Our local toll road authority's (CTRMA) recent proposal to add four toll lanes on Mopac, from Cesar Chavez across Lady Bird Lake and south to Slaughter Lane, if built, will require a double decking of Mopac over Lady Bird Lake, with flyovers connecting to Cesar Chavez alongside Austin High School.

While there is clearly a need to improve East/West traffic flows, I don't believe the current plan adequately addresses the issues of increased noise from both increasing & raising traffic, or the hugely negative impact this project will have on the quality of life for users of Town Lake Trail.

Please take action now to:

1. Explore and release to the public the alternative plans for Mopac expansion over Lady Bird Lake. Address the reasons for creating a raised road, which will negatively impact residential & park areas, versus tunnelling which would address the traffic issues without these negative & permanent impacts.

2. Explore and release to the public plan that will address traffic issues with 2244, Rollingwood Dr, Barton Springs Rd, Barton Skyway and 360 intersections.

3. Explore options that will improve pedestrians and bikes safety coming from West MoPac, including:
A pedestrian walkway over Barton Springs Rd
Traffic Dampening at Barton Springs and Rollingwood Drive in the form of traffic circles or stop signs at Rollingwood Dr & Barton Springs
Sidewalks from the Lady Bird Lake Trail to Bee Caves Blvd (connecting into existing ADA Sidewalks on Bee Caves) and on up to Liberty Park Dr. to connect with the ADA Sidewalks there.

Sincerely,

Brian Julian

I am writing to ask you to delay the vote on the south MoPac raised freeway and to request alternate plans. The sensitive environmental issues must be well studied and considered as a first priority, and the impact of this raised freeway on Zilker Park - the heart of our city - next. We should proceed very carefully.

Thank you-

Cheryl Fries

Date:	Tuesday, March 31, 2015 8:27:32 AM

Delay the vote!
Seek other options!

Lady Bird Lake is a unique aspect of our city. There must be another way to preserve Austin's treasures. In 100 year, in 50 years, in 25 years, we do not want a huge concrete structure in the center of our city. Other ways will be found. Delay the vote. Please try.

Subject: No MoPac flyovers, don"t connect MoPac to I-35
Date: Saturday, March 14, 2015 12:09:52 PM

Name : Tom Thayer
Email : [redacted]
Subject : No MoPac flyovers, don't connect MoPac to I-35
Message : Dear City, County, TxDOT, CTRMA and CAMPO officials:

I have concerns about proposed plans for double deck flyovers on MoPac at Town Lake. Lanes can be added to MoPac without unsightly flyovers ruining views of the lake and Zilker Park. I imagine that those flyovers will add quite a bit of expense to the project.

I am also concerned about connecting MoPac to I-35 via SH 45. MoPac traffic is bad enough already, but we don't need semi trucks and other traffic from I-35 overwhelming the road. That would route through traffic and Hays County traffic through SW Austin. If SH 45 is built, it should only connect MoPac to SH 1626. The current planning for SH 45 needs to consider whether or not it will be used to connect to I-35. We should not be considering it on isolation.

Thank you.

Tom Thayer

To: Capital Area Metropolitan Planning Organization
Subject: NO MORE MOPAC EXPANSIONS! NO Double Decker! NO more toll lanes! NO connection to I35 via SH45!
Date: Tuesday, March 31, 2015 10:15:18 PM

My family and I and all our neighbors and friends say:

NO TO MORE MOPAC EXPANSION!

NO double decker

NO more toll lanes.

We say NO to connecting I35 to Mopac via SH45 SW!

This proposal is WRONG: A DOUBLE DECKER MOPAC WITH ADDITIONAL TOLL LANES (GOING FROM A TOTAL OF 4-6 LANES TO A PROPOSED 12 TO 14 LANES!!!).

This WILL DECREASE OUR QUALITY OF LIFE, ESPECIALLY AROUND:

ZILKER PARK,

THE BOTANICAL GARDENS,

AUSTIN NATURE CENTER,

THE HIKE AND BIKE TRAILS (JOHNSON CREEK AND LADYBIRD LAKE)

AND AUSTIN HIGH SCHOOL

AND ALL OUR NEIGHBORS ON BOTH SIDES OF MOPAC!!!!

BY ENCOURAGING THE I35 TRAFFIC OVER TO MOPAC IT WILL BECOME A THOROUGHFARE FOR MORE TRACTOR TRAILER/SEMI TRUCKS

AND GIVE US EVEN WORSE TRAFFIC AND AIR QUALITY THAN MOPAC AND NEIGHBORHOODS (within 2 miles, studies say) ALREADY HAVE!!!

My lungs cannot take this!!!! (I use the Johnson and Ladybird trails daily for bike commuting and walking pleasure)

"This toll road expansion will pave over what we love about Austin," cautioned Roy Waley, Conservation Chair for the Austin Regional Group of the Sierra Club. The double-decker

bridge will significantly degrade the Lady Bird Lake experience and the area around Austin High School, Zilker Botanical Gardens, and the Austin Nature Center."

I join KeepMopacLocal.org in writing:

Dear CAMPO, City, County and State officials:

In tonight's public meeting officials were unable to answer our questions on the impact on the WHOLE SH 45 SW /MOPAC western loop, as well as failing to adequately answer our questions for how the proposed expansion will affect and accommodate ingress/egress onto Cesar Chavez.

They also failed to adequately address the deteriorating air quality and increasing noise pollution on Johnson Çreek Hike and Bike trail and Lady Bird Lake Trails...not to mention IN OUR HOMES AND OUR YARDS and IN THE LUNGS OF OURSELVES, OUR NEIGHBORS AND OUR CHILDREN!!!!

NO MORE TOLL ROADS on MOPAC!

NO MOPAC DOUBLE DECKER LANES!

NO CONNECTION ON SH 45SW WITH I35!!

KEEP MOPAC LOCAL!!!!!

Instead we need a good rapid transit plan (think gondola or other cost effective, low impact/footprint plan)!

We also need efficient bus service between the Dripping Springs and Budas and Round Rocks of our region and downtown Austin.

We also need smart traffic signs on S. and N. I35 to direct Austin through-traffic directly onto SH130. I've heard there is 15% through traffic, including semi/tractor trailers. If we put up directional signs stating the traffic delays going through Austin (an hour or so, at least) and point out that SH130 is free flowing, then traffic can be successfully diverted in the time it takes to put up a few smart signs (and to build better access roads to SH 130, especially south I35 between Buda and San Antonio).

WE MUST BAN THROUGH-TRAFFIC, ESPECIALLY THE TRACTOR TRAILERS and push that traffic over to SH130. WHY DID WE BUILD THAT IF WE AREN'T GOING TO REQUIRE THROUGH-TRAFFIC TO USE IT!?!?!? That would give us an immediate 15% reduction in traffic on I35. EASY SOLUTION.

As you may know, in May and April CAM PO is set to vote on a request from our local toll road authority, CTRMA, to build a continuous tolled loop around Austin. But CTRMA doesn't want to be honest with the public on this loop plan. Instead, they have chopped up their tolled loop plan into four pieces, refusing to look at the whole loop project and alternatives that would better serve Austin mobility.

Most recently, CTRMA proposed to add, 4 tolled lanes on Mopac from Cesar Chavez to Slaughter Lane. This plan would require a double-decker bridge over Lady Bird Lake and connecting bridges through Zilker Park, Austin High School, and Barton Creek greenbelt property.

Please take action now to:
1. Remove the proposed new 4-toll lanes and double-decker bridge on Mopac over Lady Bird Lake from the proposed 2035 and 2040 long-range transportation plans.

2. Remove the proposed tolled-SH 45 SW and Mopac expansion loop, which would convert Mopac to an alternative Interstate 35 route, from the proposed 2040 long-range transportation plan.

3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway by removing the proposed connection of Interstate 35 to Mopac via the proposed SH 45 SW

4. Halt any action to build Phase I of SH 45 SW over the Barton Springs recharge zone or otherwise extend South Mopac until there is a comprehensive study of all of the costs and impacts of building a an expanded Mopac/SH 45 SW tolled loop connection to Interstate 35.

sincerely,

amanda moore

Dear CAMPO, City, County and State officials:

We all know you can't build lanes to reduce traffic - how many other cities have already learned this lesson. JUST ASK ATLANTA.

We need to do more with STAGGERED COMMUTE TIMES, TELECOMMUTING and efficient methods not spending billions that we don't have on something that won't work to reduce traffic anyway.

As you may know, in May and April CAM PO is set to vote on a request from our local toll road authority, CTRMA, to build a continuous tolled loop around Austin. As a long-time Austin resident and someone who pays the price to live in central Austin, it appears our public officials are sacrificing the people who live in Austin so that folks in Williamson and Hays county can have a nicer commute. You will destroy the crown jewel of Austin, which is Lady Bird Lake.

There are several other options to help solve our traffic problems, such as improving I35 through Austin, and encouraging big commercial trucks and cars to use Hwy 130 by reducing or eliminating its tolls. Please consider these solutions before agreeing to destruction of more natural beauty in Austin, and the addition of MORE traffic onto downtown streets by those proposals described above. Thank you!

Sincerely,
Karl and Janice Buesing

As a native Austin-ite, I learned and grew in the city and had the benefit of enjoying the comfort of an easy-going Austin that respected the beauty of the nature embedded within it. Extensive toll road plans will overwhelm the nature that exists in the city, and pose an unfair burden on low-income families in the city. Toll roads do not serve all the residents in Austin. I believe a solution is out there, one that may require removing roads and engaging residents in other forms of transportation, and that the team of experts drafting that vision have the skills and knowledge to find a solution that does not ignore community input.

Thank you for your attention and continued efforts to improve Austin.

To whom it may concern,

I am a resident of Rollingwood and am very opposed to the proposed amendment to add a double decker lane above MoPac between Cesar Chavez and Bee Caves Rd. This concept was only recently publicly announced, with only one public comment forum, and you are proposing to act on it within the next few weeks? That does not illustrate political transparency to me.

This radical change to MoPac will negatively impact our quality of life in many ways: it will be an unsightly addition to the scenic central and west Austin skyline; it will create noise pollution (which may end up with sound barrier panels, which seem extremely aesthetically offensive to me); it will create considerable light pollution for the neighboring parks, neighborhoods and schools; and it will negatively impact the Edwards Aquifer Recharge zone. It will not benefit a huge portion of central Austin residents either. Many of my neighbors agree--we DO NOT WANT THE DOUBLE DECKER!

Please try to explore other alternatives before you hastily push this through. If it means you cannot use the outdated 2000 census information and must go back to the drawing board using the 2010 info, so be it.

I think if lanes truly need to be added, go horizontal before vertical. But my preference would be to stick to the smaller number of additional lanes. I am very worried that there are unspoken plans to create a loop with 45 and MoPac to divert major amounts of traffic from IH35. We do not want another IH 35 running through Zilker Park, adjacent to Barton Springs. Work hard to promote 130 for the diverted traffic--that is why it was built! If you need to remove or lower tolls on 130, please explore that option.

Please do not push this through in such a hurried and inaccessible manner. Take the opinions of central Austin area residents into account and find another way to proceed with the MoPac expansion that does not involve a double decker expansion.

-Shelly Bain

Subject:	Opposition to MoPac South Expansion
Date:	Wednesday, April 01, 2015 3:52:01 PM

I strongly oppose the recently proposed expansion of Mopac South from two express lanes to four lanes and the addition of an elevated section spanning Lady Bird Lake. Four tolled lanes over Lady Bird Lake - including the possibility of two lanes elevated 25 feet above the existing raised roadway - will negatively affect the surrounding areas. Zilker Park, the crown jewel of the Parks Department, encompassing Barton Springs Pool, Austin Nature & Science Center, Botanical Gardens, Zilker Hillside Theater, and Zilker Clubhouse will be negatively affected. Lady Bird Lake, Butler Hike and Bike Trail, Austin High School and surrounding neighborhoods on both sides of the lake will suffer from noise pollution, visual obstructions, and water quality issues. Additionally, no clear plan exists on how connections from the express lanes to Cesar Chavez will be laid out or how to alleviate the congestion that will result from dropping cars on to a road with few cross
streets able to shunt off traffic flow.

I believe these new proposals indicate the intention to use Mopac as an alternative route to Interstate-35. I am opposed to such a plan. Therefore, for this reason and the reasons stated above, I urge you to omit the four (rather than two) tolled lanes and elevated section over Lady Bird Lake from the 2035 and 2040 long range transportation plans and also remove the proposed plans to build tolled SH 45 SW.

Thank you.

Subject:	Opposition to proposed MoPac South expansion
Date:	Thursday, April 02, 2015 2:05:43 PM

Dear Sirs and Madames:

I am opposed to the proposed MoPac South expansion that would provide for an additional four lanes of traffic and a double decker bridge over Lady Bird Lake. I am opposed to this plan for multiple reasons, including:

Significant impact on the health and safety of Austin High School students as well as the effects on the playing fields of WAYA off Cesar Chavez

Increased visual, noise, and pollution impacts on the Lady Bird lake, the hike and bike trail and Zilker Park

Significant impact on surrounding west Austin neighborhoods with increased noise and pollution

I believe the money allotted to this program could be better spent on other projects such as fixing the back ups at the Y in Oak Hill.

I strongly urge to vote no on this project.

Sincerely,
Susan Dozier

Subject: personal message on Study the whole Mopac/45SW toll loop first; keep Mopac local
Date: Saturday, March 14, 2015 11:34:54 AM

Name : Frank Berlanga Jr
Email : [redacted]
Subject : Study the whole Mopac/45SW toll loop first; keep Mopac local

Dear City, County, TxDOT, CTRMA and CAMPO officials:

As a small business owner that works in the field, I drive daily on Austin's road ways. Other than the reasons listed below,

Tell the truth – Study the whole proposed Mopac expansion/SH 45 SW toll loop as a loop project; stop the piece meal approach;
2. Study ALL of the impacts and ALL of the costs first – before building SH 45 SW or any piece of the propose 45SW/Mopac toll loop;
3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway; and
4. Any Mopac expansion should be limited, without double decker flyovers through West Austin, Zilker Park, and Austin High School

Please consider the long term effects of this endeavor. Who really benefits? Is it purely for economic gain that benefits few, it usually is. Seriously consider what it does to our beautiful Lady Bird Lake. This is one of the main draws and beautiful features of our great city. Think of how much more pollutants will go into it. Think Long Term! Consider the legacy you leave to our children. Don't leave a mess for them to clean up. That's already been taken care of by previous generations. Don't contribute to that bad legacy. It's simple, keep it local, leave I35 where it is. Don't bring it over the lake. Please do the right thing.

Subject:	Please delay MoPac expansion plan
Date:	Wednesday, April 01, 2015 11:09:38 AM

I have lived in the Austin area for almost 42 years and am very concerned to learn of the poorly-publicized plan to expand Mopac South via an elevated bridge of tolled lanes over Lady Bird Lake and an extension of SH45 to IH35.

1) I ask that CAMPO remove this bridge from the 2035 and 2040 expansion plans. What a desecration this would cause to Zilker Park, Lady Bird Lake, Barton Springs, and Barton Creek, as well as to adjacent neighborhoods.

2) I ask that CAMPO be very transparent to residents in Travis and surrounding counties: Publicize plans via newspapers, radio and television, neighborhood associations, as well as via social media. Allow adequate time for public comment.

3) I ask that CAMPO keep MoPac a local highway, not a route for freight-bearing vehicles detouring from IH35 via SH45. Assess the needs of those who live in Travis and surrounding counties - e.g., can freight-bearing trucks from north and south be detoured to Hwy 130, as proposed by one of our State legislators?

Thank you for considering resident responses.

Maria Abernathy

From: Ivy Ford
To: Capital Area Metropolitan Planning Organization
Subject: Please Vote NO to the CTRMA proposal
Date: Tuesday, March 31, 2015 8:26:26 AM

Dear CAMPO, City, County and State officials:

As you may know, in May and April CAMPO is set to vote on a request from our local toll road authority, CTRMA, to add 4 tolled lanes on Mopac from Cesar Chavez to Slaughter Lane. This plan would require a double-decker bridge over Lady Bird Lake and connecting bridges through Zilker Park, Austin High School, and Barton Creek greenbelt property.

Please take action now to:

1. Remove the proposed new 4-toll lanes and double-decker bridge on Mopac over Lady Bird Lake from the proposed 2035 and 2040 long-range transportation plans.

2. Explore and release to the public the alternative plans for Mopac expansion over Lady Bird Lake.

3. Adopt the 2040 plan, instead of the 2035 plan. Use the more current 2010 Census Data in planning the infrastructure of our City of Austin.

VOTE NO on the CTRMA proposal!

Thank you,
Ivy Ford

Date:	Wednesday, March 25, 2015 12:40:20 PM

Hello,

I'm writing to lodge a complaint and my lack of support for the proposal to build a double-decker toll lane on MOPAC from Cesar Chavez across Lady Bird Lake and south to Slaughter Lane. It is a terrible idea, one that will negatively affect the quality of life, property values and ecology of surrounding areas. Please do NOT approve the double-decker toll lanes. It would be a monstrous mistake.

From:	Dana Hollingsworth
To:	Capital Area Metropolitan Planning Organization
Subject:	Proposed Elevated Lanes on MOPAC
Date:	Wednesday, April 01, 2015 12:33:32 PM

Dear CAMPO, City, County and State officials:

CTRMA proposes to add a double-decker bridge over Lady Bird Lake and connecting bridges through Zilker Park, Austin Nature Preserve, Austin Botanical Garden, Austin High School, and greenbelt property.

I have traveled MOPAC in the mornings twice this week and there does not appear to be a problem with traffic going into downtown. The traffic flows fine on the current off ramp. It does not seem that there has been sufficient study to determine if there needs to be an additonal ramp into downtown based on traffic flow.

We are very concerned about the environmental impact of the proposed double decker addition through Rollingwood, through the Austin Nature Preserve and Botanical Garden and over Lady Bird Lake/Town Lake. Noise, disruption to wild life and plant life, the unsightly nature of an elevated highway, reduction of property values, and disruption of views from impacted properties, are the biggest concerns at this time.

If a study reflects that additional lanes are needed into downtown, there must be a comprehensive study of all options to make any additional lanes at the level of the current lanes rather than elevated over the current lanes.

Please take action now to:

1. Remove the proposed double-decker bridge on Mopac over Lady Bird Lake and through the Austin Nature Preserve and Botanical Gardens from the proposed 2035 and 2040 long-range transportation plans.

2. Halt any action to build Phase I of SH 45 SW over the Barton Springs recharge zone and through the Austin Nature Preserve and Botanical Garden and over Lady Bird Lake, until there is a comprehensive study of all of the alternatives and all of the environmental impacts, including the negative impact on property values on properties impacted by increased noise, the unsightly nature of proposed elevated lanes costs, disruption to wild life in the Nature Preserve and plant life in the Botanical Garden.

Thank you for your consideration.

Date:	Wednesday, April 01, 2015 3:29:54 PM

I object to the proposed Fly Over because of the potential increased noise it would cause. I live 1.1 mile from the present Mopac and noise is already a problem. Adding four more lanes at an elevated height will make this much worse. Since spending taxpayer's money doesn't seem to be a problem why not solve the problem once and for all and build a tunnel under Lady Bird Lake.

Chet Geist

From:	Holly Reed
To:	Capital Area Metropolitan Planning Organization
Subject:	Proposed Mopac South Expansion
Date:	Wednesday, April 01, 2015 6:17:34 PM

Campo Members,

I am adamantly opposed to the proposed Mopac South Development Project. This is not the solution to Austin's traffic congestion problems, and will create a host of new problems for the city neighborhoods, for Austin High School, and for the downtown core. Bringing more cars faster to already congested streets like Cesar Chavez, and 5th and 6th streets will cause gridlock.
I am very much opposed to the elevated lanes over Lady Bird Lake and the flyover next to Austin High School. The noise and environmental impact will threaten the beauty and peacefulness of Zilker Park and the Town Lake Trail, not to mention create terrible hazards for Austin High School students.
As a lifetime resident of Austin, I ask that you please vote against this terrible proposal, and look to other solutions for Austin's traffic problems: Expand I-35, Rail, Encourage downtown based businesses to have branch offices in Round Rock, Pflugerville, Cedar Park, and other outlying communities so that so many people do not have to drive into Austin's downtown everyday. This was Mayor Adler's suggestion, to decrease the number of cars on Mopac heading into downtown! This TxDot proposal will INCREASE the number of cars funneling into downtown. Our city streets cannot take any more traffic.

Please vote against this project.

Thank you,
Holly Reed

From:	Wendi Hundley
To:	Capital Area Metropolitan Planning Organization
Subject:	PUBLIC COMMENT - CAMPO TRANSPORTATION POLICY BOARD
Date:	Monday, March 23, 2015 8:13:39 AM

I REQUEST THIS COMMENT BE MADE PUBLIC AND INCLUDED IN THE INFORMATION FOR THE NEXT MEETING OF THE TRANSPORTATION POLICY BOARD.

Dear Board Members,

The N. MoPac Express Lane from Slaughter to just before the MoPac bridge has enough right-of-way for the Express Lanes to have 2 lanes in both directions. However, once the N. Mopac Express Lane reaches the MoPac bridge (our current bottle neck area) there is only room for one express lane in both directions (from Town Lake to183/Research area). So, the Express Lane system will bottleneck and face similar issues to what we face now. With no cap on the toll it will be a premium to get into that one faster north bound Express Lane.

At the meeting one of the representatives said in referring to the Double Decker "When the 2-lanes end and we have to drop down to one lane, we have to do something with the extra lane". The "something" they chose to do is an elevated double decker bridge over Zilker Park and residential neighborhoods.

The representative said there are other alternatives which have explored: Widening the bridge which will mean some park land will need to be taken into the right of way. 2) Going under instead of over. 3) reconfiguring the existing 1st and 5th street exits. The truth is they should only be bringing one toll lane into the area, not 2!

Please don't approve the amendment to add two toll lanes in each direction. Any expansion in this area should be limited, WITHOUT double decker flyovers through West Austin, Zilker Park, and Austin High School.

Best Regards,
Wendi Hundley

- Austin High School

Please attend the March 31st forum to learn about the proposal to construct four toll lanes on Mopac, between Cesar Chavez and Slaughter Lane. The **proposal includes elevated lanes over Lady Bird Lake with a flyover next to Austin High School** onto Cesar Chavez.

This toll road project is a proposal from the CTRMA, our local toll road authority, and TxDOT. The CAMPO Board, our region's transportation authority, will be voting soon on whether to approve this proposal and the public comment deadline is April 2nd.

The Community Forum will include presentations by CTRMA on the South Mopac proposal and by Keep Mopac Local (a coalition of concerned community groups). The forum will also include a question/answer session.

For more information, please contact Barbara Rush at (512) 925-2271 or Barbara.Rush@traviscountytx.gov.

Subject:	Say NO to southward expansion of toll roads.
Date:	Wednesday, March 25, 2015 8:33:25 PM

My train of thought has left the station without me. I am concerned about both noise and - especially - air pollution to our students at Austin High School, including my own grandson.

I don't want this extra roadway surface that will pollute rainwater and dump some it in Zilker Park, Lady Bird Lake, and the Barton Aquifer recharge zone.

Expansion to this area should remain limited, and I certainly object strongly to the proposed double deck fly-over AND any plans for south of the river proposed by CTRMA. Haven't the authorities figured out how negatively we citizens feel about toll roads by now?

I thought that concerned citizens, environmental groups and other groups had alerady objected to the Toll Roae Authority about this planned expansion and provided adequate reasons why it is not a good idea to push this through at this time without additional study.

I'm angered that these sentiments have been expressed for some time and have been ignored by CTRMA, which I see as a bully that will not take No - or even Slow Down - as an answer. CAMPO, which appears to be pushing this plan on a reluctant public, is looking no better.

SLOW DOWN!!!!
Check the facts and listen to the people.

Subject : Oppose Mopac 4 toll lanes expansion loop; keep Mopac local
Message :

Dear CAMPO, City, County and State officials:

I am absolutely against the proposal to make MOPAC into a tolled and connected to I-35 thorough fare for trucks. Look eastward. We already approved and build 130. Make it useful to gets truck off I-35. Then use I-35 to reduce load on MOPAC. Stop this madness. Please.

As you may know, in May and April CAM PO is set to vote on a request from our local toll road authority, CTRMA, to build a continuous tolled loop around Austin. But CTRMA doesn't want to be honest with the public on this loop plan. Instead, they have chopped up their tolled loop plan into four pieces, refusing to look at the whole loop project and alternatives that would better serve Austin mobility.

Most recently, CTRMA proposed to add, 4 tolled lanes on Mopac from Cesar Chavez to Slaughter Lane. This plan would require a double-decker bridge over Lady Bird Lake and connecting bridges through Zilker Park, Austin High School, and Barton Creek greenbelt property.

Please take action now to:
1. Remove the proposed new 4-toll lanes and double-decker bridge on Mopac over Lady Bird Lake from the proposed 2035 and 2040 long-range transportation plans.

2. Remove the proposed tolled-SH 45 SW and Mopac expansion loop, which would convert Mopac to an alternative Interstate 35 route, from the proposed 2040 long-range transportation plan.

3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway by removing the proposed connection of Interstate 35 to Mopac via the proposed SH 45 SW

4. Halt any action to build Phase I of SH 45 SW over the Barton Springs recharge zone or otherwise extend South Mopac until there is a comprehensive study of all of the costs and impacts of building a an expanded Mopac/SH 45 SW tolled loop connection to Interstate 35.

Subject: South Mopac Expansion
Date: Monday, March 09, 2015 10:54:22 PM

You have not allowed enough time for the citizens to read what is being proposed, ask questions (it's virtually impossible even to find out how to contact anyone to voice an opinion), and have input. The engineering plan has only recently been revealed, and the haste with which you're expecting people to swallow this mass of information seems calculated to dampen public opinion and participation. Austinites are truly sick and tired of having these major spending and transportation plans crammed down our throats without enough time to make our voices heard.

It seems you're trying to alleviate I-35 traffic by increasing it on Mopac, instead of diverting the trucks off I-35 as they should be, and could be, if you reduced the tolls by half, or even made it compulsory for trucks to get off I-35. Why don't you try something immediate and simple instead of proposing lane expansions, tolls, and flyovers on Mopac that will not solve the problem and will have major environmental impacts?

I'm sure no one on CAMPO recalls, but Mopac was sold to Austinites as a "Parkway" and we were specifically told there would be no heavy truck traffic on it. Neighborhoods were cut in half to build it and now you want to turn it into I-35 west, further decimating livability in Austin. . .with no guarantee that it will do anything except cost every commuting citizen more money. Has anyone actually calculated how much an Austinite could end up spending annually to use it?

Get a more representative CAMPO makeup, and lose the tunnel-vision developers who can't seem to come up with anything more than the tired old ideas they continue to push.
And incidentally, I see plenty of pleas for me to take your survey, but when I click on them there's no survey. . .possibly that's why you're not hearing from the people.

I don't see the need for the upper deck over the river. I drive that section a lot and want to see the exits incorporated into the existing tiers of roadways. Besides, Caesar Chavez and 5th already seem to be at capacity at rush hour. If it's an inconvenience for tollway drivers to use existing exits, so be it.

Subject:	South Mopac Project
Date:	Wednesday, April 01, 2015 8:48:01 PM

Dear CAMPO members and Travis County Commissioners:

As a resident of Rollingwood, I want to express my opposition to the SouthMopac plan currently undergoing study/review/vote by CAMPO, CTRMA, and Tx DOT. Please do not support this plan.

I feel like the plans are not well thought out, and do not offer the type of solutions that Austinites are looking for. Unlike Houston or Dallas, some of Austin's most congested areas are also our most popular, beautiful gems of our city. We cannot propose plans that will add more concrete and roadways over precious park land, natural caves like Flint Rock Ridge, and Lady Bird Lake.

Please do not support the plans to join together the two ends of SH 45 to make MoPac an alternate state highway for I-35 traffic. Austinites who live and work here do not want this. Please use 130, the road that was most recently built to divert the traffic from I-35. Please keep MoPac for local commuter traffic. Please DO NOT support an elevated section of Mopac near Lady Bird Lake, Rollingwood and Austin High School.

More creative solutions must be used. Austin is unique in the way that is was originally laid out. Many people express the feeling that the roads were not built for this much traffic and that is true! But, do we tear down and change so much of what makes Austin unique and special just so that more cars can drive through? No, we do not. As an environmentally conscious city, this is not the answer for our traffic plans.

Well designed commuter trains, public transit, staggered business work starts and HOV lanes are a place to start thinking about how we can manage the traffic in a way that preserves the very thing that everyone is moving here for! No one that lives in Austin wants another Houston or Dallas. Please do not vote for these plans and please allow more time for community input.

Sincerely,
Ann Bernard

Subject: South MoPac toll road plans
Date: Tuesday, March 31, 2015 2:36:57 PM

I strongly object to the proposals to date to expand MoPac toll roads south of Lady Bird Lake.

The 2035 plan does not include two elevated toll lanes, which are a radical and ill-considered route. The plan includes one, which is plenty - if CAMPO adequately addresses more basic issues that cause congestion on MoPac south of the river.

They include dangerous on-off areas, such as where cars are forced to cross in front of incoming traffic to reach 2244 (going west). Exiting southbound MoPac at 2244 from my regular commute from UT and North Austin requires me to move over three lanes of traffic to reach Bee Cave Road. In peak travel times, it's both difficult and dangerous to make that move. Cars are backed up on the South MoPac service drive while everyone tries to avoid a crash. Who designed that off-ramp in the first place?

There is the related issue of the tangle from eastbound Cesar Chavez onto southbound MoPac, another traffic engineering nightmare. Where is any discussion about the eventual development of the Brackenridge Tract and how that will affect MoPac access?

I would like to see smarter alternatives than double-decker, double-lane toll roads over the lake. I understand there are environmental issues with adding surface-level lanes, but surely Texas has more road engineering ability than the elevated lanes suggests.

From: Richard Noster
To: Capital Area Metropolitan Planning Organization
Subject: South Mopac
Date: Wednesday, April 01, 2015 4:55:06 PM

I urge you to allow more time for public consideration and comment before voting on the plan to expand Mopac to 10 lanes from Lady Bird Lake to Slaughter.
The additional flyover connector to downtown as part of a last minute revelation of a much greater expansion of Mopac South is very controversial.
The connection of I35 to Mopac by SW45 presents many issues as well.
The piecemeal release of the details and the last minute release and rush to push through these projects also adds to further erosion of the public trust.
Please allow for further consideration and public input on this very large issue for our Central Texas region.

Please accept the forwarded message below in your consideration of the proposed 2035 Plan Amendment to add 4 tolled lanes on Mopac South

I'm very worried about pollution, water quality, noise, extra traffic, etc. The double-deckers on I-35 are dangerous and confusing, and cause lots of traffic issues with people trying to get over multiple lanes in a short time. And as we've seen, adding more capacity just means more people drive.

Message : Dear City, County, TxDOT, CTRMA and CAMPO officials:
Don't know about honest or not, but the 4 new lane double-decking proposal has come up with WAY to little notice.

Please join us in telling CTRMA and TxDOT to:
1. Study the whole proposed Mopac expansion/SH 45 SW toll loop as a loop project; stop the piece meal approach;

2. Study ALL of the impacts and ALL of the costs first – before building SH 45 SW or any piece of the propose 45SW/Mopac toll loop;

3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway; and

4. Any Mopac expansion should be limited, without double decker flyovers through West Austin, Zilker Park, and Austin High School

Dear City, County, TxDOT, CTRMA and CAMPO officials:

We don't need more roads for automobiles in Austin. We need a plan for mass transit. Let's consider putting in a rail line along MOPAC instead of adding more lanes of traffic. More automobile lanes will just bring more of the same problems we face today: congested roads, noise and poor air quality.

Sincerely,

Ann Laubach

Dear City, County, TxDOT, CTRMA and CAMPO officials:

As you may know,TxDOT and our local toll road authority, the CTRMA, are trying to build a continuous tolled loop around Austin, but they don't want to be honest with the public on this loop plan. Instead, they have chopped up their tolled loop plan into four pieces. CTRMA and TxDOT are now asking for public comments on just one piece of the proposed toll loop: adding two toll lanes in each direction along Mopac from Cesar Chavez south to Slaughter Lane. Please join us in telling CTRMA and TxDOT to:

1. Tell the truth – Study the whole proposed Mopac expansion/SH 45 SW toll loop as a loop project; stop the piece meal approach;

2. Study ALL of the impacts and ALL of the costs first – before building SH 45 SW or any piece of the propose 45SW/Mopac toll loop;

3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway; and

4. Any Mopac expansion should be limited, without double decker flyovers through West Austin, Zilker Park, and Austin High School

Please keep MOPAC for local traffic by voting no to an outer loop, no to MOPAC expansion, and no to double decker MOPAC. Thank you for your consideration of my request.

Message : Dear City, County, TxDOT, CTRMA and CAMPO officials:

As you may know,TxDOT and our local toll road authority, the CTRMA, are trying to build a continuous tolled loop around Austin, but they don't want to be honest with the public on this loop plan. Instead, they have chopped up their tolled loop plan into four pieces. CTRMA and TxDOT are now asking for public comments on just one piece of the proposed toll loop: adding two toll lanes in each direction along Mopac from Cesar Chavez south to Slaughter Lane. Apparently part of the plan includes double decking Mopac over Lady Bird lake and creating fly over ramps along the lake near Austin High School. Austin is fortunate to have Lady Bird Lake as a centerpiece, and the plan threatens to scar one of the area's scenic treasures with unsightly infrastructure not made for the good of the entire community, but rather for those who are able and willing to pay a toll for the privilege to use it. Unlike cities like Houston that often place the desires of land developers above other community needs, Austin has a tradition of honoring its unique assets, with the view corridors of the State Capital being just one example. The South Mopac/SH 45 tolled loop proposal undermines that tradition. Not even I-35 is double-decked at Lady Bird Lake, yet CTRMA proposes to do that and more to Mopac so that more toll roads can be built. Toll roads can serve a good purpose when they are used to bring infrastructure to places more quickly than government budgets might otherwise allow. That good purpose is not served when toll roads are placed in the center of town on top of already existing public roads. Perhaps some land developers and contractors need this proposed project. Austin does not.

Please join us in telling CTRMA and TxDOT to:

1. Tell the truth – Study the whole proposed Mopac expansion/SH 45 SW toll loop as a loop project; stop the piece meal approach;

2. Study ALL of the impacts and ALL of the costs first – before building SH 45 SW or any piece of the propose 45SW/Mopac toll loop;

3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway; and

4. Any Mopac expansion should be limited, without double decker flyovers through West Austin, Zilker Park, and Austin High School

2. Study ALL of the impacts and ALL of the costs first – before building SH 45 SW or any piece of the propose 45SW/Mopac toll loop;

3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway; and

4. Any Mopac expansion should be limited, without double decker flyovers through West Austin, Zilker Park, and Austin High School.

Making the "loop" on South Mopac means:

1. Exposing established suburban neighborhoods to increased urban pollution and transient traffic.
2. Paving the Barton Springs Edwards Aquifer recharge zone.
3. Putting a highway through significant cave areas, public parks/trails, and endangered species habitat.
4. Enabling sprawl development that will reduce available water supplies and open space.
5. Robbing limited transportation funds from much higher priority local transportation needs.
6. Further transform this once peaceful, quiet, and beloved city into a bustling metropolis.

KEEP MOPAC LOCAL AND FRIENDLY TO OUR COMMUNITY AND OUR NATURAL LEGACY.

Thank you,

Seems to me all toll roads are nothing more than a source of double taxation in this state. There was a time when all highways in Texas were built on a pay as you go basis. Now we have toll road authorities all over the state. Just how did that happen? I never voted for any of them. Neither did the majority of Texans. Seems to me, if the state and TXDOT needs a little more money for highway construction, the state would increase the gasoline taxes a few cents to cover the costs. Since that has not happened or anything even close to it, I can only assume the politicians and huge oil companies in the state, such as Exxon Mobil, Valero, Chesapeake, and others have the state and local politicians in their pocket. Further, I intend not to give up on this subject. Texas must know something seems to be rotten in Denmark.

Connecting I-35 traffic to Mopac is misguided and a bad decision. Already, the traffic comes to a standstill for most of every workday. Adding traffic to this local highway is ludicrous. Additionally, thinking of adding more toll roads in the environmentally sensitive area of Barton Creek, Lady Bird Lake and Zilker Park is mind-boggling. Already the run-off from Mopac is having an impact.
Yes, there needs to be improvements--but why MOPAC?
I drove for three years back and forth to San Antonio on I-35. I live in central Austin and many times it took me as long to get from downtown San Antonio to Ben White as it did to go from Ben White to central Austin. So what do we do?
Don't rely solely on Mopac. What are the other options? After 34 years in this city I've seen what inaction and the reliance on old technology and old thinking does to the transportation and the ability to move people.
Building all the toll lanes on Mopac will not help. I who drive Mopac almost every day will not use them--the entrances and exits are not convenient to me. Bringing MORE traffic to MOPAC will not help.
Study the impacts--all of them--and then come up with a viable solution. We live in Austin because of the lifestyle. Don't kill it with roads that destroy.

please do not add the proposed expansion to Mopac. Our communities have already been changed due to the addition of two lanes. The noise will be unbearable and so will the landscape of our loved communities. We do not want to become Dallas or Houston.

Comments on Flyover Proposal
March 9, 2015
Suddenly, on February 26, we are presented with last minute, additional modifications to
MoPac's extension plans for FLYOVERS, while limiting citizen input to less than 2 weeks? And now just hearing about it???? Is this fair or even legal? In an era facing
unprecedented environmental catastrophes, is it wise to increase heat gain, dependency
on the car and more water quality issues? Not to mention the additional 100s of million
dollars from unknown, undisclosed sources (taxpayers???) for such flyovers?
Are we not killing the goose that laid the golden egg by erecting flyovers in the heart of
Austin next to Zilker Park? Ouch!
I live at 612 Deep Eddy Av, at the junction of MoPac and Lake Austin Blvd; my husband
has occupied our 100 year-old historic home since 1974; for myself, since 1996. To be
asked to endure such flyovers in our neighborhood goes against every thing we approved
and envisioned. At the heart of the issue is increased environmental, noise and air quality
degradation, (there is yet to be released environmental impact statements on your website) and throws even more heat gain into this neighborhood from cars, and increased
concentration of concrete.
The historic Johnson Creek has been irreversibly damaged from the 1st MoPac construction/runoff -- it no longer flows; with the flyovers, Lake Austin will face even
greater issues of run off and decline. Take a walk through the soccer fields of Zilker Park
and listen to the traffic noise, which I do almost every day; isn't it reasonable to assume
that the high noise level that exists now from MoPac will be magnified exponentially
with flyovers? Which are almost impossible to soundproof because of the elevations?
And, yes, when will the environmental studies for MoPac extension be released to the
public????
We have been good care providers of a piece of Austin history; yet at every turn, in

the
last 15 years, we have been inundated with local, county and state governmental policies
and decisions that make it less and less desirable and possible for us to keep this property.
In a neighborhood that exemplifies what Austin was once all about.
I ask that you please extend the cut-off date past today, March 9, and allow more time for
public input for this LAST MINUTE PLAN FOR FLYOVERS, and better yet, take this last minute, sad, sad plan for inner-city flyovers totally off the books.

Message : Dear City, County, TxDOT, CTRMA and CAMPO officials:

4. Any Mopac expansion should be limited, without double decker flyovers through West Austin, Zilker Park, and Austin High School

Additional concerns:
We were only given an 11-day online comment period (Feb. 26 open house & comments due by Mar. 9 - should extend it to April 2.
What are the impacts on Cesar Chavez and 5th Street?
Impacts to Austin HS (traffic, noise, air pollution, danger to young students driving to/from the school). Austin HS is where our children go/will go.
The destruction of scenery around Lady Bird Lake, Zilker Park, etc.
The financial costs to citizens?
What happened to the one "managed" lane per direction on Mopac that is currently in the long-range plan?
Why such a short public comment period after unveiling 4 lanes idea?
We do not want Mopac connected to SH45 so that it can be connected to I-35.
2 lanes each direction is too much. I've driven in many other cities with express lanes & HOVs...they are not utilized enough and this is overkill.

Thank you for hearing our concerns.

3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway; and

4. Any Mopac expansion should be limited, without double decker flyovers through West Austin, Zilker Park, and Austin High School

5. Don't rely on traffic projections that ignore the effects of new technology like selfdriving cars: in less than a decade our present roads will be able to accommodate 400-500% more cars WITHOUT IMPROVEMENT

6. The proposed loop and toll lanes, if built, will be seen as obsolete overbuilt highways in less than a decade, but the debt/tax burden to the community will be there much longer

Sirs/Madams:

The City of Rollingwood Council Members and myself have attended, participated, and listened to citizens' comments at the Public Hearings and have considered the proposed double-decked expansion at a public hearing of the City Council held on March 11, 2015. The consensus that has resulted from these meetings is that the City Council Members and I have very strong objections to the current MoPac South Expansion Project plans. Please add these comments to the public comments for the CAMPO 2035 and 2040 plans.

The following is a summary of the Pros and Cons concerning the proposed plans:

Pros

- Improve traffic flow will benefit uses of MoPac entering and exiting at the City.
- The proposed exit ramp onto Bee Caves Road would improve the dangerous existing ramp.
- Possible improvement to the Rollingwood Drive/MoPac intersection are desired.
- Possible improvement to the Bee Caves Road/MoPac intersection are desired.
- Possibilities for improvements/developments to the Hike and Bike trails would be beneficial.

Cons

- Noise levels will significantly increase from the proposed elevated lanes.
- Light pollution will significantly increase from the proposed elevated lanes.
- Use of park areas by youth sports teams and the public and park development will be negatively impacted.
- The proposed MoPac connection to I-35 is not being discussed in the plan, and would adversely impact Rollingwood with increased traffic on MoPac.
- Ingress/Egress "short window" access for Express Lanes at Barton Skyway and Hwy. 360.
- The necessity of traveling south to Barton Skyway to reach Express Lanes from the City.

- Lack of an entry/exit point feasibility study.
- Proposed Bike/Pedestrian lane plan is not considered to be safe or rational.
- Residents' views of downtown Austin will obstructed.
- An upper deck and exit located in the immediate vicinity of Austin High School is believed to be undesirable infringement on the school.
- It is believed that the plan for northbound lanes to merge to one lane will result in an increase in traffic congestion at the point of merger and backing up from that point.
- The project's plans for access to and from Cesar Chavez Street may not be sufficient to address the increase of 15,000 workers from two new developments in that area and any new plan should provide for additional traffic capacity on Cesar Chavez Street, particularly at Lamar Street Bridge, into the downtown area.

As stated, these are only a summary of the issues and comments that have been made by City Council members and myself, and are further based on concerns voiced by residents of the City. As for noise and light pollution and the visual impact, no one can recall a double decked highway in a vicinity like ours, where the location of homes and parks on the immediately surrounding hills will suffer the effects all the more, being on more of an even elevation with the elevated highway.

The City of Rollingwood's City Council Members and myself appreciate the traffic reduction efforts of CAMPO and the opportunity to provide input to the project's plan. We sincerely hope that such input is seriously considered to develop a final plan that is publicly acceptable as well as functionally sound.

Sincerely,

Thom Farrell
Mayor
City of Rollingwood

Subject:	vote NO on the proposed CAMPO Mopac expansion Express lanes at 2244
Date:	Monday, March 30, 2015 10:05:10 AM

To Whom It May Concern,

I am a home-owner in West Lake Hills, at the corner of Gentry and Ridgewood Rd. Rollingwood is my community and neighborhood. **I am writing to ask you to OPPOSE the proposed double-decker and flyover from 2244 to Cesar Chavez!**

The proposed Express Lane that will connect MoPac to Cesar Chavez via a double decker will be elevated 25 feel above the current MoPac lanes. The lighting will be an additional 25-50 feet over than and will create light and noise pollution to the park and in my neighborhood!

Allowing a double decker over the MoPac bridge will forever change the look, feel and noise levels at Zilker Park, The Nature & Science Center, Zilker Botanical Garden, Lady Bird Lake, Austin High School and will alter the Capital Corridor views from downtown and my neighborhood!

I do NOT support this plan. Please listen to the residents in this area and act accordingly!

Best,
Marnie Fitzgerald

Subject: Oppose Mopac 4 toll lanes expansion loop; keep Mopac local

GIVE US A BREAK! The city just approved an additional 16,000 trips per day on the Mopac section of the Garza tract. ENOUGH AND STOP IT.

Name : angie wagner

Subject : Oppose Mopac 4 toll lanes expansion loop; keep Mopac local

Dear CAMPO, City, County and State officials:
As you may know, in May and April CAM PO is set to vote on a request from our local toll road authority, CTRMA, to build a continuous tolled loop around Austin. But CTRMA doesn't want to be honest with the public on this loop plan. Instead, they have chopped up their tolled loop plan into four pieces, refusing to look at the whole loop project and alternatives that would better serve Austin mobility.
Most recently, CTRMA proposed to add, 4 tolled lanes on Mopac from Cesar Chavez to Slaughter Lane. This plan would require a double-decker bridge over Lady Bird Lake and connecting bridges through Zilker Park, Austin High School, and Barton Creek greenbelt property.
Please take action now to:
1. Remove the proposed new 4-toll lanes and double-decker bridge on Mopac over Lady Bird Lake from the proposed 2035 and 2040 long-range transportation plans.
2. Remove the proposed tolled-SH 45 SW and Mopac expansion loop, which would convert Mopac to an alternative Interstate 35 route, from the proposed 2040 long-range transportation plan.
3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway by removing the proposed connection of Interstate 35 to Mopac via the proposed SH 45 SW
4. Halt any action to build Phase I of SH 45 SW over the Barton Springs recharge zone or otherwise extend South Mopac until there is a comprehensive study of all of the costs and impacts of building a an expanded Mopac/SH 45 SW tolled loop connection to Interstate 35.

Subject : Oppose Mopac 4 toll lanes expansion loop; keep Mopac local
Message : Dear CAMPO, City, County and State officials:
As you may know, in May and April CAM PO is set to vote on a request from our local toll road authority, CTRMA, to build a continuous tolled loop around Austin. But CTRMA doesn't want to be honest with the public on this loop plan. Instead, they have chopped up their tolled loop plan into four pieces, refusing to look at the whole loop project and alternatives that would better serve Austin mobility.
Most recently, CTRMA proposed to add, 4 tolled lanes on Mopac from Cesar Chavez to Slaughter Lane. This plan would require a double-decker bridge over Lady Bird Lake and connecting bridges through Zilker Park, Austin High School, and Barton Creek greenbelt property.
Please take action now to:
1. Remove the proposed new 4-toll lanes and double-decker bridge on Mopac over Lady Bird Lake from the proposed 2035 and 2040 long-range transportation plans.
2. Remove the proposed tolled-SH 45 SW and Mopac expansion loop, which would convert Mopac to an alternative Interstate 35 route, from the proposed 2040 long-range transportation plan.
3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway by removing the proposed connection of Interstate 35 to Mopac via the proposed SH 45 SW
4. Halt any action to build Phase I of SH 45 SW over the Barton Springs recharge zone or otherwise extend South Mopac until there is a comprehensive study of all of the costs and impacts of building a an expanded Mopac/SH 45 SW tolled loop connection to Interstate 35.

It is essential for us to protect our green spaces, including Zilker Park, Barton Springs, and our hike and bike trails. Without these resources, Austin will cease to be the city we love.

With urgency,
Sarah Youree

Dear CTRMA Board of Directors and Staff, 11-19-2015

Thank you for your service to our community. I know the MoPac South project has received a lot of attention and I hope that during this public collaboration we can find middle ground and a solution to our real traffic issues. I believe the public has a right to a fair and collaborative look at the issues surrounding this 300 Million + toll way project which will result in significant impacts to the natural and human environment.

I want to let you know that I am deeply concerned about the plans to build elevated toll lanes over MoPac. It seems to me that these solutions in other parts of Austin have had negative effects of the character of the city that we all know and love. I would much prefer that we try more concertedly to alleviate traffic in more resourceful and creative ways -- ways that preserve the peace and charm of Austin. I doubt that I am alone and I would urge you to reconsider these plans. I am really against adding any more elevated lanes of any kind over MoPac near downtown. The elevated lanes will impact the hill country feel, beauty and charm of this special Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

Asking the public to consider and collaborate on a $300 million + toll lane project with elevated lanes that will forever change the look and feel of downtown Austin while not providing any noise analysis for any of the options under consideration, until a final design is chosen, does not give the public adequate information to understand the impacts that any of the proposed plans will have on the parks and neighborhoods surrounding the elevated lanes near downtown.

In addition providing an incomplete traffic study that uses only 2015 Blue Tooth Data that has clearly been impacted by the North MoPac Improvement project and is calibrated using the former 2035 Travel Demand Model instead of the new 2040 Travel Demand Model is misleading.

The surrounding municipalities and the public are supposed to be collaborators in this environmental assessment but it appears that TxDot and CTRMA are the only ones collaborating in this process. The public wants a chance to really understand the goals and purposes of this project and to collaborate to find a solution to our real traffic problems that also support our public parkland use, green spaces and community values.

Currently, the CTRMA staff has failed to provide the public with sufficient or reliable information about each of the 6 alternatives upon which the public can collaborate with CTRMA to evaluate the benefits and significant impacts of each alternative. CTRMA staff have failed to treat each of the 6 alternatives evenly and have failed to evenly include TSM into the 2 express lanes each way without direct connection that could significantly reduce the travel times of those intending to use the toll lanes and the general traveling public. In addition, CTRMA staff have failed to provide a rationale to support the decision to recommend elevated lanes for the Cesar Chavez toll exit lanes, but to use inner lane toll lane exits at other points along Mopac that have a higher volume of exiting traffic than is predicted for Cesar Chavez.

I support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project.

Project Goals and Objectives

- **Provide consistency with local and regional plans.**

CTRMA has not provided consistency with regional plans. Feb 26, 2015 open house CTRMA presented their "preferred alternative" of 2-toll lanes each direction with a double Lady Bird Lake. The 2-year study information and preferred alternative CTRMA presented to the public was not aligned with the scope of the 2035 regional transportation plan. Being consistent with the Regional Transportation Plan is a requirement CTRMA must meet.

Instead of making sure their plan was consistent with the regional plan, CTRMA tried to make an amendment March 2, 2015 to the 2035 regional plan to align the regional plan with the CTRMA "Preferred Alternative" (it's supposed to happen the other way around). This would have changed the description of the project in the 2035 plan from one managed lane in each direction to two managed lanes in each direction.

March 30, 2015, CTRMA decided to withdraw their amendment request after receiving a lot of public inquiry about the change from 1-lane each direction to 2-lanes each direction and the proposed double decker over Lady Bird Lake.

As a result, CTRMA has to redo much of their 2-year study that was done under assumptions made in the 2035 Long Range Plan (which does not show a connection of MoPac to IH-35) to make sure all the study information is aligned with the newly adopted 2040 CAMPO Regional Transportation Plan.

July 13, 2015, an additional $460,922 was approved by the CTRMA Board of Directors to align the previous environmental assessment with the new.

This has been a costly mistake both in delivering relief in a timely manner and the financial impact.

The CTMRA toll-lane project with direct connections that drop traffic ½ mile into the City of Austin do not support local plans for the Austin area. This area of the city of Austin is a prized scenic entrance into downtown Austin with a lot of history and local landmarks surrounding it, including the Zilker Park Historic District, Lady Bird Lake, The Nature and Science Center, Zilker Botanical Gardens, Deep Eddy Pool, the protected Zilker Clubhouse, Austin High School and nearby neighborhoods which have deep and interesting histories.

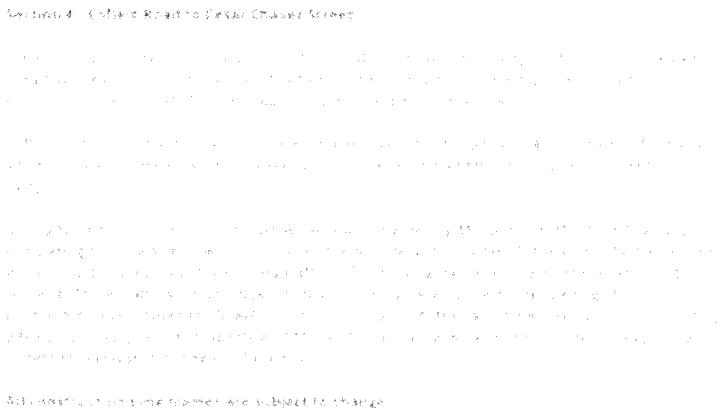
- Reduce congestion delay and provide travel times savings for all roadway users

CTRMA is presenting questionable traffic data that seems to be inflated to justify elevated lanes over an environmentally sensitive and beloved part of downtown Austin. This area will be connected with SH 45 SW and then with SH 45 SW-E. The environmental impact to SH 45 SW, and MoPac South will be cumulative. CTRMA has also told the public that noise studies will not be completed until after a preferred alternative is selected

The 2/26/15 peak period traffic data between Cesar Chavez and Slaughter Lane in 2013, the Northbound morning (7-9am) travel times were given as a 15 minute drive; The 2035 "no build" drive time was estimated to be a 47 minute drive. The southbound evening (4-6:30pm) from Cesar Chavez to slaughter is estimated as a 12 minute drive; and the 2035 "no build" is estimated as a 45 minute drive.

The 10/21/15 peak period traffic data between Cesar Chavez and Slaughter Lane in 2015, the Northbound morning (7-9am) travel times were given as a 23 minute drive, which is an 8 minute increase or **53% increase** from the 2013 estimate given using the same 2035 travel demand model. The 2035 no build is a 52 minute drive (5 minute/11% increase from 2013). The Southbound evening (4-6:30pm) is a 16 minute drive (4 minute/33% increase from 2013, the 2035 no build is 51 minute drive (6 minute/13% increase from 2013)

The most inflated and biggest increase in traffic is shown where CTRMA wants to justify the elevated lanes. Did the North MoPac construction impact the 2015 Bluetooth Study?



Express Lanes & Capacity

According to CDM Smith in a document released via a public information request. In order for the Express Lanes to operate at 60 MPH there is a maximum allowed 1,600 vehicles per hour per lane. The AM Peak Period is 7am 9am so the total number of vehicles that can be removed from free lanes during the entire AM Peak Period is 6,400. The total number of vehicles removed from free lanes during PM Peak Period 4pm - 6:30pm is 7,200. That is a very small portion of the CAMPO 2013 daily traffic count.

For Toll Users, the 2035 Time Savings benefit will be getting from Slaughter to Cesar Chaves 14 Minutes faster or 60% faster than one would get from Slaughter to Cesar Chavez today.

The General Purpose "Free Lanes" Time is actually 9 minutes or 39% slower than one would get from Slaughter to Cesar Chavez today.

According to CTRMA 70% of drivers are single occupancy vehicles but only a small percentage of those drivers will be willing or able to pay peak period toll rates that will become more expensive for the purpose of discouraging drivers from entering them.

Also, When looking at traffic data consideration should be given to studying the Northbound PM traffic, especially as it relates to traffic that utilized Cesar Chaves because the afternoon tends to be the period when the most substantial delays in that area occur.

Justify Need for Direct Connection to Downtown when other exits have a higher demand

I feel more information needs to be shared with the public about why elevated lanes are recommended for the Cesar Chavez exit, but not for the many other toll lane exit points along Mopac?

The toll road exit point that CTRMA is proposing placing before the Enfield on northbound Mopac is an inside lane exit with a very ,very short ramp for cars to exit the toll road and merge into general northbound traffic. It is positioned at a point where northbound traffic merges down from 4 lanes to 3 lanes over the river, and where there is already congestion during morning and afternoon peak times.

This inside toll lane exit, positioned before Enfield road, is the exit for all toll lane traffic planning to exit at Windsor, Westover, 35th, 45th, and 2222 to use – one toll lane exit servicing 5 Mopac exits. Where is the information to support the need for expensive, industrial elevated lanes to service a single exit at Cesar Chavez? Additionally, this proposed toll lane exit before Enfield creates a new, potentially dangerous bottleneck into Mopac North right after the river that will potentially back up traffic across the bridge.

Also, in reviewing the traffic data provided by CTRMA there is twice as much daily volume of cars exiting and entering Bee Caves at Mopac than at Cesar Chavez. Improvements to the Bee Caves Road interchange need to be considered as part of the plan if we are going to take a comprehensive approach to Mopac South. Bee Caves Road is a major artery into Mopac South, and by not considering this intersection I feel the CTRMA plan is very short-sighted.

Connection between IH 35 do to MoPac

A the series of "separate" projects to complete a toll loop around Austin were set in a calculated manner in order to make sure they are all considered separately and the cumulative effects of traffic can't be considered. The mistake by CTRMA on the MoPac South project seems to have upset the order and the consequence of pulling the amendment is CTRMA to the MoPac South "Environmental Assessment" is the newly adopted 2040 regional plan now includes the connection of MoPac to IH-35.

The list of projects in the "fiscally constrained" portion of the CAMPO 2040 Regional Transportation Plan and the CTRMA bond prospectus show the connection of MoPac South project to IH-35.

CTRMA has to align the MoPac South "Environmental Study" (which was completed with 2035 plan traffic modeling data) with the new 2040 regional plan which includes the connection of MoPac to IH-35. This traffic study won't be available until after January 2017. How can CTRMA choose a preferred alternative without knowing what the impact of the addition traffic will do to general purpose lane travel times. Will toll lanes be the best option with all the new traffic? New traffic engineering work was approved by the CTRMA Board **July 13, 2015 — only 4 months ago.**

CTRMA has made argument in the past for not using the traffic data for the connection to IH-35, stating the "SH-45 SW-E" project (which is the connection from the new SH-45 SW road to IH-35), is listed as "design only".
— SH-45 SW, the connection between MoPac South and 1626, moved forward **March 5, 2015**, with the Texas Department of Transportation issuing a Record of Decision (ROD) which allowed the SH 45SW project to proceed to final design and construction.
— SH 45 SW-E, the connection from 1626 to IH-35, is in the fiscally restrained portion of the 2040 plan (not illustrative) with a "Let Date" of 2025. (Projects listed in the fiscally constrained portion of the 2040 plan are projects expected to be funded between 2015 and 2040)

— The TxDot January 2015 Bond Prospectus states "The only toll road planned to be opened in the 2021 – 2030 period is the SH 45 SW Phase 2 Project between FM 1626 and IH-35, scheduled for completion in 2025."

(*attached: "5 CTTS Official Statement including T&R Study" —p. 2.13, 2021 – 2030 Key Network Improvements.*)

In the Buda and Hays planning documents they are even calling the existing road FM 1626 that connects at IH 35 and runs up to Brodie a "trucking bypass": https://www.co.hays.tx.us/Data/Sites/1/media/pdf/road-projects/txdotpartnership/buda-truck-bypass.pdf. This trucking bypass will be connected to the new 45SW and MoPac. Hays county Transportation Plan also shows three new roads connecting to SH45 SW. Have the effects of those connections been considered in the study?

According to a recent traffic study released, Stantec, among other things the study has said opening the road all the way to I-35, would increase traffic on Texas 45 Southwest by about 5,800 vehicles a day in 2030 and 8,400 a day by 2040. If the current "2015 CDM Smith Bluetooth Data" was used to calibrate these results I question the accuracy of the study given the inflated travel time data that has been presented using the Bluetooth method.

Consider Other Options

With the significant changes** in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option. Along with a no-build scenario, options such as expanding telecommuting, ride sharing, and rail should be considered.

Options other than toll roads should be thoroughly vetted and compared with the proposed toll lanes. Especially considering this environmental study is being paid for using Rider 42 funds, which came from Proposition 12 funds that were intended for non-tolled roadway projects.

Are we really being offered a fair look at all the alternatives to Toll Lanes? Some investigative reporting might be able to answer this:
CTRMA has ruled out HOV and Transit only lanes saying they are 50% less effective than toll lanes. They compared an "HOV lane" with 2-toll lanes each direction.

CTRMA has ruled out HOV and Transit only lanes saying the "HOV lane" is 50% less effective than the preferred alternative of 2 toll lanes each direction. When CTRMA is making the comparison are you comparing 1 HOV lane each direction with 1-toll lanes each direction and 2 HOV lanes with 2-Toll lanes each direction? Apples to Apples? Because if they you are comparing 1 HOV lane with 2 Toll Lanes it would make sense to say the toll lane option would would be 50% less effective than 2 toll lanes.

One of the 4 conclusions reached to not recommend HOV and transit only lanes during the Cannot open house was "Cannot deliver relief in a timely manner (without major change to regional funding). The passing of Prop 1 and Prop 7 represent a significant change in regional funding)

During the **Feb 26, 2015** Open House studied HOV and Transit Only lanes using traffic data from CDM-Smith 2014 INXR speed data, CAMPO 2035 Travel Demand Model, observed congested speeds in October 2013 and Bluetooth data. During the October 21, 2015 Open House CTRMA only studied toll lane options and hasn't cited any traffic data sources other than CDM Smith 2015 - Using BlueTooth Data. What data did you use to study HOV options during this current open house.

The public has a right to review traffic studies and receive real answers about the effects what Texas Department of Transportation calls the Central Texas Turnpike System, the system that includes four existing tollways on the metro area's eastern and northern sides: Texas 45 North, Loop 1, Texas 130 and Texas 45 Southeast will have when it's Western Loop runs directly over our Aquifer. Like the rest of the hydrological karst that defines the Balcones Escarpment of the Hill Country, the area is covered in caves and passages that funnel water directly into the aquifer - which is one reason why the Edwards Aquifer is so vulnerable to surface pollution (both point and non-point sources).

- Be constructible without unnecessary impacts to the natural and human environment

A successful urban city today is one that embraces green spaces, urban parks and trails, bike lanes, sidewalks, and inviting public gathering spaces. It also encourages alternatives to driving. There is abundant evidence to suggest that these are the elements that create a thriving city. People do not want to sit in cars and sit in traffic, people do not want to drive to everything, and people do not want poor air quality. People do want meaningful personal relationships, places to build movement into daily life, and ways to get to work and shopping that do not involve cars. This is the way successful cities are moving. Austin has the opportunity to attract a diverse and highly skilled workforce, but it will require a strong continued move toward this ethos of development. Consider the cities of today that have remade themselves into highly attractive places, like Chicago and Minneapolis. They did this not by building 8 lane freeways in the middle of the city. Instead, they created abundant green spaces, rich public gathering venues, they support lots of transportation options, they invested in bike lanes and sidewalks, mixed use walkable development .. they built a city for people, not for cars. Austin sits at this juncture. Are we a city for people or a city for cars? Austinites are clear – we want a city for people. CTRMA should embrace this.

A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school.

In addition, please serve the community by providing an Environmental Impact Statement for the Mopac South Environmental Study. There will be a significant impact, which will be impossible to mitigate by barriers and buffers, to the natural resources, environment, water quality, and quality of life of residents and businesses in Rollingwood and the surrounding areas of Austin if Mopac South is modified in any way. Please address the significant impacts to the environment identified in the attachments to this letter in an Environmental Impact Statement.

CTRMA needs to clearly provide the public with specific information about the studies of areas where there could be impact to the natural and human environment. Currently CTRMA has merely provided summary statements.

CTRMA needs to provide the public with additional information about the necessary impacts to the natural and human environment that cannot be mitigated.

Optimize the 2-Toll Lanes Each Direction Option

The designs with elevated lanes that CTRMA seems to be pushing are optimized to provide the greatest travel times savings for toll and general purpose lane users. The same design consideration to optimize efficiency should be given to the design with no elevated lanes.

If toll lanes must be built, the 2 Toll lanes each direction without elevated lanes option will have the least impact to the park, schools, recreation centers and neighborhoods:

The 2-lanes each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA and this option is consistent with the CAMPO 2040 Long Range Plan. Providing direct access to toll users into the downtown area is not a goal or objective identified by CTRMA or CAMPO for this project.
The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use because it has the least impact to the park land. Adding elevated lanes damages Austin's parks, restricts community members who use the open spaces, and damages neighboring neighborhoods.

- Deliver Relief in a timely manner

CTRMA failing to align the preferred alternative selected with the adopted regional plan has caused delay and a lot of taxpayer money. **July 13, 2015**, the CTRMA board of directors approved a new contract with Jacob's to fix the mistake, which has delayed the project by more than three years. The 2035 CAMPO Regional plan "let year" for the project was 2017 but had to be adjusted to a "let year" of 2020 in order for CTRMA to align the environmental study with the 2040 Regional Transportation Plan.

The toll lane projects have become so controversial with lawsuits and repeated NEPA studies that is seems these toll projects are not delivering relief in a timely manner.

Would less controversial options be able to be completed in a faster timeframe?

Public information requests for information on obtaining the traffic data/studies used to get the current and projected travel time that were published to the public during the October 21, 2015 open house have been answered with CTRMA sending the requests to the Attorney General who has ruled the data does not need to be released because "the study isn't complete" or "the information is confidential" According to the Austin Monitor, "CTRMA attorney Andy Martin said his agency did not want to release the draft document because it does not represent what the agency will finally decide to build. He said it would release a final document in about a year to 18 months that would be "an investment grade traffic and revenue study." According to Martin, CTRMA is considering suggestions made by the cities of Austin and Rollingwood as well as Travis County. The agency will also be holding open houses in October to get input from the public, he

said". (*Source:* http://www.austinmonitor.com/stories/2015/10/sos-sues-toll-road-agency-again/).

Questionable Travel Time Data
Wishbone and Double Decker Options show exact same "travel time" for express lanes — Wishbone option has to merge with traffic and double decker doesn't, so identical travel time is questionable.

The data distributed shows that both toll-lane options will have identical travel times 9 minutes in and 9 minutes out in the afternoon peak period
(*Source:* http://www.mopacsouth.com/voh/alternatives.php)

There are other ways to alleviate the transportation problem in Austin. We ask that you look at options without elevated toll lanes in particular so that we can retain the look and feel of our beloved city. Please ensure the plans you choose support our public park land use, green spaces and community values.

I respectfully request that you seriously consider all of the public comment that you receive before making such a dramatic and damaging change to our beloved section of roadway - where Mopac (Loop1) goes over beautiful Lady Bird Lake, with Zilker park below it. Thank you for your time and consideration.

Best Regards,

Wendi Hundley

CTRMA - Prop 12/ Rider 42 Funding:

History of Prop 12/Rider 42 funding
November 2007, Texas voters approved Proposition 12, which authorized the issuance of up to $5 billion in general obligation bonds. June 2009, The 81st Texas Legislature approved Senate Bill 1, authorizing TxDOT to go to contract on approximately $2 billion in voter-approved bonds for non-tolled highway projects. July 2009, Senate Bill 1 signed by Governor Perry, authorizing the issuance of $2 billion in general obligation bonds August 2009, TxDOT briefed Texas Transportation Commission on potential uses of Prop 12 funds. Commission directed staff to meet with Metropolitan Planning Organizations (MPOs) to develop guiding principles for project selection priorities. September 2009, TxDOT met with MPOs to develop guiding principles for project selection priorities. TxDOT briefed Texas Transportation Commission on guiding principles developed. Commission directed TxDOT to develop a list of the highest priority projects. October 2009, TxDOT identifies $2 billion in projects recommended for Prop12 funding to the Texas Transportation Commission. November 2009, Texas Transportation Commission takes final vote on approved list of Prop12-funded projects. April 2010, First Prop 12 project contracts will be set for bids. June 2010, First Prop 12 projects will begin construction. June 2011, Rider 42 authorized by Gov. Perry and the Legislature August 2011, TxDOT Districts and MPOs began grassroots effort to identify and select project by working with rural planning organizations, elected officials and the public. September 2011, Formal public involvement begins. September 29, 2011, Texas Transportation Commission

authorizes allocations and projects in accordance with Rider 42. Summer of 2012, Construction bids accepted on first Proposition 12 Program 2 projects.

History of CTRMA use of Rider 42 Funding

February 29, 2012, CTRMA, our toll-road authority authorized money from their general fun - reimbursed with Rider 42 funds to pay for a 2-year study of the MoPac South project to build from Cesar Chaves to Slaughter.

December 5, 2012, the CTRMA Board of Directors approved Jacob's and authorized negotiation of a contract for preliminary engineering and environmental services.

February 29, 2013, CTRMA amended contract with Jacob's engineering adding $191,671 to reclassify from Categorical Exclusion (CE) to Environmental Assessment (EA) for new total of $6,190,876 (attached: CTRMA & Jacobs $6,190,876).

March 27, 2013, the CTRMA Board of Directors authorized the Executive Director to finalize and execute a professional services contract with Jacobs Engineering Group Inc. ("Jacobs") for preliminary engineering and environmental services for development of the MoPac South ProjectThis contract provides for the alternatives development and evaluation, environmental studies, public involvement, preliminary engineering, design, field survey, hydraulic studies, and schematic development for the proposed MoPac South Project and MoPac South Overpasses Project (Projects) located in Travis County, Texas (attached: "CTRMA & Jacobs $5,999,205 - Rider 42 Funds").

February 26, 2015: Jacobs and CTRMA proceeded with the 2-year study and at presented to the public the "preferred alternative" of 2-toll lanes each direction with elevated lanes over Lady Bird Lake at the Feb 26, 2015 open house

The "preferred alternative" of 2-toll lanes each direction with elevated lanes over Lady Bird Lake was presented to the public at the open house. The 2-year study information and preferred alternative CTRMA presented to the public was not aligned with the scope of the 2035 regional transportation plan. Being aligned with the Regional Transportation Plan is a requirement CTRMA must meet.

The CAMPO Long range plan in effect at this time was the 2035 Regional Transportation Plan (RTP) plan which described the project as adding 1-toll lane each direction from Cesar Chavez to Slaughter. (source: http://www.campotexas.org/plans-programs/campo-plan-2035/)The CAMPO 2040 Regional Transportation Plan (RTP)

March 2, 2015, CTRMA requested an amendment to the 2035 plan, to align the regional plan with the CTRMA "Preferred Alternative" which would have changed the scope of the MoPac South project from 1-toll lane each direction to 2-toll lanes each direction (attached: "CTRMA pulls 2035 amendment from CAMPO RTP.png"). CTRMA made a mistake because their preferred alternative should have been aligned with the 2035 Regional Plan — the RTP shouldn't be changed to align with projects.

The amendment would have changed the description of the project in the 2035 plan from one managed lane in each direction to two managed lanes in each direction. (attached: "CTRMA pulls 2035 amendment from CAMPO RTP.png")

March 27, 2015, I called and spoke with Alex Kone. He is a Senior Planner at CAMPO in charge of the amendments. I asked why CTRMA requested the amendment to the 2035 Plan instead of making the amendment to the 2040 Plan. He told me:

The CTRMA MoPac South Project "qualitative" analysis is supposed to be based on the 2035 plan but their preferred alternative does not align with the plan.

The requested Amendment has to be made to the 2035 plan, while it's still active, before the 2040 plan is adopted May 2015 meeting; otherwise CTRMA has to start their study all over from Square 1 and cost a half a million dollars

He casually said our groups would prefer the amendment not be made because the 2040 traffic data would be better for "you guys"

March 30, 2015, CTRMA decided to withdraw their amendment request on after receiving a lot of public inquiry about the change from 1-lane each direction to 2-lanes each direction and the proposed double decker over Lady Bird Lake. CAMPO staff removed the item from the TPB's April 13, 2015 agenda as a result of the CTRMA request. (attached: "CTRMA pulls 2035 amendment from CAMPO RTP.png")

March 30, 2015, CTRMA extended their study period saying "In response to community feedback for additional public involvement on the MoPac South Environmental Study, the Central Texas Regional Mobility Authority will extend environmental study process to allow for additional community input and engineering analysis on the project.", (attached: "CTRMA Extends Study).

May 14, 2015, The CAMPO 2040 Regional Transportation Plan (RTP) was adopted May 14, 2015, with a new description/scope of the MoPac South — changed from 1-lane in each direction to 2-lanes each direction along with a footnote "*Study all options for the proposed MoPac South expansion including both 1 and 2 Express Lanes in each direction, as well as no-build". The 2040 plan was adopted without the CTRMA amendment being made to the 2035 plan (attached: "CTRMA pulls 2035 amendment from CAMPO RTP.png").

The CAMPO Mopac South project changed to "Let Year" 2020 when the 2040 plan was adopted. The 2035 plan had the "Let Year" as 2015, open year 2017. Ben Wear reported 11/10/15 "Agency officials don't foresee construction until well into 2017, at the earliest. Construction would take three to four years, they said." The report was not consistent with the 2040 plan which lists the "let" year as 2020. (Source: CAMPO 2040 Long Range Plan - Table 32 Road Projects Pg. 169)

The consequence of pulling the amendment is CTRMA has to align the MoPac South "Environmental Assessment" with the newly adopted 2040 regional plan, which includes the connection of MoPac to IH-35.

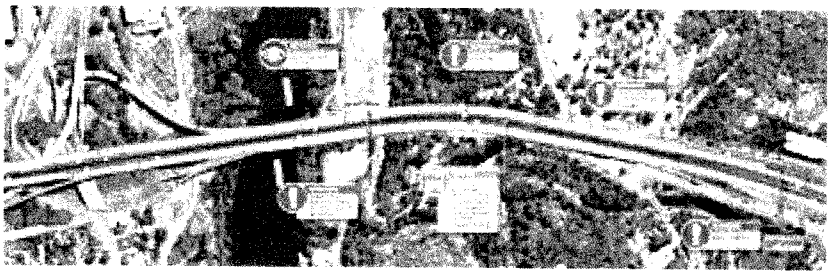
July 13, 2015, An additional $460,922 was approved by the CTRMA Board of Directors (attached: "CTRMA & Jacobs July 13, 2015") to align the previous environmental assessment with the new

The contact directs Jacob's Engineering to redo much of the "Environmental Study" for the Mopac South Project, including new traffic engineering and public outreach. CTRMA has expressed this time period extension is "In response to community feedback for additional public involvement on the MoPac South Environmental Study" but it is fixing an expensive mistake made with taxpayer Rider 42 funding because they had to re-initiate the environmental study to align the data with the 2040 Regional Transportation Plan.

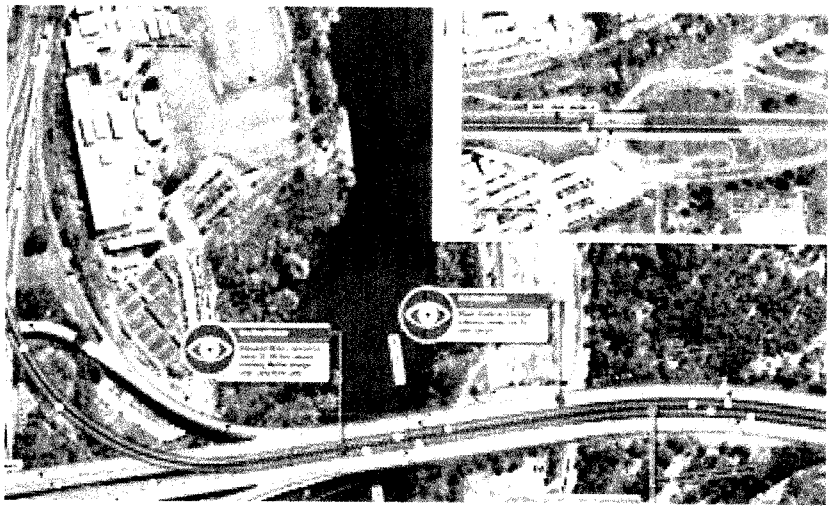
Wishbone Design:

Merge with 2244 Traffic - AM Peak Period

Merge with Northbound Traffic and enter express lanes right before 2244 - PM Peak Period



Direct Connection Over Lady Bird Lake Design - Dropped right at Cesar Chavez with no merge AM & PM periods



2015 Bluetooth data provided by CDM Smith Questionable

A public information request shows

- "big difference" in the absolute peak travel time only occurs for 15 minutes and the overall travel time for a two to two and half hour period.(*attached: "1Data_Confirmation_Request_Mopac_South_Congested_Speeds 2"*)
- States N. MoPac construction impacted the Bluetooth reader between 2244 and Cesar Chavez — this is part of the area where CTRMA is trying to justify elevated lanes. (*attached: "1Data_Confirmation_Request_Mopac_South_Congested_Speeds 2"*)

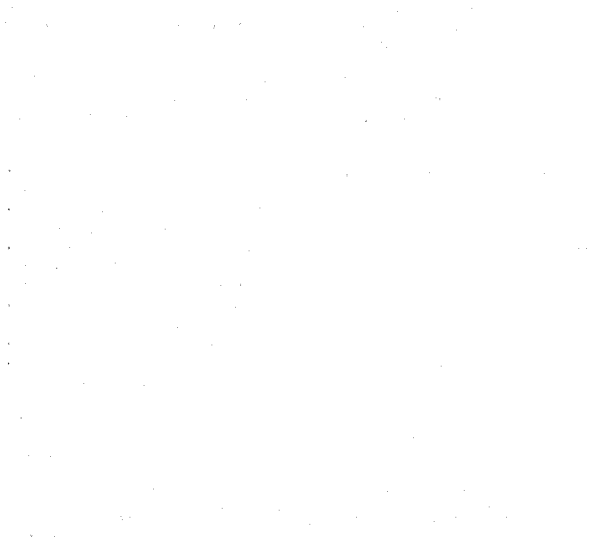
CONCLUSIONS

HOV LANES and **TRANSIT ONLY LANES** are not recommended because of the following reasons:

- Exclude Single Occupancy Vehicle trips (over 70% of peak period commuters) from the opportunity for reliable travel times
- Result in longer delays for vehicles using the general purpose lanes as compared to the Express Lanes Alternative
- Lead to underutilized capacity, even during peak periods
- Cannot deliver relief in a timely manner (without major change to regional funding)



October 21. 2015 Open House

EXPRESS LANES

EXPRESS LANES ALTERNATIVE is recommended for the following reasons:

- Offers reliable travel times for single occupancy vehicles, high occupancy vehicles, vanpools, buses and emergency vehicles
- Provides the shortest peak period travel time for all vehicles including those using the general purpose lanes
- Configurations with two Express Lanes in each direction and a downtown direct connection reduce annual delay by over 3.5 million vehicle hours of travel - twice that of the HOV Lane Alternative and 15 times more than the Transit Only Lane Alternative. Configurations with one Express Lane in each direction or no downtown direct connection reduce annual delay by over 2.5 million vehicle hours of travel - 50% more than the HOV Lane Alternative and 10 times as much as the Transit Only Lane Alternative
- Avoids unnecessary impacts to the natural and human environment, and avoids and minimizes impacts to water quality
- Delivers relief in a timely manner
- Increases opportunities for transit and ridesharing and includes new bicycle and pedestrian facilities

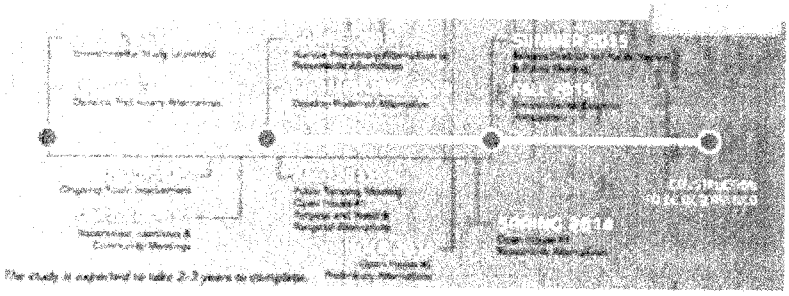
CTRMA MoPac South Goals and Objectives

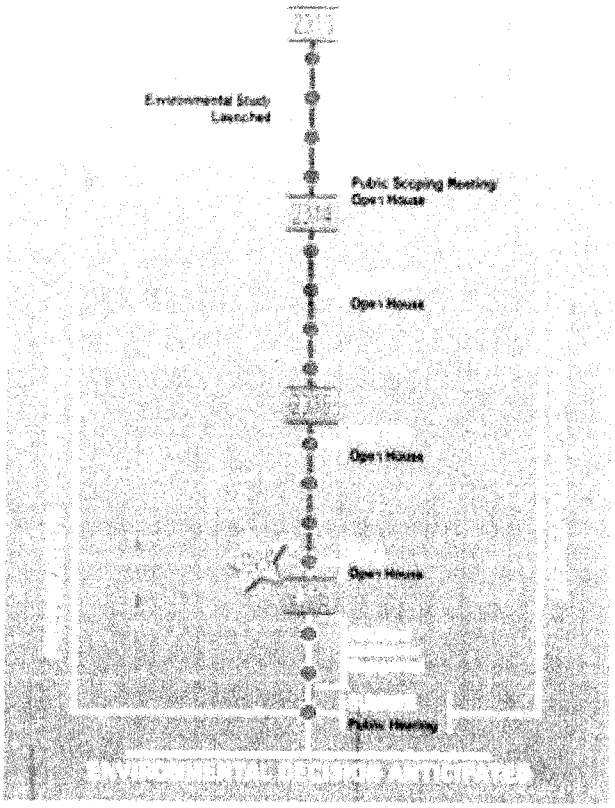
PROJECT GOALS AND OBJECTIVES

- Provide consistency with local and regional plans
- Reduce congestion delay and provide travel time savings for all roadway users
- Be constructible without unnecessary impacts to the natural and human environment
- Avoid and minimize impacts to water quality
- Deliver relief in a timely manner
- Facilitate congestion management
  - Increase opportunities for transit and ridesharing
  - Increase opportunities for pedestrians and bicyclists

MoPac South

Timeline: Where are we really at in the process?





Below are the charts I got from the CTRMA website to make many of the traffic travel time comparisons in my email. All of this information is still available on www.mopacsouth.com

Nov 18, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Ms. Blair Hunter

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Saturday, November 07, 2015 9:40:16 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Darrell Hutchinson

Email * [redacted]

Address [redacted]

Message *

I attended your South Mopac open house yesterday. Thank you for the opportunity to comment.

I do not like toll roads. I disagree with all the options presented. We should address traffic issues by encouraging workers and employers to change their driving behaviors, and seek alternative solutions that do not include expensive toll lanes.

I learned that the express lane will not include a provision to allow passenger cars with 2 or more occupants to ride for free. The HOV provision allows for only van pools and public buses to ride for free, thus failing to reward commuters willing to car pool and reducing the number of cars on the road.

When I asked why don't we dispatch with toll lanes altogether and just increase the number of general lanes, I was told that my thinking was very '20th century' and that nowadays the concept of guaranteeing a faster ride was preeminent. This, of course, rewards wealthier commuters at the expense of the general public.

I learned that although no Golden-cheeked Warblers were detected within 300 ft of the proposed highway expansion, endangered warblers were detected 500 ft. away. To claim that no endangered species will be impacted by construction is disingenuous at best.

No where in the display room nor in the public input summary do you address the crucial issue of assessing the combined environmental impacts of construction on South Mopac, North Mopac, and SH 45 together. I learned that's it's CTRMA's intent to assess and present the impacts of these clearly connected construction projects separately.

NEPA is intended to protect citizens' health and safety. By parsing the project into sections as 'independent utility', the CTRMA is contravening the spirit if not the letter of the law. I urge you to follow our highest National standards for highway construction and conduct an environmental study that evaluates the combined impacts of highway construction along the entire south and west Austin corridor.

Respectfully,

Darrell Hutchinson

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

TXDOT & CTRMA should look (honestly) at the impacts of all Mopac projects and 45SW, and connecting this highway loop to I-35. We know now from your own bond prospectus, that the plan is to connect to I-35 by 2025. All of these projects are connected physically, in time, and run over the sensitive Edwards Aquifer recharge and contributing zones. Therefore, you should insist on a full EIS on all of these projects. If you do, I'm confident you'll find this will not relieve congestion. I-35 should be the priority. Instead of building SH 45SW, you should use the money free to pay off tolls on SH 130 and encourage folks looking to bypass the downtown to take 130.

TXDOT should look at forward-thinking solutions to relieve congestion. Toll roads are not the answer. The RMA should be dissolved. All major cities deal with traffic congestion problems. Rather than spending money on more roads that destroy greenspace, our scenic & aesthetic quality, bring noise and light pollution, and cuddle host of other problems, TxDOT should focus on moving PEOPLE NOT VEHICLES. Mass transportation, coupled with park-and-rides, is the answer to solving transportation problems in metropolitan areas. Please be a leader and stop this outdated archaic policy of building more roads. And STOP TOLL ROADS!

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 7:31:50 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Court Reporter Comment:

MR. JEFF JACK:

Okay. First thing I want to talk about is process. It's hard to compare these scenarios. It would have been much better if we had a tabulation so that you could look at the three different scenarios, segment by segment, and see the pluses and minuses, the differences within each segment for all three together in one place instead of wandering around the room and trying to simulate all that information.

It would be also interesting to know how much this presentation costs. It seems to be very extravagant. There is no data easily accessible on the actual cost of these alternatives that I can find that is easily out there. In other words, when we look at the alternatives, we don't have a very quick read on howmuch it's going to cost us and how it's going to be funded.There seems to be no discussion on the unintended consequences or the externalized ramifications of these. In other words, what happens on Cesar Chavez? What happens on Barton Springs Road through Zilker Park? What happens on South Lamar? All of these things are very important as a consequence of these improvements, but they're not really discussed. With regard to the three options, I think that we have to be very careful not to use this opportunity to create more traffic jams in downtown, that the idea of densifying downtown and this being a facilitator to do that goes against our comprehensive plan. I think that we should look at other ways that we can spend this money. I personally believe that with the new funding that the state has made available, we ought to be looking at removing the bonding indebtedness for SH-130 and reverting it back to a true bypass and run a scenario where that is counted into the traffic counts so that we see, if we do that, how much better the congestion would be and the rest of the city if we got all of those cars and trucks off of SH -- I-35. I think there's some big environmental issues that have not been resolved, particularly the ripple effect of adding more capacity to increasing urban sprawl in south Travis County and northern Hays County and Caldwell County. I don't think that's been really figured in that we're actually asking people of Austin to suffer through greater traffic congestion in almost all the scenarios to facilitate people coming from way south to get into or bypass or go through Austin. I don't think that's what we should be doing.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

1. Negative impact on Austin High by all 6 options
   - A. Reduced Green Space for Students - more noise & pollution
   - B. impact tennis courts by over pass.
   - C. Closer roadways to School Buildings
   - D. Traffic problems for students getting to class.
   - E. increased delay time for Students leaving school.

2. Negative impact on Environment
   - A. Future connection to IH-35 making MoPac IH-35 WEST.
   - B. More Traffic on MoPac = more congestion = more pollution
   - C. Duplicate problem w/ IH-35 seperating our Community.
   - D. Future connection to SH45SW To South IH-35 = more diverted Traffic from IH-35

3. Negative financial implications for tax payers.
   - A. High Tolls required to pay for improvements
   - B. High cost with potential huge over-runs
   - C. Sewer Hays County at the cost to Austin's Quality of life.
   - D. Hidden agenda to connect to IH-35 to sell Bonds

4. Negative impact to Zilker Park.
   - A. Takes parkland
   - B. Noise and air pollution (more) in our park.

None of the options are acceptable - work harder & finding a

Name: dee jackson

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members, I appreciate the detailed work of your staff and board as well as the efforts of those affected by these proposed changes. And I am glad for the opportunity as a neighbor to have input into the MoPac plan after being given information through CTRMA to study and consider.

To be clear, I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake and Austin High school. The land over the Edwards Aquifer recharge zone including surrounding City of Austin and Rollingwood neighborhoods will surely be impacted by this extent of road construction. I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review before a final plan is adopted.

In addition I urge CTRMA to reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option.
The major changes approved by voters for regional non-tolled road funding in the recent election may provide the alternative necessary to keep from having to convert MoPac South into a toll road. Along with a no-build scenario, other options such as expanding telecommuting, ride sharing, and rail should be considered.

If toll lanes must be built as a last resort, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.
The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. There will also be more support from neighboring cities and residents if elevated structures are not included in the plan.

Please ensure the plan that is ultimately chosen supports our public parkland use, green spaces and community values.
Sincerely, Dee Jackson

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 4:20:18 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Nov 7, 2015

Ms. Abby Tomlinson
Austin, TX

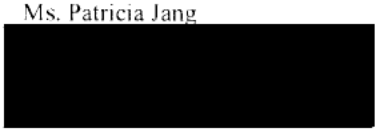
Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Ms. Patricia Jang



COMMENTS ON VIRTUAL OPEN HOUSE

Stephanie	Jarnigan	11/2/15	Dear CTRMA Staff and Board Members, Please do not add a double-decker over Lady Bird Lake or Double Decker Wishbone bridges over MoPac. I support the addition of 2 Toll lanes each direction without elevated lanes: The 2-lane each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use and with the 2040 Long Range Plan. The 2-lane each direction without elevated lanes option has the lowest impact to the parks and neighborhoods while still significantly improving travel times and capacity on our roadway. The 2-lane each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with a Double decker over Lady Bird Lake. The 2-lane each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with 40-50 feet elevated Wishbone bridges over MoPac. The 2-lane each direction without elevated lanes option cost is $30 Million less than the Wishbone concept and $40 million less lane the Double Decker Decker concept. The 2-lane each direction without elevated lanes option minimizes impact to our water quality and lowers the impact on the natural and human environment by not building elevated structures near neighborhoods or Lady Bird Lake. The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. I also support the addition of the sidewalk on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of an 8' sidewalk I would like an 11' multi-use path to accommodate bikes and pedestrians and connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project. Please make sure to fully consider the social, economic, and environmental consequences. Please ensure the plans you choose support our public park land use, green spaces and community values!

MOPAC/LOOP 1 SOUTH
November 16, 2015 at 10:20 PM
[redacted]

TO ALL PUBLIC OFFICIALS WITH RESPONSIBILITY FOR THE MOPAC/LOOP 1 SOUTH ROADWAY PROJECT

Dear Public official,

This is a copy of a letter that I have sent to the CTRMA Staff and Board Members. In your ability to make decisions on behalf of the citizens of Austin, the message applies to each of you. I am taking the liberty of copying the letter for your consideration.

Please consider this as a personal note to each of you and a earnest plea for you to think long and hard of the effect of your decision on the Austin that our (yours included) children and grandchildren will inherit in the future. The MOPAC / LOOP 1 SOUTH roadway can make or break the image of Austin that we all cherish. Please choose the option with the least negative impact to our environment and that means : NO ELEVATED BRIDGES ON LADY BIRD LAKE AND NO WISHBONE BRIDGES OVER MOPAC AT BEE CAVE ROAD. See details below.

Thank you for your consideration.

Sincerely,

-Shanthi Jayakumar.

Rollingwood

[redacted]

Dear CTRMA Staff and Board Members,

The future is in your hands. Your decision on the MOPAC / LOOP 1 South roadway improvement will survive long after you have left your posts with the CTRMA. You have a unique opportunity to preserve and protect the very heart and soul of Austin namely Zilker park, Lady Bird Lake and the green space around for our collective enjoyment now and to guarantee the same for our future generations. Allowing the construction of elevated bridges over the river and looped bridges over MOPAC will permanently defile what is currently a serene vista of our cityscape.

Having served two terms as an alderman on the council of the City of Rollingwood, I can appreciate and relate to the predicament that you are in today. Making decisions that will impact the daily lives of a lot of people and potentially cause irreversible change to the look and feel of Austin is not an easy task and you will probably always wonder if you made the right decision. The advice given to me and I want to share with you is, "when in doubt, listen to your constituents". Public service is just that: doing what is in the best interest of and for the collective good of your community. Austin's most cherished views will be forever obliterated if you choose

to build the proposed elevated bridges over Lady Bird Lake.

For the collective good of our community, I urge you: DO NOT BUILD THE DOUBLE DECKER ELEVATED BRIDGES OVER LADY BIRD LAKE or THE TWO WISH BONE BRIDGES OVER MOPAC AT BEE CAVE ROAD.

As a compromise, the 2 LANES EACH DIRECTION WITHOUT ELEVATED LANES OPTION MEETS ALL OF THE MOPAC SOUTH PROJECT "GOALS AND OBJECTIVES" SET BY CTRMA AND THIS OPTION IS CONSISTENT WITH THE CAMPO 2040 LONG RANGE PLAN. ".This compromise would be a fiscally responsible option with lower cost compared to the double decker plan with travel times in 2035 within 3-5 minutes of the double decker option.

Thank you for this opportunity to address you and to submit for your consideration, what I believe is the right decision for the maximum benefit to your Austin community for generations to come. Nature gives us ONLY ONE CHANCE to preserve and protect our green spaces and when that is gone, there is no going back to the way it used to be! Your grandkids and great grandkids will thank you for preserving this natural oasis in the heart of Austin.

Sincerely,

Shanthi Jayakumar

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

0 Please do more research to find an alternative to more lanes, a toll, and merging I-35 & Mopac.

Austin needs to retain its spirit and being sandwiched by super highways will make it more like Los Angeles than Austin.

I am deeply concerned that this will negatively impact Laman Beach and downtown access.

Fix I-H 35 first rather than just moving the problem

Work closely with the city to be sure city needs are met.

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Bryan Jones

COMMENTS ON VIRTUAL OPEN HOUSE

Jennifer	Jones	11/4/15	I would like to see another north-south roadway built that can take pressure off of mopac altogether. ONE extra lane going either way is a band aid that will not help enough right now and will not carry us into the next decade even. The disruption to mopac during the process will not be tolerable for a period of time long enough to complete this project. The disruption to Mopac for the north portion of this project is unbearable now that much needed lanes are being closed. The area around Zilker park and the greenbelt needs to be left alone, not destroyed by the construction crews. Any new roads (no matter what the configuration) should not be tolled. Tolling is not a viable solution. Any new road that is built needs to be paid in some other way than tolls to solve the traffic problem as fully as possible. We have already seen that people are not willing to use tolled roads as readily as free (130). Charging desperate people a toll is also just cruel, especially when many people need this road to get to work. Jennifer Jones

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Mopac South should not be enlarged, especially by Tolled Lanes. These enlargements will impact the most sensitive parts of Austin - Zilker Park + the Greenbelt.

The enlargements to North Mopac have disrupted traffic, removed beautiful green areas between lanes and will do very little to address traffic. The express lanes Tolls will just take advantage of people desperate to be out of traffic.

Green spaces are needed for rain water reclamation + beauty. However, many studies have ~~should~~ shown the benefit of green spaces for mental health. The trees along the South Mopac route are integral to Austin for these reasons.

TxDOT needs to use its funds to make 290 the I35 alternate, + remove the tolls there.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 4:06:20 PM

I do not think attaching anything else to Mopac is viable. It is completely over used now, which suddenly all began when they attached Mopac to the 45 toll way on the north end. That suddenly connected all of Leander, Round rock, Cedar Park and North 620 to Mopac which over night became a parking lot. What a disaster. Now they are "improving" Mopac after the fact (no foresight what so ever) by turning our safety shoulders into lanes and narrowing the lanes while taking one of the lanes of a tax funded road and turning it into a toll lane. If anything is more is attached, people will move into new housing adjacent to a new Mopac feeder thinking they can commute via mopac and it gets worse. To do what is needed now Mopac needs 6 to 7 lanes, picture Southern CA's 405

Either Austin controls growth or we have to finish destroying what is left of Austin's fabled quality of life and start condemning a lot of properties so we can begin paving everything to make new freeways , welcome to LA 2.0 and thank you to the city council who's is apparently only concerned with the Real Estate board's welfare.

I am not happy as I can not see a day very soon when I will see Austin, my birth city, in the rear view for the last time as I again go in search of a place to live.

Sincerely,
Kelley Jones

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, October 23, 2015 2:40:31 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Kendall Jones

COMMENT FORM

DEADLINE for Comments: Friday, November 20, 2015

Written comments will also be accepted through the website at www.MoPacSouth.com, by fax to 512-996-9784 or mail to: Central Texas Regional Mobility Authority, C/O MoPac South Environmental Study, 3300 North IH-35, Suite 300, Austin, Texas 78705.

NAME (PLEASE PRINT): J. Juarez

ADDRESS: [redacted]

COMMENTS:

I strongly support the idea of keeping MoPac as a local thoroughfare and not even connecting it to IH-35. MoPac was designed for use by local commuters from its inception. If construction of a toll road is moved forward it should only consist of two (2) toll lanes, One in each direction. Additionally, no elevated lanes should be built. All new construction should be at grade / ground level.

This form may be used to provide written comments on this project. Any questions placed on this form will not be considered an open records request and will not be treated as such. If you have an open records request, it must be submitted under a separate letter.

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Jan Justice

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Do not make Mopac the by-pass for I-35. Present the community with options other than ① large toll roads or ② doing nothing. Instead consider the ideas presented by KeepMopacLocal.org including ① adding HOV lanes ② protect + keep Austin tight safe ③ study and tell us about the entire project at ONE time not just in pieces and ④ look to SH130 to do what it was intended to do - alleviate I35 ~~congestion~~ congestion.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

The public cannot properly evaluate the TxDOT/CTRMA proposal for improving South MoPac. We are being presented with just a small part of the picture. (1) There are more than six options — where are the rest?

(2) The project planners (readers) seem to stop from Oltorf Street to I-35 and only a portion is being presented.

Fill in the picture and come back again.

I think we need an express bus running from Slaughter up to North Mopac to go with this since there will be an express lane running all along the Mopac corridor. Why not use this to have a new bus route instead of having a toll lane for people who have to drive most of this route each day?

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

Michele Karp

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mrs. Mary Alice Kaspar

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 10:25:36 AM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

COMMENTS ON VIRTUAL OPEN HOUSE

Russell	Keene	11/19/15	The Mopac South project should go forward. There are several alternatives that are all acceptable to me. Importantly, congestion must be mitigated at the river coming from the south. More flyovers at Lake Austin Boulevard and Austin HIgh School make sense. The widening of Lake Austin Blvd into and out downtown should be considered by the City of Austin as well. Increased ingress and egress from downtown via Mopac is essential to reduce congestion and increase mobility, to enhance our lifestyles and commerce. I appreciate the rigor that CTRMA is employing to study to avoid environmental impacts. In my view such impacts are minimal if non existent to wildlife or the ecosystem along the river by the introduction of additional lanes and flyover. Good luck..

COMMENTS ON VIRTUAL OPEN HOUSE

Eileen	Keller	11/13/15	Please do not build for more cars. Please build for more mass transit. Please build for more alternative mobility. Please evolve beyond a car and driver mentality. Austin deserves to have the best transportation system in the world. Please imagine this. Please do not lock us into the past. Say "NO!" to the idea of building another layer to Mopac.

Dear CTRMA Board Members and Staff:

I am strongly opposed to elevated structures, double deckers, or wishbone bridges over Lady Bird Lake and adjacent park land and greenbelt areas. These structures would produce noise pollution, visual obstructions and water quality issues that would hurt the crown jewels of Austin. Zilker Park, Lady Bird lake, Butler Hike and Bike Trail, Austin Nature & Science Center, Austin Botanical Gardens, Zilker Clubhouse and Lamar Beach would all be negatively impacted. The loss of calm open space in the heart of downtown would be acutely felt.

I oppose these elevated structures because of the deleterious effect it would have on Austin High School. There has been no coordination between CTRMA, the City of Austin and AISD regarding the changes such structures would have on the campus. The proposed lanes would infringe on school grounds to create a degraded learning environment and make exiting the driveways, already problematic, outright dangerous for students and faculty.

I oppose these elevated structures because they would bring increased noise and light pollution to neighborhoods on either side of MoPac and both sides of the lake. These changes in quality of life for nearby and downtown residents are so significant that I request CTRMA provide an Environmental Impact Statement (EIS) rather than the less rigorous Environmental Assessment (EA). It is important to have a clear picture of the impact of these changes on the Edwards Aquifer and surrounding lands.

While I am not opposed to toll lanes on MoPac South, I am concerned that CTRMA considers tolled lanes to be THE ANSWER to traffic problems. Please consider a combination of strategies including but not limited to tolls. Re-striping, HOV/Bus lanes, and Park & Ride systems all contribute value for minimal cost. Most importantly, DO NOT CONNECT 45SW to Loop 1.

Please choose the fiscally responsible, environmentally friendly option and pick the plan that requires no elevated segments or wishbone bridges. The 2-lane each direction without downtown direct connection meets all the goals set by CTRMA and the CAMPO 2040 Plan. It is the best option.

Sincerely,

Sandra L. Keller

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Sandra L. Keller

Sandra L. Keller [redacted]

Printed Name Address

Additional Comments:

The crown Jewels of Austin, the heart of the city, is Jeopardized by a road design that incorporates elevated lanes or wishbone bridges near the Lake and park greenbelts. Please do not choose such options.

Dear CTRMA Board Members and Staff:

I am strongly opposed to any elevated lanes, double deckers, or elevated wishbone bridges over Lady Bird Lake and the adjacent park lands or greenbelt areas leading to the lake and 2244. The crown jewels of Austin will be severely compromised by visual obstructions, noise pollution and water quality issues. Zilker Park, Lady Bird Lake, Butler Hike & Bike Trail, Austin Nature & Science Center, Austin Botanical Gardens, Zilker Clubhouse, and Lamar Beach will all be negatively impacted.

I oppose elevated sections because of the great harm they will have on Austin High School. There is no coordination between CTRMA, the City of Austin and AISD regarding the issues these lanes bring to the campus. The elevated lanes will infringe on school grounds damaging the learning environment and making exiting the driveways, already problematic, outright dangerous for students and faculty.

I oppose elevated lanes because noise and light pollution will affect residential neighborhoods on either side of MoPac and both sides of the lake. Green space will be reduced and quality of life for thousands of citizens will be diminished. The changes on the surrounding land will be so significant it is imperative that CTRMA provide a more rigorous Environmental Impact Statement (EIS) rather than an Environmental Assesment (EA).

I support mobility improvement, and constructing tolled lanes on MoPac south can be a reasonable part of that goal; however, options such as re-striping, HOV/Bus lanes, Park & Ride systems should not be overlooked. Any combination of solutions must consider the environmental, economic, social, and aesthetic consequences of each choice. The goals held by CTRMA and CAMPO can be reached without elevated lanes. Please do not build up.

Sincerely,

Sandra L. Keller

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. eric kelley

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 1:40:19 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

COMMENTS ON VIRTUAL OPEN HOUSE

David	King	11/20/15	Dear CTRMA Staff and Board Members, I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial. If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options. Please ensure the plan you choose support our public parkland use, green spaces and community values. Sincerely, David King Zilker Neighborhood Resident Austin, TX 78704

I AM NOT NECESSARILY OPPOSED TO TOLLS. TOLLS ARE, IN MY OPINION, A GOOD WAY FOR AUTOMOBILE USERS TO PAY FOR ROADS.

HOWEVER, I AM OPPOSED TO DOUBLE DECKING ANY OF OUR FREEWAYS.

THE ONLY SOLUTION IS A MASSIVE SWITCH TO TRANSIT (BUSES + RAIL)

I SUPPORT A "NO-BUILD" SOLUTION, UTILIZING MANY PARK-N-RIDE LOCATIONS, AT THE PERIPHERY OF THE CITY & IN THE SPACES BETWEEN NORTH & SOUTH BOUND LANES OF MOPAC

COMMENTS:

- These solutions all seem to effectively address getting the most vehicle connectivity possible in the MOPAC row.
- My problem with all of them is that we should not be trying to solve the (connectivity) problems focusing primarily on automobiles.
- I personally have no problem w/ toll lanes, dynamic pricing as ways to utilize existing roadways. But the real focus should be much more on park'n'ride & transit.

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Ms. Abby Tomlinson
Austin, TX

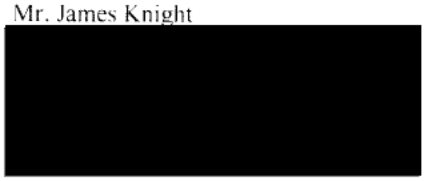
Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. James Knight



COMMENTS ON VIRTUAL OPEN HOUSE

Dear CTRMA Staff and Board Members, I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road. A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school. I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods. With the significant changes** in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option. Along with a no-build scenario, options such as expanding telecommuting, ride sharing, and rail should be considered. **The last MoPac South Open house February 26, 2015, peak period traffic data between Cesar Chavez and Slaughter Lane was: • Northbound morning (7-9am) 15 minute drive ; 2035 no build 47 minute drive • Southbound evening (4-6:30pm) 12 minute drive ; 2035 no build 45 minute drive **The current MoPac South Open House November 21, 2015, peak period traffic data between Cesar Chavez and Slaughter Lane is: • Northbound morning (7-9am) 23 minute drive (53% increase) ; 2035 no build 52 minute drive (11% increase) • Southbound evening (4-6:30pm) 16 minute drive (33% increase) ; 2035 no build 51 minute drive (13% increase) Traffic data should include the SH-45 road project and the ultimate connection of MoPac to IH-35, that is mentioned in the CAMPO 2040 plan. If toll lanes must be built, the 2 Toll lanes each direction without elevated lanes option will have the least impact to the park, schools, recreation centers and neighborhoods: • The 2-lanes each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA and this option is consistent with the CAMPO 2040 Long Range Plan. Providing direct access to toll users into the downtown area is not a goal or objective identified by CTRMA or CAMPO for this project. • The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use because it has the least impact to the park land. Adding elevated lanes damages Austin's parks, restricts community members who use the open spaces, and damages neighboring neighborhoods. • The 2-lanes each direction without elevated lanes option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options. • The 2-lanes each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 with results comparable to both the Double decker over Lady Bird Lake and double decker wishbone bridges. If free lanes are added to match the capacity of other plans, more congestion and time savings can be achieved without building elevated lanes. • The 2-lanes each direction without elevated lanes is the more fiscally responsible option because the cost is $30 Million less than the double decker wishbone bridges and $40 million less lane the double decker over Lady Bird Lake concept, but the results are almost identical. • The 2-lanes each direction without elevated lanes option minimizes impact to our water quality because it will mean less construction and less concrete over our aquifer and near Lady Bird Lake than if elevated structures were built. • The 2-lane each direction without elevated lanes option lowers the impact on the natural and human environment because there will be less impact to the park and neighborhoods, less noise pollution, less light pollution and less

COMMENTS ON VIRTUAL OPEN HOUSE

Karen	Knight	11/14/15	ascetically unattractive bridges than if elevated structures were built. • The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. There will also be more support from neighboring cities and residents if elevated structures are not included in the plan. • The 2-lane each direction without elevated lanes provides toll road users and emergency vehicles plenty of time and ability to safely maneuver and exit downtown. If there is an accident on the elevated portion of the toll lane it could actually make response times slower or impossible for emergency responders as there will be no way to exit the elevated structures until fully descended. I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project. Please make sure to fully consider the social, economic, and environmental consequences of building up. Please ensure the plans you choose support our public park land use, green spaces and community values. Message: Dear CTRMA Staff and Board Members,

I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road.

A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

With the significant changes** in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option. Along with a no-build scenario, options such as expanding telecommuting, ride sharing, and rail should be considered.

**The last MoPac South Open house February 26, 2015, peak period traffic data between Cesar Chavez and Slaughter Lane was:
- Northbound morning (7-9am) 15 minute drive ; 2035 no build 47 minute drive
- Southbound evening (4-6:30pm) 12 minute drive ; 2035 no build 45 minute drive

**The current MoPac South Open House November 21, 2015, peak period traffic data between Cesar Chavez and Slaughter Lane is
- Northbound morning (7-9am) 23 minute drive (53% increase) ; 2035 no build 52 minute drive (11% increase)
- Southbound evening (4-6:30pm) 16 minute drive (33% increase) ; 2035 no build 51 minute drive (13% increase)

Traffic data should include the SH-45 road project and the ultimate connection of MoPac to IH-35, that is mentioned in the CAMPO 2040 plan

If toll lanes must be built, the 2 Toll lanes each direction without elevated lanes option will have the least impact to the park, schools, recreation centers and neighborhoods:

- The 2-lanes each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA and this option is consistent with the CAMPO 2040 Long Range Plan. Providing direct access to toll users into the downtown area is not a goal or objective identified by CTRMA or CAMPO for this project.

- The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use because it has the least impact to the park land. Adding elevated lanes damages Austin's parks, restricts community members who use the open spaces, and damages neighboring neighborhoods.

- The 2-lanes each direction without elevated lanes option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

- The 2-lanes each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 with results comparable to both the Double decker over Lady Bird Lake and double decker wishbone bridges. If free lanes are added to match the capacity of other plans, more congestion and time savings can be achieved without building elevated lanes.

- The 2-lanes each direction without elevated lanes is the more fiscally responsible option because the cost is $30 Million less than the double decker wishbone bridges and $40 million less lane the double decker over Lady Bird Lake concept, but the results are almost identical.

- The 2-lanes each direction without elevated lanes option minimizes impact to our water quality because it will mean less construction and less concrete over our aquifer and near Lady Bird Lake than if elevated structures were built.

- The 2-lane each direction without elevated lanes option lowers the impact on the natural and human environment because there will be less impact to the park and neighborhoods, less noise pollution, less light pollution and less ascetically unattractive bridges than if elevated structures were built.

- The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of

way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. There will also be more support from neighboring cities and residents if elevated structures are not included in the plan.

• The 2-lane each direction without elevated lanes provides toll road users and emergency vehicles plenty of time and ability to safely maneuver and exit downtown. If there is an accident on the elevated portion of the toll lane it could actually make response times slower or impossible for emergency responders as there will be no way to exit the elevated structures until fully descended.
I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project.

Please make sure to fully consider the social, economic, and environmental consequences of building up. Please ensure the plans you choose support our public park land use, green spaces and community values.

Yesterday at 4:30 pm, traffic on 45th Street was bumper to bumper, light to light for the mile between Lamar and Guadalupe. To this we are adding The Grove traffic and now new traffic from the Mopac extension?. Mopac and 45th Street go through neighborhoods, not business districts. The city should be protecting residential areas and not pouring Interstate traffic into the neighborhoods. It won't be long before we are so grid-locked we can't even leave our homes.

And please explain how making us pay to drive on Mopac helps to relieve traffic. It only makes living here more expensive on top of the exorbitant taxes we pay as homeowners. And we get less and less for the taxes we pay. It costs to use our city parks, it costs to park out cars, now it will cost to drive our cars. It is unbearable.

The City needs to be accountable for how our dollars are spend, and the results of the spending. Building a Mopac extension that gridlocks our neighborhoods is not a solution to anything. Plus there is the environmental impact on our city water source. Please people, pay attention. We have to live here, not just drive

through.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 5:45:17 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Steve Koch

Date: Wednesday, November 18, 2015 12:45:24 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Let's be honest and straightforward about this road-building project. These changes are certainly going to have a different impact with each different piece that is built. If the true intent is to build a connection from !-35 to Mopac, then let's study all of it before building any of it.

The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

COMMENTS ON VIRTUAL OPEN HOUSE

Marilyn	Kounnas	11/16/15	As a resident of Austin for over 24 years, I am opposed to the proposed elevated roadways on Mopac. They are ugly. The will negatively impact the view of the lake. They will be noisy. There is significant funding for non-tolled road projects. Please consider non-tolled lanes first. And if you must use toll-lanes, please consider the option that includes two toll lanes in each direction without elevated lanes or wishbone bridges. Thank you.

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Subject: Double decker bridge over Lady Bird Lake
Date: Friday, November 20, 2015 10:04:07 AM

November 20, 2015

Re; Public comment against the double decker bridge and fly way across Lady Bird Lake

To whom it may concern:

I recently received a mailing concerning a project for the expansion of the MOPAC bridge across Lady Bird Johnson Lake to a "double decker and fly over". This is a project that will have immense impacts to our community. This is a very critical issue that needs to be carefully evaluated.

It is clear that the various transportation agencies at the state and local level have not handled the traffic problem in Austin and specifically MOPAC well. I-35, MOPAC and the arterials into the city are overcrowded. No argument, but trying to impose a new roadway plan and a double -decker bridge is a gross insult to the communities that adjoin the area of the proposed changes. The primary beneficiaries for this construction are the new arrivals in southern Travis and Hays counties, not us, the long-time residences of West Lake Hills and Rollingwood. Our two cities are well-established family communities. Our communities have already been impacted by the growth in Bee Caves and beyond. The traffic from these communities has brought traffic in our streets to a stand still by those who live well outside our city limits. The residents of our two communities will be significantly impacted even more by this proposed construction over the

river. Traffic at the intersection of Bee Caves and MOPAC essential will come to a standstill 24 /7 / 365 for years. We will essentially be cutoff from the city so that new residents in Hays County can get down town quicker. My wife and I are West Lake Hills residents since 1973. We bought here in 1973 because of the presence of "family-oriented" communities that had easy access to downtown Austin. Today we are losing our community; we are being choked by those who want to live tens of miles from the city on their little ranchettes and commute much of their waking day to work in a tall high rise downtown. Why should we have to pay for their driving habits?

I have concerns about the loss of views that this construction will inevitably impact our views of downtown, the river, and Zilker Park. Zilker Park and Barton Springs are the crown jewel of Austin, but the park in recent years has been abused by this type of development. It gets rented out to private entrepreneurs and becomes a revenue generator for the city. It's becoming fenced off with limited access by the public. It is no longer a park for the people. Adding a double decker and flyways cannot be adding to the visual beauty of the park. The beauty of the park will be further degraded. The beauty of the river will be degraded. Thank God, Lady Bird will never have to see it. I'm sure it was never in her master plan!

Our communities are being abused in the name of progress and in the name of providing a comfortable drive for people that have not yet even bought their ranchettes in some gated community in Hays County. This has got to stop. Please vote "No" to a double decker bridge across Lady Bird Lake.

Thank you.

Sincerely,

Charles Kreitler

COMMENTS ON VIRTUAL OPEN HOUSE

Charles	Kreitler	11/20/15	November 20, 2015 Re; Public comment against the double decker bridge and fly way across Lady Bird Lake To whom it may concern: I recently received a mailing concerning a project for the expansion of the MOPAC bridge across Lady Bird Johnson Lake to a "double decker and fly over". This is a project that will have immense impacts to our community. This is a very critical issue that needs to be carefully evaluated. It is clear that the various transportation agencies at the state and local level have not handled the traffic problem in Austin and specifically MOPAC well. I-35, MOPAC and the arterials into the city are overcrowded. No argument, but trying to impose a new roadway plan and a double -decker bridge is a gross insult to the communities that adjoin the area of the proposed changes. The primary beneficiaries for this construction are the new arrivals in southern Travis and Hays counties, not us, the long-time residences of West Lake Hills and Rollingwood. Our two cities are well-established family communities. Our communities have already been impacted by the growth in Bee Caves and beyond. The traffic from these communities has brought traffic in our streets to a stand still by those who live well outside our city limits. The residents of our two communities will be significantly impacted even more by this proposed construction over the river. Traffic at the intersection of Bee Caves and MOPAC essential will come to a standstill 24 /7 / 365 for years. We will essentially be cutoff from the city so that new residents in Hays County can get down town quicker. My wife and I are West Lake Hills residents since 1973. COMMENTS ON VIRTUAL OPEN HOUSE

Heidi	Krell	11/3/15	Dear CTRMA Staff and Board Members, Please do not add a double-decker over Lady Bird Lake or Double Decker Wishbone bridges over MoPac. I support the addition of 2 Toll lanes each direction without elevated lanes: The 2-lane each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use and with the 2040 Long Range Plan. he 2-lane each direction without elevated lanes option has the lowest impact to the parks and neighborhoods while still significantly improving travel times and capacity on our roadway. The 2-lane each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with a Double decker over Lady Bird Lake. The 2-lane each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with 40-50 feet elevated Wishbone bridges over MoPac. The 2-lane each direction without elevated lanes option cost is $30 Million less than the Wishbone concept and $40 million less lane the Double Decker Decker concept. The 2-lane each direction without elevated lanes option minimizes impact to our water quality and lowers the impact on the natural and human environment by not building elevated structures near neighborhoods or Lady Bird Lake. The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. I also support the addition of the sidewalk on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of an 8' sidewalk I would like an 11' multi-use path to accommodate bikes and pedestrians and connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project. Please make sure to fully consider the social, economic, and environmental consequences. Please ensure the plans you choose support our public park land use, green spaces and community values! Sincerely, The Krell Family

To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 11:30:20 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please don't ruin my home and my neighborhood by building a double decker monstrosity on Mopac. I swim daily at Barton Springs and don't want Zilker Park to have traffic running through it. Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind

salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Karen Kreps

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 1:30:55 PM

Dear TxDOT and CTRMA officials:

I want none of the options you are offering. Don't build out Mopac.

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I live right near this proposed monstrosity of a construction project and I strongly object to Toll Roads, and any construction involving elevated roads or additional lanes. I object to the way the project is being presented so the whole picture is not seen. I don't want I-35 traffic funneled onto Mopac with cars, more cars, and 18-wheel trucks.

Listen to KeepMopacLocal.com, Sos Alliance + Bryan Stevenson

The proposed unsapped expense of Tolls should not make me a prisoner in my home. No elite lanes. unable to cross north/south of the river

This Toll plan will lock us into a last-century model. We need innovative mobility, improved mass transit and alternative ideas. Austin technology leaders. Not visual blight!!

Shuttle rest stop S Mopac to create HOV lanes for rush hour.

Study all of it before any construction begins

Take Tolls off of 130 so I will not have traffic

I am worried about negative impacts to Barton Springs where I swim daily + which is vital to our quality of life.

No Tolls & roads!!

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

No toll roads.

Please exhaust every other possibility before bringing up toll-roads again.

Not to do this would guarantee squandering & permanently damaging some of the great features of Austin life.

And what damage would be done only to create what would be a short-term solution.

Optimize use of SH-130 — eliminate tolls, widen road.

Optimize I-35 as well.

Judith Kroll

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

I want Texas generally to go back to tax-funded roads and stop building toll roads. I don't use the current Austin-area toll roads, they go almost nowhere I want to go, and I would never use them unless they start having toll booths rather than the current system of pay money for a TxTag now and use it only once in a blue moon. A second beef is that entryways to the toll roads, particularly the one southbound on I-35 in Round Rock, cause congestion and vehicle back-up for those of us trying to keep going straight on I-35 who don't want to use them. A third beef is that I myself, (1) when I'm trying to go to Lampasas and destinations northwest on 183, (2) when I'm trying to return from Elgin or far east Austin on 290 and its non-toll access road, or (3) when I'm returning westbound on 79 into Round Rock driving towards I-35, and my neighbor, (4) when she's trying to return from Round Top and Giddings on 290, have to be careful to not get on a toll road, because if unsuccessful we not only have to figure out how immediately to get off and get back on course but then get charged for the mistake later. It requires being careful, because the TxDOT directional signs in such areas are subpar.. Let me take you on a sample ride back into town on 290 from Elgin, and I'll be happy to show you what she and I find confusing. It follows from all the considerations above that I want Mo-Pac to be as little toll road-ish as possible, even if I have to sit in MoPac traffic jams.

As an aside, I'll say that part of the problem on MoPac concerns the drivers who use the right-hand exit lanes as long passing lanes to get around the non-exit-lane congestion and then cut back in just before the exit they have no intention of taking. I wish law enforcement officers would find a way to ticket such drivers or give the rest of us means to report license plates. My hypothesis is that these selfish I'm-special-and-normal-rules-of-the-road-only-apply-to-the-rest-of-you-chumps-and-not-to-me drivers slow traffic down worse than it's already showed down.

Sincerely,
Chris Kuykendall

Name: Joyce Lally

Email Address [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac.

Elevated lanes will significantly impact the Austin green feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to depressingly urbanized and industrial.

If toll lanes must be built the "2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

I would also request CTMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School.

Further:

• The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use because it has the least impact to the park land. Adding elevated lanes damages Austin's parks, restricts community members who use the open spaces, and damages neighboring neighborhoods.

• The 2-lanes each direction without elevated lanes is the more fiscally responsible option because the cost is $30 Million less than the double decker wishbone bridges and $40 million less lane the double decker over Lady Bird Lake concept, but the results are almost identical.

• The 2-lanes each direction without elevated lanes option minimizes impact to our water quality because it will mean less construction and less concrete over our aquifer and near Lady Bird Lake than if elevated structures were built.

• The 2-lane each direction without elevated lanes option lowers the impact on the natural and human environment because there will be less impact to the park and neighborhoods, less noise pollution, less light pollution and less ascetically unattractive bridges than if elevated structures were built.

• The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. There will also be more support from neighboring cities and residents if elevated structures are not included in the plan.

• The 2-lane each direction without elevated lanes provides toll road users and emergency vehicles plenty of time and ability to safely maneuver and exit downtown. If there is an accident on the elevated portion of the toll lane it could actually make response times slower or impossible for emergency responders as there will be no way to exit the elevated structures until fully descended.
I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

Joyce Lally

Nov 18, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Derek Land

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 4:10:22 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

The expansion of Mopac south will become part of a large loop which will ultimately feed traffic from IH35, through SH45 to Mopac and north back to IH35. Naturally, the southbound traffic will follow the reverse flow. I believe the ultimate larger expansion loop should be studied as a single entity before building any of it. I currently am thankful for the fact that essentially no 18-wheelers are on Mopac and I believe this will change when the entire loop is completed. A reasonable alternative is to open up SH130 as a free road to serve the function of a bypass loop around Austin for through traffic.

I am opposed to adding lanes to Mopac as a misguided attempt to alleviate traffic. It is probable that traffic will increase to fill any available capacity, leaving the travel times unchanged. Additionally, I believe adding lanes to Mopac, toll or otherwise, will degrade the character of the western half of Austin. Alternatively, leaving Mopac unchanged will force alternative transportation options to be considered that I believe make more sense for our community.

Thank you for your consideration.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I do not think we should put in more traffic lanes on Mopac anywhere close to Lady Bird Lake, Zilker Park, ~~Zilker~~ Zilker Botanical Garden or the Barton Springs and its watershed and any of our preserve lands. I am totally against impacting Zilker Park and if this proceeds forward, I will be sure to vote against all measures to achieve this as well as all future funds and other improvements to any part by Austin. Putting in more lanes at Zilker & Lady Bird Lake will kill the heart and charm of Austin & Austin will be just like Houston. ~~Work~~ and then Austin will die. No one will want to move here and everyone here will move away. What would be special about Austin? Nothing. We would be a concrete jungle just like Houston with the heat, humidity and certainty of being run over by a Mac truck if you are on the road for anytime at all. The same money for building roads would pay for enough buses, rail or trains tracks to actually reduce the ~~congestion~~ traffic congestion and environmental negative impacts of so much ~~road~~ individual + bus traffic. Following through with these 4 ideas by CTRMA + CAMPO - It is insane to have spent so much time and money to protect Barton Springs pool to destroy the Austin (a

Subject: Study the whole loop project first before building SH 45 SW
Date: Sunday, November 15, 2015 1:40:20 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Shawn LaTorre

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

BLG

Barbara LeGere [redacted]

Printed Name Address

Additional Comments:

I am excited to find a solution to our city's growing Congestion! That said, ~~th~~ we must work to preserve the things that make Austin the best city in which to live. Elevated lanes will, I believe, present such noise

and light pollution, we will significantly undermine the enjoyment of the out door spaces we hold so dear.

I fully support adding two lanes in both directions without adding any elevations

Thank you for your consideration!

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 6:35:14 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Let Austin survive....STOP TRYING TO KILL WHAT IS LEFT OF THE BEST CITY IN TEXAS.

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the

Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Elena Leos

Dear TxDOT and CTRMA officials:

Please consider that the current glut of cars does not happen for no reason, i.e. development without asking developers to contribute to what they re creating --ecess traffic on roads-- is not good management by stewards of Austin. Development should stop and change its perspective before mindless going the path of ever bigger. Certainly better buses and better public trains are everywhere available for inspiration from other great cities.

sincerely,

janice leoshko

COMMENTS ON VIRTUAL OPEN HOUSE

Margot and Sal	Levatino	11/19/15	We are Rollingwood residents and strongly oppose the south Mopac plan that proposes elevated toll lanes over Lady Bird Lake because of its unsightliness, increased noise level, and the difficulty of access from this area. We hope that alternatives to adding toll lanes to south MoPac are still being considered, as well as a more comprehensive plan that includes the Bee Caves Road/MoPac intersection. Toll roads are expensive, especially over time, and are not nearly as utilized as the public roads. We are 50-year residents of Austin, and continue to deplore the elevated lanes over I-35 from Airport Blvd to MLK that we feel have greatly detracted from Austin's beauty. The upper deck is an eye sore and we think the proposed elevated roadway for MoPac over Lady Bird Lake and Zilker Park would be an equal blight over one of the loveliest areas of Austin. Thank you for your consideration.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

This proposal WILL NOT cure the traffic. It will lead to even more congestion and traffic and destruction of the natural beauty of Austin and surrounding areas as well as of our neighborhoods.

We Do NOT want another 135 through the western half of Austin.

Fix 135 !! It has become outrageously dangerous = Cramp to 183)

No piece meal approach!

Remove tolls from SH 130 so it can actually be the preferred route for interregional traffic through Austin.

COMMENTS ON VIRTUAL OPEN HOUSE

Kip	Lewis	11/6/15	Hello I would like to voice my thoughts regarding the Mopac Project. Please strongly consider the following: 1. New Lanes constructed for the entire length of the Mopac Project 2. Connecting lanes in and out of Downtown to ease the flow off and on Mopac 3. These improvements will improve traffic Flow Downtown. 4. These improvements will not effect Zilker Park 5. Its crucial to build as many lanes as possible the entire length of the project.

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Darien Ligarde
[redacted]

COMMENTS ON VIRTUAL OPEN HOUSE

Mark & Heather	Liggett	11/10/15	Austin has grown to the capacity to need two express lanes in each direction. It should not take an hour to travel 10 miles on a regular basis and yet it does. Two express lanes in each direction should help to reduce travel times from the west and south. Thank you

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 12:07:17 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Blair Liles

Message * Please move forward as soon as possible on the new Mopac south toll lanes. I support the two toll lanes each for North & South side of Mopac south project. With the long long long delays on Mopac North, the sooner the Mopac South project can start the better. Please don't use the same construction company used to build Mopac North tollway. One full year behind is ridiculous, no matter what the company comes up with for excuses. Maybe a month or two, but a full year behind is terrible.

Thanks,

Craig

Subject: Please start construction on south Mopac as soon as possible

Message: As a resent of central Austin, I'm asking the board members approve the South Mopac road as soon as possible. Roads in Austin have sat long enough. Nothing is being done on I-35 at all. Please don't make this same mistake on Mopac. Please add the two lanes on both directions of the south Mopac project.

As far as the bridge over Mopac, it is needed for the project. Build it.
Please don't use the construction company building Mopac North to be a FULL year behind is a joke. No matter what they come up with a full year behind is unprofessional and should not be put in a position to be late again on the south Mopac project if moved forward on
Thank you for your help on building a much needed road of Mopac south project.
Take care,
Craig

Please plan for the maximum number of lanes for the Mopac South extension. The attitude that if we don't build it, they will not come, is a thing of the past. The highways are already turning into parking lots, and we need to plan for the future. I hope the future plans for the Mopac South extension will also address a full-exchange intersection at Mopac and Loop 360. I have been a land planner in the Austin area for the last 36 years, and I know that land was set aside when I worked on The Terrace office complex in that area. Please utilize all the right-of-way to its maximum potential. The main arterial roadways and highways need to be utilized to their full extent in order to provide the maximum benefit to all travelers.

COMMENTS ON VIRTUAL OPEN HOUSE

Cathy	Little	11/20/15	Dear CTRMA Staff and Board Members, I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial. If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options. I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods. Please ensure the plan you choose support our public parkland use, green spaces and community values. Sincerely, Cathy Little

COMMENTS ON VIRTUAL OPEN HOUSE

James	Little	11/20/15	I do not support elevated lanes of any kind over Mopac close to the downtown area. I feel that it would have a significant negative impact on my neighborhood. I would favor expansion plans that do not include any elevated lanes.

COMMENTS ON VIRTUAL OPEN HOUSE

Mark	Littlefield	11/10/15	1. I am a resident of SW Austin - Legend Oaks in Oak Hill. When northbound MOPAC around CesarChavez/5th St was re-stripped a couple of years ago to end the bottle neck it made an immediate positive impact. 2. In a dream world, we change land use policies and transit options so that sprawl and the bigger roads are not needed. We don't live in a dream world - we live in Austin. 3. I am also surprised by Principal Amy Taylor. What Austin High needs more than anything is greater numbers of SW Austin students. Austin HS needs all of Mills and some of Baldwin. There is no way AHS is going to get that without an expansion of Mopac. I am on southbound Mopac everyday with students merging from the Lake Austin on-ramp. It is ridiculously dangerous. It's the reason I don't want our children to go to Austin High. Yes, students may have a less direct route to enter/exit AHS. However, from what I can tell from the presentation, it seems like the new option will be much safer than the current situation. 4. I think the plan sounds awesome.

Can you modify the existing pavement markings and signage at the northbound approach of the service road to Barton Skyway to provide for a left turn - through land option on the center lane? Currently the left lane is left turn only (good as it should be) and the center lane is trough only (THIS NEED TO BE CHANGD TO LEFT-STRAIGHT) and the right lane is straight only

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Subject: Study the whole loop project first before building SH 45 SW
Date: Monday, October 26, 2015 11:15:21 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Robbie Lueth

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 1:25:28 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Jimmy Luker

COMMENTS ON VIRTUAL OPEN HOUSE

Paige	Lynch	11/16/15	Thank you all for your hard work on trying to come up with the best solution to our traffic problems as a result of our growing population. In looking at the options given I believe it does not make sense to have a direct access lane into downtown via Ceasar Chavez unless something is being done to widen that thoroughfare as it is already like at parking lot at peak travel times, which is when many people will choose to use the express lanes; the current infrastructure can not support a change like this. Please consider that the most important features of our city are Lady Bird Lake, the trail and Zilker Park. For many reasons, least of all tourism and the revenue brought to Austin b/c of the festivals enjoyed there and the overall earthy feel must be protected. You do not see an elevated freeway going over Central Park in New York. We can not have an elevated freeway going over Lady Bird Lake, that is not Austin. Please consider the least invasive plan to get the best flow of traffic and do not worry about direct access to downtown if we do not have better infrastructure to handle a rapid flow of vehicles to the drop off point. Below are a few points to consider: 1) No elevated roadways. a. They are unsightly. b. Will negatively impact the view of Lady Bird Lake from Mopac. c. Will increase light and noise pollution. d. Will serve as a divider to separate key parts of west Austin from the rest of the area. e. Will negatively impact Zilker Park, Zilker Botanical Garden, Austin Nature and Science Center and Lady Bird Lake. 2) Proposition 7 passed and provides significant funding for non-tolled road projects. Before adding tolled lanes, fully consider all of our options for non-tolled lanes. 3) If toll lanes must be used, then the option that includes two toll lanes in each direction WITHOUT elevated lanes or wishbone bridges should be used. Thank you for your time, energy and work on this plan. I trust you will make the right decision for AUSTIN, who we are and retain the feel and beauty of why people want to come here. Best Regards, Paige Lynch

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 6:35:16 PM

Dear TxDOT and CTRMA officials:

For once, please please listen to the people and don't pretend to do so as was the case with the MOPAC North discussion.. Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 (traffic jam) through Austin. The CTRMA toll agencyâ €™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free or at least free or very inexpensive to commercial vehicles. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse. Reconsider the whole issue of transit trains up Mopac north.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

The proposed infrastructure will soon be obsolete. Transportation needs to be multi-dimensional and focused on true mobility of buses, trains, bike lanes, trams, HOV lanes, all of which require a change in the habitual mindset of Americans as well as the political will to raise funds for the above alternatives by raising the gasoline tax.

The irresponsibility of our society in not being willing to contribute to sustainable development through taxes will have an irreversible impact on the decades to come.

Let's look further at changes in cities around the world and take the best results as lessons we can learn from

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Florence Mackin

FLORENCE MACKIN [redacted]

Printed Name Address

Additional Comments:

The two lanes w/out elevated lanes appears consistent with local plans for park land use - it has the least impact on parkland. I proudly helped defeat the ZOO IN Zilker many years ago & we all know how divisions that would have been. We need MORE parkland protection NOT Less!! I also support the 11' multi use path. Please Be Careful - this is a big impact on

COMMENTS ON VIRTUAL OPEN HOUSE

Sara	Madera	11/20/15	None of the current options should be chosen. Mopac should not become part of the Austin loop with I-35 and 45. It should be kept as the local through-way. Trucks should be enticed to go on 130 and not on Mopac or I-35. Cesar Chavez (1st Street) is going to become an incredible bottleneck.

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Keep Mopac Local

1) Comprehensive Environmental Study
2) NO tolls Toll roads at all-
3) Invest in alternatives

Protect the downtown Natural Environment.

Toll roads are not for Locals,

Pay off the SH 130 debt to Make it Free in order to decrease traffic on I 35.

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 2:30:33 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Form Submission - New Form - Mopac/ Loop 1 South
November 17, 2015 at 6:42 AM
[redacted]

Name: Allyson Marshall

Email Address: [redacted]

Subject: Mopac/ Loop 1 South

Message: Dear CTRMA staff and board members,

I live near MOPAC and 2244 and would like to voice opposition to elevated toll lanes over MoPac and the 2 wishbone bridges. This plan destroys the most beautiful and highly utilized park areas in our city. I have personally met people from other states on Town Lake and they were blown away by how many people were on the trail on a typical day. The Barton Springs area would be negatively impacted as well - a man from New Jersey called it the seventh wonder of the world.

Please choose the "2-toll-lane each direction without elevated lanes" option to maintain the most attractive place in our city while reducing travel times for commuters.

Sincerely,
Allyson Marshall

COMMENTS ON VIRTUAL OPEN HOUSE

A.E.	Martin	11/5/15	With the traffic load we see today on south Mopac it is inconceivable to me that we would consider any expansion less than two lanes each way. Southwest Austin will continue to grow and we should plan for double the traffic in 10 years which would give us the same congestion then as we have today if we build two lanes each way.

Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. David Martin

From: [redacted]
To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 04, 2015 4:50:13 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Maria Elena Martinez

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Let's do [redacted] rush hour set up HOV + express bus lanes on Mopac instead of building new tollroads. It will quickly create significant volume for moving people, not vehicles. I suggest this as someone who drives South Mopac to Far West Blvd. for work for nearly two years. During this period, traffic congestion lengthened my commute from ~35 minutes to more than an hour -- or 90 minutes during storms or accidents.

Other steps we should take to ease Austin traffic, esp for future traffic include (but not limited to):

- Coordinate planning between TxDOT, CTRMA & AMPO, Travis county governments and the City of Austin & all affected municipalities, from Sunset Valley to Oak Hill & points west
- Reexamine the Pressler Road proposal for traffic solutions that will have less impact on Austin High & Lamar Beach
- ~~Be honest & open~~ Insist on honest, transparent public discussion of CTRMA plans AND ALLOW INPUT FROM CITIZENS OF AFFECTED COMMUNITIES.
- Once Roads are built, they fill up with traffic. So instead of building NEW toll roads:
  - Use $ 4 billion in new TxDOT funding from proposition 1 to build non-toll road in Austin
  - Pay off debt on 130 tollroad, with that $ + use that to divert ~~truck~~ long distance traffic from I35
- Take steps to protect Austin's jewels: Barton Springs, Zilker Park, Lady Bird Lake, Hike & Bike Trail, LB. Wildflower Center, Austin High, the Edwards Aquifer Recharge Zone. . .

The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 4:25:18 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center. The benefits of this road network to the community cannot possible outweigh the costs in terms of loss of irreplaceable natural resources and unique habitat.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Austin needs traffic solutions that are forward looking and that will not contribute to future congestion. Tolled roads and additional lanes are not the solution -- they guarantee continued congestion. Austin needs well-designed bus routes, dedicated bicycle lanes, HOV lanes on Mopac so that residents can truly change their behavior. All of us -- traffic engineers, city planners, elected officials, daily commuters and in-close residents -- must find alternatives to personal automobile transport. If we do not choose to take a reasonable alternative public transportation option (or bicycle) we deserve to sit in traffic -- Gerald Dougherty and his developer cronies included!

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

The arguments against the proposed changes to S. Mopac far outweigh the limited benefits that would accrue to a very limited number of people who do not even necessarily live in Travis County. Among those arguments are:

1) no alternative to tolled roads is presented – I travel S. Mopac routinely & believe that re-striping S. Mopac for HOV could alleviate congestion.
2) consider something other than cars as a transportation option for Austin. If bus routes, park & ride were available & convenient, people would use it. Cheap gas won't last... and our environment is changing – WE MUST ADAPT.
3) Take tolls off of 130 and make it free – this will also alleviate congestion....
4) Preserve Austin's most vital assets: Barton Springs, Zilker Park, the Aquifer, Hike & Bike Trail....
5) Do the promised comprehensive study – not a piecemeal approach that obfuscates the issues.

We are not idiots – & we don't want tolls. We want, need and deserve better solutions!!!

Lori

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Patrick McCord

November 16, 2015 at 3:34 PM
[redacted]

Name: Amy McCullough

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members,

As a resident of Austin for 6 years, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial. Cities built for cars end up full of cars. Austin would be better served by public transportation improvements than pandering to the single car driver.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,
Amy

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 13, 2015 7:35:18 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Brenda McGahagin

Look at alternatives.

I do not support any of these plans. Estranged
I demand a Comprehensive study worth all transportation groups (TXDOT, City, County, etc Bike & Ped groups) impact

Do not connect I-35 to Mopac w/ 45. Does not Solve traffic problems, destroys what we value; Creates more love.

Pay off I-30 - no tolls, make it free.

Restripe MoPac - create free HOV lanes

Use more Park & Rides South, for commuter
More direct buses More rail systems

Better, more & more attractive bike ways

No tolls on MoPac (or anywhere) they benefit the minimum # of people. Free lanes will become more Congested!

More concrete creates more runoff. Damage to gems like Barton Springs, Lady Bird Lake Wildflower Center, our neighborhoods.

Austin can be a fabulous example of

Form Submission - New Form - MOPAC/LOOP 1 SOUTH
November 18, 2015 at 5:02 PM
[redacted]

Name: Liz McGuire

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I am submitting, I want to express that I DO NOT support elevated toll lanes of any kind over MoPac. Please do not add a double-decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the Hill Country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

If toll lanes must be built the "2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use because it has the least impact to the park land. Adding elevated lanes damages Austin's parks, restricts community members who use the open spaces, and damages neighboring neighborhoods.

I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project.

Please ensure the plan you choose supports our neighborhoods, our public parkland and our environmental resources.

Sincerely,

Liz McGuire
Deep Eddy resident

Please do not add a double-decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the Hill Country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

If toll lanes must be built the "2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use because it has the least impact to the park land. Adding elevated lanes damages Austin's parks, restricts community members who use the open spaces, and damages neighboring neighborhoods.

I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project.

Please ensure the plan you choose supports our neighborhoods, our public parkland and our environmental resources.

Sincerely,

Liz McGuire
Deep Eddy resident

*What I sent yesterday to txdot slightly updated today thanks to extra library time. If possible I would like this example to be my representative comments, thanks:

First off, let me say I support completely the Keep Mopac Local commonsense, low cost solutions as an alternative to what TxDot and the City are proposing, most especially freeing up 130 from toll to open access to provide true I-35 relief. I also want to make clear that I am in no way affiliated with the organization lest my lengthy comments to follow unduly upset anyone. I am but a local citizen, no more, no less, but the prevailing view of modern politics wants to dumb me down to a "customer" sad to say, but I digress.

What TxDOT proposes with these South Mopac expansion scenarios is a taxpayer funded Apocalypse for the current South Austin community. The traffic studies shown seem to give even more impetus to the ravenous modern international developmental model of slash and burn as they flood our historic communities with a proposed 98% population increase over the next 20 yrs, a nonstarter for anyone who has lived any length of time in Austin. We can recall a still beautifully, pastoral Austin flush with clear running waters, timber, wildlife, and clean, fresh air, a paradise almost as namesake Stephen F. Austin and Mexican Army officer Jose Enrique De La Pena rhapsodized in their diaries during the 1820s and 1836 respectively.

I note the "deluxe" expansion choice(2 express lanes + downtown DC) of the piecemeal study area presented (15th St to Barton Springs Rd, Mopac to Congress) don't improve peak AM South to North commute times in any measurable way that counts. The peak PM North to South commute times propose pedestrian speeds for the do nothing scenario(2.1 mph - 5.365 mph), in effect holding South Austin residents hostage on their way home through how many other piecemeal study areas? Where is the study to explain where this massive stampede of traffic comes from and why does it suddenly need to force it's way into our communities?

It is without irony that I note that your deluxe (2 express lanes + downtown DC) expansion proposes to return us to horse and buggy travel times (3.001 mph-10.81 mph) for this tiny north to south study area. One can only cringe to consider the total travel times from north of Hwy 183 to south of Ladybird Lake with such expansion.

And why no both north AND south travel times mentioned during those peak times, and why no cost estimates for the various options?

As someone who has actually looked into the history of automobile development, my only conclusion is that TxDOT, the Texas Legislature, and international developers wish to develop Austin back to the horse and buggy era, did I get that right? Can it really be considered development for a community when a malignant tumor (Mopac) characterized by unlimited growth (Austin) by local invasion (Trucking Industry/Out of Town Commuters/Local road base services like pizza delivery, UPS, FedEx, restaurants, drug store, ect) and systemic by metastasis, the biological definition of cancer?

The transportation/developmental model for this city specifically is breaking down in a last frenetic grab for taxpayer and real estate property flipping gold before the next real financial derivatives real estate collapse and bank bail outs begin. Simply put, for simple errands and commutes, it don't take a 6000 lb carriage and 300 horses to cart 250 lb Bubba for beer or 100 lb Missy for makeup if I may use some typical stereotypes. The geography, geology, and hydrology of this region doesn't support the current massive infil model as our last rains proved when the Austin Planning Department flooded as well as the Bergstrom Airport Tower which was knocked out of commission for weeks, requiring a Federally equipped trailer for such emergencies for inferior operations. Proven outdated traffic and development designs only forecast ever more such disasters.

Consider that an aspiring young inventor and future US Congressman named Nathan Read was granted the podium before the first ever session of the US Congress in 1790 to display his model of a steam powered, 4 wheel automobile that he requested for a patent for. They laughed him off the podium as deranged, so 110 years of Automobile development was lost due to lack of leadership vision. A few years later Read applied for and was granted two steam engine patents by the newly created patent office that played a key role in the development of the revolutionary steamship and rail locomotive that even saw service as late as the 1960s, more than two centuries, but not for the auto. I dare say given the genius Read possessed, his first ever auto would have run faster than the speeds TxDOT proposes to levy upon our community had he thought there was a market for it.

So the automobile was a Johnny come lately that didn't start to gain traction until around 1900. A French made 1899 Serpollet steamer seated 4, could travel @ Mopac speed limits, and be gassed and watered at today's service stations. A 1906 Stanley steamer proved itself capable of 200 mph speeds with off road capacities that 99.9 percent of autos ever produced could never duplicate, could also be routinely gassed and watered today, but these were vehicles for the rich, not the common man. Enter Henry Ford with the most revolutionary automobile in history, the 1908 Model T that solved every transportation problem of the day by being very cheap, very well built and reliable, easy to maintain, off road capabilities that most cars had to have back then because of poor roads, and could do 45 mph on the low octane gasoline then. All of the above would be considerably constrained by TxDOT's proposed Mopac expansion. What have we the people really gained in transportat ion these past 100 years other than rolling entertainment salons sipping modern gasoline champagnes requiring the the finest megaroads that can be made to clog up the works while shouting out the pretentiousness of their short time on this earth?

What would Nathan design and do today if he could apply himself to the obvious intractable transportation dilemma?

As to my own transportation chops, I am quite proud to be a pedestrian by choice these days from the heart of 78704 South Austin, a traffic solution who doesn't clog your system, yet just before I moved here in 1972 to attend UT, I had purchased the fast production motorcycle made then, the antithesis of pedestrian. I stripped it down, hopped it up further, and was quite proud to say I got 30-40 mpg in town because I never raced it around town like modern bozos do. An amazing 50-80

mpg on the highway too for the decade I owned that bike. In the mid 70s I had an 11-7 job at Mary Lee School in South Austin while living across from the Blind School at 45th and Marathon, a 6 mile commute on my self maintained, 15 speed 1962 Schwinn. I was equally proud I could weave my way through town across the river to make it in 15 min flat, a time that never changed even on the return trip those 300x or so I made loop, an average speed of 24 mph. I'll let the engineering wonks to c alculate the horsepower required to haul a 180 lb load of me and my bike over that distance over dozens of elevation changes, point being it doesn't take much horsepower or fuel to power a high efficiency vehicle. I'd quickly be killed in today's Austin trying to replicate those commutes.

I last made the Mopac commute in 2001 where I could travel 13 miles south to north in 20-25 min in my big Fleetwood, usually as I made my 7AM-4PM schedule. It took about 35-40 min for the return trip south, and woe be me if I couldn't make it out until 4:15-4:30. I'm pretty sure those are Peter Pan times in 2015. I drove a big rig interstate long hauler from 2006-2007, the experience I wouldn't trade for anything, but never wish to duplicate again. They were starting to bring in poorly regulated Mexican trucks and truckers to drive down the poor wages further, and fact is I never could see the efficiency in picking up a Chilean shipment of peaches and plums at Philadelphia wharves to be delivered to Walmart in Houston when Houston is closer to Chile and the Panama Canal with arguably the largest shipping port in America. Rail is also much more efficient and less dangerous to the public than the big federally subsidized trucking industry. When Mopac was built, A ustin voters were promised there would be no Big Trucks allowed, a broken promise with the expansion plans.

So, let's take a satellite image of the study section of Mopac in peak rush hours. Now bisect each north and south artery. On the presumably slower right side, insert the much smaller footprints for a good road bicycle, a Segway, and a 125cc Honda road bike. Now there is all kinds of extra space for these low mass commuters, enough for additional lanes and faster speeds, but not too fast, we're going for average speeds of 30-40 mph max, much superior to stop and go, safer too.

OK then, what are the drawbacks to above vehicles? Fair enough, most don't want to commute on a bicycle inhaling noxious fumes while enduring record heat waves, freezing cold, and always the rain storm. A Segway is too slow, lacking range and weather protection and needs a sitting position. The 125 Honda is more than fast enough, 75 mpg, easy to park, reliable, but lacks weather protection and not enough are skilled enough to ride a motorcycle. In short, the ideal efficient commuting vehicle has yet to be produced because of a lack of vision. I could if I had the means, but if you look at the history of some of the greatest automotive innovators, in spite of some early success, most bit the dust in the sequential 5-7 year depression cycles the US has averaged since it's inception, ironically bought for scrap by Big Bank financed GM to be killed off.

Nonetheless, what I am proposing is well within the current technology, only the concept is innovative. I could do it but lack the resources. TxDOT should well consider future dedicated driving lanes to these sorts of 300-400 lb vehicles equipped with weather protection, modern communications/mapping and a few storage areas for common items like groceries, jackets, ect.

In the meantime, it's time for city leaders to actually start sustained planning around the central core of their their community instead of all this get rich quick boom and bust sociopathy. Booming from a billion dollar city budget in 2001 to nearing 4 billion in 2015, most every big problem facing the city has been self created. Noxious air, slimy creeks, obscene noise levels, new flooding, and what are the health, insurance and ultimately financial costs of all these reprehensible traffic accidents? A hundred or two years from now, these will be considered the dying dinosaur years of community planning and human rights no matter how many dead Confederate statues modern politicos melt

down.

For myself and others, it's like watching the last days of Rome in slo-mo while steeling for the next depression as our modern day Neros fiddle away. I would wish to edit this a bit more, but I've been on limited library time since a Google accident knocked out power in my neighborhood, frying my computer, but the good news is the google guy survived thanks to my neighbor's plush back yard to land on. I'm in a rush to get in before the deadline today or tomorrow. After I finish paying my taxes for next year, I will consult with my son on the appropriate computer model so as to be better messaged for future dialogue.

Good luck all, over and out...

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Where to start? Lacking a keyboard, please excuse my penmanship

How about Nathan Read who proposed the first ever powered four wheel vehicle, submitting a model, steam powered, before the 1st US Congress in 1790 - Congress then was no more visionary than now & just as vicious - They laughed him off the podium as ridiculous. Read went on to submit 2 steam engine patents to the patent office later created that played a key role in development of rail locomotives and steamships - Others such as Sylvester Roper during the Civil War years and later a man named Copeland built a number of steam cars but the populace was not ready until around 1900, so the US lost out on 110 years of auto development for lack of vision

FF >> 115 yrs of auto development and most of the people in Austin can travel no more than 10-40 mph, the same speeds as those early cars, so What Have All The Road Engineers & Big Car Makers Accomplished? A clogged sewer of roads never designed for traffic flow and the current massive population — WOW, and who to thank this but sociopathic infill planners and developers working with TXDOT, ect

Fact; It dont take 200-400 HP/4000-7000 lbs of junk to take a 250 lb man or 100 lb woman down to the store for beer or makeup - Automakers have yet to build a sustainable vehicle for the people nor have road builders designed anything but gridlock,

One Hundred years from now, new generations will note they had wealth, computers, dem[illegible] and this was the best they could do, arguing ou[illegible]

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 3:05:33 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Chris McIntyre

COMMENTS ON VIRTUAL OPEN HOUSE

Roxanne	McKee	11/13/15	MOPAC/LOOP 1 South I am writing these comments in my individual capacity, not as a Rollingwood City Council member. I am opposed to any elevated lanes or wishbone bridges on or near Lady Bird Lake. From an aesthetic viewpoint, they are unattractive and will detrimentally impact the beautiful view of Lady Bird Lake that we now have when crossing it. The proposed elevated lanes and wishbone bridges will detrimentally impact the hill country character that this area now enjoys and will contribute more light and noise pollution than non-elevated lanes. This project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School, and surrounding communities and cities so that every effort should be made to ensure that the least intrusive option be chosen. An Environmental Impact Statement should be performed. Towering, divisive concrete structures over Lady Bird Lake or the Bee Caves Road intersection at Mopac are not the answer.

Form Submission - New Form - MOPAC/LOOP 1 SOUTH
November 17, 2015 at 7:40 PM
[redacted]

Name: Mary McMahon

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members,

I thank you and appreciate the detailed work of your staff and board as well as the efforts of those affected by these proposed changes. And I am glad for the opportunity as a neighbor to have input into the MoPac plan after being given information through CTRMA to study and consider.

To be clear, I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake and Austin High school. The land over the Edwards Aquifer recharge zone including surrounding City of Austin and Rollingwood neighborhoods will surely be impacted by this extent of road construction. I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review before a final plan is adopted.

In addition I urge CTRMA to reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option.
The major changes approved by voters for regional non-tolled road funding in the recent election may provide the alternative necessary to keep from having to convert MoPac South into a toll road. Along with a no-build scenario, other options such as expanding telecommuting, ride sharing, and rail should be considered.

If toll lanes must be built as a last resort, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.
The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. There will also be more support from neighboring cities and residents if elevated structures are not included in the plan.

Please ensure the plan that is ultimately chosen supports our public parkland use, green spaces and community values.
Sincerely,

Mary McMahon

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Fixing I-35, promoting (i.e., removing tolls) the 130 Loop, and locally, improving intersections would greatly improve traffic flow. WE DON'T NEED TO EXPAND MOPAC!

It's been proven over & over, in cities across the U.S., more lanes do not relieve traffic. More lanes invites more traffic that results in the same traffic issues. It creates a car city instead of a livable city.

Traffic issues are universal. In some ways, there are no real solutions to certain traffic issues. Traffic is just a reality in this extended age of the automobile. Traffic is a function of balancing existing infrastructure, and part of that balance is to maximize efficiency and utilization of existing infrastructure.

For example re-striping or signaling Mopac south during rush hour would greatly improve traffic flow. I've seen this in many other cities, to useful and beneficial effect, and I'm suprised it's not implemented here.

I DON'T WANT MOPAC CONNECTED TO I-35! I DON'T WANT MOPAC EXPANDED JUST NORTH (AUSTIN HIGH) AND SOUTH OF LADY BIRD LAKE

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 4:30:12 AM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

I own property at 404 and 406 Farley Trail in Rollingwood, about 2 blocks from the Zilker Park Clubhouse and the Austin Nature Center "greenbelt". While I accept the background noise of the current MoPac alignment as a consequence of proximity, I am STRONGLY OPPOSED to the South MoPac proposals, especially the elevated portions. Not only would this greatly increase the noise nuisance for my property there but also would make the elevated portions visible from my house. Perhaps even more importantly it would seriously impact the Nature Center and the Zilker Park Clubhouse – two of Austin's treasures. I encourage you to be creative in seeking solutions to the traffic load on MoPac without butchering this significantly important area of Austin.

Thank you for your consideration – Dan McNamara

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Chuck McOsker

Hello! I was not able to attend, but wanted to be sure to voice my concerns for my site and for our sister site, the Austin Nature & Science Center. It looks as though the bridge might come onto over our property line? Is that accurate? MoPac is already loud for us, so sound walls need to be added to the plans. Crosswalks and parking improvements are certainly needed. Otherwise, I thought your list of suggestions looked great. Thank you!

Name: Jaime Medina

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road.

A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

If toll lanes must be built, the 2 Toll lanes each direction without elevated lanes option will have the least impact to the park, schools, recreation centers and neighborhoods:

• The 2-lanes each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA and this option is consistent with the CAMPO 2040 Long Range Plan. Providing direct access to toll users into the downtown area is not a goal or objective identified by CTRMA or CAMPO for this project.

• The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use because it has the least impact to the park land. Adding elevated lanes damages Austin's parks, restricts community members who use the open spaces, and damages neighboring neighborhoods.

• The 2-lanes each direction without elevated lanes option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

• The 2-lanes each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 with results comparable to both the Double decker over Lady Bird Lake and double decker wishbone bridges. If free lanes are added to match the capacity of other plans, more congestion and time savings can be achieved without building elevated lanes.

• The 2-lanes each direction without elevated lanes is the more fiscally responsible option because the cost is $30 Million less than the double decker wishbone bridges and $40 million less lane the double decker over Lady Bird Lake concept, but the results are almost identical.

• The 2-lanes each direction without elevated lanes option minimizes impact to our water quality because it will mean less construction and less concrete over our aquifer and near Lady Bird Lake than if elevated structures were built.

• The 2-lane each direction without elevated lanes option lowers the impact on the natural and human environment because there will be less impact to the park and neighborhoods, less noise pollution, less light pollution and less ascetically unattractive bridges than if elevated structures were built.

• The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. There will also be more support from neighboring cities and residents if elevated structures are not included in the plan.

• The 2-lane each direction without elevated lanes provides toll road users and emergency vehicles plenty of time and ability to safely maneuver and exit downtown. If there is an accident on the elevated portion of the toll lane it could actually make response times slower or impossible for emergency responders as there will be no way to exit the elevated structures until fully descended.

I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project.

Please make sure to fully consider the social, economic, and environmental consequences of building up. Please ensure the plans you choose support our public park land use, green spaces and community values.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, October 29, 2015 11:15:19 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

As a professional biologist well aware of air pollution, climate change and fossil fuel pollution from extraction to burning, I am NOT in favor of more destructive road building but rather giving people alternatives through efficient, affordable mass transit. Please use your office and personal authority to demand that CTRMA and TxDOT back up and study a strong mass transit component, and not the proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, health, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed and should make a true valuation of costs and benefits, long term.

Of strong note, this comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the

Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a se

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

All major cities are moving towards MASS TRANSIT as they face population pressure, high costs of land, air pollution, diminished public health, high costs, and climate change.

CTRMA, Tx Dept of Transportation needs to work on MASS TRANSIT as the required direction to preserve a liveable city, liveable planet

Use the new Proposition approved non-toll monies to

1) pay off I-30 debt so become free so traffic moves
2) Change existing MOPAC lanes to HOV - Not toll
3) Use state monies for MASS TRANSIT

I do not approve any of the present proposals.

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I want to make regional traffic better, but not at the expense of local traffic. To the end of improving regional traffic, I support a dedicated bus lane on MoPac and it share use with an HOV lane. Buses & Rideshare move our Austin citizens to Central Austin, got toll lanes. Let the buses run into the neighborhoods where more of our citizens come ~~through~~ from into Downtown.

I do have a student at Austin High School. I have another child who will be here next year. I also regularly use the Hike & Bike Trail, the Butler Trail, and enjoy ACL Fest each year. I am fortunate to live close by, but I want my fellow Austinites who live further out to have reasonable and affordable means to come into central Austin. Improve our public transportation. Make more bus routes, have more rideshare opportunities, and use technology to put us in cars together. Please advocate for solutions that protect our children, our city, and our environment.

Environment Texas would like to thank Central Texas Regional Mobility Authority (CTRMA) and the Texas Department of Transportation (TxDOT) officials for this opportunity to take public opinion on this critical issue that will have dire effects on our community and our environment. Environment Texas is a statewide, non-profit, citizen-funded organization that advocates for clean air, clean water, and open spaces. Environment Texas writes today to express opposition to transportation officials most recent recommendation to turn the eight miles between Cesar Chavez Street and Slaughter Lane into privately tolled roadways.

Our primary concern with this road project is its impact on the environment, specifically on local air and water quality in light of the fact that TxDOT's own analysis proves that the express lanes will increase traffic in Austin and the surrounding areas. TxDOT predicts that building the new highway segment would increase the number of miles driven by an average of 15 percent on all roads in the surrounding area. All of that traffic would result in more air pollution than would happen without the highway.

Further compounding the project's environmental damage, nearly all of the road's planned route crosses above the Edwards Aquifer, which provides drinking water for 2 million Texans. In addition, the road would pass 350 feet from the entrance to Flint Ridge Cave, a key part of the recharge system for the Edwards Aquifer, which is particularly vulnerable to pollution from surface water runoff from the highway. The aquifer is also the source of the Barton Springs, a key natural and recreational aspect of the Austin area that is also home to the federally endangered Texas blind salamander and Barton Springs salamander.

Some portions of the private toll road project's water pollution control plans allow for oil, grease and other pollutants resulting from construction and use of the highway to enter the area's surface water and groundwater.

The money intended for this eight-mile stretch of private toll roads could be used to help support other transportation priorities in the area. The surface conditions of existing roads in Austin and the surrounding counties, for example, are expected to decline from 2015 through 2018, even with the level of investment currently scheduled. Moreover, there are twenty-one structurally deficient bridges in the region covered by the Capital Area Metropolitan Planning Organization.

In addition, funds are needed to support the growing range of transportation options that are already enabling more residents in fast-growing Austin to travel without adding to congestion on the roads. For example, the city's transportation agency, Capital Metro, wants to spend $29 million to lay a second set of tracks to improve Red Line service into downtown, and another $111 million to buy additional rail cars, upgrade stations, and make other improvements to allow for even more passenger service. All of these serve as better options than building a toll road that will increase traffic and pollute the Edward's Aquifer, Barton Springs, and the air.

Sincerely,

Luke Metzger

Director, Environment Texas

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Saturday, October 24, 2015 2:55:16 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Inger & Jacob Mey, Austin residents since 1966 and deeply worried about this proposed 'development' of our beautiful city!

Sincerely,
Jacob L & Inger Mey

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Raj Mr

RAJEVE MICHEL [redacted]

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 6:40:39 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Subject: South MoPac toll roads

Date: Sunday, November 15, 2015 2:39:40 PM

I cannot believe it will take a constitutional amendment to take away the power of the Regional Transit Authority to build a double decker toll road that is not wanted by the AUSTIN CITY COUNCIL and the TRAVIS COUNTY COMMISSIONERS,much less the neighbors and friends of Barton Springs, the hike and bike,Austin High School and the Y. Please do not build this road. Please consider express lanes (one or two) to downtown and do not put in a toll road that no one can afford to use. 130 is empty most of the time and we just passed a Consititutional Amendment for more toll free roads, so why not make this free and see if traffic is diverted from downtown Austin. This double decker toll road or ANY toll road will ruin Lady Bird Lake, Cesar Chavez, Austin High, the Pet Center, the Y and the ball fields. and tolls will be so high during rush hour that no one will use it. Please consider the people!

I am against the toll lanes because the tolls will be so high. Please consider one or two express lanes to downtown instead of toll roads..Toll road 130 is empty most of the time and should be a free road to divert IH 35 traffic from downtown Austin.
I cannot believe that it will take a Constitutional Amendment to take the power away from you to build toll roads, declare imminent domain and ruin our cities. People in San Antonio are against your plan to make 281 a toll road.
Austin City Council and Travis County Commissioners are against the proposed toll roads and you can still do it..THIS IS SO WRONG. Please listen to the people!

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

Additional Comments:

I fully support NON-ELEVATED toll lanes of ANY KIND. I support this because I want to preserve the landscape of our city. As a close neighbor to this area, it is important to me and my family to provide necessary

transportation improvements in the least obtrusive means. Austin has a unique environment and feel – let's NOT lose that. There are options – non-elevated lanes – that will support both efforts.

Thank you!

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Sean Mills

COMMENTS ON VIRTUAL OPEN HOUSE

Doug	Mink	11/15/15	This EIS should be joined with the additional nearby project your agency is trying to construct, as well. Your methodology is highly suspect. And as we see from the continued delays and problems on N MoPac, your competence is highly suspect. This project should not be constructed. It will be a waste of money and do nothing for anyone except a bunch of highway contractors.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 9:40:50 AM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

COMMENTS ON VIRTUAL OPEN HOUSE

Marion	Mlotok	11/19/15	WHEREAS, because of limited access at the south end of Mopac, Mopac currently operates as a local highway serving primarily local commuters; and WHEREAS, the conversion of Mopac from a local commuter highway to a western loop, or western Interstate 35 alternative, has never been studied or carefully considered by CAMPO, the City of Austin, Travis County, the CTRMA, TxDOT, or the Austin community; and WHEREAS, in light of Mopac traffic already exceeding capacity during peak hours, it raises serious questions about the propriety of adding more traffic to South Mopac by constructing the SH 45 SW toll road at this time and prior to having a comprehensive plan for South Mopac and the Lady Bird Lake bridge; and WHEREAS the Austin City Council, upon recommendations from the Imagine Austin Citizens Task Force, voted to exclude the proposed SH 45 SW toll from the Imagine Austin plan; and WHEREAS, the Lady Bird Johnson Wildflower Center has identified the proposed construction of SH 45 SW Phase I as posing a threat to the viability of the Center as a result of the added traffic, noise, and other impacts that would be added to South Mopac, and WHEREAS, while traffic flow and safety improvements on South Mopac are very much needed, any such improvements would likely be overwhelmed when traffic is directed from Interstate 35 and FM 1626 to Mopac by way of the proposed SH 45 SW, causing real harm to Mopac neighbors and current Mopac commuters; NOW, THEREFORE, BE IT RESOLVED, that the Travis Country Homeowners Association Board of Directors joins with the Lady Bird Johnson Wildflower Center and others in calling for a comprehensive study of the proposed SH 45 SW/Mopac tolled loop expansion prior to construction of SH 45 SW, Phase I and that such comprehensive study analyze alternatives that would improve north-south traffic flow on I-35, SH 130, and Mopac without diverting I-35 traffic to Mopac via the proposed SH 45 SW; and BE IT FURTHER RESOLVED that the Board of Directors asks Austin Mayor Steve Adler and the Austin City Council, Travis County Judge Sarah Eckhardt and the Travis County Commissioners Court, and State Senator Donna Campbell join with us in urging the Central Texas Regional Mobility Authority and TxDOT to undertake the above-requested comprehensive study before initiating construction on SH 45 SW; and BE IT FURTHER RESOLVED that the Board of Directors asks the above persons and entities to work with the Board and others to initiate immediate non-tolled improvements to Mopac that would (or could) include restriping of existing shoulders to add a lane; designating a lane a High Occupancy Vehicle lane during peak hours; providing transit and park and ride options; strengthening ride share opportunities; and improving intersections.

Date: Friday, November 20, 2015 12:50:49 PM

Dear TxDOT and CTRMA officials:

"We choose none of the above."

My family, friends and I wish for NONE of the 6 proposed plans.

NO FLYOVER
NO DOUBLE DECKER
NO MORE TOLL LANES
NO CONVERTING MOPAC INTO I35 WEST (BY CONNECTING SH45 SW)

INSTEAD: We choose:
HOV lanes,
better ride sharing programs,
better mass transit (buses, light rail and other solutions)
better walking and bike paths- away from the toxic fumes and other dangers of cars
Force all through traffic (especially the 15% of truck traffic) onto SH130. This would be an OVERNIGHT REDUCTION in Austin's traffic by at least 15%!!! That would help.

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

From: [redacted]
To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, October 23, 2015 2:50:17 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Phillip Morris

Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Ms. Brittany Morrison

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 9:35:54 AM

Dear TxDOT and CTRMA officials:

KEEP MOPAC LOCAL Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center. Trucks should be required to take the toll roads instead of coming through downtown Austin congesting traffic.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse and support for staggered work shifts..

Cc: Austin area local, State and Federal officials

Sincerely,
Susan Morrison

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 12:30:35 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
D.J. Morrow

Date: Sunday, November 15, 2015 11:40:22 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

All of the toll road options currently under consideration will increase congestion on MoPac, and yet will cost a fortune. Please use your authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed in pieces and without regard to the overall impact on Austin. It is impossible to evaluate impacts on Austin traffic without looking at the entire north-south traffic flow.

Toll roads will benefit very few commuters and will make congestion worse for everyone else. Better solutions to consider include HOV lanes and the removal of tolls from SH 130.

Thank you,

Katherine Mosley

ADDRESS: [redacted]

COMMENTS: All of these plans cost an incredible amount of money for very little improvement in our traffic issues. A toll lane that is too expensive for most people to use and is designed to hold a few cars in order to keep the lane open will not benefit the general public. An HOV lane that reduces cars on the road and encouraging park and ride/express buses will be a more affordable option, actually decrease traffic and preserve an important green space area that makes Austin special.

This form may be used to provide written comments on this project. Any questions placed on this form will not be considered an open records request and will not be treated as such. If you have an open records request, it must be submitted under a separate letter.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

All of the proposed toll road plans will do nothing to alleviate the terrible congestion presently on MoPac. The extravagantly high toll fees will only be used by the wealthy few - a minimal number of Austin citizens will be able to afford/use these. If traffic congestion was the real concern, there would be more helpful options. An HOV lane would actually reduce the number of cars on the road and encouraging bus express/Park and Rides would alleviate congestion even more. Building elevated lanes across the green space (Lady Bird Lake, Zilker Park etc) will destroy what makes Austin special with no benefit to the general public. Let's find a better solution that will actually improve traffic congestion.

Toll Road 130 is underutilized and would be a better solution to relieving I-35 traffic. Why not remove tolls and get trucks off I-35 as well as other traffic just passing through Austin.

Name: Courtney Moss

Email Address: [redacted]

Subject: MOPAC South

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school.

The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. There will also be more support from neighboring cities and residents if elevated structures are not included in the plan.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,
Courtney Moss

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

- Please stop the toll madness!! Look at all alternatives before breaking ground on any more toll roads.
- SH 130 was built to alleviate traffic on I-35. Removing the toll from this thoroughfare will help more traffic North/South while keeping aquifers and critical recharge zones safe. (most of which exist on the West side of Austin)
- HOV lanes, public transit, park and rides, and other non-toll road options deserve more consideration.

Thank you for your time.

Monica

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Ms. Noelle Munoz

To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Tuesday, November 10, 2015 11:35:14 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Stephanie MuÃ±oz

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 9:25:29 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

COMMENTS ON VIRTUAL OPEN HOUSE

Mike and Stacie	Murphy	11/12/15	I strongly support two express lanes with direct connect to downtown. Alternatively, I urge the two express lanes with flyover near barton springs. In the mean time, please(!) restripe South Mopac to add a lane in each direction, as was done at the enfield exit on Mopac North. The major bottlenecks are the 2244 exits going north and south, which eliminates a lane. Ditch the shoulder and add a lane! We commute every day from SW Parkway to Downtown (Enfield exit), and traffic is atrocious. We must do as much as possible now to prepare for inevitable future growth. Thanks, Mike and Stacie Murphy

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

This madness has got to stop! I have lived in Tarrytown since 1973, when Mopac was still under construction of the first phase. I remember attending a meeting where an state Asm Richards stood up and said, "We've been told that this road would be a boulevard", not the controlled access highway that is being built. Our beloved Zilker Park, Lady Bird Johnson Wildflower Center, Hike & Bike Trail, etc. etc. must be protected! Don't forget Lady Bird Lake!

The best way to get cars off the road is to build urban rail down the Mopac right of way & the I-35 corridor. Remove the tolls from Texas 130, create park & ride bus service,

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Sunday, November 08, 2015 11:20:16 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being dishonestly pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

The only solution that makes any sense with affordability issues, density issues, and environmental/climate change issues is MASS TRANSIT. I will not support any more road-building without a discussion about mass transit. Our last light rail proposal failed because it included TOO MUCH ROAD-BUILDING. We need a mass transit proposal BEFORE we talk about expanding Mopac!

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. This is an unacceptable. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. ❒ I am employed by TxDOT

❒ I do business with TxDOT

❒ I could benefit monetarily from the project or other item about which I am commenting

[redacted]

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Julie Neas [redacted]

Printed Name Address

Additional Comments:

Need to assess pedestrian traffic impact along Mopac and safety concerns for pedestrian access ~~at~~ from Rollingwood Dr to Zilker Park - ~~Hwy~~ Current highway already limits visual site in cross Barton Springs to Rollingwood Drive and Creates significant safety issues. This is a key pedestrian

path for all Zilker park events, ACL etc that generate significant $ for Austin.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 2:45:32 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 10:20:12 PM

Dear TxDOT and CTRMA officials:

I'm writing to request that you do a comprehensive study before approving any further development of segments that may contribute to a MoPac loop. We all know that traffic has become a serious issue in Austin and is significantly affecting quality of life here. SH 130 was supposed to alleviate a part of that by diverting traffic around the city rather than through it. It's a travesty to see no traffic on that major project, while through traffic in Austin grows worse. Clearly, the tolls on SH 130 and SH 45 are discouraging its use. Why create another route through central Austin at great expense when a simpler solution clearly exists.?

Please consider the TxDOTâ€™s Advisory Committee's proposal to make the existing alternative free of tolls so that there is no further deterioration of quality of life in central Austin by adding additional trans-regional lanes through the center of the city..

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

From: [redacted]
To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Saturday, October 24, 2015 1:55:13 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Desmond Ng

COMMENTS ON VIRTUAL OPEN HOUSE

Lara	Nichols	11/20/15	Dear CTRMA Staff and Board Members, In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial. If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options. Please ensure the plan you choose support our public parkland use, green spaces and community values. Sincerely, Lara Nichols

1. Why has there been no full disclosure on how the two toll lanes in each direction would connect with Cesar Chavez Street, which as of now cannot even handle the existing egress/regress?

2. Where exactly on the current Mopac South corridor would the proposed upper deck lanes begin?

COMMENTS ON VIRTUAL OPEN HOUSE

Carol	Niemann	11/18/15	To Whom It May Concern, I am writing to express my protest of the proposal to several aspects of the proposed changes for Mopac South. I have lived in the same house in Rollingwood since 1982, and I am very concerned with several parts of the proposal: 1. I do not support the use of tollways. If they must be part of the project, make one lane in each direction tolled. It would be difficult to leave my neighborhood without a toll fee if not. 2. I do not support elevated roadways. They will negatively impact Zilker Park, the Barton Springs and Lady Bird Lake, the heart of the Edwards Aquifer recharge zone. 3. This project offends me because it goes against all the environmental protections that Austin has afforded. It is one of the reasons our city has become so well-loved. Thank you for listening! Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Signed: Justin Noonan

Printed Name: Justin Noonan

COMMENTS ON VIRTUAL OPEN HOUSE

Richard	Noster	11/2/15	I have reviewed current proposals for MOPAC SOUTH improvements. I support the two toll lanes in either direction as the best solution. I and our neighbors are strongly against any elevated lane solutions because of the adverse impacts on the crown jewel of Austin's beauty, which is Lady Bird lake, the hike and bike trail, Zilker Park, the Botanical Gardens and the Nature Center. Environmental and water issues are serious concerns. The elevated lanes contribute visual, noise and light detriments to all concerned. The neighborhoods along the right of way for elevated lanes are harmed by elevated roadways. All over the nation, cities are trying to remove these elevated eyesores from city center as quality of life issues for urban cores, so why would we put an elevated roadway through the most beautiful and enjoyed part of Austin. PLEASE hear us who are paying attention to your proposals and object to an elevated roadway. The two toll lanes in either direction, non elevated, provide improved traffic flow almost as good as elevated lanes at less expense by tens of millions of dollars at least and many fewer negative serious consequences. This will be the middle ground for a solution while planners need to strive on non freeway alternatives to aid transportation in and through Austin in future years. Look at LA. More freeways have only caused more sprawl and traffic. Is this what we want for Austin?????? Richard Noster MD

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 9:55:21 AM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Ms. Terra Nuss

Message: Dear CTRMA Staff and Board Members,

I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

Sincerely, Loren Nyer

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Monday, November 16, 2015 5:30:14 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

There have been no comprehensive solutions offered by TXDOT/CTRMA to solve the overcrowded traffic along the southern MoPac corridor.
It is unacceptable to encroach on the campus, or surrounding buffer, or the surrounding streets at Austin High School or Zilker park, inclusive of safety issues, environmental issues, or aesthetic issues!!

We have a beautiful city that is being changed/degraded by a thousand cuts from projects like this traffic re-design and building as have been proposed for the MoPac corridor.
It is the stated goal to keep traffic flow to as few vehicles as possible on the toll lanes of the re-design. This benefits only the few who can afford fees of $10-$15+ for each trip. Very undemocratic, unacceptable, and will not solve the problems at hand; by adding only these lanes to the physical layout for $100's M, not adding any "free lanes".
UNACCEPTABLE!!!!!
It is folley and dishonest to divert traffic from I-35 to the MoPac corridor by way of SW 45 and the many affiliated segments proposed in conjunction with that traffic re-design.
SH 130/SH 45 SE was paid for and built for that purpose. MAKE IT WORK!!!!! NO SERIOUS EFFORT HAS BEEN MOUNTED OR COMPLETED!!!!!!

In the meantime re-mark MoPac south lanes to maximize their potential. Wait to see if the boondoggle of a redesign that MoPac north of the river is, works out. My guess is that not much will change, if it is ever completed!!! Maybe I'm wrong, but I strongly feel I am not wrong.

MAKE SH 130/SH 45 SE WORK!! FOR ITS INTENDED PURPOSE!! BEFORE ANY OTHER ROADS OR PHYSICAL REDESIGNS FOR THAT SAME PURPOSE ARE ATTEMPTED!!!!

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-so

Sincerely,
Lou Ochs

Date: Tuesday, November 10, 2015 7:05:29 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

THE PRESENT PROPOSALS FOR SOUTH MOPAC RISK TURNING A FUNCTIONAL (IF SOMETIMES CROWDED) ROAD THAT SERVES AUSTIN INTO A DYSFUNCTIONAL LUXURY ROAD THAT WOULD ONLY SERVE THE INTERESTS OF A WEALTHY FEW AND EXTRA-REGIONAL TRANSPORT. MOREOVER, THE PROPOSALS ON THE TABLE PLACE NO VALUE ON THE NATURAL RESOURCES AND AESTHETIC ASSETS AUSTIN MIGHT LOSE IN THE PROCESS OF CONSTRUCTION. AUSTIN NEEDS MORE PUBLIC TRANSPORTATION, AS MIGHT BE ACCOMPLISHED BY STRIPING HOV/BUS LANES TO THE EXISTING ROAD AT MINIMAL COST. IT DOES NOT NEED TOLL LANES. IN FACT, THE MOST HELPFUL STRATEGY AT THIS JUNCTURE WOULD BE TO PAY OFF STATE HIGHWAY 130 AND REMOVE TOLLS THERE TO RELIEVE TRAFFIC ON IH35.

IT IS ALSO IRRESPONSIBLE AT THIS JUNCTURE TO PROCEED WITH ANY IMPROVEMENTS WITHOUT FIRST EXPLORING PROJECTIONS THAT INCLUDE POTENTIAL ADVANCES OF SELF-DRIVING CARS WHICH MAY BECOME STANDARD IN LESS THAN A DECADE AND MAY INCREASE ROAD CAPACITY BY AS MUCH AS 400%, MAKING THIS PROPOSED PROJECT NEEDLESSLY OVERBUILT AND UNFORGIVEABLE CONSIDERING ITS OBSCENE COST.

THERE ARE ASPECTS OF THIS PROPOSAL THAT REVEAL UNDERLYING SELF-SERVING ECONOMIC MOTIVES AT ODDS WITH THE NEEDS OF AUSTIN AND ITS CITIZENS. THE STEALTH CONNECTION OF SH 45 WITH SOUTH MOPAC TO CREATE A LOOP CONNECTING TO IH35 WOULD ADD TRAFFIC THAT WOULD MAKE MOPAC UTTERLY DYSFUNCTIONAL FOR THOSE NOT USING TOLL LANES; IT WOULD ALSO ENCOURAGE CONTINUED SPRAWL IN AREAS SOUTH OF THE CITY, ENDANGERING PRISTINE WATERSHED, WHILE NO DOUBT RICHLY REWARDING A HANDFUL OF PRIVILEGED LANDOWNERS AND DEVELOPERS, AS WELL AS ROAD BUILDERS AND TOLL PROFITEERS.

RECENTLY I RECEIVED A PHONE "SURVEY" POLLING MY OPINIONS ABOUT PROPOSED TOLL ROAD PROJECTS IN AUSTIN. THE QUESTIONS I WAS ASKED WERE ALL POSED IN SUCH A WAY AS TO PROMOTE THE VALUE OF TOLL LANES. IN OTHER WORDS, THIS WAS A MANIPULATIVE "PUSH POLL" DESIGNED TO SWAY PUBLIC OPINION RATHER THAN DISCOVER HONEST FEEDBACK. USING PUBLIC FUNDS IN THIS WAY DOES NOT PASS THE SMELL TEST, AND THE SAME CAN BE SAID OF THE INTENTIONALLY PIECEMEAL WAY IN WHICH THESE PROPOSALS HAVE BEEN PRESENTED BY CTRMA. THE CITIZENS OF AUSTIN RIGHTLY FEEL MANIPULATED HERE RATHER THAN HONESTLY INFORMED.

A comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of

Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

COMMENTS ON VIRTUAL OPEN HOUSE

Alan	Ogden	11/11/15	NO BUILD!!!!! The entire (stealth) loop connecting south mopac to State Highway 45 and IH35 needs to be studied before building any parts of it, not only for environmental impact but also for its dysfunction as a workable strategy to continue serving local Austin traffic. The imminent potential of self-driving cars to reduce the need for highway "improvement"s to MOPAC should be explored before spending a dime on this. We need public HOV and bus lanes, not toll lanes. Remove the tolls from highway 130 to help alleviate IH35 congestion. Double decking over Ladybird Lake and grandiose flyover bridges connecting to Caesar Chavez are unacceptable proposals both for their visual urban blight and for their tremendous potential for noise generation from the prestressed concrete components.

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Michael OHara

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I strongly support the idea of keeping MoPac local, specifically for use by South Austin and Northern Hays Co. residents. Any of the current proposals should not give consideration to a possible connection to I-35/130.

The very idea of dumping additional traffic from I-35 is inconceivable, given that MoPac is already packed in the morning/afternoon.

A single HOV lane from the River to Slaughter Lane is preferable to all other alternatives.

Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Doug Opalka
[redacted]

COMMENTS ON VIRTUAL OPEN HOUSE

Kevin	Opp	10/22/15	I support the two express lanes option with the direct connectors onto Cesar Chavez. The reduced impact of the elevated structure over the double-decked idea is a great improvement, and I'm glad to see mass transit being able to use the express lanes at no cost. Absent a light rail line, that's the best option for effective public transportation from SW Austin into the central core. My only concern is that the shared use bike path will be little more than widened sidewalk alongside the access road. If we want people to get out of their cars, they need a safe AND inviting alternative. There should be a shaded or landscaped buffer between the road and the shared use path.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 4:10:50 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.
I would like to see affordable, non-tolled options that don't make traffic on Mo Pac worse.

Dear TxDOT and CTRMA officials:

Though it is not scheduled to be built as soon, the final connection between 1626 and I-35 will create The Austin Loop which has evaded planners for years.
The west side of The Loop, however, will not be in a rural area. It will run right through the heart of Austin.
MoPac will become I-35West, a terrible idea.

Please do not build the next-to-the-last leg of The Loop before you know, and the public is accurately informed of, the implications of the final leg.

Mopac is an inner city roadway. Due to the high congestion on IH 35 many people use it to detour around Austin downtown. It was never planned to be a major highway because it has physicial limits. It is stupid to try to expand the lanes to accommodate north and south bound traffic that is passing through.

The use of SH 130 should be for diverting traffic away from downtown Austin, by eliminating the tolls.

Austin needs another western loop situated farther from the heart of downtown.

Mass transportation by rail, bus and HOV lanes are needed to help increase inner city transportation.

COMMENTS ON VIRTUAL OPEN HOUSE

Susan	Pantell	10/23/15	1. The option of 1 express lane + downtown access has the lowest travel times, so there is no need to build 2 express lanes. 2. Safety should be a top priority. Therefore, the need to change lanes, or "weave" should be minimized. Barriers should be constructed between pedestrian and bike paths and the highway. 3. The cumulative impacts of this project plus SH45 SW and a future link to I-35 need to be considered as part of the analysis for this project since they would all be linked. 4. A priority should be to minimize the number of elevated lanes over Lady Bird Lake for aesthetic reasons.

COMMENTS ON VIRTUAL OPEN HOUSE

Craig	Parker	11/15/15	Mopac desperately needs additional lanes ASAP. free lanes NOT toll lanes!! It's also time to extend mopac south and connect with 45 and I-35.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

There appears to be a lack of complete, candid transparency between CTRMA and the Travis County communities. It seems obvious to the casual observer that by compartmentalizing this project in sections the entire project is not readily apparent. The burden of traffic on the community is increasing but additional toll lanes are not the answer particularly when the project toll fee cost is not affordable to many people. Try cheaper and reasonable approach should be restriping S. MOPAC and improving parallel side option.

I will vote against toll roads and those supporting those toll roads. Coordination between CTRMA and the City of Austin must happen. Build an HOV lane! Remove the 45/130 toll!

From: [redacted]
To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, October 28, 2015 10:15:18 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Susan Pascoe
[redacted]

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I URGE you to study ALL THE elements OF ALL PLANS PROPOSED. AUSTIN RESIDENTS love their (our) green spaces and water fronts. WE do NOT WANT THE AMOUNT OF ROADS AND TRAFFIC THAT you propose.

AUSTIN DESERVES THE TRUTH AND AN objective study of ALL options — AND THE ability to discuss IN DETAIL THE PROS & THE CONS.

CENTRAL AUSTIN AND THE portion of MOPAC THAT RUNS through it, does NOT NEED MORE TRAFFIC

I URGE you to drop ALL current proposed PLANS! GO BACK to THE DRAWING BOARD — BE IMAGINATIVE — CONSIDER emerging TECHNOLOGY. PAINT AN EXISTING LANE for HOV AND EXPRESS VEHICLES. DEVELOP MORE PARK & RIDES.

WE NEED BETTER SOLUTIONS!

I VOTE NO ON ALL CURRENT OPTIONS!

Nov 6, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Gardner Pate

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 8:55:15 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Ami Patel

Name: Robert Patterson

Email Address: [redacted]

Subject: MOPAC/LOOP 1 South

Message: Dear CTRMA Staff and Board Members,

Zilker Park is a unique and sacred place. It is the centerpiece of what was once Austin. The park is a huge asset to the city and its citizens. MOPAC already has a negative impact on the park and the surrounding area. Building a double decker bridge over the river would worsen that impact and turn the park into a sad area under an urban nightmare.

The answer to Austin's traffic problems is not asphalt. No amount of building of roads can keep up with the growth rate. The answer, at least in the short term, is express buses and bus lanes. Ride the bus for 15 minutes or drive your car for two hours. Pretty easy choice is that is the choice that commuters are given.

CTRMA Board Members and Staff, TxDot directors and staff, Travis County elected officials, and Austin elected officials:

Attached is a copy of the public comments my husband and I submitted via fax to CTRMA during the November 2015 Public Comment period for the Mopac South Environmental Study.

I appreciate your consideration of the issues we raised in our comments.

Best regards,
Amy

RE: Additional Comments to the Mopac South Environmental Study (Please enter this letter, and the attachment, in full, into the record of public comments to the Mopac South Environmental Study November 2015 Open House)

Dear Chairman Wilkerson & Board Members Mills, Bennett Jr., Meade, Armbrust, Singleton, & Heimsath:

First, thank you for your service on the CTRMA board. Over the last two years, I had the honor and privilege of serving the City of Rollingwood on its City Council; this position served to further increase my appreciation for those willing to give of their time, energy, and resource to serving the public, particularly in unpaid positions. Thank you for the time you all give to our community by overseeing mobility solutions with the Central Texas region.

Second, I offer comments to the Mopac South Environmental Study. I wholeheartedly support the official comments by the City of Rollingwood with regard to the Mopac South Environmental Study. In addition, my term on the Rollingwood City Council has recently ended, so I offer additional comments as an individual resident of Rollingwood, informed, in part, by the time I spent on the Council. I am thankful that the City of Rollingwood and its residents have actively engaged in the Mopac South Environmental Study public comment process, given that the project will significantly impact the eastern landscape and access to our city.

With regard to comments by the public, I am hopeful that the CTRMA board will receive copies, in full, of all the comments submitted by all community members who take the time to comment during the current comment period. In addition, I respectfully request that to the extent I, and others, have submitted multiple, separate comment letters or signed petition letters during the comment period, that the CTRMA staff not be permitted to selectively interpret and categorize these comments without also publishing all the comments in full. Many members of the community, myself included, have submitted multiple comments as responsible citizens who are actively engaged during the public comment period - asking questions and actively commenting on issues as the issues are clarified. Please receive each of the comments I submitted and signed during the comment period as an exercise of free speech and active participation throughout a public comment period, not as an attempt to "stack the vote".

During the time I served on the Council, I had the pleasure of speaking with you all during your April Board meeting and presenting the City of Rollingwood's first position regarding the first "Double Decker over Lady Bird Lake" alternative. I appreciate your willingness to listen to the position of the City of Rollingwood and many of its residents and to ask your staff to evaluate alternatives to placing a Double Decker that would extend not only over Lady Bird Lake, but most of the eastern boundary line of the City of Rollingwood. Among the 6 alternatives now being presented to the public, there are 3 alternatives that would place double decker, elevated lanes along the eastern side of the City of Rollingwood: (1 and 2) the 1 or 2 lanes in each direction with direct connect (aka Double Decker over Lady Bird Lake); and (3) the 2 lanes in each direction with elevated lanes near Barton Skyway (aka Two Elevated

Lanes over Bee Caves Road). I ask you again to weigh the adverse impact of elevated lanes to the aesthetics and property values of the area proximate to Rollingwood and the surrounding properties in Austin. Please do not select an alternative that would place elevated lanes over Lady Bird Lake or over Bee Caves Road.

In addition, before you select any alternative, I respectfully request that the CTRMA board provide the public with at least one more public comment period, if not more, during which the CTRMA staff address the following issues raised in the attachment to this letter, which is part of my comments:

(1) The Mopac South Environmental Study needs to provide information about the actual work done or that will be done to avoid unnecessary impacts to the natural and human environment, not mere summary statements;

(2) The Mopac South Environmental Study needs to study and evaluate an alternative that includes 2 HOV lanes in each direction;

(3) The Mopac South Environmental Study needs to present multiple alternatives without elevated lanes in the Cesar Chavez to Barton Skyway corridor that include TSM improvements to optimize travel times, such as improving the TSM for the 2 express lanes in each direction without direct connect;

(4) The Mopac South Environmental Study needs to present all alternatives with the Bee Caves northbound on-ramp entry length returned to the current length or longer;

(5) The Mopac South Environmental Study needs to present a Topographical model and traffic simulation of the Proposed Bee Caves Southbound exit ramp for each of the alternatives;

(6) The Mopac South Environmental Study needs to provide the public with consistently applied rationale, traffic studies, and other information to compare the use of inside lane toll road entrance/exits are used at some locations, but recommending elevated lanes at others;

(7) The Mopac South Environmental Study needs to remove or change the dangerous and bottlenecking inner lane toll road exit on northbound Mopac before the Enfield exit and assess the impact to travel times from the toll road exit on northbound Mopac before the Enfield exit, at the 5th/Cesar Chavez interchange;

(8) The entire Mopac South Environmental Study (including, but not limited to, the project purpose, project goals and objections, project need, problems to be addressed, all underlying data and modeling, CSS, travel times, traffic modeling, and comparisons of alternatives) needs to be updated for all 6 alternatives, in addition to previously considered alternatives, to the reflect all aspects of the CAMPO 2040 plan;

(9) The Mopac South Environmental Study needs to provide improved designs for the Bee Caves Road/Mopac intersection, or provide a written rationale for why improvements to the Bee Caves Road/Mopac intersection are not a part of the Study; and

(10) The Mopac South Environmental Study needs to provide travel times for the general traveling public and toll lane users between a point on Mopac

itself near Cesar Chavez to a point on Mopac itself near Slaughter Lane to provide travel time information for the majority of the traveling public not exiting or entering at Cesar Chavez.

As addressed in the attachment, currently, the CTRMA staff has failed to provide the public with sufficient or reliable information about each of the 6 alternatives upon which the public can collaborate with CTRMA to evaluate the benefits and significant impacts of each alternative. CTRMA staff have failed to treat each of the 6 alternatives evenly and have failed to evenly include TSM into the 2 express lanes each way without direct connection that could significantly reduce the travel times of those intending to use the toll lanes and the general traveling public. In addition, CTRMA staff have failed to provide a rationale to support the decision to recommend elevated lanes for the Cesar Chavez toll exit lanes, but to use inner lane toll lane exits at other points along Mopac that have a higher volume of exiting traffic than is predicted for Cesar Chavez.

The attachment to this letter includes additional details about each of the issues above that I request be evaluated and addressed by CTRMA as part of the NEPA analysis for the Mopac South Environment Study and as part of the information provided to the public for collaborating with CTRMA.

I recognize that CTRMA has already spent a significant amount of money developing the Mopac South Environmental Study and that CTRMA may have been able to check off many boxes in the NEPA process, however, the public still has not received sufficient information about any of the alternatives for the public to collaborate with CTRMA in the CSS process or other processes. The CTRMA staff presented an initial plan to the public with 2 express lanes in each direction, which did not fall within the scope of the authority given to CTRMA to build a toll road under the CAMPO 2035 plan (only allowing for 1 express lane in each direction). CTRMA has now spent a significant amount of additional resources developing 6 alternatives, under the CAMPO 2035 plan, and has failed to provide the public with sufficient or accurate information upon which the public rely in comparing the alternatives and collaborating with CTRMA. During open house meetings, the public asks questions about environmental impacts, such as aesthetic and noise impacts or mitigation options and the public is told that these factors will not be considered until after a preferred alternative is selected. How can a preferred alternative be selected if the public has not been provided with data allowing for comparison of environmental impacts of *each* alternative? During open house meetings, the public asks questions about traffic studies for Mopac South and is consistently told that the person who could answer the question is not in the room or that the information being requested is confidential/not ready for public consumption – and from my personal experience, even if the person with the answer to a question is in the room, it is doubtful they would have the authority to provide an answer on behalf of CTRMA. In addition to providing the public with additional opportunities to collaborate and comment on the Mopac South Environmental Study, please consider selecting leadership for this project who can provide effective management of the project and ensure that the public is provided with responses to basic questions about the impacts of the project. Please ensure, as part of the Mopac South Environment Study, that the public has been provided with sufficient, fair and, accurate information to collaborate in the study process. Please ensure that CTRMA staff does not merely hold meetings in order to check a box showing that a meeting was held within a specific community, but that staff is prepared to provide

sufficient and accurate information to the public who spend the time and energy to attend the meetings and become educated about the project.

It is undoubtedly a daunting challenge to gather public support for a transportation project that requires digging up an 8 mile portion of land in Austin that includes the Edwards Aquifer and Barton Springs, along with hundreds of acres of parkland and preserved green space. There is a good reason for this: residents of Travis County in the past, and currently, value maintaining the environment and water supply for future generations, and green space aesthetic near Downtown Austin, over achieving the very top travel times. To the extent that a region of counties has decided, in the CAMPO 2040 plan, to allow toll roads on Mopac 1 South, please respect the values of residents who live along this roadway and select alternatives for these toll roads that will achieve the goals of improving travel times in the region with the least impact to the environment and green space aesthetic of the areas near Downtown Austin, including Lady Bird Lake, Zilker Park, and Rollingwood.

In addition, please serve the community by providing an Environmental Impact Statement for the Mopac South Environmental Study. There will be a significant impact, which will be impossible to mitigate by barriers and buffers, to the natural resources, environment, water quality, and quality of life of residents and businesses in Rollingwood and the surrounding areas of Austin if Mopac South is modified in any way. Please address the significant impacts to the environment identified in the attachments to this letter in an Environmental Impact Statement.

Multiple CTRMA staff have made verbal promises to me that CTRMA will collaborate with the City of Austin, TxDot, and the City of Rollingwood to improve the design of the pedestrian area under Mopac at the Barton Springs and Rollingwood Drive area. I have been told that the current proposal for pedestrian traffic in all 6 alternatives meets engineering practice requirements. Whether or not this is true, anyone who has practical experience walking through this area can immediately identify that the current proposal is not a safe solution for managing pedestrian traffic in the area (of note: I have challenged multiple CTRMA staff members to try to safely walk a jogging stroller through their proposed pedestrian cross walk locations – no one has taken me up on this challenge yet). Push button cross walks are, in practice, dangerous for this area and the proposed pathway require pedestrians to cross 3 intersections with variable high speed traffic and blind spots. Please evaluate placement of a pedestrian overpass across Barton Springs on the east side of Mopac within the CTRMA ROW. Also, please ask the CTRMA staff to keep their promise to reevaluate and redesign this pedestrian traffic area during the next phase of the Mopac South Environmental Study.

Thank you for considering my comments.

Best regards,

Amy J. Pattillo

[submitted for official public comment via fax to CTRMA]

Attachment – Please include this attachment in full in the public comments to the Mopac South Environmental Study and in the comments to be evaluated during the NEPA process

(1) The Mopac South Environmental Study needs to provide information about the actual work done or that will be done to avoid unnecessary impacts to the natural and human environment, not merely summary statements.

Of note, the "Project Goals and Objectives" sheet available in the Mopac South Environmental Study Virtual Open House states, as a third goal: "*Be constructible without unnecessary impacts to the natural and human environment.*" CTRMA has failed to provide the public with sufficient information to prove that the Mopac South project will be constructible without unnecessary impacts to the natural and human environment.

CTRMA needs to clearly provide the public with specific information about the studies of areas where there could be impact to the natural and human environment. Currently CTRMA has merely provided summary statements.

CTRMA needs to provide the public with additional information about the necessary impacts to the natural and human environment that cannot be mitigated.

Threatened and Endangered Species

With respect to threatened and endangered species, the "Environmental Study Update" flyer available in the Mopac South Environmental Study Virtual Open House states: "Field surveys were conducted in the project area. No listed threatened or endangered species were encountered." There are pictures of birds, karst species, fresh water mussels, and salamanders shown on the flyer.

The data currently provided in the Environmental Study is insufficient to support CTRMA's claims. Endangered salamanders are known to exist at Barton Springs Pool (https://tpwd.texas.gov/huntwild/wild/species/bartonspringssalamander/). Areas of Austin have been designated as preserves for the Golden Cheek Warbler (https://www.austintexas.gov/ecoweb/golden-cheeked-warbler). Both of these endangered species are known to be located near the project area or their environments. With respect to salamanders in Barton Springs, the Edwards Aquifer recharge zone feeds Barton Springs, a known habitat of endangered species and any development in that zone will impact the water quality in Barton Springs and the habitat of this species.

The environmental study merely states that "field surveys were conducted in the project area", but does not indicate the scope of this work. There is no indication of which portions of the project area were surveyed or how the surveying work was performed. The report is disturbingly ambiguous, providing no parameters or structure. Given that endangered species are known to be proximate to the project area, CTRMA needs to provide the public with more information about the actual studies that were performed to assess whether threatened or endangered species are present in the project area.

Water Quality

With respect to Water Quality, the "Environmental Study Update" available in the Mopac South Environmental Study Virtual Open House states "The Mobility Authority plans to meet

water quality standards on this project to protect the Barton Springs segment of the Edwards Aquifer Recharge Zone, as required by the Texas Commission on Environmental Quality. Water quality treatment measures on MoPac could be enhanced by this project by implementing the latest, most modern technologies available: Permeable Friction Course (PFC) Pavement, Water Quality Ponds, Vegetative Controls, Hazardous Materials Traps."

First, at the next open house, CTRMA needs to inform the public whether the latest, most modern technologies available for water quality treatment will *actually* be used on the project, or if there is some specific condition that would trigger their use. CTRMA's current statement implies that the use of these modern technologies is conditional or optional.

Second, at the next open house, CTRMA needs to inform the public of what the water quality standards are (including code sections and other requirements) that CTRMA understands as required by TCEQ for protecting the Barton Springs segment of the Edwards Aquifer Recharge Zone. In addition, CTRMA needs to provide the public with a map showing which portion of the project is the "Barton Springs segment of the Edwards Aquifer Recharge Zone".

Third, at the next open house, CTRMA needs to inform the public of what the water quality standard are (including code sections and other requirements) that CTRMA understands as required by TCEQ for protecting the portion of the project that are not the "Barton Springs segment of the Edwards Aquifer Recharge Zone".

Fourth, at the next open house, CTRMA needs to inform the public of what additional measures will be taken to protect the water quality of Lady Bird Lake and protect the lake from pollutants and run off during and after construction.

Traffic Noise

With respect to Traffic Noise, the "Environmental Study Update" available in the Mopac South Environmental Study Virtual Open House states: "Given the 98% projected population growth in Travis and Hays counties, traffic noise along MoPac is going to continue to increase over time, regardless of whether or not we build improvements. A detailed noise analysis will be conducted once a recommended Express Lane configuration has been determined. The community will be engaged in next steps after the analysis is complete."

During the November Open House at Hill Country Middle School, the CTRMA staff and CTRMA's noise consultant were asked by members of the public, during a Q&A session, if any of the alternatives would create more noise or if any would create the least amount of noise. The noise consultant stated that there actually is preliminary noise data for the project, but it was not available for public consumption. He also stated that based on the preliminary data, there is no plan that provides any more or less noise than any other because for all the plans, the noise would be mitigated, but that we could not rely on his statement.

During the next open house, CTRMA should provide the public with noise impact data pre and post mitigation for each of the 6 alternatives and any other alternatives. The public has received no notice of whether any of the 6 alternatives would emit, pre or post mitigation, more noise than any of the other alternatives. The public has been provided with an answer of "you can't have that information", regarding an issue that will impact the enjoyment of park land in Austin and in Rollingwood, along with the enjoyment of private property along Mopac. CTRMA has failed to provide the public with information that proves that CTRMA can meet the goal of "Be constructible without unnecessary impacts to the natural and human environment."

In addition, CTRMA has failed to establish that all 6 of the alternatives would have the same traffic noise impact. CTRMA must evaluate the noise impact of *all* alternatives against no build, not just a recommended configuration against no build.

Furthermore, CTRMA has presented 6 alternatives, 3 of which include elevated lanes traveling along the eastern boundary of Rollingwood, as well as impacting Zilker Park. CTRMA has failed to establish that pre or post mitigation, the 3 alternatives with elevated lanes in the Cesar Chavez to Barton Skyway corridor would have the same traffic noise impact as the 3 alternatives without elevated lanes in this corridor.

It is deceptive for CTRMA to state: "The community will be engaged in next steps after the analysis is complete." When CTRMA staff are asked to clarify what these "next steps" include, at multiple Open House meetings I have participated in during the previous Open House period and this Open House period, the public has been informed that only those residents closest to Mopac will have a vote on whether to implement noise mitigating measures. It is inaccurate and deceptive for CTRMA to state that "the community" will be engaged in next steps after the analysis is complete when there is a small selection of residents who may be able to participate in the process. In addition, when CTRMA staff are asked which properties would qualify for votes on noise mitigation options for the corridor between Lady Bird Lake and Bee Caves Road, the Zilker Club House has been designated as "the community" that would get a voice on noise mitigation measures for Mopac South – we have been told multiple times that no one in Rollingwood will get to vote on noise mitigation measures.

Since there is no guarantee to the communities adjacent to Mopac that any noise mitigation barriers will be implemented, at the next open house, CTRMA needs to provide the public with full noise analysis of pre and post mitigation noise impacts for each of the alternatives presented.

In addition, at the next open house, CTRMA needs to stop deceiving the public and identify who "the community" is that would actually have a vote on the use of noise mitigation barriers along Mopac South.

(2) The Mopac South Environmental Study needs to study and evaluate an alternative that includes 2 HOV lanes in each direction.

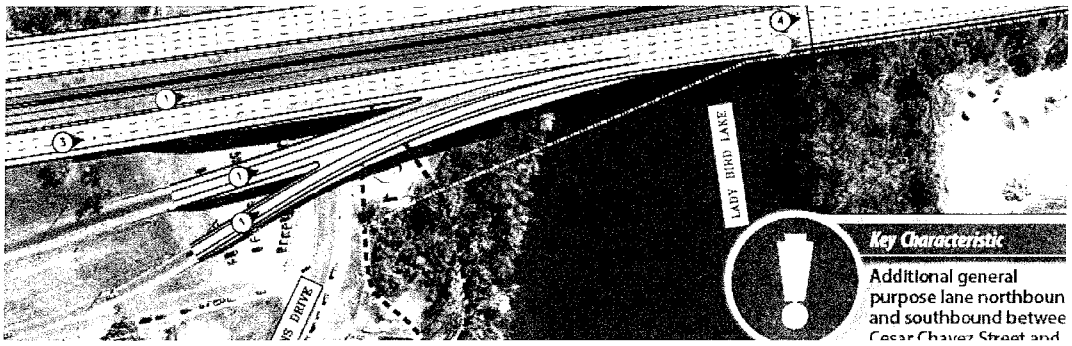
CTRMA staff appears to have initially compared the travel time estimates and impact of 1 HOV lane in each direction on Mopac South with 2 toll lanes in each direction on Mopac South. This is not an even or fair comparison of alternatives to toll lanes. An alternative with 2 HOV lane in each direction, optimized with TDM and TSM strategies, should be considered along with 2 toll lanes in each direction, optimized with the same or even TDM and TSM strategies.

(3) The Mopac South Environmental Study needs to present multiple alternatives without elevated lanes in the Cesar Chavez to Barton Skyway corridor that include TSM improvements to optimize travel times, such as improving the TSM for the 2 express lanes in each direction without direct connect.

As to the 2 lanes in each direction *without* direct connection alternative, CTRMA needs to update this alternative to include TSM improvements and other optimizations before comparing the 6 alternatives. The 2 express lanes in each direction without direct connection

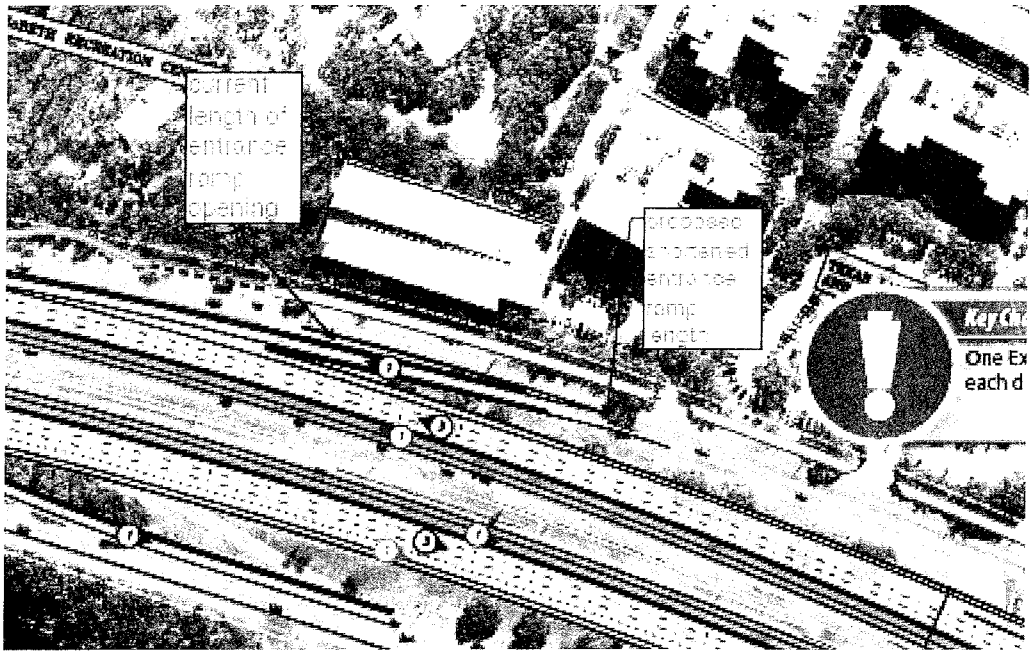
alternative is merely the 2 express lanes in each direction with direct connection, without any design adjustments that could improve the travel times *without* requiring elevated lanes. To fairly evaluate the 2 express lanes in each direction without direct connection alternative against other alternatives, it should be optimized to use the extra ROW space available because no elevated lanes are required.

For example, at the next open house, CTRMA needs to provide the public with the 2 express lanes in each direction without direct connection alternative, adjusted to include the TSM provided in the 2 lanes in each direction with elevated lanes near Barton Skyway. This TSM includes: (1) The 2 lanes in each direction with elevated lanes near Barton Skyway includes an extra general purpose lane on each side between Cesar Chavez and Bee Caves Road. These additional capacity lanes should be integrated into the 2 lanes in each direction without direct connection alternative to improve travel times for exited toll lane traffic and general traffic between Bee Caves Road and Cesar Chavez. (2) The 2 lanes in each direction with elevated lanes near Barton Skyway includes a separate lane for southbound inbound Cesar Chavez traffic from southbound inbound Lake Austin Blvd traffic (see map below). This configuration of 2 lanes removes a current known, significant bottleneck where inbound Lake Austin Blvd traffic and Cesar Chavez traffic merge before entering Mopac. Removing this bottleneck from the 2 lanes in each direction without direct connection alternative will improve travel times for southbound traffic between Cesar Chavez and Bee Caves Road.



(4) The Mopac South Environmental Study needs to present all alternatives with the Bee Caves northbound on-ramp entry length returned to the current length or longer.

5 of the alternatives presented propose shortening the entry length of the northbound on-ramp from Bee Caves Road. I have marked a cut out of the map for the 2 express lanes in each direction without direct connect to show the point where the on-ramp entry currently ends. In addition, I have marked the map to show the point where the on-ramp entry is proposed to end in the 5 alternatives. (see map below). In future presentations of alternatives, CTRMA needs to clearly show that the northbound on-ramp entry length is the same or longer than the current length. Any shortening of the entry length of this on-bound ramp will create a bottleneck for traffic flow on the frontage road, which will lead to additional traffic backup on Bee Caves Road. Please ensure that the alternatives do not remove existing access, capacity and infrastructure.

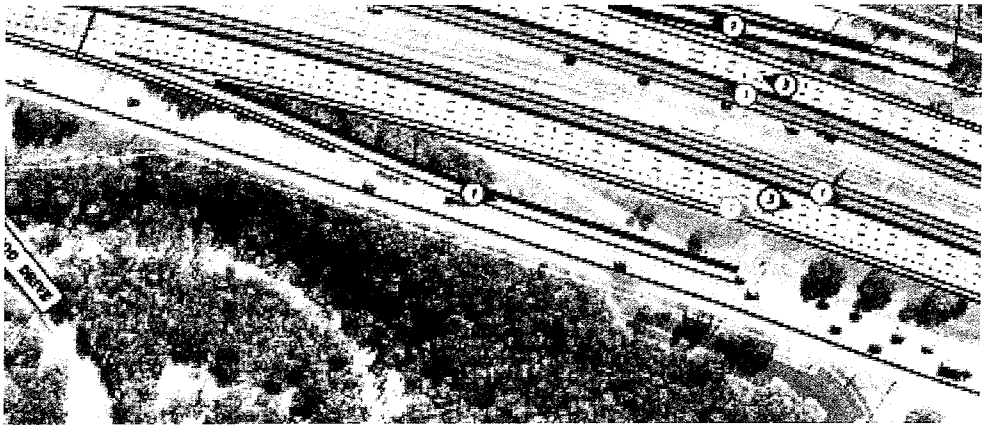


(5) The Mopac South Environmental Study needs to present a Topographical model and traffic simulation of the Proposed Bee Caves Southbound exit ramp.

5 of the alternatives propose adjusting the position of the exit ramp at Bee Caves road for southbound traffic (see map below). Currently, it is difficult to exit at Bee Caves/2244 and merge across all the lanes of traffic, to arrive at the westbound lane of Bee Caves Road. Backing up the exit ramp to provide extra space for merging may reduce this dangerous merging condition. In addition, the topography of the frontage road significantly contributes to the dangerous merging condition. Cars accelerate up the steep incline, which terminates with a sudden rise, and then levels out proximate to the driveway into Parks Hills church. The accelerating cars reach the rise and then intersect with cars exiting the ramp and attempting to merge across multiple lanes of traffic.

At the next Open House, CTRMA should present a topographical model of the proposed Bee Caves Southbound exit ramp for each of the alternative. Engineers for CTRMA have noted that different alternatives require different amounts of right of way, which impacts the design constraints for positioning and lengthening the Bee Caves Southbound exit ramp.

In addition, at the next Open House, CTRMA should provide a traffic simulation of the traffic merging into the frontage lane, showing where vehicles will enter the frontage road, using real modeling of the speeds at which vehicles travel up the steep incline and showing the inclines. Traffic modeling should show impacts at peak and non-peak hours.

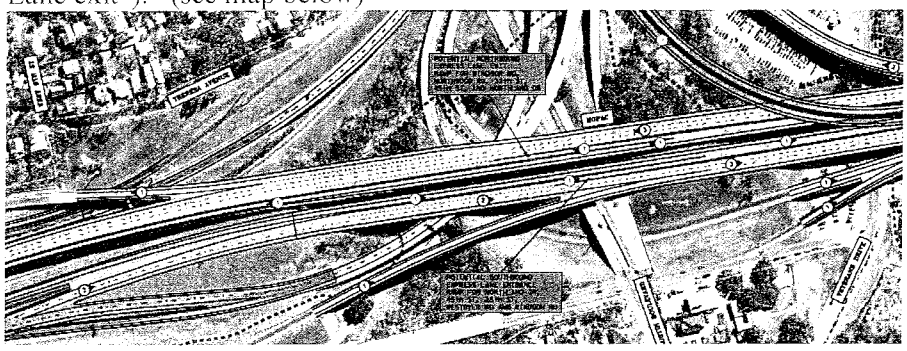


(6) The Mopac South Environmental Study needs to provide the public with consistently applied rationale, traffic studies, and other information to compare the use of inside lane toll road entrance/exits are used at some locations, but recommending elevated lanes at others.

All 6 alternatives offered by CTRMA for the Mopac South Project focus on moving traffic to and from a point on Cesar Chavez in front of Austin High School to and from a point by Slaughter Lane. CTRMA has prioritized moving toll lane traffic to and from a point well into Cesar Chavez, a downtown street that is not a highway or a bypass (or Mopac) in the shortest amounts of time. The Mopac South Environmental Study is tasked with developing toll roads on Mopac from the Cesar Chavez interchange (which also includes 5th street and Lake Austin Blvd connections) to the Slaughter Lane interchange. CTRMA, however, has myopically focused the project on putting toll road users onto Caesar Chavez itself, and has only provided travel time data reflecting the expected travel times in the toll and general lanes for the portion of traffic on Mopac that enters or exits Cesar Chavez.

There are many other toll road entrance/exit points along the Mopac South Project corridor that require toll lane traffic to merge in and out of an inside lane, and service multiple exits, rather than a single exit.

In all 6 alternatives, CTRMA has placed a toll road exit for northbound toll traffic at the top of the north side of the Lady Bird Lake bridge, before the Enfield exit ("the Enfield Toll Lane exit"). (see map below)



The Enfield Toll Lane exit is the only toll road exit point for all northbound toll road traffic needing to exit Mopac at the following exit points: Windsor Road, Northwood Road, 35th street, 45th street, and Northland Drive. **CTRMA has selected, as part of the Mopac South project, to place a single toll road exit point, from an inside lane, to service toll lane traffic exiting from 5 exit points on Mopac.**

CTRMA has not provided the public with any information indicating why a single, inside lane exit point is recommended for exiting traffic for 5 exits along Mopac before Enfield, but elevated lanes are recommended in 3 alternatives for exiting traffic for a single exit at Cesar Chavez.

CTRMA has failed to show that Cesar Chavez, in comparison with other exit points on Mopac, will receive an amount of traffic that justifies the cost and environmental impact of elevated lanes to move traffic into and off of Cesar Chavez alone with no or minimal time in general purpose lanes – in fact, CTRMA did a study with results claiming that the elevated lanes will not place any more traffic on Cesar Chavez than would be on Cesar Chavez under no build conditions. The study, using Dynamic Traffic Modeling, indicates that drivers will choose alternate routes into and out of downtown, to avoid the congestion on Cesar Chavez, and as a result, the elevated lanes will not place any more traffic on Cesar Chavez.

CTRMA has failed to provide the public with information as part of the Mopac South project showing what percentage of travelers on Mopac are predicted to use each of the Enfield Toll Lane exit, Cesar Chavez Toll Lane exit, or the Barton Skyway/Bee Caves toll lane exit. In the 3 alternatives that propose elevated toll lanes for Cesar Chavez toll lane exits, there is no supporting rationale or traffic volume study comparisons for these interchanges to support the use of elevated lanes to service a SINGLE Mopac exit point when the Enfield Toll Lane Exit uses an inner lane exit to service 5 Mopac exit points and the Bee Caves/Barton Skyway Exit also uses an inner lane exit to service 2 Mopac exit points. CTRMA has failed to identify any consistently applied engineering rationales, traffic volumes studies, or any other information, as the reasons for even studying the use of elevated lanes to service a SINGLE Mopac Exit when inner lane entrance/exits are recommended in other locations for servicing MULTIPLE Mopac Exits.

The length of the "on ramp" for the Enfield Toll Lane Exit is significantly shorter than any proposed on or off ramp proposal for the entrances and exits to the Northbound toll lane entrance and exit before Bee Caves Road. CTRMA has failed to provide any rationale, traffic studies, or any other information to support the design of the Enfield Toll Lane Exit as a very very short length inner lane "on ramp", for serving 5 Mopac exits, to support the proposed 3 alternatives that include elevated lanes for serving 1 Mopac exit at Cesar Chavez, or to support the proposed longer inner lane entrance/exit for the Barton Skyway and Bee Caves northbound exits.

Elevated lanes are not the only way to improve travel times. CTRMA needs to provide the public with one or more alternatives without elevated toll lanes that apply TSM,

optimizations and consistent engineering rationale to the design and position of **ALL** toll road entrances and exits. **Until CTRMA presents the public with an alternative that requires no elevated lanes, but optimizes toll lane entrances/exits, it is impossible for there to be a fair comparison of an alternative without elevated toll lanes to an alternative with elevated toll lanes.**

(7) The Mopac South Environmental Study needs to remove or change the dangerous and bottlenecking inner lane toll road exit on northbound Mopac before the Enfield exit and assess the impact to travel times from the toll road exit on northbound Mopac before the Enfield exit.

Creating a new bottleneck in general purpose lanes

The Enfield Toll Lane exit is currently proposed at a point where northbound Mopac traffic is often congested during peak times in the morning *and afternoon*. CTRMA has failed to show how travel times will be impacted for the general traveling public and for toll lane users due to the merging of toll lane traffic (destined for 5 exits from Mopac) into general lanes at this existing congestion point during morning and afternoon peak hour traffic. Even without CTRMA providing this data, it is clear that the Enfield Toll Lane Exit will create a new bottleneck into the traffic flow on Mopac as cars merge out of the toll lane into already congested lanes. The impact of a new bottleneck in an already congested area during peak times is certain to back up traffic well into the bridge over Lady Bird Lake and farther beyond. Will CTRMA introduce the Enfield Toll Lane Exit as it is presented, only to create a new bottleneck in northbound Mopac traffic, in order to later justify adding an elevated direct connect from the toll lane to the Enfield exit itself?

Impact of Enfield Toll Lane exit on Mopac South travel times not assessed

Even if the point selected for the Enfield Toll Lane exit were not an existing congestion point during morning and afternoon peak hour traffic, CTRMA has failed to provide any expected travel times for vehicles entering the toll road at Slaughter, but not exiting at Cesar Chavez, and continuing over the river. CTRMA has myopically focused on predicting "reliable" travel times between Slaughter Lane for the percentage of traffic that enters or exists from Cesar Chavez, but failed to provide any expected travel times for toll or general lane travelers to travel from Slaughter Lane to any point that is *on Mopac*, such as this last north bound exit included in the Mopac South environmental study.

Creating a Deathtrap

To make matters even worse, CTRMA has positioned the Enfield Toll Lane Exit in such a manner that it is feasible for those exiting the toll lane, as the plan is currently presented, exit the toll lane and merge across traffic on Mopac to exit at Enfield Road. In speaking with engineers for CTRMA, I have been told that the distance between the Toll Lane exit and the Enfield Road Exit is not the required number of feet for the Enfield Toll Lane Exit to be a proper exit point for Enfield Road – be that as it may, drivers do not care whether a proper distance has been allowed for merging across to an exit – if there is an opening for drivers to exit from the toll lane and stop traffic to merge over to Enfield, attempts to merge across and exit will happen and it will create a chokehold in traffic. During peak periods, when the traffic is slower in this area, drivers will try to merge across 3 lanes of slow moving traffic that has limited visibility because

of the incline of Mopac. During non-peak periods, when the traffic is faster in this area, drivers will try to merge across 3 lanes of fast moving traffic, which will lead to deaths. To the extent that barriers may be put in place along the portion of the map that is a dotted line, this line should extend past the Enfield exit – not stop before it. Will CTRMA introduce the Enfield Toll Lane Exit as it is presented, only to create a new dangerous merging area for general northbound Mopac traffic, in order to later justify adding an elevated direct connect from the toll lane to the Enfield exit itself?

(8) The entire Mopac South Environmental Study (including, but not limited to, the project purpose, project goals and objections, project need, problems to be addressed, all underlying data and modeling, CSS, travel times, traffic modeling, and comparisons of alternatives) needs to be updated for all 6 alternatives, in addition to previously considered alternatives, to the reflect the CAMPO 2040 plan.

CTRMA is only authorized by statute to build toll roads on Mopac between Cesar Chavez and Slaughter Lane in accordance with the CAMPO 2040 plan and "in all respects for the benefit of the people of the counties in which an authority operates and of the people of this state, for the increase of their commerce and prosperity, and for the improvement of their health, living conditions, and public safety." (*see* Texas Transportation Code Chapter 370). The CAMPO 2040 plan is the active plan for the region. (*see* the CAMPO website, which states "the CAMPO 2035 plan is no longer the active long-range plan for the capital area" and "the CAMPO 2040 Regional Transportation Plan is the active long-range plan for the capital area.")

Of note, the "Project Goals and Objectives" sheet available in the Mopac South Environmental Study Virtual Open House states, as a first goal: "Provide consistency with local and regional plans."

The Mopac South Environmental Study is currently based on the CAMPO 2035 plan, which is not the active plan for the region. In addition, the Mopac South Environmental Study is currently based on the CAMPO 2035 plan, which only authorizes CTRMA to build one toll lane in each direction on Mopac South. CTRMA specifically withdrew the request to amend the CAMPO 2040 plan to include two toll lanes in each direction on Mopac. The CAMPO 2035 regional plan does not support an Environmental Impact Study of Mopac South that includes two toll lanes in each direction. The CAMPO 2035 plan, and its underlying data and models, generated based on the multitude of information provided throughout the entire CAMPO 2035 plan, cannot be used as the basis for elimination or selection of toll road alternatives that include more than one lane in each direction on Mopac South.

CTRMA spent 3 years holding meetings for the Mopac South Environmental Study with project purpose, goals and objections, need, problems to be addressed, traffic times, and traffic modeling all based on the CAMPO 2035 plan. The CAMPO 2035 plan is a regional planning document, focused on designing a plan for building *and interconnecting* roadways throughout multiple counties. The CAMPO 2035 plan provided for building *and interconnecting a single express lane* in each direction on Mopac South. The Regional Toll Network Analysis and the Traffic Demand Model incorporated into the CAMPO 2035 plan reflect planning for one express lane in each direction on Mopac South, as that one toll lane is interconnected within the region.

Despite the fact that the CAMPO 2040 plan is the active plan during the current open house, and despite the fact that the CAMPO 2035 plan fails to provide authority for CTRMA to study, design, or evaluate 2 express lanes in each direction, during the November 2015 Open House, CTRMA staff have continued to evaluate the travel times for each of the 6 alternatives (4 of which include 2 express lanes in each direction) based on the Traffic Demand Model provided by the CAMPO 2035 plan, modified by 2015 blue tooth data.

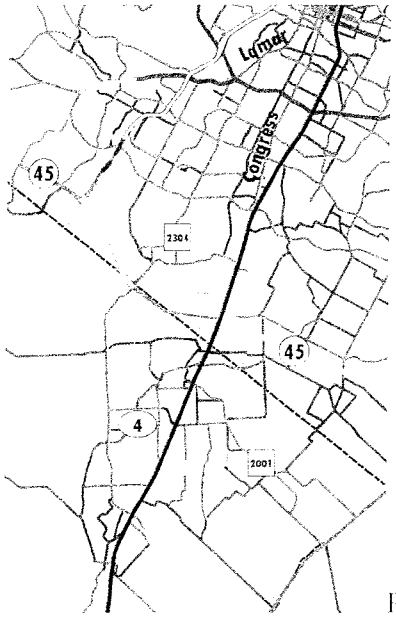
The CAMPO 2035 plan does not take into account Regional Toll Network Analysis and Traffic Demand Model based on the CAMPO 2040 plan. The Regional Toll Network Analysis and Traffic Demand Model for the CAMPO 2040 plan should take into account, in the demand on Mopac South, that 2 express lanes in each direction are allowed. According to CTRMA, one express lane in each direction is not a financially viable option for taking the Mopac South project out for bonding. If this is true, then it stands to reason that the Traffic Demand Model for 2 express lanes in each direction would differ from the Traffic Demand Model for 1 express lane in each direction in the CAMPO 2035 plan. In addition to financial viability, CTRMA has all but eliminated the option for one express lane in each direction on Mopac South by in comparison with two express lanes in each direction. There are differences in capacity, ability to handle emergencies, financial viability, and average travel times.

In addition, the CAMPO 2040 plan has a significant error, which should be corrected as CTRMA participates in evaluating the effects of the Mopac South toll road on the EJ community in accordance with NEPA. For the Regional Toll Network Analysis CTRMA is required to perform, as part of the NEPA analysis, to be accurate. Page 152, column 3 of the CAMPO 2040 plan under "Regional Toll Network Analysis" states "The interconnected network of existing and planned toll roads and express lanes form a regional toll network. Project sponsors evaluate the effects of the toll roads and express lanes on the EJ community for individual road projects in accordance with the National Environmental Policy Act (NEPA). CAMPO also evaluates the regional toll network for the effect of the total interconnected network on the EJ community. CAMPO will conduct the 2040 Plan Regional Toll Network Analysis (RTA) after the Transportation Policy Board adopts the 2040 Plan. CAMPO's most recent RTA includes all planned and potential toll projects, except for the IH 35 express lanes." This statement is not correct. CAMPO's most recent RTA based on the 2035 plan only includes potential toll projects of one express lane in each direction on Mopac South. The CAMPO 2040 plan includes two express lanes in each direction on Mopac South. CTRMA has made assertions as to the significant differences in the effects of one toll lane in each direction and two toll lanes in each direction. The RTA based on the CAMPO 2040 plan should be updated to include potential toll projects of two express lanes in each direction on Mopac South.

In addition, the CAMPO 2040 plan reflects updates to the following maps and information, which impact the Mopac South Environmental Study:

- Pp. 28-33, including map 2: population growth and changes in population density from 2010 to 2040
- Pp. 33-35, including map 3: employment forecasts and changes in employment density from 2010 to 2040
- Pp. 35-36, including map 4: CAMPO centers in 2040

- P. 49, map 6: Road types in 2040, which include a combination of toll roads and arterial roads that connect Mopac South to I-35 through two different routes: (1) 45 (toll way from 2035 plan + new section of 45 connecting to I-35 in 2040 plan labeled as "arterial roadway"); and (2) 1626 through Buda. (see pull out of map 6 below)
- P 50-54: congestion characteristics in 2040, including AM and PM delays, including Mopac South and the roadways interconnected to Mopac South
- P 54-61: updates to public transportation, including the use of transit-related apps. and changes to bicycle and pedestrian facilities



Portion of Map 6 from the CAMPO 2040 plan showing arterial roads and toll roads connecting Mopac South from the south to I-35 2 different routes: 45 and 1626.

Specifically, the CAMPO 2040 plan, on p. 64, states, "the existing transportation system described previously [in pp. 1-63 of the CAMPO 2040 plan] is used to assess current traffic congestions. CAMPO generates a travel demand model using the current and forecast socioeconomic data and information about the transportation system and land use. CAMPO 2040 plan, page 63. The plan states: "the four-step travel demand model process is described in Figure 11. The model is calibrated to observe 2010 traffic counts. Once calibrated, the model is used to forecast future traffic conditions."

Clearly, the CAMPO 2040 traffic demand model will be different from the CAMPO 2035 traffic demand model because of the litany of factors that are considered in generating the CAMPO 2040 traffic demand model and the plans for additional roadways within the region.

Further, the CAMPO 2040 plan includes additional issues that need to be evaluated as part of the study and evaluation of toll roads under the authority of the CAMPO 2040 plan and in compliance with NEPA:

- p. 131-133: freight corridors, freight movement, freight related improvements to the road system (with a list of improvements to be made including Loop 1 South from RM 2244-Cesar Chavez) and freight rail improvements;
- p. 133-135: environmental factors
- p. 135-141: air quality
- p. 141-142: energy conservation
- p. 142: water issues
- p. 143-148: climate change
- p. 148-152 : environmental justice
- p. 152-158 : regional toll network analysis
- p. 158-160 : emerging technologies

The entire Mopac South Environmental Study needs to be reevaluated and reset, in writing, to reflect the CAMPO 2040 plan. The difference between the CAMPO 2035 plan and CAMPO 2040 plan is not merely a change in language from "one express lane in each direction" to "two express lanes in each direction". As noted above, there are multiple differences between the CAMPO 2035 and CAMPO 2040 that significantly impact the underlying data used to support the Mopac Environmental Impact Study. It is insufficient for CTRMA to select one alternative and then update that alternative to reflect the CAMPO 2040 plan. Each of the 6 alternatives, or any additional alternatives, should be updated to reflect the CAMPO 2040 plan and represented to the public for comment.

(9) The Mopac South Environmental Study needs to provide improved designs for the Bee Caves Road/Mopac intersection, or provide a written rationale for why improvements to the Bee Caves Road/Mopac intersection are not a part of the Study.

During the last comment period, the City of Rollingwood and its residents requested, in multiple forums, that the Bee Caves Road/Mopac interchange be separately evaluated and redesigned to improve efficiency as part of the Mopac South Environmental Study. CTRMA is performing Intersection Environmental Studies for the intersections at Slaughter Lane and LaCrosse Avenue. The problem statement for the studies of these intersections indicates that these intersections "were originally constructed in 1992 and have grown increasingly congested over the years. Traffic congestion at these intersections is causing travel delays and adversely affecting access and mobility." In the "Proposed Action, Purpose and Need Statement" released in June 2015 for the Intersection Environmental Studies, Table 1 indicates that the Bee Caves Road intersection was completed in 1982, by a decade pre-dating the Slaughter Lane and La Crosse avenue intersections. The demand on Bee Caves Road is also known to have significantly increased since the intersection was built in 1982.

At the October 2015 Rollingwood City Council Meeting, Assistant Executive Director Mario Espinoza addressed the Rollingwood City Council. One of the first things he shared is that the Bee Caves intersection would not be considered for improvement as part of the Mopac South Environmental Study.

Please consider adding the Bee Caves road interchange, which is a gateway to Bee Caves Road and Barton Springs, to be improved as part of the Mopac South Environmental Study. If

CTRMA continues to decline this request, please provide the public with a written rationale for the Bee Caves intersection not being updated and improved as part of the Mopac South Intersections Study or Mopac South Environmental Study. Of note, in the "Proposed Action, Purpose and Need Statement" released in June 2015 for the Intersection Environmental Studies, Table 2 on page 6 provides data about the amount of delay per vehicle and number of vehicles using the Slaughter and La Crosse interchanges at peak times. In your rationale, please provide similar traffic analysis regarding the amount of delay per vehicle and number of vehicles using Bee Caves interchange at peak times and explain why improvements are not recommended for this interchange.

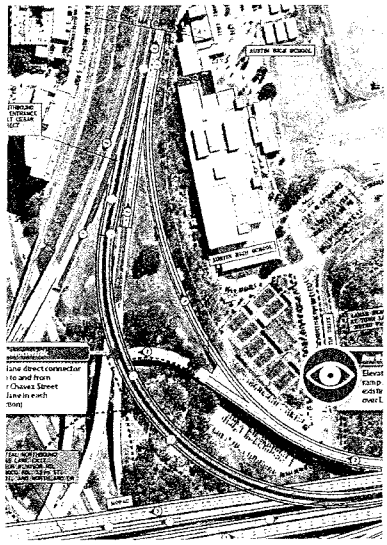
In addition, please consider that the expansion of Bee Caves Road to include a center turn lane and bike and pedestrian facilities is already underway to support the predicted increase in traffic volumes on Bee Caves Road.

At some point, the Bee Caves Road infrastructure of 1982 will need to be updated. If CTRMA is going to dig up the entire interchange at Bee Caves and Mopac to add toll lanes across the intersection, but not actually improve the intersection in any way, please, at the least, do not add elevated lanes over the Bee Caves Road exit that would add any infrastructure that would reduce or remove options for future improvement of the interchange.

(10) The Mopac South Environmental Study needs to provide travel times for the general traveling public and toll lane users between a point on Mopac itself near Cesar Chavez to a point on Mopac itself near Slaughter Lane, along with providing northbound afternoon travel times, to provide travel time information for the majority of the traveling public not exiting or entering at Cesar Chavez.

During the November Open House meeting at Hill Country Middle School, I asked the CTRMA staff and contractor who provided the travel time estimates for CTRMA, what specific points on the map were selected for the travel time estimates. I asked this question to clarify whether the travel times estimated to and from Cesar Chavez were based on the point at which toll road users enter or exit the toll road, which would vary among the alternatives, or whether they were based on a particular point on or near Cesar Chavez.

The CTRMA travel time estimator (and since then additional staff) stated that the point on Cesar Chavez that was used for the travel time estimates for all 6 alternatives is the point ½ miles in on Cesar Chavez where traffic lets out (for Northbound) or enters the toll road (for South bound) in front of Austin High on Cesar Chavez in the 2 express lanes in each direction with direct connect alternative (portion of 2 express lanes in each direction with direct connect shown in map below).



The CTRMA staff has only provided travel time estimates for northbound average travel times for those drivers who enter Mopac at Slaughter Lane, use the general purposes or toll lane, and *then exit Cesar Chavez*. The CTRMA staff has only provided travel time estimates for southbound average travel times for those drivers who enter Mopac *from Cesar Chavez*, not Mopac itself, and use general purpose or toll lanes.

In addition, the northbound travel times provided are only for am traffic and the southbound travel times provided are only for pm traffic. One glance at Google maps in the afternoon and it is clear there are unique and significant traffic congestion issues for northbound traffic on Mopac that exits Cesar Chavez and that remains on Mopac over the Cesar Chavez interchange. Peak northbound travel times should be provided.

CTRMA staff has failed to provide any travel time estimates for travel between two points *on Mopac itself*. The public has not been provided with sufficient or reliable information about the differences in travel times for the majority of traffic on Mopac that does not exit Cesar Chavez, to reach different portions of Mopac.

CTRMA staff have myopically focused on travel time estimates for only the percentage of travelers who use Cesar Chavez as an exit or entrance to Mopac, which is only 11% of Northbound Mopac travelers and 9.3% of Southbound Mopac travelers (according to the 2015 projections from the Mopac North EA).

According to the traffic data provided in Appendix N of the Environmental Assessment for the Mopac North Project, 2015 projected data for northbound traffic on Mopac, of the 86800 daily drivers reaching the Cesar Chaves/5th street exit, 63500 (74%) continue on Mopac North, without exiting, and 23300 exit. Of those exiting at Cesar Chavez/5th, only 13800 (15%) fork to the right and take the Cesar Chavez exit; the remaining 9500 (11%) take the 5th street exit.

According to the traffic data provided in Appendix N of the Environmental Assessment for the Mopac North Project, 2015 projected data for Southbound traffic on Mopac, of the 86800 daily drivers on Mopac at the point where Cesar Chavez and Lake Austin Blvd entrances connect with Mopac South, only 8100 (9.3%) of these cars arrive from the Cesar Chavez ramp.

Based on 2015 numbers, which were used in the Mopac North EA, CTRMA staff has only estimated travel times for an estimated 15% of the traveling public northbound and 9% of the traveling public southbound.

For the public to compare the travel time impact of each of the 6 alternatives, and other alternatives, CTRMA needs to provide travel time estimates between points actually on Mopac itself. In particular, for northbound travel time estimates, CTRMA needs to provide the public with travel time estimates for general and toll lane users between the north most point of the Mopac Environmental Study. For northbound and southbound traffic this point is north of the exit at Enfield.

In addition, for the public to compare the travel time impact of each of the 6 alternatives, and other alternatives, CTRMA needs to provide travel time estimates for the segments of the Mopac Improvement project where there are differences in each of the projects. For example, CTRMA needs to provide travel time estimates between 360 and Cesar Chavez and between 360 and the north most points of the Mopac South Environmental study for each of the 6 alternatives. For the public to compare the differences in impacts between the different alternatives, the public needs to be provided with sufficient and reliable (unrounded) data estimated travel times for the segments of alternatives that are different.

Of note, at the Open House at Hill Country Middle School, I was told, by CTRMA staff, that the reason that the travel times for toll lanes users of the 2 elevated lanes in each direction with direct connect and the 2 elevated lanes in each direction with elevated lanes near Barton Skyway are both "9 minutes" each way, is that the numbers are rounded. I asked how the southbound toll traffic estimates, in particular, for these two plans could be within 30 seconds of one another. I was told that it could be that the graphic designer put in the wrong numbers. I have since been shown the unrounded numbers and I still question their accuracy based on what I know about the current traffic issues for southbound traffic between the Cesar Chavez interchange and the Bee Caves interchange, during peak afternoon traffic.

Of note, the "Project Goals and Objectives" sheet available in the Mopac South Environmental Study Virtual Open House states, as a second goal: Reduce congestion delay and provide travel time savings for all roadway users. Currently, CTRMA staff has only provided that that allows the public to evaluate congestion delay and potential travel time savings for 9-15% of the total roadways users each direction. This is insufficient.

Central Texas Regional Mobility Authority
re: MOPAC South environmental study

CTRMA Board of Directors and Staff:

I fully support the official comments submitted by the City of Rollingwood, of which I am a resident. My wife, Amy Pattillo, has also submitted extensive comments, all of which I fully support as well.

In addition to both of the previously listed positions I am personally concerned of what appears to be an intentional lack of information and/or concern regarding the potential environmental impact on Barton Springs pool and the designated recharge zone. For the past 15 years I have been a twice-a-week, year-round-swimmer at Barton Springs. For most trips I also drive my friend, Nancy Ritchie-McMeans, who has been swimming there year-round since 1962. I hope to continue this activity for many years to come. This pool is a gift, a treasure of our community and amazing ambassador of the beauty and value of our city.

Before my comments are filed under "crazy-environmentalist-manifesto" please understand I am a life-long Austin resident, small business owner and believe in responsible and wise development. I, like many, experience the daily realities of our unprecedented population growth and inevitable transportation challenges. Roads must be built, solutions must be found, compromises must be reached. I am a conservationist. Protecting and preserving the treasures we have been given is a high priority.

Based on my experience I am concerned that, as often the case in such contentious developments, the anxiety of facing environmentalist opposition combined with the hubris of zealous planners has removed any plausible discussion of the possible environmental impact on the recharge zone and pool. I have found no substantive information regarding the pool in the MOPAC South Environmental Study.

Over million people visited Barton Springs pool in 2014 - the free market has spoken: The pool is valued. It is a valuable piece of Austin's culture, economy and environment. Please don't let the crazies (on both sides) keep reasonable people from having constructive dialogue about the future of MOPAC and the immediate environment.

Respectfully yours,

Jon Pattillo

Mike

Please enter the attached Comments by Amy Pattillo and by Jon Pattillo, in full, to the Mopac South Environmental Study - November 2015 Public Comment Period.

Also, please inform the CTRMA staff that the handout from the Open House at Hill Country Middle School includes 3 ways to submit public comments: (1) Today at the Open House; (2) Go to the website: www.MoPacSouth.com or Send a fax to 512-996-9784; (3) Mail (address provided). If you need a copy of the flyer that was handed out by CTRMA at the Open House, please let me know. I was told by CTRMA staff a few minutes ago on the phone that fax is not an acceptable way to submit public comment. I then submitted a public comment asking for the website to be upgraded in the future to allow for attachments or documents including graphics. This seems only fair, since we are commenting on maps and may want to include portions of them in our comments for purposes of illustration.

Thank you again for meeting with Wendi and I on Wednesday. We appreciate the time you gave us and the questions you were able to answer.

Best regards,
Amy

Amy J. Pattillo, *Attorney at Law*

RE: Additional Comments to the Mopac South Environmental Study (Please enter this letter, and the attachment, in full, into the record of public comments to the Mopac South Environmental Study November 2015 Open House)

Dear Chairman Wilkerson & Board Members Mills, Bennett Jr., Meade, Armbrust, Singleton, & Heimsath:

First, thank you for your service on the CTRMA board. Over the last two years, I had the honor and privilege of serving the City of Rollingwood on its City Council; this position served to further increase my appreciation for those willing to give of their time, energy, and resource to serving the public, particularly in unpaid positions. Thank you for the time you all give to our community by overseeing mobility solutions with the Central Texas region.

Second, I offer comments to the Mopac South Environmental Study. I wholeheartedly support the official comments by the City of Rollingwood with regard to the Mopac South Environmental Study. In addition, my term on the Rollingwood City Council has recently ended, so I offer additional comments as an individual resident of Rollingwood, informed, in part, by the time I spent on the Council. I am thankful that the City of Rollingwood and its residents have actively engaged in the Mopac South Environmental Study public comment process, given that the project will significantly impact the eastern landscape and access to our city.

With regard to comments by the public, I am hopeful that the CTRMA board will receive copies, in full, of all the comments submitted by all community members who take the time to comment during the current comment period. In addition, I respectfully request that to the extent I, and others, have submitted multiple, separate comment letters or signed petition letters during the comment period, that the CTRMA staff not be permitted to selectively interpret and categorize these comments without also publishing all the comments in full. Many members of the community, myself included, have submitted multiple comments as responsible citizens who are actively engaged during the public comment period - asking questions and actively commenting on issues as the issues are clarified. Please receive each of the comments I submitted and signed during the comment period as an exercise of free speech and active participation throughout a public comment period, not as an attempt to "stack the vote".

During the time I served on the Council, I had the pleasure of speaking with you all during your April Board meeting and presenting the City of Rollingwood's first position regarding the first "Double Decker over Lady Bird Lake" alternative. I appreciate your willingness to listen to the position of the City of Rollingwood and many of its residents and to ask your staff to evaluate alternatives to placing a Double Decker that would extend not only over Lady Bird Lake, but most of the eastern boundary line of the City of Rollingwood. Among the 6 alternatives now being presented to the public, there are 3 alternatives that would place double decker, elevated lanes along the eastern side of the City of Rollingwood: (1 and 2) the 1 or 2 lanes in each direction with direct connect (aka Double Decker over Lady Bird Lake); and (3) the 2 lanes in each direction with elevated lanes near Barton Skyway (aka Two Elevated

Lanes over Bee Caves Road). I ask you again to weigh the adverse impact of elevated lanes to the aesthetics and property values of the area proximate to Rollingwood and the surrounding properties in Austin. Please do not select an alternative that would place elevated lanes over Lady Bird Lake or over Bee Caves Road.

In addition, before you select any alternative, I respectfully request that the CTRMA board provide the public with at least one more public comment period, if not more, during which the CTRMA staff address the following issues raised in the attachment to this letter, which is part of my comments:

(1) The Mopac South Environmental Study needs to provide information about the actual work done or that will be done to avoid unnecessary impacts to the natural and human environment, not mere summary statements;

(2) The Mopac South Environmental Study needs to study and evaluate an alternative that includes 2 HOV lanes in each direction;

(3) The Mopac South Environmental Study needs to present multiple alternatives without elevated lanes in the Cesar Chavez to Barton Skyway corridor that include TSM improvements to optimize travel times, such as improving the TSM for the 2 express lanes in each direction without direct connect;

(4) The Mopac South Environmental Study needs to present all alternatives with the Bee Caves northbound on-ramp entry length returned to the current length or longer;

(5) The Mopac South Environmental Study needs to present a Topographical model and traffic simulation of the Proposed Bee Caves Southbound exit ramp for each of the alternatives;

(6) The Mopac South Environmental Study needs to provide the public with consistently applied rationale, traffic studies, and other information to compare the use of inside lane toll road entrance/exits are used at some locations, but recommending elevated lanes at others;

(7) The Mopac South Environmental Study needs to remove or change the dangerous and bottlenecking inner lane toll road exit on northbound Mopac before the Enfield exit and assess the impact to travel times from the toll road exit on northbound Mopac before the Enfield exit, at the 5th/Cesar Chavez interchange;

(8) The entire Mopac South Environmental Study (including, but not limited to, the project purpose, project goals and objections, project need, problems to be addressed, all underlying data and modeling, CSS, travel times, traffic modeling, and comparisons of alternatives) needs to be updated for all 6 alternatives, in addition to previously considered alternatives, to the reflect all aspects of the CAMPO 2040 plan;

(9) The Mopac South Environmental Study needs to provide improved designs for the Bee Caves Road/Mopac intersection, or provide a written rationale for why improvements to the Bee Caves Road/Mopac intersection are not a part of the Study; and

(10) The Mopac South Environmental Study needs to provide travel times for the general traveling public and toll lane users between a point on Mopac

itself near Cesar Chavez to a point on Mopac itself near Slaughter Lane to provide travel time information for the majority of the traveling public not exiting or entering at Cesar Chavez.

As addressed in the attachment, currently, the CTRMA staff has failed to provide the public with sufficient or reliable information about each of the 6 alternatives upon which the public can collaborate with CTRMA to evaluate the benefits and significant impacts of each alternative. CTRMA staff have failed to treat each of the 6 alternatives evenly and have failed to evenly include TSM into the 2 express lanes each way without direct connection that could significantly reduce the travel times of those intending to use the toll lanes and the general traveling public. In addition, CTRMA staff have failed to provide a rationale to support the decision to recommend elevated lanes for the Cesar Chavez toll exit lanes, but to use inner lane toll lane exits at other points along Mopac that have a higher volume of exiting traffic than is predicted for Cesar Chavez.

The attachment to this letter includes additional details about each of the issues above that I request be evaluated and addressed by CTRMA as part of the NEPA analysis for the Mopac South Environment Study and as part of the information provided to the public for collaborating with CTRMA.

I recognize that CTRMA has already spent a significant amount of money developing the Mopac South Environmental Study and that CTRMA may have been able to check off many boxes in the NEPA process, however, the public still has not received sufficient information about any of the alternatives for the public to collaborate with CTRMA in the CSS process or other processes. The CTRMA staff presented an initial plan to the public with 2 express lanes in each direction, which did not fall within the scope of the authority given to CTRMA to build a toll road under the CAMPO 2035 plan (only allowing for 1 express lane in each direction). CTRMA has now spent a significant amount of additional resources developing 6 alternatives, under the CAMPO 2035 plan, and has failed to provide the public with sufficient or accurate information upon which the public rely in comparing the alternatives and collaborating with CTRMA. During open house meetings, the public asks questions about environmental impacts, such as aesthetic and noise impacts or mitigation options and the public is told that these factors will not be considered until after a preferred alternative is selected. How can a preferred alternative be selected if the public has not been provided with data allowing for comparison of environmental impacts of *each* alternative? During open house meetings, the public asks questions about traffic studies for Mopac South and is consistently told that the person who could answer the question is not in the room or that the information being requested is confidential/not ready for public consumption – and from my personal experience, even if the person with the answer to a question is in the room, it is doubtful they would have the authority to provide an answer on behalf of CTRMA. In addition to providing the public with additional opportunities to collaborate and comment on the Mopac South Environmental Study, please consider selecting leadership for this project who can provide effective management of the project and ensure that the public is provided with responses to basic questions about the impacts of the project. Please ensure, as part of the Mopac South Environment Study, that the public has been provided with sufficient, fair and, accurate information to collaborate in the study process. Please ensure that CTRMA staff does not merely hold meetings in order to check a box showing that a meeting was held within a specific community, but that staff is prepared to provide

sufficient and accurate information to the public who spend the time and energy to attend the meetings and become educated about the project.

It is undoubtedly a daunting challenge to gather public support for a transportation project that requires digging up an 8 mile portion of land in Austin that includes the Edwards Aquifer and Barton Springs, along with hundreds of acres of parkland and preserved green space. There is a good reason for this: residents of Travis County in the past, and currently, value maintaining the environment and water supply for future generations, and green space aesthetic near Downtown Austin, over achieving the very top travel times. To the extent that a region of counties has decided, in the CAMPO 2040 plan, to allow toll roads on Mopac 1 South, please respect the values of residents who live along this roadway and select alternatives for these toll roads that will achieve the goals of improving travel times in the region with the least impact to the environment and green space aesthetic of the areas near Downtown Austin, including Lady Bird Lake, Zilker Park, and Rollingwood.

In addition, please serve the community by providing an Environmental Impact Statement for the Mopac South Environmental Study. There will be a significant impact, which will be impossible to mitigate by barriers and buffers, to the natural resources, environment, water quality, and quality of life of residents and businesses in Rollingwood and the surrounding areas of Austin if Mopac South is modified in any way. Please address the significant impacts to the environment identified in the attachments to this letter in an Environmental Impact Statement.

Multiple CTRMA staff have made verbal promises to me that CTRMA will collaborate with the City of Austin, TxDot, and the City of Rollingwood to improve the design of the pedestrian area under Mopac at the Barton Springs and Rollingwood Drive area. I have been told that the current proposal for pedestrian traffic in all 6 alternatives meets engineering practice requirements. Whether or not this is true, anyone who has practical experience walking through this area can immediately identify that the current proposal is not a safe solution for managing pedestrian traffic in the area (of note: I have challenged multiple CTRMA staff members to try to safely walk a jogging stroller through their proposed pedestrian cross walk locations – no one has taken me up on this challenge yet). Push button cross walks are, in practice, dangerous for this area and the proposed pathway require pedestrians to cross 3 intersections with variable high speed traffic and blind spots. Please evaluate placement of a pedestrian overpass across Barton Springs on the east side of Mopac within the CTRMA ROW. Also, please ask the CTRMA staff to keep their promise to reevaluate and redesign this pedestrian traffic area during the next phase of the Mopac South Environmental Study.

Thank you for considering my comments.

Best regards,

Amy J. Pattillo

Attachment – Please include this attachment in full in the public comments to the Mopac South Environmental Study and in the comments to be evaluated during the NEPA process

(1) The Mopac South Environmental Study needs to provide information about the actual work done or that will be done to avoid unnecessary impacts to the natural and human environment, not merely summary statements.

Of note, the "Project Goals and Objectives" sheet available in the Mopac South Environmental Study Virtual Open House states, as a third goal: "*Be constructible without unnecessary impacts to the natural and human environment.*" CTRMA has failed to provide the public with sufficient information to prove that the Mopac South project will be constructible without unnecessary impacts to the natural and human environment.

CTRMA needs to clearly provide the public with specific information about the studies of areas where there could be impact to the natural and human environment. Currently CTRMA has merely provided summary statements.

CTRMA needs to provide the public with additional information about the necessary impacts to the natural and human environment that cannot be mitigated.

Threatened and Endangered Species

With respect to threatened and endangered species, the "Environmental Study Update" flyer available in the Mopac South Environmental Study Virtual Open House states: "Field surveys were conducted in the project area. No listed threatened or endangered species were encountered." There are pictures of birds, karst species, fresh water mussels, and salamanders shown on the flyer.

The data currently provided in the Environmental Study is insufficient to support CTRMA's claims. Endangered salamanders are known to exist at Barton Springs Pool (https://tpwd.texas.gov/huntwild/wild/species/bartonspringssalamander/). Areas of Austin have been designated as preserves for the Golden Cheek Warbler (https://www.austintexas.gov/ecoweb/golden-cheeked-warbler). Both of these endangered species are known to be located near the project area or their environments. With respect to salamanders in Barton Springs, the Edwards Aquifer recharge zone feeds Barton Springs, a known habitat of endangered species and any development in that zone will impact the water quality in Barton Springs and the habitat of this species.

The environmental study merely states that "field surveys were conducted in the project area", but does not indicate the scope of this work. There is no indication of which portions of the project area were surveyed or how the surveying work was performed. The report is disturbingly ambiguous, providing no parameters or structure. Given that endangered species are known to be proximate to the project area, CTRMA needs to provide the public with more information about the actual studies that were performed to assess whether threatened or endangered species are present in the project area.

Water Quality

With respect to Water Quality, the "Environmental Study Update" available in the Mopac South Environmental Study Virtual Open House states "The Mobility Authority plans to meet

water quality standards on this project to protect the Barton Springs segment of the Edwards Aquifer Recharge Zone, as required by the Texas Commission on Environmental Quality. Water quality treatment measures on MoPac could be enhanced by this project by implementing the latest, most modern technologies available: Permeable Friction Course (PFC) Pavement, Water Quality Ponds, Vegetative Controls, Hazardous Materials Traps."

First, at the next open house, CTRMA needs to inform the public whether the latest, most modern technologies available for water quality treatment will *actually* be used on the project, or if there is some specific condition that would trigger their use. CTRMA's current statement implies that the use of these modern technologies is conditional or optional.

Second, at the next open house, CTRMA needs to inform the public of what the water quality standards are (including code sections and other requirements) that CTRMA understands as required by TCEQ for protecting the Barton Springs segment of the Edwards Aquifer Recharge Zone. In addition, CTRMA needs to provide the public with a map showing which portion of the project is the "Barton Springs segment of the Edwards Aquifer Recharge Zone".

Third, at the next open house, CTRMA needs to inform the public of what the water quality standard are (including code sections and other requirements) that CTRMA understands as required by TCEQ for protecting the portion of the project that are not the "Barton Springs segment of the Edwards Aquifer Recharge Zone".

Fourth, at the next open house, CTRMA needs to inform the public of what additional measures will be taken to protect the water quality of Lady Bird Lake and protect the lake from pollutants and run off during and after construction.

Traffic Noise

With respect to Traffic Noise, the "Environmental Study Update" available in the Mopac South Environmental Study Virtual Open House states: "Given the 98% projected population growth in Travis and Hays counties, traffic noise along MoPac is going to continue to increase over time, regardless of whether or not we build improvements. A detailed noise analysis will be conducted once a recommended Express Lane configuration has been determined. The community will be engaged in next steps after the analysis is complete."

During the November Open House at Hill Country Middle School, the CTRMA staff and CTRMA's noise consultant were asked by members of the public, during a Q&A session, if any of the alternatives would create more noise or if any would create the least amount of noise. The noise consultant stated that there actually is preliminary noise data for the project, but it was not available for public consumption. He also stated that based on the preliminary data, there is no plan that provides any more or less noise than any other because for all the plans, the noise would be mitigated, but that we could not rely on his statement.

During the next open house, CTRMA should provide the public with noise impact data pre and post mitigation for each of the 6 alternatives and any other alternatives. The public has received no notice of whether any of the 6 alternatives would emit, pre or post mitigation, more noise than any of the other alternatives. The public has been provided with an answer of "you can't have that information", regarding an issue that will impact the enjoyment of park land in Austin and in Rollingwood, along with the enjoyment of private property along Mopac. CTRMA has failed to provide the public with information that proves that CTRMA can meet the goal of "Be constructible without unnecessary impacts to the natural and human environment."

In addition, CTRMA has failed to establish that all 6 of the alternatives would have the same traffic noise impact. CTRMA must evaluate the noise impact of *all* alternatives against no build, not just a recommended configuration against no build.

Furthermore, CTRMA has presented 6 alternatives, 3 of which include elevated lanes traveling along the eastern boundary of Rollingwood, as well as impacting Zilker Park. CTRMA has failed to establish that pre or post mitigation, the 3 alternatives with elevated lanes in the Cesar Chavez to Barton Skyway corridor would have the same traffic noise impact as the 3 alternatives without elevated lanes in this corridor.

It is deceptive for CTRMA to state: "The community will be engaged in next steps after the analysis is complete." When CTRMA staff are asked to clarify what these "next steps" include, at multiple Open House meetings I have participated in during the previous Open House period and this Open House period, the public has been informed that only those residents closest to Mopac will have a vote on whether to implement noise mitigating measures. It is inaccurate and deceptive for CTRMA to state that "the community" will be engaged in next steps after the analysis is complete when there is a small selection of residents who may be able to participate in the process. In addition, when CTRMA staff are asked which properties would qualify for votes on noise mitigation options for the corridor between Lady Bird Lake and Bee Caves Road, the Zilker Club House has been designated as "the community" that would get a voice on noise mitigation measures for Mopac South – we have been told multiple times that no one in Rollingwood will get to vote on noise mitigation measures.

Since there is no guarantee to the communities adjacent to Mopac that any noise mitigation barriers will be implemented, at the next open house, CTRMA needs to provide the public with full noise analysis of pre and post mitigation noise impacts for each of the alternatives presented.

In addition, at the next open house, CTRMA needs to stop deceiving the public and identify who "the community" is that would actually have a vote on the use of noise mitigation barriers along Mopac South.

(2) The Mopac South Environmental Study needs to study and evaluate an alternative that includes 2 HOV lanes in each direction.

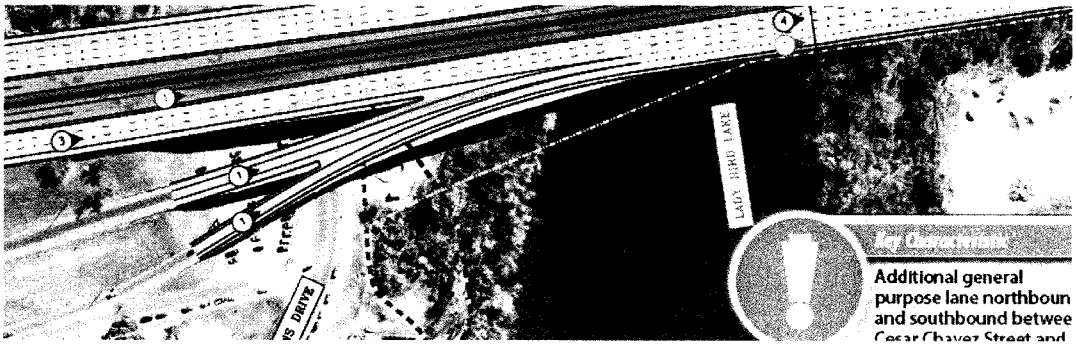
CTRMA staff appears to have initially compared the travel time estimates and impact of 1 HOV lane in each direction on Mopac South with 2 toll lanes in each direction on Mopac South. This is not an even or fair comparison of alternatives to toll lanes. An alternative with 2 HOV lane in each direction, optimized with TDM and TSM strategies, should be considered along with 2 toll lanes in each direction, optimized with the same or even TDM and TSM strategies.

(3) The Mopac South Environmental Study needs to present multiple alternatives without elevated lanes in the Cesar Chavez to Barton Skyway corridor that include TSM improvements to optimize travel times, such as improving the TSM for the 2 express lanes in each direction without direct connect.

As to the 2 lanes in each direction *without* direct connection alternative, CTRMA needs to update this alternative to include TSM improvements and other optimizations before comparing the 6 alternatives. The 2 express lanes in each direction without direct connection

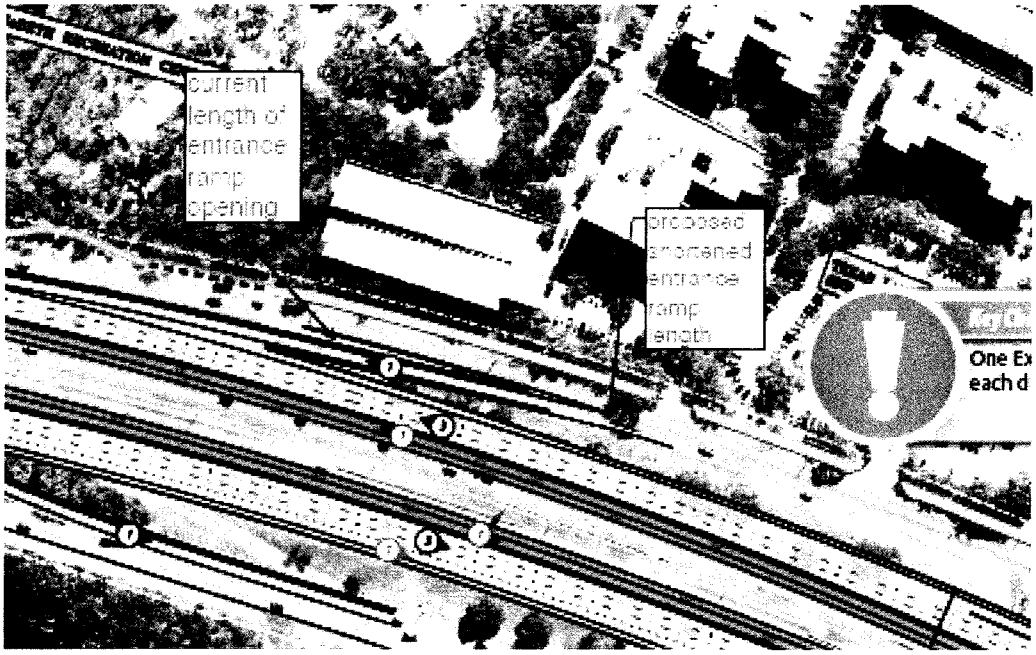
alternative is merely the 2 express lanes in each direction with direct connection, without any design adjustments that could improve the travel times *without* requiring elevated lanes. To fairly evaluate the 2 express lanes in each direction without direct connection alternative against other alternatives, it should be optimized to use the extra ROW space available because no elevated lanes are required.

For example, at the next open house, CTRMA needs to provide the public with the 2 express lanes in each direction without direct connection alternative, adjusted to include the TSM provided in the 2 lanes in each direction with elevated lanes near Barton Skyway. This TSM includes: (1) The 2 lanes in each direction with elevated lanes near Barton Skyway includes an extra general purpose lane on each side between Cesar Chavez and Bee Caves Road. These additional capacity lanes should be integrated into the 2 lanes in each direction without direct connection alternative to improve travel times for exited toll lane traffic and general traffic between Bee Caves Road and Cesar Chavez. (2) The 2 lanes in each direction with elevated lanes near Barton Skyway includes a separate lane for southbound inbound Cesar Chavez traffic from southbound inbound Lake Austin Blvd traffic (see map below). This configuration of 2 lanes removes a current known, significant bottleneck where inbound Lake Austin Blvd traffic and Cesar Chavez traffic merge before entering Mopac. Removing this bottleneck from the 2 lanes in each direction without direct connection alternative will improve travel times for southbound traffic between Cesar Chavez and Bee Caves Road.



(4) The Mopac South Environmental Study needs to present all alternatives with the Bee Caves northbound on-ramp entry length returned to the current length or longer.

5 of the alternatives presented propose shortening the entry length of the northbound on-ramp from Bee Caves Road. I have marked a cut out of the map for the 2 express lanes in each direction without direct connect to show the point where the on-ramp entry currently ends. In addition, I have marked the map to show the point where the on-ramp entry is proposed to end in the 5 alternatives. (see map below). In future presentations of alternatives, CTRMA needs to clearly show that the northbound on-ramp entry length is the same or longer than the current length. Any shortening of the entry length of this on-bound ramp will create a bottleneck for traffic flow on the frontage road, which will lead to additional traffic backup on Bee Caves Road. Please ensure that the alternatives do not remove existing access, capacity and infrastructure.

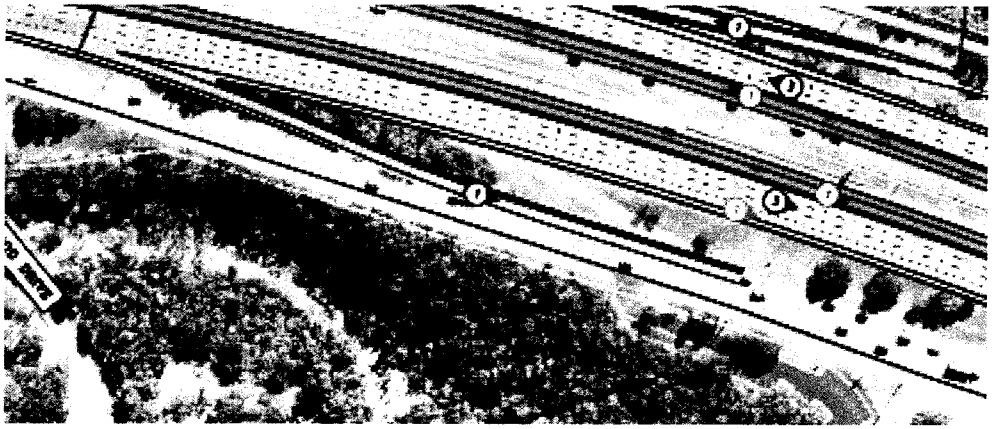


(5) The Mopac South Environmental Study needs to present a Topographical model and traffic simulation of the Proposed Bee Caves Southbound exit ramp.

5 of the alternatives propose adjusting the position of the exit ramp at Bee Caves road for southbound traffic (see map below). Currently, it is difficult to exit at Bee Caves/2244 and merge across all the lanes of traffic, to arrive at the westbound lane of Bee Caves Road. Backing up the exit ramp to provide extra space for merging may reduce this dangerous merging condition. In addition, the topography of the frontage road significantly contributes to the dangerous merging condition. Cars accelerate up the steep incline, which terminates with a sudden rise, and then levels out proximate to the driveway into Parks Hills church. The accelerating cars reach the rise and then intersect with cars exiting the ramp and attempting to merge across multiple lanes of traffic.

At the next Open House, CTRMA should present a topographical model of the proposed Bee Caves Southbound exit ramp for each of the alternative. Engineers for CTRMA have noted that different alternatives require different amounts of right of way, which impacts the design constraints for positioning and lengthening the Bee Caves Southbound exit ramp.

In addition, at the next Open House, CTRMA should provide a traffic simulation of the traffic merging into the frontage lane, showing where vehicles will enter the frontage road, using real modeling of the speeds at which vehicles travel up the steep incline and showing the inclines. Traffic modeling should show impacts at peak and non-peak hours.

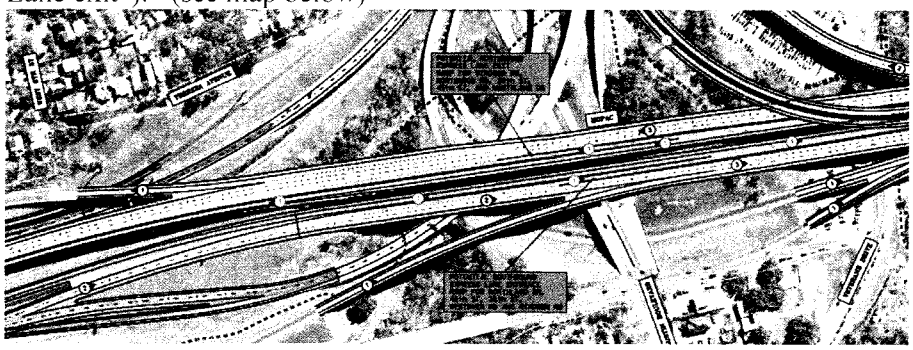


(6) The Mopac South Environmental Study needs to provide the public with consistently applied rationale, traffic studies, and other information to compare the use of inside lane toll road entrance/exits are used at some locations, but recommending elevated lanes at others.

All 6 alternatives offered by CTRMA for the Mopac South Project focus on moving traffic to and from a point on Cesar Chavez in front of Austin High School to and from a point by Slaughter Lane. CTRMA has prioritized moving toll lane traffic to and from a point well into Cesar Chavez, a downtown street that is not a highway or a bypass (or Mopac) in the shortest amounts of time. The Mopac South Environmental Study is tasked with developing toll roads on Mopac from the Cesar Chavez interchange (which also includes 5th street and Lake Austin Blvd connections) to the Slaughter Lane interchange. CTRMA, however, has myopically focused the project on putting toll road users onto Caesar Chavez itself, and has only provided travel time data reflecting the expected travel times in the toll and general lanes for the portion of traffic on Mopac that enters or exits Cesar Chavez.

There are many other toll road entrance/exit points along the Mopac South Project corridor that require toll lane traffic to merge in and out of an inside lane, and service multiple exits, rather than a single exit.

In all 6 alternatives, CTRMA has placed a toll road exit for northbound toll traffic at the top of the north side of the Lady Bird Lake bridge, before the Enfield exit ("the Enfield Toll Lane exit"). (see map below)



The Enfield Toll Lane exit is the only toll road exit point for all northbound toll road traffic needing to exit Mopac at the following exit points: Windsor Road, Northwood Road, 35th street, 45th street, and Northland Drive. **CTRMA has selected, as part of the Mopac South project, to place a single toll road exit point, from an inside lane, to service toll lane traffic exiting from 5 exit points on Mopac.**

CTRMA has not provided the public with any information indicating why a single, inside lane exit point is recommended for exiting traffic for 5 exits along Mopac before Enfield, but elevated lanes are recommended in 3 alternatives for exiting traffic for a single exit at Cesar Chavez.

CTRMA has failed to show that Cesar Chavez, in comparison with other exit points on Mopac, will receive an amount of traffic that justifies the cost and environmental impact of elevated lanes to move traffic into and off of Cesar Chavez alone with no or minimal time in general purpose lanes – in fact, CTRMA did a study with results claiming that the elevated lanes will not place any more traffic on Cesar Chavez than would be on Cesar Chavez under no build conditions. The study, using Dynamic Traffic Modeling, indicates that drivers will choose alternate routes into and out of downtown, to avoid the congestion on Cesar Chavez, and as a result, the elevated lanes will not place any more traffic on Cesar Chavez.

CTRMA has failed to provide the public with information as part of the Mopac South project showing what percentage of travelers on Mopac are predicted to use each of the Enfield Toll Lane exit, Cesar Chavez Toll Lane exit, or the Barton Skyway/Bee Caves toll lane exit. In the 3 alternatives that propose elevated toll lanes for Cesar Chavez toll lane exits, there is no supporting rationale or traffic volume study comparisons for these interchanges to support the use of elevated lanes to service a SINGLE Mopac exit point when the Enfield Toll Lane Exit uses an inner lane exit to service 5 Mopac exit points and the Bee Caves/Barton Skyway Exit also uses an inner lane exit to service 2 Mopac exit points. CTRMA has failed to identify any consistently applied engineering rationales, traffic volumes studies, or any other information, as the reasons for even studying the use of elevated lanes to service a SINGLE Mopac Exit when inner lane entrance/exits are recommended in other locations for servicing MULTIPLE Mopac Exits.

The length of the "on ramp" for the Enfield Toll Lane Exit is significantly shorter than any proposed on or off ramp proposal for the entrances and exits to the Northbound toll lane entrance and exit before Bee Caves Road. CTRMA has failed to provide any rationale, traffic studies, or any other information to support the design of the Enfield Toll Lane Exit as a very very short length inner lane "on ramp", for serving 5 Mopac exits, to support the proposed 3 alternatives that include elevated lanes for serving 1 Mopac exit at Cesar Chavez, or to support the proposed longer inner lane entrance/exit for the Barton Skyway and Bee Caves northbound exits.

Elevated lanes are not the only way to improve travel times. CTRMA needs to provide the public with one or more alternatives without elevated toll lanes that apply TSM,

optimizations and consistent engineering rationale to the design and position of **ALL** toll road entrances and exits. **Until CTRMA presents the public with an alternative that requires no elevated lanes, but optimizes toll lane entrances/exits, it is impossible for there to be a fair comparison of an alternative without elevated toll lanes to an alternative with elevated toll lanes.**

(7) The Mopac South Environmental Study needs to remove or change the dangerous and bottlenecking inner lane toll road exit on northbound Mopac before the Enfield exit and assess the impact to travel times from the toll road exit on northbound Mopac before the Enfield exit.

Creating a new bottleneck in general purpose lanes

The Enfield Toll Lane exit is currently proposed at a point where northbound Mopac traffic is often congested during peak times in the morning *and afternoon*. CTRMA has failed to show how travel times will be impacted for the general traveling public and for toll lane users due to the merging of toll lane traffic (destined for 5 exits from Mopac) into general lanes at this existing congestion point during morning and afternoon peak hour traffic. Even without CTRMA providing this data, it is clear that the Enfield Toll Lane Exit will create a new bottleneck into the traffic flow on Mopac as cars merge out of the toll lane into already congested lanes. The impact of a new bottleneck in an already congested area during peak times is certain to back up traffic well into the bridge over Lady Bird Lake and farther beyond. Will CTRMA introduce the Enfield Toll Lane Exit as it is presented, only to create a new bottleneck in northbound Mopac traffic, in order to later justify adding an elevated direct connect from the toll lane to the Enfield exit itself?

Impact of Enfield Toll Lane exit on Mopac South travel times not assessed

Even if the point selected for the Enfield Toll Lane exit were not an existing congestion point during morning and afternoon peak hour traffic, CTRMA has failed to provide any expected travel times for vehicles entering the toll road at Slaughter, but not exiting at Cesar Chavez, and continuing over the river. CTRMA has myopically focused on predicting "reliable" travel times between Slaughter Lane for the percentage of traffic that enters or exists from Cesar Chavez, but failed to provide any expected travel times for toll or general lane travelers to travel from Slaughter Lane to any point that is *on Mopac*, such as this last north bound exit included in the Mopac South environmental study.

Creating a Deathtrap

To make matters even worse, CTRMA has positioned the Enfield Toll Lane Exit in such a manner that it is feasible for those exiting the toll lane, as the plan is currently presented, exit the toll lane and merge across traffic on Mopac to exit at Enfield Road. In speaking with engineers for CTRMA, I have been told that the distance between the Toll Lane exit and the Enfield Road Exit is not the required number of feet for the Enfield Toll Lane Exit to be a proper exit point for Enfield Road – be that as it may, drivers do not care whether a proper distance has been allowed for merging across to an exit – if there is an opening for drivers to exit from the toll lane and stop traffic to merge over to Enfield, attempts to merge across and exit will happen and it will create a chokehold in traffic. During peak periods, when the traffic is slower in this area, drivers will try to merge across 3 lanes of slow moving traffic that has limited visibility because

of the incline of Mopac. During non-peak periods, when the traffic is faster in this area, drivers will try to merge across 3 lanes of fast moving traffic, which will lead to deaths. To the extent that barriers may be put in place along the portion of the map that is a dotted line, this line should extend past the Enfield exit – not stop before it. Will CTRMA introduce the Enfield Toll Lane Exit as it is presented, only to create a new dangerous merging area for general northbound Mopac traffic, in order to later justify adding an elevated direct connect from the toll lane to the Enfield exit itself?

(8) The entire Mopac South Environmental Study (including, but not limited to, the project purpose, project goals and objections, project need, problems to be addressed, all underlying data and modeling, CSS, travel times, traffic modeling, and comparisons of alternatives) needs to be updated for all 6 alternatives, in addition to previously considered alternatives, to the reflect the CAMPO 2040 plan.

CTRMA is only authorized by statute to build toll roads on Mopac between Cesar Chavez and Slaughter Lane in accordance with the CAMPO 2040 plan and "in all respects for the benefit of the people of the counties in which an authority operates and of the people of this state, for the increase of their commerce and prosperity, and for the improvement of their health, living conditions, and public safety." (*see* Texas Transportation Code Chapter 370). The CAMPO 2040 plan is the active plan for the region. (*see* the CAMPO website, which states "the CAMPO 2035 plan is no longer the active long-range plan for the capital area" and "the CAMPO 2040 Regional Transportation Plan is the active long-range plan for the capital area.")

Of note, the "Project Goals and Objectives" sheet available in the Mopac South Environmental Study Virtual Open House states, as a first goal: "Provide consistency with local and regional plans."

The Mopac South Environmental Study is currently based on the CAMPO 2035 plan, which is not the active plan for the region. In addition, the Mopac South Environmental Study is currently based on the CAMPO 2035 plan, which only authorizes CTRMA to build one toll lane in each direction on Mopac South. CTRMA specifically withdrew the request to amend the CAMPO 2040 plan to include two toll lanes in each direction on Mopac. The CAMPO 2035 regional plan does not support an Environmental Impact Study of Mopac South that includes two toll lanes in each direction. The CAMPO 2035 plan, and its underlying data and models, generated based on the multitude of information provided throughout the entire CAMPO 2035 plan, cannot be used as the basis for elimination or selection of toll road alternatives that include more than one lane in each direction on Mopac South.

CTRMA spent 3 years holding meetings for the Mopac South Environmental Study with project purpose, goals and objections, need, problems to be addressed, traffic times, and traffic modeling all based on the CAMPO 2035 plan. The CAMPO 2035 plan is a regional planning document, focused on designing a plan for building *and interconnecting* roadways throughout multiple counties. The CAMPO 2035 plan provided for building *and interconnecting a single express lane* in each direction on Mopac South. The Regional Toll Network Analysis and the Traffic Demand Model incorporated into the CAMPO 2035 plan reflect planning for one express lane in each direction on Mopac South, as that one toll lane is interconnected within the region.

Despite the fact that the CAMPO 2040 plan is the active plan during the current open house, and despite the fact that the CAMPO 2035 plan fails to provide authority for CTRMA to study, design, or evaluate 2 express lanes in each direction, during the November 2015 Open House, CTRMA staff have continued to evaluate the travel times for each of the 6 alternatives (4 of which include 2 express lanes in each direction) based on the Traffic Demand Model provided by the CAMPO 2035 plan, modified by 2015 blue tooth data.

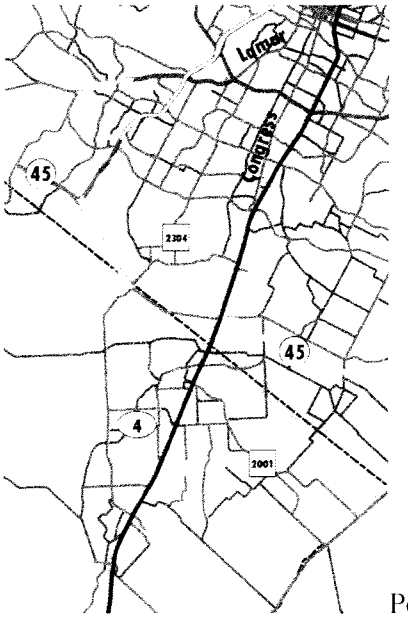
The CAMPO 2035 plan does not take into account Regional Toll Network Analysis and Traffic Demand Model based on the CAMPO 2040 plan. The Regional Toll Network Analysis and Traffic Demand Model for the CAMPO 2040 plan should take into account, in the demand on Mopac South, that 2 express lanes in each direction are allowed. According to CTRMA, one express lane in each direction is not a financially viable option for taking the Mopac South project out for bonding. If this is true, then it stands to reason that the Traffic Demand Model for 2 express lanes in each direction would differ from the Traffic Demand Model for 1 express lane in each direction in the CAMPO 2035 plan. In addition to financial viability, CTRMA has all but eliminated the option for one express lane in each direction on Mopac South by in comparison with two express lanes in each direction. There are differences in capacity, ability to handle emergencies, financial viability, and average travel times.

In addition, the CAMPO 2040 plan has a significant error, which should be corrected as CTRMA participates in evaluating the effects of the Mopac South toll road on the EJ community in accordance with NEPA. For the Regional Toll Network Analysis CTRMA is required to perform, as part of the NEPA analysis, to be accurate. Page 152, column 3 of the CAMPO 2040 plan under "Regional Toll Network Analysis" states "The interconnected network of existing and planned toll roads and express lanes form a regional toll network. Project sponsors evaluate the effects of the toll roads and express lanes on the EJ community for individual road projects in accordance with the National Environmental Policy Act (NEPA). CAMPO also evaluates the regional toll network for the effect of the total interconnected network on the EJ community. CAMPO will conduct the 2040 Plan Regional Toll Network Analysis (RTA) after the Transportation Policy Board adopts the 2040 Plan. CAMPO's most recent RTA includes all planned and potential toll projects, except for the IH 35 express lanes." This statement is not correct. CAMPO's most recent RTA based on the 2035 plan only includes potential toll projects of one express lane in each direction on Mopac South. The CAMPO 2040 plan includes two express lanes in each direction on Mopac South. CTRMA has made assertions as to the significant differences in the effects of one toll lane in each direction and two toll lanes in each direction. The RTA based on the CAMPO 2040 plan should be updated to include potential toll projects of two express lanes in each direction on Mopac South.

In addition, the CAMPO 2040 plan reflects updates to the following maps and information, which impact the Mopac South Environmental Study:

- Pp. 28-33, including map 2: population growth and changes in population density from 2010 to 2040
- Pp. 33-35, including map 3: employment forecasts and changes in employment density from 2010 to 2040
- Pp. 35-36, including map 4: CAMPO centers in 2040

- P. 49, map 6: Road types in 2040, which include a combination of toll roads and arterial roads that connect Mopac South to I-35 through two different routes: (1) 45 (toll way from 2035 plan + new section of 45 connecting to I-35 in 2040 plan labeled as "arterial roadway"); and (2) 1626 through Buda. (see pull out of map 6 below)
- P 50-54: congestion characteristics in 2040, including AM and PM delays, including Mopac South and the roadways interconnected to Mopac South
- P 54-61: updates to public transportation, including the use of transit-related apps, and changes to bicycle and pedestrian facilities



Portion of Map 6 from the CAMPO 2040 plan showing arterial roads and toll roads connecting Mopac South from the south to I-35 2 different routes: 45 and 1626.

Specifically, the CAMPO 2040 plan, on p. 64, states, "the existing transportation system described previously [in pp. 1-63 of the CAMPO 2040 plan] is used to assess current traffic congestions. CAMPO generates a travel demand model using the current and forecast socioeconomic data and information about the transportation system and land use. CAMPO 2040 plan, page 63. The plan states: "the four-step travel demand model process is described in Figure 11. The model is calibrated to observe 2010 traffic counts. Once calibrated, the model is used to forecast future traffic conditions."

Clearly, the CAMPO 2040 traffic demand model will be different from the CAMPO 2035 traffic demand model because of the litany of factors that are considered in generating the CAMPO 2040 traffic demand model and the plans for additional roadways within the region.

Further, the CAMPO 2040 plan includes additional issues that need to be evaluated as part of the study and evaluation of toll roads under the authority of the CAMPO 2040 plan and in compliance with NEPA:

- p. 131-133: freight corridors, freight movement, freight related improvements to the road system (with a list of improvements to be made including Loop 1 South from RM 2244-Cesar Chavez) and freight rail improvements;
- p. 133-135: environmental factors
- p. 135-141: air quality
- p. 141-142: energy conservation
- p. 142: water issues
- p. 143-148: climate change
- p. 148-152 : environmental justice
- p. 152-158 : regional toll network analysis
- p. 158-160 : emerging technologies

The entire Mopac South Environmental Study needs to be reevaluated and reset, in writing, to reflect the CAMPO 2040 plan. The difference between the CAMPO 2035 plan and CAMPO 2040 plan is not merely a change in language from "one express lane in each direction" to "two express lanes in each direction". As noted above, there are multiple differences between the CAMPO 2035 and CAMPO 2040 that significantly impact the underlying data used to support the Mopac Environmental Impact Study. It is insufficient for CTRMA to select one alternative and then update that alternative to reflect the CAMPO 2040 plan. Each of the 6 alternatives, or any additional alternatives, should be updated to reflect the CAMPO 2040 plan and represented to the public for comment.

(9) The Mopac South Environmental Study needs to provide improved designs for the Bee Caves Road/Mopac intersection, or provide a written rationale for why improvements to the Bee Caves Road/Mopac intersection are not a part of the Study.

During the last comment period, the City of Rollingwood and its residents requested, in multiple forums, that the Bee Caves Road/Mopac interchange be separately evaluated and redesigned to improve efficiency as part of the Mopac South Environmental Study. CTRMA is performing Intersection Environmental Studies for the intersections at Slaughter Lane and LaCrosse Avenue. The problem statement for the studies of these intersections indicates that these intersections "were originally constructed in 1992 and have grown increasingly congested over the years. Traffic congestion at these intersections is causing travel delays and adversely affecting access and mobility." In the "Proposed Action, Purpose and Need Statement" released in June 2015 for the Intersection Environmental Studies, Table 1 indicates that the Bee Caves Road intersection was completed in 1982, by a decade pre-dating the Slaughter Lane and La Crosse avenue intersections. The demand on Bee Caves Road is also known to have significantly increased since the intersection was built in 1982.

At the October 2015 Rollingwood City Council Meeting, Assistant Executive Director Mario Espinoza addressed the Rollingwood City Council. One of the first things he shared is that the Bee Caves intersection would not be considered for improvement as part of the Mopac South Environmental Study.

Please consider adding the Bee Caves road interchange, which is a gateway to Bee Caves Road and Barton Springs, to be improved as part of the Mopac South Environmental Study. If

CTRMA continues to decline this request, please provide the public with a written rationale for the Bee Caves intersection not being updated and improved as part of the Mopac South Intersections Study or Mopac South Environmental Study. Of note, in the "Proposed Action, Purpose and Need Statement" released in June 2015 for the Intersection Environmental Studies, Table 2 on page 6 provides data about the amount of delay per vehicle and number of vehicles using the Slaughter and La Crosse interchanges at peak times. In your rationale, please provide similar traffic analysis regarding the amount of delay per vehicle and number of vehicles using Bee Caves interchange at peak times and explain why improvements are not recommended for this interchange.

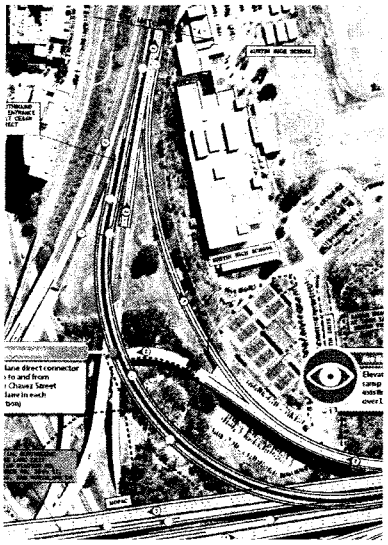
In addition, please consider that the expansion of Bee Caves Road to include a center turn lane and bike and pedestrian facilities is already underway to support the predicted increase in traffic volumes on Bee Caves Road.

At some point, the Bee Caves Road infrastructure of 1982 will need to be updated. If CTRMA is going to dig up the entire interchange at Bee Caves and Mopac to add toll lanes across the intersection, but not actually improve the intersection in any way, please, at the least, do not add elevated lanes over the Bee Caves Road exit that would add any infrastructure that would reduce or remove options for future improvement of the interchange.

(10) The Mopac South Environmental Study needs to provide travel times for the general traveling public and toll lane users between a point on Mopac itself near Cesar Chavez to a point on Mopac itself near Slaughter Lane, along with providing northbound afternoon travel times, to provide travel time information for the majority of the traveling public not exiting or entering at Cesar Chavez.

During the November Open House meeting at Hill Country Middle School, I asked the CTRMA staff and contractor who provided the travel time estimates for CTRMA, what specific points on the map were selected for the travel time estimates. I asked this question to clarify whether the travel times estimated to and from Cesar Chavez were based on the point at which toll road users enter or exit the toll road, which would vary among the alternatives, or whether they were based on a particular point on or near Cesar Chavez.

The CTRMA travel time estimator (and since then additional staff) stated that the point on Cesar Chavez that was used for the travel time estimates for all 6 alternatives is the point ½ miles in on Cesar Chavez where traffic lets out (for Northbound) or enters the toll road (for South bound) in front of Austin High on Cesar Chavez in the 2 express lanes in each direction with direct connect alternative (portion of 2 express lanes in each direction with direct connect shown in map below).



The CTRMA staff has only provided travel time estimates for northbound average travel times for those drivers who enter Mopac at Slaughter Lane, use the general purposes or toll lane, and *then exit Cesar Chavez*. The CTRMA staff has only provided travel time estimates for southbound average travel times for those drivers who enter Mopac *from Cesar Chavez*, not Mopac itself, and use general purpose or toll lanes.

In addition, the northbound travel times provided are only for am traffic and the southbound travel times provided are only for pm traffic. One glance at Google maps in the afternoon and it is clear there are unique and significant traffic congestion issues for northbound traffic on Mopac that exits Cesar Chavez and that remains on Mopac over the Cesar Chavez interchange. Peak northbound travel times should be provided.

CTRMA staff has failed to provide any travel time estimates for travel between two points *on Mopac itself*. The public has not been provided with sufficient or reliable information about the differences in travel times for the majority of traffic on Mopac that does not exit Cesar Chavez, to reach different portions of Mopac.

CTRMA staff have myopically focused on travel time estimates for only the percentage of travelers who use Cesar Chavez as an exit or entrance to Mopac, which is only 11% of Northbound Mopac travelers and 9.3% of Southbound Mopac travelers (according to the 2015 projections from the Mopac North EA).

According to the traffic data provided in Appendix N of the Environmental Assessment for the Mopac North Project, 2015 projected data for northbound traffic on Mopac, of the 86800 daily drivers reaching the Cesar Chaves/5th street exit, 63500 (74%) continue on Mopac North, without exiting, and 23300 exit. Of those exiting at Cesar Chavez/5th, only 13800 (15%) fork to the right and take the Cesar Chavez exit; the remaining 9500 (11%) take the 5th street exit.

According to the traffic data provided in Appendix N of the Environmental Assessment for the Mopac North Project, 2015 projected data for Southbound traffic on Mopac, of the 86800 daily drivers on Mopac at the point where Cesar Chavez and Lake Austin Blvd entrances connect with Mopac South, only 8100 (9.3%) of these cars arrive from the Cesar Chavez ramp.

Based on 2015 numbers, which were used in the Mopac North EA, CTRMA staff has only estimated travel times for an estimated 15% of the traveling public northbound and 9% of the traveling public southbound.

For the public to compare the travel time impact of each of the 6 alternatives, and other alternatives, CTRMA needs to provide travel time estimates between points actually on Mopac itself. In particular, for northbound travel time estimates, CTRMA needs to provide the public with travel time estimates for general and toll lane users between the north most point of the Mopac Environmental Study. For northbound and southbound traffic this point is north of the exit at Enfield.

In addition, for the public to compare the travel time impact of each of the 6 alternatives, and other alternatives, CTRMA needs to provide travel time estimates for the segments of the Mopac Improvement project where there are differences in each of the projects. For example, CTRMA needs to provide travel time estimates between 360 and Cesar Chavez and between 360 and the north most points of the Mopac South Environmental study for each of the 6 alternatives. For the public to compare the differences in impacts between the different alternatives, the public needs to be provided with sufficient and reliable (unrounded) data estimated travel times for the segments of alternatives that are different.

Of note, at the Open House at Hill Country Middle School, I was told, by CTRMA staff, that the reason that the travel times for toll lanes users of the 2 elevated lanes in each direction with direct connect and the 2 elevated lanes in each direction with elevated lanes near Barton Skyway are both "9 minutes" each way, is that the numbers are rounded. I asked how the southbound toll traffic estimates, in particular, for these two plans could be within 30 seconds of one another. I was told that it could be that the graphic designer put in the wrong numbers. I have since been shown the unrounded numbers and I still question their accuracy based on what I know about the current traffic issues for southbound traffic between the Cesar Chavez interchange and the Bee Caves interchange, during peak afternoon traffic.

Of note, the "Project Goals and Objectives" sheet available in the Mopac South Environmental Study Virtual Open House states, as a second goal: Reduce congestion delay and provide travel time savings for all roadway users. Currently, CTRMA staff has only provided that that allows the public to evaluate congestion delay and potential travel time savings for 9-15% of the total roadways users each direction. This is insufficient.

Central Texas Regional Mobility Authority
re: MOPAC South environmental study

CTRMA Board of Directors and Staff:

I fully support the official comments submitted by the City of Rollingwood, of which I am a resident. My wife, Amy Pattillo, has also submitted extensive comments, all of which I fully support as well.

In addition to both of the previously listed positions I am personally concerned of what appears to be an intentional lack of information and/or concern regarding the potential environmental impact on Barton Springs pool and the designated recharge zone. For the past 15 years I have been a twice-a-week, year-round-swimmer at Barton Springs. For most trips I also drive my friend, Nancy Ritchie-McMeans, who has been swimming there year-round since 1962. I hope to continue this activity for many years to come. This pool is a gift, a treasure of our community and amazing ambassador of the beauty and value of our city.

Before my comments are filed under "crazy-environmentalist-manifesto" please understand I am a life-long Austin resident, small business owner and believe in responsible and wise development. I, like many, experience the daily realities of our unprecedented population growth and inevitable transportation challenges. Roads must be built, solutions must be found, compromises must be reached. I am a conservationist. Protecting and preserving the treasures we have been given is a high priority.

Based on my experience I am concerned that, as often the case in such contentious developments, the anxiety of facing environmentalist opposition combined with the hubris of zealous planners has removed any plausible discussion of the possible environmental impact on the recharge zone and pool. I have found no substantive information regarding the pool in the MOPAC South Environmental Study.

Over million people visited Barton Springs pool in 2014 - the free market has spoken: The pool is valued. It is a valuable piece of Austin's culture, economy and environment. Please don't let the crazies (on both sides) keep reasonable people from having constructive dialogue about the future of MOPAC and the immediate environment.

Respectfully yours,

Jon Pattillo

COMMENTS ON VIRTUAL OPEN HOUSE

Amy	Pattillo	11/20/15	I was just informed by CTRMA staff that public comments received by fax may not be included in the public comment record. Since there is not an option to attach a document that includes drawings within this comment portal, I attempted to fax in my public comments (a 20 page document) to the CTRMA fax line. I also attempted to fax in a 1 page letter from my husband. Copies of the comments from myself and my husband that I attempted to fax are also in the packets being hand delivered to CTRMA by the City of Rollingwood. As an additional comment, for the next public comment period, the website comment interface needs to include an option for attaching documents or the CTRMA fax system needs to be updated to allow for receiving faxes of public comments that include graphic, as well as text, comments.

RE: Additional Comments to the Mopac South Environmental Study (Please enter this letter, and the attachment, in full, into the record of public comments to the Mopac South Environmental Study November 2015 Open House)

Dear Chairman Wilkerson & Board Members Mills, Bennett Jr., Meade, Armbrust, Singleton, & Heimsath:

First, thank you for your service on the CTRMA board. Over the last two years, I had the honor and privilege of serving the City of Rollingwood on its City Council; this position served to further increase my appreciation for those willing to give of their time, energy, and resource to serving the public, particularly in unpaid positions. Thank you for the time you all give to our community by overseeing mobility solutions with the Central Texas region.

Second, I offer comments to the Mopac South Environmental Study. I wholeheartedly support the official comments by the City of Rollingwood with regard to the Mopac South Environmental Study. In addition, my term on the Rollingwood City Council has recently ended, so I offer additional comments as an individual resident of Rollingwood, informed, in part, by the time I spent on the Council. I am thankful that the City of Rollingwood and its residents have actively engaged in the Mopac South Environmental Study public comment process, given that the project will significantly impact the eastern landscape and access to our city.

With regard to comments by the public, I am hopeful that the CTRMA board will receive copies, in full, of all the comments submitted by all community members who take the time to comment during the current comment period. In addition, I respectfully request that to the extent I, and others, have submitted multiple, separate comment letters or signed petition letters during the comment period, that the CTRMA staff not be permitted to selectively interpret and categorize these comments without also publishing all the comments in full. Many members of the community, myself included, have submitted multiple comments as responsible citizens who are actively engaged during the public comment period - asking questions and actively commenting on issues as the issues are clarified. Please receive each of the comments I submitted and signed during the comment period as an exercise of free speech and active participation throughout a public comment period, not as an attempt to "stack the vote".

During the time I served on the Council, I had the pleasure of speaking with you all during your April Board meeting and presenting the City of Rollingwood's first position regarding the first "Double Decker over Lady Bird Lake" alternative. I appreciate your willingness to listen to the position of the City of Rollingwood and many of its residents and to ask your staff to evaluate alternatives to placing a Double Decker that would extend not only over Lady Bird Lake, but most of the eastern boundary line of the City of Rollingwood. Among the 6 alternatives now being presented to the public, there are 3 alternatives that would place double decker, elevated lanes along the eastern side of the City of Rollingwood: (1 and 2) the 1 or 2 lanes in each direction with direct connect (aka Double Decker over Lady Bird Lake); and (3) the 2 lanes in each direction with elevated lanes near Barton Skyway (aka Two Elevated

Lanes over Bee Caves Road). I ask you again to weigh the adverse impact of elevated lanes to the aesthetics and property values of the area proximate to Rollingwood and the surrounding properties in Austin. Please do not select an alternative that would place elevated lanes over Lady Bird Lake or over Bee Caves Road.

In addition, before you select any alternative, I respectfully request that the CTRMA board provide the public with at least one more public comment period, if not more, during which the CTRMA staff address the following issues raised in the attachment to this letter, which is part of my comments:

(1) The Mopac South Environmental Study needs to provide information about the actual work done or that will be done to avoid unnecessary impacts to the natural and human environment, not mere summary statements;

(2) The Mopac South Environmental Study needs to study and evaluate an alternative that includes 2 HOV lanes in each direction;

(3) The Mopac South Environmental Study needs to present multiple alternatives without elevated lanes in the Cesar Chavez to Barton Skyway corridor that include TSM improvements to optimize travel times, such as improving the TSM for the 2 express lanes in each direction without direct connect,

(4) The Mopac South Environmental Study needs to present all alternatives with the Bee Caves northbound on-ramp entry length returned to the current length or longer;

(5) The Mopac South Environmental Study needs to present a Topographical model and traffic simulation of the Proposed Bee Caves Southbound exit ramp for each of the alternatives;

(6) The Mopac South Environmental Study needs to provide the public with consistently applied rationale, traffic studies, and other information to compare the use of inside lane toll road entrance/exits are used at some locations, but recommending elevated lanes at others;

(7) The Mopac South Environmental Study needs to remove or change the dangerous and bottlenecking inner lane toll road exit on northbound Mopac before the Enfield exit and assess the impact to travel times from the toll road exit on northbound Mopac before the Enfield exit, at the 5th/Cesar Chavez interchange;

(8) The entire Mopac South Environmental Study (including, but not limited to, the project purpose, project goals and objections, project need, problems to be addressed, all underlying data and modeling, CSS, travel times, traffic modeling, and comparisons of alternatives) needs to be updated for all 6 alternatives, in addition to previously considered alternatives, to the reflect all aspects of the CAMPO 2040 plan;

(9) The Mopac South Environmental Study needs to provide improved designs for the Bee Caves Road/Mopac intersection, or provide a written rationale for why improvements to the Bee Caves Road/Mopac intersection are not a part of the Study; and

(10) The Mopac South Environmental Study needs to provide travel times for the general traveling public and toll lane users between a point on Mopac

itself near Cesar Chavez to a point on Mopac itself near Slaughter Lane to provide travel time information for the majority of the traveling public not exiting or entering at Cesar Chavez.

As addressed in the attachment, currently, the CTRMA staff has failed to provide the public with sufficient or reliable information about each of the 6 alternatives upon which the public can collaborate with CTRMA to evaluate the benefits and significant impacts of each alternative. CTRMA staff have failed to treat each of the 6 alternatives evenly and have failed to evenly include TSM into the 2 express lanes each way without direct connection that could significantly reduce the travel times of those intending to use the toll lanes and the general traveling public. In addition, CTRMA staff have failed to provide a rationale to support the decision to recommend elevated lanes for the Cesar Chavez toll exit lanes, but to use inner lane toll lane exits at other points along Mopac that have a higher volume of exiting traffic than is predicted for Cesar Chavez.

The attachment to this letter includes additional details about each of the issues above that I request be evaluated and addressed by CTRMA as part of the NEPA analysis for the Mopac South Environment Study and as part of the information provided to the public for collaborating with CTRMA.

I recognize that CTRMA has already spent a significant amount of money developing the Mopac South Environmental Study and that CTRMA may have been able to check off many boxes in the NEPA process, however, the public still has not received sufficient information about any of the alternatives for the public to collaborate with CTRMA in the CSS process or other processes. The CTRMA staff presented an initial plan to the public with 2 express lanes in each direction, which did not fall within the scope of the authority given to CTRMA to build a toll road under the CAMPO 2035 plan (only allowing for 1 express lane in each direction). CTRMA has now spent a significant amount of additional resources developing 6 alternatives, under the CAMPO 2035 plan, and has failed to provide the public with sufficient or accurate information upon which the public rely in comparing the alternatives and collaborating with CTRMA. During open house meetings, the public asks questions about environmental impacts, such as aesthetic and noise impacts or mitigation options and the public is told that these factors will not be considered until after a preferred alternative is selected. How can a preferred alternative be selected if the public has not been provided with data allowing for comparison of environmental impacts of *each* alternative? During open house meetings, the public asks questions about traffic studies for Mopac South and is consistently told that the person who could answer the question is not in the room or that the information being requested is confidential/not ready for public consumption – and from my personal experience, even if the person with the answer to a question is in the room, it is doubtful they would have the authority to provide an answer on behalf of CTRMA. In addition to providing the public with additional opportunities to collaborate and comment on the Mopac South Environmental Study, please consider selecting leadership for this project who can provide effective management of the project and ensure that the public is provided with responses to basic questions about the impacts of the project. Please ensure, as part of the Mopac South Environment Study, that the public has been provided with sufficient, fair and, accurate information to collaborate in the study process. Please ensure that CTRMA staff does not merely hold meetings in order to check a box showing that a meeting was held within a specific community, but that staff is prepared to provide

sufficient and accurate information to the public who spend the time and energy to attend the meetings and become educated about the project.

It is undoubtedly a daunting challenge to gather public support for a transportation project that requires digging up an 8 mile portion of land in Austin that includes the Edwards Aquifer and Barton Springs, along with hundreds of acres of parkland and preserved green space. There is a good reason for this: residents of Travis County in the past, and currently, value maintaining the environment and water supply for future generations, and green space aesthetic near Downtown Austin, over achieving the very top travel times. To the extent that a region of counties has decided, in the CAMPO 2040 plan, to allow toll roads on Mopac 1 South, please respect the values of residents who live along this roadway and select alternatives for these toll roads that will achieve the goals of improving travel times in the region with the least impact to the environment and green space aesthetic of the areas near Downtown Austin, including Lady Bird Lake, Zilker Park, and Rollingwood.

In addition, please serve the community by providing an Environmental Impact Statement for the Mopac South Environmental Study. There will be a significant impact, which will be impossible to mitigate by barriers and buffers, to the natural resources, environment, water quality, and quality of life of residents and businesses in Rollingwood and the surrounding areas of Austin if Mopac South is modified in any way. Please address the significant impacts to the environment identified in the attachments to this letter in an Environmental Impact Statement.

Multiple CTRMA staff have made verbal promises to me that CTRMA will collaborate with the City of Austin, TxDot, and the City of Rollingwood to improve the design of the pedestrian area under Mopac at the Barton Springs and Rollingwood Drive area. I have been told that the current proposal for pedestrian traffic in all 6 alternatives meets engineering practice requirements. Whether or not this is true, anyone who has practical experience walking through this area can immediately identify that the current proposal is not a safe solution for managing pedestrian traffic in the area (of note: I have challenged multiple CTRMA staff members to try to safely walk a jogging stroller through their proposed pedestrian cross walk locations – no one has taken me up on this challenge yet). Push button cross walks are, in practice, dangerous for this area and the proposed pathway require pedestrians to cross 3 intersections with variable high speed traffic and blind spots. Please evaluate placement of a pedestrian overpass across Barton Springs on the east side of Mopac within the CTRMA ROW. Also, please ask the CTRMA staff to keep their promise to reevaluate and redesign this pedestrian traffic area during the next phase of the Mopac South Environmental Study.

Thank you for considering my comments.

Best regards,

Amy J. Pattillo

[submitted for official public comment via fax to CTRMA]

Attachment – Please include this attachment in full in the public comments to the Mopac South Environmental Study and in the comments to be evaluated during the NEPA process

(1) The Mopac South Environmental Study needs to provide information about the actual work done or that will be done to avoid unnecessary impacts to the natural and human environment, not merely summary statements.

Of note, the "Project Goals and Objectives" sheet available in the Mopac South Environmental Study Virtual Open House states, as a third goal: "*Be constructible without unnecessary impacts to the natural and human environment.*" CTRMA has failed to provide the public with sufficient information to prove that the Mopac South project will be constructible without unnecessary impacts to the natural and human environment.

CTRMA needs to clearly provide the public with specific information about the studies of areas where there could be impact to the natural and human environment. Currently CTRMA has merely provided summary statements.

CTRMA needs to provide the public with additional information about the necessary impacts to the natural and human environment that cannot be mitigated.

Threatened and Endangered Species

With respect to threatened and endangered species, the "Environmental Study Update" flyer available in the Mopac South Environmental Study Virtual Open House states: "Field surveys were conducted in the project area. No listed threatened or endangered species were encountered." There are pictures of birds, karst species, fresh water mussels, and salamanders shown on the flyer.

The data currently provided in the Environmental Study is insufficient to support CTRMA's claims. Endangered salamanders are known to exist at Barton Springs Pool (https://tpwd.texas.gov/huntwild/wild/species/bartonspringssalamander/). Areas of Austin have been designated as preserves for the Golden Cheek Warbler (https://www.austintexas.gov/ecoweb/golden-cheeked-warbler). Both of these endangered species are known to be located near the project area or their environments. With respect to salamanders in Barton Springs, the Edwards Aquifer recharge zone feeds Barton Springs, a known habitat of endangered species and any development in that zone will impact the water quality in Barton Springs and the habitat of this species.

The environmental study merely states that "field surveys were conducted in the project area", but does not indicate the scope of this work. There is no indication of which portions of the project area were surveyed or how the surveying work was performed. The report is disturbingly ambiguous, providing no parameters or structure. Given that endangered species are known to be proximate to the project area, CTRMA needs to provide the public with more information about the actual studies that were performed to assess whether threatened or endangered species are present in the project area.

Water Quality

With respect to Water Quality, the "Environmental Study Update" available in the Mopac South Environmental Study Virtual Open House states "The Mobility Authority plans to meet

water quality standards on this project to protect the Barton Springs segment of the Edwards Aquifer Recharge Zone, as required by the Texas Commission on Environmental Quality. Water quality treatment measures on MoPac could be enhanced by this project by implementing the latest, most modern technologies available: Permeable Friction Course (PFC) Pavement, Water Quality Ponds, Vegetative Controls, Hazardous Materials Traps."

First, at the next open house, CTRMA needs to inform the public whether the latest, most modern technologies available for water quality treatment will *actually* be used on the project, or if there is some specific condition that would trigger their use. CTRMA's current statement implies that the use of these modern technologies is conditional or optional.

Second, at the next open house, CTRMA needs to inform the public of what the water quality standards are (including code sections and other requirements) that CTRMA understands as required by TCEQ for protecting the Barton Springs segment of the Edwards Aquifer Recharge Zone. In addition, CTRMA needs to provide the public with a map showing which portion of the project is the "Barton Springs segment of the Edwards Aquifer Recharge Zone".

Third, at the next open house, CTRMA needs to inform the public of what the water quality standard are (including code sections and other requirements) that CTRMA understands as required by TCEQ for protecting the portion of the project that are not the "Barton Springs segment of the Edwards Aquifer Recharge Zone".

Fourth, at the next open house, CTRMA needs to inform the public of what additional measures will be taken to protect the water quality of Lady Bird Lake and protect the lake from pollutants and run off during and after construction.

Traffic Noise

With respect to Traffic Noise, the "Environmental Study Update" available in the Mopac South Environmental Study Virtual Open House states: "Given the 98% projected population growth in Travis and Hays counties, traffic noise along MoPac is going to continue to increase over time, regardless of whether or not we build improvements. A detailed noise analysis will be conducted once a recommended Express Lane configuration has been determined. The community will be engaged in next steps after the analysis is complete."

During the November Open House at Hill Country Middle School, the CTRMA staff and CTRMA's noise consultant were asked by members of the public, during a Q&A session, if any of the alternatives would create more noise or if any would create the least amount of noise. The noise consultant stated that there actually is preliminary noise data for the project, but it was not available for public consumption. He also stated that based on the preliminary data, there is no plan that provides any more or less noise than any other because for all the plans, the noise would be mitigated, but that we could not rely on his statement.

During the next open house, CTRMA should provide the public with noise impact data pre and post mitigation for each of the 6 alternatives and any other alternatives. The public has received no notice of whether any of the 6 alternatives would emit, pre or post mitigation, more noise than any of the other alternatives. The public has been provided with an answer of "you can't have that information", regarding an issue that will impact the enjoyment of park land in Austin and in Rollingwood, along with the enjoyment of private property along Mopac. CTRMA has failed to provide the public with information that proves that CTRMA can meet the goal of "Be constructible without unnecessary impacts to the natural and human environment."

In addition, CTRMA has failed to establish that all 6 of the alternatives would have the same traffic noise impact. CTRMA must evaluate the noise impact of *all* alternatives against no build, not just a recommended configuration against no build.

Furthermore, CTRMA has presented 6 alternatives, 3 of which include elevated lanes traveling along the eastern boundary of Rollingwood, as well as impacting Zilker Park. CTRMA has failed to establish that pre or post mitigation, the 3 alternatives with elevated lanes in the Cesar Chavez to Barton Skyway corridor would have the same traffic noise impact as the 3 alternatives without elevated lanes in this corridor.

It is deceptive for CTRMA to state: "The community will be engaged in next steps after the analysis is complete." When CTRMA staff are asked to clarify what these "next steps" include, at multiple Open House meetings I have participated in during the previous Open House period and this Open House period, the public has been informed that only those residents closest to Mopac will have a vote on whether to implement noise mitigating measures. It is inaccurate and deceptive for CTRMA to state that "the community" will be engaged in next steps after the analysis is complete when there is a small selection of residents who may be able to participate in the process. In addition, when CTRMA staff are asked which properties would qualify for votes on noise mitigation options for the corridor between Lady Bird Lake and Bee Caves Road, the Zilker Club House has been designated as "the community" that would get a voice on noise mitigation measures for Mopac South – we have been told multiple times that no one in Rollingwood will get to vote on noise mitigation measures.

Since there is no guarantee to the communities adjacent to Mopac that any noise mitigation barriers will be implemented, at the next open house, CTRMA needs to provide the public with full noise analysis of pre and post mitigation noise impacts for each of the alternatives presented.

In addition, at the next open house, CTRMA needs to stop deceiving the public and identify who "the community" is that would actually have a vote on the use of noise mitigation barriers along Mopac South.

(2) The Mopac South Environmental Study needs to study and evaluate an alternative that includes 2 HOV lanes in each direction.

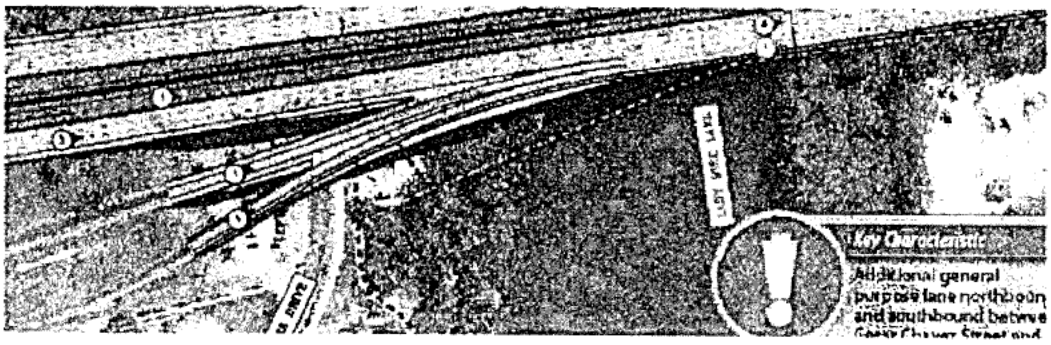
CTRMA staff appears to have initially compared the travel time estimates and impact of 1 HOV lane in each direction on Mopac South with 2 toll lanes in each direction on Mopac South. This is not an even or fair comparison of alternatives to toll lanes. An alternative with 2 HOV lane in each direction, optimized with TDM and TSM strategies, should be considered along with 2 toll lanes in each direction, optimized with the same or even TDM and TSM strategies.

(3) The Mopac South Environmental Study needs to present multiple alternatives without elevated lanes in the Cesar Chavez to Barton Skyway corridor that include TSM improvements to optimize travel times, such as improving the TSM for the 2 express lanes in each direction without direct connect.

As to the 2 lanes in each direction *without* direct connection alternative, CTRMA needs to update this alternative to include TSM improvements and other optimizations before comparing the 6 alternatives. The 2 express lanes in each direction without direct connection

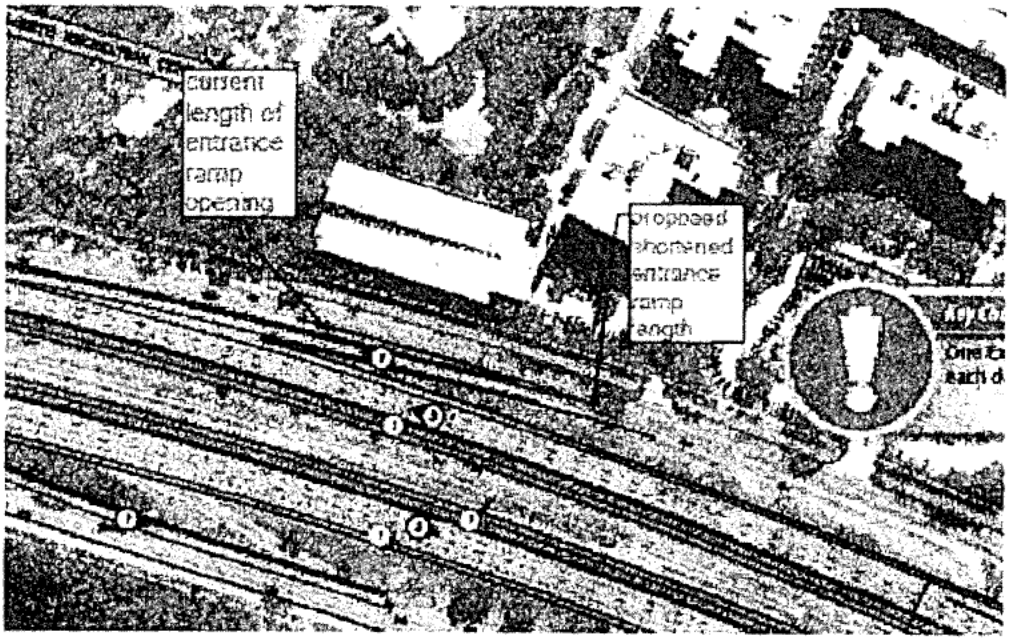
alternative is merely the 2 express lanes in each direction with direct connection, without any design adjustments that could improve the travel times *without* requiring elevated lanes. To fairly evaluate the 2 express lanes in each direction without direct connection alternative against other alternatives, it should be optimized to use the extra ROW space available because no elevated lanes are required.

For example, at the next open house, CTRMA needs to provide the public with the 2 express lanes in each direction without direct connection alternative, adjusted to include the TSM provided in the 2 lanes in each direction with elevated lanes near Barton Skyway. This TSM includes: (1) The 2 lanes in each direction with elevated lanes near Barton Skyway includes an extra general purpose lane on each side between Cesar Chavez and Bee Caves Road. These additional capacity lanes should be integrated into the 2 lanes in each direction without direct connection alternative to improve travel times for exited toll lane traffic and general traffic between Bee Caves Road and Cesar Chavez. (2) The 2 lanes in each direction with elevated lanes near Barton Skyway includes a separate lane for southbound inbound Cesar Chavez traffic from southbound inbound Lake Austin Blvd traffic (see map below). This configuration of 2 lanes removes a current known, significant bottleneck where inbound Lake Austin Blvd traffic and Cesar Chavez traffic merge before entering Mopac. Removing this bottleneck from the 2 lanes in each direction without direct connection alternative will improve travel times for southbound traffic between Cesar Chavez and Bee Caves Road.



(4) The Mopac South Environmental Study needs to present all alternatives with the Bee Caves northbound on-ramp entry length returned to the current length or longer.

5 of the alternatives presented propose shortening the entry length of the northbound on-ramp from Bee Caves Road. I have marked a cut out of the map for the 2 express lanes in each direction without direct connect to show the point where the on-ramp entry currently ends. In addition, I have marked the map to show the point where the on-ramp entry is proposed to end in the 5 alternatives. (see map below). In future presentations of alternatives, CTRMA needs to clearly show that the northbound on-ramp entry length is the same or longer than the current length. Any shortening of the entry length of this on-bound ramp will create a bottleneck for traffic flow on the frontage road, which will lead to additional traffic backup on Bee Caves Road. Please ensure that the alternatives do not remove existing access, capacity and infrastructure

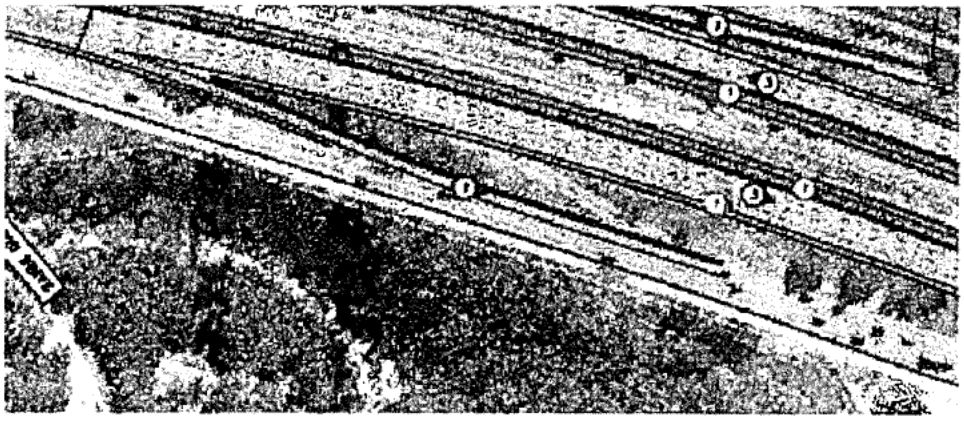


(5) The Mopac South Environmental Study needs to present a Topographical model and traffic simulation of the Proposed Bee Caves Southbound exit ramp.

5 of the alternatives propose adjusting the position of the exit ramp at Bee Caves road for southbound traffic (see map below). Currently, it is difficult to exit at Bee Caves/2244 and merge across all the lanes of traffic, to arrive at the westbound lane of Bee Caves Road. Backing up the exit ramp to provide extra space for merging may reduce this dangerous merging condition. In addition, the topography of the frontage road significantly contributes to the dangerous merging condition. Cars accelerate up the steep incline, which terminates with a sudden rise, and then levels out proximate to the driveway into Parks Hills church. The accelerating cars reach the rise and then intersect with cars exiting the ramp and attempting to merge across multiple lanes of traffic.

At the next Open House, CTRMA should present a topographical model of the proposed Bee Caves Southbound exit ramp for each of the alternative. Engineers for CTRMA have noted that different alternatives require different amounts of right of way, which impacts the design constraints for positioning and lengthening the Bee Caves Southbound exit ramp.

In addition, at the next Open House, CTRMA should provide a traffic simulation of the traffic merging into the frontage lane, showing where vehicles will enter the frontage road, using real modeling of the speeds at which vehicles travel up the steep incline and showing the inclines. Traffic modeling should show impacts at peak and non-peak hours.

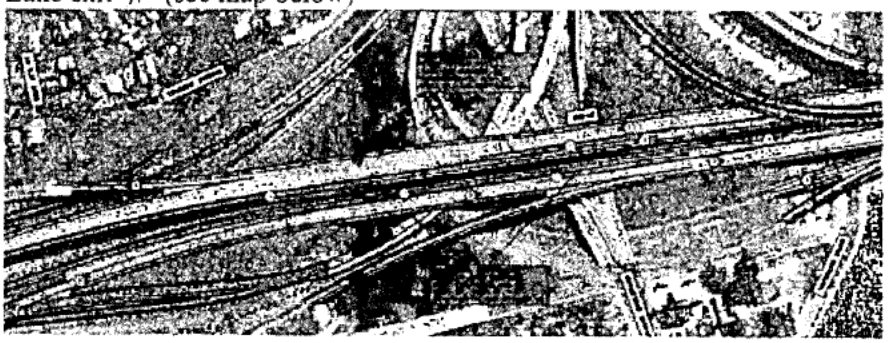


(6) The Mopac South Environmental Study needs to provide the public with consistently applied rationale, traffic studies, and other information to compare the use of inside lane toll road entrance/exits are used at some locations, but recommending elevated lanes at others.

All 6 alternatives offered by CTRMA for the Mopac South Project focus on moving traffic to and from a point on Cesar Chavez in front of Austin High School to and from a point by Slaughter Lane. CTRMA has prioritized moving toll lane traffic to and from a point well into Cesar Chavez, a downtown street that is not a highway or a bypass (or Mopac) in the shortest amounts of time. The Mopac South Environmental Study is tasked with developing toll roads on Mopac from the Cesar Chavez interchange (which also includes 5th street and Lake Austin Blvd connections) to the Slaughter Lane interchange. CTRMA, however, has myopically focused the project on putting toll road users onto Caesar Chavez itself, and has only provided travel time data reflecting the expected travel times in the toll and general lanes for the portion of traffic on Mopac that enters or exits Cesar Chavez.

There are many other toll road entrance/exit points along the Mopac South Project corridor that require toll lane traffic to merge in and out of an inside lane, and service multiple exits, rather than a single exit.

In all 6 alternatives, CTRMA has placed a toll road exit for northbound toll traffic at the top of the north side of the Lady Bird Lake bridge, before the Enfield exit ("the Enfield Toll Lane exit"). (see map below)



The Enfield Toll Lane exit is the only toll road exit point for all northbound toll road traffic needing to exit Mopac at the following exit points: Windsor Road, Northwood Road, 35th street, 45th street, and Northland Drive. **CTRMA has selected, as part of the Mopac South project, to place a single toll road exit point, from an inside lane, to service toll lane traffic exiting from 5 exit points on Mopac.**

CTRMA has not provided the public with any information indicating why a single, inside lane exit point is recommended for exiting traffic for 5 exits along Mopac before Enfield, but elevated lanes are recommended in 3 alternatives for exiting traffic for a single exit at Cesar Chavez.

CTRMA has failed to show that Cesar Chavez, in comparison with other exit points on Mopac, will receive an amount of traffic that justifies the cost and environmental impact of elevated lanes to move traffic into and off of Cesar Chavez alone with no or minimal time in general purpose lanes – in fact, CTRMA did a study with results claiming that the elevated lanes will not place any more traffic on Cesar Chavez than would be on Cesar Chavez under no build conditions. The study, using Dynamic Traffic Modeling, indicates that drivers will choose alternate routes into and out of downtown, to avoid the congestion on Cesar Chavez, and as a result, the elevated lanes will not place any more traffic on Cesar Chavez.

CTRMA has failed to provide the public with information as part of the Mopac South project showing what percentage of travelers on Mopac are predicted to use each of the Enfield Toll Lane exit, Cesar Chavez Toll Lane exit, or the Barton Skyway/Bee Caves toll lane exit. In the 3 alternatives that propose elevated toll lanes for Cesar Chavez toll lane exits, there is no supporting rationale or traffic volume study comparisons for these interchanges to support the use of elevated lanes to service a SINGLE Mopac exit point when the Enfield Toll Lane Exit uses an inner lane exit to service 5 Mopac exit points and the Bee Caves/Barton Skyway Exit also uses an inner lane exit to service 2 Mopac exit points. CTRMA has failed to identify any consistently applied engineering rationales, traffic volumes studies, or any other information, as the reasons for even studying the use of elevated lanes to service a SINGLE Mopac Exit when inner lane entrance/exits are recommended in other locations for servicing MULTIPLE Mopac Exits.

The length of the "on ramp" for the Enfield Toll Lane Exit is significantly shorter than any proposed on or off ramp proposal for the entrances and exits to the Northbound toll lane entrance and exit before Bee Caves Road. CTRMA has failed to provide any rationale, traffic studies, or any other information to support the design of the Enfield Toll Lane Exit as a very very short length inner lane "on ramp", for serving 5 Mopac exits, to support the proposed 3 alternatives that include elevated lanes for serving 1 Mopac exit at Cesar Chavez, or to support the proposed longer inner lane entrance/exit for the Barton Skyway and Bee Caves northbound exits.

Elevated lanes are not the only way to improve travel times. CTRMA needs to provide the public with one or more alternatives without elevated toll lanes that apply TSM,

optimizations and consistent engineering rationale to the design and position of ALL toll road entrances and exits. **Until CTRMA presents the public with an alternative that requires no elevated lanes, but optimizes toll lane entrances/exits, it is impossible for there to be a fair comparison of an alternative without elevated toll lanes to an alternative with elevated toll lanes.**

(7) The Mopac South Environmental Study needs to remove or change the dangerous and bottlenecking inner lane toll road exit on northbound Mopac before the Enfield exit and assess the impact to travel times from the toll road exit on northbound Mopac before the Enfield exit.

Creating a new bottleneck in general purpose lanes

The Enfield Toll Lane exit is currently proposed at a point where northbound Mopac traffic is often congested during peak times in the morning *and afternoon*. CTRMA has failed to show how travel times will be impacted for the general traveling public and for toll lane users due to the merging of toll lane traffic (destined for 5 exits from Mopac) into general lanes at this existing congestion point during morning and afternoon peak hour traffic. Even without CTRMA providing this data, it is clear that the Enfield Toll Lane Exit will create a new bottleneck into the traffic flow on Mopac as cars merge out of the toll lane into already congested lanes. The impact of a new bottleneck in an already congested area during peak times is certain to back up traffic well into the bridge over Lady Bird Lake and farther beyond. Will CTRMA introduce the Enfield Toll Lane Exit as it is presented, only to create a new bottleneck in northbound Mopac traffic, in order to later justify adding an elevated direct connect from the toll lane to the Enfield exit itself?

Impact of Enfield Toll Lane exit on Mopac South travel times not assessed

Even if the point selected for the Enfield Toll Lane exit were not an existing congestion point during morning and afternoon peak hour traffic, CTRMA has failed to provide any expected travel times for vehicles entering the toll road at Slaughter, but not exiting at Cesar Chavez, and continuing over the river. CTRMA has myopically focused on predicting "reliable" travel times between Slaughter Lane for the percentage of traffic that enters or exists from Cesar Chavez, but failed to provide any expected travel times for toll or general lane travelers to travel from Slaughter Lane to any point that is *on Mopac*, such as this last north bound exit included in the Mopac South environmental study.

Creating a Deathtrap

To make matters even worse, CTRMA has positioned the Enfield Toll Lane Exit in such a manner that it is feasible for those exiting the toll lane, as the plan is currently presented, exit the toll lane and merge across traffic on Mopac to exit at Enfield Road. In speaking with engineers for CTRMA, I have been told that the distance between the Toll Lane exit and the Enfield Road Exit is not the required number of feet for the Enfield Toll Lane Exit to be a proper exit point for Enfield Road – be that as it may, drivers do not care whether a proper distance has been allowed for merging across to an exit – if there is an opening for drivers to exit from the toll lane and stop traffic to merge over to Enfield, attempts to merge across and exit will happen and it will create a chokehold in traffic. During peak periods, when the traffic is slower in this area, drivers will try to merge across 3 lanes of slow moving traffic that has limited visibility because

of the incline of Mopac. During non-peak periods, when the traffic is faster in this area, drivers will try to merge across 3 lanes of fast moving traffic, which will lead to deaths. To the extent that barriers may be put in place along the portion of the map that is a dotted line, this line should extend past the Enfield exit not stop before it. Will CTRMA introduce the Enfield Toll Lane Exit as it is presented, only to create a new dangerous merging area for general northbound Mopac traffic, in order to later justify adding an elevated direct connect from the toll lane to the Enfield exit itself?

(8) The entire Mopac South Environmental Study (including, but not limited to, the project purpose, project goals and objections, project need, problems to be addressed, all underlying data and modeling, CSS, travel times, traffic modeling, and comparisons of alternatives) needs to be updated for all 6 alternatives, in addition to previously considered alternatives, to the reflect the CAMPO 2040 plan.

CTRMA is only authorized by statute to build toll roads on Mopac between Cesar Chavez and Slaughter Lane in accordance with the CAMPO 2040 plan and "in all respects for the benefit of the people of the counties in which an authority operates and of the people of this state, for the increase of their commerce and prosperity, and for the improvement of their health, living conditions, and public safety." (*see* Texas Transportation Code Chapter 370). The CAMPO 2040 plan is the active plan for the region. (*see* the CAMPO website, which states "the CAMPO 2035 plan is no longer the active long-range plan for the capital area" and "the CAMPO 2040 Regional Transportation Plan is the active long-range plan for the capital area.")

Of note, the "Project Goals and Objectives" sheet available in the Mopac South Environmental Study Virtual Open House states, as a first goal: "Provide consistency with local and regional plans."

The Mopac South Environmental Study is currently based on the CAMPO 2035 plan, which is not the active plan for the region. In addition, the Mopac South Environmental Study is currently based on the CAMPO 2035 plan, which only authorizes CTRMA to build one toll lane in each direction on Mopac South. CTRMA specifically withdrew the request to amend the CAMPO 2040 plan to include two toll lanes in each direction on Mopac. The CAMPO 2035 regional plan does not support an Environmental Impact Study of Mopac South that includes two toll lanes in each direction. The CAMPO 2035 plan, and its underlying data and models, generated based on the multitude of information provided throughout the entire CAMPO 2035 plan, cannot be used as the basis for elimination or selection of toll road alternatives that include more than one lane in each direction on Mopac South.

CTRMA spent 3 years holding meetings for the Mopac South Environmental Study with project purpose, goals and objections, need, problems to be addressed, traffic times, and traffic modeling all based on the CAMPO 2035 plan. The CAMPO 2035 plan is a regional planning document, focused on designing a plan for building *and interconnecting* roadways throughout multiple counties. The CAMPO 2035 plan provided for building *and interconnecting a single express lane* in each direction on Mopac South. The Regional Toll Network Analysis and the Traffic Demand Model incorporated into the CAMPO 2035 plan reflect planning for one express lane in each direction on Mopac South, as that one toll lane is interconnected within the region.

Despite the fact that the CAMPO 2040 plan is the active plan during the current open house, and despite the fact that the CAMPO 2035 plan fails to provide authority for CTRMA to study, design, or evaluate 2 express lanes in each direction, during the November 2015 Open House, CTRMA staff have continued to evaluate the travel times for each of the 6 alternatives (4 of which include 2 express lanes in each direction) based on the Traffic Demand Model provided by the CAMPO 2035 plan, modified by 2015 blue tooth data.

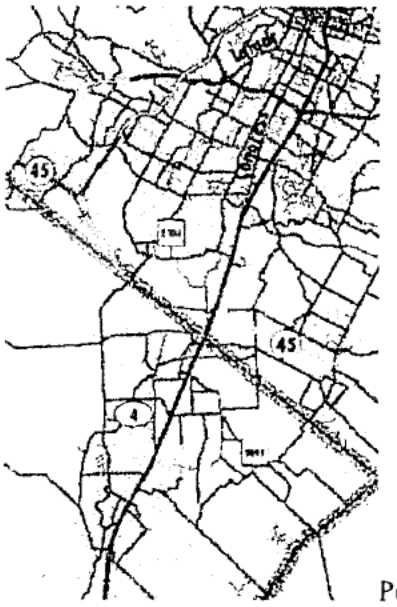
The CAMPO 2035 plan does not take into account Regional Toll Network Analysis and Traffic Demand Model based on the CAMPO 2040 plan. The Regional Toll Network Analysis and Traffic Demand Model for the CAMPO 2040 plan should take into account, in the demand on Mopac South, that 2 express lanes in each direction are allowed. According to CTRMA, one express lane in each direction is not a financially viable option for taking the Mopac South project out for bonding. If this is true, then it stands to reason that the Traffic Demand Model for 2 express lanes in each direction would differ from the Traffic Demand Model for 1 express lane in each direction in the CAMPO 2035 plan. In addition to financial viability, CTRMA has all but eliminated the option for one express lane in each direction on Mopac South by in comparison with two express lanes in each direction. There are differences in capacity, ability to handle emergencies, financial viability, and average travel times.

In addition, the CAMPO 2040 plan has a significant error, which should be corrected as CTRMA participates in evaluating the effects of the Mopac South toll road on the EJ community in accordance with NEPA. For the Regional Toll Network Analysis CTRMA is required to perform, as part of the NEPA analysis, to be accurate. Page 152, column 3 of the CAMPO 2040 plan under "Regional Toll Network Analysis" states "The interconnected network of existing and planned toll roads and express lanes form a regional toll network. Project sponsors evaluate the effects of the toll roads and express lanes on the EJ community for individual road projects in accordance with the National Environmental Policy Act (NEPA). CAMPO also evaluates the regional toll network for the effect of the total interconnected network on the EJ community. CAMPO will conduct the 2040 Plan Regional Toll Network Analysis (RTA) after the Transportation Policy Board adopts the 2040 Plan. CAMPO's most recent RTA includes all planned and potential toll projects, except for the IH 35 express lanes." This statement is not correct. CAMPO's most recent RTA based on the 2035 plan only includes potential toll projects of one express lane in each direction on Mopac South. The CAMPO 2040 plan includes two express lanes in each direction on Mopac South. CTRMA has made assertions as to the significant differences in the effects of one toll lane in each direction and two toll lanes in each direction. The RTA based on the CAMPO 2040 plan should be updated to include potential toll projects of two express lanes in each direction on Mopac South.

In addition, the CAMPO 2040 plan reflects updates to the following maps and information, which impact the Mopac South Environmental Study:

- Pp. 28-33, including map 2: population growth and changes in population density from 2010 to 2040
- Pp. 33-35, including map 3: employment forecasts and changes in employment density from 2010 to 2040
- Pp. 35-36, including map 4: CAMPO centers in 2040

- P. 49, map 6: Road types in 2040, which include a combination of toll roads and arterial roads that connect Mopac South to I-35 through two different routes: (1) 45 (toll way from 2035 plan + new section of 45 connecting to I-35 in 2040 plan labeled as "arterial roadway"), and (2) 1626 through Buda. (see pull out of map 6 below)
- P 50-54: congestion characteristics in 2040, including AM and PM delays, including Mopac South and the roadways interconnected to Mopac South
- P 54-61: updates to public transportation, including the use of transit-related apps, and changes to bicycle and pedestrian facilities



Portion of Map 6 from the CAMPO 2040 plan showing arterial roads and toll roads connecting Mopac South from the south to I-35 2 different routes: 45 and 1626.

Specifically, the CAMPO 2040 plan, on p. 64, states, "the existing transportation system described previously [in pp. 1-63 of the CAMPO 2040 plan] is used to assess current traffic congestions. CAMPO generates a travel demand model using the current and forecast socioeconomic data and information about the transportation system and land use. CAMPO 2040 plan, page 63. The plan states: "the four-step travel demand model process is described in Figure 11. The model is calibrated to observe 2010 traffic counts. Once calibrated, the model is used to forecast future traffic conditions."

Clearly, the CAMPO 2040 traffic demand model will be different from the CAMPO 2035 traffic demand model because of the litany of factors that are considered in generating the CAMPO 2040 traffic demand model and the plans for additional roadways within the region.

Further, the CAMPO 2040 plan includes additional issues that need to be evaluated as part of the study and evaluation of toll roads under the authority of the CAMPO 2040 plan and in compliance with NEPA:

- p. 131-133: freight corridors, freight movement, freight related improvements to the road system (with a list of improvements to be made including Loop 1 South from RM 2244-Cesar Chavez) and freight rail improvements;
- p. 133-135: environmental factors
- p. 135-141: air quality
- p. 141-142: energy conservation
- p. 142: water issues
- p. 143-148: climate change
- p. 148-152 : environmental justice
- p. 152-158 : regional toll network analysis
- p. 158-160 : emerging technologies

The entire Mopac South Environmental Study needs to be reevaluated and reset, in writing, to reflect the CAMPO 2040 plan. The difference between the CAMPO 2035 plan and CAMPO 2040 plan is not merely a change in language from "one express lane in each direction" to "two express lanes in each direction". As noted above, there are multiple differences between the CAMPO 2035 and CAMPO 2040 that significantly impact the underlying data used to support the Mopac Environmental Impact Study. It is insufficient for CTRMA to select one alternative and then update that alternative to reflect the CAMPO 2040 plan. Each of the 6 alternatives, or any additional alternatives, should be updated to reflect the CAMPO 2040 plan and represented to the public for comment.

(9) The Mopac South Environmental Study needs to provide improved designs for the Bee Caves Road/Mopac intersection, or provide a written rationale for why improvements to the Bee Caves Road/Mopac intersection are not a part of the Study.

During the last comment period, the City of Rollingwood and its residents requested, in multiple forums, that the Bee Caves Road/Mopac interchange be separately evaluated and redesigned to improve efficiency as part of the Mopac South Environmental Study. CTRMA is performing Intersection Environmental Studies for the intersections at Slaughter Lane and LaCrosse Avenue. The problem statement for the studies of these intersections indicates that these intersections "were originally constructed in 1992 and have grown increasingly congested over the years. Traffic congestion at these intersections is causing travel delays and adversely affecting access and mobility." In the "Proposed Action, Purpose and Need Statement" released in June 2015 for the Intersection Environmental Studies, Table 1 indicates that the Bee Caves Road intersection was completed in 1982, by a decade pre-dating the Slaughter Lane and La Crosse avenue intersections. The demand on Bee Caves Road is also known to have significantly increased since the intersection was built in 1982.

At the October 2015 Rollingwood City Council Meeting, Assistant Executive Director Mario Espinoza addressed the Rollingwood City Council One of the first things he shared is that the Bee Caves intersection would not be considered for improvement as part of the Mopac South Environmental Study.

Please consider adding the Bee Caves road interchange, which is a gateway to Bee Caves Road and Barton Springs, to be improved as part of the Mopac South Environmental Study. If

CTRMA continues to decline this request, please provide the public with a written rationale for the Bee Caves intersection not being updated and improved as part of the Mopac South Intersections Study or Mopac South Environmental Study. Of note, in the "Proposed Action, Purpose and Need Statement" released in June 2015 for the Intersection Environmental Studies, Table 2 on page 6 provides data about the amount of delay per vehicle and number of vehicles using the Slaughter and La Crosse interchanges at peak times. In your rationale, please provide similar traffic analysis regarding the amount of delay per vehicle and number of vehicles using Bee Caves interchange at peak times and explain why improvements are not recommended for this interchange.

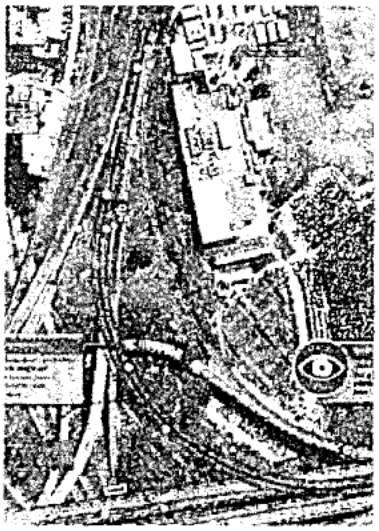
In addition, please consider that the expansion of Bee Caves Road to include a center turn lane and bike and pedestrian facilities is already underway to support the predicted increase in traffic volumes on Bee Caves Road.

At some point, the Bee Caves Road infrastructure of 1982 will need to be updated. If CTRMA is going to dig up the entire interchange at Bee Caves and Mopac to add toll lanes across the intersection, but not actually improve the intersection in any way, please, at the least, do not add elevated lanes over the Bee Caves Road exit that would add any infrastructure that would reduce or remove options for future improvement of the interchange.

(10) The Mopac South Environmental Study needs to provide travel times for the general traveling public and toll lane users between a point on Mopac itself near Cesar Chavez to a point on Mopac itself near Slaughter Lane, along with providing northbound afternoon travel times, to provide travel time information for the majority of the traveling public not exiting or entering at Cesar Chavez.

During the November Open House meeting at Hill Country Middle School, I asked the CTRMA staff and contractor who provided the travel time estimates for CTRMA, what specific points on the map were selected for the travel time estimates. I asked this question to clarify whether the travel times estimated to and from Cesar Chavez were based on the point at which toll road users enter or exit the toll road, which would vary among the alternatives, or whether they were based on a particular point on or near Cesar Chavez.

The CTRMA travel time estimator (and since then additional staff) stated that the point on Cesar Chavez that was used for the travel time estimates for all 6 alternatives is the point ½ miles in on Cesar Chavez where traffic lets out (for Northbound) or enters the toll road (for South bound) in front of Austin High on Cesar Chavez in the 2 express lanes in each direction with direct connect alternative (portion of 2 express lanes in each direction with direct connect shown in map below).



The CTRMA staff has only provided travel time estimates for northbound average travel times for those drivers who enter Mopac at Slaughter Lane, use the general purposes or toll lane, and *then exit Cesar Chavez*. The CTRMA staff has only provided travel time estimates for southbound average travel times for those drivers who enter Mopac *from Cesar Chavez*, not Mopac itself, and use general purpose or toll lanes.

In addition, the northbound travel times provided are only for am traffic and the southbound travel times provided are only for pm traffic. One glance at Google maps in the afternoon and it is clear there are unique and significant traffic congestion issues for northbound traffic on Mopac that exits Cesar Chavez and that remains on Mopac over the Cesar Chavez interchange. Peak northbound travel times should be provided.

CTRMA staff has failed to provide any travel time estimates for travel between two points *on Mopac itself*. The public has not been provided with sufficient or reliable information about the differences in travel times for the majority of traffic on Mopac that does not exit Cesar Chavez, to reach different portions of Mopac.

CTRMA staff have myopically focused on travel time estimates for only the percentage of travelers who use Cesar Chavez as an exit or entrance to Mopac, which is only 11% of Northbound Mopac travelers and 9.3% of Southbound Mopac travelers (according to the 2015 projections from the Mopac North EA).

According to the traffic data provided in Appendix N of the Environmental Assessment for the Mopac North Project, 2015 projected data for northbound traffic on Mopac, of the 86800 daily drivers reaching the Cesar Chaves/5th street exit, 63500 (74%) continue on Mopac North, without exiting, and 23300 exit. Of those exiting at Cesar Chavez/5th, only 13800 (15%) fork to the right and take the Cesar Chavez exit; the remaining 9500 (11%) take the 5th street exit.

According to the traffic data provided in Appendix N of the Environmental Assessment for the Mopac North Project, 2015 projected data for Southbound traffic on Mopac, of the 86800 daily drivers on Mopac at the point where Cesar Chavez and Lake Austin Blvd entrances connect with Mopac South, only 8100 (9.3%) of these cars arrive from the Cesar Chavez ramp.

Based on 2015 numbers, which were used in the Mopac North EA, CTRMA staff has only estimated travel times for an estimated 15% of the traveling public northbound and 9% of the traveling public southbound.

For the public to compare the travel time impact of each of the 6 alternatives, and other alternatives, CTRMA needs to provide travel time estimates between points actually on Mopac itself. In particular, for northbound travel time estimates, CTRMA needs to provide the public with travel time estimates for general and toll lane users between the north most point of the Mopac Environmental Study. For northbound and southbound traffic this point is north of the exit at Enfield.

In addition, for the public to compare the travel time impact of each of the 6 alternatives, and other alternatives, CTRMA needs to provide travel time estimates for the segments of the Mopac Improvement project where there are differences in each of the projects. For example, CTRMA needs to provide travel time estimates between 360 and Cesar Chavez and between 360 and the north most points of the Mopac South Environmental study for each of the 6 alternatives. For the public to compare the differences in impacts between the different alternatives, the public needs to be provided with sufficient and reliable (unrounded) data estimated travel times for the segments of alternatives that are different.

Of note, at the Open House at Hill Country Middle School, I was told, by CTRMA staff, that the reason that the travel times for toll lanes users of the 2 elevated lanes in each direction with direct connect and the 2 elevated lanes in each direction with elevated lanes near Barton Skyway are both "9 minutes" each way, is that the numbers are rounded. I asked how the southbound toll traffic estimates, in particular, for these two plans could be within 30 seconds of one another. I was told that it could be that the graphic designer put in the wrong numbers. I have since been shown the unrounded numbers and I still question their accuracy based on what I know about the current traffic issues for southbound traffic between the Cesar Chavez interchange and the Bee Caves interchange, during peak afternoon traffic.

Of note, the "Project Goals and Objectives" sheet available in the Mopac South Environmental Study Virtual Open House states, as a second goal: Reduce congestion delay and provide travel time savings for all roadway users. Currently, CTRMA staff has only provided that that allows the public to evaluate congestion delay and potential travel time savings for 9-15% of the total roadways users each direction. This is insufficient.

Central Texas Regional Mobility Authority
re: MOPAC South environmental study

CTRMA Board of Directors and Staff:

I fully support the official comments submitted by the City of Rollingwood, of which I am a resident. My wife, Amy Pattillo, has also submitted extensive comments, all of which I fully support as well.

In addition to both of the previously listed positions I am personally concerned of what appears to be an intentional lack of information and/or concern regarding the potential environmental impact on Barton Springs pool and the designated recharge zone. For the past 15 years I have been a twice-a-week, year-round-swimmer at Barton Springs. For most trips I also drive my friend, Nancy Ritchie-McMeans, who has been swimming there year-round since 1962. I hope to continue this activity for many years to come. This pool is a gift, a treasure of our community and amazing ambassador of the beauty and value of our city.

Before my comments are filed under "crazy-environmentalist-manifesto" please understand I am a life-long Austin resident, small business owner and believe in responsible and wise development. I, like many, experience the daily realities of our unprecedented population growth and inevitable transportation challenges. Roads must be built, solutions must be found, compromises must be reached. I am a conservationist. Protecting and preserving the treasures we have been given is a high priority.

Based on my experience I am concerned that, as often the case in such contentious developments, the anxiety of facing environmentalist opposition combined with the hubris of zealous planners has removed any plausible discussion of the possible environmental impact on the recharge zone and pool. I have found no substantive information regarding the pool in the MOPAC South Environmental Study.

Over million people visited Barton Springs pool in 2014 - the free market has spoken: The pool is valued. It is a valuable piece of Austin's culture, economy and environment. Please don't let the crazies (on both sides) keep reasonable people from having constructive dialogue about the future of MOPAC and the immediate environment.

Respectfully yours,

Jon Pattillo

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, October 23, 2015 6:00:18 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Donna Pauler

Form Submission - New Form - mopac/loop 1 south plans
November 18, 2015 at 5:39 PM
[redacted]

Name: Leah Paulo

Email Address: [redacted]

Subject: mopac/loop 1 south plans

Message: Dear CTRMA Staff and Board Members,

Wow what a tough spot y'all are in. Traffic is bad in Austin and not many people are happy with the proposals you've come up with to alleviate the rush hour grind. Perhaps that's the problem - no matter what gets built it will not alleviate the traffic in this town. What a pickle we're all in First I want to express that I do not support any proposal that creates elevated lanes over existing mopac lanes. I also do not support any construction that will uglify Lady Bird Lake, Zilker Park and the Science & Nature Center I know something must be done and I hope it's something completely outside of the box like 2 HOV lanes instead of express/toll lanes. Or perhaps closing down certain streets to car traffic altogether so only buses can use them. How about promoting carpooling. I know this is all wishful thinking but just needed to speak my mind. I'm not the expert here but I do know building a double decker over mopac
& Lady Bird lake will destroy the beauty of Austin so please consider taking any elevated lanes or ramps of the table.
Thank you for your time & good luck.
Leah Paulo

To: Abby Tomlinson
Subject: MoPac South Improvement Project support

Nov 18, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Ms. Elizabeth Paulovich
[redacted]

COMMENTS ON VIRTUAL OPEN HOUSE

Angie	Paulson	11/20/15	Hello, I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Area, and will transform the character from peaceful and green to highly urbanized and industrial. The "2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times. Please ensure the plan you choose supports our public parkland use, green spaces and community values. I can't imagine this downtown area losing any of its beautiful appeal to Austin's residents! Sincerely, Angie Paulson

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 10:40:40 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

COMMENTS ON VIRTUAL OPEN HOUSE

Rick	Perkins	11/6/15	Thank you so much for finally giving us some congestion relief in South Austin. I am requesting that these comments be made part of the permanent record. Please build 2 new lanes in each direction, both north and south, on the MOPAC SOUTH project. Please include an Exit and Entrance ramp at the intersection of MOPAC South with Hwy 290 West, going towards the West. In the future, there is ample room for HOV / HOT lanes on Hwy 290 West and we need to be able to directly access via flyovers the MOPAC SOUTH north bound and south bound lanes, if at all possible. Please consider that van pools and buses will be using this facility and consider providing a Bus and Van Pool parking node both at the Far South section of MOPAC SOUTH and at the Western edge of Hwy 290 West around the intersection or the Y at Oak Hill. Please consider building a multi level parking garage at each location. We very, very, VERY, much appreciate the work that you are doing. There are far too many short sighted people who may not want a modern transportation system. IF in the future we do have Driver Less Cars ... they will probably need to travel on the HOV / HOT lanes.

I attended the Open House last night but did not have enough time to leave my Comment Sheet. Please enter the following into the Official Record:

I have 2 new comments for possible improvements that have not yet been put in to any of the plan options.

1. First, I very much support the original CTRMA proposal for 2 Toll / HOT lanes in each direction. This is the best way to get people to Car Pool and any environmentalist worth their dirt would know that.

2. I support adding the DIRECT CONNECTS between the Toll Lanes and the Hwy 290 / Oak Hill Parkway project. Please make it so.

3. I support the City of Austin's suggested New Collectors over Lady Bird Lake with new bridges. I have been wishing for this for decades and I am SO HAPPY that the City is proposing this ... Please add it to the CTRMA plan.

4. I also like the City of Austin's Jug Handle from WB on Lake Austin Drive to Direct Access to the Southbound Main Lanes of MOPAC. That will help the Lake Austin

intersection immensely.

5. I hesitantly support the Bee Cave access to Downtown via the Collector, but I'm concerned because so much of the Bee Caves traffic may be actually going NB on Mopac. They may flip out on this change to make a U turn at Barton Skyway then come back on to Mopac. But I recognize that this intersection is a somewhat problem as it has so many inputs and outputs, so here possible solutions.

Possible Solutions to Reduce Air Pollution and Help Bee Caves / MOPAC Intersection Not FAIL.

A. Currently, traffic WB on Barton Springs that wants to travel NB on MOPAC, must go under MOPAC then U Turn at Bee Caves, then enter the ramp to go NB on MOPAC. That is an Extra 1.1 miles for EACH Car that is entering MOPAC from Barton Hills. We need a direct access connection from Barton Hills to MOPAC NB that Avoids the U Turn at Bee Caves. Possibly have traffic turn Right and join the Main Lanes underneath the Collector right at the corner of Barton Springs and MOPAC? These kind of entrance ramps are challenging, but very much worth it if you can get a decent design. It would avoid all of the traffic from making that 1.1 mile U Turn, reduce Air Pollution, Traffic, etc. Please work on this a little because it would be such a help for that WB traffic on Barton Hills to get that traffic out of the way for Rollingwood, Bee Caves, etc.

B. Currently, NB MOPAC traffic (south of Barton Skyway) that wants to get on to Barton Springs Road, must exit at Bee Caves, travel through the intersection, and then go forward to Barton Springs. Could we instead have Barton Springs traffic fly over the intersection and weave over the entrance ramp to Barton Springs? That would help with traffic at Bee Caves intersection also. Currently its a huge mass of traffic stopping at that light that doesn't need to.

Thanks for ALL of this. SO MANY PEOPLE SUPPORT THIS IMPROVEMENT! You know you only hear from the Don't Build It and They Won't Come People ... who knows what is driving them; surely not the welfare of our City. We need MANY MORE IMPROVEMENTS South of Hwy 290. Can't wait for SH45 SW and the widening of RM1826 per the CAMPO PLAN. Its an Exciting Time to FINALLY be getting some attention. Thanks to CTRMA ... I wish I had a bumper sticker with a Heart CTRMA. Ha. No, but really.

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Dale L Petersen

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

SUGGESTIONS:

- Make I-30 free, not a tollway, for truck by-passing Austin
- Mopac should have HOV lanes instead of toll lanes
- Current plans presented assume that most northbound traffic would be exiting at Cesar Chavez rather than continuing north. Presently Mopac is the main freeway for commuters going farther north. These commuters should not be penalized with toll costs.

(Also, where do the studies show all those cars supposedly exiting at Cesar Chavez are going? There is no parking downtown!! And the people can't all be going to work downtown!)

- No double-decks.

None of the 6 options for Mopac now shown are acceptable!!

Austin tax payers must have a say in this matter!

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Saturday, November 07, 2015 1:40:15 PM

Ladies and Gentlemen,

Pleasedemand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop. This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW. This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today. The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling

long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Thank you for your attention.

Sincerely,
Sam Pittman

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 12:16:13 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 10:05:26 PM

Dear TxDOT and CTRMA officials:

Comments for MoPac South Environmental Study- Open House Public Comment Period
Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on these routes.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, the Flint Ridge Cave recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs watersheds, over Town Lake, over our greenbelt parkland hike-bike trails, and essentially over Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin Pets Alive, the Edwards Aquifer, Barton Springs pool, multiple plant, water and wildlife species, many endangered species, and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker bridge on MoPac over Lady Bird Lake from the transportation plans. We vote for the no build option.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on

projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.
What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. --We say NO to building a second Interstate 35 through Austin to ruin the heart and soul of Austin along the way.
We want to Keep MoPac

Sincerely,
Hester Pollard

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:
I absolutely urge all of you to consider a better plan for traffic flow around/into/through Austin than the current one of turning MoPac into a new I 35 and constructing highway decks and more toll roads across one of the jewels of Austin, Lady Bird Lake.

This plan seems a major mistake to me, and I hope a better traffic strategy for central Texas and Austin can be found.

I am opposed to the construction of highway.

Yours, Sandra Pollard
Taxpayer, homeowner, citizen, voter, concerned citizen of Austin

Message: Dear CTRMA Staff and Board Members,

I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial. The feeder into the downtown area from MoPac cannot support more traffic.
If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

ADDITIONAL IDEAS FOR YOUR LETTER:

I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road.

A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.
Quite frankly, I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road.

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 1:30:38 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Date: Friday, November 20, 2015 4:55:23 PM

Dear TxDOT and CTRMA officials:
I concur with the message offered below and strongly urge you to add a greater layer of transparency to the proposed MoPac South project. Please study the project in its entirety â€" that is, the larger MoPac South project and the State Highway 45 SW toll road that will add tens of thousands of additional vehicles onto MoPac. As the chair of the Austin City Councilâ€™s Committee on Open Space, Environment and Sustainability, as well as co-chair of the Balcones Canyonlands Coordinating Committee, I am extremely concerned about the adverse effects the added traffic will have on the health and safety of our community and our many treasures â€"Zilker Park, Lady Bird Lake, the Butler Hike and Bike Trail, the Lady Bird Johnson Wildflower Center, and, of course, the Barton Springs zone of the Edwards Aquifer. The effect this project would have on Austin High School is especially concerning and I would urge you to seriously consider the comments expressed by the AHS principal and parents of students who attend the school.
Sincerely,

Leslie Pool
Council Member, District 7
Austin City Council
P.O. Box 1088
Austin, Texas 78701
512.978.2107

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Leslie Pool

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Michael Porvaznik

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

(1) I support more mass transit !!

(2) change Toll lanes To HOV lanes

(3) Make SH 130 alternative To I-35 rather than using Mopac & hwy 45 for that purpose

(4) Birth control -- family planning ; population pressure drives demand for increased infrastructure, eg roads

Form Submission - New Form - MOPAC/LOOP 1 SOUTH
November 12, 2015 at 4:50 PM
[redacted]

Name: Laura Prather

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTMA Staff and Liaisons,
I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road.

A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

With the significant changes** in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option. Along with a no-build scenario, options such as expanding telecommuting, ride sharing, and rail should be considered.

**The last MoPac South Open house February 26, 2015, peak period traffic data between Cesar Chavez and Slaughter Lane was:
- Northbound morning (7-9am) 15 minute drive ; 2035 no build 47 minute drive
- Southbound evening (4-6:30pm) 12 minute drive ; 2035 no build 45 minute drive

**The current MoPac South Open House November 21, 2015, peak period traffic data between Cesar Chavez and Slaughter Lane is.
- Northbound morning (7-9am) 23 minute drive (53% increase) ; 2035 no build 52 minute drive (11% increase)
- Southbound evening (4-6:30pm) 16 minute drive (33% increase) ; 2035 no build 51 minute drive (13% increase)

If toll lanes must be built, the 2 Toll lanes each direction without elevated lanes option will have the least impact to the park, schools, recreation centers and neighborhoods:

- The 2-lanes each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA and this option is consistent with the CAMPO 2040 Long Range Plan. Providing direct access to toll users into the downtown area is not a goal or objective identified by CTRMA or CAMPO for this project.

- The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use because it has the least impact to the park land. Adding elevated lanes damages Austin's parks, restricts community members who use the open spaces, and damages neighboring neighborhoods.

- The 2-lanes each direction without elevated lanes option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

- The 2-lanes each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 with results comparable to both the Double decker over Lady Bird Lake and double decker wishbone bridges. If free lanes are added to match the capacity of other plans, more congestion and time savings can be achieved without building elevated lanes.

- The 2-lanes each direction without elevated lanes is the more fiscally responsible option because the cost is $30 Million less than the double decker wishbone bridges and $40 million less lane the double decker over Lady Bird Lake concept, but the results are almost identical.

- The 2-lanes each direction without elevated lanes option minimizes impact to our water quality because it will mean less construction and less concrete over our aquifer and near Lady Bird Lake than if elevated structures were built.

- The 2-lane each direction without elevated lanes option lowers the impact on the natural and human environment because there will be less impact to the park and neighborhoods, less noise pollution, less light pollution and less ascetically unattractive bridges than if elevated structures were built.

- The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. There will also be more support from neighboring cities and residents if elevated structures are not included in the plan.

• The 2-lane each direction without elevated lanes provides toll road users and emergency vehicles plenty of time and ability to safely maneuver and exit downtown. If there is an accident on the elevated portion of the toll lane it could actually make response times slower or impossible for emergency responders as there will be no way to exit the elevated structures until fully descended.
I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project.

Please make sure to fully consider the social, economic, and environmental consequences of building up. Please ensure the plans you choose support our public park land use, green spaces and community values.

Sincerely,
Laura Prather

Date: Wednesday, November 18, 2015 3:30:23 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

I agree with all the comments stated below. I have lived in the same house in Old Enfield for 38 years, and every time Mopac or 183 has been lengthened or widened or improved, it has simply led to more sprawl and commuter traffic trying to use Mopac with our neighborhood almost paralyzed from 4 until 7 with traffic backed up trying to access Mopac. Further "improvement" of Mopac is doomed to overload it again. In addition to the suggestions in the last line, please consider a plan where all businesses, professional offices and state offices downtown would stagger their work starting hours from 6 AM to 9:30 AM and their end of workday hours from 3 PM to 6:30 PM.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 7:15:24 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Deborah Price

COMMENTS ON VIRTUAL OPEN HOUSE

Cliff	Priddy	11/12/15	I prefer the double lane in ea direction with direct connectors to downtown. I feel that traffic is already really bad and we need as many new roads and transportation options as possible. Not everyone can afford to live and work in central Austin like the elitist core of the SOS supporters and activist environmentalists who already live in central Austin. The city should be accessible to all Texans--not just those with lots of money and those who have been living in central Austin for years. I work as a home health physical therapist and need reliable roads so that I can see patients in their homes. If I have to sit in traffic all day, then I cannot serve my patients. We need more and better roads everywhere in this city and now! I would also like to see additional frontage lanes at William Cannon and underpasses at Davis and Slaughter.

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Earl Prochnick

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

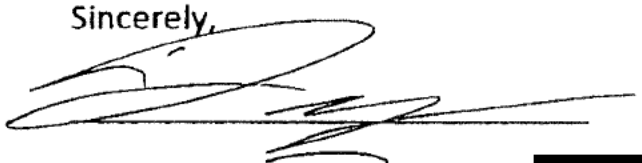
Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,



Payne Pryor [redacted]

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Sunday, November 08, 2015 12:40:40 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase 1 of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Ross Quade

11/08/2015

COMMENTS ON VIRTUAL OPEN HOUSE

Ross	Quade	11/15/15	I am extremely concerned these proposals do not include the environmental impact when hwy 45 will connect 35W to Mopac. Mopac is a regional use only should not be used as a transit corridor alternative to 35W. I am also extremely dissatisfied with the proposed freeway/bridge over lady bird lake. This area is extremely fragil with regards to the Barton Creek recharge zone for our acquifier. Also, this one of the main reasons we moved to Austin to enjoy the parks and trails that surround the city. Your proposal will create an unappealing and ugly addition to our beautiful city.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

THE BARTON HILLS ZILKER AREA IS ONE OF THE MOST BEAUTIFUL, SCENIC AND MOST ATTRACTIVE LOCATIONS IN THE CITY. AS A PROPERTY OWNER BIZ OWN RESIDENT AND INFORMED CITIZEN I TAKE PRIDE IN THIS AMAZING AREA. THIS PROPOSED SOLUTION IS NOT ACCEPTABLE AND I STRONGLY URGE YOUR ORGANIZATION TO REVIEW ADDITIONAL ALTERNATIVES AND SOLUTIONS IN LINE WITH SOSA ALLIANCE.

I AM ALSO CONCERNED THESE RECENTLY VOTED BILLS THAT I SUPPORTED TO BUILD ROADS WILL BE USED AS TOLL ROADS. THE STUDIES THAT HAVE BEEN COMPLETED ARE UNACCEPTABLE AND NOT COMPREHENSIVE. AS A CONCERNED CITIZEN I DO NOT SUPPORT THE CURRENTLY PROPOSED IDEAS REGARDING 45 & MOPAC (HWY 1).

LOOK AT LOCAL PLANNING - IE 35 !!

MOPAC IS A LOCAL REGIONAL ROAD — KEEP IT THAT WAY!

Additional Comments:

It has been a joy to live in this community for 13 years. We love the Zilker area for its green spaces & charm. We are acutely aware of the traffic challenges & needs of Austin due to growth. We would hope the

city of Austin would consider its beauty & charm AS IMPORTANT as it traffic management. Time, education & research will ensure that we won't create more problems while trying to fix existing options. Elivated lanes are a noise, light, & aesthetic issue. Access to existing roadways has to be considered. Lastly, industrialization of our green space IS NOT a solution.

Please consider protecting what makes Austin Beautiful!

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 5:15:12 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

"Mopac South" is almost exactly what we don't need in Austin. A thoughtful, independent investigation is essential *before* any further steps are taken.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

I strongly object to adding any toll lanes to MoPac. - none of the options you have presented thus far are acceptable. What we want are non-tolled, affordable options that benefit Mopac commuters without converting Mopac into a second Interstate 35 through Austin.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. I oppose your plan to expand Mopac.

Compromising our quality of life and the treasures of our city to convenience a few is not reasonable.

Our treasures - Lady Bird Lake, the Wild flower Center, Zilker Park and the health of the students and teachers who spend their days at Austin High - must be protected and preserved.

You are trying to solve a ~~problem~~ rush hour problem, you must use limited, rush hour measures, to solve the problem.

You already built a downtown bypass - 130. It would be far cheaper to eliminate tolls on 130 than to build the Mopac expansion.

I am adamently AGAINST the Mopac expansion plan. TOO EXPENSIVE - TOO MUCH POLLUTION - Too much degradation to our way of life

COMMENTS ON VIRTUAL OPEN HOUSE

Doug	Rauls	11/19/15	Looks great. anything you can do to improve traffic in Austin is welcomed!

COMMENTS ON VIRTUAL OPEN HOUSE

Bruce	Ravenscraft	11/11/15	I prefer TXDOT add continuous, non-tolled four lanes on Mopac South. Current set-up is three lanes with noncontinuous fourth lane for exits. Unfortunately, this is not being considered even though is the least expensive, least environmentally destructive option. Of the options being considered I prefer the two express lanes without direct ramp access connections. I prefer this option because it does not involve elevated ramps and allows for a continuous express lane and an express lane for merging to the exit ramps. I am a homeowner in the Mopac/Barton Skyway neighborhood. Also, please do not erect sound barrier walls on South Mopac. Residences are not directly at Mopac like on North Mopac. I prefer full landscaping including significant amount of new high quality trees in the area to counter the expanded south Mopac lanes.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Clotilde Rea

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 7:20:12 AM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

COMMENTS ON VIRTUAL OPEN HOUSE

Penny	Redington	10/31/15	Dear Mr. Johnson, As a resident of the Liberty Park Condominiums, I am writing to express concerns that have been raised by some of my fellow residents about the proposed Project ID #102 in the CAMPO 2040 Transportation Plan, more commonly known as the MoPac South project. Our condominium development at 1000 Liberty Park is one of the neighborhoods adjacent to MoPac and is located just south of the Bridge at Lady Bird Lake. Our complex, comprised of fifty (50) one and two-story dwelling units, was built by the well-known Austin developer Larry Peel, and is notable for the extreme care taken during construction and throughout the life of the development to protect and maintain the natural vegetation, wildlife and character of the property. Strict covenants restrict owners' ability to alter or remove natural vegetation and the board in recent years has been engaged in efforts to eradicate invasive, non-native vegetation. The natural serenity and park-like surroundings are cherished by the residents and help support the native flora and fauna. Several of our property owners have expressed concerns about the CAMPO Regional Transportation Plan's recent proposal to add two (2) express lanes in each direction near Lake Lady Bird. We strongly support studying all options (including no-build) for the proposed MoPac South expansion that would limit the noise, pollution and other negative impacts of this project on our residential area at Liberty Park. Of particular concern is the preservation of native vegetation along the west side of the southbound access road right-of-way (ROW) between Bee Cave Road and Liberty Park Drive. This dense strip of trees and shrubs functions as a natural sound and sight barrier for the residents in Building 4 of our complex and allows for the quiet enjoyment of their homes. While our review of the project appears to show that this ROW will not be encroached upon, it is very important that this heavily wooded area not be damaged during construction. It is more attractive and probably more effective than a manmade sound barrier, especially for the second-story residents. I am happy to meet with you or your staff to express our concerns and show you the area that we feel could be damaged (perhaps even inadvertently) during construction. Thank you for your consideration. Please feel free to contact me as I can provide further information. Penny Redington Best regards,

COMMENTS ON VIRTUAL OPEN HOUSE

David	Reed	11/16/15	Really? An elevated freeway? Above Zilker? Nature center? NO!

COMMENTS ON VIRTUAL OPEN HOUSE

Mary	Reed	11/3/15	I am totally opposed to a double-decker over Lady Bird Lake as well as Double Decker Wishbone bridges over MoPac. I much prefer the addition of two toll lanes each direction without elevated lanes: I am also in favor of the addition of a 11 foot multi-use sidewalk on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. I ask that you consider ALL of the social, economic, and environmental consequences of the options you choose and respect Austin's public lands, green spaces and community values none of which should be sacrificed to a misguided MoPac expansion scheme.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

If this project is completed as proposed, the already congested traffic downtown & on west Austin will become even worse. Property taxes in West Austin are among the highest in the city, and I fear this project will destroy the peace and tranquility of our beloved and unique neighborhoods. Traffic is already a huge issue in Austin's quality of life and this project will only make it worse. In addition, it seems that the environmental impacts have not been adequately or honestly studied and will negatively affect some of Austin's most popular & iconic sites such as Zilker Park, Barton Springs and Lady Bird Wildflower Park. I believe there are better solutions to address the traffic issue and that this deserves more study and an intent toward a more acceptable and creative solution that will better preserve what we all love about Austin.

Keep Mopac Local!

I'm writing in opposition to the plans for a double decker bridge over Lady Bird Lake. It will add tremendously to the noise that already echoes up the canyons from MoPac and destroy the beautiful view of the Lake both upstream and down for drivers on the current bridge. Add an HOV lane, encourage staggered office hours, add public transportation (there's an idea). Don't just keep enlarging roads until we have paved over all of the scenic medians and roadsides and look like Houston or LA. Please.

Thank you.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I think that complete environmental studies that disclose the effects of extending highway need to be conducted and shared with the public so and informed decision can be made. Complete not separated into parts. This is especially important because the location of the extended Mopac will be over the Edwards Aquifer, a very important recharge zone for the rivers in Austin, such as the Brazos River (a large source of tourism for Austin). Once that water recharge zone gets polluted reversing the effects are virtually impossible. The cost of improving water quality in the city of Austin will be in the millions. By extending the highway, an icon of Austin will be destroyed and no longer useable for recreation like it is today. Other areas affected like Zilker Park (site for popular events such as ACL that bring in money to the city) and Lady Bird Lake (another popular recreation area) will be close to unuseable. So not only will the highway cost millions but the needed water treatment plants on top of the loss of tourism and recreation will cost the city billions in the long term. To me, the overall cost far outweighs the economic benefit the extended Mopac will provide. We need to search for an alternate solution.

Sincerely,

[illegible] UT Austin Freshman

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I was recently flipping through our local paper and reviewing the options for Mopac South. I read the first four and thought 'Well, those won't work. They either take away our beloved park land OR will hurt our streams and springs, OR - They'll be unsightly and noisy and interrupt the peaceful neighborhoods and parks surrounding Mopac South.' So, I turned the page, fully thinking they put the 'bad' ideas first so the perferred solution (ideally the one incorporating local input and maintaining parkland, line sights, minimizing noise level, etc.) could shine even brighter. I turned every page of that paper as I could not comprehend that there was no other options listed. What a shock it was to realize TXDOT ~~Root~~ is trying to dupe us again. Shame on you TXDOT. Please look at your priorities and consider moving them from building bigger highways to improving well-being. My vote is for ~~that~~ A NO vote on the options provided. Consider more bike lanes, increased ride shares, painting HOV lanes, focusing on improving I-35, and making I30 free. Sincerely, Julia Remington.

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 05, 2015 9:25:12 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
joel richards

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 2:45:31 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study the entire project (all segments) before moving forward with any one segment. Consider that there are financial interests involved and that any study should be independent of these financial interests.

Connecting MoPac to IH 35 will only increase the traffic on MoPac, bringing outside traffic through our neighborhoods.

We want to keep Mopac local rather than using our neighborhoods to bring more traffic through.

Subject: Mopac/loop1south

Message: DEAR CTRMA STAFF AND BOARD MEMBERS,

I write to voice my opposition to any type of elevated double decker lanes over Mopac

I have lived in the City of Rollingwood and Travis County for 32 years. I truly love the beauty of our surrounding nature filled hill country. I've walked most mornings of the week around peaceful Lady Bird Lake enjoying the wild life and sunrises year round all these years. My 4 children grew up walking and riding bikes to Zilker Park and Gardens and Barton Springs Pool and now I take my grandchildren to Zilker and Barton Springs Pool and Austin Nature Center. These are truly unique treasures very near the heart of downtown Austin that help make our community a wonderful place to live. Please be very careful to protect them!

Are the traffic studies on which you base your recommendations truly representative of the needs? I am surprised a comprehensive environmental assessment has not been done as what is proposed is in the Edwards Aquifer recharge zone and so near Zilker Park, Zilker Gardens, Barton Springs Pool and the Austin Nature Center. As the city of Austin decreases parking downtown and works to make the downtown area a walking liveable area does it make sense, is it in sync with Austin values to make this area closest to downtown industrial and highly urbanized? As other large cities work to take down double decker lanes and reclaim the area close to their city centers as park areas, why is Austin considering constructing elevated lanes in this most beautiful natural area?

I realize that changes are needed and I therefore do agree with the Rollingwood City Council's recommendations that would support expansion laterally of Mopac because that would have less impact environmentally for Lady Bird Lake, Zilker Park and Gardens, Barton Springs Road and the City of Rollingwood. Just make very sure you don't "throw the baby out with the bath water." Please be very wise and focus on the future and what we want our city to be.

Sincerely,
Patsy Rider

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

It is important to present for approval the entire project.
It is reasonable to acknowledge different impacts of different parts of the project.
It is not responsible to piecemeal the project so it becomes more palatable.
It really is time to develop mass transit plans and stop selling the idea that we can build enough roads to handle the traffic associated with our incredible growth rate.
Create a more realistic long term option that will get people out of cars on their feet.
That approach in in the long term public health interest of the citizens.
It is time to consider health in all policies and not throw uncoordinated ideas at the wall for disjointed sets of activities.
Please engage with the rest of the issues involved in our community and develop a plan that will have a net positive impact instead of narrowly defined benefit that creates more problems. than it solves.

Sincerely,
Ken Ripperger-Suhler

COMMENTS ON VIRTUAL OPEN HOUSE

Barbara	Ritchie	10/28/15	First, I would like to comment that the people who live in Tarrytown and Bykerwoods will also be impacted by the final choice selected to address long term traffic issues, not just the Rollingwood community. Second, even if the access point to downtown is extended beyond the Austin High School entry road, there is still going to be a significant noise and congestion impact on the school. Third, as a almost 50 year resident of Austin, I do not support any solution that has elevated lanes crossing over Lady Bird Lake. I would prefer to see the elevated roads begin near Barton Skyway and take no risks with the quality of wildlife or water of Town Lake. While this option costs almost as much as the recommended solution, there will be much higher costs to our community when all we have to adhere to environmentally are the standards of TCEQ, which I do not believe to have very high standards. I think we do need to address the traffic issues Austin is facing but to do so an environmentally sound and safe manner, as well as the safety of kids going to Austin High School, even if the cost is almost as high as two elevated lanes crossing the lake.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Tuesday, November 10, 2015 8:00:16 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please study the entire plan including SH 45 SW/South Mopac expansion before building anything.

Let's pay off the debt on SH 130 to encourage commuters to use this route instead of IH-35.

Let's re-stripe S Mopac to put in an HOV lane now. How about more Park & Ride spots?

Let's preserve the beauty of Barton Springs, Zilker Park, the Edwards Aquifer, the Hike & Bike Trail, the Nature Center, Zilker Botanical Gardens, the Lady Bird Johnson Wildflower Center and the green all along Ceasar Chavez.

It is an insult to propose destroying the heart and soul of our city and with our tax dollars while building a toll lane for only the wealthy.

Let's take some lessons from other cities around the world who have removed asphalt and cars and provided beautiful spaces for people and business. Cologne, Germany is one such city. The main center of the city is for people only - there are no cars for blocks in all directions.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the beauty that has defined Austin and brought thousands of people here to enjoy it.

Sincerely, Margaret

Sincerely,
Margaret Rittenhouse

COMMENTS ON VIRTUAL OPEN HOUSE

Alan	Rivaldo	11/17/15	Thank you for all you do to enhance mobility in Central Texas. Undeniably, the best option is to have two express lanes in each direction, and that should be obvious to all. Further, the option that provides direct connectors to downtown is best, because the greatest consideration should be given to safety (no weaving) and the second highest consideration should be given to a design that reduces travel times the most throughout the study area, and well into the future. An expansion of capacity should not impede traffic flow elsewhere; it should instead enhance it. Very little consideration should be given to aesthetics or the possibility of noise. These are HIGHWAYS, intended to move people and product, not a natural landscape! The opinions of anyone who complains about unsightly infrastructure, such as elevated roadways or bridges, should be discounted greatly. These people chose to live near a freeway and can always move and eventually will, because this project will outlive them. The problem with poor mobility will also outlast these people. Meanwhile, the commuters who drive these roads every day today and 30 years from now, who suffer a diminished quality of life by sitting in traffic needlessly, should have the greatest say in this project. Those worried about aesthetics or noise apparently are sitting at home with not much more to do than complain about things they do not understand. They are not truly end customers of this project. Again, thank you for soliciting our input. I reiterate that the optimal design is one that reduces anticipated travel times the most, eliminates weaving, and increases average vehicle speed throughout most of the study area.

From: [redacted]
To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Saturday, November 07, 2015 1:42:11 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Linda Rivera

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Please consider alternatives to the negatives of tolls on South Mopac
Comprehensive plans needed.
Non-tolling options.
☑ None of the proposed.

From: [redacted]
To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 3:30:49 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, October 28, 2015 11:00:16 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Elaine Robbins

DEADLINE for Comments: Friday, November 20, 2015

Written comments will also be accepted through the website at www.MoPacSouth.com, by fax to 512-996-9784 or mail to: Central Texas Regional Mobility Authority, C/O MoPac South Environmental Study, 3300 North IH-35, Suite 300, Austin, Texas 78705.

NAME (PLEASE PRINT): Elayne Robbins

ADDRESS: [redacted]

COMMENTS:

(1) Since you can't fit new lanes only attract more cars, build fast mass transit instead

(2) keep mopac local – is this still an option?

(3) pls don't ruin my Deep Eddy + hike + bike trail experience w/ noise, smog + lights.

(4) I don't want a Houston-sized highway over the lake

This form may be used to provide written comments on this project. Any questions placed on this form will not be considered an open records request and will not be treated as such. If you have an open records request, it must be submitted under a separate letter.

(Texas Transportation Code, §201.811(a)(5)): Check each of the following boxes that apply to you:

☐ I am employed by TxDOT

☐ I do business with TxDOT

☐ I could benefit monetarily from the project or other item about which I am commenting

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Bob Roberts

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 10:05:15 AM

Dear TxDOT and CTRMA officials:
The traffic on MoPac from 183 to downtown is already horrorfic.You must allow extra time to travel to an appointment because you never know if the traffic will be moving (occasionally) or creeping along at a snail's pace. Paying an expensive toll is out of the question for many of us. The tolls are high to begin with and increase as the traffic increases. MoPac should be renamed Porsche Alley. I CANNOT EVEN IMAGINE THE NIGHTMARE that will ensue if CTRMA is allowed to continue with its current plan. The residents of Austin deserve a better fate. We will have no road to travel on which seems grossly unfair. The new plan will only benefit those from out of Austin who are passing through or coming into Austin.

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Please Keep Mopac local. Do not turn it into an alternate I-35. All of the proposed plans are toll road plans. Please study non toll options. I live off Mopac and I cannot afford to pay tolls to use a road that I've already paid for once.

Please study proposals that do not include tolls. Study before you start building toll roads. Follow Tx Dot Advisory Committee recommendation to pay off the debt on 5#130 and make it toll free. Voters have given TxDot money for non toll roads. Use some of money to pay off 5# 130 and make it toll free. This will cause a lot of traffic to be diverted.
I-35 is a mess. Fix it before you convert Mopac into a second I-35.
Make an HOV lane on Mopac.

Please protect some of Austin's jewels that will be adversely impacted by connecting I-35 and Mopac - One plan has highway going over Flint Ridge Cave. In a dye test, what went into cave went straight to Barton Springs in 2-3 days. The Wildflo

Date: Saturday, October 24, 2015 6:55:16 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

As a native austinite, I find the planned destruction of our once charming city hard to believe. Whoever is making these decisions must not care about keeping the beauty and character that makes our city so special. Mopac was originally promoted as a boulevard, no trucks allowed. It was never to connect to IH 35. Little by little this boulevard has become a monster that threatens our peaceful quiet neighborhoods. Please study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters. Look for alternatives because I KNOW they exist!

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW. This is so obvious!

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. NAME (PLEASE PRINT): Claire Robertson

ADDRESS: [redacted]

COMMENTS: The Plans for MoPac South is not one that will help the traffic situation the way it is being built. Having a Toll Road has been proven to be ineffective in other plans. Roads have already been paid for through taxes and are unethical. Where there are toll roads, people get off and use surface roads. Adding a freeway in addition will help the people going farther south while not having to pay. This project will not benefit as it is a waste of taxes money and the traffic will always be a problem. The preliminary drawings dump traffic right at my high school, Austin High, which already has too much traffic.

This form may be used to provide written comments on this project. Any questions placed on this form will not be considered an open records request and will not be treated as such. If you have an open records request, it must be submitted under a separate letter.

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Please consider the cumulative affect of the entire project. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project, not doing so is a violation of NEPA, leaving the potential for litigation. Key resources and receptors are at risk from this project, such as the federally endangered Barton Springs Salamander and Austin Blind Salamander.

The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. Please consider other reasonable alternatives than toll roads. As far as the current options, none in my opinion meet the NEPA requirements to consider the alternative with the least environmental impact, including the human environment.

I agree with KeepMopacLocal.org. Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 3:25:21 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

The entire growth model that the current local leaders, embrace does nothing for the regular people, aka the 1%. The underlying justification for the destruction of Austin and Travis County, is the same ole, same

Sincerely,
Joseph Robles

Subject: MoPac South Improvement Project support

Nov 12, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Dennis Roetman

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 4:35:16 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Martha Rogers

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 10:45:45 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
John Rooney

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Gayle Rosenthal

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Pay off tolls on 130 - make that the I-35 by-pass, not MOPAC

- Develop ~~tools~~ and study additional, 21st century options that are people-centered, not car-centered

- The 4 options presented are all unacceptable.

- Environmentally-friendly options must be developed.

- Re-stripe MOPAC South to create HOV lanes

Subject: Mopac/Loop 1 South

Message: I absolutely do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decked tollway over Lady Bird Lake or two double decked wishbone bridges over Mopac at Bee Caves Road.

A double decked road or tollway over Lady Bird Lake or two double decked wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

With the significant changes** in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option. Along with a no-build scenario, options such as expanding telecommuting, ride sharing, and rail should be considered.

**The data below looks at the travel time information CTRMA provided to the public at the February 25, 2015 open house. The data sources cited were: CDM-Smith 2014 INXR speed data, CAMPO 2035 Travel Demand Model, observed congested speeds in October 2013 and Bluetooth data. The February 25, 2015 data is compared to travel time information provided to the public at the October 21, 2015 open house The data source cited is CDM Smith 2015 - Using BlueTooth Data

General Purpose Lanes
**Feb 26, 2015 MoPac South Open house peak period traffic data between Cesar Chavez and Slaughter Lane was (2013):
- Northbound morning (7-9am) 15 minute drive ; 2035 no build 47 minute drive
- Southbound evening (4-6:30pm) 12 minute drive ; 2035 no build 45 minute drive

**October 21, 2015 MoPac South Open House, peak period traffic data between Cesar Chavez and Slaughter Lane is (2015):
- Northbound morning (7-9am) 23 minute drive (8 minute/53% increase from 2013) ; 2035 no build 52 minute drive (5 minute/11% increase from 2013) - Note the biggest increase in where CTRMA wants to justify the elevated lanes
- Southbound evening (4-6:30pm) 16 minute drive (4 minute/33% increase from 2013) ; 2035 no build 51 minute drive (6 minute/13% increase from 2013)

2 lanes each direction with elevated lanes over Lady Bird Lake
**Feb 26, 2015 MoPac South Open house peak period traffic data between Cesar Chavez and Slaughter Lane was (2013):
- Northbound morning (7-9am) 8 minute drive ; General Purpose: 37 minute drive
- Southbound evening (4-6:30pm) 8 minute drive ; 2035 no build 26 minute drive

**October 21, 2015 MoPac South Open House, peak period traffic data between Cesar Chavez and Slaughter Lane is (2015):
- Northbound morning (7-9am) 9 minute drive (1 minute/12% increase from 2013) ; General Purpose 32 minute drive (5 minute/15% decrease from 2013) - The N. bound general purpose Lane showed a decrease from 2013?
- Southbound evening (4-6:30pm) 9 minute drive (1 minute/12% increase from 2013) ; General Purpose 29 minute drive (3 minute/10% increase from 2013)

Traffic data should include the SH-45 road project and the ultimate connection of MoPac to IH-35, that is mentioned in the CAMPO 2040 plan

If toll lanes must be built, the 2 Toll lanes each direction without elevated lanes option will have the least impact to the park, schools, recreation centers and neighborhoods:

- The 2-lanes each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA and this option is consistent with the CAMPO 2040 Long Range Plan. Providing direct access to toll users into the downtown area is not a goal or objective identified by CTRMA or CAMPO for this project.

- The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use because it has the least impact to the park land. Adding elevated lanes damages Austin's parks, restricts community members who use the open spaces, and damages neighboring neighborhoods.

- The 2-lanes each direction without elevated lanes option has the lowest impact to the park, lake and neighborhoods while still significantly

improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

• The 2-lanes each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 with results comparable to both the Double decker over Lady Bird Lake and double decker wishbone bridges. If free lanes are added to match the capacity of other plans, more congestion and time savings can be achieved without building elevated lanes.

• The 2-lanes each direction without elevated lanes is the more fiscally responsible option because the cost is $30 Million less than the double decker wishbone bridges and $40 million less lane the double decker over Lady Bird Lake concept, but the results are almost identical.

• The 2-lanes each direction without elevated lanes option minimizes impact to our water quality because it will mean less construction and less concrete over our aquifer and near Lady Bird Lake than if elevated structures were built.

• The 2-lane each direction without elevated lanes option lowers the impact on the natural and human environment because there will be less impact to the park and neighborhoods, less noise pollution, less light pollution and less ascetically unattractive bridges than if elevated structures were built.

• The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. There will also be more support from neighboring cities and residents if elevated structures are not included in the plan.

• The 2-lane each direction without elevated lanes provides toll road users and emergency vehicles plenty of time and ability to safely maneuver and exit downtown. If there is an accident on the elevated portion of the toll lane it could actually make response times slower or impossible for emergency responders as there will be no way to exit the elevated structures until fully descended.
I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project.

Please make sure to fully consider the social, economic, and environmental consequences of building up. Please ensure the plans you choose support our public park land use, green spaces and community values.

(Sent via [redacted])

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Subject: MoPac South Improvement Project support

Nov 17, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mrs. Amy Ruffino

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 6:55:11 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: November 16, 2015

Dear CTRMA Staff and Board Members,

I do not support elevated toll lanes of any kind over Mopac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Zilker Park, Barton Springs & Lady Bird Lake are the reason so many live in Austin. Austin green spaces are what make our city unique & beautiful. Elevated lanes will impact the beauty and increase pollution and noise not to mention they make our city UGLY. We seem to be stuck in the 1980's with the options at hand. Let's protect our beautiful city by engaging innovative thinkers with new ideas you'd expect for a city like Austin.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Barton Springs, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

If one of the choices must be selected, the toll lanes with "2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods. Please ensure the plan you choose supports our public parkland use, green spaces and community values.

I also do not support connecting I-35 to MoPac via 45. Its defeating the purpose of doing the MoPac improvements if you are just creating more traffic including trucks to use MoPac. MoPac was never intended to be another I-35. PLEASE keep the trucks off MoPac.

Sincerely,
Amy Rung

COMMENTS ON VIRTUAL OPEN HOUSE

Pete	Rung	11/16/15	Hi , I am writing this as a concerned Austinite. I strongly disagree with the addition of elevated roadways through Central downtown negatively affecting some of the most unique, important and lifestyle oriented areas Austin has to offer. This includes Zilker, Barton Springs, the Botanical garden, and Lady Bird Lake. The increase of light, noise and air pollution to central austin and areas around are profound. The negative impacts of elevated roadways (IE IH35) are well known and major cities are now removing them (safety during during rain or ice?). Why would we choose to move in this direction? If we must add toll lanes, then the 2 lane option without wish bone lanes is the most appropriate to guarantee access without giving up quality of our beautiful downtown areas. With the profound changes to cars/travel quickly manifesting themselves, elevated highways seem like a solution firmly rooted in 20 to 30 year old thinking. Sincerely, Pete Rung

Date: Wednesday, November 18, 2015 2:42:52 PM

Mopac South Public Comments DUE FRIDAY, NOVEMBER 20

Please take a minute to let your voice be heard on South MoPac project. You can send an email through the KeepMopacLocal.org website.

CTRMA is piecemealing the "Mopac South" project (traffic, environmental impact & costs) into several segments. For example, this study / public comment process is ONLY for the 8 mile segment from Cesar Chavez to Slaughter and does not include the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that will connect Mopac to IH-35... turning it into an IH-35 bypass and adding extra cars, trucks and 18-wheelers daily.

The bottom line is that CTRMA needs to comprehensively study the 18-mile loop as the single project that it is and stop piecemealing the studies as though they don't connect. Austin and Travis County residents deserve the full story!

CTRMA needs to Study All of It, BEFORE Building Any of It.

DID YOU KNOW?

- MoPac South is only the first phase of a massive 14-16 lane freeway/toll road project that will connect MoPac to IH-35, via SW45. *(To be completed in 10 years.*[1] *)*
- When completed it will add extra cars, trucks & 18-wheelers daily on MoPac, turning MoPac into an IH-35 bypass
- The MoPac South Environmental and Traffic Study includes only 8 miles of the 18 mile planned toll road loop and does not include traffic impacts to Austin roads, neighborhoods, businesses, Cesar Chavez, Downtown, Austin High School, Lady Bird Lake, the Butler Hike & Bike Trail, Zilker Park, Barton Springs, the Wildflower Center, Nature Center, air and water quality, etc.
- The double-decker bridge over Lady Bird Lake is still being proposed
- The toll road authority is piecemealing the South MoPac project (traffic/environmental/cost) into several segments (as though it doesn't all connect) and they are NOT conducting a comprehensive study / impact of the full 18-mile toll expansion.
- MoPac toll plan will pave over sensitive watershed and protected lands
- MoPac toll lane fares can cost as much as $13 and higher for a one-way 8 mile trip from Slaughter Lane to Cesar Chavez
- Building 2 toll lanes in each direction on MoPac South will NOT make travel time faster for vehicles on the "free" lanes
- For IH-35 congestion relief, a TxDOT Committee recommends removing the tolls from SH-130, making it the preferred route for interregional traffic from south of Austin to north of Georgetown

[1] *Central Texas Turnpike System Revenue Bonds prospectus dated January 15, 2015 (p. 2.13) "... Phase 2 Project between FM1625 and IH-35, scheduled for completion in 2025."*

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 12, 2015 7:40:16 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Jon Samuelson

Date: Thursday, October 22, 2015 4:20:14 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Evelise Sandidge

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 6:00:16 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Re: Comments to be considered and entered into the official public record of public comments associated with the November 10th, 2015 "Open House" on the proposed MoPac South toll project and the six variations of toll lane options proposed for consideration; we choose "None of the above" (which is not the same as "do nothing")

Via Hand-Delivery to CTRMA offices

Dear CTRMA and TxDOT Officials and Project Manager:

Please consider and include in the official public comment record associated with the November 10th, 2015 "Open House," scheduled to run through today, November 20th, these comments on behalf of Save Our Springs Alliance and the enclosed individual comments and petition signatures from hundreds of individuals from across the region.

Attachment A consists of a list of 115 individuals who wrote hand-written letters of public comment for the record in this matter at a community forum held November 9th, 2015 at Austin High School, together with the originals of those letters.

Attachment B is a list of 531 individuals (377 plus 154) who sent messages into the public record by way of emails sent through the Keep MoPac Local website. Those emails should have been received into the official public record, as addressed to both CTRMA board members and CTRMA Executive Director Mike Heiligenstein. If those emails have not shown up in the public record, the only explanation would be that they were improperly blocked and incorrectly labelled as "spam" and they would be found in the CTRMA's spam catcher folder. If this happened, please retrieve them and consider and include them in the official record. Additional emails will likely be received by CTRMA through the Keep MoPac Local email action page before the comment period closes at midnight on the evening of November 20th, however this is the list of those that should have been received by CTRMA as of about 3:00 p.m. on November 20th.

Attachment C consists of four pages of petition signatures from 32 individuals that include the following message:

To TxDOT, CTRMA, Travis County, City of Austin, and Local Officials:

1. Tell the truth – Study the whole proposed MoPac expansion/SH 45 SW toll loop as a loop project before building any of it
2. Study ALL of the impacts and ALL of the costs first – before building SH 45 SW
3. Any MoPac expansion should be non-tolled and limited, without double decker flyovers through West Austin and Zilker Park, and over Lady Bird Lake and Austin High School
4. Make the SH 130 bypass free and route I-35 through traffic to SH 130 as originally intended rather than convert MoPac into a second I-35 through Austin.

November 2015

Attachment D contains resolutions from the Old West Austin, Deer Park, Maple Run, Travis Country, and West Austin Neighborhood Group neighborhood and homeowners associations.

SOS Comments

A. Our overall SOS Alliance comment is that we choose "none of the above" options presented – neither the six toll lane options nor the "do nothing" no-build option. This list excludes the most effective, efficient, affordable, equitable, and environmentally sound alternatives available to improve traffic flow on MoPac and, in the larger context, improve north-south mobility between Hays County and central Austin and points north of central Austin.

B. We call for a comprehensive study of the likely impacts of and alternatives to the real project – the construction of a MoPac South/SH 45 SW toll project from FM 1626 to Cesar Chavez (or alternatively from I-35 to Cesar Chavez) and for an end to the improperly segmented and piecemeal approach currently being pursued. The SH 45 SW SW Phase I, MoPac Intersections, and MoPac South projects are not stand-alone, independent projects as that term is recognized under the National Environmental Policy Act (NEPA). They are one, single project or endeavor which must be studied together in one environmental impact statement before any piece of this project can be built. These pieces are so closely connected that studying them separately and independently as if the others do not exist, and making a "no significant impact" determination on each separate piece cannot be supported by common sense, responsible planning, or applicable law.

The segmentation approach violates at a fundamental level the core of NEPA calling for consideration of alternatives. The current, segmented approach avoids ever asking the real question that should be considered by TxDOT, CTRMA, CAMPO, local governments and the community at a large through the mandated NEPA process: what alternatives will improve north-south mobility between Hays County and central Austin and points north of central Austin? Instead, CTRMA and TxDOT have only asked the questions that, to a great degree, answer themselves: "How to move cars between FM 1626 and South MoPac?; how to move more cars (from the SH 45 SW Phase I project) from the south end of MoPac to north of Slaughter?; How to move (some small fraction of) of traffic "reliably" from north of Slaughter Lane to Cesar Chavez?) When the wrong questions are asked, the wrong answers follow.

C. The sequencing is backward. Even if the three segments currently being pursued made some sort of sense as a useful investment of limited transportation dollars, building SH 45 SW Phase I first makes no sense at all. The CAMPO/CTRMA/TxDOT traffic studies all show that 45SW Phase I will deliver many thousands of more cars onto South MoPac. Doing this before the LaCrosse and Slaughter intersections are upgraded to handle this enormous increase of high-speed traffic will make traffic much worse. Similarly, building 45SW Phase I before MoPac South improvements are in place to manage the increased 45 SW traffic will only make the currently congested MoPac South even worse. How to move traffic across Lady Bird Lake and from MoPac all the way in to downtown, must be figured out and implemented first before expanding the South MoPac traffic-shed by extend South MoPac to the just-now-expanded FM 1626.

D. We call for an honest, impartial broker in choosing and analyzing the options for improving north-south mobility between Hays County and central Austin and points north of central Austin. CTRMA cannot serve this role given its track record of producing unreliable, biased information and their financial imperative to build projects that feed more toll paying revenue onto their existing partially debt-financed, toll funded projects and their other proposed projects that will also be partially debt-financed and toll funded. CAMPO, TxDOT, or, preferably, a shared effort of the City of Austin, Travis County, CapMetro, and the Rocky Mountain Institute's Austin transportation project should be assigned the role of presenting and analyzing two or more non-tolled "shared solution" alternatives that combine the best of innovative, affordable, and equitable solutions for moving people (not just cars) from Hays county to central Austin and points to the north.

E. We call for honest, informed, and transparent analysis – in short, science, facts, and engineering, not the sales pitch that the community has been presented in lieu of the quality, reliable and current information that is required by NEPA.

Studies belatedly released by CTRMA on the effects of the proposed MoPac South toll lanes on traffic in downtown and Cesar Chavez as well as the Stantec April 2015 study on potential traffic impacts on MoPac from building SH 45 SW Phases I and II have been edited, or scrubbed, to hide the raw data and to hide changes in traffic patterns from current conditions. For example, the Center for Transportation

Research report only compares projected 2020 traffic times and overall comparative volumes between the various toll options and the "no build." It does not show changes for 2020 or any other years on traffic counts, traffic patterns, or time of travel as compared to current conditions. The methods are obscured so that it is impossible for interested members of the public, including those with expertise, to "check the work" of CTRMA's consultants. By comparing everything to the false choice of "do nothing," then the tolled options look good; if compared to other, better, more affordable options that are not designed to make CTRMA money and serve only wealthy, long-distance commuters, these options would look terrible as public investments.

A similar huge omission is how the official public information presented by CTRMA can assert that it is only slightly more expensive to build two toll lanes in each direction than to build one lane in each direction, when building one lane each way can be squeezed onto much of the existing roadway pavement and bridges, while squeezing two lanes each way is impossible.

TxDOT is moving to squeeze additional "managed lanes" onto the existing pavement and bridges on I-35, but somehow that is not an option for MoPac? This makes no sense, and is yet another example of CTRMA and TxDOT presenting unsubstantiated information designed to support the desired outcome of a larger, two-lanes each way outcome.

F. We call for a full NEPA-compliant Environmental Impact Statement, not the contemplated, short-form "Environmental Assessment" and unsupportable "Finding of No Significant Impact" current being pursued for the "MoPac Intersections" and "MoPac South" segments. Similarly, the deficient "state" EIS on SH 45 SW Phase I that is still undergoing reevaluation by TxDOT and CTRMA reached conclusions of no or minimal impacts where such conclusions were not supported with either a segment-specific focus on SH 45 SW or with the missing consideration of the impacts of the larger project and related and connecting projects.

G. Besides making the process honest, please follow multiple Congressional mandates to streamline the NEPA review process and environmental compliance by undertaking one comprehensive study instead of multiple, piecemeal studies. By breaking the MoPac/SH 45 SW partially tolled loop into four, artificially segmented pieces, CTRMA and TxDOT are forced to undertake (and drag the public through) four separate, expensive, and time consuming NEPA processes as well as four separate Endangered Species Act and Transportation Act Section 4(f) compliance procedures. This violates both NEPA and multiple congressional mandates that call for streamlining the NEPA and environmental compliance process. The piecemeal and segmented approach is made even worse when viewing the connected and related projects that TxDOT and CTRMA are simultaneously and actively pursuing in the Barton Springs Edwards Aquifer watershed. These include, most notably, the misnamed "Oak Hill Parkway" toll expansion of US 290 and SH 71 and the US 290/Loop 360 projects. A comprehensive EIS is required for the 45 SW/MoPac tolled project and a programmatic EIS approach is required in advance of any of these

projects moving forward, including specifically the $100 million SH 45 SW Phase I project for all projects located in the watershed for Barton Springs and Texas most vulnerable major aquifer.

H. Please use both current information and accurate information. To date, much of the traffic and related information presented on the 45 SW Phase I, MoPac Intersections, and MoPac South projects has been based on older information, including but not limited to the CAMPO 2035 plan and the CAMPO 2035 plan traffic model. The analysis, in all aspects, should use current information as well as reliable information. Traffic analysis should be based on the 2040 plan and the CAMP) 2040 model, adjusted for the "true plan" as told to Wall Street in the January 2015 bond prospectus for the Central Texas Turnpike System as it pertains to the plans of TxDOT and CTRMA to complete the SH 45 SW Phase II extension to Interstate 35 by 2025. The studies, while including CAMPO 2040 plan information and assumptions should also include more realistic population, employment, and households projections for the southwest Travis and Hays county regions along and southwest of the 45 SW/MoPac South project. The 2040 CAMPO plan unfortunately turned more than 40 years of local planning upside down, shifting a massive amount of projected population and employment growth from preferred growth areas along and east of I-35 to areas west of I-35 and west of South MoPac, where water, environmental and cost constraints as well as large swaths of protected lands make such development highly unlikely, if not impossible, in addition to being unwanted and harmful. Traffic analyses and projected growth should reflect both historic trends and existing constraints rather than political choices of wanting a lot more growth by a majority on the CAMPO board regardless of whether that growth is remotely likely to occur.

Recently produced exhibits for the MoPac South project incorporate updated traffic data, included "Bluetooth" data to measure time of travel on MoPac South and, using this data, to predict future time of travel during morning and afternoon peak periods. This data is compromised due to the traffic slow downs on South MoPac caused by the toll lane construction on MoPac from Cesar Chavez north. CTRMA should not be portraying the congestion their own construction projects cause as a "baseline" and justification for the proposed toll lane construction on MoPac South.

The analysis should also consider recent trends towards driving less, including showing recent traffic counts at key locations and overall trends in both total vehicle miles travelled in the region and per capita vehicle miles travelled in the project area.

Similarly, in the realm of analyzing likely water quality and flooding impacts and effects on endangered species CTRMA and TxDOT should incorporate (rather than ignore) the science provided in formal comments to the SH 45 SW Phase I state draft EIS by SOS Alliance, City of Austin, U.S. Fish & Wildlife Service, and Texas Parks & Wildlife Department. Much of that science was ignored in favor of "technical reports" written to ignore the best available science and to twist available information to support unsupportable conclusion of no or no significant impacts on water and wildlife resources. This current and accurate information would also include the recent discovery of an endangered Barton Springs salamander in a well near the

proposed northeast end of 45SW Phase I and the previously known localities near the other end of the proposed 45SW Phase I and just east of the MoPac Intersections project near Bowie High School.

Reliable and accurate information would also include information on cumulative impacts of noise, air, and visual pollution to adjacent neighborhoods, parks, and schools, and the Lady Bird Johns Wildflower Center and indirect and cumulative effects (including analysis of induced growth using current information and best practices to predict induced growth and induced traffic rather than pretend these effects will not exist because CTRMA can find a local professional planner to say they won't exist).

I. Please recognize and faithfully comply with applicable Executive Orders on differential effects of federal projects on minorities and low-income residents. The proportion of benefit which people of different income status receive from toll roads depends to some extent on how these roads are financed and how the revenue from tolls is used. Since most tolls are paid by people with medium to high incomes, the cost burden for financing toll roads often rests largely on the well-off (Schweitzer). Here, however, the Austin area toll roads are heavily subsidized by tax dollars. For example, CTRMA Executive Director Mike Heiligenstein has estimated that SH 45 SW Phase I will be paid half with debt backed by future toll collections and half by tax dollars. Free roads are primarily financed by gas taxes which are considered regressive taxes since money spent on gasoline is a larger portion of the spending of lower income people (Schweitzer). Thus, tolls, on the surface, can be a progressive, rather than regressive, way of financing roads, but this concept shifts where taxes subsidize the toll lanes. Additionally, revenue from tolls could be used to fund public transportation projects which could benefit those in lower income brackets (Schweitzer). However, although this use of toll revenue is a possibility, it should by no means be expected; it illustrates that tolls can be used as a means of redistributing resources to lower income families and commuters although this is seldom the case.

The secondary effects of toll roads often fall disproportionately on to lower income residents and commuters. While one of the benefits of toll roads is that they can have less traffic than free roads, the traffic which they discourage will usually be diverted onto other roads and cause worse congestion there (Swan). This increased congestion of other roads increases wear, decreases safety (Swan), increases travel time, and moves the pollution from traffic from the tolled roads to these roads. In effect, the way in which toll roads increase their own quality of transportation is by pushing these transportation problems elsewhere. Since the roads which receive the brunt of the traffic diversions from toll roads are more traveled by those with lower incomes, these problems are pushed away from people with higher incomes towards people with lower incomes creating problems of environmental justice and social exclusion.

Toll roads also cost more to build than free roads, and this additional cost can mean that less money can be spent on socially beneficial projects and programs. Operating and maintaining toll roads is more expensive than for free roads because toll roads have additional costs associated with collecting fees and are often financed through

private companies which charge higher interest rates (TexPIRG). While CTRMA is not a private company, its debt offerings, made at just below "junk" status, add considerable interest costs as compared to more traditional "pay as you go" road building. In particular, if a private company is responsible for operating the toll road, it will focus on maximizing revenue off the road instead of maximizing profit which takes into account the cost of wear and tear on the road and the effects on other roads (Swan). CTRMA will have a similar incentive to adjust the variable tolling in ways that will maximize revenue rather than maximize the public benefit to all commuters. In order to compete with free roads, toll roads need a larger capacity than the amount of cars they will actually attract and to be higher quality than free roads (or conversely, free roads need to be lower quality) which increases the cost of toll roads compared to free roads (Hall).

CTRMA will actually make more money on the proposed variable toll lanes the worse traffic gets on the free MoPac lanes and on alternative routes (Lamar, South First, Brodie, Congress, I-35, among others). The environmental studies must address these issues honestly and head on, rather than pretend they do not exist.

On another note, toll roads compromise privacy by tracking the people's cars through the system for the sake of providing an accurate fee (Swan).

When reading studies and literature on the social impacts of toll roads, it is important to remember that many of these papers assume that additional roads or lanes are needed or wanted and then base their claims off the scenarios for building the road or lanes. These papers use construction of the road as a baseline and then evaluate environmental justice, social exclusion, and tax incidence issues from this baseline. If a "no-build" scenario is used as a baseline, then different conclusions could be drawn about the impact of toll roads on these issues.

J. Converting a lane each way to rush hour HOV lanes should be a top priority action, taken immediately with a few dollars, and supported by one or more park and rides. TxDOT and the Texas Transportation Institute have shown that over 40 miles of HOV lanes in the Dallas area function very well to use pavement more efficiently. See the TTI study summary here: http://d2dtl5nnlpfr0r.cloudfront.net/tti.tamu.edu/documents/7-4961-S.pdf. The potential for reversible lanes (HOV and general purpose) should also be evaluated.

K. The purpose and need statement is improperly narrow, excluding and prejudicing alternatives that will deliver more traffic congestion relief and more safety benefits than the proposed toll options. In general, the environmental study should be expanded to reflect the Context Sensitive Solutions (CSS) goals. The current purpose and need are framed too narrowly, resulting in proposed alternatives that are very similar in nature and are not representative of a meaningful set of alternatives as required by NEPA. Instead of only adding variable tolled express lanes, the environmental study should also consider an alternative, or alternatives, that include non-tolled lanes and mass transit options. Finally, the environmental study process should include consideration of cumulative and indirect effects from related projects and induced growth.

The Central Texas Regional Mobility Authority (CTRMA) was created to build toll roads, although they have authority to do other kinds of transportation projects. Having the toll road agency manage the MoPac South environmental study is not compliant with the purpose of NEPA to meaningfully consider alternatives because the agency's obvious preferred alternative is and will be toll roads in each case. TxDOT should assign the studies to CAMPO, or the City of Austin, or prepare the NEPA documents itself. CTRMA's obvious bias translating into unreliable information; sales pitch, not science or evidence.

1. The purpose and needs are framed too narrowly, and the alternatives chosen for further study do not advance the broader purpose and need.

The MoPac South segment's stated purposes are to: (1) provide an opportunity for reliable travel times; (2) improve operational efficiency; (3) create a dependable and consistent route for transit; and (4) facilitate reliable emergency response.

CTRMA characterizes the needs for the project in terms of problems the project is trying to address, which CTRMA states as being that: (a) current congestion levels are creating unreliable travel times; (b) the total population of Travis and Hays County is expected to increase 98% by 2040; (c) emergency response times are impacted by traffic congestion; and (e) if we do nothing, it could take an additional 35 minutes to drive from Cesar Chavez to Slaughter Lane in 2035.

SOS Alliance takes issue with various aspects of CTRMA's characterization of these purposes and needs, as well as the ability of the proposed alternatives to meet them. The overarching concern is that the project's stated purpose and needs are too narrowly defined to

result in only alternatives that involve toll roads using variable pricing, in violation of NEPA's requirement to meaningfully consider alternatives.

"Reliable travel times" is too narrowly tailored in violation of NEPA. The website states that one project "need" or problem to be addressed is "current congestion levels creating unreliable travel times." The counterpart project purpose is to "provide an opportunity for reliable travel times." Framing the purpose and need in this way precludes considering non-tolled alternatives. Although not explained on the website, CTRMA has in other contexts claimed "reliable travel times" (or a similar term) as an outcome of using variable toll pricing.[1] That is, by adjusting the price upward or downward, CTRMA claims it can guarantee a travel time for a particular route. Because traffic demand fluctuates, the argument goes, the only way "reliability" can be achieved is through the use of variable toll pricing. **Thus, "reliable travel times" is (at least in theory) a *result* of the proposed alternatives (which are all tolled), not a *need* or problem to be solved, and certainly not a purpose for any project except variable tolled lanes.** The need is to relieve congestion and move large amounts of people in a reasonable time, which could be addressed in a number of ways. In contrast, reliable connectivity is tied to one specific toll-pricing policy. In effect, CTRMA reverse engineered the "need" by looking at what the proposed alternatives would do. This is not permissible under NEPA.

Furthermore, the alternatives chosen for further study do not even solve the problem of congestion. To the contrary, tolling makes congestion worse. Congestion management is a worthy purpose, but it will not be achieved with the proposed alternatives, especially in the long-term. Providing more capacity for personal vehicles will, at most, provide short-term congestion management. As TxDOT acknowledges, "it is increasingly clear that we cannot build our way out of congestion." TxDOT 2015-2019 Strategic Plan. By building projects that encourage use of single-occupancy vehicles, CTRMA is ensuring that as population increases, congestion will again become a problem. Variable toll-pricing may help keep the new lanes relatively uncongested, but with price based on demand, the toll fees will soon become out of reach for the average Austin-area resident. CTRMA should explore alternatives that would discourage the use of single-occupancy vehicles and also promote fairness and equity, such as mass transit.

The stated purpose to "create a dependable and consistent route for transit" also unreasonably limits alternatives. By using the term "dependable and consistent," CTRMA is again implicating the need for managed lanes that are regulated through variable tolling. However, there are options available for increasing transit's dependability, such as dedicated bus lanes. CTRMA officials have said at public meetings that they are working with Capital Metro to determine possible places for park and rides along MoPac South. This process needs to be inclusive to ensure that any such infrastructure provides practical and attractive options for commuters. CTRMA should work with and really listen to the citizens who live, work, and attend school in the area to identify viable alternatives to personal vehicles.

SOS Alliance recognizes that buses would be able to use the tolled roads for free, but it is questionable how this will have a practical effect on use of public transit on MoPac. Currently, only one bus uses South MoPac, and it enters the highway at William Cannon and exits Cesar

[1] *See* MoPac Improvement Project website, where CTRMA states: "[t]o ensure the Express Lanes remain free flowing, variable tolls are used to manage the number of vehicles entering the lanes at any given time." *Available at* http://www.mopacexpress.com/express-lanes/pricing-101.php#sthash.jB998GZV.dpuf.

Chavez. Based on the route and configurations of the proposed alternatives, it is not clear the bus would even be able to access the Express Lanes, nor use the "direct connectors." Thus, the bus would be stuck with all the other express-lane traffic dumping onto the already at-capacity Cesar Chavez, negating any "dependability and consistency" created by the express lanes. Otherwise, the bus's next opportunity to exit is FM 2222, bypassing downtown and a large chunk of the Austin business district where most commuters are headed. Thus, the utility of the express lanes for buses is questionable at best, and the proposed alternatives would likely not enhance dependability and consistency of transit. Without park and rides, and a source of funding and commitment to expanded, reliable bus service, the reference to bus service is little more than red herring designed to distract from the fact that the propose variable tolls do far more harm than good to everyone except for the few people who can afford to pay and who have access to the toll lanes.

The alternatives will not necessarily improve emergency response. The project's stated purpose is to "facilitate reliable emergency response," in reaction to the problem of having "emergency response [being] impacted by traffic congestion." First, this problem is overstated. Emergency vehicles can currently use the shoulder to bypass congestion, and emergency vehicles are not often travelling far distances—generally not the distances between proposed express lane entrances and exits. Thus, it is unclear how useful express lanes would be for emergency vehicles, and building them is not justified on the basis that it will improve emergency response time. The information presented by CTRMA at the Open House makes clear that congestion will get much WORSE, not better, than current conditions for the free lanes.

Furthermore, by using the term "reliable," CTRMA implicates the "need" for "reliable travel times" discussed above. By framing the problem in this way, CTRMA impermissibly narrows the range of alternatives that could solve this problem, because according to CTRMA, only variable toll pricing accomplishes the goal of "reliability" that is allegedly lacking for emergency vehicles. This framing also bolsters support for CTRMA's preferred alternative (as indicated in its first unveiling of the project plans) to have two lanes going each way. CTRMA will try to say one express lane each way will not help emergency vehicles because they could get stuck if only one express lane is available. But this ignores the fact that cars must pull over to the shoulder to let emergency vehicles pass if possible, and if that's not possible, then emergency vehicles can use the shoulder to get around congestion. And as mentioned above, for the project to provide such reliability to emergency vehicles, the emergency vehicles must make use of the tollway from a designated entrance to a designated exit, a dubious assumption.

The stated purposes and needs all center on moving cars faster in the toll lanes and do not include the Context Sensitive Solutions (CSS). According to the MoPac South project website: "As part of the MoPac South Environmental Study, we have and will continue to engage stakeholders in a Context Sensitive Solutions (CSS) process." CSS is an approach that is designed to lead to "preserving and enhancing scenic, aesthetic, historic, community and environmental resources, while improving or maintaining safety, mobility, and infrastructure conditions."

Constructing more bridges and pavement through the heart of Zilker Park and the Edwards Aquifer/Barton Springs recharge zone—as each of the proposed alternatives would do—gives

absolutely no deference to these important community values. Rather, the current purposes and needs, and the resulting alternatives, are weighted heavily in favor of moving mass amounts of personal vehicles at a cost to local scenic, aesthetic, historic, and environmental resources. Slapping on some public heart and adding some pretty landscaping does nothing to make up for the aesthetic and water quality degradation from concrete pylons and increased impervious cover.

2. CTRMA should consider more conservative growth projections.

The project website states as problems that: "The total population of Travis and Hays Counties is expected to increase 98% by 2040," and "[i]f we do nothing, it could take an additional 35 minutes to drive from Cesar Chavez Street to Slaughter Lane in 2035." Both statements are attributed to CAMPO's modeling in the 2040 Plan. CTRMA's reliance on CAMPO's growth projections is in error because these projections do not take into account realistic limits to growth. Moreover, CAMPO's and travel demand model does not account for human behavior. Before traffic slows down to the predicted rate, it is likely that people would find an alternative route.

Also, the 98% growth predicted, even if it happened, does not mean that 98% more cars would use MoPac South. Many Hays County residents would stay in Hays County, and much of Travis County's growth would occur in the northern and eastern parts of the County. CTRMA should use a more accurate model to honestly represent predictions to the public, rather than using inflated hyperbolic traffic scenarios to scare residents into paving and building over the natural and historic beauty of Lady Bird Lake and Zilker Park.

CTRMA should also take into account existing factors that will limit growth and development in Travis and Hays County – limits such as water supply, the environmentally-sensitive nature of the area and applicable regulatory framework. The comprehensive plans of the City of Austin (Imagine Austin) and Travis County (Land, Water & Transportation Plan) encourage new growth to be more compact and connected, rather than sprawling in nature. Much of the land southwest of MoPac will remain undeveloped as it is Austin-owned Water Quality Protection Land. Together, these factors would predict a slower rate of growth in traffic on MoPac South than the project website. CTRMA should provide an alternative that accounts for more conservative growth projects.

That is not to say that we advocate for the "No Build" scenario. In fact, SOS Alliance supports expanding MoPac's capacity – making better use of the existing pavement.

In conclusion, the current piecemeal approach should be scrapped in favor of a single, more honest and more efficient study of the entire SH 45 SW/MoPac South expansion loop project. This is the only way to consider alternatives and cumulative impacts in a meaningful way.

Thank you for your consideration.

Sincerely,

Bill Bunch

Sent: Tuesday, November 17, 2015 8:03 PM
To: Abby Tomlinson
Subject: MoPac South Improvement Project support

Nov 17, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Jon Sawvell

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 3:46:22 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
nancy scanlan

11/20/2015

From: [redacted]
To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Sunday, October 25, 2015 10:15:11 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
andrea scarborough

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Study all of it before beginning any of it. There is already bad traffic around AHS And down town dont make it worse. Safety of AHS Student are going to be much more likley to be harmed by the increase in traffic. Also the amount of air, polution, noise polution, & traffic polution in and around AHS. Also, the Barton Springs Salamander will be extremly endangered by this construction.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

1) re: Austin H.S. access, whatever option is determined, part of the project should include increased + expanded pedestrian + bike access to the school so more students can walk, bike, + use transit to school. For the sake of local connectivity there + is also will benefit with more ways to go between W. 5th + Cesar Chavez.

2) None of the options presented are satisfactory or acceptable. TxDOT + CTRMA must study + present options that include expanded mass transit options + HOV lanes. Toll lanes that benefit single occupancy vehicles are not acceptable. Building bigger roads that encourage sprawl won't help with congestion or benefit the local community. Taking cars off the road thru mass transit + smart rides needs to be the preferred option → with park + ride options

3) Please do not expand Mopac or build a "double decker" bridge + preserve the environment's green spaces + aquifer.

4) I live along the Cesar Chavez corridor (east of I-35) + we should seek out solutions to build + develop this corridor as liveable space + slow down traffic through Complete Streets. The six options proposed will not help + will harm Cesar Chavez. I think we should use roads

(over)

COMMENTS ON VIRTUAL OPEN HOUSE

Patricia	Schaub	11/20/15	1) I support the inclusion of a shared use path along both sides of the proposed Mopac South project for people on foot, bikes, and personal mobility devices. These shared use paths will provide mobility that does not require use of an automobile and are an important means for increasing the capacity of Mopac, which is the goal of this project. Regardless of the final configuration of the new general purpose lanes, congestion is only going to get worse along Mopac and given the overall cost and scale of this project, it's not a lot to ask CTRMA and TXDOT to provide paths that will give people an alternative to driving and traffic congestion. Shared use paths will also help serve the destinations along S. Mopac, in particular the retail and service areas near 290 and 360 which otherwise are largely inaccessible to anyone not using a motor vehicle. It also will make it easier to access the natural areas and recreational paths that connect to Mopac, such as the Barton Creek Greenbelt. Having capacity on Mopac for people walking or biking will also make it possible for more people to afford to live in the area without the expenses of car ownership, or having to drive a car for every trip. 2) Please do not abandon the Pressler extension between W. 5th St. and Cesar Chavez, esp. the biking and walking paths. Whatever option is determined for the project, it should include increased and expanded pedestrian and biking access to Austin High School so more students can bike, walk, and use transit, and fewer students and parents have to drive their cars in the area, which is a chronic source of congestion in this part of town in the afternoon. Local connectivity also will benefit with more ways to go between W. 5th and Cesar Chavez, without having to deal with stacked up cars on these streets at Mopac and Lamar. 3) CAMPO and transportation analysts have projected that no matter what option is selected the travel time is going to continue to increase along South Mopac in the general purpose lanes. In other words, the current options will only benefit people with cars who can pay a toll to travel along this corridor. Besides being a questionable use of resources, the negative environmental impact on the aquifer, the atmosphere, and the lake make all of the current options presented unacceptable. Given these realities, please do not add extra lanes or "double deck" the bridge over Lady Bird Lake, and please do devise different options that incorporate mass transit, incentives for car pooling, and meaningful accommodations for more sustainable forms of transportation, such as bicycles. 4) I live off of Cesar Chavez (east of I-35) and believe we should seek out solutions that stop treating this corridor as an exit ramp for Mopac and a feeder road for 183, and instead seek out a design that SLOWS DOWN traffic between these two freeways. Cesar Chavez is a significant east-west route that combines natural beauty with urban amenities serving the surrounding neighborhoods and downtown, and should be built and developed as livable space using the principles of Complete Streets. Instead of a high speed flyover, TXDOT and the city should work on a downtown connection to Cesar Chavez that integrates the schools, waterfront parks and trails, Seaholm, hotels, Convention Center, restaurants, bars, offices, and businesses from west to east and east to west, and help break down the persistent division at I-35.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 3:15:43 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

COMMENTS ON VIRTUAL OPEN HOUSE

Melissa	Schenker	11/19/15	I don't like any of the "direct connects" to Cesar Chavez - there are no clear solutions for the pressures they put on Cesar Chavez. Reasonable solutions must exist prior to approval of any plan. It's hard not to sound unreasonable in responding to this problem. But it seems unacceptable to design something and make the rest of it a City of Austin problem. There is too much going on at MoPac/Cesar Chavez/5th/6th - there does not seem to be enough thought being given to how to create long term realistic functional solutions for this area. I drive in this area multiple times a day and am not impressed with any of these ideas as being very functional or far-sighted. In addition, this area is vital in terms of urban design, and should be looked at as a key element in Austin's livability. These proposals don't seem to do that. Variable pricing is not attractive. I wonder if people are even commenting on the upper deck ideas - no one I've spoken to even thinks this is in the realm of acceptable. The direct connect proposals put lanes unacceptably close to Austin High School. I don't understand why toll roads are the only options provided. I'd like to see other proposals - Park n Rides, HOV lanes. It's not clear why these sorts of things are not up for discussion, and why variable priced toll lanes of one sort or another are the only options put on the table by the CTRMA. I like the idea of improving the safety and functionality of the southbound Bee Caves Rd. exit. The City of Austin Proposal for a "westbound Lake Austin Blvd turnaround to southbound collector-distributor road" creates a conflict for drivers westbound on Cesar Chavez who merge onto 6th St (under MoPac) and want to continue on to Lake Austin Blvd. The merge is very close to the proposed exit to loop onto South MoPac and looks like a problematic conflict. I'm concerned about the impact on the Wildflower Center. The idea of taking more of Zilker Park for MoPac is unappealing. Adding traffic over the aquifer is in opposition to our community values. I'm not impressed by the non-names used for your proposals - it has made it very hard to have a community conversation. It undermines the CTRMA's claim to be very interested in community input. In addition, providing 11 proposals overwhelms any non-expert citizen's capacity. I also don't understand how what's been proposed is in any way an "environmental study." These unfortunate choices regarding language undermine your credibility. The long term plan that connects MoPac to I35 is unacceptable. I'm aware of the CTRMA claim that this set of proposals has nothing to do with that, and have heard it said that it's not in your plans, nor is it in CAMPO's plans, but this is not a credible claim. Breaking this up into separate and discreet projects makes it impossible to have a real conversation and community consensus - by it's very nature, it seems designed to confuse and create conflict. It's unfortunate that if you have good solutions among your many ideas, it's hard for people to focus on them due to the unreliable numbers, the obfuscating language, unappealing ideas, and threats to the environment.

Date: Friday, November 06, 2015 1:15:15 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

MoPac needs to remain just as it is - a local thoroughfare. Widening it, and making it a major commercial thoroughfare filled with cargo and merchandise, will ruin Austin. No modern city rips through its residential areas with such a passÃ© infrastructure. And it will create a dangerous road to rip through the areas where people live, travel to school, and peacefully travel through the city.

Keep MoPac local, and keep Austin beautiful!

Patrice M. Schexnayder

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Above all, please do not build an even higher elevated bridge for the toll lanes over the river. This will be a blight on the view for everyone for the benefit of few.

Please stop encouraging growth in suburbs when money should be spent densifying the urban core and city center. Austin is already one of the most sprawling cities in the country, and rewarding those who live further away with faster access in and out of the city is not fair for the rest of the residents in the city. It will only encourage more people to move further out and necessitate additional highways and tolls in the future.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Have we not learned anything from SH 130 or any of the other empty toll roads around Austin? Toll roads and toll lanes SOLVE NOTHING. People passing through who add to our daily commutes won't take them because they're too cheap. We need more lanes and proper loops around the city, but they need to be open and free to the general traveling public in order to solve ANY of Austin's problems--not a toll!

Shut down the idea of more pointless toll lanes right now. The company that runs them doesn't even care to get your license plate right, as they profit whether they bill the right vehicle or not. That's true corruption. Politicians who've been bought this corrupt plan hook, line and sinker deserve to be run out of town with pitchforks and torches for selling off a public need to the highest bidder. Shame on them. NO MORE TOLLS.

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Sunday, November 15, 2015 2:00:24 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Jodi Schrobilgen

Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up. Additonally, the amount of traffic thatt would increase

in and around Austin High will put our newly and inexperienced drivers at risk as well as students and hike and bike pedestrians.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances. Why add an expensive toll that local traffic cannot afford on a daily basis? The toll in NO WAY will alleviate traffice on MoPac.

Please use your authority to insist that common sense and basic planning take place before we build a

Sincerely,
Claire Schroer

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. William Schwartz

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 05, 2015 9:35:21 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT abandon the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be halted and the project abandoned. Keep traffic on I 35 on that corridor and keep MoPac traffic on MoPac.

The comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, PLEASE prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic. This is a good idea, SH 130 is already in place. Why build when there is already a system, it doesn't work because of the tolls. To build the proposed 45SW/South MoPac tolled loop would be to ignore the recent history of the SH 130 failure, toll roads don't work. Make SH 130 free, and it will compete with I 35 and will succeed.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson

Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 7:20:33 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Alma Scott

Please also take another look at the impact on traffic exiting Bee Caves Rd (southbound) and how it may be impacted by the toll lane entrance. I'd like this group to consider dropping from 4 lanes to 2 lanes near the 360/MoPac intersection where there is much more space and less concerned surrounding communities.

Message: Dear CTRMA Staff and Board Members,

I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. It's evident to me after looking over the newly proposed plans, that perhaps you've not spent much time trying to get on and off Bee Caves road (FM 2244). Bee Caves Rd is the principal corridor for all businesses and residents of the city of Rollingwood and most all for Westlake Hills. In addition, this road serves so many in Bee Cave and beyond. Current plans concern me the egrees and ingress for toll lanes as well as off ramps for Bee Caves are converging potentially causing a very serious concern for the above mentioned populations. I recommend that this group consider dropping the 4 toll lanes, two in each direction, down to one in each direction near the 360/mopac intersection - where there is much more room, less impact to the neighboring communities and where issues of on and off ramps/ could much easier be solved.

Sincerely,
Catherine Scott

The lanes on Mopac south of 290 are very wide and seem to have more space than required. Have you looked at extending the 3 lanes all the way down to the Davis exit or even to Slaughter? We seem to lose a lane when it is not required. This would involve some repainting of the lines and some additional paving. Should not be a major effort if even for only a short term solution.

Name: Emily and Rick Selders

Email Address: [redacted]

Subject: Mopac / Loop 1 South

Message: Dear CTRMA Staff and Board Members,
As a resident of the lower portion of Rollingwood closest to Mopac, my family and I are deeply invested in the future of the Mopac / Loop 1 Project. We do NOT support elevated toll lanes of ANY kind over Mopac close to the downtown area. Not only will it permanently and negatively affect the character of Austin, it will create an imposing industrial structure that will decrease property values and increase noise and light pollution in the surrounding neighborhoods. Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, and Lady Bird Lake are the heart and soul of this city; why would we not consider other options that would help preserve this unique character that makes Austin AUSTIN??

I understand there have been significant changes to the 2015 traffic data presented to the public since the Feb 2015 open house and also major changes approved by voters for regional non-tolled road funding in the recent election. In light of this, we strongly encourage CTRMA to reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option. Along with a no-build scenario, options such as expanding telecommuting, ride sharing, and rail should be considered.

There are other ways to alleviate the transportation problem in Austin. We ask that you look at options without elevated toll lanes in particular so that we can retain the look and feel of our beloved city. Please ensure the plans you choose support our public park land use, green spaces and community values.

Sincerely,
Emily and Rick Selders

Please know that I am not against progress and development - it just needs to be well planned. Your current plan(s) are ineffective and do not address key issues because it is being pieced together rather than fluently planned. There are now six different options - up from the original 4 - and your building this significant piece of infrastructure using committee input to direct it rather than studying the problem and preparing a solid solution solution for our future. It is not worth spending tens of millions of dollars today to deliver a project that impacts our most precious resource - Lady bird lake and the beautiful grounds surrounding our city. Stop. Take time to reassess. Say you need to study this further. Assemble a true team of experts and dig in. Good work takes time, thought, drive and yes, the reality that you can't please everyone. Set your objectives based on needs not politics, time or a land grab.

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Jude Sevin

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 2:15:31 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Form Submission - New Form - MOPAC/LOOP 1 SOUTH
November 17, 2015 at 11:48 AM
[redacted]

Name: Brooke Shannon

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members,

I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

Brooke Shannon

Re: Commissioner Brigid Shea official comments to the Mopac South Environmental Study, related to the Open House comment period.

Dear Chairman Wilkerson and Board Members, CTRMA and TxDOT Officials:

I write to you today in my capacity as the Travis County Commissioner, Precinct 2, and ask that you accept this letter as my official comments on the Mopac South Environmental Study. I do not support any of the proposed six toll lane alternatives. I my opinion, all six options will cause harm to Austin, Travis County and my constituents.

"Study all of it, before building any of it." The CTRMA has shown the public only a fragment of the toll project, presenting the eight miles of Mopac south from downtown to Slaughter Lane, as if that's all there is to consider. Before anything is built, the "Mopac South Environmental Study" process must be revised to include a comprehensive study of the full 18-mile loop project, from Cesar Chavez to the IH-35 connection. Currently those connected projects are chopped into pieces resulting in the public (and CTRMA) never knowing the full impact to our community and environment. Segmenting the projects also eliminates the ability to examine real multi-modal transportation solutions to improve north-south traffic flow.

All the six tolled alternative will do real harm to roads, neighborhoods, businesses, Cesar Chavez, Downtown, Austin High School, Lady Bird Lake, the Butler Hike and Bike Trail, Barton Springs, Zilker Park, Botanical Gardens, Nature Center, Wildflower Center, aquifers, water shed, preserve lands...and to current Mopac commuters. This is too important to do a rush job on the massive paving of our community – the future health and welfare of our community is at stake, so we must get it right. And frankly, the fact that CTRMA just came before CAMPO to amend their 183 toll project from $225 million to $655 million, tripling their original cost estimate, adds to my growing lack of confidence in CTRMA's process.

Again, I do not support any of the six toll alternatives and call on CTRMA to do a comprehensive study of the full 18-mile toll loop before building any of it.

Respectfully,

Brigid Shea
Travis County Commissioner, Pct 2

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Please study all of the ultimate plan to connect I-35 to Mopac before you build any of it.

Please pay off the toll debt on SH 130 to use it as the I-35 bypass it was intended to be

Please study free options like HOV lanes at rush hour.

None of the 6 CTRMA options

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 1:05:42 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

COMMENTS ON VIRTUAL OPEN HOUSE

Chris	Shields	11/19/15	As a resident of Meridian in South Austin, and one who uses Mopac daily to commute to work downtown, I would greatly appreciate any new traffic arteries to ease congestion. Currently the 15 mile one-way trip takes between 25 and 40 minutes to commute through the morning traffic and between 45 minutes to 1 hour 15 minutes when traveling home. Taking into account housing prices in proximity to Austin's CBD and the influx of individuals to the overall area, the problem will only worsen if new roads aren't constructed. I believe this can be accomplished with minimal negative impact to the surrounding environment.

COMMENTS ON VIRTUAL OPEN HOUSE

Reza	Shirazi	10/31/15	Hi, I support the Two Express Lanes - No Downtown Connection. It improves traffic flow and does not impact Zilker and the other neighborhoods around the downtown connection area. Thanks Reza

COMMENTS ON VIRTUAL OPEN HOUSE

Reza	Shirazi	11/20/15	Dear CTRMA Staff and Board Members, In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial. If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options. Please ensure the plan you choose support our public parkland use, green spaces and community values. Sincerely, Reza Shirazi

Dear TxDOT and CTRMA officials:

In addition to the comments below, I just would like to say that I was born and raised in Austin but have spent the last 7+ years in Houston for college and a job. I always imagine myself moving back home one day. However, every time I come home, I feel more and more like Austin is becoming Houston as far as traffic goes. If corporations want an IH-35 bypass for their semi-trucks, then they can build their own highway and we'll keep what little soul Austin has left.

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

1) Include - add study - Pipes on Mo* Pac for HOV Non-toll express lanes. Make 130 toll free to relieve I-H 35 traffic.
2) High tolls at rush hour will just push traffic on to S. Lamar.
3) Study + report before you build!
4) None of the current solutions address Austin High traffic and safety - or Lady Bird Lake or Butler Trails or Barton Springs.
5) Buses, rail and ride and HOV lanes are a much cheaper alternative.
6) Take toll off 130 to by pass I-H 35
7) Our City Council + County commissioners are not for the plans for double deck toll road - so why can't the people make the decisions.?

As a person who has lived on a street that backs up to MoPAC for nearly 40 years, I strongly urge you to kill this proposal! Make a decision for once that takes us, the citizens of Austin, into account. None of the 6 proposed MoPAC changes are in our interest quite the contrary. Please. Back to the drawing board -- you can do better.

From: [redacted]
To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, October 22, 2015 1:05:26 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Nancy Simons

Nov 18, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Bryan Smith

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 3:35:25 PM

Dear TxDOT and CTRMA officials:

I DO NOT WANT you to proceed with the Mopac South expansions!! Instead, utilize existing 130 . DO NOT USE OUR inner CITY's thoroughfare as a major highway! Build less roads and invest the money in other mass transit options !!

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Monday, November 09, 2015 9:10:27 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Ellen B Smith

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Heidi Smith

HEIDI SMITH [redacted]

Printed Name Address

Additional Comments:

We can all agree that the City of Austin's traffic must be alleviated. Something must be done - I appreciate your efforts to address the issue. However consideration of environmental, aesthetic, and traffic overflow impact must be a priority.

If the traffic can be improved without elevated lanes - it MUST be the first consideration. There is a reason traffic has increased and families are moving to our wonderful city. Let's not change [illegible] the reason — the parks, the lake, the neighborhoods. Austin is unique to Texas — and wants to stay that way — we are not cement city.

Please select the option "2 toll lanes & no elevation"

Thank you for your consideration.

Jeri

I drive into downtown every morning from my home near 45th and MoPac, and the reason I don't travel on Cesar Chavez is because of the limited number of alternate routes that are available if there is an incident. There is no access to the south, because of the river, and no access to the north between MoPac and Lamar Boulevard. I understand that you are not expecting an increase in the number of trips that would be heading into downtown via Cesar Chavez; however, I think this would be a great opportunity to develop an active plan for incident management on Cesar Chavez as part of these improvements. Thank you for your consideration of my suggestion.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 10:15:42 PM

Dear TxDOT and CTRMA officials:

Comments for MoPac South Environmental Study- Open House Public Comment Period
Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on these routes.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, the Flint Ridge Cave recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs watersheds, over Town Lake, over our greenbelt parkland hike-bike trails, and essentially over Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin Pets Alive, the Edwards Aquifer, Barton Springs pool, multiple plant, water and wildlife species, many endangered species, and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker bridge on MoPac over Lady Bird Lake from the transportation plans. We vote for the no build option.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on

projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances. What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. --We say NO to building a second Interstate 35 through Austin to ruin the heart and soul of Austin along the way.
We want to Keep MoPac

Sincerely,
Chloe Sofikitis

Austin, TX

Dear Ms. Tomlinson,

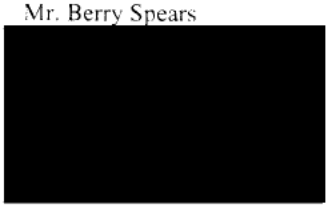
According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way. Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Berry Spears



COMMENTS ON VIRTUAL OPEN HOUSE

Gerald	Speitel	11/16/15	I am opposed to any options that result in elevated roadways between MOPAC at 360 and the north side of Lady Bird Lake. Elevated roadways are eyesores, create noise and light pollution, physically divide communities, and obstruct the natural beauty of the area. The need for additional capacity on MOPAC should be accommodated by widening the road at its existing elevation.

John Whitfield

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 5:35:14 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
James Spindlet

COMMENTS ON VIRTUAL OPEN HOUSE

Amy	Spiro	11/7/15	I travel daily from Zilker Park (driving through Barton Springs Road and entering Mopac heading North at Rollingwood Drive via a circle....all the way up to 2222 to take my daughter to her magnet middle school. My concern is how the exit configurations will work for people like me that exit at Rollingwood and head EAST, not WEST. It is unclear from all the information posted on the virtual open house, how this part of my commute would be affected...especially if I decided to take the express way from up north (entering at Anderson Lane)...would I exit at Barton Skyway and then just take the access road to Barton Springs Road, or would I be able to exit safety from the Express Lanes in time to get to my normal Rollingwood Exit and cross under Mopac heading East to get home. I personally think if we have room for 2 extra lanes that they should be dedicated HOV lanes...not express lanes with tolls.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Tuesday, October 27, 2015 10:40:28 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Dana Sprute

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

John L. Staha

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Chaille Stidham

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 3:30:34 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,
Molly Burnette
Lynne Storm → Also

Address

Additional Comments:

The elevated lanes are the worst, ugliest possible idea to improve the efficiency of Mopac. Please, please do not force this monstrous eye-sore on the citizens of Southwest Austin.

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Date: Wednesday, November 18, 2015 10:05:17 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

SH 130 is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE FREE. Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. Letâ€™s make the I-35 bypass we already have work.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

I urge you to Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 10's of 1000's of cars on South Mopac, making traffic worse not better. It will likely cause real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

We need an independent study that considers non-toll alternatives that avoid converting Mopac into a second I-35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay exorbitant tolls during rush hour.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

North-South movement of bicyclists & pedestrians in the MoPac corridor is very important to maintain. Many non-motorized commuters cross Lady Bird Lake at MoPAC. This includes persons going ~~to~~ to and from work, but also to & from Zilker Park, Barton Spring, Deep Eddy Pool, etc. Non-motorized travel in this corridor should be preserved ~~as~~ to whatever extent possible as work on MoPAC is performed.

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 12, 2015 11:50:13 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
CJ Taylor

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Ms. Cheyenne Taylor

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 2:55:21 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Linda Team

Form Submission - New Form - MOPAC/LOOP 1 South
November 19, 2015 at 7:42 AM
[redacted]

Name: Stuart Tendler

Email Address: [redacted]

Subject: MOPAC/LOOP 1 South

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

Stu Tendler

From: [redacted]
To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 12, 2015 9:40:14 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Texans AgainstTolls

Subject: Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 10:25:45 PM

Dear TxDOT and CTRMA officials:

Comments for MoPac South Environmental Study- Open House Public Comment Period
Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on these routes.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, the Flint Ridge Cave recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs watersheds, over Town Lake, over our greenbelt parkland hike-bike trails, and essentially over Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin Pets Alive, the Edwards Aquifer, Barton Springs pool, multiple plant, water and wildlife species, many endangered species, and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker bridge on MoPac over Lady Bird Lake from the transportation plans. We vote for the no build option.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on

projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances. What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. --We say NO to building a second Interstate 35 through Austin to ruin the heart and soul of Austin along the way.
We want to Keep MoPac

Sincerely,
Texans AgainstTolls

KeepMopacLocal

Pg 1 of 2

GO TO KeepMopacLocal.org FOR MORE INFORMATION AND TO SEND A SINGLE EMAIL MESSAGE TO TxDOT, CTRMA AND OUR LOCAL OFFICIALS.

AUSTIN HIGH SCHOOL COMMUNITY FORUM
NOVEMBER 9, 2015

Purposes of Forum:

Provide information on pending toll road agency (CTRMA) and TxDOT proposals for South Mopac and the larger proposed SH 45SW/Mopac toll loop

Answer your questions and hear your comments

Obtain your written comments on the future of Austin, the Mopac corridor, and alternatives to making Mopac a second, partially tolled I-35 through Austin

DON'T LET THE TOLL PLANNERS FOOL YOU

Toll road planners are trying to pull a fast one. They want us to choose between one of six different toll road options –on just the eight miles from Lady Bird Lake to Slaughter Lane.. as if that's all there is.

But there are better, non-tolled options. And there are much bigger questions at play.

HERE'S WHAT THEY'RE NOT TELLING US:

Mopac South is just one piece of a massive 6 to 14 lane, 18-mile freeway/toll loop project *that would connect South Mopac to I-35 by building the SH 45 SW toll road.* This toll loop project has been chopped up into four separate environmental studies – so the public never gets to consider the whole, and one piece leads to the next without ever considering better alternatives

It would put up to 60,000 extra cars and trucks a day on Mopac, which will become a second I-35 roaring through the city---serving long-distance 18- wheelers and car traffic. The proposed 4-lane toll expansion is not for current commuters – it's for interregional traffic diverted from I-35.

None of CTRMA and TxDOT's environmental studies for Mopac or SH 45 SW consider the impacts of I-35 traffic diverted to Mopac, yet TxDOT and CTRMA told Wall Street bond buyers that South Mopac would be connected to I-35 by 2025 by completing SH 45 SW.

Even without considering traffic from I-35, the TxDOT and CTRMA studies predict traffic gets much worse for everyone on Mopac except for those who can access and afford the toll lanes.

Keep Mopac local Cont'd Pg 2 of 2

The 45 SW/Mopac toll loop project will degrade Austin's beauty and national image while making traffic worse, not better for Austin drivers.

It will choke traffic on Cesar Chavez, around Austin High, and on connected and parallel roads, dumping thousands of extra rush hour cars a day onto Caesar Chavez right at Austin High.

The "dynamic pricing" toll lane fares can rise to $13 and higher for a one way eight mile trip from Slaughter Lane to Cesar Chavez during peak hours. These Lexus Lanes won't help regular drivers. The toll road agency makes more money the worse the traffic gets on the free lanes.

Toll revenues only pay a fraction of the costs for building the toll projects. Our limited tax dollars are used to subsidize the toll projects while other projects languish.

It will pave through pristine watershed protection lands that protect Barton Springs and the Austin environment. But the toll authority refuses to study the whole loop, pretending that the pieces don't connect and the only options are toll lanes that feed money to them.

It will destroy the tranquility of the Lady Bird Johnson Wildflower Center, one of our environmental treasures. Noise, air, and visual pollution will also harm Austin High, Lady Bird Lake Park, and iconic Zilker Park, site of world famous music events and a treasure for locals, suburban residents, and visitors alike.

THERE'S A BETTER WAY – Please join us in telling TxDOT and CTRMA . . .

"Study all of it before building any of it"; stop the piece meal studies and don't build SH 45 SW until there is an honest study of the whole loop project and better alternatives for improving north-south traffic without converting Mopac to I-35West.

"NONE OF THE ABOVE" -- Find solutions that improve traffic flow, not make it worse, and which protect Austin High, Zilker Park, Barton Springs, the Wildflower Center, Lady Bird Lake, the Zilker Botanical Gardens, and the Austin Nature & Science Center.

Study and invest our limited transportation dollars in projects that benefit everyone, not just those who can pay the tolls to drive alone.

Remove the tolls from SH 130, making it the preferred route for interregional traffic from south of Austin north to Georgetown. This will reduce traffic on I-35 while saving Mopac.

(TxDOT's own 2011 Blue Ribbon Advisory Council listed paying off the toll debt and making SH 130 a free road as their top priority for reducing congestion and improving traffic flow on I-35 through Austin. At the time, TxDOT had limited funds, but Texas voters approved substantial funding for TxDOT in both November 2014 and November 2015).

Add rush hour HOV lanes, park and rides, public transit options, and improved intersections, not expensive, damaging toll lanes that make congestion worse.

GO TO KeepMopacLocal.org FOR MORE INFORMATION AND TO SEND A SINGLE EMAIL MESSAGE TO TXDOT, CTRMA AND OUR LOCAL OFFICIALS.

Comments for MoPac South Environmental Study- Open House Public Comment Period

Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMA's piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs recharge zones, over Town Lake, over our greenbelt parkland hike bike trails, and essentially over part of Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs pool, many endangered species and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker bridge on MoPac over Lady Bird Lake from the transportation plans.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. --We say NO to building a second Interstate 35 through Austin to ruin the heart and soul of Austin along the way.

We want to Keep MoPac Local. No Double Decker Bridge over TownLake!! And Keep MoPac Toll Free!

KeepMopacLocal

Dear CAMPO, City, County and State officials:

Please take action now to:

1. Remove the proposed new 4-toll lanes and double-decker bridge on Mopac over Lady Bird Lake from the proposed 2035 and 2040 long-range transportation plans.

2. Remove the proposed tolled-SH 45 SW and Mopac expansion loop, which would convert Mopac to an alternative Interstate 35 route, from the proposed 2040 long-range transportation plan.

3. Keep I-35 traffic on I-35 – and Keep Mopac as a Local Commuter Highway by removing the proposed connection of Interstate 35 to Mopac via the proposed SH 45 SW

4. Halt any action to build Phase I of SH 45 SW over the Barton Springs recharge zone or otherwise extend South Mopac until there is a comprehensive study of all of the costs and impacts of building an expanded Mopac/SH 45 SW tolled loop connection to Interstate 35.

Also,
Please, Open Sh 130 with 4 lanes to 85!
Before you even consider
Keeping this in the 2040 plan,
The $3 Billion 2040 plan needs an accurate Audit!

The CTRMA's piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs recharge zones, over Town Lake, over our greenbelt parkland hike bike trails, and essentially over part of Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs pool, many endangered species and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker bridge on MoPac over Lady Bird Lake from the transportation plans.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. –We say NO to building a second Interstate 35 through Austin to ruin the heart and soul of Austin along the way.

We want to Keep MoPac Local, No Double Decker Bridge over TownLake!! And Keep MoPac Toll Free!

Comments for MoPac South Environmental Study- Open House Public Comment Period

Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase 1 of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMA's piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

Mopac South Public Comments DUE FRIDAY, NOVEMBER 20

Please take a minute to let your voice be heard on South MoPac project. You can send an email through the KeepMopacLocal.org website

CTRMA is piecemealing the "Mopac South" project (traffic, environmental impact & costs) into several segments. For example, this study / public comment process is ONLY for the 9 mile segment from Cesar Chavez to Slaughter and does not include the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that will connect Mopac to IH-35, turning it into an IH-35 bypass and adding extra cars, trucks and 18-wheelers daily.

The bottom line is that CTRMA needs to comprehensively study the 18 mile loop as the single project that it is and stop piecemealing the studies as though they don't connect. Austin and Travis County residents deserve the full story!

CTRMA needs to Study All of It BEFORE Building Any of It.

DID YOU KNOW?

- MoPac South is only the first phase of a massive 14-18 lane freeway/toll road project that will connect MoPac to IH-35, via SH45. *(To be completed in 10 years[1])*
- When completed it will add extra cars, trucks & 18-wheelers daily on MoPac, turning MoPac into an IH-35 bypass
- The MoPac South Environmental and Traffic Study includes only 9 miles of the 18 mile planned toll road loop and does not include traffic impacts to Austin roads, neighborhoods, businesses, Cesar Chavez, Downtown, Austin High School, Lady Bird Lake, the Butler Hike & Bike Trail, Zilker Park, Barton Springs, the Wildflower Center, Nature Center, air and water quality, etc.
- The double-decker bridge over Lady Bird Lake is still being proposed
- The toll road authority is piecemealing the South MoPac project (traffic/environmental impact) into seven segments (as though it doesn't all connect) and they are NOT conducting a comprehensive study / impact of the full 18-mile toll expansion
- MoPac toll plan will pave over sensitive watershed and protected lands
- MoPac toll lane fares can cost as much as $12 and higher for a one way 9 mile trip from Slaughter Lane to Cesar Chavez
- Building 2 toll lanes in each direction on MoPac South will NOT make travel time faster for vehicles on the "free" lanes
- For IH-35 congestion relief, a TxDOT Committee recommends removing the tolls from SH-130, making it the preferred route for interregional traffic from south of Austin to north of Georgetown

[1] *Central Texas Turnpike System Revenue Bonds prospectus dated January 15, 2015, p. 7-13) Phase 2 Project between FM 1625 and IH-35, scheduled for completion in 2025.*

Comments for MoPac South Environmental Study, Open House Public Comment Period

Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I 35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase 1 of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMA's piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs recharge zones, over Town Lake, over our greenbelt parkland hike bike trails, and essentially over part of Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs pool, many endangered species and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker bridge on MoPac over Lady Bird Lake from the transportation plans.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. --We say NO to building a second Interstate 35 through Austin to ruin the heart and soul of Austin along the way.

We want to Keep MoPac Local, No Double Decker Bridge over TownLake!! And Keep MoPac Toll Free!

Comments for MoPac South Environmental Study- Open House Public Comment Period

Dear CTRMA Board members, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South MoPac expansion toll loop as the real project that is currently being unfairly pushed, piecemeal, onto the Austin community and current MoPac commuters. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to a major interstate thoroughfare.

We are proposing that a comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45 SW/South MoPac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

In the interim, please prioritize making Highways 71 and 183 South; and the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route.

Because of the limited access at the south end, MoPac currently serves local commuters. The CTRMA's piecemeal push to expand MoPac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert MoPac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic which would rip through the heart of Austin and damage the lifestyle of the neighborhood people.

The proposed plan would essentially convert it to "MoPac Interstate 35 West." Thus, MoPac would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while locals would suffer from costly tolls, and even worse congestion than today.

With the current plan, inter-regional and interstate truck and auto traffic would make its way through our most environmentally sensitive areas in the heart of Austin Neighborhoods. It would direct heavy traffic over the Edwards Aquafer recharge zone, over our most cherished recreational areas like Zilker Parkland, over Barton Creek and Barton Springs recharge zones, over Town Lake, over our greenbelt parkland hike bike trails, and essentially over part of Austin High School.

The current plan to build out MoPac Loop 1 with a double decker bridge over Town Lack would cause harm and cumulative impacts to multiple natural and cultural treasures that currently support a livable Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs pool, many endangered species and Austin blind salamanders.

Therefore, we are asking that you remove the proposed new 4-toll lanes and double decker bridge on MoPac over Lady Bird Lake from the transportation plans.

Taking the time to study the entire tolled MoPac Loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region. As proposed, toll revenues will only pay half or less of the costs; local taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

What TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paint. We want smart lanes, not more pavement and tolls. --We say NO to building a second Interstate 35 through Austin to ruin the heart and soul of Austin along the way.

We want to Keep MoPac Local, No Double Decker Bridge over TownLake!! And Keep MoPac Toll Free!

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 2:25:54 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Cc: Austin area local, State and Federal officials

Sincerely,
Rachit Thakkar

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I don't have a big problem adding lanes to South Mopac. However, better than tolled lanes would be HOV or even HOT lanes. Toll only lanes do nothing to encourage carpooling. With HOV lanes and better transit + carpooling, Mopac may only need to be expanded 2 lanes instead of 4. New money from state propositions could pay for this expansion.

Do not connect Mopac + I-35 as it would crush traffic, rendering any improvements obsolete. Study what impact connecting SH 45 to I-35 would have on Mopac traffic.

Also don't build a second level at Mopac + the river. Any improvements should fit in with the current single deck of traffic.

SH 130 should be the alternative for I-35, not Mopac.

COMMENTS ON VIRTUAL OPEN HOUSE

Tom	Thayer	11/19/15	I do like the shared use path spanning the length of the project. However, I do have a couple suggestions to improve it. On the south side of the Barton Creek Bridge, extend the shared use path on the west side of MoPac to connect to Southwest Parkway. The YBC trail will likely start from near this intersection, so it would be good for the shared use path to extend here. Also, at Williamson Creek, there should be a shared use path crossing under MoPac to the west side of the highway extending south to William Cannon. The Violet Crown Trail was originally supposed to extend along the west side of the highway behind the shopping center to the intersection of William Cannon and Brush Country. It would be great if the MoPac project could build this connection. The reason is that the William Cannon and MoPac intersection is very dangerous, especially on the east side where traffic whips right around the corner from William Cannon to MoPac very quickly regardless of if the light is red or green going down the west side of MoPac and crossing William Cannon at MoPac is much safer. As for the travel lanes, I am opposed to the double deck highway design through Zilker Park and over Town Lake. This would be so unsightly and noisy as elevated lanes usually are. Why can't the express lanes go under the main lanes to connect to Cesar Chavez? Or better yet, don't have a solid barrier between the express lanes and main lanes allowing for easier access between the two. Restriping and soft posts can be used to separate the lanes.

Subject: [AustinBAC] MoPac South project

I have not been following the Mopac South Project very closely, but I quickly reviewed the project maps as there is an official comment deadline tomorrow.

I see two things that could be improved at first look:
South of the Barton Creek Bridge, there is a short shared use path on the west side of the highway, but it does not extend all the way down to Southwest Parkway (the main path goes on the east side). I think the path should extend down the west side of the highway to Southwest Parkway which is likely close to where the YBC Trail will start. It would be great if they could build the beginning of the YBC Trail, but this would likely be outside of the project area.

At Williamson Creek, the Violet Crown Trail is planned to cross under MoPac and end at the Randalls parking lot. The Violet Crown Trail was originally supposed to extend along the west side of the highway behind the Randalls shopping center to the intersection of William Cannon and Brush Country, but they didn't have enough money in their budget for that for now. It would be great if the MoPac project could build the trail on the west side of the highway from Williamson Creek to the William Cannon/Brush Country intersection. This would be much safer than only having a path on the east side of MoPac going through the William Canon/MoPac intersection. This is a very dangerous intersection with right-turning traffic swiftly moving from William Cannon on to MoPac whether the light is red or green.

You can view the plans here: http://www.mopacsouth.com/multimedia/maps.php

You can make an official comment here: http://www.mopacsouth.com/voh/contact.php

The comment period closes 11/20/15. Feel free to comment on other aspects of the project such as double deck lanes through Zilker Park and over the Lake.

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 4:30:13 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 12:21:17 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.
I CHOOSE NONE OF THE CHOICES YOU ARE CURRENTLY OFFERING. MoPac runs through precious natural green spaces and historic and established Austin neighborhoods where our children are growing up! It needs to remain a local road and not turn into a western version of I-35 that could be RUINOUS to our city's future.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, PARK & RIDES - please! - connecting to increased MetroRapid buses, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse. Bring more pressure to bear to once & for all establish smart mass transit in Austin rather than putting energy toward ill-advised road projects such as this one that could ruin what makes Austin special.

Thank you for your public service and your thoughtful consideration of this matter.

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Ryan Therrell

PLEASE → Do Comprehensive Study before proceeding

→ Allow a VOTE

→ NO 18 WHEELERS ON MOPAC

→ MAKE SH 130 free for thru 18 Wheelers

→ PROTECT OUR Greenspace, " OUR SPRINGS " the PEACE of the City

→ DON'T kill the Goose that lays the golden eggs..!!

AUSTIN HAS Grown to this point because of its natural Beauty. Freeways / Toll Roads are NOT beautiful.

→ PROMOTE ALTERNATIVE TRANSportation.

COMMENTS ON VIRTUAL OPEN HOUSE

David	Thompson	11/5/15	When designing the sound barrier walls on the south portion of Mopac please try to not build them as high as some of the ones on the north Mopac project currently under construction. Some are ridiculously high and unnecessary which leaves a driver feeling like they're in some sort of concrete canyon...aka Dallas or Houston which is NOT what folks in Austin want. We value our greenery (trees, etc) and the extremely tall walls on the north project block out anything but the concrete walls (which in the summertime only add to the glare and heat trapping affect on the freeway). Please consider this when designing the south project. Thank you.

COMMENTS: All of the options seem to me to be a 1950s solution to the problem of traffic congestion, namely building more roads for more cars regardless of eventual congestion from the ever increasing number of cars from the increasing population of the city. TxDOT & CAMPO still seem to be unaware of solutions found in European & Asian cities: an integrated, multimodal system deemphasizing private autos. This is the only real solution to our congestion. Such a system can be adapted to a spread out city such as Austin. So I think all the options presented are a waste of money and will degrade our quality of life. However, it appears TxDOT & CAMPO are determined to expand S. MoPac for cars, and I am sure they will, unfortunately.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

1. Tollroads do not relieve traffic congestion no one uses them because of the ridiculous cost They are way underutilized due to cost.

2. Full disclosure to the public can only HELP; non-disclosure creates distrust and animosity

3. Those who use these roads on a day to day basis must be consulted for successful solutions to develop.

4. Proposals that are developed from those who have not used or will not use these roads & structures impacted, will only result in failure long term.

5. Flowing traffic & (Safety) of our students at Austin High must take priority. Not to mention all the events that occur in this area throughout the year which require (safe) (pedestrian) traffic ways

6. While toll roads are not the answer, neither are the underutilized rail systems or additional bike lanes.

Solutions must involve automobile usage by those who Require their own vehicles for various reasons including small business

I have copies of articles, comments, etc. from Austin residents, business owners, Zilker Park, water front activities, and

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 04, 2015 4:40:19 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase 1 of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Paul Thompson

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Marie R

Marie Timmermann [redacted]

Printed Name Address

Additional Comments:

I am very concerned about the impact elevated toll lanes will have on the character of our neighborhood and parks. I am also concerned about the impact it will have in terms of light and noise pollution

COMMENTS ON VIRTUAL OPEN HOUSE

Jeff	Tindle	11/4/15	I work near city hall and live near circle C. I'm absolutely terrified by the future projected commute times with the no build option. I'm sure others are too. I moved here from CA for a tech industry job loving that the life here was less dense and chaotic. I'm clearly not the only one with this ingenious idea. Now, this unavoidable consequence of Austin's rapid growth is slowly turning our work commutes into personal strategies for traffic avoidance, or sluggish tests of driving patience. Obviously, it only gets worse. We can look at other cities for clear examples. A lot of those people probably moved here to escape it. My official comment is this: I think we should do everything in our power to improve the flow of traffic. Infrastructure is absolutely essential, and the choice we make now will literally change the lives of millions of us for the better part of a century. We cannot let short-sighted complaints or grievances deter us from the best long term solution. I know this sounds dreadfully dramatic, but I am dead serious.

COMMENTS ON VIRTUAL OPEN HOUSE

Brandon	Turner	11/4/15	Dear CTRMA Staff and Board Members, Please do not add a double-decker over Lady Bird Lake or Double Decker Wishbone bridges over MoPac. I support the addition of 2 Toll lanes each direction without elevated lanes: The 2-lane each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use and with the 2040 Long Range Plan. The 2-lane each direction without elevated lanes option has the lowest impact to the parks and neighborhoods while still significantly improving travel times and capacity on our roadway. The 2-lane each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with a Double decker over Lady Bird Lake. The 2-lane each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with 40-50 feet elevated Wishbone bridges over MoPac. The 2-lane each direction without elevated lanes option cost is $30 Million less than the Wishbone concept and $40 million less lane the Double Decker Decker concept. The 2-lane each direction without elevated lanes option minimizes impact to our water quality and lowers the impact on the natural and human environment by not building elevated structures near neighborhoods or Lady Bird Lake. he 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. I also support the addition of the sidewalk on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of an 8' sidewalk I would like an 11' multi-use path to accommodate bikes and pedestrians and connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project. Please make sure to fully consider the social, economic, and environmental consequences. Please ensure the plans you choose support our public park land use, green spaces and community values!

Form Submission - New Form - MOPAC/Loop 1 South
November 13, 2015 at 7:32 AM
[redacted]

Name: Robert Turner

Email Address: [redacted]

Subject: MOPAC/Loop 1 South

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road.

A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

Robert Turner

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. James Turpin

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Thursday, November 19, 2015 8:40:23 AM

Dear TxDOT and CTRMA officials:

I am a parent of two Austin High School children and I am very concerned about the South Mopac Project. I do believe that traffic needs to be addressed, however, this plan appears only to increase traffic and is cost preventative for so many. We already have a toll road that is so underutilized.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Go back to the drawing board.
None of your proposals work to benefit the safety of our children. AHS has 2000 students - nearly 1/2 are drivers. We already are congested and face serious safety risks. Any of the proposals on the table risk making this situation worse.

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, October 23, 2015 2:35:34 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Jac. van Sitteren

Nov 18, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Carter Vecera

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 4:05:30 PM

Dear TxDOT and CTRMA officials:

Comments for the public record regarding "Mopac South" project.

We already have a bypass around Austin and its SH130. More effort should be put into making it successful.
REPAINT the lines on South Mopac to add more capacity NOW while you STUDY the impact or necessity of toll lanes on Mopac.
Study all of it before building any of it.

The CTRMA mission is to implement innovative, multi-modal transportation solutions that reduce congestion and create transportation choices that enhance quality of life and economic vitality. Not make loads of money by tolling every road we have in Travis County.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition. RE: PROPOSED SH 45SW/MOPAC TOLL LOOP

RESPECTFULLY, I DON'T SEE HOW THIS PROJECT MAKES ANY SENSE. IT WILL NOT SOLVE TRAFFIC ISSUES, MERELY MOVE THEM. MORE IMPORTANTLY, IT WOULD HAVE AN ADVERSE IMPACT ON THE LAKE AND THE GREENBELT, BOTH ECOLOGICALLY AND AESTHETICALLY. FINALLY, IT'S NOT A GOOD USE OF MONEY. UNDER THE BEST POLITICAL CIRCUMSTANCES, THESE WOULD ALL BE PROBLEMS THAT CALL THE WISDOM OF THIS PROJECT INTO QUESTION. ADD TO THIS THAT THE POLITICAL CIRCUMSTANCES SURROUNDING THE PLANNING AND FUNDING OF THIS PROPOSAL RAISE FURTHER QUESTIONS ABOUT TRANSPARENCY, ACCOUNTABILITY, AND WHETHER THIS IS ACTUALLY IN THE PUBLIC INTEREST.

A BETTER SOLUTION WOULD BE TO REMOVE TOLLS FROM SH 130 TO DRAW TRAFFIC AWAY FROM I-35 AND SAVE MOPAC. THIS IS ALREADY A PRIORITY ACCORDING TO TX-DOT'S OWN BLUE RIBBON ADVISORY COUNCIL. PLEASE CONSIDER THIS MORE CAREFULLY AND ONLY INVEST OUR LIMITED TRANSPORTATION DOLLARS IN PROJECTS THAT ACTUALLY BENEFIT THE COMMUNITY.

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 2:35:37 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

COMMENTS ON VIRTUAL OPEN HOUSE

Jennifer	Voss	11/17/15	Thank you for taking the time to review my comments. This topic is very important to me and many others. I request that this comment be registered in the official comments. Mopac currently operates as a local highway serving primarily local commuters. Converting Mopac to be a western alternate to I-35 has never been studied or carefully considered by CAMPO, the City of Austin, Travis County, the CTRMA, TxDOT, or the Austin community. Mopac traffic already exceeds capacity during peak hours. What sort of planning mistakes would we see when adding more traffic to South Mopac by constructing the SH 45 SW toll road at this time and prior to having a comprehensive plan for South Mopac and the Lady Bird Lake bridge? Additionally, the Austin City Council, upon recommendations from the Imagine Austin Citizens Task Force, voted to exclude the proposed SH 45 SW toll from the Imagine Austin plan. And...the Lady Bird Johnson Wildflower Center has identified the proposed construction of SH 45 SW Phase I as posing a threat to the viability of the Center as a result of the added traffic, noise, and other impacts that would be added to South Mopac. While traffic flow and safety improvements on South Mopac are very much needed, any such improvements would likely be overwhelmed when traffic is directed from Interstate 35 and FM 1626 to Mopac by way of the proposed SH 45 SW, causing real harm to Mopac neighbors and current Mopac commuters. I full heartedly support the Lady Bird Johnson Wildflower Center and others in calling for a comprehensive study of the proposed SH 45 SW/Mopac tolled loop expansion prior to construction of SH 45 SW, Phase I and that such comprehensive study analyze alternatives that would improve north-south traffic flow on I-35, SH 130, and Mopac without diverting I-35 traffic to Mopac via the proposed SH 45 SW. I urge the Central Texas Regional Mobility Authority and TxDOT to undertake the above-requested comprehensive study before initiating construction on SH 45 SW. Additionally, all parties should work together to initiate immediate non-tolled improvements to Mopac that would (or could) include restriping of existing shoulders to add a lane; designating a lane a High Occupancy Vehicle lane during peak hours; providing transit and park and ride options; strengthening ride share opportunities; and improving intersections. Thank you, SW Austin resident and long-time citizen that uses Mopac daily and is a mother of a future student at Austin High School Jennifer Voss 11/17/2015

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Mary N. Wade

DO NOT CONNECT MOPAC TO I-35.
SH 130 WAS SUPPOSED TO BE THE I-35 BY-PASS — PAY OFF SH130 SO IT CAN BE THE BY-PASS WE WERE TOLD IT WOULD BE.

STUDY STRIPING AN HOV LANE. FASTER, CHEAPER, BETTER.

WE NEED GOOD BUS SERVICE IN S. AUSTIN. BUILD PARK + RIDES TO MAKE TRANSIT WORK.

THE CITIZENS OF AUSTIN DESERVE A SAY IN THESE DECISIONS - SOMETHING BEYOND HAVING OUR COMMENTS RECORDED FOR POSTERITY.

Make SH130 free and make I-35 underground in Austin to allow East West city streets.

Create HOV lanes on MOPAC

NO Toll Roads!!!

Design for safety of Austin High School.

No widening of Cesar Chavez!!!

No connection of SW 45 TO I-35,

John Whitfield

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Ms. kimberly wallace

COMMENTS ON VIRTUAL OPEN HOUSE

Bob	Ward	11/20/15	GENERAL COMMENTS 1) Elevated structures should be pursued if they provide the safest and most efficient design for reducing congestion - even if other comments have esthetic concerns. DOT can mitigate those concerns by seeking world class architectural designs. Almost half of Austin's most identifiable structural landmarks are bridges. Renown architects like Santiago Calatrava (who already has designed a pair of bridges in Dallas) can eliminate most concerns over personal esthetic concerns. 2) The final design needs to include 2 express lanes. The future of mass transit efficiency will include greater use of express busses of all sizes originating from various points. Variable pricing combined with multiple lanes will provided the greatest flexibility and offer the most transportation choices for all users while maximizing the peak capacity in both directions. It is possible that the incremental cost for a second lane can be offset by addition tolling fees collected from a second lane. 3) Direct access into and from the downtown area from express lanes will provide the greatest flexibility for future design improvements to Cesar Chaves and the 5th and 6th Street corridors. The mass transit express routes will benefit most by eliminating weaving especially for extended length vehicles. SHARED-USE PATHS 1) Shared-Use Paths should be included on both sides of MoPac from the Mopac Bicycle and Pedestrian Bridge Project (phase I &II) to Barton Springs Road. 2) Existing sidewalks should be widened in this area where feasible to meet contemporary Shared-Use Path design standards. 3) Where the Shared-Use Path intersects streets and driveways, it should be curved to be inset a car-length to better alert vehicles to bicyclists and pedestrian from BOTH directions and Path users to approaching vehicles. 4) Driveway and side streets controlled by stop signs should have "Raised Crosswalks" which exceed ADA requirements and better accommodate all users. 5) Raised crosswalks should have sinusoidal vehicle approaches to better accommodate motorists. 6) Trail Crossing and downward arrow sign assemblies should be provided at all non signalized Shared-Use Path Crossings. 7) Route path closest to property lines and add shade to increase comfort level of service for path users. 8) Existing Shared Use Path from Barton Springs Road to Ladybird Lake should be repaired and modified where needed to meet Shared-Use Path standards. 9) Shared-Use Path south of MoPac Bicycle and Pedestrian Bridge project should connect all the way to the Violet Crown Trail at the intersection of Brodie Lane. BEE CAVES INTERSECTION 1) SB Frontage Road has limited sight distances to the intersection, faded pavement markings and longitudinal pavement joints do not give motorists the best lane guidance. 2) EB on Bee Caves the lane shift is too abrupt (like entering a turn lane) leading some motorists to swerve from left to right. This could be smoothed out. 3) The transition from WB Barton Springs Road to the frontage road is too tight of a radius for conditions leading some motorists to drift onto the shoulder used by bicyclists and pedestrians.

COMMENTS:

If we are going to do this project, we need to make the biggest impact possible to the most people. For those of us that drive MoPac every day, we feel the traffic delays. Please seriously consider two lanes each way with direct connect down town. With all the people moving to Austin daily, we need more capacity!!!

This form may be used to provide written comments on this project. Any questions placed on this form will not be considered an open records request and will not be treated as such. If you have an open records request, it must be submitted under a separate letter.

COMMENTS ON VIRTUAL OPEN HOUSE

Eric	Watts	11/1/15	Dear CTRMA Staff and Board Members, This is a copy and pasted plea from our household. We love the lake and see no great reason to ruin the charm of Lady Bird with a car based elevated road. I also think the idea of a toll road and express lanes is unnecessary. However, it is clear that the ship has sailed and the powers that be, are determined to privatize our roads and join 45 to MoPac come hell or high water. Since it's going to happen no matter what, PLEASE do all you can to limit the environmental impact and capital required to complete this job. Also PLEASE do all you can to ensure that the city run Nature's Way Preschool is not greatly affected by these decisions. Please build a wall to protect them from road noise. Please allow for more pedestrian path width to buffer the school from the road. Remember Austin has a rush hour problem, NOT a traffic problem. Please work on ways to promote carpooling and public transit. A public transit station downtown would be great. Electric railways. Dedicated bus lanes. We lived in NYC for 15 years. The traffic here is NOTHING. The public transit system here is grossly under funded and under supported. The priority is given to single drivers in cars and now better service for only those that can afford to pay the premium. But, like I said before, it's really a lost cause, so just please do the BEST you can to limit your impact. Please be smart and don't build a super highway for a not so super rush hour. Please do not add a double-decker over Lady Bird Lake or Double Decker Wishbone bridges over MoPac. I support the addition of 2 Toll lanes each direction without elevated lanes: The 2-lane each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use and with the 2040 Long Range Plan. The 2-lane each direction without elevated lanes option has the lowest impact to the parks and neighborhoods while still significantly improving travel times and capacity on our roadway. The 2-lane each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with a Double decker over Lady Bird Lake. The 2-lane each direction without elevated lanes option provides reduced congestion and travel time savings for all roadway users in 2035 and is only slightly slower than the option with 40-50 feet elevated Wishbone bridges over MoPac. The 2-lane each direction without elevated lanes option cost is $30 Million less than the Wishbone concept and $40 million less lane the Double Decker Decker concept. The 2-lane each direction without elevated lanes option minimizes impact to our water quality and lowers the impact on the natural and human environment by not building elevated structures near neighborhoods or Lady Bird Lake. The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. I also support the addition of the sidewalk on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of an 8' sidewalk I would like an 11' multi-use path to accommodate bikes and pedestrians and connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project. Please make sure to fully consider the social, economic, and environmental consequences. Please ensure the plans you choose support our public park land use, green spaces and community values!

Subject: MOPAC/LOOP 1 SOUTH

Date: Thursday, November 12, 2015 4:54:54 PM

Dear CTRMA Staff and Board Members,

I may be repeating a previous email, but with all the deadlines for voices to be heard and phases, I've decided to error on 'crazy' and write you again.

I'm not a big fan of copy and pasted letters, or activist type groups that are often myopic in their views. However the points in the below 'copy and pasted' letter from this group are neither self serving or myopic. What I see as a resident of Travis County is an attempt to push a larger agenda of connecting 35 to 45 and MoPac. No one knows what we'll experience once we open the floodgates to 10's of thousands of cars heading north from Hayes County. What we are looking at is the promise of big transportation changes paid for in the form of a Toll Road.

Yes Austin has a rush hour. Will a few more lanes help? Perhaps. Will it cure the problem? I don't believe so. Northern Hayes County is experiencing a huge building boom along with Austin. Consequently the infrastructure as it is will be stressed. Mass transit plans parallel to MoPac were voted down this year by the communities that most frequent MoPac via car transit. Now these same communities are given the keys to car and promised bigger roads and short commutes. Thousands and thousands of dollars in research and planning has been put in to push the agenda for larger roads. But I have two questions. Why are mass transit solutions not gaining traction and will these express lanes terminate in a fashion that actually helps with traffic?

I don't know why people love their cars in Austin so much. I spent 15 years riding the subway in Manhattan and Brooklyn. It worked really well. The culture here has become twisted towards more car travel. Not less. I am yet to see an HOV lane, a bus lane, a train station that terminates in a central downtown location, or light rail proposals that even comes close to the man power being used to push this 45 loop agenda. For a city that is priding itself on Green Initiatives and HiTech solutions, I can't think of a more detached solution than building double height express lanes for the wealthy.

As for road termination, is 4th street going to be able to handle the influx of cars spilling on to it at such a high rate or are we going to see the type of bottle neck that I saw for years in NYC at river crossings? Thousands of cars all going to one small area causes a traffic jam no matter how large the roads are that lead to the destination.

I digress, and cede to the powers that be. The political machine has decided and that toll roads are going to be put in place. It's been determined that we'll sell our roads to the toll industry. It's been determined that Bear Creek with have another leg of 45 on it before 2050. It's all for

progress. Right? Well what if we just did things with a little dignity and didn't build a double decker road that led to nowhere? What if we had some restraint and didn't ruin the big sky look of Downtown Austin? What if we took great care to protect our limited green space in the time of unprecedented growth? Growth is possible, but reclaiming nature and lowering bridges will be impossible. Once it's paved, that's it. It's PAVED.

On that note PLEASE take care of the Botanical Garden, Austin Science and Nature Center, the Nature's Way Pre-School (yes you want to build a huge super highway 50' from a city run preschool, where kids go to learn about nature) and Zilker Park. Please tread lightly, think sound barrier walls, pedestrian buffer lanes, more mass transit, staggered work days, incentives for carpooling. This toll road is not a magic bullet, so you can reduce the caliber from canon size to BB gun if you combine it with other plans. I cringe to think there will one day be an administrator, engineer, politician known as the person who destroyed the charm of the city so we could have more car traffic. Let's not let that be our future.

Have a look Robert Moses. He obsessed over not letting roads and public transportation share the same path. One of his greatest flaws as a planner, was preventing mass transportation to flourish next to highways. I pray Austin's planners have a better view regarding the coexistence of the two transportation options.

PLEASE let's do this the SMART way and consider all of the ideas that I 'copy and pasted' below.

Thanks,
Eric Watts

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

ADDITIONAL IDEAS FOR YOUR LETTER:

I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road.

A double decker over Lady Bird Lake or two double decker wishbone bridges over Mopac at Bee Caves Road will be 45-50 feet above ground level and will impact the hill country feel,

beauty and charm of this special downtown Austin area, and will transform the character, look and feel from peaceful and green to highly urbanized and industrial. Elevated lanes will also add more noise and light pollution (than not building up) to Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, and Austin High school.

I request CTRMA perform an Environmental Impact Statement (EIS) instead of an Environmental Assessment (EA) so a more comprehensive and detailed assessment of impacts can be made available for public review because the project will significantly impact land over the Edwards Aquifer recharge zone, Zilker Park, the Nature and Science Center, Zilker Botanical Gardens, Lady Bird Lake, Austin High School and City of Austin and City of Rollingwood surrounding neighborhoods.

With the significant changes** in the 2015 traffic data presented to the public since the Feb 2015 open house and the major changes approved by voters for regional non-tolled road funding in the recent election, CTRMA's current study should reexamine alternatives to converting MoPac South into a toll road. HOV and transit only lanes should be compared with the toll and general purpose lane options proposed to give the public an understanding of why toll lanes are being considered as the only option. Along with a no-build scenario, options such as expanding telecommuting, ride sharing, and rail should be considered.

**The last MoPac South Open house February 26, 2015, peak period traffic data between Cesar Chavez and Slaughter Lane was:

- Northbound morning (7-9am) 15 minute drive ; 2035 no build 47 minute drive
- Southbound evening (4-6:30pm) 12 minute drive ; 2035 no build 45 minute drive

**The current MoPac South Open House November 21, 2015, peak period traffic data between Cesar Chavez and Slaughter Lane is:

- Northbound morning (7-9am) 23 minute drive (53% increase) ; 2035 no build 52 minute drive (11% increase)
- Southbound evening (4-6:30pm) 16 minute drive (33% increase) ; 2035 no build 51 minute drive (13% increase)

If toll lanes must be built, the 2 Toll lanes each direction without elevated lanes option will have the least impact to the park, schools, recreation centers and neighborhoods:

- The 2-lanes each direction without elevated lanes option meets all of the MoPac South project "goals and objectives" set by CTRMA and this option is consistent with the CAMPO 2040 Long Range Plan. Providing direct access to toll users into the downtown area is not a goal or objective identified by CTRMA or CAMPO for this project.

- The 2-lanes each direction without elevated lanes provides consistency with local plans for park land use because it has the least impact to the park land. Adding elevated lanes damages Austin's parks, restricts community members who use the open spaces, and damages neighboring neighborhoods.

- The 2-lanes each direction without elevated lanes option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

- The 2-lanes each direction without elevated lanes option provides reduced congestion and

travel time savings for all roadway users in 2035 with results comparable to both the Double decker over Lady Bird Lake and double decker wishbone bridges. If free lanes are added to match the capacity of other plans, more congestion and time savings can be achieved without building elevated lanes.

- The 2-lanes each direction without elevated lanes is the more fiscally responsible option because the cost is $30 Million less than the double decker wishbone bridges and $40 million less lane the double decker over Lady Bird Lake concept, but the results are almost identical.

- The 2-lanes each direction without elevated lanes option minimizes impact to our water quality because it will mean less construction and less concrete over our aquifer and near Lady Bird Lake than if elevated structures were built.

- The 2-lane each direction without elevated lanes option lowers the impact on the natural and human environment because there will be less impact to the park and neighborhoods, less noise pollution, less light pollution and less ascetically unattractive bridges than if elevated structures were built.

- The 2-lane each direction without elevated lanes option will be more likely to be delivered in a timely manner because it requires no right of way be taken from Zilker Park, Lady Bird Lake or Lamar Beach Park. There will also be more support from neighboring cities and residents if elevated structures are not included in the plan.

- The 2-lane each direction without elevated lanes provides toll road users and emergency vehicles plenty of time and ability to safely maneuver and exit downtown. If there is an accident on the elevated portion of the toll lane it could actually make response times slower or impossible for emergency responders as there will be no way to exit the elevated structures until fully descended.

I also support the addition of an 11' multi-use path on the west side of MoPac from Lady Bird Lake to Barton Creek Mall. Instead of the proposed 8' sidewalk, I would like to see an 11' multi-use path that can accommodate both bikes and pedestrians and will connect and seamlessly with Phase III of the MoPac bicycle and Pedestrian project.

Please make sure to fully consider the social, economic, and environmental consequences of building up. Please ensure the plans you choose support our public park land use, green spaces and community values.

Copy and Paste the sample letter to get started --- and then make it your own!

--
Eric Watts

..ole Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 9:05:22 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Nov 18, 2015

Ms. Abby Tomlinson
Austin, TX

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mr. Jesse Weber

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

I am already horrified at how the large barrier walls block off near west Austin from other neighborhoods.

How about instead of toll roads, put a light rail off MOPAC to get the commuter traffic off MOPAC?

DO NOT TURN MOPAC into an IH 35 West! (by connecting it to IH 35 (via 45 proposed loop?)

Keep west Austin & Town Lake (AKA Lady Bird Lake) beautiful & quiet -
NO DOUBLE decker roads over MOPAC!!

Toll roads only make things worse for the core inclusives. We already pay high land taxes for the privilege of living close in.

HOV's (not of toll roads) during high traffic times.

Take overflow off IH 35 & put it on already existing east toll roads! make it free for truckers going across Texas, not bringing them to W. Austin!

Dear TxDOT and CTRMA officials:

As a long-time Austin resident, homeowner, tax-payer and resident of near-downtown Austin, I strongly object to CTRMA's toll lane plans for Mopac South. In fact, I oppose the toll-road concept in general. I view tolling as just another form of regressive taxation, and toll roads ultimately pose a huge debt burden while lining the pockets of foreign conglomerates. Why not create non-toll HOV lanes (common in California and many other parts of the country) to promote car-pooling during rush hour? I wish CTRMA had done that with North MoPac; I predict that when (or if) the Lexus lanes open on N. MoPac, they will do little to alleviate the crushing traffic.

Furthermore, I strongly believe we must keep Mopac local and not connect it to I-35, according to your master plan. And finally, you must not engage in any massive road-building projects in the environmentally sensitive Edwards Aquifer area without completing all necessary environmental impact studies and releasing ALL information to the public.

It's time that Austin consider other innovative, cost-effective strategies for mobility other than tolling, which is a costly and elitist mode of transportation. I will be closely following the Rocky Mountain Institute's mobility initiative in Austin and looking forward to technology-driven solutions to our traffic woes that will not involve the strangulation of Austin by toll roads.

I've lived in Austin for nearly 20 years, and I've seen such growth - some good, some bad. The continual influx of people from all over the country has lead to an increase in housing (including housing types), a vibrant and growing entertainment and food scene, but also the ever-present nuisance of increased traffic. We have been a city of non-actors, with 7-10% voter turnout on a regular basis. The few make the rules for the majority, and when this happens, only the minority is actually heard. Traffic is one of the worst things about this city - I put it right up there with affordability (or, lack of affordability). We must enhance and expand our roadway networks, in addition to alternative forms of mass transportation. Mopac South MUST be done, and must take full advantage of existing rights-of-way for maximum benefit and expansion. PLEASE MAKE THIS HAPPEN!

COMMENTS ON VIRTUAL OPEN HOUSE

Matt	Welch	11/11/15	I am concerned with the many options presented by CTRMA thus far. I believe that the proposed changes will have a significant negative impact on the city, particularly the changes proposed for the areas in and around Lady Bird Lake, Cesar Chavez, Zilker Park, etc. I worry that adding additional lanes and encouraging greater traffic flow in these areas will significant detract from the inner-city experience that makes Austin so special. Furthermore, I suspect that such highway changes will ultimately have little, if any, positive impact on the traffic congestion experienced on MOPAC. Adding lanes may have a negligible impact due to the oft-observed phenomenon of 'induced demand', particularly in light of the goal to connect MOPAC, Highway 45, and I-35. Instead, I believe the CTRMA should give due consideration to a more creative and holistic solution that incentivizes more efficient modes of transportation, like buses and carpools, and discourages, rather than facilitates, the inefficient, sprawling type of development that has largely characterized Austin's growth over the last 75 years. Finally, because the proposed changes neither contribute to the built environment, nor significantly improve mobility for ALL residents, I believe the proposed changes are wholly inconsistent with the Imagine Austin Comprehensive Plan, which embodies the vision for Austin shared by its residents. Thank you, Matt Welch

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

It is critical to study the full potential impacts of all proposed alternatives – and to include an open public participation & comment process. Failure to take action before this study & comment process is not in conformance with your NEPA duties. The Austin community (and all communities) will be best served in the future by a well-balanced transportation network that truly incorporates viable options for all modes and that discontinues our sprawling.

To:
Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 11, 2015 10:35:11 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Stuart Werbner

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Local solutions for Local Traffic (as opposed to Texus Lancs for suburbanites/exurbanites)

If anything, our schools, such as Austin High need more land, more traffic buffering, more green buffering; not less.

Any traffic solution must be accessible to & affordable for all Austinites.

Mopac is/was intended to be a local highway for Austin and its most immediate suppurbs. I don't want to see it made into an I-35 lite or an interregional highway. It would be counterproductive to add more traffic to north Mopac soon after completing the current improvements. Actually, it's plain insane!

We need to focus more intensely on mass transit and bike/ped solutions than a destructive

what about SH 130??

Make it cheaper to reduce traffic on I-35

Honorable Thom Farrell, Mayor, & Members of the Rollingwood City Council

RE: Please take action oppose tolled, elevated lane expansion of Mopac and the connection of South Mopac to Interestate 35

Dear Mayor Farrell and Members of Council:

Please take action to oppose both the expansion of Mopac with tolled and elevated lanes and the connection of South Mopac over to Interstate 35 with the proposed SH 45 SW toll road. With limited access at the south end, Mopac currently serves local commuters. If South Mopac is expanded and connected to I-35, it will be converted from serving local commuters into an alternate I-35 serving long-distance, inter-regional car and truck traffic. This would make traffic on Mopac worse, not better for current Mopac commuters, including Rollingwood residents.

Thank you for your consideration.

Form Submission - New Form - MOPAC/LOOP 1 SOUTH
November 19, 2015 at 7:58 PM
[redacted]

Name: Alyssa West

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built the "2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Thank you for your thoughtful consideration,

Alyssa West

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Emily Wethington

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 2:55:23 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Form Submission - New Form - MOPAC/LOOP 1 SOUTH
November 19, 2015 at 6:25 AM
[redacted]

Name: Brian White

Email Address: [redacted]

Subject: MOPAC/LOOP 1 SOUTH

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial

If toll lanes must be built the "2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

Brian White

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Ms. Gail Whitfield

Date: Monday, November 09, 2015 5:00:17 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Improve Mopac traffic now with consistent lanes coming into 360. Mopac needs continuous flow and right now there are at least three constriction/pinch points where load capacity is overwhelmed and traffic comes to a stop.

Toll lanes are TAXES. Stop burdening the people with TAXES when you let the Corporations get off with paying NOTHING and screwing up the entire system. I am sick of this nonsense. Utilize H 130 as you PROMISED you would.

Liars.

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Wait until N. Mopac opens so we can see how it functions. Buses and HOV lanes are part of the solution. Solution must include all roads in area -

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

JEFF WILLIAMS [redacted]

Printed Name Address

Additional Comments:

NOT A BIG FAN OF ANY EXTENSION OF MOPAC BUT IF ANY ADDITION IS MADE, WOULD MUCH PREFER THE 2-TOLL-LANE OPTION OVER AN ELEVATED SOLUTION.

Here's a vote for underpasses at Slaughter and Lacrosse (less visibility and noise) but please construct them in the normal way, not that strange layout they use in France. It's too dangerous to use unorthodox traffic patterns. The situation at the Y at Oak Hill is so, so odd.

Please minimize the noise and visibility from the Wildflower Center. The models I've seen from SOA are really sad.

Lastly, construction should begin at the most congested area, I.e., Cesar Chavez, and then move south. Thanks!

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Dear Ms. Tomlinson,

According to the Texas Transportation Institute, Austin ranks 10th in the nation for the worst traffic congestion. MoPac is listed in the top 50 most congested roads in Texas. Please move as quickly as possible to construction of the MoPac South Express Lane project. We need to add the maximum additional capacity available within existing right of way.
Please build two Express Lanes in each direction as described in the CAMPO 2040 Plan.

We need a way to get downtown without weaving through traffic. Please build a direct connector from the Express Lanes into and out of downtown Austin to provide a reliable route for cars, transit and emergency responders. I support the opportunity to enhance water quality treatment measures on MoPac by implementing the latest, most modern technologies available with this project. Don't let those that are spreading misinformation slow down this project any more. Build it Now!"

Sincerely,

Mrs. Talley Williams

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 11, 2015 11:05:18 AM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT back up and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by removing the tolls on this route. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
Brooke Wilton

Form Submission - New Form - Mopac/Loop 1 South
November 17, 2015 at 7:37 AM
[redacted]

Name: Joanna Wolaver

Email Address: [redacted]

Subject: Mopac/Loop 1 South

Message: Dear CTRMA Staff and Board Members,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial

If toll lanes must be built the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose support our public parkland use, green spaces and community values.

Sincerely,

Joanna Wolaver

Court Reporter Comment:

MS. JUDY WOODS:

I am opposed to the Mopac South Project. I took a look at it. I am astounded that you all want to put flyovers on the most sensitive parkland in Austin. It is the most environmentally sensitive parkland in Austin and maybe part of Texas, because it goes right over the aquifer and the Barton Springs recharge zone. And so I'm opposed to that. It's going to give Barton Springs a lot more runoff and dirty up the waters. And that's going to be disastrous. Also, this is where people come to recreate. Austin brings thousands of people into town to go to Fun Fest, Austin City Limits, various concerts down on the shores of Auditorium Shores and the Zilker Park area. This is going to really who wants to go to a festival where it's just ugly and a great big super highway going through? The money that is spent on this project should go to improving I-35. Let's build a flyover over I-35. What's wrong with that? We don't want it here in our parkland area in Austin over Mopac. Mopac is a neighborhood parkway. We don't want it to be a super highway, and we certainly don't want it to be a loop around Austin to take the traffic off of IH-35. The traffic on IH-35 can be alleviated by allowing people to get on SH-130 and by lowering either lowering the tolls or getting rid of the tolls on SH-130 so that more of the truck traffic can go out SH-130 and more of the car traffic would be encouraged to go that way. If you want a solution, that would be a good solution. We don't want Mopac to carry traffic that's a loop through or around Austin. This is our most sensitive neighborhood area, recreational area, living area, environmentally sensitive area because of the recharge zone. Let me repeat that. This is a recharge zone for water we drink, water we use, environmentally sensitive species, beautiful vegetation growth. We don't want extra roads going through there. And we certainly don't want them going through our middle-class/high-income neighborhoods. That's going to be another thing, to mess up our neighborhoods and lower the value of our neighborhoods. What we believe is that TxDOT and CTRMA what TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paints, smart lanes, not more pavement and tolls. We do not the neighborhoods feel like flyovers would be very detrimental to our way of life, having a huge highway go through our neighborhood with flyovers, a lot of loud noise, dirty traffic, dirty runoff. This is going to affect the Austin Pets Alive Volunteer Center there that helps a lot of little animals be adopted out. It's going to affect the Zilker gardens. The high school is certainly just Austin High School is just astounded that you all are planning on putting a big super highway over the high school. That can even be dangerous. People can

be using the hike and bike trail for years and years. And we ask that that hike and bike trail be improved and developed. Over the last 40 years, I've watched it be improved and developed because we wanted to go there. Who wants to walk on the hike and bike trail and enjoy the birds and the vegetation when right overhead is a huge, loud, noisy super highway. And okay. So you're going to say, "Oh, no. That's not a super highway. "Okay. So it's not. We don't want that going over our recreational area. That's an area that keeps people in Austin healthy. People go there to run, to fish, to picnic, to bring their children, to teach their children things. They go there to swim, to play games, to play baseball, soccer. Sometimes little neighborhood children will practice football or just playing running tag out there in the Zilker Zilker Park fields. It's too close to Zilker Park, what you're developing. And we don't want that. This is very disruptive to our way of life. And it's an environmental disaster. And we want you to consider these comments that I've entered into your comment log. I thank you so much for taking my comments and for considering these conceptions and ideas in deciding not to build this atrocious overhead flyover. The people in Austin are very passionate about not having this. Even though they're not able to come out and make their own comments, I hope that I represent a lot of people that don't want this. I know a lot of people weren't able to come tonight. They probably won't figure out how to send their comments in to you, but I want you to consider my voice as representing thousands of people in Austin. And I thank you so much again.

To:
Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 4:05:16 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse, not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

A huge part of what makes Austin so beautiful and unique is the fact that it's possible to see so much of the river and the greenbelt in the heart of the City. The area around Austin High and Zilker Park is a treasure on so many levels -- civic, cultural, ecological -- that we can't afford to change it without careful consideration. We need to protect what makes our city home.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long distances.

Please use your authority to insist that common sense and basic planning take place before we build a second Interstate 35 through Austin and ruin the heart and soul of Austin along the way.

Sincerely,
JO WRIGHT

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Building new lanes on South Mopac is a problematic proposal for several reasons. First, as an Austin High student the proposal double decker bridge and flyover exit onto Cesar Chavez would increase traffic for AHS students and put them in further danger. Second, the proposal will actually add traffic after completion and only worsen commuting in Austin.

Third, the added pollution will push the Barton Springs salamander towards extinction due to pollution of Edwards Aquifer. An HOV lane, increased light rail for commuters, and other high-volume mass transit are all better options than the current proposal.

Subject: Study the whole loop project first before building SH 45 SW
Date: Friday, November 20, 2015 7:35:19 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

MOPAC/LOOP 1 SOUTH PUBLIC COMMENT

Dear CTRMA Board Members and Staff,

In addition to other comments I may submit, I want to express that I do not support elevated toll lanes of any kind over MoPac close to the downtown area. Please do not add a double decker over Lady Bird Lake or two wishbone bridges over MoPac at Bee Caves Road. Elevated lanes will impact the hill country feel, beauty and charm of this special downtown Austin area, and will transform the character from peaceful and green to highly urbanized and industrial.

If toll lanes must be built, the"2-toll-lane each direction without elevated lanes" option has the lowest impact to the park, lake and neighborhoods while still significantly improving travel times and capacity on our roadway, with travel times in 2035 that are within 3-5 minutes of the double decker options.

Please ensure the plan you choose supports our public parkland use, green spaces and community values.

Sincerely,

Terra Yesne

Terra Yesne [redacted]

Printed Name Address

Additional Comments:

I am very concerned with the plans to redo mopac, specifically concerned with any elevated lanes that will ruin the natural beauty of the downtown area. Not only am I concerned with the esthetic of double decs, I'm concerned w noise + light

pollution. austin is a beautiful city w an amazing downtown and adding any elevation to an already ever expanding sky line will obstruct views. we are building a home very close to mopac. We specifically bought this lot for the unobstructed views of Austin & downtown. ONES will directly impact us as we are specifically building for the amazing views. Please don't do any elevation WE prefer 2 express lanes without direct connections.

NO ELEVATED LANES!

PLEASE!

Subject: Study the whole loop project first before building SH 45 SW
Date: Tuesday, November 10, 2015 1:00:18 PM

Dear CTRMA Boardmembers, TxDOT officials, and Austin area local, state and federal officials:

Please use your office and personal authority to demand that CTRMA and TxDOT see the big picture and study the entire proposed SH 45 SW/South Mopac expansion toll loop as the real project that is currently being pushed, piecemeal, onto the Austin community and current Mopac commuters.

This comprehensive environmental, social, economic, and financial study on the entire 18-mile long 45SW/South Mopac tolled loop (from I-35 south of Austin to Cesar Chavez north of Lady Bird Lake) should be completed before any part of the loop is built, including Phase I of SH 45 SW.
** The effect of expanding Mopac has impacts to the local highway nighbors, including Zilker Park, Barton Springs, Deep Eddy, Lady Bird Lake, Austin High School and so many more cherished sites that make Austin the attractive and vibrant community it is today.
** We do not need another I35 running on the current Mopac.

This comprehensive study should also examine alternatives to converting Mopac into a second Interstate 35 through Austin, including improving I-35 itself and SH 130, expanding telecommuting, ride sharing, and transit options, and moving forward with the Lone Start passenger rail project between Georgetown and San Antonio.

** In the interim, please prioritize making the SH 130/SH 45 SE eastern bypass function as traffic relief for I-35, as originally intended, by reducing or removing the tolls on this route -- - and/or adding tolls to I-35 such that SH 130 is a more attractive option. Also, improve Mopac itself by using existing pavement and bridges more efficiently, by creating a rush hour HOV lane, and by improving intersections at Slaughter Lane and LaCrosse without building a massive toll road for interstate traffic.

Because of the limited access at the south end, Mopac currently serves local commuters. The CTRMAâ€™s piecemeal push to expand Mopac to a total of 12 to 16 lanes and connect the southern end to Interstate 35 via the proposed SH 45 SW toll road would, in effect, convert Mopac from a local commuter highway into a second, or alternate, Interstate 35, serving inter-regional and interstate truck and auto traffic. The current piecemeal study process, which chops up this project into four separate pieces, ignores this fundamental change of Mopac from a local highway to an interstate thoroughfare.

The current, piecemeal conversion of Mopac to Interstate 35 West emerges as a byproduct, or fait accompli, of building each piece, rather than as a choice, carefully analyzed, with consideration of alternatives that would improve north-south commuting without redirecting I-35 traffic to Mopac. As proposed, the expanded capacity would be overwhelmed with I-35 traffic immediately; only those long-distance commuters willing and able to pay tolls would benefit, while everyone else would suffer even worse congestion than today.

The current, piecemeal approach also covers up the harm and cumulative impacts to multiple

natural and cultural treasures that make Austin Austin, including the Lady Bird Johnson Wildflower Center, Zilker Park, Austin High, Lady Bird Lake Park, Austin High School, the Edwards Aquifer, Barton Springs, and the endangered Barton Springs and Austin blind salamanders. A comprehensive study would show all of these costs to our community: the piecemeal approach covers them up.

Taking the time to study the entire tolled loop project and better alternatives to improving north-south commuting, would allow us to prioritize immediate spending on projects that would benefit, rather than harm, the Austin region.

As proposed, toll revenues will only pay half or less of the costs; taxpayers will pay the rest, subsidizing the toll lanes that only benefit those who can afford to pay and those travelling long dista

RE: Comments for Mopac South Environmental Study Open House public comment period

Dear TxDOT, CTRMA and Public Officials,

Please accept these comments for the official public comment period, submitted by way of the November 9 Community Forum held by Travis County Commissioner Brigid Shea, Austin Mayor Steve Adler, Austin Councilmembers Kathie Tovo and Leslie Pool, and the Keep Mopac Local coalition.

Keep our city protected. We need to look at our city's culture / lifestyle and study all of this before building it. Instead of building lanes on South Mopac to alleviate future I-35 traffic, utilize the VERY EMPTY SH-130 as an off shoot for I-35. The fact that you built SH-130 with the same purpose and no one uses it should tell you that the idea of a toll road on Mopac will not be successful. Take the tolls off SH-130 and let our community use those roads. Have it be the bypass it was intended to be. Fix I-35 first; don't prime Mopac to be a construction dump as you fix I-35.

Right now, without spending much money, paint over HOV lanes on Mopac.

Focus on how to shift the culture of our city to public transportation.

These proposals will ruin all that is good about our city.

* Pay-off SH-130

Subject: [SPAM] Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 2:25:39 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

I am very interested in the adjacent projects for bicycles and pedestrians (as well as runners) relative to the South Mopac/ Hwy 71 project. As you know the Parkway project does not include the connection between Joe Tanner and the YBC Trail , section 1, the Urban Trail. There are many questions regarding the issues of Water Quality associated with Gaines Creek and Sycamore Creek that permeate the Travis Country neighborhood en route to Barton Creek and are integral to the plan for not only the trail but the elevated toll lane at the intersection that will be going West. Abatements for sound given the deceleration/ acceleration at the intersection hopefully will be addressed to protect the neighbors and wildlife. Is there a means to include the planting of trees along the City of Austin property adjacent to the highway - not specifically for sound abatement as this would not apply-but to offer a buffer and reduce impact?

Subject: Study the whole loop project first before building SH 45 SW
Date: Wednesday, November 18, 2015 1:20:17 PM

Dear TxDOT and CTRMA officials:

Please include these comments in the public record on the proposed 8-mile long "Mopac South" project.

Study all of it before building any of it. The "Mopac South" project is really just one of four segments of the larger 18-mile long Mopac South and SH 45 SW toll expansion loop that should be studied comprehensively as a single project. Building SH 45 SW first will dump 30,000 or more cars on South Mopac, making traffic worse not better, while causing real damage to the Barton Springs recharge zone and the Lady Bird Johnson Wildflower Center.

Make it an independent study that considers non-toll alternatives that avoid converting Mopac into a second Interstate 35 through Austin. The CTRMA toll agencyâ€™s 4-segment, piecemeal approach only considers toll options. They make more money the worse the traffic is on the free lanes. We need someone else to study non-toll options that benefit everyone, not just the few people who can afford to pay $10 to $13 one-way during rush hour.

Relieve traffic on I-35 by making SH 130 function as intended. SH 130 was built to relieve traffic on I-35. It is underutilized because of the high tolls. Implement TxDOTâ€™s Advisory Committee plan to relieve I-35 congestion by making SH 130 and SH 45 SE free. Letâ€™s make the I-35 bypass we already have work, rather than making Mopac a new I-35.

Improve Mopac traffic now with rush hour HOV lanes, park and rides, enhanced ridesharing, and improved intersections at Slaughter Lane and LaCrosse.

OPEN HOUSE - MoPac South Environmental Study

Texas Department of Transportation and
Central Texas Regional Mobility Authority

HELD TUESDAY, NOVEMBER 10, 2015

****
STATEMENTS ON THE RECORD
****

The following is the Reporter's Record of comments received during the Open House in the above-styled matter on the 10th day of November, 2015, from 3:00 p.m. to 7:30 p.m. at Palmer Event Center, 900 Barton Springs Road, Austin, Texas 78704, before Heidi Morrison, Texas Certified Reporter in and for the State of Texas, reported by stenographic method.

AcuScribe Court Reporters, Inc. - A Veritext Company
(800) 497-0277

SPEAKERS:

Mr. Javed Helali

Mr. Donald Towles

Mr. Jeff Jack

Mr. Philip Dorr

Ms. Judy Woods

* * * *

MR. JAVED HELALI: As I said, we are paying toll twice. Once to enter it, once to come out of it. That means to use it and not to use it, we are paying toll.

And my second point is, when does the toll end? I mean, you take the toll because of -- you want to finish -- replenish the cost of the thing. The cost is never replenished? Once a toll road is there, it's always a toll road. It never becomes non-toll.

So what I'm trying to say is that once that amount of money which has been spent on the bridge or whatever it is has been recouped, the toll should stop.

***

MR. DONALD TOWLES: I just wanted to express my support for maximizing the amount of elevated structures on the project, amount of bridge structures versus building that great widening. I have a preference for maximizing the amount of bridge structures on the corridor.

***

MR. JEFF JACK: Okay. First thing I want to talk about is process. It's hard to compare these scenarios. It would have been much better if we had a

tabulation so that you could look at the three different scenarios, segment by segment, and see the pluses and minuses, the differences within each segment for all three together in one place instead of wandering around the room and trying to simulate all that information.

It would be also interesting to know how much this presentation costs. It seems to be very extravagant. There is no data easily accessible on the actual cost of these alternatives that I can find that is easily out there. In other words, when we look at the alternatives, we don't have a very quick read on how much it's going to cost us and how it's going to be funded.

There seems to be no discussion on the unintended consequences or the externalized ramifications of these. In other words, what happens on Cesar Chavez? What happens on Barton Springs Road through Zilker Park? What happens on South Lamar? All of these things are very important as a consequence of these improvements, but they're not really discussed.

With regard to the three options, I think that we have to be very careful not to use this opportunity to create more traffic jams in downtown, that the idea of densifying downtown and this being a facilitator to do that goes against our comprehensive

plan. I think that we should look at other ways that we can spend this money.

I personally believe that with the new funding that the state has made available, we ought to be looking at removing the bonding indebtedness for SH-130 and reverting it back to a true bypass and run a scenario where that is counted into the traffic counts so that we see, if we do that, how much better the congestion would be and the rest of the city if we got all of those cars and trucks off of SH -- I-35.

I think there's some big environmental issues that have not been resolved, particularly the ripple effect of adding more capacity to increasing urban sprawl in south Travis County and northern Hays County and Caldwell County.

I don't think that's been really figured in that we're actually asking people of Austin to suffer through greater traffic congestion in almost all the scenarios to facilitate people coming from way south to get into or bypass or go through Austin. I don't think that's what we should be doing.

***

MR. PHILIP DORR: I moved back here three years ago from Chicago, and I had 26 years of observing toll authorities up there. And they're rife with

corruption, abuse, cronyism, the unions. You know, it's just the whole thing just -- I'm not a fan of tolls.

I've asked a couple of people -- and I shared with a couple of people in here -- as I digress, but when I lived here back in the mid '80s, I-35 south of Lady Bird Lake to 290 or Ben White was a nightmare back then. It's still the same old piece-of-crap road. The leadership hasn't figured out how to fix that, which makes me kind of question leadership in general.

And that to me is one of the biggest impediments to traffic through the whole area. But that being said, when I see TxDOT stuff, I want to give them credence, but I also -- and here again, I digress, but, you know, I-35, they're fixing it between here and Hillsboro, and they're making it three lanes each way, but the experts tell us the state's going from 26 million to 50 million people over the next 30 years or whatever.

And their sign in there says if we make this new expansion on Mopac four lanes -- or two new lanes each way would be four lanes, it's only 10 percent more cost. Well, why didn't TxDOT do that with I-35, knowing that we're going to double the size of the state in the next 30 years?

So was there a lack of leadership there,

or are these numbers misleading? You know, what do I -- who do I trust? I think they're probably fairly accurate with this 10 percent more here, you know. And I think, you know, it should be widened because obviously traffic is an issue, and it's going to continue to be. But again, to me, it's kind of a trust issue by their examples.

And then it's -- the conclusion -- concluding remark is, I was -- I shared with them in here, why not just go ahead and put a fifth lane in and out, and for a portion of it from downtown Austin to Sunset Valley or somewhere, put in a light rail system and let the light rail system compete against the HOV bus lane thing, whatever, on the toll lane or whatever, and see what one the people want. And then do analysis on the cost benefit -- do a cost benefit analysis of that and see if it makes sense to then take that fifth lane from Sunset Valley all the way south wherever they're going with this thing and make a light rail all the way out, or you take that fifth lane in a few years when you've outgrown the four lanes and turn that into an additional road for cars, a lane for cars.

And I don't see anything that has to do with light railing in this proposal. And I know none of this is cheap or free, but somewhere in here, there has

to be another -- another alternative than just add lanes for cars because, you know -- like, again, I've said repeatedly in here, pickup trucks are getting bigger; SUVs are getting bigger; cars are getting bigger. There's more of them. And as much as we romanticize and fantasize about everybody riding a bicycle to work, it ain't going to happen.

***

MS. JUDY WOODS: I am opposed to the Mopac South Project. I took a look at it. I am astounded that you all want to put flyovers on the most sensitive parkland in Austin. It is the most environmentally sensitive parkland in Austin and maybe part of Texas, because it goes right over the aquifer and the Barton Springs recharge zone. And so I'm opposed to that. It's going to give Barton Springs a lot more runoff and dirty up the waters. And that's going to be disastrous.

Also, this is where people come to recreate. Austin brings thousands of people into town to go to Fun Fest, Austin City Limits, various concerts down on the shores of Auditorium Shores and the Zilker Park area. This is going to really -- who wants to go to a festival where it's just ugly and a great big super highway going through?

The money that is spent on this project should go to improving I-35. Let's build a flyover over I-35. What's wrong with that? We don't want it here in our parkland area in Austin over Mopac. Mopac is a neighborhood parkway. We don't want it to be a super highway, and we certainly don't want it to be a loop around Austin to take the traffic off of IH-35.

The traffic on IH-35 can be alleviated by allowing people to get on SH-130 and by lowering -- either lowering the tolls or getting rid of the tolls on SH-130 so that more of the truck traffic can go out SH-130 and more of the car traffic would be encouraged to go that way. If you want a solution, that would be a good solution.

We don't want Mopac to carry traffic that's a loop through or around Austin. This is our most sensitive neighborhood area, recreational area, living area, environmentally sensitive area because of the recharge zone. Let me repeat that. This is a recharge zone for water we drink, water we use, environmentally sensitive species, beautiful vegetation growth. We don't want extra roads going through there.

And we certainly don't want them going through our middle-class/high-income neighborhoods. That's going to be another thing, to mess up our

neighborhoods and lower the value of our neighborhoods.

What we believe is that TxDOT and CTRMA -- what TxDOT and CTRMA cannot accomplish with billions of dollars, we can achieve with buckets of paints, smart lanes, not more pavement and tolls.

We do not -- the neighborhoods feel like flyovers would be very detrimental to our way of life, having a huge highway go through our neighborhood with flyovers, a lot of loud noise, dirty traffic, dirty runoff. This is going to affect the Austin Pets Alive Volunteer Center there that helps a lot of little animals be adopted out. It's going to affect the Zilker gardens.

The high school is certainly just -- Austin High School is just astounded that you all are planning on putting a big super highway over the high school. That can even be dangerous. People can be using the hike and bike trail for years and years. And we ask that that hike and bike trail be improved and developed. Over the last 40 years, I've watched it be improved and developed because we wanted to go there.

Who wants to walk on the hike and bike trail and enjoy the birds and the vegetation when right overhead is a huge, loud, noisy super highway. And okay. So you're going to say, "Oh, no. That's not a

super highway." Okay. So it's not. We don't want that going over our recreational area. That's an area that keeps people in -- in Austin healthy.

People go there to run, to fish, to picnic, to bring their children, to teach their children things. They go there to swim, to play games, to play baseball, soccer. Sometimes little neighborhood children will practice football or just playing running tag out there in the Zilker -- Zilker Park fields. It's too close to Zilker Park, what you're developing. And we don't want that. This is very disruptive to our way of life. And it's an environmental disaster. And we want you to consider these comments that I've entered into your comment log.

I thank you so much for taking my comments and for considering these conceptions and ideas in deciding not to build this atrocious overhead flyover. The people in Austin are very passionate about not having this. Even though they're not able to come out and make their own comments, I hope that I represent a lot of people that don't want this.

I know a lot of people weren't able to come tonight. They probably won't figure out how to send their comments in to you, but I want you to consider my voice as representing thousands of people in

Austin. And I thank you so much again.

(End of statements)

REPORTER'S CERTIFICATE

I, Heidi Morrison, Certified Shorthand Reporter in and for the State of Texas, do hereby certify that the foregoing speakers came before me to comment during the above-styled Open House as hereinbefore set out.

I FURTHER CERTIFY that the comments of said speakers were reported by me, accurately reduced to typewriting under my supervision and control and, after being so reduced, were filed with the Texas Department of Transportation.

IN WITNESS WHEREOF, I have this date subscribed my name.

Dated: November 17, 2015.
