MoPac South

# PUBLIC HEARING SUBMISSIONS

The Central Texas Regional Mobility Authority has published all public comments received during the recent Public Hearing for the MoPac South Project. This step reflects our continued commitment to transparency and public engagement throughout the National Environmental Policy Act (NEPA) Environmental Assessment process.

The study team is currently reviewing almost 8,000 submissions, a number of which were from individuals submitting their same comments multiple times. Please note, other than redacting profanity and personal information, all submissions are published as received. Each comment will be considered and addressed in a forthcoming public hearing summary document, where formal responses will be provided. Where needed, clarifications will be provided in the formal responses to help ensure a clear and accurate understanding of the project.

We sincerely appreciate the time, effort, and thoughtfulness that project stakeholders have contributed. The level of community interest in the MoPac South Project underscores the importance of this work, and we value the public's role in helping inform the process.

# Bringing Clarity to the complex

MoPac South

***The NEPA process and the technical aspects of this study are complex. Over the course of six open houses, multiple phases, and several years, we have identified some of the community's key areas of interest and address them below with the latest information.***

## THE STUDY OF THE MOPAC SOUTH PROJECT FULFILLS A REGIONAL DIRECTIVE UNDER CAMPO'S 2045 REGIONAL TRANSPORTATION PLAN (RTP).

CAMPO's RTP builds on local, subregional, and regional plans to inform transportation priorities and uses CAMPO member agencies to sponsor projects to ensure that the regional nature of the plan is locally-driven. Both the Capital Express Central Project and Project Connect are included in the CAMPO's 2045 RTP which the study's analysis is based on.

## THE EA CONSIDERS A FULL RANGE OF ALTERNATIVES, INCLUDING GENERAL-PURPOSE, HOV, AND TRANSIT-ONLY LANES AGAINST THE PROJECT'S PURPOSE AND NEED.

Identified as the Build Alternative, Express Lane(s) consistently outperform other alternatives to improve travel time savings and reliability. Often other agency policies prohibit them from evaluating or pursuing this more effective alternative.

## THE EA WILL CONSIDER THE POTENTIAL IMPACTS OF THE BUILD ALTERNATIVE ON THE BARTON SPRINGS RECHARGE ZONE OF THE EDWARDS AQUIFER AND THE SPRINGS OCCURRING IN THAT ZONE.

The MoPac South Project has not received environmental clearance, nor have any funds or commitments been made regarding future design or construction. Contingent on these things, the next phase of the project would be to advance the Environmental Schematic design to detailed 100% design and would continue its coordination with our technical partners including Travis County, Barton Springs and Edwards Aquifer Conservation District, and City of Austin.

## FUNDING FOR TOLLED LANES DOES NOT COME FROM GAS TAXES.

While nothing has currently been committed for funding or construction of the MoPac South Project, it is important to note that the Mobility Authority funds toll road projects through loans secured from toll road revenue.

## THE MOBILITY AUTHORITY IS PERFORMING AN ENVIRONMENTAL ASSESSMENT (EA) AS DETERMINED BY TXDOT'S ENVIRONMENTAL AFFAIRS DIVISION UNDER NEPA.

The preparation of an EA or EIS was discussed with TxDOT on several occasions throughout the process, including in early 2026 as we finalized the draft EA. In all cases, TxDOT has consistently confirmed that an EA is the appropriate NEPA environmental study process for this project at this time. We have followed that guidance and prepared an EA accordingly.

## PUBLIC INPUT HAS SHAPED THE MOPAC SOUTH PROJECT.

These are only a few of the adjustments made based on community feedback:

- No increased elevations over Lady Bird Lake
- No direct connector ramps near Austin High School
- Added almost 8-miles of additional Shared Use Path (SUP), for a total of 16-miles of continuous ADA compliant SUP and sidewalks along the corridor
- Added third southbound general-purpose lane south of William Cannon Drive
- Ramp improvements at Loop 360, Bee Caves Road, and William Cannon Drive
- Added Texas Turnaround at Barton Skyway
- Added Bypass lanes from Barton Skyway to Loop 360
- Added new direct connection to US 290

## CORRIDOR IMPROVEMENTS ARE CRITICAL WHERE EXISTING DEMAND ALREADY EXCEEDS AVAILABLE CAPACITY.

This project aims to identify operational enhancements to an existing corridor—including added express bus capacity—that has not undergone significant updates since its original lanes were constructed between 1973 and 2005. As Austinites ourselves, we understand how rapidly our region has grown and how that growth has affected our community.

## WE ARE STUDYING ALL THREATENED AND ENDANGERED SPECIES THAT HAVE HABITAT RANGES WITHIN THE CORRIDOR, INCLUDING THE AUSTIN BLIND SALAMANDER AND THE BARTON SPRINGS SALAMANDER.

This is a fundamental requirement of NEPA and the Endangered Species Act, and a requirement of all Environmental Assessments. Despite no anticipated significant impacts, the EA has been drafted to include mitigations and conservation measures for salamanders in case of the unexpected.

## THE PROJECT ENCOURAGES LONG-TERM PRIORITIZATION OF EXPANDING PUBLIC TRANSIT.

The Mobility Authority allows CapMetro public transit buses to drive toll-free on the express lanes. Because the variable-priced toll in the express lanes would be set at a rate intended to maintain uncongested traffic flow, transit riders would be ensured a reliable trip, even during peak periods, making it a viable alternative to driving alone.

## UNDER THE BUILD ALTERNATIVE, A 5-MIN SAVINGS EACH DIRECTION EQUATES TO MORE THAN 40 HOURS PER YEAR FOR NON-TOLLED DRIVERS.

For Express Lane and transit users, a 12–14-minute savings each way could total more than 110 hours annually, encouraging transit ridership. In addition to time savings, the project would deliver enhanced bike and pedestrian connections, a reliable and consistent route for transit services, and improved emergency response reliability.

## WHAT COMMUNITY COORDINATION WILL BE DONE IN THE FUTURE?

The MoPac South Project has not received environmental clearance, nor have any funds or commitments been made regarding future design or construction. Contingent on these things, the next phase of the project would be to advance the Environmental Schematic design to detailed 100% design and would continue its coordination with our technical partners including Travis County, Barton Springs/Edwards Aquifer Conservation District, and City of Austin.

|---|---|---|
| **5/3/2026** | ?Tomer Halbertal?? | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, ?Tomer Halbertal?? |
| **3/19/2026** | <name not provided> | Widening highways always makes traffic SLOWER and MORE CONGESTED. Look at the historical data on literally every highway widening project! Don't let the highway engineers scam you! |
| **3/19/2026** | <name not provided> | Please do not add more lanes as part of this project. Induced demand is a consistently proven result of highway expansion. Which will ultimately not alleviate capacity and congestion issues. Instead prioritized managed and transit lanes to divert single occupancy vehicles. |
| **4/23/2026** | <name not provided> | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/25/2026** | <name not provided> | I support building a shared use path along the highway as well as the addition of a high occupancy lane for transit vehicles. I do not support any expansion of the highway footprint or any additional car lanes. The traffic volumes in that area absolutely do not justify any more roadway widening. |
| **3/30/2026** | <name not provided> | DO NOT ADD TOLL LANES. Tax money is supposed to cover the expense and care of roads, so why do we need to pay additional money to try and get somewhere in a reasonable time?! You should be adding regular, non-tolled lanes to Mopac, not tolls. The city and TXDot has put off south Mopac updates for years and now you want to pass the burden to your citizens. It's ridiculous. The road was poorly designed for growth and the constant on-ramps with reduction in lanes is what's causing so many issues and the heavy traffic. If you fix the on-ramps and just add lanes that's a good start. Stop tolling new lanes in Austin! |

| | | |
|---|---|---|
| **4/5/2026** | <name not provided> | Can you share more data about why general purpose lane doesn't reduce the congestion enough? The express lane could be very expensive and also doesn't have the option to exit before Cesar Chavez st. That doesn't work for people who want to exit in between. |
| **4/7/2026** | <name not provided> | There is absolutely no need to spend millions of dollars, decades of time, and irreparable damage to nature just for a few minutes in less driving. If this project moves forward, Austin will see a decline and good folks will continue leaving. It is our responsibility to steward our beloved city for the next generation, please do not move forward with this irresponsible project |
| **4/22/2026** | <name not provided> | Thank you for this opportunity to comment. Austin's water, endangered wildlife, beloved Greenbelt trails, and community health matter to me . I've moved here three decades ago because of the gem of a place Austin is and Barton Springs and Austin school students - my 23 year old daughter went K-12 in AISD- are of the upmost importance and concern to me. I've brought my daughter countless times to Barton Springs, Deep Eddy, and the green belt . Because of my love and responsibility to the lands, water, air and people of Austin, I urge there to be a full, transparent Environmental Impact Statement (EIS) of the proposed MOPAC expansion . Please do not cause such chaos and destruction to the heart of our city without doing the thorough and due diligence of a full EIS. |
| **4/25/2026** | <name not provided> | Dick Nicholas park is the lifeline of this neighborhood. Please don't ruin it. |
| **4/28/2026** | <name not provided> | I very much support this project and it is much needed for safety and mobility. I drive MoPac regularly and the delays are becoming significant. Thank you for your efforts in improving our region. |
| **5/2/2026** | <name not provided> | Do not move forward with the toll lane expansion. It is unnecessary and will cause far greater damage to our already fragile greenbelt ecosystem. |
| **5/3/2026** | <name not provided> | Do not pass this |
| **5/3/2026** | <name not provided> | I strongly recommend rejecting the expansion of highways in downtown Austin. Adding a new toll lane over the source of Barton springs jeopardizes one of Austin's most prominent community spaces. |
| **5/3/2026** | <name not provided> | I'd really like to urge Austin's leaders to reconsider this expansion of Mopac. Making a highway wider won't decrease traffic, more people will just start to use it. Haven't you learned anything from decades of I35 expansions? Please just create more public transportation and bike lanes. And leave the green spaces alone. Those green spaces are exactly what make living here bearable. |
| **5/3/2026** | <name not provided> | Protect the natural beauty that makes Austin, Austin! |
| **5/3/2026** | <name not provided> | DO NOT BUILD MORE ROADWAYS. DON'T RUIN BARTON SPRINGS. |
| **5/3/2026** | <name not provided> | It will take away from the appeal of moving to the city. |
| **5/3/2026** | <name not provided> | I do not believe in TxDot's ability to protect the various watersheds affected by this development, nor do I believe in their ability to protect the endangered salamanders that occupy those waters. In addition, I do not believe that the extra lanes will serve to benefit the various communities that use this road in the long term. Time and time again in this state we build more lanes to fix traffic and every time we have been proven wrong. I do not want this expansion in my city. |
| **5/3/2026** | <name not provided> | Please do not go through with the MoPac highway expansion. It will not benefit the city and will take access to green spaces away from Austin, which are so integral to our people and the environment. The highway expansion will not improve traffic and comes at the detriment of the environment, our city, and its people. |
| **5/3/2026** | <name not provided> | please protect our springs, it's one of austin's beautiful gems left. there is so much wildlife animals and plants that are counting on us to protect their environment. we all live and coexist on this planet together, the least we can do is respect |

| | | |
|---|---|---|
| | | their wellbeing's.we don't need a road expansion there is already so much construction 24/7 leading to more traffic and it's completely unnecessary. |
| **5/3/2026** | <name not provided> | Please no. Born and raised in Austin and don't want to lose any more of our precious natural resources. |
| **5/3/2026** | <name not provided> | I do not support building anything with only an environmental assessment. It is incomplete and is disingenuous. Central Texas Regional Mobility Authority (CTRMA) failed to include rail as an option. Reducing the need for cars would help more than adding more lanes. Texas does not need more toll roads. I only support a no-build solution until rail is included as an option and a complete environmental impact statement is complete. |
| **5/3/2026** | a a | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a |

| | | |
|---|---|---|
| | | decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, a a |

| **4/23/2026** | A Kelley | Dear Mopac Expansion Project,<br><br>I am writing to submit a formal comment regarding the proposed road expansion project over Zilker Park. I would like to express my concerns regarding the significant impact this development will have on both the environment and the quality of life for local residents.<br><br>Expanding a roadway over a dedicated green space poses several environmental risks, including the loss of local flora and fauna, increased air pollution, and higher noise levels. Furthermore, parks serve as vital communal spaces; reducing this area will inevitably diminish the quality of life for those who rely on it for recreation, mental well-being, and community engagement.<br><br>I urge you to consider these factors and explore alternative solutions that preserve our natural landscapes and protect the interests of the community.<br><br>I grew up in the nearby city of Rollingwood. I can't believe anyone would propose building a toll way through Austin's greatest Gem Zilker Park, truly " Paving Paridise".<br><br>Destroying the quiet of Zilker Park and with it - the way hundreds of thousands of local people's quality of life. Iv'e walked into stores close to 183 and 290 and the sound of the hwy is deafening. How can you do that to this space.<br><br>I think there's a better solution, electric trains perhaps. Anything but this monstrosity. I am against your plans. Where is the Austin and Travis County that's filled with modern forward minds? Why are we coming up with old Dallas, Houston make bigger highways ideas. Who wants to live like that here - by destroying Zilker Park so people can get somewhere 5 minutes faster.<br><br>I'm ashamed this is what you've come up with.<br><br>Anne Kelley |

| | | |
|---|---|---|
| | | Thank you for your time and for considering my feedback on this important matter.<br><br>Best regards,<br><br>A Kelley |

| | | |

| **5/3/2026** | A Paterson | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. | **5/3/2026** | Aanika Das | Dear CTRMA Board Members, I am very concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project will threaten Austin's amazing water sources and has the potential to harm our animals, plants, and ecosystems that make Austin so incredibly special. The promised benefit of 5 mintues across does not offset the huge disruption and destruction that will result from this expansion. CTRMA should conduct a full environmental impact statement and actually LISTEN to the Austin community regarding this project. We, the denizens of Austin, live here and our voice should matter in the going-ons of this city. Sincerely, Aanika Das |

| | | |
|---|---|---|
| **4/22/2026** | Aaron Bacon | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| **3/28/2026** | Aaron Boersma | LETS DO THIS |

| | | |
|---|---|---|
| **4/2/2026** | Aaron Cacali | Please consider building a paved connector path to the Meridian neighborhood as part of the improvements to the South Mopac corridor. As residents of Meridian and avid runners and cyclists, my family and my neighbors would greatly benefit from such a path. I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45, which is very dangerous. City Council District 8 has now allocated $117,000 to the design of this path as they recognize the important need for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request, and I can provide further information, including graphics. Thank you. |
| **5/3/2026** | Aaron Sosa | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Aaron Sosa |
| **3/19/2026** | Aaron Weatherford | I do not want any expansion of MoPac. The proposed project would increase water, air, and noise pollution; further set back Austin's climate goals; and continue to balloon our reliance on an inefficient, dangerous mode of transportation. Highway expansion has repeatedly shown not to work, proven to be a poor use of public money, and created a sunk cost from which the only perceived solution is to just continue expanding. There are other ways to address the problem, which I would support. Dedicated bus service on the highway, rail service, and bike path connections. |
| **5/1/2026** | Abbe J Waldman Delozier | We do not need any expansion. I OPPOSE the expansion! This will pol;lute fragile recharge areas of the Barton Creek and other fragile contributing zones. We only have so much water. We must be stewards of these fragile systems! |
| **5/3/2026** | Abbee | Destroying Barton springs would be the down fall to Austin living and tourism. We do not need to build more highways!!!! |
| **5/1/2026** | Abbey Hobbs | Barton Springs is at the heart of the Austin community. Building more roads and traffic will be devastating to the environment. Protect the heart and culture of Austin, Texas, which is largely due to Barton Springs. |

| | | |
|---|---|---|
| **4/20/2026** | Abbey Kirkland | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/28/2026** | Abbie Pannell | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Please keep the wonderful natural spaces of Austin and everything that they provide for Austinites (rec space, connection with nature, and outdoor access) in your minds and hearts as you move forward with this road expansion project. Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/20/2026** | Abby Cowlishaw | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Abby Germann | I do not want an expansion of Mopac South, I think the environmental study was performed incomprensively and the harm done to surrounding areas with outweigh any benefit seen from increasing traffic flow. |

| | | |
|---|---|---|
| **3/16/2026** | Abby Hollar | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Abby Hollar |

| | | |
|---|---|---|
| **4/23/2026** | Abby Lilly | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Abby Minde | This absolutely cannot happen. No tolls |
| **4/22/2026** | Abi Awtrey | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/22/2026** | Abi Awtrey | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/20/2026** | Abi De Jesus | Do not expand MoPac. This will not solve problems and only make congestion worse. This will also worsen air quality and hurt the environment that Austin is known and loved for. Please invest in other modes of transit like our metro, HOV lanes, or biking lanes. Do we want to end up like Houston? No. No we don't. |
| **4/27/2026** | Abigail biggs | I am not involved with txDOT |
| **4/27/2026** | Abigail Biggs | I am completely against this unnecessary Mopac expansion. I urge you to complete a full environmental impact statement. |

| | | |
|---|---|---|
| **5/3/2026** | Abigail Biggs | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Abigail Biggs |
| **3/20/2026** | Abigail Diaz | I grew up visiting family in Austin and now live here. I care deeply about the growth of Austin in an eco-friendly and equitable way. I don't want a wider mopac, adding more lanes will add more traffic. We should focus more on public transportation and pedestrian infrastructure. |

| | | |
|---|---|---|
| **4/22/2026** | Abigail Genova | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **4/22/2026** | Abigail Genova | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/26/2026** | Abigail Marines | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/24/2026** | Abraham Perez | I disapprove of Mopac South expansion.<br>- environmental impact of the construction would be too much for the sensitive recharge zone of the green belt. There can be no guarantee of the actual impact this may cause to the wildlife that is present within the area. As a born and raised Austinite I believe this area should be left alone. Public transport should be invented in order to minimize commute/ idle on the highway. Thank you. |
| **4/21/2026** | Abraham Perez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/29/2026** | Abrahan Aguayo | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Abrar Chowdhury | Don't do it, leave the environment alone |
| **3/19/2026** | Abrianna Citta | Dear CTMRA, I do not want a wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. Instead, I do want: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. Please consider the generational consequences of highway expansion. Our children must live with what we build now; so let us invest in people centered—not car centered—transportation. Thank you, Abrianna Citta City of Austin resident |
| **5/3/2026** | Abriel Young | Dear CTRMA Board Members, I have lived in Austin for 20 years and know that this expansion is a very bad idea that will damage quality of life as well as our aquifer. Please do not proceed with this dangerous and short-sighted expansion. I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Abriel Young |

| | | |
|---|---|---|
| **4/23/2026** | Adam Abrams | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Adam Abrams |
| **4/30/2026** | Adam Bartlett | Given what we have seen from previous CTRMA projects - this will be an environmental disaster. CTRMA and contractors overseen by CTRMA have failed time and time again to follow their own processes. CTRMA's 183 North project is over a year behind schedule, CTRMA failed to ensure that contractor mitigated any number of environmental concerns (dust management in particular) in an area that is nowhere as environmentally sensitive as the Edwards Aquifer Recharge Zone, the Barton Creek and Barton Springs watersheds, and the highly karst environment in the area south of the Colorado River. After the past few projects overseen by CTRMA, the state should bar them from any new projects, but they seem bound and determined to wreck the rest of the City of Austin. |

| | | |
|---|---|---|
| **4/26/2026** | Adam Borger | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Adam Borger |

| | | |
|---|---|---|
| **3/19/2026** | Adam Greenfield | I strongly oppose expanding MoPac. The evidence is clear that expanding highways is worse for traffic, air and water quality, quality of life of nearby residents, noise, safety, climate, and the local economy. Instead, I call for the current highway to be improved by converting main lanes to transit lanes and building a wide shaded shared use path along the entire stretch of the project. If tolling is a part of this project, it should be by tolling existing lanes. |
| **5/3/2026** | Adam Greenfield | Dear MoPac South project team,<br><br>Please find attached Safe Streets Austin's public comment regarding the MoPac South project Environmental Assessment.<br><br>Best,<br><br><https://www.safestreetsaustin.org/><br><br>Adam Greenfield<br><br><<Attachment>> |

| | | |
|---|---|---|
| **4/26/2026** | Adam Helbig | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Adam Helbig |

| | | |
|---|---|---|
| **5/1/2026** | Adam Hite | As a resident of Austin, TX, I am writing to formally record my strong opposition to the CTRMA proposal to expand the MoPac footprint. I specifically oppose the addition of toll lanes, flyover lanes, and expanded main lanes.<br><br>I don't know why this continues to happen in Texas. The state continues to expand highways and it benefits no one, other than a wealthy few. It increases road deaths and increases pollution. It makes life hell for citizens and does not solve traffic congestion. There are plenty of studies that prove this. Yet, it continues to move forward. Residents of the city of Austin overwhelmingly opposed the expansion of I-35, yet it moved forward. I imagine this will also move forward, but not without a fight.<br><br>How many more scientists need to tell you that we are fast tracking our way to an unlivable future due to climate change? Literally 99% of scientists agree on this.<br><br>The data clearly shows that cities instead should invest in alternatives to expanding highways and increasing traffic. Instead, CTRMA should create bike-pedestrian east-west crossings every quarter mile and improve transit reliability. DO NOT expand the highway.<br><br>--<br><br>Adam Hite |

| | | |
|---|---|---|
| **4/22/2026** | Adam Hoffman | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Adam Hoffman |

| | | |
|---|---|---|
| **4/25/2026** | Adam James | Dear CTRMA Board Members,<br><br>To whom it may concern,<br><br>I live in Austin and spend a lot of time in the areas along this corridor, including near Zilker, the Austin Nature & Science Center, and the surrounding green spaces. I'm not someone who is against growth or infrastructure — I understand this city is changing and transportation needs are real. But after reviewing the Draft Environmental Assessment, I'm not convinced this project is responding to the reality we're living in today.<br><br>The document acknowledges impacts to vegetation, wildlife, and impervious cover, but it relies heavily on mitigation language without clearly addressing what is actually being lost. Mature trees, especially heritage trees, are not interchangeable with new plantings. The canopy we have now is the result of decades of growth, and in a city dealing with prolonged drought and rising temperatures, losing even portions of that canopy has real consequences for heat, air quality, and overall ecological health.<br><br>The section of this corridor near Zilker and the Austin Nature & Science Center is not just another stretch of roadway. It is one of the few remaining connected pieces of urban habitat in central Austin. Even if the project stays largely within the existing right-of-way, edge impacts — soil disturbance, root zone damage, increased noise, and reduced permeability for wildlife — will degrade that space over time. Those kinds of cumulative impacts are not meaningfully captured in the EA. |

| | | |
|---|---|---|
| | | I am also concerned that the project is being evaluated in isolation. With the I-35 expansion already underway and continued development across South Austin, the cumulative effect of adding more pavement, more traffic, and more heat is significant. That context matters, especially when the EA concludes that impacts are “not significant.”<br><br>At a minimum, I believe this project warrants a full Environmental Impact Statement to properly evaluate long-term and cumulative effects, particularly given its proximity to sensitive ecological areas and aquifer recharge zones.<br><br>If this project is going to move forward, it should do so with clear, enforceable commitments to minimize canopy loss, protect heritage trees, and preserve the ecological function of the remaining green corridors — not just replace them on paper.<br><br>Austin is growing, but how we grow matters. Right now, it feels like we are slowly trading away the natural systems that make this place livable, and that’s not a trade we can afford to keep making.<br><br>Sincerely,<br><br>You for listening to your neighbors, |

| | | |
|---|---|---|
| | | Adam James |

| | | |
|---|---|---|
| **4/28/2026** | Adam Miller | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/30/2026** | Adam Oberman | Just add a free lane south from 290 to slaughter lane, where it merges at william canon. The bridges south already have 2 extra lanes of space so this could be a quick project impacting traffic in a year or 2. No one wants a bunch of toll lanes built in the sky, the IH 35 South project looks horrible. |
| **5/2/2026** | Adam Ortman | I strongly oppose the planned MoPac expansion on multiple grounds — environmental, practical, and economic. Although I regularly commute on MoPac South and am one of the drivers the project is meant to help, the tradeoffs simply are not worth the modest savings on drive time. I sincerely hope you listen to the voices of Austinites on this matter. |
| **5/3/2026** | Adam Schlender | Hi, my name is Adam Schlender. I've lived in Austin for a little over 20 years. I'vebeen coming to Barton Springs weekly, if not daily, for the majority of that time. It'sthe first place that I bring people when they're here. It's been the altar that I have comeyou when I've been through challenging times, hardships personally, it is, in my opinion,the blood, the spiritual, emotional, cultural center of this beautiful town without which,The magic that is growing and expanding in some ways that are really powerful and beautifulwould not be possible or held together with any anchor.And I'm really personally concerned about the MOPAC expansion.I'm concerned about the environmental impact.It feels like the environmental impact is being swept under the rug and not taken seriously.It feels like the soul of the city in this place is being paved, literally being pavedover and I want to advocate for a full environmental impact statement and pausing any constructiondevelopment of the plan until the public has been given a real earnest assessment on what this isgoing to cost both the land, the water, the springs itself, and I feel like we deeply deserve that. |

| | | |
|---|---|---|
| **5/3/2026** | Adam Schlender | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Adam Schlender |

| **5/3/2026** | Adam Schlender | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Adam Schlender |

The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Adrian Buchanan |
| **3/10/2026** | Adrian Helen | Please no more toll lanes and especially not express lanes. The additional on and off ramps and additional height and intersections for express lanes would materially negatively impact the areas next to the highway. I use South MoPac daily and would love to see improvements at choke points but absolutely not express lanes, and preferably not toll lanes. |

| | | |

| **4/24/2026** | Adrian Mefford | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Adrian Mefford |
| **5/3/2026** | Adrian Moss | As a native-born Austinite, I vehemently oppose the MoPac expansion which will cause irreversible damage to the Edwards Aquifer. |

| | | |
|---|---|---|
| **4/28/2026** | Adrian Santoyo | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/6/2026** | Adriana Tamez | CTRMA Board Members,<br><br>The MoPac South expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Adriana Tamez |

| **4/20/2026** | Adriana Cardenas | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>-Utmost care to not disturb Edward’s Aquifer recharge zone<br>Thank you for your time and consideration. |
| **5/3/2026** | Adriana Cardenas | Dear CTRMA Board Members,  Hello, thank you for considering my submission! I have been in Texas all my life and in Austin for 12 years. I hope to start a family here one day and so this directly impacts our future as well as everyone's future children.  <br />It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Adriana Cardenas |

| | | |
|---|---|---|
| **3/31/2026** | Adriana Galindo-Perdomo | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before doing anything crazy like this because that is CRAZY WORK<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of CenTex,<br><br>Adriana Galindo-Perdomo |
| **5/1/2026** | Adriana Lara | We do not want more mopac lanes and do not need to destroy what makes Austin special. We demand an environmental study by a company that is not liked to big oil, cars, or anyone that gives money to superpacs. |

| | | |
|---|---|---|
| **4/20/2026** | Adriana Melgar | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/29/2026** | adriana Spina | Here's a clearer, more polished rewrite that keeps your arguments strong while tightening the language and flow: —— Demand a Full Environmental Impact Statement (EIS) CTRMA is advancing this project with a predetermined Finding of No Significant Impact (FONSI), effectively cutting corners on environmental review. Under the National Environmental Policy Act (NEPA), a full EIS is required when a project is likely to significantly affect the environment. Drilling into the Edwards Aquifer, harming endangered species, degrading public parks, and worsening air quality near Austin High School all qualify as significant impacts and warrant a comprehensive EIS. Question the Outdated Analysis This project dates back to 2011, and the traffic model used to dismiss alternatives was finalized in 2012—more than a decade ago. Since then, conditions have changed dramatically, including the COVID-19 pandemic, the rise of telecommuting, and the approval of Project Connect. CTRMA should reevaluate the project using updated data, reconsider alternatives, and align with current local goals and policies. Challenge the Claimed Benefits After 5–7 years of disruptive construction, the project is projected to save only 5–6 minutes for drivers traveling the entire 8.77-mile corridor during rush hour. These marginal gains are likely to be offset by years of construction delays, raising serious questions about whether the benefits justify the impacts. Protect Endangered Species CTRMA acknowledges the project will adversely affect four federally endangered species but has declined to fully explore design alternatives that could avoid or reduce these impacts. Construction threatens groundwater flows to Barton Springs and risks destroying fragile cave ecosystems that cannot be restored once damaged. Demand Clean Air for Students Students at Austin High School and nearby residents will face increased exposure to fine particulate matter (PM2.5) from higher traffic volumes, tire wear, and brake dust. CTRMA's claim that air quality will improve—despite adding an estimated 331 million vehicle miles traveled annually—is not credible. Protect Our Water The proposed water quality measures fall short of the standards required by Travis County and the City of Austin for similar projects. During construction, sediment and pollutants could flow directly into the Edwards Aquifer Recharge Zone, causing long-term and potentially irreversible damage to a critical water |

| **5/3/2026** | Adriane Pippins | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Adriane Pippins |
| **4/21/2026** | Adrianna Morrow | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/28/2026** | Adrianne chmiola | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |

| **5/2/2026** | Adrienne Greenblatt | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Adrienne Perlman | Please provide the citizens of Austin a full environmental impact study that shows the potential changes to water, runoff and impact to animals and surrounding neighborhoods for this expansion prior to implementation. Thank you. |

| | | |
|---|---|---|
| **5/3/2026** | Aerin Henderson | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Aerin Henderson |

| **4/24/2026** | Afton Roberson | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Afton Roberson |

| | | |
|---|---|---|
| **5/1/2026** | AG Motwani | To the Central Texas Regional Mobility Authority:<br><br>I am submitting this comment in opposition to the proposed MoPac South expansion.<br><br>I live and move in Austin as a cyclist, pedestrian, and and a hiker/swimmer in and around Barton Creek. MoPac South is part of my daily infrastructure — and what CTRMA is proposing does not serve people like me. It serves cars, at the expense of everyone else.<br><br>The case against this project is straightforward on multiple fronts:<br><br>Fiscally, $825 million is a consequential public investment. Directing it toward toll lanes and flyovers that generate marginal travel time savings for a subset of drivers — while doing little for the majority of corridor users — is a poor allocation of regional resources. That same capital could fund transformative improvements to walking, cycling, and transit across the Austin area.<br><br>Environmentally, expanding highway capacity induces demand. More lanes produce more vehicle miles traveled, more impervious surface, more runoff, and more emissions. The data on induced demand is not contested. CTRMA's own environmental study should be honest about this dynamic rather than treating congestion relief as a durable outcome.<br><br>For residents and users of the corridor, the proposed footprint expansion — over 100 acres — carries real consequences for the communities along and near MoPac. Displacement, noise, and pollution fall disproportionately on those least positioned to absorb them.<br><br>What I am asking CTRMA to pursue instead:<br>— Wide, shaded, continuous bike and pedestrian infrastructure along the full corridor<br>— East-west crossings at quarter-mile intervals, which are currently absent and dangerous<br>— Meaningful transit reliability improvements, not as an afterthought<br>— A project scope that does not expand the highway footprint<br><br>Austin's growth challenge is real. But building our way out of congestion with more lanes is a failed strategy with a long track record. I expect CTRMA and TxDOT to weigh this input seriously.<br><br>I am an engaged Austin) Central Texas resident and I participate in local elections, boards, and civic processes. The decisions made here will be part of how I evaluate the responsiveness of regional leadership to the communities they serve.<br><br>Thank you for accepting public comment.<br><br>Amit Motwani<br>Austin, TX |
| **3/19/2026** | Agnes | I am against Mopac expansion |
| **4/27/2026** | Agnes wilson | Please reconsider plans for expanding the highway which would affect our ecosystems so greatly. |

| | | |
|---|---|---|

| **5/3/2026** | Aidan Keys | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Aidan Keys |

| | | |
|---|---|---|
| **4/22/2026** | Aidan MacDonald | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

|---|---|---|
| **5/3/2026** | Aidan Sherlock | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Aidan Sherlock |
| **4/29/2026** | Aidé Basilio | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **5/3/2026** | Aimee Batuski | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Aimee Batuski |

|---|---|---|
| **5/3/2026** | Ainsley Eis | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Ainsley Eis |

| **4/27/2026** | Al Braden | It is not credible to claim that a project the size and scope of the proposed MoPac South Expansion over the most environmentally sensitive part of the Austin region will have “No Significant Impact.”<br><br>Drilling, digging, and massive construction over the Barton Springs Recharge Zone cannot be done without disrupting, dislodging and potentially destroying many sensitive karst features and cavers which are the lifeline of the Barton Springs system. Sediments from drill penetration, leakage from construction and ongoing road runoff will cause contamination in the system and potentially affect many known endangered species and endanger the purity and flow of Barton Springs.<br><br>I ask for a full and detailed Environmental Impact Statement to research these risks and to thoroughly compare many alternative solutions that could be less damaging.<br><br>My preferred solution is to create one additional non-toll lane in each direction using existing pavement and bridges to the greatest extent possible. Redesign the dangerously short southbound exit to RM 2244 and any other exits and entrances determined to be unsafe.<br><br>High speed luxury toll lanes do not provide the same capacity as a non-tolled lane moving slower at rush hour. Capacity drops rapidly with speed increased speed. Please analyze the total capacity of one non-tolled lane vs. two tolled lanes. We need a solution that moves the most people at a reasonable pace contrasted to a solution that lets the rich buy their way through the line.<br><br>Please work to study the real environmental impacts, work closely with the City of Austin and fashion a solution that meets our needs with the least environmental damage and the most equity at a fair cost.<br><br>Best wishes,<br><br>Al Braden |

| **4/3/2026** | Al Lodge | To Whom It May Concern:<br><br>IIt is my understanding that paved paths will be built along with the proposed improvements to the South Mopac corridor. My sub-division, Meridian, submitted a request in 2020 to construct a paved pathway from Meridian along Hwy 45 to Escarpment Blvd. The distance is 1.2 miles. This would allow access for more than 3,000 residents to the rest of Austin as cyclists and walkers who would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who utilize the narrow shoulder of Hwy 45. With the current level of increased vehicular traffic on this stretch Hwy 45, it has become extremely dangerous for those individuals!<br><br>City Council District 8 has now allocated $117,000 to the design of this path as they recognize the important need for safety and access. We have a committee dedicated to this request.<br><br>Thank you for your attention to this issue. |
| **5/3/2026** | Alaina DiGann | As a born and raised austinite, and someone who now lives DIRECTLY in the area of impact for this project, I urge you to halt the project. The community does not want this. It may be beneficial in theory, but in reality it is putting things the community DOES hold dear at risk. There are so many projects this community would love to see TxDOT tackle -- but this isn't one of them. Again, I urge you as a member of this community to cease this project. |
| **4/28/2026** | alan friedman | I strongly object to the proposed MoPac expansion, extending 8.8 miles from Enfield Road to Slaughter Lane and adding 7 lanes across Lady Bird Lake. |
| **5/3/2026** | Alan Frye | I am in favor of Barton Springs pool and resources and NOT more toll roads!!! |

| | | |
|---|---|---|
| **3/25/2026** | Alan Hecht | I DONT WANT: - A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: - Continuous pedestrian-bicycle paths along the project's length. - Converting an existing highway lane to a HOV/transit lane. - CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **4/23/2026** | Alan Rivaldo | CTRMA and TxDOT have gathered more than enough input from Austin area residents. Now the notoriously vocal minority has come along, trying to throw wrenches into this project, further delaying it and/or trying to prevent it from moving forward. Enough is enough already. The vocal minority is seriously misguided, and trying to make it seem like this project is a threat to the environment, is performative nonsense. This project merely adds more lanes to an existing highway in its current right of way. These pseudo-environmentalists have apparently gotten their local representatives duped into thinking that their viewpoint is valid, when in fact their agenda is merely obstructionist and a sad attempt by the representatives of SOS to regain relevance. The fact of the matter is that they haven't been relevant in at least 20 years, while the average commuter continues to suffer with congestion and precious time wasted in traffic. If there is going to be a political solution to this, then it may be time for the state legislature and/or the governor's office to step in and keep the well-meaning but seriously misguided Austinites at bay before they further ruin others' quality of life by further delaying this project through court battles that they are bound to lose, just like they always do. The time has come to move on and build this thing already! |

| | | |
|---|---|---|
| **5/3/2026** | Alana Bui | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Alana Bui |
| **5/3/2026** | Aldia Bluewillow | Dear CTRMA Board Members, The proposed addition of multiple new lanes, and toll lanes extending 8.8 miles from Enfield Rd to Slaughter Ln, will have significant negative impacts: 5-7 years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. 5-7 years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. Adding new lanes will increase noise and light pollution will disturb residents of surrounding neighborhoods and harm endangered species and their habitats; air pollution will harm public health at Austin High; water pollution will harm Barton Springs swimmers and wildlife; and traffic congestion will be shifted to north Mopac, 1st St and other streets. Respectfully, Aldia Bluewillow |

| | | |
|---|---|---|
| **4/20/2026** | Ale Eckhoff | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Aleah Noble | I am writing in opposition to the expansion of Mopac south. Further considerations should be reviewed to address the environmental impacts of this project. The heart of Austin is its open greenspace for everyone to enjoy. The Edwards Aquifer could be greatly impacted by this expansion, impacting the water supply for the foreseeable future. In order to make Austin more livable for everyone, we should consider a number of other options, including investing in better public transportation and bike infrastructure. I do not approve of this plan as it currently stands. |
| **4/20/2026** | Alejandra DeChavez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/2/2026** | Alejandra Lucio | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **3/26/2026** | Alejandra Paredes | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Alejandra Paredes |
| **3/24/2026** | Alejandro Hernández | Would like to see future designs for the project include shared-use paths/sidewalks with better safety improvements (lighting, distance from curb, good driveway/street striping). There are several pedestrian/bicycle facilities that merely only stub into the ROW when there are certainly opportunities to connect. Where ROW allows, there should be larger SUPs 12'+. Additionally if the Latta/Convict Hill crossing is being improved, consider a diagonal crossing. Finally, the managed lane should be a dedicated bus lane during off-peak hours. |

| | | |
|---|---|---|
| **5/3/2026** | Alejandro Najera | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Alejandro Najera |

| **3/19/2026** | ALEX | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **4/25/2026** | Alex | Nice |
| **5/3/2026** | Alex | Please do not put a toll or ruin Barton springs water shed |

| | | |
|---|---|---|
| **5/3/2026** | Alex Abushanab | I do not support the MoPac South expansion as proposed. Adding lanes will induce more driving, not reduce congestion. The EA needs to analyze induced vehicle miles traveled properly and revise the 2045 traffic forecasts. Given ongoing I-35 work, now is the wrong time. The project will disrupt parks, trails, and pedestrian access. We need to focus on transit, biking, walking, and smarter solutions first. |
| **4/20/2026** | Alex Andre Goldfine | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/21/2026** | Alex Chaniotis | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Alex Evans | I urge the CTMA to halt moving forward with any MOPAC expansion until environmental impacts to the Barton Creek system have been studied, at the very least. |
| **3/19/2026** | Alex Fritsch | I am against the MoPac expansion. Widening highways has proven to be ineffective at reducing traffic. With the I-35 project happening concurrently, the last thing this city needs is more construction. This expansion also encroaches on environmentally sensitive areas in Austin that are very close to my heart. It would be heartbreaking to lose even more beautiful land to something as superficial as a highway expansion. It is not necessary for the wellbeing of the residents of this city, most of which are already upset with the I-35 expansion. |

| | | |
|---|---|---|
| **4/25/2026** | Alex Fritsch | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Alex Fritsch |

| **4/26/2026** | Alex Helm | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/1/2026** | Alex Hemingway | I support the Mopac South project! I am usually against highway expansion given that adding lanes creates induced demand, but I think this corridor really needs the improvement. I also appreciate the use of express lanes opposed to general lanes to reduce additional congestion caused by adding lanes. I just think environmental considerations are critical for this project, given that it passes through the aquifer recharge zone. |
| **4/21/2026** | Alex Hendrex | I am opposed to the proposed project because of the minimal benefits to congestion at the catastrophic risk of water quality over the numerous, well documented Karst features. |
| **4/20/2026** | Alex Ligon | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Alex Marrero | Dear CTRMA Board Members, BARTON SPRINGS IS THE SOUL OF AUSTIN. We need to PROTECT it. Not endanger it further! <br />I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Alex Marrero |

| | | |
|---|---|---|
| **5/3/2026** | Alex Meed | I urge the Authority to have a full Environmental Impact Statement prepared before deciding whether to proceed with this project. I am extremely concerned about the possibility that this project could proceed without its implications being fully known. I live in Downtown Austin, a stone's throw from both the I-35 expansion area and the proposed Mopac expansion area. I also frequently use the Lady Bird Lake trail both for transportation and recreation. When I'm walking the trail, I want to get away from urban noise and vehicle traffic, and a little closer to the more natural environment of the lake. The traffic-pattern changes and ecological impact of this project could permanently alter the lake environment that thousands of Austinites enjoy, and must be thoroughly studied. Further, because the I-35 expansion is already proceeding, the Authority needs to perform a full evaluation to take into account the potential impact of two simultaneous freeway expansions. The effects of one may well be exacerbated by the other. This must be carefully considered. We don't need to get steamrolled by yet another hasty highway expansion. I ask the Authority to conduct a full EIS and otherwise fully understand the effects of the Mopac project before further acting. |
| **4/21/2026** | Alex Mertes | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| **4/13/2026** | Alex Muller | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45, which is very dangerous. City Council District 8 has now allocated $117,000 to the design of this path as they recognize the important need for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request, and I can provide further information, including graphics. Thank you. |
| **5/3/2026** | Alex ODay | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Alex ODay |

| **5/2/2026** | Alex Perrone | My name is Alex Perrone. Please do not build the highway without a full environmental study.Thank you. |

| | | |
|---|---|---|
| **5/3/2026** | Alex Pizzonia | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Alex Pizzonia |

| | | |
|---|---|---|

| **5/3/2026** | Alexa Marie | DONT RUIN BARTON SPRINGS |
| **5/3/2026** | Alexa Pegues | Protect our Austin waterways. No to the Mopac expansion. |
| **5/3/2026** | Alexa Rickard | Barton springs is a place I go to hang out with friends, bring out of towners, and spend the day enjoying nature and the gift of living in Austin. It is a must have to keep safe and uninterrupted. I urge you to complete a full and transparent Environmental Impact Statement. |

| | | |
|---|---|---|
| **5/3/2026** | Alexa Sanchez | It’s 2026 and y'all still think MORE lanes, particularly highway lanes, will help traffic ??! Does the traffic in our neighbor city Houston with more lanes not teach y'all anything???? I swear TX engineers and land surveyors MUST be the dumbest in the country, even though we the people know, y’all need to be publicly shamed more for it so hopefully this comment does its part. We the people of Austin are furious and demand competent people do your jobs. I’m tired of irrelevant out of state even in state “engineers” thinking their schooling helps communities but what is education without experience and knowledge about it ON THE GROUND?! If they were smart they’d know; expansion does not have to be wide it can be VERTICAL AND PUBLIC. We need an efficient and safe inner city rail system that allows us to compete on the same level as an actually developed city not some schlump playground for tech bros. There are empty Amtrak rails already built that could be the catalyst for such a project but building over the nature that attracts so many people to it and is the heartbeat of our city is the solution !?? BE FCKN FOR REAL. and in case you forgot; our anger about this is more justified than your right to build over Barton/zilker so if you can’t handle this comment; grow up child and get a different job. Why should you build the city when you can’t even handle someone holding up a mirror to you?! You can even build layers to the already existing highways and go up rather than out. Boston and New York have nowhere to grow but up so rather than take away what makes Texas Texas; why don’t you use what’s already available and actually make it useful ?!! Considering all the engineers in my life are actually some of the most idiotic people I’ve ever met and have asked myself why is there a pipeline of engineers actually being stupid humans but great at math?? It makes sense this is y’all’s solution. Can’t handle the people’s reactions; GET OUT OF THE PEOPLE’S DECISIONS AND LIVES or at the bare minimum have a good idea ffs. |
| **3/19/2026** | Alexa Smith | I do not want a mopac expansion. It is a ridiculous idea that will only create induced demand for more traffic! I commute daily to North Austin on Mopac and I do not think widening lanes would help this commute. CTRMA should invest in transit, walking, biking and other options. For example, I live .5 miles from Zilker but can’t take a bus directly there. This proposal to widen Mopac is a joke and honestly it’s embarrassing! No actual engineers or city planners with half a brain would think this is a useful solution. Y’all should be ashamed for proposing this. Pray to God it gets struck down and doesn’t go through - so that you may be saved from retribution in the after life. |
| **5/2/2026** | Alexa Teders | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Alexander Bauer | I do not support this project on the grounds of lack of transparency and rigor surrounding the environmental impact study. I also believe that this is an ineffective use of budget, where examples show time and time again that adding additional lanes, especially space inefficient and unequal toll lanes, do not provide long term relief. |

| | | |
|---|---|---|
| **4/24/2026** | Alexander Bonetti | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Alexander Bonetti |

| | | |
|---|---|---|
| **4/21/2026** | Alexander Fielden | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |
| **4/21/2026** | Alexander Fielden | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/21/2026** | Alexander Kennedy | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |
|---|---|---|
| | | Alexander Kennedy |
| **3/13/2026** | Alexander Novotny | The biggest thing that needs changed is updating the 360 to mopac north from a light, frontage road, merge to an onramp. This place specifically is the most congested part of the entire section of improvement. Why you all are leaving it as it is makes no sense. I would also extend this all the way to 45. you are already going south. Just go as far south as you can and be done with it so we don't have to go through construction again. |
| **3/27/2026** | Alexander Pankow | I think this is a good idea that will eliminate massive traffic concerns in South Austin. Please move forward with 2c Alternative. |
| **3/19/2026** | Alexander Pasch | I am firmly against widening Mopac near the river. Highways should not go through or near downtown areas to begin with, but since it’s there already, we should not expand the mistake that is this highway. The greatest cities in the world are |

| | | |
|---|---|---|
| | | known for avoiding or minimizing highways in their central areas. Highways pollute the surrounding area and make it less livable. Let's avoid this and try to be great! |
| **5/2/2026** | Alexandra Alvarez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Alexandra Arteaga | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Alexandra Arteaga |

| | | |
|---|---|---|
| **5/3/2026** | Alexandra Biden | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Alexandra Biden |

| **5/3/2026** | Alexandra Edwards | Please find a way to ease traffic without endangering waterways, wildlife, and our public parks! |
| **3/19/2026** | Alexandra Kirkilis | I am a Travis County resident of nearly 40 years and I commute via Mopac. I DON'T WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin’s climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project’s length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **5/2/2026** | Alexandra Kirkilis | To whom it may concern,<br><br>I oppose the MoPac South expansion project. I want a full Environmental Impact Statement (EIS). I support funding for rail, transit, and biking instead. Research shows that adding more lanes does not relieve heavy traffic anyway, and this expansion will harm the environment that makes Austin worth living in.<br><br>Thank you,<br><br>Alexandra Kirkilis |

| | | |
|---|---|---|
| **5/3/2026** | Alexandra Mendoza | Hi, I'm a resident of Austin and urge against the project set to expand south mopac into the community's natural spaces. These expansions that are set to destroy habitats of Texas wildlife as well as valued third places for members of the Austin community are fully unnecessary. Our highways have already undergone just about enough construction this city can handle and increasing that nuisance at the cost of natural life is not what I believe we need.<br><br>Sincerely ,<br><br>A concerned member of the Austin community |
| **5/3/2026** | Alexandra Mendoza Ochoa | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Alexandra Mendoza Ochoa |

| | | |
|---|---|---|
| **5/3/2026** | Alexandra Nelson | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Alexandra Nelson |
| **5/3/2026** | Alexandra Perry | Barton Springs is the crown jewel of Austin. There is no where else like it, especially in the heart of a city. Please help protect it & all of Barton Creek by not allowing highway (Mopac) expansion in that area. Thank you, from an Austin native |
| **5/2/2026** | Alexandra RObinette | I can see and hear Mo-pac from my home. I live on a high point in Rollingwood, 1500ft. from the already elevated ramps. I was born and raised in Austin, graduated Austin High in 1987. I've been through a lot of cycles of construction, and some of them have been helpful. I'd like to be able to echo the comments of my community on how to help guide current planning in a meaningful way, but I have to be honest: what is being proposed is a waste of time and money. There are some obvious and "easy" solutions that could happen to stretches of Mo-pac south of Ben White/360, but all that mess being proposed near Zilker Park is devastating on so many levels. I urge CTRMA to drop the plans that impact the area near Lady Bird Lake/Bee Caves Rd. and prevent the horrible impacts to this sensitive, beloved region. I know how easy it is to get invested in a plan, so much so that reasonableness no longer prevails, and the execution is inevitable. Please don't. It will not solve anything - people adapt and adjust as needed. Do not ruin the quality of life for the people that have invested so much to love and protect this area - it's why Austin is special. And once it is done it, it can't be undone - and CTRMA will not have succeeded. |
| **5/3/2026** | Alexandra Stenseth | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/2/2026** | Alexandra Wolford | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Alexandria Lawhon | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Alexandria Lawhon |

| | | |
|---|---|---|
| **4/23/2026** | Alexia Gioldasis | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | alexia johnson | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, alexia johnson |

| | | |

| **4/20/2026** | Alexis Jacobs | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | alexis jairala | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, alexis jairala |
| **5/3/2026** | Alexis Kraus | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Alexis Kraus |

|---|---|---|
| **4/3/2026** | Alexis Thompson | Dear CTRMA Board Members,<br><br>hello, I've had the pleasure of calling central TX my home for the last 16 years. Barton creek and the natural beauty of the area are a large part of what makes this city beautiful - encouraging community, awareness, and love! Our waters and parks are so deserving of our protection, and I oppose the proposition of the Mopac expansion project. I urge you all to consider the recommendations of citizens and guardians of the area, statement below:<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow |

| | | |

| | | |
|---|---|---|
| **4/21/2026** | Alexis Thompson | A personal note:<br>Please consider these measures, not only to preserve public land but to help the recharge zone. Texas is on the edge of a serious water crisis, and the nature that you cannot find anywhere else in this state deserves our protection so that we may ALL survive. The public wants this land protected, please please consider the mitigation requests as outlined below.<br>Alexis T<br>Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Alexis Williams | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/24/2026** | Alfonso Alarcon | I support the Mopac South project. I believe it's needed to add capacity and relieve traffic congestion, which is a problem in Austin. With the awareness of projects built in and around the Edward's Aquifer and other environmentally sensitive areas, I believe this project can be built in an environmentally sensitive way that benefits our community. |
| **4/28/2026** | Ali Bodovsky | I am a resident of the Barton Springs neighborhood and visit this area every single day with my dog and family. This expansion project could be detrimental to the local ecosystem (and Barton Springs as we know it). I love Barton, Austin loves Barton, everyone loves and cherishes Barton Springs. It is a true gem of Austin. Please, I urge you to complete a full environmental impact statement, as required by law. |

| | | |
|---|---|---|
| **5/3/2026** | Ali Weilacher | No to mopac being built on Barton springs |
| **5/2/2026** | Alia Khan | Please do not add any additional toll/express lanes to Mopac. Adding another lane is needed, but it should be a regular traffic lane. The limited number of exits in express lanes does not make sense for a freeway as relatively short as Mopac, which will mean that the number of drivers who choose to use it will be limited. For instance, I generally travel from William cannon to the UT campus area or 45th street exit, so I never use the existing express lane. And if you want to generate more revenue for the city, there are plenty of well-funded tech companies that could handle a small tax. Small for them, but significant revenue for the city. Same goes for AirBnB and pied a terre properties owned by non-residents. Everyday drivers are not the ones on whom you need to be levying fees. Thanks for your consideration! |
| **3/23/2026** | Alianah Suda | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside |

| | | |
|---|---|---|
| | | Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Alianah Suda |
| **3/28/2026** | Alice lin | Please consider adding a paved shared-use pathway connecting the 1.2 miles from Meridian to the existing shared-use pathway at Escarpment Blvd. Thank you. |
| **3/28/2026** | Alice Tilton | Hello, I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for |

| | | |
|---|---|---|
| | | safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. Alice Tilton |
| **5/3/2026** | Alicia Bonte | Do not expand mopac |
| **5/3/2026** | Alicia Bowling?? | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Alicia Bowling |

| | | |
|---|---|---|
| **3/12/2026** | Alicia Fiedler | Dear CTRMA Board Members,<br><br>Please realize that this issue is extremely important to me as a resident who has watched Austin grow since the 1990s. I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. |---|---|---|
| **4/20/2026** | Alicia Herrera | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration.<br>We need more green spaces, thats what makes Austin what it us. Dont destroy what little we have left |
| **5/3/2026** | Alietza | Hi, my name is Alietza and I am born and raised from Austin and Travis County and I wantedto call in asking for an environmental impact report for this South MoPac expansion thatyou guys are proposing.I'm fully against it.I'm really worried about the ways that it would, the runoff would impact the water flowof our springs of our aquifer what what the quality of our rechargezone would look like and how it would impact the umendemic species that live here so this brings me in a lot to me this ismy holy water this is where i um feel like i am at church soanything that impacts that feels really sensitive to me and thepeople that I love. So please don't **** with my water. Thank you. |
| **5/3/2026** | Alina Garcia | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Alina Garcia |
| **4/28/2026** | Alisa Hanson | I feel that this is a short term attempt at a solution that will have more negative consequences than benefits. Adding more lanes is not a sustainable long term solution nor does it significantly improve traffic. As an alternative, converting existing lanes into HOV or transit lanes would be a better long term choice for our city, at least until we finally fix all of this with a proper and well funded public transit system such as an expansion to our lackluster public rail system. |

| | | |
|---|---|---|
| **5/3/2026** | Alison Andrews | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Alison Andrews |
| **5/1/2026** | Alison Biers | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **3/12/2026** | Alison Campbell | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Alison Campbell |

Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

|---|---|---|
| **4/4/2026** | Alison Prince | Dear CTRMA Board Members,<br><br>Dear Officials,<br><br>I am writing to strongly oppose the proposed 8.77-mile MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS). While the Draft Environmental Assessment claims "no significant impacts," the project poses the following critical risks:<br><br>- Aquifer Contamination: The route crosses the Edwards Aquifer Recharge Zone. Construction and 110 acres of new pavement will funnel untreated pollutants (sediment, heavy metals, and oils) through karst features directly into Barton Springs.<br><br>- Endangered Species: The project threatens the Barton Springs and Austin Blind salamanders. These federally endangered species are highly sensitive to the water quality and flow disruptions this expansion would cause.<br><br>- Watershed Impact: The corridor crosses Barton Creek, Eanes Creek, and Lady Bird Lake, jeopardizing the regional watershed. The aquifer is already dangerously low due to climate change and development and this will forever alter the aquifer and very well could disappear something that makes Austin special.<br><br>- Community Health: Expanding to 13–18 lanes will significantly increase noise and PM 2.5 air pollution, specifically impacting students at Austin High School and surrounding neighborhoods. Austin already has more lanes than exist in Tokyo, a city much larger. Saving 5 minutes isn't worth spending billions.<br><br>- Public Assets: The expansion will disrupt major public trails and parks. People come to live here because of our green spaces, you must seriously consider what happens when these are forever altered.<br><br>Given these environmental and public health threats, a rigorous EIS is essential before any further action is taken.<br><br>Do what's right for our city,<br><br>Alison Prince |

| | | |

|---|---|---|
| **5/3/2026** | Alison Valente | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Alison Stonhaus |
| **4/27/2026** | Alissa Ruder | I am very concerned about the mopac expansion. Barton Springs - be specific. I urge you to complete a full and transparent Environmental Impact Statement. Barton Springs and the energy here in Austin are WHY people live here and want to move here. It makes the city so much money. Please don't make this city like every other city in the US….Austin is the #1 capital for a reason. It's nature. Not highways. Please. Please. |

| | | |
|---|---|---|
| **4/20/2026** | Aliya Rosenbloom | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>When... on planet earth has an expansion in a senstaive recharge zone had “no significant impacts...” It is offensive that you think the general public of Austin is that dumb and cares this little about what we hold most valuable here.<br><br>Expanding the roadway by over 100 acres of pavement will obviously increase runoff carrying oil, heavy metals, and other pollutants into creeks and recharge features that feed the aquifer. This corridor crosses multiple waterways that flow directly to Barton Springs, deepening the risk to an already stressed system.<br><br>This isn’t just about water quality--it’s about the health of an entire ecosystem.<br><br>At a time when the Edwards Aquifer is already under pressure from drought and growth, we should be proceeding with extreme care. This project warrants a full Environmental Impact Statement to truly understand the cumulative impacts and explore less damaging alternatives.<br><br>Barton Springs and the aquifer are not just environmental assets--they are part of the identity and daily life of this city. I urge you to require a full Environmental Impact Statement before moving this project forward.<br><br>Please step out of the mindset of development and money for one second and look towards what we might actually view as wealth in the future-- our water.<br><br>For the love of water in Central Texas,<br><br>Aliya Rosenbloom |

| **5/2/2026** | Aliyah Morales | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Aliyah Moss | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Aliyah Moss |

Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Aliyah Moss |

| | | |
|---|---|---|
| **5/3/2026** | Aliyah Moss | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. |---|---|---|
| **5/3/2026** | Alizabeth Mcafee | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Alizabeth Mcafee |

|---|---|---|
| **4/30/2026** | Alli Bertram | This expansion will:<br><br>* Pave over 110 acres of the Edwards Aquifer Recharge Zone, threatening groundwater quality, our creeks and Barton Springs;<br><br>* Harm 4 federally endangered species and their habitats, including the Barton Springs Salamander and Austin Blind Salamander;<br><br>* Carve through some of Austin's most iconic parkland and recreational spaces, including Zilker Park, the Barton Creek Greenbelt, and the Lady Bird Lake Hike and Bike Trail; and<br><br>* Pollute our air with massive increases in cars (increasing annual vehicle miles traveled on MoPac by a whopping 331 million) with more car emissions directly next to neighborhoods and Austin High School (If you didn't see it, Austin's air quality just received a failing grade from the American Lung Association). |
| **5/3/2026** | Alli Crew | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Alli Crew |

|---|---|---|
| **5/3/2026** | Alli Love | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Alli Love |
| **5/3/2026** | Alli Tithof | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. |---|---|---|
| **5/3/2026** | Allie Meger | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Allie Meger |
| **5/3/2026** | Allie Schlener | Save Barton Springs ! Stop Mopac |

| **4/14/2026** | Allison DeWitt | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Allison DeWitt |

| | | |
|---|---|---|
| **5/3/2026** | Allison Drish | Dear CTRMA Board Members, <p data-start="404" data-end="755">It is unacceptable and incredibly irresponsible that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. <p data-start="757" data-end="780">Key concerns include: <ul data-start="782" data-end="2196"> <li data-section-id="vtrp38" data-start="782" data-end="1003">Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. I urge you to reconsider.  <p data-start="2387" data-end="2423">  Sincerely, Allison Drish |
| **3/28/2026** | Allison Ferris | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it’s only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |

| | | |
|---|---|---|
| **5/3/2026** | Allison FInn | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Allison FInn |

| | | |
|---|---|---|
| **5/3/2026** | Allison Garrow | Hello, this is Allison Garrow and I'm calling to ask that you please do a full environmentalimpact statement on how this expansion is going to affect not only the Edwards aquiferbut all of the habitat for these endangered species that call it home.I'm here at the Springs right now, and this place is so special.It is the most magical land that Austin has.It is a place where community gathers.It's where we come to seek relief during the hottest months of the year.These waters are healing, and what happens to the water happens to the people.Right now, you know, there is so much at risk and water is being threatened everywhere.We have an opportunity to reimagine how we move forward and adding more lanes for moretraffic, more pollution, only to shave off a few minutes of commute time, it's not worthit.It's really not worth it, and I'm pleading with my whole heart that you consider other ways.Thank you. |
| **4/20/2026** | Allison Gordon | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/27/2026** | Allison Hohimer | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Allison Hohimer |
| **5/3/2026** | Allison Hohimer | Please do not expand mopac over the precious watershed area that encompasses Barton springs. Austinites love our springs and do not want them tainted by construction. I beg you think of future generations!! |

| | | |
|---|---|---|
| **5/3/2026** | Allison Lang | Given the potential impact to water quality and access to our parks and springs, the city must conduct a full environmental impact statement. The addition of more toll lanes throughout the city has not solved traffic problems. Instead, the construction causes accidents, pollutes our natural areas, and makes outdoor access more difficult. It is wholly irresponsible to fast track this project. The most detailed review needs to be conducted, given that our waterways already face significant environmental challenges. The current assessment is not sufficient. |
| **5/3/2026** | Allison Paranka | Dear CTRMA Board Members, I run on the hike and bike trail, the greenbelt, and swim in Barton Springs on a daily basis. These trails and wildlife areas are integral to maintaining access to nature for Austin residents, for protecting our environmental area, and preserving what we can of the already depleted aquifer. Uncalled for and UNASKED FOR Construction for years in this area would cause untold disruption for citizens, wildlife, and ecosystems around Lady Bird Lake and the Greenbelt. We are already living through hell with the I-35 construction project -- to have both major highways bottlenecked with construction for years at a time AND have restricted access to the Mopac pedestrian bridge and Zilker park for unnecessary highway expansion is untenable, not to mention the massive ecological impact this would have on some of our most precious nature. I STRONGLY oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Allison Paranka |

| | | |
|---|---|---|
| **3/12/2026** | Allison Patrick | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Allison Patrick |

| | | |
|---|---|---|
| **4/1/2026** | Allison Patrick | Central Texas Mobility Authority,<br><br>I am appalled at the greed of your company and 7 board members desire to create more lanes of traffic through the heart of our greenbelt just to line the corporate pockets.<br><br>Does the Central Texas Toll Mobility Agency even care about the Austin community? You will destroy Barton Springs, the salamander habitat, the greenbelt, Midnight cave, the karst Edwards Aquifer, residential water supply, hundreds of trees, wildflowers, just to make a dime.<br><br>Your company could never bring back our environment back from this permanent destruction. The additional lanes of Mopac in a natural area that draws so many people to visit Austin, and what so many residents love about Austin, is not only shocking in a town like Austin, but it is morally wrong.<br><br>I guess corporations ran by Abbott, like to wait until the EA are cut by 55% as of January of this year, so you can get away with it. It is disgusting and I hope your toll roads go belly up after the mid-terms , and certainly after your corruption is exposed in the next presidential race.<br><br>Your company ruins beauty and awe, and our environment.<br><br>A. Patrick |

| | | |
|---|---|---|
| **3/31/2026** | Allison Patrick | Hi, my name is Allison Patrick and I'm a resident here over by Barton Springs and Barton Skyway area and I am deeply concerned about the expansion with the Texas, Central Texas mobility and what environmental impact that would have on our precious ecosystem over in Barton Springs. We are already facing a lot of extreme drought, tree destruction, construction, traffic noises, extreme temperatures. Why do we need two more toll lanes? It's only going to save, you know, 10 minutes and ruin our environment for years to comes the tall people can make more money. This is absolutely insanity. There are other ways to go. And an inconvenience to have a beautiful city that thrives with trees and nature and beauty is what makes Austin so special. It's very upsetting. Maybe you should go build your toll around the data centers. Yes, it seems like they're all on the same team. Thank you. I do not support this, and it really needs to stop. And of course, the EPA that we don't have any longer, You know, it's very, the funding has run out. Why would they be the one who's considering the environmental impact on this and paying for it? I get them paying for it, but it's not going to be fair. It needs to be a third party that the city, the Environmental Protection Agency, also recommends. This is just bully. Have a great week. |
| **4/20/2026** | Allison Phillips | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/1/2026** | Allison Wallace-Fuarez | My name is Allison Wallace-Fuarez and this is not just about Austin, it's about nature, it's about life, water is life, and endangered species are in Barton Springs and this isinsane that nobody's paying attention to exactly the damage that's going to be done, not maybe.And we have to think about more than just the dollar signs. This is going to be a life long impact that impacts our children, our children's children, and we can't keep letting dollar signs be the biggest thing that we care about. Without water, humans, animals, plants cease to exist.And think about all of the peoplethat travel to Austin for Barton Springs.It's a huge deal.People come from all over. I've been going to Barton Springs since the 90s. My grandparents, my grandfather, who was a Supreme Court judge and a Senator, his name is James Wallace, he came to the area because he loved the area and he kept us in the area.and my parents relocated to Georgetown,and I've spent my entire life,and I'm almost 42 regularly being at Barton Springs,so to potentially have it threatened with a highwayis just insane. Please think about nature, not the dollar signs. |

| | | |

| **5/3/2026** | Ally Young | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Ally Young |
| **5/3/2026** | Allysa Dallmann | Do not expand. We don’t need larger roads, just more public transport. |

| | | |
|---|---|---|
| **5/3/2026** | Allyson Buchanan | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Allyson Buchanan |
| **4/26/2026** | Allyson Garcia | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **5/3/2026** | Allyson Garro | Dear CTRMA Board Members,  What happens to the water, happens to the people. This expansion project is careless and will threaten the vital infrastructure of our aquifer, and do irreparable harm to our water, the delicate ecosystem of wildlife, and the health of the people who call Austin home. <br /><br />  Can you imagine the hot Austin Summers without Barton Springs? Don't sell out our sacred waters for more pavement! We will all choke on the pollution of these bad decisions for years to come. The time to protect our home for future generations is NOW! Please listen to the ones advocating for safer transit solutions.  Sincerely,  Allyson Garro |

| | | |
|---|---|---|
| **4/23/2026** | Alma Ramos | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Alysa Nunez | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Alysa Nunez |

| **5/3/2026** | Alyssa Galloway | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Alyssa Galloway |

| | | |
|---|---|---|
| **4/20/2026** | Alyssa Galloway | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project. These mitigation requests are critical to ensuring the long term sustainability and health of Austin green spaces, an element that locals love and keeps people moving to our city. We must respect and protect our natural green spaces as a first priority, for the long term thriving of our city.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Alyssa LaBau | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Alyssa LaBau |

| **3/16/2026** | Alysse Balmer | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>alysse balmer |

| **5/3/2026** | Amanda | Do expand mopac. Use the light rail taxes and build the light rail more efficiently. Stop allowing private investors to pickpocket your constituents for decades |

| | | |
|---|---|---|
| **4/16/2026** | Amanda Phillips | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>I was born here in south Austin 36 years ago and grew up swimming in the green belt and the springs. Yes, I've seen the traffic get worse but you know what's worse?! The water going down, green belt drying out, our beautiful nature areas being flattened for endless construction. People can wait longer on the road, we can't replace the springs. It's part of what keeps us sane in this mad world!<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow |

| | | |
|---|---|---|
| | | patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. |

| | | |

| **5/3/2026** | Amanda Bejarano | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Amanda Bejarano |

|---|---|---|
| **5/3/2026** | Amanda Bender | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Amanda Bender |
| **5/3/2026** | Amanda Bowman | I oppose expanding MoPacSouth with toll lanes or without. South is never that busy (my job takes me all over the region). Expanding MoPac will cause major environmental degradation to the Barton Creek Zones plus the Edward's Aquifer. Water before traffic! |

|---|---|---|
| **3/27/2026** | Amanda Clements | Dear CTRMA Board Members,<br><br>Any person that knows the importance of the aquifers, wildlife, endangered species, and overall God given environment, shall know that the MoPac South expansion plan is ABSURD! I object to the proposed plan to expand MoPac South!<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Amanda Clements |

| | | |
|---|---|---|
| **5/3/2026** | Amanda Gaber | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Amanda Gaber |
| **5/3/2026** | Amanda Goodrich | I do NOT want to see this project go through. Expanding MoPac in this way would not only endanger our waterways and wildlife, it would be an eyesore to one of the few remaining natural habitats left in the city. |
| **5/3/2026** | Amanda Graves | Rather than molding nature to meet our needs. Or in this case, blatant greed, let Austin be a place that molds itself to the needs of the land. Our greenspaces are what make Austin so special and protecting them at all costs also protects us, our health ,and out children. |

| | | |
|---|---|---|
| **5/3/2026** | Amanda K Leach | I am writing to formally submit my comments regarding the Draft Environmental Assessment (EA) for the MoPac South Expansion project. I strongly urge the CTRMA and TxDOT to rescind the current Draft EA and instead conduct a full Environmental Impact Statement (EIS).The proposal to add up to six new lanes across nearly nine miles of the Edwards Aquifer Recharge Zone constitutes a "significant impact" that cannot be legally or ethically mitigated under a Finding of No Significant Impact (FONSI). A full EIS is required for the following reasons:Irreversible Risks to Drinking Water: The project involves extensive drilling and excavation into the porous karst limestone of the Edwards Aquifer Recharge Zone. This creates direct conduits for toxic highway runoff—including heavy metals and petroleum products—to enter the primary water source for over two million people without natural filtration.Endangered Species Protection: The project poses a direct threat to the federally endangered Barton Springs Salamander and Austin Blind Salamander. Any degradation in water quality or alteration of subterranean flow paths could lead to the extinction of these species, a significant impact that demands the "hard look" only provided by an EIS.Failure to Meet Local Water Quality Standards: The Draft EA indicates an intent to follow state-level water quality standards rather than the more stringent Save Our Springs (SOS) Ordinance. Given the sensitive nature of the Barton Springs Zone, ignoring local protections is a significant omission.Community and Visual Impacts: The proposed construction of 20-foot-tall noise walls near Zilker Park and Lady Bird Lake will fundamentally alter the character of Austin's most iconic green spaces. Furthermore, the increased air pollution near Austin High School has not been sufficiently analyzed for long-term health effects on students.Lack of Meaningful Alternatives: The Draft EA focuses almost exclusively on toll-lane expansion and fails to rigorously evaluate multimodal alternatives, such as expanded transit or "demand management" strategies, that would not require building over the recharge zone.For these reasons, a Finding of No Significant Impact is inappropriate. I request that the agencies fulfill their obligations under NEPA by initiating a full EIS process that includes a more thorough scientific review and broader public engagement. |
| **3/24/2026** | Amanda Kale | I support this project because it directly addresses the growing congestion issues and travel times that the Austin community is experiencing. I'm hopeful that the improvements will help create a more consistent transit route, improve overall traffic flow, and allow emergency responders to reach people more quickly. These changes will benefit the community greatly. |
| **5/3/2026** | Amanda Kuroda | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/28/2026** | Amanda L. Clements | The South Mopac expansion project must be haulted. The environmental studies for the area have not been thorough nor extensive for the vulnerable area. The proposed project will only cause more issues, both temporarily during construction as well as LONG TERM DAMAGE. The God given land along with the natural wonders of the area must be left alone. Amen. |

| | | |
|---|---|---|
| **4/29/2026** | Amanda Lynch | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I would prefer that MoPac not be expanded at all, due to the large environmental cost. However, in the event that it does go forward:<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Amanda Olson | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Amanda Olson |
| **5/3/2026** | Amanda Ph?m | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. * Please care about the future of our children growing up in a safe, natural environment. *Green spaces should be respected and protected for everyone to enjoy for generations to come. *Keep Austin thriving without causing harm to local communities and our wildlife neighbors. *Improve public transport infrastructure Respectfully, Amanda Ph?m |

| **4/20/2026** | Amanda Rohlich | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/28/2026** | Amanda Schauer | I do not care about a highway expansion. I will always choose traffic no matter how heavy, over disrupting our clean drinking water, the thousand year old caves, and the species that occupy the area this will affect. We don't want a highway expansion. We want our nature preserved with more care. Stop the Mopac expansion. |
| **5/2/2026** | Amanda Schauer | The heart of our city is Barton springs and zilker. These spots are one of the biggest draws for new residents and tourists. Our city is built on some of the most beautiful nature areas. Expanding mopac removes that heart. It threatens the beauty. It threatens the wildlife. It threatens our drinking water. It is not needed. I would rather sit in traffic than disrupt our nature areas and water supply. Please do not expand mopac. |
| **5/2/2026** | Amanda Shaftel | I sincerely request this project down not move forward. Barton Springs is the heart of this city, without its clean waters, the city and its residents would suffer. Please don't ruin our city. Our current residents and future generations beg of you. |
| **3/24/2026** | Amanda Sherard | I live so close to Mopac & want to keep it a local highway. Less people drive now due to work at home from Covid. We should have more metro |
| **3/24/2026** | Amanda Sherard | We don't need more construction to this magnitude! Offer metro, more bike lanes, keep MoPac local, less people are on the roads since work at home opportunities! This construction proposal won't save that much (4 minutes) of commute time. |
| **5/3/2026** | Amanda Townsend | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Amanda Townsend |

| | | |
|---|---|---|
| **4/20/2026** | Amanda Utter | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/26/2026** | Amanda Wright | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |

The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>AMANDA YOUNG |
| **5/3/2026** | Amatist | I oppose the south MoPac expansion! A full environmental impact statement must be completed before any such project is considered. Barton Springs is Austin’s treasure and MUST be protected. |

|---|---|---|
| **5/3/2026** | Amaya Shiva | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amaya Shiva |
| **4/20/2026** | Amber Andel | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Amber Armendariz |

| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Amber Armendariz |

| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |

Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |
| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |

It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |
| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |
| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. | **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |

The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |

|---|---|---|
| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |
| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |
| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |

| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |

The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |

|---|---|---|
| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |
| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |
| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |

| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |

The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |

|---|---|---|
| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |
| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |
| **5/3/2026** | Amber Armendariz | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amber Armendariz |

| **4/23/2026** | Amber Bezzant | Dear CTRMA Board Members,<br><br>Hi! Below is the letter they the powers that be wrote for me but I wanted to add my own thoughts. Toll roads are super icky. I mean, how greedy do you have to be to make people pay to get to work? Roads are a public good. Water is a public good. If you destroy our lack of water, who will you have to drive on your roads? We will all have to move away. And the recharge zone is so pretty. Toll roads are not pretty. We don't want to look all concrete like houston or Dallas so we? I thought so.<br><br>Okay well, have the day you deserve.<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. | **4/22/2026** | Amber Byfield | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project. I love how GREEN our city is. “A city within a park” is what Austin is known as. Because of this…<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/22/2026** | Amber Byfield | Dear CTRMA Board Members,<br><br>This expansion CANNOT happen. I live right in the heart of zilker, the springs are a humongous part of my childhood and life. This expansion will pollute our very valuable waters, our nature in zilker park, the critters who live here amongst us, and all of US ourselves. The pollution will affect commuters, affect the students at Austin High, and the tourists and locals who bask in Zilker parks beauty. This will harm us all, and it should not happen.<br><br>Sincerely,<br><br>Ina Ashcraft |

| **5/3/2026** | Amber Herndon | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Amber Herndon |
| **4/21/2026** | Amber Jekot | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **5/3/2026** | Amber Lindholm | Hello, I am an Austin resident who has lived in 78704 zip code since 2010. I have spent countless hours hiking the Barton Creek Greenbelt and swimming in Barton Springs. I visit the Butler Hike and Bike trail to walk under Mopac and around the three mile loop multiple times a week. I am an avid nature lover, a certified Master Naturalist who spends time helping maintain and restore our native ecosystems for the health of our community. And, I am a mother of three kiddos who attend AISD.<br><br>I am concerned about the plan to expand Mopac South for many reasons, most notably the sensitive ecoregion that Mopac runs through which is our Edwards Aquifer Recharge Zone. Water is and will continue to be one of our most vital resources here in Central Texas and we need to be incredibly careful with how we handle anything in this zone. I demand that this project undertake a full Environmental Impact Statement (EIS) to fully understand all of the environment impact that may take place... to the water, the land, the endangered animals, to the humans that live, work, and play in these areas every day. We cannot proceed with such a massive construction project without understanding and mitigating these issues.<br><br>I am also concerned that we do not have the full picture with up-to-date traffic volume and pattern data. Please ensure that this is understood... what traffic looks like today and projections based on the other multiple large scale projects happening around town. I would love to also see alternatives explored that are not a blanket expansion of pavement from end to end... it seems incredibly excessive to add 4-8 lanes onto this area of the highway with only a small improvement of time to people's commutes. Everything that I've read about this project makes it seem that the cost to our environment and our community is not proportional to the benefit.<br><br>Austinites have great pride in our natural spaces: our creeks, greenbelts, our hiking and biking trails, our lake, our springs. We deserve a solution that protects our environment, keeps our air and water clean, and invests in better transportation alternatives than solely single commuter automobiles. We must do better for our kids and for our future. Please respect our identity as a city that values nature, water, and health. Thank you for your consideration.<br><br>Amber Lindholm<br><br>Austin TX 78704 |

| **4/23/2026** | Amber Lucien | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Amber mcgarrahan | I am a resident of Austin, Texas and I have lived in Texas my whole life. The expansion project would put our environment at risk as well as many native species. I do not approve of this expansion of Mopac, it will not do anything to positively impact traffic flow and the construction is destructive to our city. |
| **4/20/2026** | Amber Nuchols | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Amber Richards | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Amber Richards |
| **5/3/2026** | Amber Walker | There is no Planet B. This earth, this city, and these springs are not ours to destroy, we have a responsibility to protect them. There are other ways to improve traffic without any further destruction of the springs. |

| | | |
|---|---|---|
| **5/3/2026** | Amber Williamson | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Amber Williamson |
| **5/3/2026** | Amber Wilson | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Amber Wilson |
| **5/2/2026** | Amelia | Hello, my name is Amelia. I live at -.We're calling about the expansion on the MOPAC highway. We demand that there's afull environmental investigation to make sure all the wildlife and endangeredspecies are taken care of and we also don't agree with it because we do notthink it's actually going to help us in any way. Toll roads are really expensiveFirst off, and second, it would cause a lot of pollution, not only to the roads and theenvironment, but to the water, and which aquifers, one of the most precious aquifers, not onlyin Texas, but in the world.So we ask that you not only reconsider it, but cancel it all together.It's the smartest thing we can do for our entire community.for you, for your family, for the future. So let's stop this. Thank you. |

| | | |
|---|---|---|
| **4/22/2026** | Amelia Cane | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/21/2026** | Amelia Cobb | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Amelia Scott | Hello, my name is Amelia Scott. I'm 10 years old and I live in Austin, Texas.I'm here to tell you that what you're doing is breaking the federal law. You can't build something near endangered species.Specifically the salamander.If youIt is a federal law. You can't do that. Another thing is you're taking away childhoods.My dad learned to swim there, I learned to swim there, there are so many kids that havehopes and dreams and they want, they want to have a place where they can share theirchildhood with their children and generations to come.If you do this, you're going to be taking away childhood, dreams, and the only placewhere a certain type of endangered Salamander lives in the entire world.So I hope you hear me and all the other voices who are trying to fix this.It's horrible.I know I'm only 10 years old, but I have a very strong voice, and I promise you thisproject is going to take so much money.I have calculated every single income, and I can tell you that what you're doing, inmy opinion, is wrong.I really want you to hear me and all the other voices out there.We may be small, but we're powerful, just like me.Also, if you break the federal law, you could go to jail, and no one wants to go to jail.The federal law, you cannot build anything near endangered species, especially when there'sonly a few in the entire world.Do you want to make a species go extinct?I don't think so, but if you do, I don't know what you're thinking.Goodbye. |
| **5/3/2026** | Amelie Maclay | Dear CTRMA Board Members, Ive lived in Austin my entire life and I would hate to see the little bit of undeveloped greenery we have be destroyed. I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Amelie Maclay |
| **4/25/2026** | Amelie Spadaccini | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/20/2026** | Amelie Spurlin | I grew up in the Austin area and care to see it grow and change in an accessible way. I DON'T want a wider mopac! More lanes will cause worse traffic. I OPPOSE more express and toll lanes. I DO WANT continuous pedestrian and bike paths along the project length! I want to see the city of Austin and CTRMA to invest in WALKING, BIKING, AND TRANSIT infrastructure rather than DOUBLING DOWN on highway expansion! |

| | | |
|---|---|---|
| **5/3/2026** | Amelie Trieu | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. | **5/3/2026** | Amie Pena | I do not agree with this proposal |
| **5/3/2026** | Amie Raftus | This is appalling. We live centrally and the idea that you are planning (without doing an environmental review) to pave over environmentally sensitive areas to widen ROADS is shocking. This whole area JUsT lived through multi year road closure and construction and before we can catch our breath and enjoy normalcy we hear about THIS…feels like y'all are constantly reacting to th cities growth vs planning for it. |
| **4/18/2026** | Amit Kumar Singh | The area south of Colorado river is environmentally sensitive and is a part of Edward Aquifer Recharge Zone. Add more road pavement will have serious detrimental affect on underground water, Barton Spring and Green area near Zilker park. It will push more traffic in public green spaces. Adding more lanes is not going to fix traffic. It would fill up quickly. |

| | | |
|---|---|---|
| **5/3/2026** | Amna Hamed | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Amna Hamed |
| **5/3/2026** | Amrit Banwait | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Not to mention, these green spaces are a significant draw for tourism and out-of-state investment; damaging them in pursuit of trying to satiate the endless thirst of (what shouldn't be) a car-centric city. Sincerely, Amrit Banwait |
| **5/3/2026** | Amy | I am concerned about the environmental impact of this project on zilker park and the greenbelt and would like an environmental study to be completed before the project is approved |
| **5/3/2026** | Amy | Please protect Barton Springs and Austin’s natural areas! Thank you |
| **3/28/2026** | Amy Ashbaugh | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it’s only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I strongly request this addition! The addition will help support the businesses at GR golf and tennis, and the restaurants and local boutiques/shops at Escarpment village, as well. Limited parking mitigated by bike and pedestrian access. Thank you! |

| | | |
|---|---|---|
| **5/3/2026** | Amy Bickford | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Amy Bickford |

| | | |
|---|---|---|
| **5/2/2026** | Amy Bushong | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| | | |
|---|---|---|
| **4/23/2026** | Amy Constant | Dear CTRMA Board Members,<br><br>I absolutely oppose the MoPac South highway expansion project. There are other ways to mitigate congestion and your data justifying the project is out of date. The thought of the destruction, pollution, and construction involved is incredibly concerning and certainly not worth the time savings for future commuters.<br><br>I'm also deeply dismayed at the lack of impact study and disclosure of impacts. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>And then there's the time and discomfort of construction, time that I won't get back in my lifetime. I am on the trail 3+ days a week and at the springs 2+ days a week in the summer. My precious trail will be closed for years, not to mention the pollution I'll inhale after when using the trail and the pollutants that will flow through Barton Springs. And there's a true detrimental impact to the animals and habitats in the construction zone. None of this is worth it!<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank you for valuing a resident's and long-time Austinite's input.<br><br>Amy Constant |
| **5/1/2026** | Amy Foster | Though I do not live in Austin, my office is located there and I frequently travel in and through the city. I am opposed to this proposed expansion of MOPAC through environmentally sensitive areas over an important part of an aquifer recharge zone. We can live with traffic. We can not live without water. Also, as someone who has lived with traveling on a constantly expanding I35, enduring construction that never ends and never seems to actually reduce the heavy traffic, perhaps these funds should be directed toward a public transportation system instead of constantly widening roads. Other world class cities do it - we Texans should try it, since it works like a dream all over the world. |

| | | |
|---|---|---|
| **4/21/2026** | Amy Gerhard | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Amy Nappier | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Amy Nappier |

| | | |
|---|---|---|
| **5/3/2026** | Amy Nelson | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Amy Nelson |
| **3/18/2026** | Amy Pancake | Dear CTRMA Board Members,<br><br>It is not worth anyone's time to draft cemprehensive emails explicating all the fine points of the clearly defective plan that has been put forward.<br><br>Use your common sense - the world as we know it is in its death throes - you want to throw another match on the fire so hyou can meet your tiny, selfish goal of making a living for your family while screwing your same family's future irrevocably?<br><br>Really?<br><br>Really?<br><br>YOu don't have that right. You do not have that right. None of you do.<br><br>Check yourselves.<br><br>For the love of water in Central Texas,<br><br>Amy Pancake |

| **5/3/2026** | Amy Pattillo | Dear CTRMA Board,<br><br>I'd like to begin by thanking you all for taking the time over the past decade to consider community input and request additional changes and information about the Mopac South project. I've appreciated the opportunity to participate in meetings with CTRMA staff, and the dialogue that has been offered. Thank you each for your stewardship of our community resources.<br><br>I am encouraged by some of the changes made along the way, and I remain hopeful that there will be another round of thoughtful evaluation of this project's design.<br><br>As policymakers, I ask that you consider the following.<br><br>Over the last decade of community feedback, including during the current public comment period, a consistent theme has emerged: the community recognizes the need for improvements on Mopac, but continues to question whether the project's scope — with its narrow focus on traffic traveling from Slaughter Lane to Cesar Chavez — has yielded a design that represents the best use of our area's financial and environmental resources.<br><br>For example, if the project goal were to reduce congestion and improve safety for all origins and destinations along the Mopac South corridor, would elevated toll lanes over Bee Cave Road still be in the preferred alternative?<br><br>The proposed elevated toll lanes over Bee Cave Road are presented in the preferred alternative on the basis that they will provide reduced, reliable travel times for traffic between Slaughter Lane and Cesar Chavez. However, these elevated toll lanes negatively impact traffic entering and exiting at Bee Cave Road, which is a significant portion of the traffic entering and exiting Mopac South. A separate alternative — with toll lane ingress/egress on the inner lanes of Mopac — has also been studied, providing comparable, reliable travel time benefits while avoiding these drawbacks. That alternative offers longer acceleration and merging lanes, similar to those installed on Mopac North. It does not pair toll lane ingress/egress with Bee Cave Road's general traffic lanes, thus not creating the weaving, differences in speed, and other safety concerns that the elevated toll lanes introduce. And it would not require spending a large portion of the project budget on elevated structures in an environmentally sensitive area. Elevated lanes carry significant construction time and costs, require deep excavation for structural supports, and produce ongoing noise impacts that cannot be mitigated. With so many regional roadway projects competing for funding, are these elevated toll lane structures worth the cost when an alternative exists that achieves similar travel time benefits, reduces safety and congestion impacts for both Slaughter-to-Cesar drivers and Bee Cave Road drivers, costs considerably less, and has reduced construction times? |

| | | |
|---|---|---|
| | | The community also continues to ask whether the proposed design will produce a safer roadway for all users. Are ramp lengths and positions designed to alleviate existing bottlenecks, and not create new ones? Are known bottlenecks in general lanes and frontage roads being addressed?<br><br>For instance, the proposed connection of Mopac South to Mopac North proposes reversing two existing toll lane ingress and egress points, and it is unclear how this improves safety for any users. The proposed ramp lengths at these points are short and will likely introduce new bottlenecks in general lane traffic, along with choke points in the single toll lane in this area. It is also unclear how these changes serve any drivers, much less the stated project goal of providing reliable travel times between Slaughter Lane and Cesar Chavez.<br><br>Similarly, a toll lane egress is proposed just south of the Enfield exit — a placement that will almost certainly create a safety hazard as drivers exit the toll lane and attempt to cross multiple general lanes to reach Enfield. Any driver familiar with this stretch of road can see the problem this will create, and one can reasonably anticipate that an elevated, direct connection exit ramp to Enfield will be required to address it shortly after construction.<br><br>The community also continues to ask what the character of Mopac South will become if both this project and the SH-45 SW gap project are built, connecting Mopac to I-35 at the southern end.<br><br>I attended the open house for the SH-45 SW gap project feasibility study and reviewed its results. Reviewing both that study and the Mopac South draft EA, it is apparent that the two project teams have used the CAMPO regional travel demand model to forecast future traffic on the same segment of roadway — Mopac South between Slaughter Lane and Cesar Chavez — and arrived at inconsistent results for the same time periods. As a member of the CAMPO policy board, I do not see how it is prudent to commit upwards of a billion dollars to updating Mopac South without first reconciling these conflicting demand forecasts for the same roadway segment.<br><br>I also want to note that the community's concern about the potential character change to Mopac South is significant. Currently, Mopac South is not a heavy truck route. If connected to I-35, there is a real possibility it would transition from a local urban highway to a trucking and commuter bypass. Unlike I-35, Mopac crosses the Edwards Aquifer Recharge Zone. If a connection to I-35 is part of the long-term plan for the region, the community deserves to know whether the Mopac South project is designed to account for that additional traffic, and an opportunity to comment on both the increase in traffic and its environmental consequences. |

| | | |
|---|---|---|
| | | The questions I have raised above reflect what I have heard consistently from the community and are part of what have led many to call for the Mopac South study to be reset under an EIS. I understand from ED Bass' comments at the April CAMPO meeting that CTRMA staff believes there would be no difference in analysis or reports between the current EA process and an EIS. Without taking a position on the legal standing of an EIS or what more might be required under it, I ask the Board to consider that regardless of the study's acronym designation, the community — including the local jurisdictions through which Mopac South runs — is asking the Board to address consequential financial, environmental, and design questions before the Mopac South study is concluded.<br><br>Thank you each for your thoughtful consideration of the fiscal and environmental resources our community depends on to support mobility and quality of life.<br><br>With appreciation,<br><br>Amy |

| | | |
|---|---|---|
| **4/24/2026** | Amy Robinson | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/27/2026** | Amy Taylor | Hi my name is Amy. I've been an austin resident for 10 yrs now. I love this city and have seen a lot of change happen over time. Over the past 10 yrs I've lived all over the city and MoPac has been a large part of how I commute. I demand the MoPac South project conduct a full Environmental Impact Statement. The current Environmental Assessment finding of "No Significant Impact" is dishonest. I support multi-modal regional planning, investment in public transit, and better walking and biking infrastructure in Austin. I support protecting what makes Austin unique: our water, wildlife, and citizens. |
| **5/3/2026** | Amy Torres | I do not want any construction along the Greenbelt that can affect the Edwards aquifer the Barton springs pool or the endangered species |

| | | |
|---|---|---|
| **4/17/2026** | AmyM Cline | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. | **3/19/2026** | Ana Kutz | As an Austin resident, I strongly oppose the expansion of Mopac and urge a shift in focus toward alternative transportation solutions like robust public transit, protected bike lanes, and pedestrian-friendly walkways. Austin's enduring charm lies in its vibrant greenery and the ability to move through the city at a human pace, taking in the unique character of our neighborhoods. Prioritizing sustainable, multi-modal infrastructure is the only way to preserve the soul of the city while building a functional future that doesn't rely solely on more pavement. |

| | | |
|---|---|---|
| **5/2/2026** | Ana Lucio | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Ana Trevino | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Ana Trevino |

| | | |
|---|---|---|
| **4/26/2026** | Anabell Diaz | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. | | | |
|---|---|---|
| **5/3/2026** | Anabelle Glass | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Anabelle Glass |
| **3/16/2026** | Anahita Bradberry | I strongly disagree with the proposed expansion of mopac. The environmental damage will far outweigh any promised benefits. The proposed outcomes of this project wholly inadequate for the risks. I urge you to help prevent irreversible damage to the area. Thank you. |
| **5/3/2026** | Analisa Flores | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.  Respectfully,  Analisa Flores |
| **5/3/2026** | Ana-Marcela Lopez | My name is Ana-Marcela and I am a born and raised Austinite. Like millions of others who have lived in this city, I have found joy and peace in the waters of Barton Springs. This natural wonder is the crown jewel, the beating heart of this city. To proceed with this costly and ineffective project knowing that it would damage the Springs is an unforgivable. As I’ve grown up, I’ve watched city leaders bow to the highest bidder at the cost of our precious resources, energy, and spirit. This is an opportunity for city leaders to truly make Austin a progressive oasis by putting that money into more sustainable transportation solutions that do not directly harm our most precious destination. It’s what the people want. |

| | | |
|---|---|---|
| **5/3/2026** | AnaMichele Babyak | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, AnaMichele Babyak |

| **3/19/2026** | Ande Fallon | More lanes = more deaths. More lanes = less greenery. More lanes = more traffic by induced demand. This phenomenon is well-characterized and studied, and Austinites have made it clear for YEARS that we want options besides the car. Expanding MoPac would increase car dependency and pollution, and reduce highway safety. If you want to improve traffic on mopac, improve commuter access to public transit, disincentivize single-passenger vehicles, and improve surface road infrastructure. Save our wildflowers, our aquifers, our children, our passengers, our hardworking commuters, and our future. |
| **4/29/2026** | Ande Fallon | To whom it may concern,<br><br>I am absolutely opposed to MoPac expansion, especially without a full Environmenal Impact Statement. The proposal from CTRMA is dishonest about the scale of expansion and the environmental impacts. Additionally, Texas is already a world leader in traffic deaths, and adding more lanes is guaranteed to increase the death toll.<br><br>I currently live at the - on Lake Austin Blvd. It is a beautiful, quiet slice of riverbank perfect for a student lifestyle. Expanding MoPac would increase noise, preventing maximum academic productivity, and endanger the beautiful land and river we live on.<br><br>I hate driving. It's dangerous, expensive, and requires me to maintain a costly, easy-to-break vehicle. However, the city of Austin all but mandates that I drive a car, because the bus system is unreliable, bike paths are unsafe or nonexistent, and sidewalks and pedestrian paths are poorly maintained or nonexistent. As a Texan, I'm big on personal choice, and spending $800 million on reinforcing car-dependent infrastructure takes more choice out of my hands. I want to be able to choose not to drive a car, but adding more highway makes that choice less feasible. Please redirect these funds to giving me and Austinites like me the choice to not drive.<br><br>Thank you,<br><br>Ande Evyn Marjorie Fallon<br><br>The University of Texas at Austin \| Biochemistry '27<br><br>-- |

| **4/21/2026** | Andra Zhao | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |
| **4/21/2026** | Andra Zhao | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | André sanchez | Please complete a full environmental impact study. Barton springs is loved by all do not ruin it! |
| **3/19/2026** | Andrea A Guerra | I DONT WANT:  A wider highway.  Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals.  I DO WANT:  Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **5/1/2026** | Andrea Bridges-Smith | I am concerned about the environmental impact of the current proposal. If we harm the Edwards Aquifer, we harm our water supply. Yes, South Mopac needs to expand, but it should be a one lane expansion, not two. Given the sensitivity of this area, I urge you to choose the less impactful plan. |
| **5/3/2026** | Andrea collins | NO EXPANSION OF THE TOLL ITS NOT NEEDED ON MOPAC |
| **4/22/2026** | Andrea Daniela | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Andrea Daniela |

|---|---|---|
| **4/22/2026** | Andrea Dennison | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. So did our parents and grandparents. You are endangering the heart and therefore the life of this city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Dr. Andrea Dennison |

| | | Respectfully,<br><br>Dr. Andrea Dennison |
| **4/27/2026** | Andrea Ellison | As someone who has lived in Austin for 20+ years, I do NOT want to see increased toll lanes at the expense of Zilker/Barton Creek! These parks are what make Austin unique, and encroaching on them and potentially damaging Edwards Aquifer to add TOLLED lanes (why tolled?? Why not HOV??) is unacceptable. We need to find other solutions to traffic that do not negatively impact our green spaces. |

| | | |
|---|---|---|
| **5/3/2026** | Andrea Fraser | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Andrea Fraser |
| **4/21/2026** | Andrea Kilpper | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| **5/3/2026** | Andrea Torres | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Respectfully,  Andrea Torres |

| **5/3/2026** | Andres Garcia | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. | **5/3/2026** | Andres Sanchez | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Andres Sanchez |

| | | |
|---|---|---|
| **4/27/2026** | Andrew Danowski | I am writing to express opposition to the proposed MoPac South expansion. This project raises significant concerns related to environmental impact, neighborhood disruption, and long-term community stability. The corridor overlaps with sensitive areas tied to the Barton Springs watershed and Edwards Aquifer, and expansion increases risks to water quality, habitat, and green space that are central to Austin's identity. From a mobility perspective, expanding highway capacity—particularly tolled lanes—does not address underlying congestion and may worsen it over time. At the same time, the project would disrupt frontage road access that residents rely on for daily navigation, reducing local connectivity. More broadly, this proposal appears to prioritize marginal travel-time gains over the quality-of-life factors that define Austin's long-term success. Available data shows Austin's congestion, while real, is not among the most severe nationally, and recent population trends indicate growth has slowed compared to prior years. This suggests the city's primary challenge is no longer rapid expansion at all costs, but maintaining livability, environmental integrity, and resident retention. Projects of this scale risk eroding the very qualities that attract and keep people in Austin. For residents like myself, this is not theoretical. The combined impact of environmental degradation, reduced accessibility, and loss of neighborhood character would materially affect the viability of continuing to live in this area. When quality of life declines beyond a certain point, people do not simply adapt—they relocate. I encourage a more serious evaluation of alternatives, including the no-build option and solutions that better align mobility with environmental protection, neighborhood preservation, and long-term quality of life. |
| **4/27/2026** | Andrew Fogleman | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **4/29/2026** | Andrew Gaudet | Hi there,<br><br>I OPPOSE expanding MoPac South. Instead, I SUPPORT regional rail and a world class bike/pedestrian network<br><br>I want a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA).<br><br>Rather than endlessly expanding highways, Austin and Texas need new alternatives that better serve large numbers of people. Surely, we must know that adding a lane every few years is simply never going to be enough. We need to consider new ways and avenues (literally) to get people where they need to go.<br><br>Can we route unnecessary traffic around Austin, instead of through it?<br><br>Can we offer transit options that are preferable to driving in a traffic jam full of single-occupancy vehicles?<br><br>Can we avoid wasting money on yet another lane that does little to relieve traffic pressures?<br><br>Can we work to make a better, healthier city for all Austinites, as well as preserving our natural environment and beauty for all to enjoy?<br><br>More lanes, highways, and flyovers are not the answer. The answer considers the long-term impact of these decisions on budgets, the environment, and Austinites.<br><br>Please support better, more creative projects that improve our quality of life.<br><br>Thank you,<br><br>Andrew |

| | | |
|---|---|---|
| **5/3/2026** | Andrew Harrod | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac. After it's done, it will likely aliviate traffic as long as the SW Katy Freeway did (widest freeway in Texas). Seven years is all it took for gridlock to return to a multimillion dollar road expansion.  This will be another example of "induced demand" and faith in your organization will decline. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Andrew Harrod |
| **4/27/2026** | Andrew Hilbert | This project is overlooking the fact that green spaces are being taken more than is necessary. Green spaces offer our population more health mentally and physically, as it gives people the chance to exercise and explore nature thus also benefiting the populations happiness and wellbeing. Taking away nature too much does the opposite. Too many roadways and city spaces lead to more feelings of stress, so when youre building a roadway for people to save 5 minutes at the cost of taking away what provides a great boost in the populations wellbeing, ask yourself is it worth the cost? Is 5 minutes of time saved worth destroying the beautiful green space that is a gift to our population? Please dont take more than you need. This project will take more than our population needs, and the cost is not worth it. |
| **5/3/2026** | Andrew Hutcheson | I am writing to voice my strong opposition of the mopac south expansion, and urge you to consider alternative methods of improving traffic within Austin without harming local wildlife and water. Respectfully, -Andrew Hutcheson |

| | | |
|---|---|---|
| **5/3/2026** | Andrew Hutcheson | Dear CTRMA Board Members,Hello, I am writing to voice my opposition of the mopac south expansion, and urge you to consider alternative methods of improving traffic within Austin without harming local wildlife and water. I strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your |

| | | |
|---|---|---|
| | | hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Andrew Hutcheson |

| | | |
|---|---|---|
| **5/3/2026** | Andrew Jaroszewski | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Andrew Jaroszewski |
| **3/19/2026** | Andrew Katsetos | No More! |

| | | |
|---|---|---|
| **4/22/2026** | Andrew Kouri | To Whom It May Concern:<br><br>I am an Austin resident and submit these comments as part of the official record for the MoPac South Draft Environmental Assessment (EA). After reviewing the Draft EA, I have significant concerns regarding the adequacy of the document under the National Environmental Policy Act (NEPA). I respectfully request that TxDOT address these deficiencies before issuing a Finding of No Significant Impact (FONSI).<br><br>1. ESA Consultation Is Incomplete — A FONSI Cannot Be Issued Prematurely<br>The Draft EA acknowledges that consultation with the U.S. Fish and Wildlife Service (USFWS) regarding the Austin blind salamander, Barton Springs salamander, Bee Cave harvestman, and Tooth Cave spider is ongoing, with a commitment only to complete it "prior to the final EA" (Section 6.0; Post-Clearance Activity #19). Under Section 7 of the Endangered Species Act, a FONSI cannot lawfully be issued before formal consultation is complete and a Biological Opinion has been received. The public also cannot meaningfully evaluate the adequacy of the EA without knowing the outcome of that consultation. This alone warrants withholding a FONSI until the consultation is complete and its conclusions are incorporated into the public record.<br><br>2. Noise Barriers Are Not Binding Commitments<br>The EA identifies 864 impacted residences and 22 non-residential land uses (Section 5.13), yet deems noise barriers "reasonable and feasible" for only 5 of 40 evaluated locations. Critically, even those 5 proposed barriers are explicitly conditioned on a post-FONSI constructability assessment and a vote by benefiting property owners (Post-Clearance Activity #5; Design/Construction Commitment #17). The EA therefore concludes "no significant noise impacts are anticipated" based on mitigation measures that are not guaranteed to be constructed. NEPA requires that mitigation relied upon to support a FONSI be binding and enforceable. Contingent, vote-dependent noise walls do not meet this standard. I request that either: (a) the noise barrier commitments be made legally binding in the final EA, or (b) the project be elevated to a full Environmental Impact Statement.<br><br>3. The Induced Demand Analysis Is Inadequate<br>The EA's Induced Growth Analysis Technical Memorandum (TxDOT 2025k) concludes that induced growth impacts are negligible because the corridor area is "mostly developed" (Section 5.2). This analysis conflates induced land use changes with induced vehicle travel demand — two distinct phenomena. The peer-reviewed literature (Duranton & Turner, 2011, "The Fundamental Law of Road Congestion") establishes that highway capacity additions generate proportional increases in vehicle miles traveled, regardless of surrounding land use development status. The EA does not address this traffic-induction effect. I request the final EA include an analysis of induced VMT using accepted elasticity-based methods, and that forecasted 2045 traffic volumes reflect induced demand rather than assuming static travel patterns.<br><br>4. Greenhouse Gas Analysis Is Voluntarily Truncated<br>Section 5.15 of the Draft EA explicitly states the GHG section is "not required by FHWA" and punts entirely to a statewide TxDOT report. No project-specific GHG analysis is provided. Given the direct relationship between highway capacity expansion, induced VMT, and $CO_2$ emissions, and given Austin's adopted climate commitments, the public deserves a project-specific analysis of GHG consequences, including the induced-demand scenario. I request this analysis be included in the final EA.<br><br>5. EA Classification Is Inappropriate for This Project's Scale<br>This is an $824 million project spanning 8.77 miles through a dense urban corridor, crossing the Edwards Aquifer Recharge Zone, impacting nearly 900 residential receptors, and requiring ESA consultation for four listed species. An EA is |

| | | |
|---|---|---|
| | | appropriate only where the significance of environmental impacts is not clearly established. The cumulative weight of these factors — noise impacts on hundreds of homes, incomplete endangered species consultation, crossing of a critical recharge zone, and a multi-billion-dollar regional traffic effect — strongly suggests that a full Environmental Impact Statement is the appropriate NEPA instrument. I formally request that TxDOT and the Mobility Authority evaluate whether this project warrants elevation to an EIS.<br><br>I respectfully request that the Mobility Authority and TxDOT address each of these comments in the final EA response document. These are not objections to improved mobility — they are requests for a legally adequate NEPA process that fully discloses environmental impacts and ensures that any mitigation relied upon is binding and enforceable.<br><br>Respectfully submitted,<br><br>Andrew Kouri |

|---|---|---|
| **4/22/2026** | Andrew Kouri | To Whom It May Concern:<br><br>I am an Austin resident and submit these comments as part of the official record for the MoPac South Draft Environmental Assessment (EA). After reviewing the Draft EA, I have significant concerns regarding the adequacy of the document under the National Environmental Policy Act (NEPA). I respectfully request that TxDOT address these deficiencies before issuing a Finding of No Significant Impact (FONSI).<br><br>1. ESA Consultation Is Incomplete — A FONSI Cannot Be Issued Prematurely<br><br>The Draft EA acknowledges that consultation with the U.S. Fish and Wildlife Service (USFWS) regarding the Austin blind salamander, Barton Springs salamander, Bee Cave harvestman, and Tooth Cave spider is ongoing, with a commitment only to complete it "prior to the final EA" (Section 6.0; Post-Clearance Activity #19). Under Section 7 of the Endangered Species Act, a FONSI cannot lawfully be issued before formal consultation is complete and a Biological Opinion has been received. The public also cannot meaningfully evaluate the adequacy of the EA without knowing the outcome of that consultation. This alone warrants withholding a FONSI until the consultation is complete and its conclusions are incorporated into the public record.<br><br>2. Noise Barriers Are Not Binding Commitments<br><br>The EA identifies 864 impacted residences and 22 non-residential land uses (Section 5.13), yet deems noise barriers "reasonable and feasible" for only 5 of 40 evaluated locations. Critically, even those 5 proposed barriers are explicitly conditioned on a post-FONSI constructability assessment and a vote by benefiting property owners (Post-Clearance Activity #5; Design/Construction Commitment #17). The EA therefore concludes "no significant noise impacts are anticipated" based on mitigation measures that are not guaranteed to be constructed. NEPA requires that mitigation relied upon to support a FONSI be binding and enforceable. Contingent, vote-dependent noise walls do not meet this standard. I request that either: (a) the noise barrier commitments be made legally binding in the final EA, or (b) the project be elevated to a full Environmental Impact Statement. |

| | | |
|---|---|---|
| | | 3. The Induced Demand Analysis Is Inadequate<br><br>The EA's Induced Growth Analysis Technical Memorandum (TxDOT 2025k) concludes that induced growth impacts are negligible because the corridor area is "mostly developed" (Section 5.2). This analysis conflates induced land use changes with induced vehicle travel demand — two distinct phenomena. The peer-reviewed literature (Duranton & Turner, 2011, "The Fundamental Law of Road Congestion") establishes that highway capacity additions generate proportional increases in vehicle miles traveled, regardless of surrounding land use development status. The EA does not address this traffic-induction effect. I request the final EA include an analysis of induced VMT using accepted elasticity-based methods, and that forecasted 2045 traffic volumes reflect induced demand rather than assuming static travel patterns.<br><br>4. Greenhouse Gas Analysis Is Voluntarily Truncated<br><br>Section 5.15 of the Draft EA explicitly states the GHG section is "not required by FHWA" and punts entirely to a statewide TxDOT report. No project-specific GHG analysis is provided. Given the direct relationship between highway capacity expansion, induced VMT, and $CO_2$ emissions, and given Austin's adopted climate commitments, the public deserves a project-specific analysis of GHG consequences, including the induced-demand scenario. I request this analysis be included in the final EA.<br><br>5. EA Classification Is Inappropriate for This Project's Scale |

| | | |
|---|---|---|
| | | This is an $824 million project spanning 8.77 miles through a dense urban corridor, crossing the Edwards Aquifer Recharge Zone, impacting nearly 900 residential receptors, and requiring ESA consultation for four listed species. An EA is appropriate only where the significance of environmental impacts is not clearly established. The cumulative weight of these factors — noise impacts on hundreds of homes, incomplete endangered species consultation, crossing of a critical recharge zone, and a multi-billion-dollar regional traffic effect — strongly suggests that a full Environmental Impact Statement is the appropriate NEPA instrument. I formally request that TxDOT and the Mobility Authority evaluate whether this project warrants elevation to an EIS.<br><br>I respectfully request that the Mobility Authority and TxDOT address each of these comments in the final EA response document. These are not objections to improved mobility — they are requests for a legally adequate NEPA process that fully discloses environmental impacts and ensures that any mitigation relied upon is binding and enforceable.<br><br>Respectfully submitted,<br><br>Andrew Kouri |

| **5/3/2026** | Andrew Lucchesi | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. I desperately request that CTRMA considers such an alternative. No price is worth the destruction of Austin's natural beauty and environment. Thank You for listening to your neighbors, Andrew Lucchesi |

| | | |
|---|---|---|
| **4/23/2026** | Andrew Naples | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br><br>- Avoid parkland encroachment<br><br>- Capital improvement reimbursements for affected community assets<br><br>- A noise wall workshop with meaningful community input<br><br>- An open space fund dedicated to long-term preservation and restoration<br><br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Andrew Olson | The draft environmental assessment is insufficient. Alternative options to alleviate congestion have not been considered. The current plan to add toll lanes will do nothing to reduce traffic and will increase runoff, pollution, and negatively impact wildlife, including sensitive species. The funding for this expansion doesn't have to go to adding more lanes - let along toll lanes - that will fail to benefit anyone. Why can't we explore light rail? Or a better park and ride? At a minimum, a more articulate and thorough assessment must be done before any construction is begun. -Andrew Olson |
| **4/21/2026** | Andrew Parsons | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |

| **4/22/2026** | Andrew Silvas | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Andrew Silvas | Dear CTRMA Board Members, This expansion does not benefit Austin long term. It affects recharge zones that aid the environment that the people of Austin and people everywhere love and come here for. The pollution long term isn't a good byproduct of this expansion either. This expansion seems reckless. Respectfully, Andrew Silvas |
| **4/21/2026** | Andrew TRUPIANO | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/28/2026** | Andrew Vaz | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |

| | | |
|---|---|---|
| **4/25/2026** | Andrew Willard | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Andrew Willard |

| **4/30/2026** | Ange Kelly | Read all the data that proves adding another highway lane does not help with traffic congestion when all is said and done. Ladybird lake is one of our few prized natural places in Austin - ruin this area and you'll ruin tourism, pride in our city's beauty, to name a few. We need to not become another Dallas or Houston. Look at how horrendously bad the 35 construction has been going - it's a pain for everyone who has to drive on those roads everyday. |
| **5/3/2026** | Angel | NO to the mopac expansion. It will ruin Barton springs. Austin is already losing so much water due to development. Once Austin dries up there will be nothing left. I will leave. So many others will leave. Swimming at Barton springs and in lake Austin and the creeks is the only reason so many of us stay. These natural water fixtures are the allure to Austin. Expanding mopac and putting them at risk is DISGUSTING behavior. And it will not improve traffic. There are many stats out there to prove that added lanes do not improve traffic congestion. Stop!! This is ridiculous. Yall just want to put money in your pockets with this. And you'll ruin Austin's gorgeous nature to do it. Disgusting. You should all be ashamed of yourselves. |

| **5/2/2026** | Angela | My name is Angela, and I oppose the MOPAC expansion and am concerned about the environmentalimpact on the endangered species, so I just want to voice my concern.Thank you. |

| | | |
|---|---|---|
| **4/21/2026** | Angela Barrios | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| | | |
|---|---|---|
| **4/21/2026** | Angela Barrios | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Angela Barrios |

| **5/3/2026** | Angela Diaz | I am against Mopac expansion |

| | | |
|---|---|---|
| **5/3/2026** | Angela Fogle | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Angela Fogle |
| **4/21/2026** | Angela Kehm | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| **5/3/2026** | Angela Merrick | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Angela Merrick |

| **4/29/2026** | Angela Moss | Please do not allow the building of 6-8 toll lanes added to Mopac. Barton Springs is a beloved Austin landmark and WILL be negatively impacted by doing so. I was born and raised in Austin and enjoy visiting Barton Springs every summer as one of the few natural springs in Texas that have not been emptied by the droughts yet. I urge you to complete a full Environmental Impact Study. It is legally required. |

| | | |
|---|---|---|
| **5/3/2026** | ANGELA YANG | I would request that the northbound express lane should start after the Slaughter NB entrance ramp, to capture traffic entering from Slaughter (and avoid congestion at Davis). Currently it looks like the traffic entering from both Slaughter and Davis will be served only by the one expressway entrance right before William Cannon. Additionally it is hard to tell, but looks like a significant amount of lanes are merging just north of the 290 junction, right before the river. Is there any way to stagger the merging so that the mass merging event/funnel is mitigated and doesn't create a huge bottleneck between 290/the river? |
| **4/21/2026** | Angelica Cazares | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/24/2026** | Angelica Cortez | I live in Travis Country, and this project looks like it will greatly alleviate traffic. Question: I did not see the turnaround that exists by Gaines Ranch in the video flythrough, is that getting eliminated? Also, how will this project alleviate the pinch point at the northbound entrance ramp at Southwest Parkway and MoPac? That is a huge congestion spot that needs to be addressed. Please consider addressing that issue. |
| **4/20/2026** | Angelica Flook | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/23/2026** | Angelina Saldaña | Dear CTRMA,<br>I'd like to first note that I don't approve of this toll way expansion. We need less roads in this area that would only push our wildlife population and in the end effect our ecosystem.<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Angelina Silva | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Angelina Silva |

| | | |
|---|---|---|
| **4/19/2026** | Angelina Zulas-Carr | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/21/2026** | Angelina Zulas-Carr | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Angelina Zulas-Carr |

| | | |
|---|---|---|
| **5/3/2026** | Angeliska Polacheck | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Angeliska Polacheck |
| **5/3/2026** | Angelle Hall | As a concerned long time Austin resident, I am calling for a full and robust environmental impact study prior to the initiation of this expansion project; with the results made fully and publicly transparent. |
| **4/26/2026** | angie florez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/23/2026** | Anika Garf | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Anisah Ali | Dear CTRMA Board Members,Hello, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer . The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as |

| | | |
|---|---|---|
| | | we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Anisah Ali |
| **5/3/2026** | Anita R tschurr | This South Mopac extension is absolutely detrimental to our incredible ecologic diversity with underground caves, Barton springs, edwards aquifer and on and on. Not to mention the absolutely outrageous amount of $ to perform the extension. This is a boondoggle, it's harmful to water sources and the environment from which we will never recover. It lacks even the basic science to back it up. Stop the extension!!!! |

| **4/21/2026** | Anjelica Achterhof | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| | | |
|---|---|---|
| **4/21/2026** | Anjelica Achterhof | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. | **3/20/2026** | Ann Haraguchi | I strongly oppose the project to widen MoPac south. A major road like this with more lanes will lead to heavier traffic, higher levels of pollution and noise, and have negative effects on the local environment/natural habitat. I currently have the I35 expansion project directly outside my back yard and am considering when I should move away. Projects like these are disruptive, costly, and unnecessary. How about investing in other ways to get around the Austin area, such as better public transportation and walking and biking paths? |

Please prioritize tree planing and avoiding parkland encroachment as you look at this expansion.<br>Thank you for your time and consideration.<br>Ann Hillis |

| | | |
|---|---|---|
| **4/23/2026** | Ann Keyrouz | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Ann Keyrouz |
| **4/27/2026** | Ann Maguire | Please do not move forward with this overly complex, disastrously expensive and ridiculous plan, which will cause 8 years of pain, put our water and environment at risk, and accomplish nothing but a vague promise of 5 minutes in travel time. STOP!!!! PLEASE DO NOT MOVE FORWARD... THIS IS A CRAZY WASTE OF TIME, MONEY AND PAIN! PLEASE FIRE THE PERSON OR PERSONS WHO CAN UP WITH IS INCREDIBLE STUPID PLAN!!! |
| **5/3/2026** | Ann McNair | A full environmental impact study is needed before a final decision is made on this construction. The potential to destroy much-needed recharge zone and wildlife habitat for minimal improvement in travel time is warranted. |

| | | |
|---|---|---|
| **4/6/2026** | Ann Odell | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. | **5/3/2026** | ann vandenburgh | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Ann Vandenburgh |
| **5/3/2026** | Anna | Just repaint the lanes by William Cannon. The cost and impact of this project is not sustainable & destroys the soul of our city. Stop rebuilding roads !!! |

| | | |
|---|---|---|
| **5/3/2026** | Anna Cochran | I do not like the idea of having construction impact both Zilker park and Barton springs. The green spaces of austin are so incredibly important and it's nearly impossible to bring those spaces back once impacted. |
| **4/23/2026** | Anna Gieselman | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Anna Gieselman |

| | | |
|---|---|---|
| **3/18/2026** | Anna Halberstadt | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Anna Halberstadt |

| | | |
|---|---|---|
| **4/28/2026** | Anna Holland | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Anna Holland |

| | | |
|---|---|---|
| **5/2/2026** | Anna Johnson | Hello,<br><br>As a resident of Austin, I am writing to formally express my strong opposition to the proposed MoPac South expansion. Expanding our highway infrastructure is a dated solution that fails to address our long-term mobility needs while threatening our local environment.<br><br>The current proposal claims to have "no significant impact," but adding over 100 acres of new pavement in an environmentally sensitive area demands the highest level of scrutiny.<br><br>I am calling for a full Environmental Impact Statement (EIS). An abbreviated Environmental Assessment (EA) is insufficient for a project of this magnitude and ecological risk.<br><br>On a personal level, I am exhausted by the cycle of highway-centric planning. I see the constant expansion of lanes as a failure of imagination that only leads to induced demand and more traffic. My vision for Austin is a city connected by a world-class bike and pedestrian network and a robust regional rail system—not more asphalt. We need leadership with the creativity to invest in a future that prioritizes people over more toll lanes. If you're not up for the challenge to build a better future, get the hell out of the way of the creative people who have more imagination and vision than you.<br><br>It is time to move past ineffective "solutions" that have been proven not to work. I urge you to reject this expansion and pivot toward sustainable, regional transit.<br><br>Sincerely,<br><br>Claire, Austin, TX |

| | | Anna Krishtal |
| **5/3/2026** | Anna Kristal | Hi there. My name is Anna Kristal. I'm an Austin resident and I have concernsabout this MOPAC expansion project that's happening that's going to impactour green belt and it's going to impact our springs and I would feel a lot betterabout this project if there was a full environmental impact report that wasgiven by a very reputable source. I would love that report to also have multiplesources so we can get a really good idea of how this impact goes, so getting this impactreport from more than one source and also including mitigation steps that we can takeso that we are really minimizing the impact.I also have read multiple studies that show that expanding lanes on a highway does notreduce traffic, so I would love to know alternatives, like how else can we mitigate this whole expansionand what else can we do to let the flow of traffic gowithout this environmental impact that is still uncertain.So calling for a full environmental impactfrom multiple sources so that we |

| | | |
|---|---|---|
| | | have a good assessmentof what the actual impact will be,including mitigation steps that we'll takeand really getting the community on board.Thank you. |
| **4/22/2026** | Anna Larson | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Addtiinally, the impact this expansion will have on the Austin High community, including my daughter, a new 16 year old driver. The number of new drivers who use mo-pac every day to drive to and from school is large. The impact of this construction on their safety, and the impact of the construction on the general safety and environment for their campus, is extremely important.<br><br>In addition to the incalculable impact on the environment, the threats to the quality of life impact for these students is inestimable. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Anna Larson |

| **5/3/2026** | Anna Madrona | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. <p data-start="6371" data-end="6517">Having worked on the research that went into Environmental Impact Statements related to projects around Austin, I'm absolutely flabbergasted that the environmental assessment finding came up with a FONSI. I smell corruption in your review process. Or the hiring of a non-local engineering firm unaccustomed to the requirements of a full assessment taking into account the karst nature of the Edwards Aquifer. <p data-start="6371" data-end="6517">There are no do-overs if this project eliminates threatened and endangered species OR if the construction process contaminates the Edwards Aquifer. The drinking water of thousands of residents of Travis and Hays County residents must be protected. The springs in the area, including the most famous, Barton Springs, need to be protected from predatory development. Please do the right thing and contract to have a full Environmental Impact Statement produced. <p data-start="6371" data-end="6517"> <p data-start="6371" data-end="6517"> <p data-start="6371" data-end="6517"> Thank You for listening to your neighbors, Anna Madrona |
| **4/21/2026** | Anna Marceau | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Anna Margaret Hollyman | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Anna Margaret Hollyman |

| **4/20/2026** | Anna Martinez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/28/2026** | Anna Moltz | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/28/2026** | Anna Moltz | Dear CTRMA Board Members,<br><br>I strongly oppose the MoPac South expansion.<br><br>I grew up in Austin; going to Barton Springs, canoeing on Town Lake, and playing on the Zilker playground.<br><br>Today, I continue to live here and visit this land regularly. I often tell people that Barton Creek is my oldest friend. The city has changed so much over my lifetime, but the creek continues to be a refuge of greenery and solitude. It's a place for nature and community. It is one of the things that makes Austin truely special.<br><br>The land, trees, and creeks that would be harmed in this project would steal this gem of Austin from me, my children, and their children. Zilker is a legacy. It is one of the most special places we have<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Anna Moltz |

| | | |
|---|---|---|
| **5/3/2026** | Anna Plote | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Anna Plote |

| | | |
|---|---|---|
| **4/26/2026** | Anna Rogers | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Anna Rogers |
| **5/3/2026** | Anna Rosenleaf | Hello, my name is Anna Rosenleaf. I'm an Austin resident and I'm calling in objection to the proposedexpansion of MOPAC near Barton Springs and Zilker Park. This area isprofoundly special to the city andfull ofenvironmentally and ecologically significant and sensitivebeings.As a community member, I am a first doula and the Springs arereally important places to come and recharge so I can do this healing workfor our community. And I know I am not alone in feeling the importance of thisgem of our city and I think it needs to be preserved and a full environmentalassessment in depth must be performed before any expansion of the highwayThank you.Continue. |

| | | |
|---|---|---|
| **5/3/2026** | Anna Weeks | Dear CTRMA Board Members,  I am writing in strong opposition to the MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before this project moves any further.  Barton Springs is not just a landmark — it is the living heart of Austin. People have gathered at these waters for thousands of years. We swim here in the summer, walk the Greenbelt with our families, paddle Lady Bird Lake, and explore the caves and trails that make this city unlike any other. That relationship between water, geology, and community is irreplaceable.  The Draft Environmental Assessment concludes there are no significant impacts to communities, endangered species, or water quality. That conclusion is hard to square with the EA's own findings.  The project corridor runs directly over the Edwards Aquifer Recharge Zone — a karst landscape where surface runoff moves rapidly through caves, fractures, and sinkholes into the aquifer with almost no natural filtration. The EA acknowledges karst features within the project area and multiple creek crossings, including Barton Creek and Eanes Creek, all feeding directly into Barton Springs Pool. Expanding pavement means more runoff, more sediment, more hydrocarbons, more tire particles, and more heavy metals entering that system. The EA offers little meaningful protection during construction.  The endangered Barton Springs salamander and Austin Blind salamander depend entirely on the stability of this aquifer. The Austin Blind salamander exists nowhere else on Earth. It requires precise water chemistry, stable temperatures, and dissolved oxygen levels around 6 mg/L. Even small disruptions to groundwater flow or sediment load could be fatal to these species. The EA does not adequately reckon with that reality.  The human costs are just as serious. At its widest, the expansion would create thirteen to eighteen total lanes, paving nearly the entire right-of-way over Lady Bird Lake and alongside Austin High School — bringing increased noise, air pollution, and elevated structures to one of Austin's most historic campuses. Construction would disrupt the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Zilker Park and the Greenbelt — infrastructure that thousands of Austinites rely on every single day.  Austin has been here before. In 2016, this project was cancelled in the face of overwhelming public opposition. The threats today are greater: our aquifer faces drought, overdevelopment, and mounting pressure. Reviving this project without rigorous environmental review is not acceptable.  A full EIS would provide the transparent, comprehensive analysis this project demands — examining cumulative impacts, evaluating real alternatives, and ensuring genuine public participation. For a highway proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that is the bare minimum.  There is only one Barton Springs. Once it's gone, it's gone. I urge the CTRMA Board to direct staff to complete a full Environmental Impact Statement before advancing this project.  Thank you.  Respectfully,  Anna Weeks |

| | | |
|---|---|---|
| **4/24/2026** | Anna Weible | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Anna Weible |

| | | |
|---|---|---|
| **4/20/2026** | Annabelle Carrell | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Annabelle Carrell |

| | | |
|---|---|---|
| **4/20/2026** | Annabelle Kindig | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Anna-Kay Reeves | Expanding a highway into a limestone aquifer recharge zone is bad, ethically and scientifically. Please spend our tax dollars on maintaining what we have, including by protecting our natural resources and community green spaces. (I.e. do not expand MoPac, speed up and expand the light rail.) |
| **4/9/2026** | Anna-leigh | My name is Anna-Leigh and I have lived in Austin or 7 years with 30 years of family history here before me. I use the Lady Bird walk and bike trail at least 3 times a week and the expansion would be detrimental to this mental health care routine of mine. Beyond that it is know that more lanes only cause more traffic. I frequently avoid going places via MOPAC already when its high traffic areas. An expansion would encourage me to never use it again if possible. A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. Continuous pedestrian-bicycle paths along the project's length. • Converting an existing highway lane to a HOV/transit lane. • CTRMA to invest in transit, walking, and biking-not double down on highway expansion. |
| **5/3/2026** | Annaleigh Gedney | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Annaleigh Gedney |
| **3/20/2026** | anna-leigh siegert | NO!!!!!!!!!! |
| **5/3/2026** | Annalise | I DO NOT SUPPORT THE CONSTRUCTION OF MOPAC RHAT WILL DAMAGE THE LAND AND WATERSHED THAT FEEDS THE AQUIFER |

| | | |
|---|---|---|
| **5/2/2026** | Annalise Lozano | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/22/2026** | Annalise Rogers | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/22/2026** | Annalise Rogers | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/26/2026** | Annalise Rogers | This project would not decrease traffic nearly enough to justify the environmental and health concerns that come with it. Surely the money going to this could be used to build public transportation. |
| **4/20/2026** | Annastasia Lang | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **3/24/2026** | Anne Mason | I am wholeheartedly against this project!! The data they are using for traffic studies was all pre-covid data. It is not currently accurate. Supposedly the proposed construction would result in saving only 5-7 minutes on drivers commute times. This is not worth endangering an environmentally sensitive area!! Also, the EA is vaguely worded. The environmental impact on the project has not been accurately communicated to residents. The project would greatly reduce water quality in the Edward Aquifer. |

| | | |
|---|---|---|
| **4/22/2026** | Anne Mason | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. | **4/20/2026** | Anne Miller | Please conduct a full-scale Environmental Impact Statement for Mopac South before proceeding any further. This freeway may impact the environmentally-sensitive Barton Springs Edwards Aquifer Recharge Zone. Thank you. |

| | | |
|---|---|---|
| **5/2/2026** | Anne Province | I just watched “Foreverland” on PBS about the history of creating and protecting the Barton Creek Greenbelt. I am dismayed to learn about the Mopac South Expansion. Please require an Environmental Impact Statement about this proposed project. We need to protect the already inadequate green spaces in Austin more than we need more concrete and highways. |
| **4/20/2026** | Anne Wick | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>Austin would not be Austin without our beloved, shared green spaces. No matter that it's a bummer to be stuck in traffic - if there is nowhere special to go to (greenbelt, Barton Springs, Zilker Park) - then what's the point?! If we lose these places we will never get them back. Please don't remove natural habitat that supports endemic plants and wildlife.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/22/2026** | Anneleise Toowey | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **4/22/2026** | Anneleise Toowey | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/21/2026** | Anne-Marie Griger | Dear CTRMA,<br>In order to preserve the green spaces and amenities that Austin currently enjoys, I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/24/2026** | Annessa Baird | While I do understand and experience the rush hour congestion on MoPac, I do not support expanding the freeway by 4-6 lanes over the Barton Springs Recharge Zone and Edwards Aquifer. It will worsen pollution and decrease the already historic low water flow. |
| **5/3/2026** | Annessia Clarke | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Annessia Clarke |
| **4/7/2026** | Annette Kobus | I came to the public comment forum at Rattan Creek Community Center on March 25, but nobody from TxDOT was available to speak to me. I have a long list of comments which I will submit to the email address provided on the handout card. |

| | | |
|---|---|---|
| **5/3/2026** | Annette Welsh | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Annette Welsh |
| **4/3/2026** | Annick | Funding and building the grade-separated crossing @ Barton Springs road is a very good idea for mitigation. The economies of scale of building it with the project cannot be ignored, and if not done with the project will likely never be done, but more importantly, it provides a much safer crossing in the Text Dotte, right of way adjacent to regional park, there have been multiple car crashes, as well as close calls with pedestrians and bicyclist as this connection connects to the 10 mile Butler Trail that extends to East Austin also connect connecting a disadvantage area of Austin with the Park. Please build this bridge. Also I'm supportive of the project but want this include included. |

| | | |
|---|---|---|
| **3/23/2026** | Annie Flom | Don't expand MoPac! When traffic-clogged highways are expanded, new drivers quickly materialize to fill them - a phenomenon called induced demand. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. What should be invested in instead: 1) continuous pedestrian-bicycle paths along the project's length, 2) converting an existing highway lane to a HOV/transit lane, 3) CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **5/3/2026** | Annie Gerlach | Please do not move forward with the plan the put toll lanes over our barton springs watershed just to expand mopac and increase pollution in our city |
| **5/1/2026** | Annie Wilcox | I strongly oppose this highway expansion without a full, publicly shared environmental impact report. Austin is already under a major highway construction project. This expansion would cause traffic delays, pedestrian delays and dangers and unknown risks to our green spaces and ecosystems. |
| **5/3/2026** | Anoa Lainer | Hi, my name is Anoa Lanier, I'm a resident of Travis County here in Texas.I'm aware that there's a significant impact to the environment doing the MOPAC expansionproject, and I would like you to move forward with phase one, two, and three environmentalimpact report.I am against the expansion overall, and would like much deeper results into what the environmentalimpact will be.Thank you.Thank you very much. |
| **5/1/2026** | Anonymous | Even a cursory review would imply that a full EIS warranted. It's simply laughable that such an extensive build scenario over an especially sensitive recharge zone wouldn't have more significant impacts and that those identified would be so easily mitigated. Some of the conclusions seem to over rely upon a (now drastically slowed) widespread transition to EVs. I also question assumptions about future demand given the rise of AI and potential for worker displacement. The future of work, and its effect on travel demand, should be better understood before undertaking such a destructive and potentially wasteful use of public funds to increase vehicular capacity. I also question the logic of such a significant capacity increase given the hard constraints at Cesar Chavez and 5th Street, as well as MoPac North. This would appear to either initiate a vicious cycle of capacity upgrades or create a parking lot over Lady Bird Lake. |
| **5/3/2026** | Anslee Connell | I am writing as an Austin resident to formally oppose the MoPac South expansion as currently proposed, and to urge that the project be subjected to a full Environmental Impact Statement (EIS) rather than the Environmental Assessment (EA) released in February. The scale and sensitivity of this project demand the more rigorous review. The corridor crosses the Edwards Aquifer recharge zone — Austin's drinking water source — and habitat for federally listed endangered species including the Barton Springs salamander, Austin blind salamander, and Tooth Cave spider. It would require construction in Zilker Park, the Barton Creek Greenbelt, and over Lady Bird Lake. By any reasonable standard, these are exactly the conditions a full EIS exists to evaluate. Comparable Austin-area transportation projects have received full EISs. The I-35 Capital Express project required one. Project Connect required one. There is no defensible reason an $825 million, 8-mile expansion through some of the most ecologically sensitive land in the region should receive a less thorough review. The Austin City Council and the Travis County Commissioners Court have both unanimously passed resolutions making this same request. A finding of "no significant impact" is not credible without the full analysis an EIS would provide. I urge CTRMA and TxDOT to require an EIS before this project advances any further. Anslee Connell -Austin, TX 78745 |

| **5/2/2026** | Ansley Burnette | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Ansley Marquardt | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. Key concerns include: Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement. *** Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.***Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.***Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover. With the increased impervious surfaces, water will not be able to recharge the Edwards Aquifer. We are already in a drought, and we need to increase water storage, not decrease it. The run off creates flooding of water that we can't even use. Impervious surfaces also create urban heat islands, and it is already way too hot<br><br>What good is another toll road that nobody wants to pay for if there is no clean water? It's bad for people, it's bad for business, and it is bad for our local government. We need better design and solutions, rather than building another road. People will come to the places where government and the citizens take care of the land that was fought for, not land that is drying up from mismanagement and poor choices. Once you run out water, you run out of life. Sincerely, Maximillian Henton |
| **5/1/2026** | Anthony | No more lanes. Stop ruining the city for the car and oil lobby. Build rail and busses and build it now |
| **3/24/2026** | Anthony adams | FINALLY. This is so long overdue. I am in favor of this. Please ignore the idiots who show up with their “logic” that more lanes does not improve traffic. The increased number of tax paying citizens requires expanding the infrastructure. I like that the proposal generally fits into the area already in use by Mopac, especially the stretches between Wm Cannon and Slaughter which already have concrete for 3 lanes, but much of it is unused (why did we pay to have 30-40 feet of shoulder there?). Tell Vanessa Fuentes we can’t be a world class city with our current 3rd world transportation infrastructure. |

| | | |
|---|---|---|
| **3/29/2026** | Anthony Ferrante | Hello. I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and we can provide further information including graphics. Thank you. |
| **4/22/2026** | Anthony Garossino | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| **5/3/2026** | Any morris | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br>Thank You for listening to your neighbors, Amy Morris |

| | | |
|---|---|---|
| **5/3/2026** | Anya Evans | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. |---|---|---|
| **5/3/2026** | Anya Viljoen | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Anya Viljoen |
| **5/3/2026** | Aoife Longmore | The area affected by the MoPac project is extremely sensitive in terms of water aquifers, as well as the karst caves and endangered species. It is also in the heart of Austin's community assets and identity. I request a full environmental study and a review of less disruptive solutions. |
| **5/3/2026** | Ap | No to the impact expansion! |

| | | |
|---|---|---|
| **5/3/2026** | Apollo Dahmus | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Apollo Dahmus |
| **4/27/2026** | April Aviv | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/21/2026** | april coulon | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | April Goss | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, April Goss |

| | | |

| | | |
|---|---|---|
| **5/3/2026** | April Lewton | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  April Lewton |

| | | |
|---|---|---|
| **4/14/2026** | April O'Donnell | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cuts through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• The Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>Thank you, |

| | | |
|---|---|---|
| | | April O'Donnell |
| **3/19/2026** | April Porter | I DON'T WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **5/3/2026** | April Slaughter | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, April Slaughter |

| | | |
|---|---|---|
| **4/21/2026** | Aracely Gonzalez | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Aracely Gonzalez |

| | | |
|---|---|---|
| **5/3/2026** | Ariel Atlas | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Ariel Atlas |

| | | |
|---|---|---|
| **4/22/2026** | Ariel Novodvorschi | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project. I love how GREEN our city is. “A city within a park” is what Austin is known as. Because of this…<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **4/22/2026** | Ariel Novodvorschi | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/21/2026** | Ariel Quintana | I DO NOT WANT a wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin’s climate and mode-shift goals. I DO WANT continuous pedestrian-bicycle paths along the project’s length. Converting an existing highway lane to a HOV/transit lane would be more helpful and efficient. CTRMA should invest in transit, walking, and biking—not double down on highway expansion. |

| | | |

| **4/4/2026** | Ariel Wood | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| **4/23/2026** | Arielle Yadhati | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Aries Knight | Barton springs and all of zilker holds so much wildlife, greenery and community that we can't afford to get rid of here in Austin. Our water resources are already getting stripped from us, so many animals are being harmed and displaced already, and we don't have enough space that is uniquely Austin anymore, let alone naturally Austin. We don't need more cement and we don't need more money in another corporations pocket at the cost of nature. I'm begging you to drop the idea of taking this staple from people. A toll road doesn't get people to move here but our community and balance between nature and city does. |
| **5/1/2026** | Arista Ip | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Arista Ip | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Arista Ip |

| **4/26/2026** | Arjun Adapalli | Dear CTRMA Board Members,<br><br>I am very concerned about this. The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Arjun Adapalli |

|---|---|---|
| **4/24/2026** | Arturo Bustamante | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |

|---|---|---|
| **5/3/2026** | Arun Kumar | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Arun Kumar |

| **4/21/2026** | Arvin Bhatti | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration.<br>Honestly just drop the project and build a metro system like are you guys dumb? |

| | | |
|---|---|---|
| **4/23/2026** | Ash Catalan | I oppose further expansion and resources being put into Mopac, despite its congestion. Expanding on 8 miles of lanes will induce increased demand, leading to further congestion in the long run, and not solving the issue of Austin's congested roads. With the current highway expansion project in i-35, an additional expansion project on Mopac will only further congest roads and put a strain on daily travelers. The environmental impact that this project proposes is not worth it for the temporarily relief that the expansion will provide before it congests once more. I belief Austin officials should invest this money in resources that encourage alternative methods of transporating commuters across the city, such as an additional Metro Rail network that connects the city and in time, will lessen traffic congestion. |
| **4/22/2026** | Ash Martin | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| **4/23/2026** | Ashleigh Garces | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **5/3/2026** | Ashleigh Roessler | The idea that expanding highways will reduce traffic volumes has been disproved time and time again. The environmental havoc that this extension of Mopac will create a whole new slew of issues for the City of Austin and risk threatening the already fragile nature of the Barton Springs ecosystem. Stop wasting our money (and commute times) on highway extensions and look at more viable options like more comprehensive and robust public transportation systems like we've been asking to happen. |

| | | |
|---|---|---|
| **4/21/2026** | Ashleigh Stevens | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Ashley | Nooo to Mopac expansion. Save our springs! |
| **5/2/2026** | Ashley Alba | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/24/2026** | Ashley Alvarado | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Ashley Crane | As a 5th generation Austinite and my children being 6th generation, we strongly oppose this. My grandparents fought to save the springs and I will continue this fight for the sake of my children & the future of Barton Springs. |
| **3/28/2026** | Ashley Dickinson | MoPac South<br>I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you.<br><br>Ashley Dickinson |

| **5/3/2026** | Ashley Dodd | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Ashley Dodd |

| | | |
|---|---|---|
| **4/7/2026** | Ashley Dyslin | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. Stop taking away what makes this city so great, including valuable green spaces, and adding pollution.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For Austin residents and nature, |

| | | |
|---|---|---|
| | | Ashley Dyslin |

| | | |
|---|---|---|
| **4/30/2026** | Ashley Dyslin | Protect our land, save our city's incredible natural beauty and community spaces. I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |
| **5/3/2026** | Ashley Gordon | Barton Springs is the crowned jewel of Austin - this project is a threat. It is imperative that a full Environmental Impact Statement (EIS) is generated before ANY decisions are made and less harmful alternatives be prioritized. Thank you. |
| **3/31/2026** | Ashley Hall | I drive on Mopac every day, multiple times a day. I work downtown, live south at William Cannon near Mopac, have my kids daycare at Convict Hill & Mopac, and my son's elementary school off of 45 near Mopac. I am very excited at the prospect of adding lanes and reducing drive times! I am in favor of adding the maximum amount of lanes in both directions. Traffic is a huge factor in our daily life and in our ability to have community throughout various parts of Austin. I am obviously not looking forward to the potential traffic delays due to construction, but the end result will be well worth it in my opinion!! |
| **4/21/2026** | Ashley Hammonds | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Ashley Jakes | Hi, my name is Ashley Hakes and I am representing the Cosmos Ranch Foundation and Secret Explorer.I'm calling to strongly urge CTRMA to require a full environmental impact statement forthe MOPAC South expansion.I'm taking the time to call because this decision really matters to me, not just in the shortterm but for generations to come.This project is not happening in a neutral location, it's happening within the Edwardsaquifer recharge zone, a place thatis incredibly sensitive, porous, and directly connectedto the water that feeds Barton Springs.At Barton Springs, it's not just a recreational site.It's truly a living, breathing ecosystem.It's a home to endangered species,like the Barton Springs salamander.It's a source of clean, flowing waterthat people rely on all the time.It's a place where community gathers,where people connect to nature, where people heal.What happens in the recharge zone flows into that water.There is no separation.This is why it's deeply concerning that this project is being pushed forwardunder finding a no significant impact.There is definitely significant impact happening because expanding a highway to sixto eight lanes over nearly nine miles through an ecologically sensitive area is notinsignificant.It brings increased runoff, increased pollution, increased disruptionto underground water flow and long-term impacts that cannot simply be reversed once they occur.And from what I understand, this decision is being supported by outdated traffic data.That alone should be enough reason to pause and reassess.We're making permanent changes because of information that may no longer reflect currentreality.This is exactly why a full environmental impact statement exists, to take a deeper, more honestlook at the consequences of a large project like this, to ensure the decisions are notnot minimized, not based on incomplete information.Because once this kind of damage is done,it doesn't just go away.You can't easily repair an aquifer.You can't create a spring.You can't bring back a species once its habit is compromised.And beyond the science, there is something deeper here.There's really a true responsibilityto protect what is sacred.What is life-giving?What is irreplaceable?We need water to survive, and Austin is known for its connection to nature because it's water, because of its green space.That identity doesn't exist without places like Barton Springs and decisions like this directly shape whether that identity survives.I'm asking you to slow this process down, to listen not just to the data, but to the community that is showing up, speaking out, and asking for care.to choose transparency over shortcuts,to choose long-term stewardship over short-term expansion.I request and require a full environmental impact statementfor this project before moving forward.This is the moment right now to get it right,so thank you so much for your time for hearing thisand taking it into consideration. |

| | | |

|---|---|---|
| **4/17/2026** | Ashley Lane | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Stacia Guerrero |

| | | |
|---|---|---|
| **4/19/2026** | Ashley Lane | Dear CTRMA,<br>I support EverGreen's mitigation efforts but believe they do not go anywhere near far enough. My own suggestions follow.<br>I am writing to strongly oppose ANY expansion of Mopac over Austin's beloved parks and natural spaces. The proposed expansion of Mopac is the equivalent of paving paradise to put up a parking lot. We cannot afford to lose more beautiful spaces to cars. Especially when doing so could also endanger the drinking water source for millions of people.<br>I do not trust the CTRMA or the city to handle this project with the extreme care required for such an important area. The forced expansion of I-35 by the state across town has already destroyed part of the Austin Food Forest despite promises that were made by the city and the contractors that it hired, that the Food Forest would not be damaged. Instead rows of freshly planted food trees were dug up during a crucial planting window, all to install a massive sewage pipe that s wasn't on the approved drawings. The city didn't stop it. It didn't hold it's contractors accountable.<br>CTRMA's current plan is a toll road greenwashed with performative bike lanes. Personally, I love to walk and bike around town. Including when I previously lived in the Tarrytown neighborhood about two blocks away from Mopac. But the absolute last place I want to bike is next to cars whizzing by at 60 (let's be real, it's Texas so it is probably 80+) miles an hour. It's not just unpleasant, this speed differential is deadly to cyclists. If you are hit at 50 MPH by a car, no bike helmet can save you. The legal speed limit of Mopac is higher than that. People often drive faster.<br>This is not a reasonable or sustainable solution. Austin needs real transit alternatives, not more trust me "just one more lane, bro." Study after study has shown that adding lanes induces demand, it does not reduce it.<br>One definition of insanity is doing the same thing and expecting a different outcome. CTRMA is proposing adding another lane, and despite 60 years of evidence nationwide showing that this does not work, claims it will help solve traffic. This is the solution it poses over Austin's crown-jewel public park, despite the city's poor track record with similar expansions on land it controlled.<br>The proposed solution by CTRMA is by definition insane. This whole project needs to go back to the drawing board. The people of Austin deserve better.<br>There is no room for error. Our springs, our drinking water, our parks, our urban natural spaces are too important. |
| **5/3/2026** | Ashley Lee | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Ashley Levrier | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. |---|---|---|
| **5/3/2026** | Ashley Manley | Dear CTRMA Board Members,  I am writing to OPPOSE the mopac expansion plan. <br /><br />I moved here as a young person from Corpus Christi in my early 20s 13 years ago and have watched the effect of over development on our creek systems. It's jarring, and I don't need to send you all statistics and facts because plenty of other have sent you that. Please preserve what makes Austin special and sustainable. Don't turn our city into a desert wasteland by overpaving and not allowing rain water to recharge our ground water. We will just end up like California - dried up. Once the water table is depleted that aquifer is dead.  But central Texas is so special and unique and we have to preserve its beauty.  For the love of water in Central Texas,  Ashley Manley |
| **5/3/2026** | Ashley Sands | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Ashley Sands |

|---|---|---|
| **5/3/2026** | Ashley Stovall | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Ashley Stovall |

| **4/21/2026** | Ashley Sykora | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Ashley Wainscott | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Ashley Wainscott |

| | | |
|---|---|---|
| **5/3/2026** | Ashlynn Long | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Ashlynn Long |

Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Audra Webbe |
| **3/21/2026** | Audrea Moyers | I am writing to protest plans to widen MoPac. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin’s climate and mode-shift goals. I do support converting an existing highway lane to a HOV/transit lane. I support continuous pedestrian-bicycle paths along the project’s length. We need to invest in walkable streets with safe bicycle corridors and transit options, especially to/from hubs. |
| **3/21/2026** | Audrea Straub | Do not expand Mopac! We have already done so much harm to our city's environment with urban sprawl. More cars on the road in not the solution, and will only create more traffic in construction and add more cars onto the roads. Didn't work for LA and their traffic and won't help here either. |

| | | |
|---|---|---|
| **4/29/2026** | Audrey Bennatt | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |
| **5/3/2026** | Audrey Clark | Austinites DO NOT want Mopac expansion!! As a transplant from Dallas that loves Austin, protecting Barton Springs is a top priority for me personally. We should prioritizing this because it's what makes our city so special. I also know from experience growing up in the vast concrete expanse of Dallas that highway expansions cannot be our solution!! Please explore other transit options, say no to Mopac expansion. |
| **5/3/2026** | Audrey Conway | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Audrey Conway |

| | | |
|---|---|---|
| **4/20/2026** | Audrey Cook | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/1/2026** | Audrey Dahlkemper | You told my generation that we were the ones who had a chance to make things better. So here I am, hoping that this email will reach you. You, who are also most likely a resident of Austin. Have you walked the path at sunset when the birds take off into the sky. Have you swam in Barton creek on a hot summers afternoon. Have you taken a moment, taken a breath to look up, look up and see the tree branches waving in the wind against the blue sky. All of this will disappear if this highway gets expanded. Nature is not like a building we can re-erect. Once it's gone, it's gone forever. It's not worth more lanes and more traffic. Stop the highway expansion. |
| **4/23/2026** | Audrey Eberly | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **3/19/2026** | Audrey Hartman | I do not want Mopac widened! We should invest in bike lanes, pedestrian infrastructure, and public transit instead. Do NOT widen mopac! Traffic and pollution will only increase if this is done. |
| **4/15/2026** | Audrey Moore | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45, which is very dangerous. City Council District 8 has now allocated $117,000 to the design of this path as they recognize the important need for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request, and I can provide further information, including graphics. Thank you. |
| **4/25/2026** | Audrey Scalici | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Audrey Sullivan | Please reconsider doing this while i-35 is under construction. I don't think adding a lane will benefit anyone. I live in tarrytown right off mopac. |
| **5/3/2026** | Audri gunderson | I care more about this cities environmental health than saving a couple minutes on my commute to work. Save nature!! |

| | | |
|---|---|---|
| **5/3/2026** | August Floyd | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. | **4/22/2026** | August Fye | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. |---|---|---|
| **4/5/2026** | Aurora Silva | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Aurora Silva |

| **4/20/2026** | austin | This project is going to waste 825+ million dollars, not going to be finished for 10 years, and then provide a negligible impact of at most 10 mins a day taken off commute times. |
| **4/30/2026** | Austin Ables | Barton Springs is one of the few great public amenities in this country that has not been destroyed by our insatiable greed. It is a gift of nature and is to be treated care and respect. No one owns rights to the pools waters, but we all have a responsibility to maintain these waters for generations to come. |
| **4/27/2026** | Austin Aiken | I don’t think mopac expansion is worth any impacts to the aquifer. |

| | | |

| | | |
|---|---|---|
| **5/3/2026** | Austin King | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Respectfully, Austin King |
| **3/19/2026** | Austin Lukes | This will do nothing to reduce congestion, and the amount of time and money spent on it will be a waste. |

| | | |
|---|---|---|
| **5/3/2026** | Austin McDaniel | Dear CTRMA,<br><br>The current plans for the mopac expansion perpetuate a history of car centric infrastructure and highway expansion that we know doesn't address traffic issues. Instead these expansions cost more money, further the destruction of our precious green spaces, and take away funding from mass transit options and active transportation options that are more affordable and accessible to everyone. Stop expanding our highways, increasing our costs, and polluting our environment. Instead build infrastructure for the people.<br><br>Thanks,<br><br>Austin McDaniel |
| **5/3/2026** | Austin Nichols | Dear CTRMA Board Members, My name is Austin Nichols and this is not a repeat form letter. I am an actor and director. I have been in Austin since 1981. You, your organization, and people like you, have systematically destroyed almost everything that made this city unique and wonderful. STOP!!! The Aquifer and the springs are so special and important. Our wildlife. Our flora and fauna. You know what we don't care about? Bigger wider roads and freeways. NO ONE WANTS THIS. WHY DO YOU??? Please ask yourself why you are doing this? It's not for us. <br /><br /> YOU WILL NEVER FIX TRAFFIC in popular fast growing city. All you will do is make room for more cars. More people. More traffic. Your ideas to ease traffic are flawed. And frankly, just wrong. <br /><br /> I would be willing to bet that you have never been to Jacob's Well. If you had, you would realize that humans are destroying our environment. The unchecked development in Austin and Texas in general is disgraceful. We don't need to speed up or ramp up development. Let people build their own homes. Let growth happen naturally. <br /><br /> Do you know what happens when growth happens too fast? People and institutions naturally check that growth. And it finds equilibrium again. <br /><br /> I will mobilize my half million followers to fight you every step of the way. And expose any nefarious "deals" that may be happening. <br /><br /> First and foremost, you are supposed to represent US, not you or special interest. I'd love to see a list of people who want the Mopac South Expansion. I'm sure it's extremely short or non existent. <br /><br /> PLEASE put us first. The environment. Quality of life. Parks. Beauty. NOT ROADS!!!! No one wants wider bigger roads. <br /><br /> Also, if you don't understand how drainage works, you need to read up on how the aquifer recharges and how large tracts of concrete and asphalt disrupt the recharging of the aquifer. <br /><br /> One day, you will wake up and Barton Springa will be dry. Is that what you want? Do you want to live with that on your head? Please think about what you're doing!!! Austin Nichols Respectfully, Austin Nichols |

Save the trees! Save our parks!<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **4/22/2026** | Autumn F | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>Save the springs! Save the trees! Save our parks!<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/1/2026** | Autumn Good | I'm extremely concerned about the environmental impact of this proposal. We already have one city in Texas posed to run out of water, and this project has a high risk of endangering another water source 2 million Texans depend on. Additionally, the scale of the projected improvements do not justify the cost and headache that another near decade long construction project would entail. A time saving of 4-5 minutes is simply not worth it, especially since our other primary north south corridor is also under a multi-year construction project. At an absolute minimum, a full environmental impact statement needs to be conducted to better evaluate the risks both environmental and logistical. |

| | | |

| **5/3/2026** | ava hall | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, ava hall |

| | | |
|---|---|---|
| **5/3/2026** | Ava Moses | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Ava Moses |
| **5/3/2026** | Ava Paredes | I am opposed to the widening of south mopac. The north mopac expansion has done little to mitigate traffic and expanding the southern section would just create the same thing. i am particularly opposed to this highway construction due to the environmental effects of the project. the edwards aquifer recharge zone runs right through the area of construction. i do not believe that this project would cause little damage to the green belt. it would change the landscape and natural habitat for many flora and fauna in the area. we already are in a significant drought and causing damage to the recharge zone would further damage the ecosystem. it has been shown time and time again that adding lanes only temporarily decreases traffic. as the traffic decreases demand increases. and we are right back to square one after spending millions of dollars. instead think about using the money to mediate and fix the choke points for traffic south of 290 rather than widening the highway. would be a much better use of taxpayer money and wouldn't damage the ecosystem. think about the katy |

| | | |
|---|---|---|
| | | freeway, the widest highway in the country, perhaps the world. there is still traffic at the katy freeway. there is still traffic on north mopac. |
| **4/23/2026** | Ava Stafford | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | |
| **3/19/2026** | Avalena | Not interested in an expansion. It doesn't help traffic long term and we should be more focused on improving our public transit, sidewalks, and bicycle lanes. |

| | | |
|---|---|---|
| **4/23/2026** | Avalon Ray | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Avery Valdez | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Avery Valdez |
| **4/21/2026** | Avery Vincent | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| **4/22/2026** | AW Waring | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Aya El-Sawa | Dear CTRMA Board Members,  It is absolutely unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. I have been going to barton springs for years, and this highway would ruin it.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Aya El-Sawa |

| **5/3/2026** | Ayla Maduzia | Dear CTRMA Board Members,           <br />I oppose the MoPac South highway expansion project. Faster is not better. May we slow down! May we sit in traffic a little longer in order to protect the few good things we have left that we have not ruined with modern advances. <br /><br /> I live between mopac and 290. Already I am feeling the overhang of traffic and construction and always something changing. It does not make my life any better to drive from one part of town all the way to dripping springs without a stop light. This was not better! Faster is not always better. <br /><br /> Protect our land, protect our waters. I know we all need to get from point A to point B. As safely as possible! More lanes does not mean safer. Faster is not safer.            This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Ayla Maduzia |

|---|---|---|
| **5/3/2026** | azura martinez | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, azura martinez |

|---|---|---|
| **4/26/2026** | Barbara Johnson | Dear CTRMA Board Members,<br><br>Dear CTRMA Board Members,<br><br>I want clean water streams, not revenue streams. I'm writing to oppose the MoPac South expansion because of it's envoronmental impacts to the vulnerable recharge zone that is the Edward's Aquafer and the jeaportization of endangered species and species of concern that live there.<br><br>Research shows that adding more lanes to a roadway does not substantially ease traffic.<br><br>I am opposed to construction, especially because a thorough and satisfactory environmental impact report has not been produced.<br><br>Sincerely,<br><br>Barbara Johnson |

| | | |
|---|---|---|
| **4/26/2026** | Barbara Johnson | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Barbara Johnson |
| **5/3/2026** | Barbara Johnson | Hi there. My name is Barbara Johnson. I'm an Austin resident. I use MOPAC on a near daily basis.I'm calling to express my concern about the proposed MOPAC south expansion.I'm really concerned that there's not an environmental impact study that is done by experts.We have endemic endangered species in the spring.Endemic means that they're only here in the spring in Austin on the globe.that's what endemic means. Endangered means that they're threatened. There are only a few left.So we really need to be paying attention to that. We could be jeopardizing and even killing the lastof these known species in Austin. And I think we need experts on the case to tell us what theproposed planning would do for the impact of these creatures in the land and the water. Thank you. |

| | | |
|---|---|---|
| **3/24/2026** | Barbara LaFellette | This MoPac expansion plan is bad for everyone except CTRMA. A full environmental impact study needs to be done. What you are passing off as an impact assessment is ingenious at best! A flat out lie at worst. Noise, air, water quality will all be diminished. Pollution to all will be inevitably increase and for what? Profits for CTRMA-HELL NO! |
| **4/28/2026** | Barbara LaFollette | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Barbara LaFollette |

| | | |
|---|---|---|
| **4/25/2026** | Barbara Loe | Dear CTRMA Board Members,<br><br>Please, as an Austinite since 1976, a resident of south Austin that uses MoPac regularly, and a senior who swims daily at Barton Springs, I urge you to conduct a full and transparent Environmental Impact Statement for the project. This will uncover the truth of the severe and unnecessary impacts the project will have as currently proposed. The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on MoPac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lady Bird Lake trail hike and bike bridge. I will not be able to reach Barton Springs since I live south and must use MoPac to get there, due to bottlenecks in alternate roads with traffic avoidance of MoPac because of the construction. I am not one of the happy few who have the priviledge to live in the Barton Springs neighborhood.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats; air pollution will harm public health at Austin High; sediment runoff and water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north MoPac, Cesar Chavez and other streets in my neighborhood. And, with the ciry of Austin project for Lamar Blvd. changes taking place at the same time that will reduce car traffic to one lane, the traffic nightmares will be compounded for those of us who live south of the river.<br><br>Please evaluate and consider less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Cannon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>The proposed project must be evaluated together with the TxDOT proposal to connect the south end of MoPac to I35, converting MoPac to a western I35 bypass. I shudder to think of the amount of traffic that project will add to MoPac, and you all know that MoPac was never designed to accommodate that kind of traffic, including large trucks and 18 wheelers which will inevitably end up on MoPac as a "bypass." |

| | | |
|---|---|---|
| | | I regularly drive MoPac from William Cannon to Cesar Chavez and the reverse, and I do not see the kind of traffic slowdowns you think that you are addressing. Most of the slowdowns I experience are north of the Cesar Chavez onramp traveling north, which will only become more congested by increasing lanes only to that point. Whenever I'm driving south to my exit at the 360 turnoff, I have never experienced more than maybe a 5 minute delay due to traffic slowdowns, even at peak hours.<br><br>Please conduct an EIS for this project and let us look at the truth of what the consequences will be, and consider the alternatives before proceeding with the expansion.<br><br>Respectfully,<br><br>Barbara Loe |

| | | |
|---|---|---|
| **5/3/2026** | Barbara McArthur | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Barbara McArthur |
| **5/3/2026** | Barbara Rodriguez | Oppose any projects interrupting Zilker Park/Barton Springs. |
| **4/30/2026** | Barbara Stinson | Hello: this project must be more carefully evaluated for environmental impacts. Other alternatives should be considered that include broader goals for improving air quality and lowering environmental impact in the region. Transit and other options must be more thoroughly evaluated, ones that align with Austin‘s lower carbon footprint, and regional transportation needs. Let’s go back to the drawing board and get an alignment with the leadership of the city of Austin and surrounding communities! |
| **5/3/2026** | Barbara White | I am against the mopac expansion |

| | | |
|---|---|---|
| **5/3/2026** | Barrie Golden | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Barrie Golden |

| | | |
|---|---|---|
| **4/17/2026** | Bart Landry | Dear CTRMA Board Members,<br><br>Here:<br><br>As a long time resident of Austin and a lover of the nature here, I have seen the impact over development has had on our natural waterways, greenbelts, nature spots, lakes, and so many things that make Austin a unique place to live. The planned expansions to Mopac would be devastating for our water system, for our beautiful nature access, and it is absolutely not a cleverly thought-out solution to the traffic issues on Mopac. It seems like a money grab. We DON'T need more f*cking toll lanes! We need free HOV lanes, metered access, and a much more well thought out plan that seeks to preserve the way of life in Austin instead of just bulldozing everything for the sake of making money for rich stakeholders. I implore you to reconsider, have a proper study done of the environmental impacts of this plan, and do better. Create a more sustainable plan that doesn't simultaneously ruin such important parts of what make Austin a great place to live. The city is being ruined by overdevelopment and greed.<br><br>******<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin’s parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders’ external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction |

| | | |
|---|---|---|
| | | ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Bart Landry |

| | | |
|---|---|---|
| **4/23/2026** | Barton Ballard | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| | | |
|---|---|---|
| **4/26/2026** | basil jacobs | Dear CTRMA Board Members,<br><br>Dear CTRMA,<br><br>I strongly oppose the proposed MoPac expansion, and ask that you abandon it. It is an irresponsible decision that is clearly made with no consideration for the ecosystem, public health, and what Austinites actually want. Nobody I have talked to has expressed support for this project, only exasperation and annoyance that there's going to be more construction, and ANOTHER lane added to a highway that does not need it. We are sick and tired.<br><br>It is obvious that there is a financial incentive to build this highway inefficiently in order to force people into the toll lanes and turn a larger profit for your company. The toll prices during peak hours today are anywhere from $9-$12. This clearly creates an unfair situation, with only certain people being able to afford the ridiculous tolls, and everyone else forced to sit through bumper-to-bumper traffic. There are much more efficient ways to reduce traffic than to add additional lanes, toll or regular. In fact, it has been proven that adding lanes only worsens congestion instead of relieving it. It is clear to anyone who has done an ounce of real research that CTRMA only cares about profit, not the people. A 14 lane highway is the absolute worst thing you could do.<br><br>There is a huge environmental concern with this expansion going through the St. Edward's recharge area, bringing even more pollution and habitat loss to an already sensitive area. Studies show that highway construction will add heavy metals and harmful chemicals, including significant levels of phthalates, microplastics, cadmium, and lead- all of which have extreme health effects on humans and wildlife. Nitrous oxides cause algae blooms which deplete water of oxygen, resulting in lower biodiversity across the whole food chain. Fish, turtles, herons, bobcats, insects, bats- all life is affected by these decisions. Not to mention the two endangered salamander species that exist only in the Barton Springs area. A fully functioning ecosystem is essential for humans as well- the ecosystem services provided by plants and animals are invaluable and include things like cleaning the air and water, keeping pest populations under control, preventing erosion, |

| | | |
|---|---|---|
| | | and pollinating plants. Allowing these services to go on saves us billions of dollars nation-wide every year, and affects us more closely than you would like to admit. This is a fragile and delicately balanced ecosystem that is already suffering due to the extreme urbanization of the area. We demand a full Environmental Impact Statement that prioritizes a comprehensive assessment of all pollutants and environmental hazards that will be created in the process of this project.<br><br>As for public health, the dust and particles from construction that get into the air, soil, and water, will only add to the thousands of sicknesses and deaths that occur every year due to pollution. These, along with the aforementioned heavy metals and chemicals in the water, cause asthma, cancer, brain damage, and reproductive issues. The excess of pollution in our city will affect Austinites for generations to come. Imagine Barton Springs so polluted with sediments and chemicals that nobody can swim in it anymore. Think of the many AISD schools, notably Austin High School, are right in the area of construction, where young lungs will experience all of these health effects tenfold. Not to mention the increased traffic due to the long construction process will make it even more unsafe for young drivers and walkers trying to get to school on time. Noise from construction also makes it difficult for students and teachers alike to focus in class, preventing top-level learning. Your children and grandchildren will have to live with the vast negative effects of this expansion.<br><br>Please, if you care about people at all, if you care about the natural world at all- do not go forward with this highway expansion. Austin is begging you.<br><br>basil jacobs<br><br>Respectfully,<br><br>basil jacobs |

| | | |
|---|---|---|
| **5/1/2026** | bass phillips | CTRMA Board <https://www.mobilityauthority.com/about/board-members/> -<br><br>Take another and another hard look at the 2015 'One-Lane' each way proposal. Protect the Aquifer at all costs. Consider ways to make this project better for Austin, such as preserving all trees 19” and up in diameter and “Replace removed trees at 4:1 (large) and 3:1 (mid-size), using native or regionally adapted species with an 85% survival plan.” Thank you for your attention. |
| **5/3/2026** | Bassel Alaiyoubi | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. | **5/3/2026** | Beatrice Kennedy | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Beatrice Kennedy |

| | | |
|---|---|---|
| **4/16/2026** | Becca Shropshire | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Becca Shropshire |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Becca Shropshire |
| **5/3/2026** | Beck Sonniksen | The proposed expansion will hurt one of the most popular recreational destinations in Austin, will harm tourism to the city and state, and endangers the environment, all for a solution to traffic that has been known for decades to be counterproductive. |

| | | |
|---|---|---|
| **4/25/2026** | Becka Gutierrez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Becky Bullard | Please do not expand Mopac. The time saved in travel by adding additional lanes is not worth the impact on the environment or the cost of the project. Furthermore, the time savings would disproportionately benefit those with the resources to pay for toll lanes and doesn't help those who lack the resources. This is antithetical to Austin's goal of being the most livable city in America, which must take into account issues of equity for all residents. |

| | | |
|---|---|---|
| **4/24/2026** | Becky Dreps | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. | **4/7/2026** | Becky Fliss | Spending nearly $825 million to expand MoPac South for a projected 8–12 minute commute savings is a poor long-term investment. The cost is enormous compared with the modest benefit, and during construction, residents and commuters will face years of traffic delays, detours, and safety risks, effectively losing more time than they'll gain once the project is complete. Beyond the financial burden, the expansion threatens local waterways, wetlands, and wildlife, contributing to pollution and long-term environmental damage. These harms are permanent, while the commute-time improvements are relatively small and temporary, particularly given the likelihood of induced demand, where added lanes eventually fill up and congestion returns. Alternative investments, such as enhanced public transit, bike and pedestrian infrastructure, and smarter traffic management, could deliver more sustainable mobility improvements without massive costs or environmental harm. When weighed against the significant financial and ecological impacts, the limited time savings simply do not justify this project, making it an imprudent choice for the long-term health and livability of Austin. |
| **4/27/2026** | Becky Fogle | I am opposed to the expansion.<br><br>Rebecca Fogle |
| **5/3/2026** | Becky Hook | I am writing as an Austin resident to formally oppose the MoPac South expansion as currently proposed, and to urge that the project be subjected to a full Environmental Impact Statement (EIS) rather than the Environmental Assessment (EA) released in February. One of the most incredible things about Austin is its harmonic relationship with city and nature. Impacting our incredible, invaluable water source would be foolish and short sighted. I have spent countless hours enjoying Zilker park through volleyball tournaments, picnic dates, kite festivals and music festivals. It's the heart of Austin! The scale and sensitivity of this project demand the more rigorous review. The corridor crosses the Edwards Aquifer recharge zone — Austin's drinking water source — and habitat for federally listed endangered species including the Barton Springs salamander, Austin blind salamander, and Tooth Cave spider. It would require construction in Zilker Park, the Barton Creek Greenbelt, and over Lady Bird Lake. By any reasonable standard, these are exactly the conditions a full EIS exists to evaluate. Comparable Austin-area transportation projects have received full EISs. The I-35 Capital Express project required one. Project Connect required one. There is no defensible reason an $825 million, 8-mile expansion through some of the most ecologically sensitive land in the region should receive a less thorough review. The Austin City Council and the Travis County Commissioners Court have both unanimously passed resolutions making this same request. A finding of "no significant impact" is not credible without the full analysis an EIS would provide. I urge CTRMA and TxDOT to require an EIS before this project advances any further. Becky Hook - Austin, TX 78727 |

| **5/3/2026** | Becky Jolin | I live on the edge of the Barton Creek Greenbelt off of Spyglass Drive between Wallingwood Dr. and Barton Skyway. My home is approximately 2,000 feet from the Project. I walk on the Barton Creek Greenbelt daily. THe project will seriously deteriorate the natural setting of the area by noise pollution, air pollution, water pollution, and changing a beautiful natural area to a highly urbanized area. We must not allow suburban growth to destroy our beautiful natural urban setting which drew us here. I have lived here for more than 25 years. It was a quiet and peaceful place until the North Mopac Tollway and sound walls were constructed. That project increased highway noise pollution to this area exponentially when the prevailing SW winds are weak or replaced with North, NW or W winds. I cannot imagine the noise pollution that will come into south Austin from the Project and elevating portions of South Mopac. This noise pollution will negatively impact not only the people who live there, but also the animals who already tenuously live in the Barton Creek Greenbelt. It is still a relatively wild area, with coyotes, racoons, armadillos, rock squirrels, turkeys, road runners and -- just this week - my Merline Bird App identified 42 species of birds in a less-than 3-hour period. This is treasured habitat that will be forever changed by the Project. CTRMA must conduct a full Environmental Impact Statement analysis before proceeding so that the true impacts of the project will be on the table before any decision is made regarding whether the Project should go forward. We do not think saving 8 minutes of drive time warrants the impacts to people, water quality, air quality, and most importantly, our wild neighbors who rely on this small island of wild land in the middle of Austin. We cannot continue to build roads for cars from outside the area. Austin should provide a blueprint for the future for other urban areas to follow to remain a beautiful, green, liveable city. Mass transit should bring people in to the City and small impact transit should get them where they need to go once they are here. The traffic model used to dismiss alternatives to the Project are old, do not reflect the fast-developing future of technology and transportation alternatives, and do not consider local goals and policies. The Project's benefits of faster commutes are far outweighed by the damage the project will heap on neighboring residents, on water and air quality in sensitive natural areas including Barton Creek, Barton Springs, and the Barton Creek Greenbelt, which is part of the Preserve to Protect Endangered Species, and on the abundant wildlife that inhabit the Barton Creek Greenbelt and Barton Creek Wilderness Park, which the Project will transect and run parallel to for some miles. Austin does not need the Project and should not allow the CTRMA to move forward with the Project. In order to understand what is at stake, I urge everyone involved to watch two documentaries on the Barton Creek Greenbelt, "Foreverland," which recently aired on PBS, and "Origins of a Green Identify", both of which are available on YouTube's Living Springs Documentary Series. Thank you for considering these comments. Becky Jolin |
| **5/3/2026** | Becky Miranda | I am NOT in favor for this project. There is no need for tolls. |
