll road authority, CTRMA, to build a continuous tolled loop around Austin. But CTRMA doesn't want to be honest with the public on this loop plan. Instead, they have chopped up their tolled loop plan into four pieces, refusing to look at the whole loop project and alternatives that would better serve Austin mobility.

Most recently, CTRMA proposed to add, 4 tolled lanes on Mopac from Cesar Chavez to Slaughter Lane. This plan would require a double-decker bridge over Lady Bird Lake and connecting bridges through Zilker Park, Austin High School, and Barton Creek greenbelt property.

Please take action now to:

1. Remove the proposed new 4-toll lanes and double-decker bridge on Mopac over Lady Bird Lake from the proposed 2035 and 2040 long-range transportation plans.

2. Remove the proposed tolled-SH 45 SW and Mopac expansion loop, which would convert Mopac to an alternative Interstate 35 route, from the proposed 2040 long-range transportation plan.

3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway by removing the proposed connection of Interstate 35 to Mopac via the proposed SH 45 SW

4. Halt any action to build Phase I of SH 45 SW over the Barton Springs recharge zone or otherwise extend South Mopac until there is a comprehensive study of all of the costs and impacts of building a an expanded Mopac/SH 45 SW tolled loop connection to Interstate 35

There are several other options to help solve our traffic problems, such as improving I35 through Austin, and encouraging big commercial trucks and cars to use Hwy 130 by reducing or eliminating its tolls. Please consider these solutions before agreeing to destruction of more natural beauty in Austin, and the addition of MORE traffic onto downtown streets by those proposals described above. Thank you!

Sincerely,
Karl and Janice Buesing

From: Amber Meinzer
To: Capital Area Metropolitan Planning Organization
Subject: Campo 2040 plan - Mopac plans
Date: Wednesday, April 01, 2015 7:34:44 PM

I am writing to request that consideration of the current plan to do double decker over MoPac at the bridge over Lady Bird lake be put on hold so that all the pieces of the plan to create a continuos loop around Austin can be considered together. I strongly believe that there are other, better options for decreasing mopac travel times than putting in double levels of lanes over the lake. The double lanes will just increase number of people on mopac, not decrease travel times. The double decker plan will have a negative impact on the environment, noise and quality of life of not only those living close to the area in question but for all Austinites who enjoy using our hike and bike trail. I am a native Austinite and this would be a travesty in my eyes. Please find another way!

From: Roy E. Greenwood
To: Capital Area Metropolitan Planning Organization
Subject: Cesar Chavez/Barton Springs Road double-decker/flyover-request to postpone action
Date: Tuesday, March 31, 2015 10:47:33 AM

Campo:

This morning I received a mailing concerning this project, which, quite frankly, astounded me. I'm a Westlake Hills resident, and attempt to keep apprised of all news, especially matters that directly concern me, but in this case, I feel completely **blindsided** by receiving notice of this proposal, especially since the mailing indicates that public comment is to be cut off by April 2, 2015, literally only *hours* from now. I have never heard of this project! **I object to this RUSH TO JUDGMENT!**

Having literally only *moments* to study this proposal, I can think of numerous reasons to register such an objection, including, but not limited to: the lack of long-term notice for such a major proposal; the apparent effort to extend the *toll road concept*, to which I've always objected; the lack of utility for such a proposal for any number of reasons (i.e., it does not fulfill an immediate need); the lack of information concerning the cost for such a project, how is to be funded, etc.; the environmental impact to the Park and the Lake based upon this project; the complete disruption of access to Bee Cave Road for many months, perhaps years, especially since Bee Cave Road is the only real access road that most of Westlake Hills residents have into the city; and, any number of other collateral objections which I will probably think of within the next day or two.

Please postpone any votes on this project and extend the time for public comment, and in the end, cancel further consideration of this limited, but massive boondoggle project.

--
Roy E. Greenwood

From:	Betty Dickson
To:	Capital Area Metropolitan Planning Organization
Cc:	Betty Dickson
Subject:	Comments for the Amendments to the MoPac South 2035 Plan
Date:	Wednesday, April 01, 2015 4:52:20 PM

If our nation's capital has been able to avoid double decker lanes and fly-overs all these many years, we should be able to do the same to preserve the beauty of Ladybird Lake, Zilker Park, and all the area along MoPac South to Slaughter Lane. The double decker plans and fly-overs in the amended 2035 Plan for MoPac South need to be eliminated. Also, the frontage road and/or highway planned to be built behind and close to Austin High School should also be eliminated for the safety and health of the students.

Alternate plans to replace the amended MoPac South need to be those identified by the KeepMoPacLocal.org organization.

Additionally we need a coordinated and comprehensive plan for the entire region with mass-transit, including rail, along with pedestrian (the ages 8 to 80 plan), bicycle and other multi-modal plans for the region. I understand that a comprehensive plan would need to be implemented in segments, but no segment should be implemented without a regional comprehensive plan in place.

Regarding a regional comprehensive plan specific to the Austin area, Lone Star Rail should execute its plan as quickly as possible so that local stops along MoPac to downtown would be in place as an incentive for drivers to commute by mass-transit. The bus system or other multi-modal transportation would allow train commuters to reach their destinations. The toll for highway 130 needs to be removed to allow trucks and vehicles to by-pass downtown Austin, if desired, rather their than adding to the congestion in Austin. And since the MoPac North's varied toll rates are designed to manage vehicle throughput to about 45 miles per hour minimally, I-35 needs to have a toll of varied rates to reduce congestion.

Regards,
Betty Dickson

Subject: Comments on CTRMA Proposal for South MoPac
Date: Wednesday, April 01, 2015 10:50:32 AM

I am strongly opposed to the CTRMA proposal to add a double-deck flyover on MoPac/Loop 1 across Lady Bird Lake.
That configuration will extend the reach of noise pollution and be a blight on the lake and parkland it would traverse.
Once that is full to capacity, what would be the proposed fix other than to add more lanes to it? Now is the time to plan for better alternatives, not after the damage has been done.

Respectfully,

Kent

Kent McMillan, RPLS

Subject:	Concerns about MoPac expansion plans
Date:	Thursday, April 02, 2015 4:56:56 PM

To those involved with MoPac Expansion Planning,

I have recently become aware of the south-side MoPac expansion plans. I learned some of these details during a Rollingwood town hall meeting, the Smart Mopac website, and from fliers posted through out my neighborhood.

As a resident of the Rollingwood community, I am quite concerned about the present proposals for the MoPac expansion:

1. I am concerned that plans for a double-decker fly-over from MoPac to Downtown will increase noise and light pollution. Since this portion of road would be elevated, both the noise and lighting are likely to be much more notable to greater distances. Since I live less than a mile from MoPac, my family and community will likely be affected. I raised this concern during the town hall meeting, and the general reply was "studies could be done about these issues". This implies that no studies have been to date and no clear solutions for mitigation have been considered. It is imperative that studies on such issues be thoroughly considered before any actions are taken.
Furthermore, I struggle to understand how the flyover would improve traffic flow to Downtown. There are already major arteries branching off of MoPac to Cesar Chavez, and they back up due to traffic intersections near Lamar. Injecting the flyover into this path will only increase the amount of traffic funneled to this intersection, causing even greater traffic back-ups.

2. It is also my understanding there are changes planned to make MoPac an effective bypass to IH-35; not only for local traffic, but also for inter-regional truck traffic. It is my understanding that TX-45 and 130 highways are supposed to be the intended bypass routes for IH-35. If the current bypass traffic density is not as intended, then there should be additional incentives put in place to encourage truck traffic to use these intended routes instead of adding to the severe congestion that already exists on MoPac.

I and many of the residents who attended the Rollingwood town hall meeting expressed frustration that we were just recently becoming aware of such plans that appear to be fast-tracked to an execution phase. I think it is imperative that more time be given for local residents to understand the ramifications of these plans and have their opinions heard and concerns addressed. It is important that alternative plans be considered, reviewed, and voted on.

Thank you for your considerations,
-Glenn Starnes
Resident of Rollingwood community

Subject:	Concerns over South MoPac Expansion
Date:	Wednesday, April 01, 2015 1:06:41 PM

To Whom It May Concern:

Because of my work schedule, I am unable to attend the majority of the community forums and the public meetings. I would like to strenuously voice my frank opposition certain parts of this plan and my general concerns to this plan overall.

I don't think that anyone can disagree with the fact that traffic is a major problem in Austin. And I do not believe that my concerns regarding the plan are simply a reflexive Not In My Backyard posture. However, there are certain parts of the plan that in my opinion, do not make sense, and would have a profound negative impact on the area in exchange for very little benefit. Also, there has really been very little time to sufficiently communicate with the community and its leaders in order to get feedback regarding the plans for expansion.

Conceptually, I am not opposed to more roads, or even toll roads for that matter. However, the layout for the toll roads do not make sense when considering the population to the West and Central areas of Austin. Express lanes that turn from MoPac to Cesar Chavez would still become congested in a very short distance from MoPac and would still lead to significant congestion on MoPac itself. Even people traveling from the Slaughter area and further south will still hit significant congestion at the 5th St/Cesar Chavez/2244 areas.Hardly a solution.

From a safety standpoint, trying to enter the Express Lanes if you are coming heading South from Bee Caves Rd., you would enter MoPac from the onramp north of Barton Skyway. You would then have to cross multiple lanes of traffic to get into the express lanes in I believe ~1800 feet, which is, in my opinion, too short a distance to traverse safely.

As for the northbound express lanes, the solution does not provide enough of a widespread benefit for the community to balance out the negative impact on the area. Many people from the Lake Travis region, Westlake, and even the areas between downtown and 360 will have little benefit from this plan.

Plus, the idea that this expansion may eventually tie into 45, and provide an additional North-South corridor for traffic trying to escape the I-35 corridor is a horrible idea. Everyone can agree that MoPac is already congested, and adding additional traffic from the I-35 corridor makes this an untenable situation.

However, my GREATEST concerns are regarding the idea of adding a double decker freeway section over Lady Bird Lake. Of course, living in Rollingwood, I can already hear MoPac at my house, and the idea of the additional noise and light pollution is extremely concerning to me and my family. Not to mention that this section of MoPac is over an environmentally sensitive area and Austin's major greenspace and park. Zilker Park attracts huge portions of Austinites and people from out of town for general recreation and major events. To add another deck to the freeway would really be an concrete eyesore in an area of town everyone is using as a greenspace. This is especially

ill-conceived given that it is not a more comprehensive solution to the traffic problem, especially around the downtown area. When you add in the potential negative impact on the the environment, especially Lady Bird Lake, I cannot believe that this was seriously considered as a viable plan.

My family would like to join the growing number of concerned community members in requesting that CAMPO allow more time for this process to develop. This would allow community members to become better informed as to the advantages AND disadvantages of the proposal. In the interests of transparency, the families that will be impacted by these decisions should at least have the right to examine the plan in more detail, provide additional input, voice their concerns, and in some cases demand that changes be made. This proposal will have a great impact on the environment and neighborhoods in some of the most densely populated parts of Austin and Rollingwood. The very least that should be allowed is to give the community time to carefully examine and measure its impact.

Regards,

Edward Lee

Subject:	Delay of Vote on CTRMA proposal!
Date:	Tuesday, March 31, 2015 4:58:50 PM

Dear Persons and Organizations of Distinction,
My name is Christy Lamb, a resident of twenty two years of the city of Rollingwood.
I am asking all of you to please delay the vote of the CTRMA proposal based on the 2000 Census, of the four toll lanes on MoPac between Cesar Chavez and Slaughter Lane.
Prudence dictates a plan based on the more current 2010 Census and also to explore viable alternatives.
Please slow down the process in part to provide community members time for education and input.
Thank you for your service and for consideration of my request.
Christy Lamb

Subject:	Delay vote on MoPac expansions
Date:	Monday, March 30, 2015 6:11:36 PM

Dear Travis County Commissioners and CAMPO Representatives,

Please delay the vote and revisit solutions for any MoPac expansion. What we experience as Austinites is rush hour, not traffic. Rush hours happen all over the country. People plan for them by waking earlier, riding a bike, taking back roads, carpooling, or using public transportation. My experience commuting in the Northeast for 15 years was that no matter how many roads were paved, lanes added, or bridges built, the final problem is bottlenecking. The proposal of an elevated express lane and 2 exit lanes heading north will funnel down to one traffic light on Caesar Chavez. This idea looks snazzy in a rendering and kept a civil engineer very busy, but it isn't going to help the unavoidable, rush hour.

Concerned Resident,
Eric Watts

Subject:	DO NOT APPROVE Mopac Toll Roads
Date:	Tuesday, March 31, 2015 10:45:07 AM

To CAMPO, Commissioners, CTRMA, Mayor Farrell, Austin City Council, City of Rollingwood, City of Austin:

The information which has been provided regarding the expansion and tolling of MOPAC south of Cesar Chavez is wholly inadequate and fails to provide any kind of real notice and due process to the citizens of Austin and Rollingwood, Texas regarding the loss of previously paid for access
to public roads, the true cost and contract allocations which will result from approval, and the impact on the environment & property values adjacent to and near the expansion.

If you vote to approval this plan as it now stands, every opportunity will be lost to **INSURE** that the current aesthetics, livable quality, and functionality of a major asset to the City of Austin
will be maintained. If you vote to approve **NOW** you are voting to throw into question major issues that have **NOT BEEN ADDRESSED**.

The question of whether the expansion is needed and for what purpose it is needed has not been addressed. If we are attempting to satisfy current capacity, then caps on future development should be included. Otherwise we just add business opportunity for more development and a further increase in traffic, all at the expense of long-term Austin, Westlake and Rollingwood residents
who have spent their lives building this City.

I access Mopac every day via the Rollingwood Dr./Mopac feeder, and via the Bee Cave/Mopac exchange. There is **NO** information on major impact and development issues provided on
http://www.mopacsouth.com/about/. Indeed the website states there **WILL BE ANALYSIS** and the neighborhood **WILL BE CONSULTED** on major aspects of the plan including :

- Need and purpose for improvements to MoPac Expressway
- Alternatives and roadway design
- Bicycle and pedestrian accommodations
- Corridor aesthetics
- Neighborhood access and connectivity

Until a fully developed plan with clearly stated **GUARANTEES** can be added to the vote, such as:

GUARANTEED PROTECTION OF CURRENT NON TOLLED ACCESS AND CONNECTIVITY
GUARANTEED ADDITION OF SOUND BARRIERS AND ROADWAY AESTHETICS
GUARANTEED PEDESTRIAN AND BICYCLE ACCOMMODATIONS
GUARANTEED CAPS ON ANCILLARY DEVELOPMENT ASSURING CONTINUED CAPACITY SATISFACTION

GUARANTEED PROTECTION AGAINST ENVIRONMENTAL DEGRADATION

you must **delay any approval** for this proposal on April 13, 2015.

Gayle Rosenthal

Dear City, County, TxDOT, CTRMA and CAMPO officials:

The CAMPO board is supposed to vote on the 2035 Plan proposal (and whether or not to include the Mopac amendments) April 1st. This leaves many people in West Austin with no public testimony opportunities. We just found out about the Double Decker February 26th, 2015. Please don't approve the amendment to add two toll lanes in each direction. Any expansion in this area should be limited, WITHOUT double decker flyovers through West Austin, Zilker Park, and Austin High School. I ask the CAMPO Board to slow down this process so that our community may have time to learn more about the proposal and provide input to the decision. This Double Decker will be built over our parks and our residential community.

Subject: double decker & fly over
Date: Monday, March 30, 2015 7:48:31 PM

Dear CAMPO:

I am a long time resident of Austin, as we moved here in 1970. My wife and I have witnessed Austin change from a 'cozy' and comfortable college town to 'Dallas-light'.

The proposed construction of the double-deck fly over Lady Bird Lake is a BIG MISTAKE in my humble opinion. I live in Rollingwood and would be negatively impacted by this monstrosity. I'd rather be in traffic and take a few minutes longer to get home than see that toll road become a reality. Do we really want to turn Austin into another Dallas or Houston.

Please vote "NO" on this construction project. We don't need it and the citizens directly affected due to proximity to Mopac especially do not want such a road way.

I'm on my knees begging!

Sincerely

Harvey Sussman

Email : [redacted]
Subject : Oppose Mopac 4 toll lanes expansion loop; keep Mopac local

Dear CAMPO, City, County and State officials:

As you may know, in May and April CAM PO is set to vote on a request from our local toll road authority, CTRMA, to build a continuous tolled loop around Austin. But CTRMA doesn't want to be honest with the public on this loop plan. Instead, they have chopped up their tolled loop plan into four pieces, refusing to look at the whole loop project and alternatives that would better serve Austin mobility.

Most recently, CTRMA proposed to add, 4 tolled lanes on Mopac from Cesar Chavez to Slaughter Lane. This plan would require a double-decker bridge over Lady Bird Lake and connecting bridges through Zilker Park, Austin High School, and Barton Creek greenbelt property.

Please take action now to:
1. Remove the proposed new 4-toll lanes and double-decker bridge on Mopac over Lady Bird Lake from the proposed 2035 and 2040 long-range transportation plans.

2. Remove the proposed tolled-SH 45 SW and Mopac expansion loop, which would convert Mopac to an alternative Interstate 35 route, from the proposed 2040 long-range transportation plan.

3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway by removing the proposed connection of Interstate 35 to Mopac via the proposed SH 45 SW

4. Halt any action to build Phase I of SH 45 SW over the Barton Springs recharge zone or otherwise extend South Mopac until there is a comprehensive study of all of the costs and impacts of building a an expanded Mopac/SH 45 SW tolled loop connection to Interstate 35.

As a native Austin-ite, I learned and grew in the city and had the benefit of enjoying the comfort of an easy-going Austin that respected the beauty of the nature embedded within it. Extensive toll road plans will overwhelm the nature that exists in the city, and pose an unfair burden on low-income families in the city. Toll roads do not serve all the residents in Austin. I believe a solution is out there, one that may require removing roads and engaging residents in other forms of transportation, and that the team of experts drafting that vision have the skills and knowledge to find a solution that does not ignore community input.

Thank you for your attention and continued efforts to improve Austin.

To Whom It May Concern:

Please let me second the extensive objections sent to you by **Wendi Hundley of Rollingwood**. She has done her homework and her views express ,my views and the identical views of many, many people. I have lived in Rollingwood for 19 years and drive Mopac almost every day.

I appreciate the efforts to reduce traffic jams by the work currently underway. BUT . . . adding an overpass over the Mopac Bridge at Lady Bird Lake and through West Austin would be very detrimental to some of the most beautiful parts of our City. West Austin and the Bee Cave area are jewels of our city. Please do not increase the scope of work on Mopac. My daughter and grandchildren live in a modest home one block west of Mopac near Windsor and a double-decker bridge would ruin her lovely neighborhood. The noise and the view would be terrible for them and for all of us.

Thank you for any support you can give to my position.

Sincerely,

Clare Hudspeth

Subject: Fwd: NO MOPAC Double Deck Expansion!
Date: Thursday, April 02, 2015 10:29:49 AM

Dear CAMPO, City, and State leaders.

I live in the Zillker neighborhood and object the the proposal to build a double deck set of lanes on top of the current MoPac Expressway. This would significantly decrease the quality of life for citizens that live near Zilker Park and Central Austin. This would also greatly diminish one of the City's greatest assets, Zilker Park.

Mopac should NOT be tolled and putting lanes for SH45 on top of current "free" roads is a government taking of roads that have already been paid for by our citizens. Toll roads are not the answer to everything. Please limit our reliance on tolls and third party contractors to manage same.

Even if you build the double deck lanes, it will take forever, be extremely expensive, and be grid-locked by the time you finish it.How about moving the MoPac rail line to far Eastern Travis County and using the line for commuter rail or for additional lanes? That would be a much more cost effective use of our tax dollars.

If you need more North - South routes, please remove the lights from 183 and add fly-overs.

Regards,

Chris Bean

Sent: Saturday, March 07, 2015 9:13 PM
To: Capital Area Metropolitan Planning Organization
Subject: No tolls in 2040 Plan

Texans Uniting for Reform and Freedom (or TURF) and Texans for Toll-free Highways represents tens of thousands of Texans statewide and work with a network of over 300 grassroots groups across the state.

We share the following concerns about CAMPO's 2040 Plan and proposed amendments to the TIP/MTP.

Please vote to reject the proposed amendment that would add two toll lanes in each direction on Mopac, from Cesar Chavez to Slaughter Lane, necessitating an elevated bridge over Lady Bird Lake. The volume of toll roads planned for the Austin area is unsustainable, unaffordable, and isn't doing anything to fix congestion. Use the money from Prop 1 and the new funds coming from the Texas legislature to fix Austin roads without tolls.

CAMPO/TxDOT told us that we had to use tolling because there wasn't enough money to build free roads. But now that the state is adding $4 billion of new cash, CAMPO still wants to toll everything. (Plus, Austin has about $1 billion of new money from Transportation Development Credits.)

All of this new money, $5 billion, is being put into adding two lanes to I-35. Therefore, in order to pay for all of the other big road projects, CAMPO wants to impose expensive toll taxes on Ausitn freeways, yet the ***traffic studies show that adding two toll/bus lanes on I-35 will cause congestion to increase more than building nothing at all on I-35***.

The common sense solution is to use the new road money to build the 183 South project as a free road. That will peel traffic off of I-35. That only costs ~$500 million so there is still plenty of money left over to build all of the other proposed toll roads as free roads. By 2020, there is enough money to pay the bonds on SH 130 and remove the tolls there. That takes more cars and trucks off of I-35.

For the transit side, the 2040 Plan calls for converting two of the existing lanes on very important arterials into ***bus-only lanes*** (Burnet, Riverside, N and S Lamar, Guadalupe, S Congress and other unnamed streets). ***This will force people to choose between using I-35, MoPac or transit buses.*** In other words pay a toll or ride the bus. The vast majority of Texans rely on cars to get to work and always will. The planners at CAMPO need to stop tinkering with our roadways and shrinking auto capacity thinking it'll force a change in behavior and make people ride transit or pay outlandish toll taxes to have mobility. The bottom line is buses are inefficient and take longer per trip than cars, even on a congested roadway. Texans cannot afford to pay $10-$15/day in toll taxes to get to work and will find alternate routes to avoid paying, forcing traffic onto our already congested city streets. Toll roads don't solve congestion and quire unsustainable debt that can't be repaid without massive subsidies like the $100 million

in gas taxes already used to bailout Sh 130, Hwy 1,and 45 and the subsidies being proposed for truck toll rates on SH 130.

CAMPO's computer model projects that if the 2040 Plan is built as written, **congestion will get far worse than it is now**. You suggest that if employers change their work hours to begin before 6:00 AM or after 10:00 AM, or if employers convert jobs into telecommuting jobs, then it is possible that congestion might be reduced *a little bit* in the future. you're saying that *people must give up their property rights and let CAMPO do land-use planning if we want congestion reduced* below the current level. This won't work. Use the money the voters approved and the funds coming form the legislature to fix our roads and keep them toll-free!

Subject: Oppose Mopac 4 toll lanes expansion loop; keep Mopac local

-------- Original Message --------

Name : Colin Ingarfield
Email : [redacted]
Subject : Oppose Mopac 4 toll lanes expansion loop; keep Mopac local
Message : Dear CAMPO, City, County and State officials:

As you may know, in May and April CAM PO is set to vote on a request from our local toll road authority, CTRMA, to build a continuous tolled loop around Austin. But CTRMA doesn't want to be honest with the public on this loop plan. Instead, they have chopped up their tolled loop plan into four pieces, refusing to look at the whole loop project and alternatives that would better serve Austin mobility.

Most recently, CTRMA proposed to add, 4 tolled lanes on Mopac from Cesar Chavez to Slaughter Lane. This plan would require a double-decker bridge over Lady Bird Lake and connecting bridges through Zilker Park, Austin High School, and Barton Creek greenbelt property.

Please take action now to:
1. Remove the proposed new 4-toll lanes and double-decker bridge on Mopac over Lady Bird Lake from the proposed 2035 and 2040 long-range transportation plans.

2. Remove the proposed tolled-SH 45 SW and Mopac expansion loop, which would convert Mopac to an alternative Interstate 35 route, from the proposed 2040 long-range transportation plan.

3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway by removing the proposed connection of Interstate 35 to Mopac via the proposed SH 45 SW

4. Halt any action to build Phase I of SH 45 SW over the Barton Springs recharge zone or otherwise extend South Mopac until there is a comprehensive study of all of the costs and impacts of building a an expanded Mopac/SH 45 SW tolled loop connection to Interstate 35.

5. The best thing we can do to relieve traffic would be to replace existing lanes on mopac with trains. As is clear from decades of highway construction, adding more lanes only briefly relieves traffic.

Thank you,
Colin Ingarfield
Zilker Neighborhood

As a long-time Austin resident and someone who pays the price to live in central Austin, it appears our public officials are sacrificing the people who live in Austin so that folks in Williamson and Hays county can have a nicer commute. You will destroy the crown jewel of Austin, which is Lady Bird Lake.

Subject : Please withdraw the SH45 SW draft Environmental Impact Statement
Message : Dear TxDOT, CTRMA, and local and state officials:

Please withdraw the draft Environmental Impact Statement on the proposed SH 45 SW toll road in favor of an honest and comprehensive analysis of the real project: the conversion of Mopac from a local commuter highway to an alternative Interstate 35 West.

TxDOT and the CTRMA are currently pursuing this conversion of Mopac to I-35 West in piecemeal fashion, with the 4 mile segment of SH 45 SW over the Barton Springs Edwards Aquifer recharge zone as just one of four pieces. The other pieces include: (1) building freeway (or tolled) mainlanes and bridges at the Mopac/Slaughter and Mopac/LaCrosse intersections; (b) expanding South Mopac from Slaughter all the way north, across Lady Bird Lake to Cesar Chavez with up to four toll lanes (2 in each direction); and (c) building SH 45 SW Phase II from FM 1626 to I-35 and SH 45 SE.

Mopac traffic is already maxed out, especially at the bottleneck that exists at the Lady Bird Lake bridge. Moving forward with SH 45 SW Phase I before figuring out what, if anything, can be done to this bottleneck only assures much worse traffic on Mopac and more pollution of the Barton Springs Edwards Aquifer.

The traffic, financial, environmental and social impacts of building SH 45 SW and expanding Mopac from Cesar Chavez to the southern terminus must be studied before taking the first step. The Austin community deserves, and sound planning requires, that we analyze the whole picture – including viable alternatives that keep Mopac a local commuter highway while improving commuter and interregional traffic flow along the I-35 corridor.

Please promptly undertake an honest evaluation of alternatives that do not divert I-35 commuters to already overwhelmed Mopac or further pave and pollute the Barton Springs Edwards Aquifer.

Thank you for your consideration.

Subject: Campo 2040 plan - Mopac plans

I am writing to request that consideration of the current plan to do double decker over MoPac at the bridge over Lady Bird lake be put on hold so that all the pieces of the plan to create a continuos loop around Austin can be considered together. I strongly believe that there are other, better options for decreasing mopac travel times than putting in double levels of lanes over the lake. The double lanes will just increase number of people on mopac, not decrease travel times. The double decker plan will have a negative impact on the environment, noise and quality of life of not only those living close to the area in question but for all Austinites who enjoy using our hike and bike trail. I am a native Austinite and this would be a travesty in my eyes. Please find another way!

Subject:	MOPAC "double decker and fly over" public comments
Date:	Wednesday, April 01, 2015 4:20:45 PM

April 1, 2015

Re; Public comment against the double decker bridge and fly way across Lady Bird Lake

To whom it may concern:

My wife and I recently received a mailing concerning a project for the expansion of the MOPAC bridge across Lady Bird Johnson Lake to a "double decker and fly over". This proposal quite honestly astounded me in the rapidity in which it is moving forward. As a concerned citizen, I needed to submit comments by April 2 (and the current date is April 1) and that CAMPO was going to vote on it by April 13. This is a project that will have immense impacts to our community but with a request for input from the public that almost appears as an after thought .

My wife and I are West Lake Hills residents since 1973. We have attempted to be aware of all news that affects our community, especially matters that directly concern our family. In this case, we feel completely blindsided by rapidity of the proposal, especially since the mailing indicates that public comment is to be cut off by April 2, 2015. This is a very critical issue that needs to be given the time to evaluate and digest its implications by our communities, West Lake Hills and Rollingwood.

It is clear that the various transportation agencies at the state and local level have not handled the traffic problem in Austin, and specifically MOPAC, well. I-35, MOPAC and the arterials into the city are overcrowded. No argument, but trying to impose a new roadway plan and a double -decker bridge in the matter of days is a gross insult to the communities that adjoin the area of the proposed changes. The primary beneficiaries for this construction are the new arrivals in southern Travis and Hays counties, not us, the long-time residences of West Lake Hills and Rollingwood. Our two cities are well-established family communities. Our communities have already been impacted by the growth in places like Bee Caves and beyond. The traffic from these communities has brought traffic in our streets to a stand still by those who live well outside our city limits. The residents of our two communities will be significantly impacted even more by this proposed construction over the river. Traffic at the intersection of Bee Caves and MOPAC essential will come to a standstill 24 /7 / 365 for years. We will essentially be cutoff from the city so that new residents in Hays County can get down town quicker. We bought here in 1973 because of the presence of "family-oriented" communities that had easy access to downtown Austin. Today we are losing our community; we are being choked by those who want to live tens of miles from the city on their little ranchettes and commute much of their waking day to work in a tall high rise downtown. Why should we have to be penalized for their driving habits?

I also have concerns about the loss of views that this construction will inevitably impact our views of downtown, the river, and Zilker Park. Zilker Park and Barton Springs are the crown jewel of Austin, but the park in recent years has been abused by this type of development. It gets rented out to private entrepreneurs and becomes a revenue generator for the city. It's becoming fenced off with limited access by the public. It is no longer a park for the people. Adding a double decker and flyways cannot be adding to the visual beauty of the park. The beauty of the park will be further degraded. The beauty of the river will be degraded. Thank God, Lady Bird will never have to see it. I'm sure it was never in her master plan!

Please postpone any votes on this project and extend the time for public comment, and in the end, cancel further consideration of this massive project that will further degrade our local communities and the livability of Austin. Please involve the local communities. Ask our opinions (at meetings that take "public" comment for more than 1.5 hours). Meet with the city councils of Rollingwood and West Lake Hills. Our communities are being abused in the name of progress and in the name of providing a comfortable drive for people that have not yet even bought their ranchettes in some gated community in Hays County. This has got to stop. Please vote "No".

Thank you.

Sincerely,

Charles Kreitler

Subject:	Mopac Expansion Amendment
Date:	Friday, March 27, 2015 11:48:41 AM

Please do NOT amend the 2035 plan to add additional express lanes to Mopac over Lady Bird Lake, requiring a double decker flyover. This plan will make it even more difficult for vehicles to enter or exit off Mopac to 2244 (Westlake/Bee Cave/Lakeway), which is becoming a major artery serving burgeoning development West of Loop 360/Bee Cave/Lakeway and points west. Also, the noise from MoPac/Bee Cave is already a problem for our neighborhood. My family can't use our backyard because of it. The noise and light pollution would be a detriment to the Nature Center, Zilker park and Austin High School.

Please stick by the current plan which calls for one managed lane in each direction. Then fix the major intersections 360, 2244, Barton Skyway. That would be a much better use of the money. Please listen to the people who live in the area. We do not want this double decker plan and we vote in droves. At least show us the alternate proposals and slow down the process so we can participate in any decision.

From:	Susan Bennnett
To:	Capital Area Metropolitan Planning Organization
Subject:	Mopac Expansion and it"s effect on surrounding neighborhoods
Date:	Monday, March 23, 2015 8:56:35 AM

Hello, my name is Susan Bennett and I am a Rollingwood resident for the last 13 years. Your proposal to add a double decker would unfairly increase the burden of noise pollution, light pollution and air pollution on the surrounding neighborhoods and Zilker park. Additionally the view of our beloved Lady Bird Lake would be forever spoiled. The industrialization of the view by the double decks would quash the feeling that we do live in such a lovely natural space. This would be true for all drivers not just the ones driving on the addition but by drivers on 135, downtown and from any angle that one could see it. It is true that Mopac needs to be improved but I feel that in this instance the end does not justify the means. It is time for the planning committee to take a step back and really consider how future generations will view this and your own personal legacy as the entity responsible for this . I believe that ruining this wonderful area with the double decker would go down as a huge mistake made by your committee. Our city is changing and we do need to make room for our new neighbors, but not at the expense of what makes Austin such a wonderful place to live. I hope that you will do the following:

Reject the amendment to add two toll lanes in each direction along MoPac from Cesar Chaves south to Slaughter Lane.

Request that any expansion in this area should be limited, WITHOUT double decker flyovers through West Austin, Zilker Park, and Austin High School.

Susan Bennett

Leah and Merritt Alberti
City of Rollingwood residents

April 1, 2015

Dear CAMPO, City, County and State officials:

Our local toll road authority's (CTRMA) recent proposal to add four toll lanes on Mopac, from Cesar Chavez across Lady Bird Lake and south to Slaughter Lane, if built, will require a double decking of Mopac over Lady Bird Lake, with flyovers connecting to Cesar Chavez alongside Austin High School.

We feel that this would have an enormous and irreversible negative impact to the City of Rollingwood, central and west Austin areas. We ask that you explore an alternative plan for traffic flow over Lady Bird Lake and you the commuters to downtown.

Please take action now to:

1. Explore and release to the public the alternative plans for Mopac expansion over Lady Bird Lake.

2. Explore and release to the public plan that will address traffic issues with 2244, Rollingwood Dr, Barton Springs Rd, Barton Skyway and 360 intersections.

3. Explore options that will improve pedestrians and bikes safety coming from West MoPac, including:
   - A pedestrian walkway over Barton Springs Rd
   - Traffic Dampening at Barton Springs and Rollingwood Drive in the form of traffic circles or stop signs at Rollingwood Dr & Barton Springs
   - Sidewalks from the Lady Bird Lake Trail to Bee Caves Blvd (connecting into existing ADA Sidewalks on Bee Caves) and on up to Liberty Park Dr. to connect with the ADA Sidewalks there.

Thank you for your consideration to this very important issue.

Sincerely,
Leah and Merritt Alberti
Rollingwood homeowners and taxpayers

To:	Capital Area Metropolitan Planning Organization
Subject:	Mopac expansion
Date:	Wednesday, March 25, 2015 5:20:36 PM

Good evening,

The toll road authority's (CTRMA) recent proposal that adds four toll lanes on Mopac, from Cesar Chavez across Lady Bird Lake and south to Slaughter Lane, if built, will require a DOUBLE DECKING of Mopac over Lady Bird Lake, with flyovers connecting to Cesar Chavez alongside Austin High School.

PLEASE REJECT THIS AMENDMENT THAT ALLOWS DOUBLE DECKING. There are lots of questions being raised, and so far the answers are limited. Some of these questions include impacts on traffic on Cesar Chavez and 5th St; on traffic, noise and air pollution at Austin High School; on noise, air and visual pollution on neighborhoods, Zilker Park, and the Lady Bird Lake hike and bike trail; on water quality at Barton Springs; and the financial impacts to residents. And many more questions about what are the real potential costs and benefits of this proposal.

Reject the amendment to add two toll lanes in each direction along MoPac from Cesar Chavez south to Slaughter Lane.

Any expansion in this area should be limited, WITHOUT double decker flyovers through West Austin, Zilker Park, and Austin High School.

Please SLOW DOWN this process so that our community may have time to learn more about the proposal and provide input to the decision. (The double decker plan was just made public Feb 26, 2015).

Thank you,
Hannah Huckaby, Austinite

Please, please, please slow down this process.

This is a very complicated project, and it will have a significant impact on ***all*** members of the Austin/Rollingwood/West Lake Hills community and anyone who uses MoPac, Town Lake, Barton Springs or the surrounding areas.

People who will be directly impacted by this project need more time to understand the project and then provide input. Plus, the decision makers should need more time to hear from the community.

Thank you.

Good afternoon-
I received an email just this week about a proposal for a double-decker bridge to accommodate a northbound lane from Rollingwood to the 1st Street exit. I understand we all must pitch in together to accommodate traffic in our growing communities, but a double decker flyover bridge overlooking Rollingwood and Zilker Park? Can we widen the existing bridge? Tunnel?
Rotating one-way lane?

We need to step back and continue our thinking, this time with more input from the community impacted the most and delay any vote until further proposals are considered and more community input.

To: CTRMA

From: Jim and Catherine Harris, 2501 Timberline Drive, Rollingwood, TX

We are disappointed at the news of a plan for a double-decker and fly over on Loop 1 (MoPac) near the entrance to the City of Rollingwood and Zilker Park. Please find a way to satisfy the traffic problems without encroaching on the long-established park and surrounding residential neighborhoods---Rollingwood and Barton Hills as well as Austin High School. The creation of MoPac itself displaced many homeowners in the 1970's and the road has inadequately solved the traffic problem. Why make the same mistake twice?

The current plan to build a fly-over at Cesar Chavez and MoPac is reminiscent of the 1980's effort to turn Cesar Chavez (1st Street) into a freeway, adjacent to Town Lake!! Thank goodness, sensible members of the Austin City Council defeated that plan. Ruining the beauty of the Park in order to address traffic issues is not acceptable. At that time (1981/82), retaining as much peace and tranquility as possible for Zilker Park outweighed the need to accommodate more cars and that should be the goal now in 2015. Concern for the Park and residential communities should continue to outweigh the importance of more roadways.

Why not put the flyover at the intersection of MoPac and Loop 360/Capitol of Texas Highway? That location would better serve the City to direct traffic to Hwy 71 and Capitol of Texas Hwy. rather than to Cesar Chavez. That location would also mirror the fly-over at 71 and IH35 directing traffic to Waco or San Antonio.

Subject:	Mopac Improvement Project
Date:	Thursday, March 26, 2015 4:50:23 PM

I have done some reading on the Mopac Improvement Project.

First I would like to say that any sound proof wall you can build on the elevated express way should be as high and thick as possible and designed to radiate sound towards down town Austin or the sky.

Second, I have to say the whole project seems like a huge expense for a 1 lane road.

Third, I am not sure that I have all the facts, but it appears that the mopac improvement project will bypass Bee Caves Rd, one of only 2 arteries to get onto Mopac from West of Austin? This seems an incredible oversight given that Bee Caves Rd serves as the access to Mopac and all of Austin for 4 cities, Rollingwood, Westlake, Bee Caves, and Lakeway. Who do you think is going to pay to use this very expensive express way? The people in South East Austin? No, it's the more prosperous people who live in these communities I have listed. The current design as I understand it, excludes the most affluent customer base available to the express way?

That is just bad business.

It is bad enough that the city of austin makes so much money already with special events like ACL Fest and the Trail of lights, while the neighborhoods in close proximity to Zilker park are not protected form noise traffic or crime or in any way compensated for the extreme inconvenience these special events bring.

Forcing Rollingwood and Westlake to serve as the parking lot for all of the traffic from the communities to the west is unjust.

My only solace is that the exorbitant property taxes I pay that support Travis County will surely go down with my property value.

Please make an effort to improve the Bee Caves Rd access to Mopac and the new express way.

Thank you for your consideration,

Subject:	Mopac Northbound expansion
Date:	Wednesday, April 01, 2015 4:14:26 PM

To whom it may concern,

I am a longtime resident of Austin having moved here in 1969. I have watched the original construction of Mopac as well as many of the representations that have been made over the years regarding its intended purpose. I have attended two recent meetings with the design team and listened to their explanations for the most recent plan for north bound toll lanes from Slaughter lane. For a variety of reasons I believe the planned expansion is not in the best interests of the City. I have tried to make these reasons known to the individuals at the meetings. To the extent I need to I am writing you as well so my disapproval is noted.

I do not believe building a flyover across town lake is in the best interests of the city

I do not believe getting more cars from Slaughter lane to Ceasar Chavez accomplishes anything. I drive Ceasar Chavez almost daily and the idea that getting more cars to Ceasar Chavez somehow improves the City of Austin is without merit.

I do not believe encouraging toll traffic of single rider cars is in the best interest of the City.

I do believe increased bus traffic from the outlying areas is a good idea but I have been told that is not the task of the design team.

I do believe high occupancy vehicle lanes are a good idea to promote carpooling etc. I was told by the design team that did not get as many cars to Ceasar Chavez as toll lanes. I think their statement is true I just think it misses the point that Ceasar Chavez cannot handle any more cars.

I asked where the cars would go when they reached Ceasar Chavez and was told that was not the task of the design team.

All of this indicates to me that we have several different groups working on interrelated projects that are not working together for a real solution. I think designing an expansion of Mopac under these conditions does nothing to accomplish the goal of making Austin a more livable city.

Campo Members,

I am writing to express my concern over the Mopac South Development Project. I know there have been meetings about improvement to Mopac but I feel like all of it has been so piecemeal that we haven't gotten a sense of the entire project. I am opposed to this project but at the very least I ask that you delay moving forward so everyone affected can understand the extent of this initiative.

I am a parent of a high schooler at Austin High School and a number of us have already been concerned about the safety of students at Austin High school if you implement this solution.
I am concerned about the environmental impact because of increased pollution.
I don't believe adding more and higher lanes will truly fix the problem.
Other cities are removing exactly these types of flyovers with great success so I'm wondering why Austin is adding them? We are an innovative city — we don't just need to add more and bigger lanes.

I have many many many other concerns but I feel the need to communicate quickly that I am VEHEMENTLY opposed to this project as is right now. I urge you to delay approval.

To Campo Members,

We are writing you to **oppose** the proposed Mopac South Development Project for the following reasons:

- As a parent of a student at Austin High School it will have a permanent destructive impact on the safety of students at Austin High School.
- It will have a visual, acoustic, and pollution destructive permanent impact on Zilker Park.
- Increased visual, noise and pollution impacts on Lady Bird lake and the hike and bike trail.
- Increased pollution on watersheds and aquifer recharge zones.
- The "flyovers" at Caesar Chavez increase the unsustainability of residential neighborhoods in the west Austin area.
- Finally, the project simply piles more cars on Mopac which exacerbates the back-up at Caesar Chavez, 5th, 6th and Enfield--the funnel effect. The money could be better spent on other projects such as: I 35, finishing the Hwy 290/Hwy 71 expressway beyond the "Y". One stated purpose of the project--"to provide *reliable* times" for the trip from Slaughter to downtown is an impossible goal because there are too many variables besides the size of Mopac--parking downtown being one;

Looking closely at the TxDot plans for future construction in the south and southwest, it is evident that the long term goal is a loop around Austin to function like I35 West--a terrible idea.

I urge you to vote down this over-sized project that will have terrible consequences for Austin's core and in the end will not have an impact on traffic.

Sincerely,

Mimi and Allen Smith

I want to thank you for giving us an opportunity to comment on the proposed Mopac South Expansion Project. **I can't express strongly enough my opposition to the proposed double-decker lane expansion.**

Austin's commitment to its parks and greenbelt is what makes it special. The greatest of these assets is Zilker Park and Auditorium Shores. Nothing should be approved to take aware from these Austin landmarks. The double-decker lanes would create additional traffic and noise while distracting from the park's beauty. It should not be approved.

Subject:	Mopac South flyover support!
Date:	Tuesday, March 31, 2015 8:47:20 AM

Dear Campo Members,

I live in Rollingwood and I am writing to express my strong support for the proposed South Mopac project. I have reviewed the proposal and your process and believe this is a sound approach to the significant traffic problems currently presented by the South MoPac/Cesar Chavez/Lake Austin interchange.

I frequently drive in this area during rush hour taking my sons to sports activities at the Town Lake YMCA. We have to leave Rollingwood at 5:30 to ensure that we arrive at the YMCA by 6:00 p.m.—this is a travel distance of less than 2 miles.

In contrast, we also drive to another youth sports program near Oltorf and I35—I can drive there in 12 minutes and leave Rollingwood at 5:45 to arrive before 6:00 by taking MoPac to 71 to I35 thanks to the improvements at the 71/I35 interchange.

My husband also works at 6th and Lavaca and his travel time has increased significantly over the last five years.

Further, I find it very difficult to visit my mother in Pflugerville because of the slow moving traffic on MoPac.

This improvement will have a significant impact on lives by decreasing the amount of time we spend sitting in traffic and increasing the time we can spend together as a family. Please do it.

Thanks,

-Jen Kuhn

Subject:	MoPac South toll lanes proposal
Date:	Thursday, April 02, 2015 2:25:22 PM

Dear CAMPO,

I am a citizen of Rollingwood and urge you to please postpone decision on building double decker freeway over Lady Bird Lake. With so many community members residing and working in this region it is only fair to provide more time to gather data and share information on the impact this project will have. This area of town joining Lady Bird Lake is full of homes, businesses, parks, and recreational activities. The noise and light pollution a double decker freeway will bring is counter-intuitive to the beauty and preservation of Austin.

Thank you for your consideration,
Carolyn Saathoff

From:	Terri Hall
To:	Capital Area Metropolitan Planning Organization
Subject:	MoPac South toll lanes
Date:	Tuesday, March 31, 2015 8:14:24 PM

Submitted by Terri Hall, Founder/Director, Texans Uniting for Reform and Freedom (TURF), and Texans for Toll-Free Highways, [redacted]

We do not support a toll alternative for south MoPac. MoPac is a major lifeline for local Austin commuters and requiring residents to pay tolls on a DAILY basis in order to gain mobility is not a solution that will meet the purpose and need of the project or the community. Congestion pricing in and of itself is problematic in that it's designed to push cars off of the toll lanes and into the congested free lanes if its deemed traffic moving too slowly on the toll lanes. So it's very design is to service only the very few who can afford the highest toll rates to access the new capacity, especially in peak hours when the vast majority of the traveling public has to use the corridor. Everyone else will be second class citizens stuck in congestion. A free lane carries more traffic than a toll lane and is therefore a better, more affordable, and more feasible alternative that will allow access to all drivers regardless of income or status.

Tolling south MoPac will also divert hundreds of millions of transportation dollars needed to improve traffic flow on I-35 and in preferred growth areas of our region into a project that will make traffic worse, not better. **Toll collections will only pay half or less of the costs; the rest will come from taxpayers.** So everyone is paying for this expansion, which is double taxation, but only the very few, the wealthy, will be able to afford to access it. Tolling is a discriminatory, targeted tax on one corridor and an unfair tax burden on commuters who rely on MoPac, while others get their roads expanded without tolls.

We support a non-toll expansion that's freely accessible to **ALL** users, regardless of status or income.

Subject:	MOPAC SOUTH
Date:	Wednesday, April 01, 2015 2:34:17 PM

1) Please do not approve the amendment to add two toll lanes in each direction on MOPAC SOUTH which creates the need to elevate the roadway at Lady Bird Lake.

2) Require a traffic study to be completed and released to the public that shows current and future trips per day and drive times for the project before and after construction including from Slaughter Lane to Congress Avenue at Cesar Chavez before this project is considered for approval.

3) Until this is studied, please eliminate the Flyover Toll Connection from MOPAC South to Cesar Chavez from the plan.

4) Make sure to study if the Flyover Toll Connection impacts the safety and environment at Austin High School.

5) Additionally do not allow the tollway traffic to use the Cesar Chavez "free lane capacity". The current design places toll traffic in front of the free lanes that merge into Cesar Chavez.

6) Do not allow I35 truck traffic to be diverted to MOPAC via 45.

Barry Bone

From:	Kevin Keim
To:	Capital Area Metropolitan Planning Organization
Subject:	Mopac South
Date:	Wednesday, April 01, 2015 12:40:46 PM

To Whom it May Concern:

We are entirely **OPPOSED** to the proposed Mopac South Development Project.

• We are **opposed** to any project that ultimately has its "end game" the "linking" of Mopac and IH-35, thereby making Mopac an alternate route for IH-35 traffic.

• **Permanent, destructive** impact on the safety of **Austin High School**.

• **Permanent, destructive** impact on **Zilker Park**. (Visual, acoustic, and pollution.)

• **Permanent, destructive** impact on **Lady Bird Lake and the Hike and Bike Trail**. (Visual, acoustic, and pollution.)

• **Permanent, destructive** impact because of obstructive and **UGLY** views from all point along Lady Bird Lake, Auditorium Shores, Zillker Park, Deep Eddy Pool, and the Hike and Bike Trail.

• **Unceasingly** expanding pressures on watersheds and aquifer recharge zones.

In addition to the general reasons I've listed above, there are many specific reasons why we are opposed to the current Mopac South project.

While we oppose practically the entire scope of this project, and question its "intentions" we also vehemently oppose the project for these specific reasons:

• **Increasing the traffic load on Cesar Chavez.** This road is already burdened with too much traffic, damaging the integrity of the Hike and Bike Trail and entire waterfront. (And this traffic will increase even more as the **Seaholm Power Plant** and **Water Treatment Plant** residential developments are completed, not to mention the University of Texas' plans to add upwards of 25,000 residents to the **Brackenridge Tract**, a zone whose only means of egress is Lake Austin Boulevard and Cesar Chavez.) The 3-story "flyway" ramp proposed to funnel significant amounts of northbound Mopac traffic directly onto Cesar Chavez is utterly flawed, **akin to blasting a fire hose into a drinking straw**. It is plainly obvious that the current "gridlock" at all points along Cesar Chavez as well as the intersections of Lamar at 5th and 6th Streets will be made significantly worse if the proposed ramp funnels even more traffic into these streets.

• When many cities (Boston, Portland, Seattle, and San Francisco, to name just a few) have finally realized that major traffic arteries along prized waterways (rivers, bay fronts, and ocean fronts) are not only ineffective insofar as traffic control, they also have profoundly negative consequences for the environment and water quality, for the scenic beauty that all citizens enjoy (not to mention tourists who flock here), and for the general quality of the urban environment. Just **when many cities are REMOVING these types of freeways and ramps, why is Austin now even considering one should be ADDED?** To suggest that a "183-style"

towering ramp is appropriate for the center of Austin is ludicrous.

• When there is **actually very little effort** by our local, regional, and state governments to **SIGNIFICANTLY develop alternative transportation systems**, the proposition that making Mopac bigger will fix traffic is deceptive. Many competent studies have demonstrated clearly that expanding freeways WITHIN THE CONTEXT OF DENSE URBAN ZONES (where linear arteries try in vain to insert traffic into just a few points in the grid) actually produces MORE traffic. We need to dramatically transform alternatives for getting around Austin, including all types of rail, safe and well landscaped broke routes (these should be mandated for every single street and road in the city limits), expanding bus networks, a train to the airport, etc. etc. (As our late mentor Hal Box once said "Austin does NOT need Light Rail. It needs HEAVY Rail.)

Kevin Keim, Director
Charles Moore Foundation (Stakeholder and West Enfield Neighborhood Residents)

NOTE: We also question the reality that **THREE** residents of Williamson County are permanent members of the CAMPO Board, comprising half of its voting power. Why should Williamson County residents should have such a significant "say" in the destiny of transportation development in Travis County, let alone transportation development that SIGNIFICANTLY impacts our neighborhoods and the City of Austin itself?
