| **5/3/2026** | Jenny Medel | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Respectfully, Jenny Medel |

Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Respectfully, Jenny Medel |

|---|---|---|
| **5/3/2026** | Jenny Medel | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. | **5/3/2026** | Jenny Morris | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/27/2026** | Jenny Ramirez | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Jenny Ramirez |

| | | |

| **4/28/2026** | Jeremy Huffman | I oppose the proposed MoPac expansion between Slaughter Lane and Enfield due to its disproportionate environmental and community impacts relative to its limited transportation benefit. The project corridor intersects the Edwards Aquifer recharge zone, creating significant risk to groundwater quality, karst features, and dependent ecosystems, including Barton Springs. These impacts warrant a full Environmental Impact Statement under federal review standards. Additionally, the Violet Crown Trail functions as a critical active transportation corridor. Prolonged disruption and potential degradation of this infrastructure undermine multimodal mobility goals and public safety. Given the estimated benefit of only minimal travel time savings, this project does not represent a balanced or sustainable transportation investment. It should not proceed as proposed. |

| | | |
|---|---|---|
| **4/22/2026** | Jeremy Lee | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Jeremy Lee |

| | | |

Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Jeremy Martinez |

| | | |
|---|---|---|
| **5/3/2026** | Jeremy Turtle | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Jeremy Turtle |
| **5/3/2026** | Jeremy Wright | Please do not cut through the aquifer (Barton Creek)just to save 5 minutes in traffic. |
| **5/3/2026** | Jerrica Butler | This is not the solution to fixing city mismanagement. We've had multiple children injured or killed by cars this year alone. Everything globally is increasing financially and you're burdening families by altering one of the last few SAFE and natural spaces in town. Rethink this, this is not the way to improve tourism, funding or even encouraging people to do more outdoors IN OUR CITY |

| | | |
|---|---|---|
| **4/27/2026** | Jess Bourgoyne | I have lived in Austin for the past 36 years and love going to Barton Springs. I have two young children who have just experienced the Springs for the first time this past year and we hope to continue the tradition for many years to come. I urge you to get a full Environmental Impact Statement completed to see if this is going to harm the Springs or wildlife that live in or nearby. This place is important to Austin please do not take this decision lightly!! |
| **4/22/2026** | Jess Chester | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| **5/1/2026** | Jesse Bernal | I am opposed to the MoPac South expansion. Adding lanes will only lead to more cars on the road, more air and water pollution, and sprawl. We need a plan for MoPac South that adds wide, shaded bike and pedestrian paths, creates bike-pedestrian east-west crossings, improves transit reliability, and does NOT expand the highway. I do not want MoPac to become as painful to drive as I-35. I do not want my community of south Austin to become a victim of sprawl. I want to have more options for non-automobile modes of transportation. |

| | | |
|---|---|---|
| **4/18/2026** | Jesse Pinson | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| **3/19/2026** | Jessica Cardenas-Kirkpatrick | Expanding Mopac is a waste of time and taxpayer money. Study after study has shown expanding highways Does Not Work and the only way to truly fix the traffic problem is to invest in and expand public transit. More bus routes, more frequent buses, expanding the light rail, and maintaining alternative forms of transportation like shareable bikes and bike paths. Expanding Mopac will only cause both short and long term issues with congestion and pollution resulting from construction and the continued car dependency being fostered by refusing to spend money on the things that have been proven to work best long term. Stop wasting taxpayer money. |

| | | |
|---|---|---|
| **5/3/2026** | Jessica Coulbury | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. | **5/2/2026** | Jessica Grace | My name is Jessica Grace. I was born and raised in Austin, Texas. I own a home here on theeast side of Austin, and I demand a full environmental impact statement for what this expansion isgoing to do to the endangered species, particularly how they will be affected, and also aboutour water. This is our drinking water. It is one of the most vulnerable aquifers. Ita very biodiverse recharge zone and anything that would cause a negativeimpact to that or to our drinking water should be thoroughly reviewed and studied.The environmental impact is the most important aspect to this highway. I don'twant to get from north to south any faster than I already do. We don't wantconstruction. We don't want this expansion. Please, we |

| | | |
|---|---|---|
| | | demand anenvironmental impact statement. This is crucial and we should not proceed oreven consider proceeding without knowing the full impact of what our actions willcause. Thank you very much and have a nice day. |
| **5/3/2026** | Jessica Grace | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has |

| | | |
|---|---|---|
| | | resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Jessica Grace |

| **4/26/2026** | Jessica Hudson | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Jessica Kavanagh | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Jessica Kavanagh |
| **5/3/2026** | Jessica L. Boice | Expanding MoPac over Zilker and Barton Springs, bringing development closer to Lady Bird Lake, would damage the very things that make Austin unique. Our city is a rare blend of nature and innovation, conservatism and progressivism, growth and environmental stewardship. That balance is what defines Austin. We do not need a MoPac expansion with additional tollways that threatens our natural spaces and treasured ecosystems. There has to be a better solution than disrupting the areas that give this city its character, beauty, and identity. Zilker Park, Barton Springs, and Lady Bird Lake are not empty spaces waiting to be paved over—they are the heart of Austin. They are where families gather, where wildlife survives, where residents recharge, and where visitors come to experience what makes this city special. Pursuing a project that harms these spaces feels counterintuitive to everything Austin represents. Growth should not come at the expense of the environment and community treasures that cannot be replaced. I strongly urge you to reconsider this expansion project and seek smarter, more sustainable alternatives that protect Austin’s future while preserving its soul. |

| **3/28/2026** | Jessica Luh | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |
| **5/3/2026** | Jessica Martinsen | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Jessica Martinsen |

| | | |
|---|---|---|
| **5/3/2026** | Jessica McGhee | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Jessica McGhee |

| | | |
|---|---|---|
| **4/28/2026** | Jessica Mejia | I do not agree with this project as it is currently planned. I want to see a full environmental impact study and I want a binding guarantee that Zilker Park, Barton Springs, the hike and bike trail and the aquifer will not be harmed or inconvenienced during and after construction. These outdoor spaces are the heart of the city and we already know from experiences such as Houston adding more lanes to a highway does not fix traffic issues. What would help traffic is a public transportation system that is actually usable and walkable business districts. More lanes damaging our outdoor spaces will only lead to more cars on the roads. Focus time, money, and energy in getting cars off the roads by building a real public transportation system. |
| **5/3/2026** | Jessica Mejia | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Jessica Mejia |

|---|---|---|
| **4/25/2026** | Jessica Moore | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Jessica Paul |

| | | |
|---|---|---|
| **5/3/2026** | Jessica Perry | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Jessica Perry |
| **4/22/2026** | Jessica Robinson | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| **5/3/2026** | Jessica Sager | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Jessica Sager |

| | | |
|---|---|---|
| **5/3/2026** | Jessica Shriftman | Dear CTRMA Board Members,This decision is wrong. I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. I frequent Barton springs and the green belt. It is a sacred place that provides a small amount of nature. The creatures and plants who live there can not represent themselves and defend themselves. Please stop thinking in selfish ways . As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Jessica Shriftman |

| **4/27/2026** | Jessica Stout | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Jessica Stout |

| | | |
|---|---|---|
| **3/18/2026** | Jessica Walbridge | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. | **3/26/2026** | Jessica Walbridge | Dear CTRMA Board Members,<br><br>As a resident of central Austin, a Barton Springs pool user,a Lady Bird Lake trail lover and somone with asthma I am increasingly concerned about the strain on our precious resources as Austin gets bigger and the world gets hotter.<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird |

| | | |
|---|---|---|
| | | Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Jessica Walbridge |
| **4/22/2026** | Jessica Walbridge | I have the following concerns about this project:<br>1. No post pandemic traffic data used (traffic patterns have changed)<br>2. No project connect data included (more public transportation will change driving habits.<br>3. No chemical studies were done for at least 11 known toxins that are contained in fuel, tires, combustion<br>4. The health of our Austin High Students<br>5. The SH 45 expansion is not included in the study. This is a major proposal with generational health, environmental and quality of life impacts. We need A FULL EIS! |

| **5/3/2026** | Jill Becker | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Jill Borden | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Jill Borden |
| **5/3/2026** | Jill Butler | Please don't expand Mopac. I'd like a full Environmental Impact Statement (EIS) and funding for rail, transit or biking instead.<br><br>Thank you,<br><br>Jill Butler |

| | | |

| **4/26/2026** | Jill Klopp Turner | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/28/2026** | Jill Kolasinski | Even though I sit in MoPac traffic everyday, I do not want this project to proceed at all. Barton Springs and the Barton Creek greenbelt are why my family lives in Austin. Anything that would harm these precious gems is something I very much against. I would rather sit in traffic an extra 15 minutes a day than harm these environmental areas. At the very least, I strongly feel that we need to have an EIS completed before this project proceeds. |

| | | |
|---|---|---|
| **4/19/2026** | Jill Martin | Dear CTRMA Board Members,<br><br>I'm concerned that the MoPac South highway expansion project directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Will construction and increased traffic also increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems? Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Jill Martin |
| **5/3/2026** | Jill Mayfield | Do not do this. Barton Springs is the soul of Austin. Please protect it. |

| | | |
|---|---|---|
| **4/25/2026** | Jill McLennon | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Jill Schmidt | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Jill steinwedel | we want Barton springs over anything |

| | | |
|---|---|---|
| **5/3/2026** | Jillian Anthony | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Jillian Bissar | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Jillian Bissar |
| **5/3/2026** | Jillian McCann | stop the expansion |

| | | |
|---|---|---|

|---|---|---|
| **4/20/2026** | Jim Camp | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>April 22, 2026<br><br>Environmental sensitivity of the study area and Proposed MOPAC South Expansion<br><br>• Will this MOPAC study process explore the increased number of vehicle trips per day traveling on MOPAC?<br><br>· Will this MOPAC study follow the NEPA Process with a scientific-based Environmental Impact Study (EIS)? With the data gathered about increased car trips per day in this EIS investigate potential pollutant loading from cars and trucks traveling from Enfield Rd. to Slaughter Lane? Will the feasibility and the NEPA studies reference CHARACTERIZATION OF HIGHWAY RUNOFF IN THE AUSTIN, TEXAS AREA study done in 1995?<br><br>· What kinds of mitigation (passive and structural controls) of highway run-off might be recommended in the EIS? Will |

| | | |
|---|---|---|
| | | the design of MOPAC expansion use design criteria for preventing environmental degradation? Will the MOPAC EIS consider costs of pollution controls in design of proposed expansion to reduce pollution of watersheds and groundwater drinking sources?<br><br>· Is there a statement in the documentation that the Barton Springs/Edwards Aquifer is a groundwater system that provides drinking water for over 60 thousand Central Texans? Could the Edwards Aquifer and Barton Springs face contamination by hydrocarbon spills on the expanded MOPAC area in Aquifer Recharge Zone or cumulative pollutant loading in this proposed expansion?<br><br>Other questions and comments<br><br>· Will the expansion options consider rail service instead of adding more lanes? Has CTRMA and TXDOT studied national transportation studies (state, local and academic) about lane additions and “induced traffic”?<br><br>Doesn’t transportation research across the US and Canada show that more lanes attract more motorized vehicles and more carbon pollution? Won’t more lanes create more suburban sprawl and a warmer Austin from more carbon pollution, possibly fouled drinking water, and conceivably the slow death of Barton Springs? |

| | | |
|---|---|---|
| **5/3/2026** | Jim E | Dear DRAFT ENVIROMENTAL Study Team:<br><br>I am a homeowner living about 1.5 miles East of the location where Loop 1 crosses over William Cannon st.,<br>and roughly 900 +/- feet East of Kincheon Branch and slightly upstream of its discharge into Williamson Creek.<br><br>Due to this location, I am especially interested in Stormwater Management, (Collection, Mitigation, and Outfalls).<br><br>In the "Preliminary Drainage Analysis" report of the Environmental Assessment (EA), on p.57,<br>the report states ..."the hydrologic and hydraulic analyses should be re-evaluated to assess and confirm adverse impacts<br>based on updated Atlas 14 watershed flood studies".<br><br>This means stormwater controls evaluated in the DRAFT EA may be not be adequately sized<br>for rainfall intensity recently experienced in the project area.<br>I suggest some model runs using the maximum rainfall intensity observed in the project area within the last 2 to 3 years.<br><br>I am also interested in Air Quality during construction and operation of the new roadway afterwards.<br>Dust from earthwork and exhaust from equipment and machinery can travel some distance.<br>I have several family members that are sensitive to these irritants.<br><br>Because of SAFETY for the general population, the large number of caves (35+/-) and undetected subsurface voids, many springs and seeps,<br>the entire MoPac South Project is above the Edwards Aquifer South of the Colorado River, and many endangered and threatened species throughout<br>the project area, I request that CTRMA do a complete Environmental Impact Statement. |

| | | |
|---|---|---|
| | | I believe an EIS will save everyone time and money.<br><br>Thank you for your good work!<br><br>Sincerely,<br><br>Jim Edwards |

| | | |
|---|---|---|
| **4/28/2026** | Jim Kaighin | Dear CTRMA Board Members,<br><br>Dear CTRMA:<br><br>I love Barton Springs. My fear has always been that Barton Springs would suffer a slow death by a thousand cuts--this expansion of MoPac feels more like a slice across the jugular.<br><br>Although I'm not a geologist, I'm married to one. And we've been fortunate to get to tour some City and private properties which have unique and prolific recharge features and we have also seen properties with more common recharge features. Once you have this detailed (not superficial) knowledge of how aquifers recharge, it changes your perspective on how the natural environment works. Even with cutting edge mitigation and construction techniques, it is simply not possible for the needed disruption of this project to not have a negative impact on Barton Springs and the Edwards Aquifer.<br><br>I fear that we will look back at this point in time, and at this specific project, and will be able to tie the Springs decline direclty to this decision.<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction |

| | | |
|---|---|---|
| | | ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Jim Kaighin |
| **3/24/2026** | Jim Kitchen | I am strongly in favor of the current proposal. It seems very well thought out. The use of Express Lanes to ensure free-flowing lanes makes good economic sense. However, I have not seen or heard where money from "surge" pricing goes. I understand that a base toll rate needs to be changed- that's how the road is funded. But the "surge" pricing is an economic tool to keep the Express Lane (s) always flooring. It is a tax on people who value their time more than thei money, with the price set to keep too many people from clogging to Express Lane during peak times. I feel this "surge" pricing should fund either CapMetro or Austin ISD. Let's better fund public transit or fix the RobinHood fiasco with this tax on Austin drivers. |

| | | |
|---|---|---|
| **4/22/2026** | Jim Mapes | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The project will have a horrible effect on the quality of life for everyone in the Austin area. It will create tremendous amounts of vehicular traffic resulting in noise and pollution. The long term effect on traffic will be negative- more lanes, more suburban development, and ultimately more cars moving slowly. Use the money for something else that is actually good for the community.<br><br>For the love of water in Central Texas,<br><br>Jim Mapes |

| | | |
|---|---|---|
| **4/22/2026** | Jim Mapes | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Jim Mapes |

| | | |
|---|---|---|
| **3/16/2026** | Jim Sedlachek | Dear CTRMA Board Members,<br><br>I am writing to strongly AGREE to the MoPac South expansion as proposed. I urge you to proceed with the proposed 8.77-mile project.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to begin advancing this project further.<br><br>Thank you for your time and consideration<br><br>Respectfully,<br><br>Jim Sedlachek |
| **3/16/2026** | Jim Sedlachek | Dear CTRMA Board Members,<br><br>I am writing to strongly AGREE to the MoPac South expansion as proposed. | | | |
|---|---|---|
| **5/1/2026** | Jim Stiffler | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |
| **5/3/2026** | Jim Williams | My name is Jim Williams, and I want a full environmental impact statement for the MOPACexpansion.I fear that Barton Springs and the aquifer will be impacted negatively, so we don't needthat anymore.Bye.Thank you.Thank you. |
| **3/19/2026** | Jimmie Burnett | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin’s climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project’s length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **4/24/2026** | Jingyao Wu | I'm strongly against this project, it would be a fake and quick "bandage" on traffic congestion, it could not solve the real issue. Traffic congestion is not caused by not enough lanes, rather a lack of public transportation and connections. Meanwhile the project would severely threatened the vulnerable Edwards aquifer and ecosystem. |

| | | |
|---|---|---|
| **4/25/2026** | Jisela Serrano | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **5/3/2026** | JJacob Wilk | Hello, my name is Jacob Wilk and I'm calling to oppose the expansion of MOPAC with theadditional six to eight lanes.I'm asking for a full environmental review.I do not believe that it will lead to no further damages and so I would like to call for morereview before it happens.Thank you very much.My name is Jacob Wilk and I oppose the MOPAC expansion.Thank you.Bye bye. |
| **5/3/2026** | jo cook | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, jo cook |

|---|---|---|
| **4/21/2026** | Jo Howard | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Jo Howard |

| | | |
|---|---|---|
| **4/21/2026** | Jo Howard | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| **4/25/2026** | Jo Rich | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/22/2026** | Jo Rocha | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/27/2026** | Jo WeHunt | Save Barton springs and the salamanders. No expansion to mopac |
| **5/3/2026** | Joan Boikess | I am against the Mopac Expansion. I want to preserve the current bridge over Barton Springs. The environmental impact must be studied. We don’t need an 8 lane expansion of Mopac. |

| | | |
|---|---|---|
| **5/1/2026** | joan G hudson | Please conduct a full Environmental Impact Statement (EIS) analysis. I am worried about the endangered species, the health of our treasured and sensitive Barton Springs, caves, birds, Edwards Aquifer, and other precious creatures and environmental treasures. Please do everything you can to ensure that these things that make austin great are not impacted. Also, with expanded transit in Project Connect there is a need to redo your traffic models. I use the butler hike and bike trail and bridge under Mopac several times a week for transportation and recreation on both bike and foot. I've heard that it will be closed for many years during construction. The daily count is in the several thousands as I recall and the counters may be undercounting since only one person is counted when walking side by side. Many Austin High students use this bridge too to for drop off and pick up south of the river. Make sure the expected benefits in terms of reduced delay per vehicle are correct and updated with the latest data. We need to have clean air for our communities including my kids and grandkids who live near the highway. Make sure your estimates of particulate matter are correct considering the additional motor vehicles that will be on the reconstructed highway. What is the plan for bee caves road exits and entrances? I couldn't see the schematic except for the first page which was repeated page after page for 10 pages. Could CTRMA add the managed lanes without adding or removing general purpose lanes? Like what was done north of Cesar Chavez? What will the crossings look like for people walking and biking? I use the sidewalk from bee caves road to us290 and even further south using the violet crown trail which connects back to Mopac near William cannon. We use the sidewalk that is on the east side (no sidewalk is on the west side) to 290. We need to keep that sidewalk (making it wider would be better) and add a shared use path on the west side too. I'd like to see better crossings of the highway too. It is scary to bike and walk across at the current intersections. Thank you for your considerations, Joan |
| **5/3/2026** | Joan Goldsmith | Dear CTRMA Board Members, I swim in Barton Springs Pool multiple times a week. I, along with so many others, love BSP and want to protect it along with it's water quality for future generations. BSP and the Greenbelt are the city's great treasures. They are why people want to live in and visit Austin. The MoPac South highway expansion project will most certainly damage the sensitive areas that feed Barton Springs a nd the aquifer, not to mention endangers species habitats. This project clearly calls for a full environmental impact statement (EIS). To not have a full EIS would be negligent. <br />I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Joan Goldsmith |

| | | |
|---|---|---|
| **4/20/2026** | Joan Grace | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Joan Grace |
| **5/3/2026** | Joan Grace | Please do NOT build over the Edwards Aquifer. No to Mopac extention. Protect our water. |

| | | |
|---|---|---|
| **5/1/2026** | joan hudson | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/1/2026** | Joan Hudson | CTRMA,<br><br>It looks like every page is the same in the 10 page schematic.<br><br>https://www.mopacsouth.com/draftea/Schematic%20Roll%20Plot.pdf<br><br>Please address.<br><br>Thank you,<br><br>Joan |

| | | |
|---|---|---|
| **4/20/2026** | Joan Hughes | Dear CTRMA,<br>I DO NOT support the expansion of toll lanes or any lanes on MOPAC as your proposal describes. The cost and years of construction will never outweigh any time savings for transportation. And the ecological impacts are immense.<br>If it is unfortunately approved, I do support the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- A permanent green fund to support ongoing environmental mitigation<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>Thank you for your time and consideration.<br>Joan Hughes |
| **5/3/2026** | Joanna Castillo | Parkland in the city is vital. Please protect it! |
| **4/23/2026** | Joanna Fried | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/24/2026** | Joanna James | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Joanna James |
| **3/23/2026** | Joanna Widmier | Please just add a lane on mopac from William Cannon to 45 and reduce the number of merges. The merges are causing so much of the traffic. We don't need a huge change! This smaller fix would help SO MUCH and is much more efficient. There's room for another lane. |

| | | |
|---|---|---|
| **5/3/2026** | Joanne Cimarosti | I am against the expansion because it will negatively impact our already dwindling natural spaces! As an Austinite who grew up here, I believe that the upkeep of the natural greenbelt and Barton springs area are a key part of what makes Austin a place that people want to live, that is to say, nature is a key aspect of Austin, and to destroy natural green space is to destroy Austin. All animals including people need these green spaces, untouched by developments. |
| **5/3/2026** | Joanne F Day | The environmental consequences of expanding South MoPac will be devasting to the aquifer and the surrounding area far beyond what your so called impact survey says. There are no long nor short term benefits to this expansion. The best solution would be to invest in a true transit system that gets people out of our cars. |
| **4/16/2026** | Joanne Senn | Not a silly question at all. There's a lot of history here, and it's not easy to explain quickly. The biggest issue for Rollingwood and Westlake Hills is that the current proposal adds major elevated toll lanes through our area without preserving reasonable access for the people who actually live here. Even though the cities pushed for a less intrusive, non-elevated option, the toll authority moved forward with a plan that adds large double-decker toll lanes through this stretch. On top of that, the proposal removes the direct southbound toll lane exit at Bee Caves, which many west-side residents rely on to get home. For years, Rollingwood and Westlake Hills have been asking for a more balanced solution — one that improves traffic without: -bypassing our local business district, -forcing traffic onto school and neighborhood streets, -creating dangerous weaving and merging patterns, -adding unnecessary noise and visual impact. So the goal isn't to say "do nothing." It's to push for a better design that keeps practical east–west access and takes the needs of west-side residents seriously. The comment period is our chance to make clear that this version still misses the mark. |
| **5/2/2026** | Joanne Trubitt | Concerned about the effect on the Barton Creek watershed |
| **5/2/2026** | Joaquin Campos | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Joaquin Silva | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Joaquin Silva |
| **5/3/2026** | Joaquina Guevara. | My name is Joaquina Guevara. I'm an Austin resident and lifelong Central Texas resident.And I'm calling for a full environmental impact review of the MOPAC project.I'm deeply concerned about the impact on the recharge zone, which is a critical habitat for many speciesand directly influences the water quality of endangered species here in Central Texas.This is such a beautiful amenity resource that our community shares with both the residentsof Central Texas and all the visitors that pass through this area every year and hasbeen important to the people living in this area for longer than us in this city.And I'm deeply concerned about the impact that this MOPAC expansion would have on this region. |
| **5/3/2026** | Jocelyn Labrada | Dear CTRMA Board Members, Please reconsider the proposed addition of 5 to 7 new lanes (4 of them tolled) from Enfield Road to Slaughter Lane. This new addition (and 5-7 years of construction) will negatively impact the community by: * Creating harmful traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge (which is horrible since it's a great place for community members and families to spend time together or exercise! I personally run the trail in that area weekly!) *Adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Jocelyn Labrada |
| **5/3/2026** | Jocelyn Rodriguez | As a member of the public, I'd like to see a full environmental impact review for the Barton Springs area. I'd also like to voice that myself and many others want to see Austin moving towards more public transportation, not expansion of roadways just to reach the same traffic equilibrium within a few years times. I want to see the cities dollars going towards making it safe to commute by bike from south Austin to downtown, not expanding roadways. I am concerned about impacts of the development on the ecosystem and do not offer my support to this project. |

| | | |
|---|---|---|
| **5/3/2026** | Jodel Patino | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Jodel Patino |

| | | |

Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Jodie Warren |
| **3/24/2026** | Joe Anthony | The project should not terminate at Slaughter lane, it should finish at 45. |
| **3/20/2026** | joe camarene | I am not in favor of the proposed expansion of MoPac. I believe more studies should be done to try and understand what other options are available. |

| | | |
|---|---|---|
| **3/16/2026** | Joe Clifton | Dear CTRMA Board Members,<br><br>As a neighbor of MoPAC South I am particularly concerned about what may happen to the environment and my neighborhood if you proceed with the proposed widening of the highway across the Edwards Aquifer recharge zone.<br><br>We will always have more traffic but widening the road will threaten the very existence of species like the Barton Springs Salamander. Please proceed with a full Environmental Impact Statement or decide right now that we don't need this. It is a waste of money and a threat to the environment, particularly Barton Springs and the recharge zone.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin’s most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin’s most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, |

| | | |
|---|---|---|
| | | overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Jo Clifton |

|---|---|---|
| **4/29/2026** | Joe DasGupta | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| **4/28/2026** | Joe Gifford | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. | **4/20/2026** | Joe Hoeft | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Joe Mirelez | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Joe Mirelez |
| **5/3/2026** | Joe Riddell | Please seem my attached comments. |

| | | |
|---|---|---|
| **4/21/2026** | Joe Savak | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Joe Savak |

|---|---|---|
| **4/29/2026** | Joe Tracy | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |
| **4/28/2026** | Joel Burgess | After reviewing the proposed plans for mopac, I do not find it beneficial for the cost, environmental impact and disruption. A revised plan certainly needs to be had before considering a 7-year project that that gives such a small improvement, the ROI for the community is certainly not there. It seems from a layman's perspective that there's enough shoulder space to simply convert some of the pre-existing concrete/ asphalt into an additional Lane and see a substantial enough improvement in traffic throughput without a massive multi-year project that just results in unfortunate additional toll lanes. |
| **4/28/2026** | Joel Evans | I do not support the mopac expansion, it does far too much harm for almost no benefit. It’s a huge waste of taxpayer money that could be used for things that actually benifet our community and will destroy natural habitat that we desperately need to protect. Do not expand mopac |

| | | |
|---|---|---|
| **4/26/2026** | Joel Laviolette | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| **4/22/2026** | Joel Marzo | CTRMA Board members,<br>It is unacceptable for the Central Texas Regional Mobility Authority (CTRMA) to continue disregarding the significant environmental and community impacts of widening and elevating portions of MoPac South through the neighborhoods of Austin, Rollingwood, and West Lake Hills. The porposed highway expansion directly over the Edward Aqufier Recharge Zone, threatens water quality and endangers the alread precarious survivial of four federally listed endangered species, including the Barton Springs and Austin Blind Salamanders. Furthermore, the expansion will exacerbate localized air quality concerns, near sensitve areas like Austin High School, where students and teachers will bear the brunt of increased air pollution.<br><br>Without a full Environmental Impact Statement (EIS), CTRMA is risking irreversible environmental harm, years of disruptive construction, and the permanet loss of endangered species; all for a project that may fail to deliver the minscule, promised traffic benefits. The Austin community rejects the proposed "finding of no significant impact" and demands that the CTRMA, as part of a full EIS, prioritize meaningful community engagement to develop modern, sustainable alternatives that address congestion without sacrificing environmental protections or public health.<br><br>As a daily Mopac commuter, I believe the Mopac expansion is a disaster in multiple avenues. When the effect to Austin High School students, cement construction to I-35, previous construction to Mopac and espeically to the environmental impact. With the proposed construction, the negative impact does not drastically improve traffic flows. An alternative HOV Lane would have a less harmful impact to our community. So please consider an alternative solution for mopac. Please no more imperious coverage. |

| | | |
|---|---|---|
| **5/3/2026** | Johanna Gordon | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Johanna Gordon |

| | | |
|---|---|---|
| **4/27/2026** | Johanna Peyton | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | John Abrams | CTRMA people,<br><br>please do a full study on the impact this project, as proposed, will have on water quality, species impact, runoff, sediment, etc. etc.<br><br>You can build all the highways and such, but they will quickly fill to capacity (Houston). The better solution would be to get people on a bus, train, etc, right?<br><br>-John |
| **5/3/2026** | John Anthony Dina | As a resident of Austin, I can confirm that the Edwards Aquifer, the Green Belt, Barton Springs, and Deep Eddy pool are essential parts of the community and must be protected and preserved. I support performing the EIS to ensure this project will not have a negative impact on these priceless and irreplaceable natural resources. |

| | | |
|---|---|---|
| **4/25/2026** | John Barry | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/23/2026** | John Benton | Additional capacity is much needed on South Mopac. The proposed improvements would greatly improve mobility options in South Austin and northern Hays County. The proposed braided ramps at SB convergence of Mopac and US 290 will help alleviate an existing bottleneck. However, I recommend that the auxillary lane be extended over William Cannon and terminate after the entrance ramp from SB frontage road south of William Cannon to avoid additional weaving conflicts on the mainlanes. I utilize this segment of Mopac multiple times each week and additional capacity and cleaning up the weaving movements from the ramps is very much needed. |

| | | |
|---|---|---|
| **5/3/2026** | John Coates | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, John Coates |

| | | |
|---|---|---|
| **5/2/2026** | John Foor | I firmly oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. CTRMA should NOT conduct this project. At the very least, CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. |
| **5/3/2026** | John Gallagher | Dear CTRMA Board Members, Although I wouldn't consider myself a devout Environmentalist, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, John Gallagher |
| **4/21/2026** | John Griggs | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/2/2026** | John Hallock | We live in the deep Eddy neighborhood with 2 young children. We do not support the MoPAC south expansion. The addition of more concrete and more high speed traffic cutting us off from the city and the waterfront seems very poorly thought through and and needs much more study to be considered viable. Please provide traffic analysis, plans showing how walking paths with be connected to downtown, and how there will be no impact to thdd we neighborhood from additional noise, pollution, and heat generated by additional cats and pavement.<br><br>Thank you,<br><br>John<br><br>Sent from my iPhone |
| **5/2/2026** | John Hallock | I do not support the expansion, it creates a less walkable city. I would ask that the team come up with a more comprehensive environmental and pedestrian friendly solution. |
| **5/3/2026** | John Hartigan | I commute on MOPAC every workday, but I am opposed to this proposed project moving forward until it recieves a full Environmental Impact Statement. It's not worth it to me to shave a few minutes off my commute if it puts at risk any aspect of the unique, fragile ecosystem of the aquifers or the greenbelt. Please prioritize the full Environmental Impact Statement. |

| | | |
|---|---|---|
| **5/3/2026** | John Kane | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, John Kane |
| **5/3/2026** | John Kinney | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, John Kinney |
| **5/1/2026** | John Lewis | We desperately need additional lanes as proposed by the CTRMA for south Mopac!! |
| **4/2/2026** | John MacKay | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45, which is very dangerous. City Council District 8 has now allocated $117,000 to the design of this path as they recognize the important need for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request, and I can provide further information, including graphics. Thank you. |
| **5/3/2026** | John McCarthy | I am an ER doctor who works south of town— if your project goes according to plan it could hypothetically make my commute faster— HOWEVER I am vehemently opposed to this plan. Austin is the best city not because of its highways but because of its connection to nature, something that is sacred and has already been disturbed too much by our focus on expansion and development. If Austin were to lose a place like Barton springs, I would not want to live here. I spend my days caring for the lives of Austin's people and I hope you guys can make the right choice and protect the people, species, and natural environment that makes this city great. |

| | | |
|---|---|---|
| **5/3/2026** | John McElhenney | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, John McElhenney |
| **3/27/2026** | John Mullaney | I write to oppose the proposed MoPac South project. I've lived in Southwest Austin for over 20 years and have witnessed the growth in this part of the community. While I am not opposed to new roads, I am against the construction of this road for many reasons. For one, this area is adjacent to the Edwards Aquifer, which is already facing numerous challenges with a rapidly expanding population and related pollution. Similarly, I believe the quality of life for residents in Southwest Austin will be negatively impacted by the years of construction, noise, and disruptions to the existing road. Finally and perhaps most importantly, MoPac was always meant to be a commuter highway. The Mopac South project would turn it into another crowded mega-highway in the middle of a sensitive environment. This project should not go forward as proposed. |
| **3/19/2026** | John Mustin | Do not expand MOPAC! Let Austin's beauty shine |

| | | |
|---|---|---|
| **4/23/2026** | John Padalino | I am writing to express my firm opposition to the proposed MoPac South expansion. As the Draft Environmental Assessment (EA) and public hearings conclude this April, it is clear that the "Build Alternative" (specifically Configuration 2C) fails to align with the Austin Strategic Mobility Plan (ASMP) and poses an unacceptable risk to our region's most vital ecological assets. Rather than doubling down on outdated, car-centric infrastructure, the Mobility Authority should prioritize multimodal solutions that reduce Vehicle Miles Traveled (VMT) and protect the Edwards Aquifer. Environmental Ramifications: The Edwards Aquifer at Risk The proposed expansion occurs directly within the Barton Springs segment of the Edwards Aquifer Recharge Zone. This is one of the most sensitive landscapes in Texas, where fractured limestone allows surface water to enter the aquifer with virtually no natural filtration. 1. Pollutant Infiltration and Water Quality * Increased Impervious Cover: Adding lanes increases the surface area for "first flush" pollutants—including heavy metals, motor oils, tire microplastics, and polycyclic aromatic hydrocarbons (PAHs)—to wash directly into recharge features. * Hazardous Spills: Expanding capacity increases the statistical likelihood of toxic spills over the recharge zone. A single commercial vehicle accident could lead to irreversible contamination of the drinking water source for over two million Texans and the primary inflow for Barton Springs. 2. Thermal Pollution and Aquatic Ecosystems * Warming Runoff: The "Urban Heat Island" effect from expanded asphalt significantly raises the temperature of stormwater runoff. * Threat to Endangered Species: Increased water temperatures and sediment loads directly threaten the survival of the Barton Springs Salamander and the Austin Blind Salamander, both of which rely on the pristine, stable conditions of the aquifer. The Fallacy of Induced Demand Widening MoPac will not solve congestion; it will invite it. The concept of induced demand dictates that new capacity is quickly filled by "latent" traffic, resulting in the same levels of congestion within years, but with a significantly higher carbon footprint. * The current proposal's estimated time savings of 5–6 minutes for a full-length trip do not justify the generational environmental debt being incurred. * The project's focus on toll revenue ("Lexus Lanes") incentivizes the maintenance of congestion in general-purpose lanes to drive demand for the paid lanes. A Better Path Forward: Biking and Multimodal Mobility The Mobility Authority should pivot from highway expansion to a "Mobility First" strategy that prioritizes the following: * Regional Cycle Superhighways: Instead of adding toll lanes, invest in a fully separated, high-capacity commuter cycling spine along the MoPac corridor. This would allow residents in South Austin and Hays County to bypass traffic entirely while contributing zero emissions. * Alignment with Project Connect: With Austin Light Rail construction beginning in 2027, the focus must shift toward "last-mile" connectivity—expanding bike shares, protected lanes, and pedestrian infrastructure that feeds into the rail system. * Xeriscaping and Green Infrastructure: Any necessary safety improvements should utilize native, drought-tolerant vegetation (xeriscaping) and bio-filtration ponds to slow and clean runoff, rather than stripping the 35-foot easements of their existing tree canopy. Conclusion We cannot pave our way out of a climate crisis, nor can we afford to gamble with our water supply. I request that the CTRMA pause the MoPac South project and conduct a full Environmental Impact Statement (EIS) that exhaustively explores non-highway alternatives, including robust bicycling infrastructure and transit-oriented development. |

| | | |
|---|---|---|
| **4/23/2026** | John Paul OBrien | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>John Paul OBrien |

| | | |
|---|---|---|
| **4/21/2026** | John Pepper | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | John Pierce | Dear CTRMA Board Members, No more MOPAC!! We don't want it. We want to protect our beautiful land environment instead. <br />The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, John Pierce |
| **5/1/2026** | John Pleasant | Why use 2 lanes in each direction? It won't have any measurable impact on commute times, 5-10 min max. And it'll have so many deleterious effects on the environment. Y'all need to quit squeezing your eyes shut, covering your ears, and listen to what Austinites and city council have to say about it. Do a real impact study like they did on the I35 expansion project. Don't be such a CTRMA about it. |
| **4/30/2026** | John Ragland | Please perform a full and impartial study of the environmental impact of this project. The public and the taxpayers are entitled to know the long term effects of this enormous project on such a beautiful and sensitive area. Thank you. |

| | | |
|---|---|---|
| **4/24/2026** | John Romeo | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/28/2026** | John Russell | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |
|---|---|---|
| | | John Russell |
| **4/28/2026** | John Tate | It would be a huge error to expand MOPAC over the Barton Creek recharge zone. It would degrade water quality, reduce underground aquifer and surface stream flows, threaten endangered species, and harm the recreational value of the Barton Creek Greenbelt and Barton Springs. I oppose proceeding with the project at all. If you decide to proceed, you should complete a full Environmental Impact Statement, and give ample opportunity for public scrutiny of the result. Thanks for the opportunity to comment. |
| **5/3/2026** | John Thomas McGuire | Do not build additional toll lanes that encroach on the watershed. Please stop plundering Texas of its natural resources. Additional lanes do not and have never meaningfully increased the wellbeing of a city's citizens. |

| | | |
|---|---|---|
| **5/3/2026** | John Tucker | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, John Tucker |
| **5/3/2026** | John Wynn | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, John Wynn |
| **5/1/2026** | Johnathan Gutierrez | Please do not go forward with this project. The project is over a critically important environmental area, and poses real danger to plants, animals, local native ecosystems and future generations quality of life. |
| **4/28/2026** | Johnny Fuchs | I oppose the MoPacSouth expansion. The cost benefit analysis is awful and we want our neighborhood to remain tight and quiet. We don't want years and years of construction. We want to maintain our peace and parks. |

| | | |
|---|---|---|
| **4/17/2026** | John-O Davies | CTRMA Board Members,<br><br>The MoPac South expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>John-O Davies |

|---|---|---|
| **4/27/2026** | Jolene Kiolbassa | Dear CTRMA Board Members,<br><br>Wrong in so many ways. Increases noxious air that Austin High students will breathe, ruins the fragile environment south of the river, and will not solve Austin's traffic problem.<br><br>Sincerely,<br><br>Jolene Kiolbassa |

| | | |
|---|---|---|
| **4/17/2026** | Jon Bass | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Jon Bass |

| | | |

| | | |
|---|---|---|
| **4/30/2026** | Jon Huibregtse | I am strongly against the proposed south Mopac expansion. This will further degrade the environment in this very sensitive area and discourage more innovative ways to mitigate mobility problems in the area. This is all about people in cars saving a few minutes on long commutes to homes that they chose to buy, knowing the cost in terms of convenience and frustration. Thank you.<br><br>Jon Huibregtse, Ph.D. |
| **3/17/2026** | Jon M | A mopac expansion would not do any good and only increase the traffic flow while hurting the surrounding businesses and people. |

| | | |
|---|---|---|
| **4/18/2026** | Jon Pickard | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. | | | |
|---|---|---|
| | | Sincerely,<br><br>Jon Ross |
| **5/3/2026** | Jonah Popp | I am commenting as I do NOT want to see the expansion of MOPAC into a crucial watershed for the city. We have damaged our environment enough as it is, and we would be much better off investing in better public transit options. |

| | | |
|---|---|---|
| **4/24/2026** | Jonas Bailey | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Jonathan Batres | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Jonathan Batres |

| **3/24/2026** | Jonathan Nolte | I understand that much of the traffic data and related data for this project is from over 10 years ago. So much has changed in the area in that time! I am concerned that these plans do not reflect the current and future needs for transportation. That 2015 (?) pause is too long. Toll roads are a grift. Please allow further comments on tolls. Everyone resents toll roads. |
| **4/20/2026** | Jonathan Quintanilla | Dear CTRMA,<br>Do NOT build any more express tolls on Mopac— let it be as it is and instead redirect that money in:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/21/2026** | Jonathan Rouse | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/24/2026** | Jonathan W. Nolte | Do NOT build any more damn toll roads! Everyone hates the toll roads. If we cannot afford to build roads without tolls, we cannot afford to build those roads. |

| | | |
|---|---|---|
| **5/3/2026** | Jonelle Santanello | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Jonelle Santanello |

| | | |
|---|---|---|
| **5/3/2026** | Jones Miller | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Jones Miller |
| **5/3/2026** | jordan curry | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/21/2026** | Jordan Fronk | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/30/2026** | Jordan Harvard | Expression lanes are not the right solution. The construction with cause increased congestion in the short term and the express lane won't improve congestion unless people pay for it. Putting the burden of reducing traffic on drivers to select a paid lane. This didn't help Mopac north. It won't help mopac south. |
| **4/30/2026** | Jordan Krupa | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **3/19/2026** | Jordan Levin | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Jordan Levin |

|---|---|---|
| **5/3/2026** | Jordan Levin | I live near the Westover exit of MoPac, and as you might imagine travel MoPac quite frequently. Like others, I experience traffic during peak commute hours. However, also like others, I am very concerned about the environmental impact of the proposed MoPac south expansion. The Edwards Aquifer Recharge Zone is the beating heart of our city, our economy, our culture, and our quality of life. We must exercise caution and patience, and evaluate the the long-term consequences of any highway expansion in this sensitive region. It is irresponsible, indefensible, and short-sighted not to prepare a full environmental impact statement for the proposed expansion of MoPac South, as the Travis County Commissioners Court and Austin City Council unanimously called for on behalf of its constituents. Protecting our groundwater quality and our creeks, including Barton Springs, is imperative and should be non-negotiable. Given the importance of the Barton Springs Pool, Zilker Park, the Lady Bird Hike and Bike trail, and the Barton Creek Greenbelt to our community and economy, any action should only be contemplated with comprehensive and updated data, and in alignment with our local, long-term goals. I personally question the extent to which the expansion, once completed, would ease traffic enough to justify the cost, time, increased pollution, and threat to our groundwater quality and supply. At the very least, we should consider the environmental impact to younger generations, including students at Austin High School. Aside from air pollution, if our groundwater quality and supply is compromised, the consequences would be irreversible. As a citizen who first lived in Austin in 1980s, and later owned property in the early 2000s, and finally a homestead prior to the Covid pandemic, the appeal of Austin across the eras has been of a place that has prioritized quality of life, protected its natural resources, reflected the will of its citizens, and has always been forward-thinking and innovative in finding solutions to problems. Unbridled growth at all costs is a hallmark of the short-term thinking that has afflicted larger metro areas like Dallas-Fort Worth and Houston. Now is the time to be sensible and at the very least conduct a full Environmental Impact Statement to consider before moving forward with any plans. |
| **5/3/2026** | Jordan Lopez | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Jordan Lopez |

| **5/3/2026** | Jordan Mordecai | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Jordan Mordecai |
| **5/3/2026** | Jordan Moser | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Jordan Moser |
| **4/27/2026** | Jordan Sanchez | Please don’t ruin one of the most unique and beautiful spaces that we have in our wonderful city!!! Barton Springs in sacred. There needs to be a full environmental impact statement!!! |
| **4/20/2026** | Jordan Shamir | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Jordy Tello | Hello, I regularly use Mopac for driving to other parts of the city. I don't want a wider highway. This would mean more pollution and hurts Austin's mode shift goals. What I do support is continuous bicycle-pedestrian paths along the project's length, converting an existing highway lane to a HOV/transit lane, and for CTRMA to invest in transit, walking, and biking, not highway expansion. I'm also concerned about how the expansion will affect native species in the area and the impact on the greenbelt. This project needs an Environmental Impact Statement. |
| **5/3/2026** | Jordyn Roach | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Jordyn Roach |
| **3/24/2026** | Jorel Lane | After reviewing the public hearing materials, I recommend that the project team strengthen documentation related to environmental mitigation and alternative analysis. The draft Environmental Assessment notes potential impacts to federally listed species and outlines anticipated consultation with the U.S. Fish and Wildlife Service. Given this, greater clarity on proposed conservation measures, monitoring protocols, and stormwater controls would enhance public understanding and promote regulatory confidence. Additionally, prior public-meeting documentation shows that more than two-thirds of submitted comments raised environmental concerns and requested analysis of "low-build" alternatives or a full Environmental Impact Statement. Providing updated, consolidated comparison matrices for the evaluated alternatives—including multimodal and transit-priority options—would improve transparency. Traffic modeling assumptions should also be made available for public review, given past disputes over access to this data. I recommend publishing summary modeling outputs and associated methodologies to ensure that the project's travel-time benefit projections are independently verifiable. |
| **5/3/2026** | Jorge | Good evening, my name is Jorge and I am a resident of 7-8-7-0-4 and I call to formallydemand an environmental impact statement for the Mopac project as it will greatly impactthe Barton Springs Aquifer, which is the soul of the city, it is a place where people conveneto be with each other, it is what makes Austin Austin and any impact on that will greatlyimpactful the culture, the economy, and the morale of the city with love andtess's Jorge. |

|---|---|---|
| **4/21/2026** | Jorge Gamboa | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| **4/22/2026** | Jose Cano | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |
| **4/22/2026** | Jose Cano | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Jose L | Please, do not expand the highway. Money is better spent giving people more mobility options besides driving. When more/safer mobility choices are available, everyone benefits, including people who drive. Instead of more expansions/business as usual, consider this as an opportunity to provide more options to get around: Add wide, shaded bike and pedestrian paths Create bike-pedestrian east-west crossings every quarter mile Improve transit reliability |

| | | |
|---|---|---|
| **4/20/2026** | Jose Munoz | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Josefine Roeding | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Josefine Roeding |
| **3/22/2026** | Joseph Voss | Do not expand mopac further. Adding additional vehicle lanes will only increase travel times due to increased demand. Funding should instead be directed to other forms of mobility instead of worsening congestion and increasing pollution. |
| **3/19/2026** | Joseph Chandler | Research consistently shows that freeway expansion fails to reduce long-term congestion and instead generates additional vehicle traffic. The proposed Mopac expansion would cause irreversible harm to a critical environmental corridor while increasing noise, water, and air pollution throughout the area. Prioritize proven solutions to reducing traffic: expanded transit service and improved bicycle and pedestrian infrastructure. |

| | | |
|---|---|---|
| **3/30/2026** | Joseph Fife | To the Central Texas Regional Mobility Authority and TxDOT, I am writing to formally submit my opposition to the proposed MoPac South Build Alternative (Operational Configuration 2C). As a resident of the Austin area, I am concerned that this expansion—specifically the addition of two express lanes in each direction and the elevated ramps near Barton Skyway—will not provide a sustainable solution to our region's long-term mobility needs. My primary objections are based on the following concerns: Induced Demand: Expanding highway capacity often leads to "induced demand," where the temporary reduction in travel time encourages more driving, eventually returning congestion to previous levels while increasing overall vehicle emissions. Environmental Impact: I am concerned about the potential effects on the local environment, particularly regarding water quality and the sensitive Edwards Aquifer recharge zone. The construction of elevated ramps and increased impervious cover poses risks to our local natural resources that have not been adequately mitigated in the draft Environmental Assessment. Prioritizing Alternative Transit: Instead of further highway expansion, I urge the Mobility Authority to prioritize more robust investments in high-capacity public transit and safer, more connected cycling and pedestrian infrastructure that does not depend on being adjacent to a major expressway. I request that the "No Build" alternative be more seriously considered, with funding redirected toward comprehensive multi-modal transportation solutions that align with Austin's climate and mobility goals. Thank you for considering these comments. Joseph Fife, SW Austin Resident |
| **4/20/2026** | Joseph Grasso | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/20/2026** | Joseph Mancuso | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Joseph Miller | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Joseph Ortiz | I am against adding another lane or any type of construction of the springs. Let’s spend that money on building a proper rail system |

| | | |
|---|---|---|
| **5/3/2026** | Joseph Ringuette | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Joseph Ringuette |
| **5/3/2026** | Joseph Ryan Gingrich | Endless investment in expansion of roadways is demonstably ineffective in alleviating congestion in the long term. There is typically a short-term period of relief following completion of an expansion, followed by an induced demand that creates even worse congestion in the decades to follow. The only way to achieve the outcomes you want, is to deincentize local travel along the route by improving transit and non-automobile connectivity. Invest in expanded bus networks, light rail, and non-vehicle routes, before committing to a decade or more of traffic-increasing and effluent-producing construction, that will not produce your desired results, and will impact the Greenbelt, one of the shining examples of urban greenery in the United States. |

| | | |
|---|---|---|

Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Josh Curtis |
| **5/1/2026** | Josh Durham | As an Austin Native who has seen my local green spaces drastically change for the worse over time, I strongly DO NOT SUPPORT this project. The watershed, Edwards Aquifer and local habit need stronger protections, and development should be stopped. This green space is what gives the City its soul and beauty. We need to preserve the green space and not risk damaging local water sources. |

| | | |
|---|---|---|
| **4/30/2026** | Josh Hubka | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |
| **4/30/2026** | Josh Levine | Please don't expand mopac! This will be a disaster for the city. Please, please don't. Public transport instead. |
| **3/27/2026** | Josh Miley | Build the Toll road already! The city has been “studying” this for 20 years now and just keep pouring money into more studies. Enough! This is not the same Austin as 20, 30 or even 40 years ago….we are a BIG city now and need road infrastructure. Quit letting these money sucking special interests groups rule the day….while their voices are loud, they are just a minor fraction of the population. All of my neighbors and friends who live in Southwest Austin are begging to get this done. And simultaneously fix the lane stripping. You go from 2 lanes to 3 and then back down to 2 which causes extra unnecessary delays due to merging and remerging. Pick either 2 or 3. Either would help in the meantime. |

| | | |

| | | |
|---|---|---|
| **3/30/2026** | Joshua Butterick | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of sensible development,<br><br>Joshua Butterick |

| | | |
|---|---|---|
| **3/30/2026** | joshua butterick | The proposed development was drafted by a team with a tenuous grasp on transportation engineering and environmental impact assessments. The idea that adding more lanes to this section of highway will do anything productive to ease congestion in the long term is a fantasy perpetuated by the mathematically incompetent and morally repugnant. Do the 'engineers' backing this design have any sense at all? Does the depth of their understanding bottom out at the idea that more lanes = less traffic? Have these people ever driven cars or considered the limiting factors of highway congestion being something other than how wide a highway is? How many different cities need to fall into the absurd pitfall that this is the solution? I would think that someone in a position to propose an alternative solution (of which there are may) would grow a spine at some point. It's very difficult to believe that someone, if not several people, are receiving a great deal of shady funding to support this project, because the choice to pursue this approach based on historical evidence of success in similar cases is impossible to make. There are no such examples. Turn your brain on, remember you have a back bone, admit you made a mistake and choose an approach that will actually help. There are many, and they are far more economical and far less destructive than this proposal. I genuinely hope you come to your senses. |
| **5/1/2026** | Joshua chambless | Do not disturb aquifer recharge zones with more concrete. Do not take away the little green space we have to recreate |

| | | |
|---|---|---|
| **5/3/2026** | Joshua Davis | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Joshua Davis |
| **5/3/2026** | Joshua Freiman | OPPOSE expanding MoPac South Instead, I SUPPORT regional rail and a world class bike/pedestrian network I want a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA) You will destroy irreplaceable precious water resources and natural underground features in a sensitive aquifer for marginal car commuter benefits. That's not worth it. Austin could be headed the path of Corpus. People want commuting options, plural, that won't choke the planet and leave us without fresh water. Stop selling us the same bill of goods that contributed to the dire situation we're in: on the verge of an uninhabitable Central Texas region by 2050. |
| **4/14/2026** | Joshua Knebel | Please don’t add more lanes to mopac. Let’s do something else to reduce traffic like use trains or buses. $800 million could be used for public transit that will reduce the number of cars on mopac and therefore reduce travel time on mopac. |

| | | |
|---|---|---|
| **5/3/2026** | Joshua Sabick | Hi, my name is Joshua Sabick and I am calling to comment on the MOPAC South project.I find it absurd that a full EIS would not be conducted for this project because it isover a sensitive aquifer recharge zone which supports many specific endemic species thatare endangered in the Barton Springs pool.I imagine that not doing a full EISwould result in irreparable harm to sensitive ecosystems.And I urge you to move forward with a full EIS.Thank you. |
| **3/30/2026** | Joshua Salas | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin’s most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin’s most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw |

| | | |
|---|---|---|
| | | pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Joshua Salas |

| | | |
|---|---|---|
| **5/3/2026** | Joshua Urbank | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Joshua Urbank |
| **5/2/2026** | Josiah Brown | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/30/2026** | Josiah Pavilonis | Stop the mopac expansion project. The people of Austin do not want to ruin our beautiful city for an unnecessary project. Please listen to the citizens and stop this awful threat to our home.<br><br>This expansion will:<br><br>* Pave over 110 acres of the Edwards Aquifer Recharge Zone, threatening groundwater quality, our creeks and Barton Springs;<br><br>* Harm 4 federally endangered species and their habitats, including the Barton Springs Salamander and Austin Blind Salamander;<br><br>* Carve through some of Austin's most iconic parkland and recreational spaces, including Zilker Park, the Barton Creek Greenbelt, and the Lady Bird Lake Hike and Bike Trail; and<br><br>* Pollute our air with massive increases in cars (increasing annual vehicle miles traveled on MoPac by a whopping 331 million) with more car emissions directly next to neighborhoods and Austin High School (If you didn’t see it, Austin’s air quality just received a failing grade from the American Lung Association). |

| | | |
|---|---|---|
| **4/22/2026** | Josiah Pearce | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/22/2026** | Josiah Pearce | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Carmen Gioia |

| | | |

| **4/21/2026** | Josie Blair | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Josie Hart | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Josie Hart |

| | | |
|---|---|---|
| **5/3/2026** | Josue Munoz | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |

| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Josue Munoz |

| | | |
|---|---|---|
| **4/23/2026** | Josy Johnson | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Josy Johnson |

|---|---|---|
| **4/27/2026** | Jotform | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/29/2026** | Jotty Allen | Hello,<br><br>I am not in favor of the current plan to expand MoPac South. There is ample research that the expansion of highways with additional lanes does not in the long term benefit the traffic problems we are currently facing.<br><br>Our funds should go to more efficient and clean forms of transportation like trains, trams, bike lanes, and pedestrian friendly infrastructure. This would greatly improve the city of Austin economically.<br><br>The city of Austin has a huge opportunity to be a trendsetter in the United States in terms of public transportation. Cars are loud, exhaust is bad for the environment, sitting in car traffic is bad for citizens mental health, and adding more lanes just means adding more cars and worse traffic over time due to induced demand.<br><br>It is also a poor financial decision when it comes to the costs of maintaining roadways and losing out on tax revenue to subsidize and incentivize big box stores to set up outside of the city and larger corporations collect this money rather than the city of Austin.<br><br>Please do not perpetuate a huge problem we have with cities in the United States.<br><br>Thank you,<br><br>Jotty |

| | | |
|---|---|---|
| **4/28/2026** | Joy Menyhert | Please note that I oppose the MoPacSouth Expansion for the following reasons:<br><br>Disruption for 4 years, $1 Billion cost, loss of use of Dick Nichols Park and Violet Crown Trail for an extended period of time and destroying trees and habitat along the freeway for a miniscule commuting savings time of 5 minutes. This is a very poor use of taxpayer money.<br><br>Thank you.<br><br>Joy Menyhert |
| **4/30/2026** | Joy Mitchell | I am against this project due to the harm it will do to our natural resources: springs, river. It will also destroy pathways made for non-motorized vehicles |

| | | |
|---|---|---|
| **3/18/2026** | Joy Ruth | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment incredibly concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. These, and other endangered species, have suffered already due to rapid growth of the greater Austin area. Many thousands of people have moved here because of the beauty and accessibility of our parks, the Colorado River, and the streams and karsts. Risking the pristine beauty of this precious area would be foolhardy and irreversible!<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over incredibly sensitive recharge lands. Additional lanes and elevated structures would drastically increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird |

| | | |
|---|---|---|
| | | Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. I grew up walking to Zilker Park in the '50s. No shortcut across the Colorado river could ever be worth the damage that would be caused by even the construction of an extension of MoPac, much less continued the ensuing traffic over this very special environment!<br><br>The Edwards Aquifer now faces greater stress from years of drought, decades of rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is essential. A full Environmental Impact Statement is imperative to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Joy Ruth |

| | | |
|---|---|---|
| **3/26/2026** | Joy Ruth | CTRMA Board Members,<br><br>The MoPac South expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will most certainly dramatically increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement would irreversibly intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Filling the karsts with concrete is such a terrible idea, I cannot even believe it is being proposed! Precious groundwater and habitat for vulnerable species need the karsts to remain undisturbed. A proposal to build an extension of MoPac was soundly oppossed in 2015. This current proposal must also be unequivically stopped, once and for all! I grew up in walking distance to Zilker Park in the 1950's. Now at 75 years of age, I still recall how pristine this area was. The growth of this fine city is largely based upon the environment. Do Not destroy the environment for the convenience of those who would save a few minutes in their commute at such a terrible price!<br><br>Key Water Concerns:<br><br>Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br>Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br>Tree removal and vegetation loss eliminate natural filtration.<br>Warmer runoff will reduce oxygen in streams and promote algae blooms.<br>Karst features and caves supporting unique ecosystems will be destroyed.<br>Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Joy Ruth |

| | | |
|---|---|---|
| **4/28/2026** | Joyce Bertolacini | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Joyce Bertolacini |

|---|---|---|
| **5/1/2026** | Joyce Durst | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |

| | | |
|---|---|---|
| **5/3/2026** | Joyce E McQueen | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Joyce E McQueen |

| | | |
|---|---|---|
| **3/19/2026** | Joyce Greer | I DONT WANT:  A wider highway.  Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **4/19/2026** | Joyce Greer | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |

| **4/21/2026** | JP Munoz | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Jt holt | Please do NOT pursue mopac expansion around Barton springs. It's simply not worth it for the taxpayers. |
| **5/2/2026** | Juan Carlos Salgado | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Juan Csillagi | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and |

| | | |
|---|---|---|
| | | neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Juan Csillagi |
| **4/21/2026** | Juan Hernandez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Juan Romero | I urge you to do a full environmental impact statement as this is guaranteed to cause environmental damage. We need to protect what makes Austin, Austin. |

| | | |

| **4/26/2026** | Jude Lowe | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Jude Loy | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Jude Loy |
| **5/1/2026** | Judith Baudoin | I am not in favor of this project and I do not think this is a good idea. I drive this rout to go to school at ACC and I don't see how adding toll lanes will help the traffic. my more important concern is the construction over the Edwards aquafer recharge zone when Texas is entering a water shortage. I don't think we should be risking the water we have at a time like this. I will say there are aspects this project that I like as it would fixed merge areas southbound near William Cannon, those murage spot causes back ups every time I drive home. but I dislike every other aspect presented for this project. I would recommend ditching the toll lane expansions and just fix the issues that need addressing, that would actually help your commuters. those being the added left turn lane on to William cannon and removing the funky murages toward slaughter. if that was all this project was I would be in favor for it. thank you. |

| | | |
|---|---|---|
| **4/4/2026** | Judith Sims | I am strongly opposed to the South MOPAC expansion plan, as it will further damage the Edwards Aquifer, Barton Springs and Zilker Park.<br><br>Judith Sims<br><br>Ausin 78704 |
| **4/29/2026** | Judy Lanahan | Do not allow this project to negatively impact the environment. It's a miracle we have a beautiful environment at all, and that's due to the Save Our Springs Alliance and others who know how damaging it is to constantly build build build. We do not need any more toll roads and we do not need any more damage to what's left of our beautiful environment. Find another way to solve problems with traffic! |

| | | |
|---|---|---|
| **3/24/2026** | Jules Elkins | To the CTRMA: As an Austin resident and Professor of Environmental Health and Urban Planning, I wish to submit the following comments. 1. Health Assessment. Increasing Mopac South by up to 4 additional lanes will significantly increase the levels of pollution to which residents of Austin will be exposed. There is a robust body of scientific evidence that shows that traffic-related air pollution (TRAP) is one of the major sources of exposure in urban areas and has been associated with a wide range of adverse human health effects. These include higher rates of asthma onset and aggravation, cardiovascular disease, impaired lung development in children, preterm and low-birthweight infants, childhood leukemia, and premature death. Emerging evidence links TRAP with neurotoxicity and the alteration of neurobehavioral function. The human health effects of the expansion of Mopac have not been adequately assessed nor have they been communicated in any substantive or meaningful way to the public. Asking for public comment, and then basing decisions upon those comments, is misleading when the basic scientific information has not been presented. 2. . Analyze real alternatives to added toll lanes. The proposed six “alternatives” offered are all variations on one concept—adding toll lanes to MoPac South. I encourage the analysis of a range of alternatives that make better use of existing pavement and take into account changing traffic patterns. Specifically, analyze an alternative that involves converting inside existing lanes to rush hour HOV lanes with little or no additional pavement as an option in the analysis—and pursue in the interim as a test solution for very little money. 3. Include the climate implications as a primary concern in the Mopac South plans. The transportation sector is the greatest contributor to US carbon emissions—and just as important as vehicles are the roads and highways they travel on. The State Highway Induced Frequency of Travel (SHIFT) calculator, developed by the Rocky Mountain Institute, shows that the impact of 4 additional lanes for 8.8 miles will induce up to 116 million vehicle miles travelled per year, which is about 1.2 million metric tons of CO2 emissions by 2050. Engage the public in a robust and meaningful conversation about what kind of Austin we as a community want for the future. The average citizen’s understanding of the impacts of infrastructure is more nuanced than it was fifty years ago. There is a broad coalition of people in Austin — neighbors concerned with continued negative impacts from a highway or people who are interested in different forms of mobility — that are pushing innovative options for transit that do not include cars and expanded roadways. We need to continue and expand this community conversation and ask again and again: Who is the greater good that benefits from a “utilitarian infrastructure project”? If the answer doesn’t prioritize the planet, public health and safety for everyone — including people who cannot or do not drive — or the vitality of our precious public spaces, then we must fight for an alternative that does. Moving transit away from highways and cars is happening all over America. If we look in our backyard to Houston and the proposed expansion of I-45, there is tremendous public outcry over this proposed project because the impacts on the community are intense and the benefits questionable. In a 2019 Houston Chronicle editorial, urban planner and academic, Jeff Speck, wrote that the NHHIP “can be described as having significant costs and significant benefits. The costs are best understood as tremendous, and the benefits are best understood as false.” We live on a rapidly warming planet. We know what kind of infrastructure projects are going to help, and which are going to hurt our chances of survival. These are not just roads, but questions of collective action. Most people want access to safe places to walk and bike where they live. Most people say they would like to reduce greenhouse gas emissions. However, the infrastructure that will allow us to do this requires trade offs, such as losing a traffic lane to put in a bike lane, or muscling through a few months of construction near neighborhoods in order to build a new transit stop. In Conclusion Breaking free of the status quo will require creativity and a commitment on the part of transportation officials. It will require a clear mandate from voting citizens that they want to see funding go towards green spaces, bus service, and fixing inadequate sidewalk facilities, with less towards asphalt and road widening. It will require elected officials to show political courage and boldness and implement the will of a representative democracy — not just the squeakiest wheels with the largest campaign donations. Let’s slow down and have this vitally important community conversation about our future as Austinites and the future of Austin. |

| **4/21/2026** | Jules Garrett | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Jules Hamm | What is the MATTER with you people? Another toll bridge are you kidding me? Construction on BOTH i-35 AND Mopac is actually insane. Not to mention the destruction or chaos it will BRING to Barton Springs AND Lady Bird Lake. Our world is already dying and we're racing to save it, is that NOT ENOUGH???? Austin is losing places that make it the city I was BORN in due to high prices, and now this?! Forget the city of music we might as well be the city of traffic and culture loss. This is stupid. This project is MURDER to the land, the scenery, and the nature that's PIVOTAL to Austin and NOT just because people have enjoyed it for YEARS BUT BECAUSE ITS IMPORTANT TO THE ECOSYSTEM HERE! Please don't tell me you are all THAT incompetent. I've always been excellent with journalism and studying towards a journalism major and I HAVE to say you guys have just given me and MANY OTHERS a great piece to write where you'll be the ENEMY. The pen is a harsher weapon than a sword. Not to mention the traction this will get on social media. So actually USE YOUR BRAINS, and THINK ABOUT IT. Unless you all that's a part of this and wanting it really are God awful people. If you are and you ignore all the ones pleading you to NOT do this, then I have one thing left to say. Rot. In. Hell ~ Jules A Hamm (an Austinite, and someone who's related to those that helped build & shape & even protect Austin) |

|---|---|---|
| **4/20/2026** | Juli Berwald | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Julia | It is irresponsible to carry out this project without the requisite environmental studies. While I would enjoy the benefits of an improved highway system, I am not willing to sacrifice water quality, wildlife conservation, air quality, or temperature changes. All of which I would be able to weight against the need of improved traffic flow, if only there was an environmental impact study. |
| **5/3/2026** | Julia | The Mopac expansion will cause damage to parks and creeks and worsen air quality in the surrounding areas. This project will involve drilling around the Edwards Aquifer, putting at least four endangered species at risk, and impacting water quality in Barton Creek and Ladybrid Lake. The impact is undeniable. CTRMA is attempting to hasten approval by "finding no significant impact" in their Environmental Assessment. The National environmental policy act requires a full Environmental Impact Statement for larger projects such as this one which will cause significant impact on one of Texas' most important resources: the Edwards Aquifer |

| | | |
|---|---|---|
| **4/13/2026** | Julia Vunderink | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

|---|---|---|
| **4/13/2026** | Julia Vunderink | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. | | | |
|---|---|---|
| **4/27/2026** | Julia Barraford-Temel | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

|---|---|---|
| **5/2/2026** | Julia Hebner | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/12/2026** | Julia Hill | As a concerned Austin resident, I urge decision-makers to reconsider the proposed MoPac South expansion before it causes irreversible harm to our community. The corridor runs through ecologically sensitive areas, including the Barton Springs/Edwards Aquifer Recharge Zone, putting federally protected endangered species — and the beloved Barton Springs Pool — at serious risk of contamination and habitat disruption. With transportation already identified as the leading source of carbon emissions in our region, widening MoPac will only deepen our dependence on single-occupancy vehicles, worsening the air quality that Austinites breathe every day. Decades of research on induced demand make clear that adding lanes does not solve congestion — it generates more traffic — and Austin City Council members themselves have warned that CTRMA must be mindful of the risks of inducing additional traffic in these environmentally sensitive areas. Instead of an $825 million investment in more pavement, we should be prioritizing transit, protected bike infrastructure, and park-and-ride facilities that give Austinites real alternatives to sitting alone in their cars. |
| **5/3/2026** | Julia Hotze | Expanding Mopac while concurrently expanding 35 would make Austin a completely miserable place to live. We don't need to expand the highway any more. What makes the city special are green spaces like zilker and the green belt, but especially Barton springs. |
| **4/21/2026** | Julia Hoyt | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Julia Irwin | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. | | | |
|---|---|---|
| **4/23/2026** | Julia Larson | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Julia Larson |

| | | |
|---|---|---|
| **4/24/2026** | Julia NICHOLS | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Julia NICHOLS |

| | | |
|---|---|---|
| **5/2/2026** | Julia Ranger | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/21/2026** | Julia Reidlinger | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Julia Robinson | Dear CTRMA Board Members,  I am a lifelong Austinite, born in 1979, before MoPac expanded the first time to south Austin. Over the last 40+ years highway expansions have done little to ease congestion vs a similar investment in public mass transit and bike lanes. Austin needs lightrail, NOT more lanes on MoPac. This expansion threatens the heart of what makes this city so beloved, our natural spaces right in the heart of downtown.  <br />We've fought battles over many decades to ensure the continued health of Barton Springs, the Edwards Aquifer, the Greenbelt, the Salamander, all of which are already struggling. Adding onto 8 lanes of traffic will make the noise and pollution unbearable. When our natural spaces offer no refuge to animals and humans, we have lost the entire point. We live in a community to maintain and improve the quality of life for all, not the legions of cars that continue to multiply without the right incentives to reduce the use of single occupancy cars.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  I demand CTRMA conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  From a native Austinite, exhausted from the traffic that's prioritized over quality of life.  Julia Sincerely,  Julia Robinson |
| **5/3/2026** | Julia Robinson | Dear CTRMA Board Members,  I am a lifelong Austinite, born in 1979, before MoPac expanded the first time to south Austin. Over the last 40+ years highway expansions have done little to ease congestion vs a similar investment in public mass transit and bike lanes. Austin needs lightrail, NOT more lanes on MoPac. This expansion threatens the heart of what makes this city so beloved, our natural spaces right in the heart of downtown.  <br />We've fought battles over many decades to ensure the continued health of Barton Springs, the Edwards Aquifer, the Greenbelt, the Salamander, all of which are already struggling. Adding onto 8 lanes of traffic will make the noise and pollution unbearable. When our natural spaces offer no refuge to animals and humans, we have lost the entire point. We live in a community to maintain and improve the quality of life for all, not the legions of cars that continue to multiply without the right incentives to reduce the use of single occupancy cars.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  I demand CTRMA conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  From a native Austinite, exhausted from the traffic that's prioritized over quality of life.  Julia Sincerely,  Julia Robinson |
| **5/3/2026** | Julia Ruth | I DO NOT support the mopac toll expansion project. I support protecting Barton Springs from possible harm. |

|---|---|---|
| **3/24/2026** | Julia Sykora | Hello,<br><br>I'm writing today in opposition of the proposed Mopac expansion.<br><br>I've lived in Austin for the past 6 years. I moved here from Dallas in search of more green spaces and access to nature. Barton Springs is one of the precious resources that makes Austin beautiful: not only providing a habitat for Austin's wildlife, but also granting the wider Texas community (Austinites, as well as visitors from Central Texas and beyond) access to natural springs, places they can swim and enjoy the outdoors. The proposed highway expansion would cut through the Edwards Aquifer recharge zone, polluting this necessary resource to central Texas. Barton Springs and resources like it are one of the main reasons I moved to Austin!<br><br>As a resident, I do not want there to be an expanded highway near my home. It should be noted that expanded highways do not result in decreased traffic, which can be seen in other large cities such as Los Angeles. In addition to this, I live in the area between the intersections of Mopac, 290, and highway 71. There is already construction happening along 290 and 71. New construction on Mopac would mean traffic patterns would be disrupted in every direction from where I live. This causes a huge negative impact, not only on me and the residents of my neighborhood, but all people and businesses who work, live, or drive through this area.<br><br>I do not want my taxpayer dollars to fund a project that will not improve my life or Austin traffic, and directly harms the environment surrounding this area. The project I really want to see supports Austinites and decreases traffic: improved and accessible public transit throughout the city.<br><br>There are so many people and organizations that do not want to see this expansion to the Mopac highway. Please consider the needs of my fellow community members, as well as impacts on the environment, before pursuing a project like the Mopac expansion. This is really important to me; I have submitted an online comment, and wanted to send an email directly as well to make my opinion known. I will also be attending tonight's public hearing in person. I hope these requests by myself and others have an impact on the plans, as the proposition has greatly impacted us as well.<br><br>Thank you for your time and consideration.<br><br>Best,<br>Julia Sykora |

| **3/24/2026** | Julia Sykora | I'm disappointedly by this hearing because it doesn't create a platform where community members can share their opinions with a full panel of officials and be heard by the rest of the community. I'm opposed to this expansion because even though environmental impacts can be "mitigated," the damage to the surrounding area and aquifer cannot fully be prevented. By the time damage is done to the aquifer it is too late to prevent it. This is a vital resource to Austin residents and wildlife that cannot afford to be damaged. Highway expansions are not effective in lowering traffic. Public transit lowers traffic. It's unreasonable to have construction in progress on 35, 290, 71, and MoPac, and has a negative impact on the environment, residents and businesses. Austin residents have opposed plans to expand and alter MoPac for years! We deserve to be listened to. |

| | | |

| **3/24/2026** | Julia Sykora | I've lived in Austin for the past 6 years. I moved here from Dallas in search of more green spaces and access to nature. Barton Springs is one of the precious resources that makes Austin beautiful: not only providing a habitat for Austin's wildlife, but also granting the wider Texas community (Austinites, as well as visitors from Central Texas and beyond) access to natural springs, places they can swim and enjoy the outdoors. The proposed highway expansion would cut through the Edwards Aquifer recharge zone, polluting this necessary resource to central Texas. Barton Springs and resources like it are one of the main reasons I moved to Austin! As a resident, I do not want there to be an expanded highway near my home. It should be noted that expanded highways do not result in decreased traffic, which can be seen in other large cities such as Los Angeles. In addition to this, I live in the area between the intersections of Mopac, 290, and highway 71. There is already construction happening along 290 and 71. New construction on Mopac would mean traffic patterns would be disrupted in every direction from where I live. This causes a huge negative impact, not only on me and the residents of my neighborhood, but all people and businesses who work, live, or drive through this area! I do not want my taxpayer dollars to fund a project that will not improve my life or Austin traffic, and directly harms the environment surrounding this area. The project I want to see to support Austinites and decrease traffic is improved and accessible public transit throughout the city. There are so many people and organizations that do not want to see this change. Please consider the needs of my fellow community members, as well as impacts on the environment, before pursuing a project like the Mopac expansion. Thank you |
| **4/29/2026** | Julia Sykora | The 2026 “State of the Air” report gave Austin an F rating for ozone pollution, with poor ratings for short-term particle pollution and annual particle pollution. The Mopac South expansion research indicates that there would be “no significant impact” on pollution, air quality, and more. However, this is not possible given that any road expansion would impact both traffic and air pollution. Not to mention the water pollution that would occur from a project occurring immediately over Barton springs and the Edwards aquifer recharge zone. It is of paramount importance that an EIS is conducted on this project before any additional steps are taken. Without doubt, more traffic results in more pollution. |
| **5/3/2026** | Julia Sykora | Dear CTRMA Board Members, The projected expansion would only save 6 minutes of driving time. How is that a significant benefit to Austin drivers, especially after the 5-7 year construction period? <br /><br /> Consider also the concept of induced demand: we can see many examples in large American cities where highway lanes are expanded to their greatest, and traffic wait is either the same or worse! <br /><br /> At this time, mopac has an optional toll lane. Increasing toll lanes will be inequitable for Austin drivers. And CTRMA will use the money from the tolls to repay its construction. This means CTRMA would need to incentivize drivers to use the toll lanes: providing a less desirable experience to toll-free drivers. And with toll costs inaccessible for Austin residents,  this wouldnt be fair  Respectfully, Julia Sykora |
| **5/3/2026** | Julia Sykora | Dear CTRMA Board Members, The Mopac expansion will cause damage to parks and creeks and worsen air quality in the surrounding areas. This project will involve drilling around the Edwards Aquifer, putting at least four endangered species at risk, and impacting water quality in Barton Creek and Ladybrid Lake. The impact is undeniable. CTRMA is attempting to hasten approval by "finding no significant impact" in their Environmental Assessment. The National environmental policy act requires a full Environmental Impact Statement for larger projects such as this one which will cause significant impact on one of Texas' most important resources: the Edwards Aquifer     Respectfully, Julia Sykora |

| | | |
|---|---|---|
| **5/3/2026** | Julia Vishnepolsky | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Julia Vishnepolsky |
| **3/19/2026** | Julia Watkins | None of the above |
| **5/1/2026** | Julia Watkins-Davis | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |

|---|---|---|
| **4/26/2026** | Julian knox | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Julian knox |

| | | |
|---|---|---|
| **5/3/2026** | Julian Louviere | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Julian Louviere |
| **5/3/2026** | Juliana Acosta | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Juliana Acosta |

|---|---|---|
| **3/26/2026** | Juliana Boswell | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Juliana Boswell |

|---|---|---|
| **4/28/2026** | Juliana Strickland | Dear CTRMA Board Members,<br><br>I truly believe that adding unnecessary lanes to Mopac will threaten the culture of Austin and moving through with the expansion will signify the collapse of what Austin has represented for decades. Austin is a city of both innovation and care — of both technology and nature. This is what makes Austin different than any other city in Texas. This is what makes Austin the best city in Texas.<br><br>Highway expansion is an incredibly dated and harmful solution to a problem that requires modern innovation. This is what Austin SHOULD excel at, and yet we are stuck in the past.<br><br>When you think of a city with a 14 lane highway, you think of Houston, a city known for its 24-hour-a-day traffic. Austin is not Houston, and that is what makes Austin great.<br><br>When you look at how other large, influential cities are expanding, you don't see the addition of multiple highway lanes. Instead, you see metros, streetcars, subways, the expansion of public transportation, increase of walkability. Austin can do this and do it BETTER. Austin can do this and make it Texas.<br><br>Personally, I absolutely do not want added lanes to Mopac. I think that Mopac traffic is completely reasonable the vast majority of the time and does not necessitate up to 8 added lanes. I do not think that 4 years of construction traffic is worth the 5 minutes of time the lanes would save during rush hour. Not to mention that highway construction ALWAYS takes longer than the intended time frame, so it would likely take 7-8 years instead of 4. There are also proven mathematical equations that highway expansion actually makes traffic WORSE over time and to go through with this is to blatantly ignore fact and knowingly make things worse for Austinites both before and after the 5 years of slight ETA improvement.<br><br>Also, I enjoy kayaking on Lady Bird Lake and walking on the pedestrian bridge under Mopac, and both of these would be |

| | | |
|---|---|---|
| | | disrupted for years during the construction of these lanes. Additionally, once they are built, the added highway sounds will greatly diminish the enjoyment of these outdoor activities.<br><br>None of this has even touched on the environmental impact. Like I said before, Austin is known as a city where people enjoy life. By expanding Mopac, you severely impact the water and soil quality as well as put thousands of organisms at risk. I LOVE and greatly care for nature and animal life in Austin, and an improvement of 5 minutes on a drive is not worth the harmful impacts on animal, plant, and human lives.<br><br>For a more in-depth and less personalized version of these issues, please read below.<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution. |

| | | |
|---|---|---|
| | | * Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin’s environment, public health, and community life.<br><br>Sincerely, and with true concern,<br><br>Juliana Strickland |

|---|---|---|
| **5/1/2026** | Julie Hill | Following the Austin City Council's unanimous passage of RESOLUTION NO. 20260423-064, I urge CTRMA to complete a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile South MoPac expansion/widening project. Everything about this sounds like it will ruin one of the most special areas of downtown Austin in favor of a minor improvement for traffic. We should learn from other cities who have ruined their waterfronts in favor of car traffic. The Draft Environmental Assessment concludes the project will have "no significant impacts," yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Further, the disruption to daily commuters, including families and school children, has not been adequately studied or addressed. There are many impacts that a massive-scale road construction project will likely have on our environment and our community. I'd like to outline them below: The proposed expansion would bring years of construction-related noise, air pollution, water pollution, traffic disruption, and loss of access to some of Austin's most heavily used public spaces. The corridor runs near or over Lady Bird Lake, Deep Eddy Pool, Barton Springs Pool, Zilker Park, Austin High School, the Butler Hike-and-Bike Trail, the Barton Creek Greenbelt, the Edwards Aquifer recharge zone, and residential neighborhoods from Enfield Road to Slaughter Lane. These are not peripheral spaces. They are central to daily life in Austin. The effects on Austin High School and nearby neighborhoods are especially concerning. Students use outdoor areas adjacent to and underneath MoPac for sports, band, PE, and other daily activities. Increased construction noise, dust, diesel exhaust, and long-term traffic pollution would directly affect young people, who are particularly vulnerable to air pollution, including fine particulate matter. The Draft Environmental Assessment does not adequately address these daily, cumulative impacts on students, families, commuters, and surrounding neighborhoods. The water-quality risks also deserve a far more rigorous review. Expanding pavement by approximately 110 acres and increasing roadway capacity would increase polluted stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other contaminants into a sensitive watershed. The corridor crosses or affects Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain toward the Barton Springs segment of the Edwards Aquifer. In a karst aquifer system, contaminants can move rapidly through recharge features with limited natural filtration, creating direct risks to Barton Springs and the aquifer that sustains it. Those risks also extend to endangered species. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health, flow, and water quality of the aquifer. The Austin Blind salamander exists nowhere else. These species require clean, well-oxygenated water and stable spring flow; even small changes in sediment, groundwater chemistry, contaminants, or flow patterns can threaten their survival. A finding of "no significant impacts" is not adequate without a full analysis of cumulative and long-term effects. The scale of the proposed widening is itself a major concern. In some areas, MoPac could expand to as many as 13 to 18 total lanes, dramatically increasing pavement, elevated structures, runoff, noise, and air pollution in one of Austin's most environmentally sensitive corridors. Construction and widening would also affect major public trails and park connections, including the Butler Hike-and-Bike Trail, the Roberta Crenshaw Pedestrian Bridge, connections around Lady Bird Lake, Zilker Park, and access to the Barton Creek Greenbelt. These trails and parks are used daily by thousands of residents, students, cyclists, runners, and families. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. Since then, the Edwards Aquifer and Barton Springs watershed have only become more stressed by drought, rapid population growth, roadway pressure, and expanding development. That makes a full Environmental Impact Statement even more necessary now, not less. A full EIS is needed to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, analyze construction-related disruption to schools, neighborhoods, trails, parks, and commuters, examine less damaging alternatives, and ensure meaningful public participation before irreversible decisions are made. For many of us who live here, Barton Springs, the Greenbelt, Lady Bird Lake, Zilker Park, the nearby schools, and the Edwards Aquifer as Austin's underground beating heart are part of the daily life and identity of this city. These are the places where families gather, where students grow up, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing through the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. |

|---|---|---|
| **5/3/2026** | Julie Holguin | NO TO THE MOPAC TOLL EXPANSION! |
| **3/18/2026** | Julie Hudnall | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, |

| | | |
|---|---|---|
| | | runners, and families and are central to Austin’s outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Julie Hudnall |

|---|---|---|
| **4/29/2026** | Julie Shannan | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |

| | | |
|---|---|---|
| **5/1/2026** | Julie Unruh | Don't throw away precious funding on a future in which there are no workable alternatives to single driver cars, and in which we've killed our environment. Nobody wants that future. Expanding highways is irresponsible and cruel: it does not improve congestion, negatively impacts surrounding communities, and promotes rapid environmental destruction in a multitude of ways beyond the well known (such as creating tire particles that disrupt the reproductive cycles of fish: google it). HIghways increase human diseases (surely you don't need to google that one), in addition to just being aesthetically disruptive and sonically disruptive. A full Environmental Impact Statement has not been provided, but CTRMA has laughably claimed there will be no environmental impact. Being willfully ignorant of the many detrimental and horrifying effects that expanding Mopac will have serves nobody,<br><br>There are too many reasons to list why highway expansion is shortsided. Did I mention that it won't work? The data is solid on that (google it). Unquestionably, the money would be more responsibly spent on improving bikeability, walkability and mass transit. We need functional rail and safer bike lanes urgently. We don't need yet another misguided, expensive, destructive highway expansion project that's doomed to fail before it's begun. I vehemently oppose going forward with the proposed plan.<br><br>Thank you,<br><br>Julie Unruh |

| | | |
|---|---|---|
| **4/17/2026** | Julieta Turincio | Dear CTRMA Board Members,<br><br>Here:<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Julieta Turincio |

| | | |
|---|---|---|
| **5/3/2026** | Juliette Ramirez | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Juliette Ramirez |

| | | |
|---|---|---|
| **4/23/2026** | Julissa Ramos | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | June Eickholt | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, June Eickholt |

| | | |
|---|---|---|
| **4/28/2026** | Justin E Brodnax | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |
| **5/3/2026** | Justin Faure | I have concern of the proposed toll lane expansion for Mopac. Our freeways do not need additional tool lanes. Toll lanes do not alleviate the burden of traffic, and will only increase the cost of Mopac users over time to reach destinations in a sufficient time. |
| **5/3/2026** | Justin Hoglan | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Justin Hoglan | Dear CTRMA Board Members, <p data-start="120" data-end="304">I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. <p data-start="306" data-end="515">The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. <p data-start="517" data-end="776">• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. <p data-start="987" data-end="1230">• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. <p data-start="1232" data-end="1454">• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. <p data-start="1656" data-end="1913">• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. <p data-start="1915" data-end="2063">• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. <p data-start="2306" data-end="2499">• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. <p data-start="2712" data-end="2935">• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.  <p data-start="2937" data-end="3189">• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. <p data-start="3375" data-end="3535">• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. <p data-start="3537" data-end="3695">The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. <p data-start="3982" data-end="4260">For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity |

| | | |
|---|---|---|
| | | of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. <p data-start="3982" data-end="4260">  <p data-start="3982" data-end="4260">CONSIDER THE FOLLOWING IN YOUR ASSESSMENT:      <div id="0" class="EditorClass ___ok1c3p0 ftgm304 fr7e4de f1ids18y f1ohdurq f1fa7rqs f1ee13vk fkhj508 f1hu3pq6 f11qmguv fly5x3f f1g0x7ka fhxju0i f1qch9an f1cnd47f f19f4twv f1tyq0we fz5stix g7toD" tabindex="-1" role="presentation" aria-multiline="true" aria-readonly="true" aria-label="To: Mama Cita Chula Cell <hernandez_sophia@outlook.com>"><span class="lpcWrapper lpcCommonWeb-hoverTarget container-196" tabindex="0" role="button" aria-label="Mama Cita Chula Cell <hernandez_sophia@outlook.com>" data-lpc-hover-target-id="lpc-react-target-2" aria-haspopup="dialog" data-is-focusable="true">Mama Cita Chula Cell?            <p dir="ltr" style="text-align: left; text-indent: 0px; margin: 0px;">Trees ?? <br />Preserve all trees 19" diameter or greater. | | | |
|---|---|---|
| **5/3/2026** | Justin Maslowski | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Justin Maslowski |
| **4/17/2026** | Justin Nolan | I am strongly against any new changes that cut off access from MOPAC to bee caves. The current the proposal removes the direct southbound toll lane exit at Bee Caves, which many west-side residents rely on to get home. For years, Rollingwood and Westlake Hills have been asking for a more balanced solution — one that improves traffic without: -bypassing our local business district, -forcing traffic onto school and neighborhood streets, -creating dangerous weaving and merging patterns, -adding unnecessary noise and visual impact. I want a better design that keeps practical east–west access and takes the needs of west-side residents seriously. Thank you Justin Nolan |

|---|---|---|
| **5/3/2026** | Justin Potter | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Additionally, adding more lanes is not going to fix traffic problems. This has been shown tine and tine again. The solution is to provide public transportation options to reduce the total number of cars on the road. <br /><br /> Please do not cause further harm to our fragile ecosystem and recreational spaces. My family loves to enjoy nature throughout zilker park and lady bird lake. We would love to hop on a train or bus to these places if that infrastructure was developed. Please at least do additional environmental impact studies. Talk to TPWD and ask them for input. Look into alternative solutions. Please do break our planter further. <br /><br /> Thank you for your time and thorough consideration. Respectfully, Justin Potter |

| **4/24/2026** | Justin Sibley | Dear CTRMA Board Members,<br><br>The only people in favor of this are those who stand to profit from this. Water is more important than minimizing traffic.<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Justin Sibley |

| | | |
|---|---|---|
| **4/29/2026** | Justin Spencer Garrett | My family and I drive this road everyday and this road improvement is way overdue. |
| **5/3/2026** | Justin Valdez | The “investment” of this new crossway is not nearly worth the degradation of the environment in that area. We want investment in ways to improve the environment and promote positive environmental interactions with the residents and visitors of Austin. |
| **5/2/2026** | Justin Wilkins | Greetings,<br><br>While I do think this should move forward, I also think there needs better connectivity at the Ben white, 290, 71 triangle. It’s a nightmare trying to go from mopac over to Ben white and vise versa. And not just during rush hour, but some how all day. There needs to be a dual lane entrance and exit ramps. It’s almost a non negotiable to put all this work into this corridor and it’s still a nightmare in this area.<br><br>Thanks!<br><br>Justin Wilkins<br><br>South Austin Resident<br><br>Sent from my iPhone |
| **3/24/2026** | Justin Word | As a regular user of the Mopac South corridor and a long-time Austin area resident, I fully support the implementation of the Mopac South project to provide mobility options and improve safety in the corridor. |

| | | |
|---|---|---|
| **5/3/2026** | Justina Gil | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Justina Gil |

| **4/19/2026** | K Key | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Kaelin Crowley | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Kaelin Crowley |

| | | |
|---|---|---|
| **5/3/2026** | Kaila Graham | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Kaila Graham |
| **5/3/2026** | Kaila Miller | I do not support the MoPac Expansion. It would ruin green areas key to the heart of Austin. This would forever change the city in a negative way |

| | | |
|---|---|---|
| **5/3/2026** | Kaiteo McDonald | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Kaiteo McDonald |
| **5/3/2026** | Kaitlin Harris | Dear CTRMA Board Members, As a Texan and Austinite I am very concerned about the MoPac South expansion and the impact it would have on our community. The expansion would pave over 110 acres in one of Austin's most sensitive ecological zones,  threatening Barton Springs, the Edwards Aquifer, endangered salamanders, and the Greenbelt.  I urge you to conduct a full Environmental Impact Statement and not cut corners. Austites need a solution that protects our environment, our water and our neighborhoods. Sincerely, Kaitlin Harris |
| **5/3/2026** | Kaitlyn Agan | Protect Barton Springs! No highway expansion! |
| **5/3/2026** | Kaitlyn Bailey | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Kaitlyn Bailey |
| **4/28/2026** | Kaitlyn Deckert | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| **5/3/2026** | Kaitlyn Hornback | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Kaitlyn Hornback |
| **4/26/2026** | Kaitlyn Ludlow | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **5/2/2026** | Kalan Seewack | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/24/2026** | Kaleb Bierman | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Kali Campbell | I oppose this project due to the environmental implications, destruction of Austin's well loved park areas, and potential that it will not yield a worthwhile result. Increased lanes induce more demand, resulting in only 5 minutes saved while creating 14 lanes of traffic, failing to solve long-term congestion. The project threatens the Edwards Aquifer recharge zone, risking toxic runoff into Barton Springs and harming endangered salamander species. This also would destroy trees, affect public parkland near Zilker Park, and create massive construction impacts for 6–8 years. I request a comprehensive environmental impact statement to study the environmental harm and exploration of alternative and sustainable solutions. |
| **4/28/2026** | Kali Carpenter | The Edwards Aquifer is vital to our ecosystem and our town. Do not touch it. The expansion is not worth the loss of local nature and culture. As austinites we cannot claim to push environmental protections and be a progressive City and then immediately choose to cut down what is beautiful because it can make profits or slightly convenience a few. |

| | | |
|---|---|---|
| **4/3/2026** | Kali Page | Adding car lanes has never been successful in reducing traffic but has time and time again shown to only increase demand until as bad or worse than before. TX Dot knows this (or they should if they have any civil engineering degrees amongst them) but would rather please politicians that get paybacks from those that profit from highway expansion. Focus on reliable, frequent transit and other alternatives to driving is the most effective way to reduce traffic times. Outside of the car/traffic issue, this expansion will likely negatively affect Barton Springs and it's recharge zone, which is already under threat from urban expansion and climate change. Why put a great natural resource under further strain for an outdated notion of the best method of transportation? Highway building and expansion is so 20th century and we should be working on better 21st century solutions. So TLDR: don't add more lanes please |
| **4/20/2026** | Kalpana Sutaria | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **5/3/2026** | Kandace Walter | DO NOT BUILD TOLL ROADS ANYWHERE NEAR BARTON!! |
| **3/20/2026** | Kaomi M | I am submitting this comment in strong opposition to the proposed MoPac South expansion and any associated toll road development. This project threatens the Edwards Aquifer recharge zone, one of the most environmentally sensitive and essential natural resources in Central Texas. Water in Austin is not just a utility—it is a deeply valued and limited resource that sustains our communities, ecosystems, and way of life. We already face ongoing challenges during drought periods, with strained water supplies and heightened conservation efforts. Expanding roadway infrastructure in this area will only increase pollution, runoff, and the risk of long-term contamination to a system we are already struggling to protect. Beyond human impact, this development puts additional pressure on local wildlife and fragile ecosystems that depend on clean, stable water sources. It is disheartening to see decisions that could harm the very environment and animal species that make this region unique. We are at a point where environmental disruption is already severe. We should be prioritizing restoration and protection—not advancing projects that risk making these issues worse. Short-term traffic relief does not justify the permanent damage that could be done to our aquifer. I urge decision-makers to reject this proposal and instead invest in sustainable, environmentally responsible transportation solutions that protect our natural resources and reflect Austin's values. Austin's growth should not come at the expense of its most vital resources. Please say no to the MoPac South expansion. Thank you for considering my comment. |

| | | |
|---|---|---|
| **3/18/2026** | Kara Knoche | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. | | | |
|---|---|---|
| **3/26/2026** | Kara Knoche | Dear CTRMA Board Members,<br><br>Add Your Unique Comments Here:<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Kara Knoche |

| | | |

|---|---|---|
| **3/18/2026** | Kara Knoche | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Kara Knoche |

| | | |
|---|---|---|
| **3/26/2026** | Kara Knoche | Dear CTRMA Board Members,<br><br>Add Your Unique Comments Here:<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Kara Knoche |

| | | |
|---|---|---|
| **4/23/2026** | Kara Sandoval | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

|---|---|---|
| **4/21/2026** | Kara Timmons | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Kara Timmons |

| | | |
|---|---|---|
| **4/23/2026** | Karen Psup | Dear CTRMA Board Members,<br><br>I write to convey my concern about the MoPac South expansion. It would have a bad impact on our water and other aspects that we highly value especially Barton Springs, the Edwards Aquifer, and Barton Creek Greenbelt. It will increase air pollution and imperil the unique ecosystem that sustains life in the MO-PAC SOUTH area.<br><br>FOR WHAT? A promised traffic benefit? New highways tend to get crowded soon after construction. From the start, this highway promise to save only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>Expanding the MO-PAC highway compels me to apppeal to you get a full Environmental Impact Statement and seek options that really protect water, wildlife, and neighborhoods. We need answers that reflect our values and protect our ecological and community heritage of our city.<br><br>Sincerely,<br><br>Karen Psup |

| | | |

|---|---|---|
| **4/16/2026** | Karen Brimble | Please find the Evergreen Austin letter and a tree planting guide attached.<br><br>Thank you!<br><br><<Attatchment>> |
| **4/20/2026** | Karen Brimble | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/22/2026** | Karen Brimble | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| | | |
|---|---|---|
| **4/19/2026** | Karen Brimble | Central Texas Regional Mobility Authority (CTRMA)<br><br>Attn: Project Manager, MoPac South Project<br><br>3300 N. IH-35, Suite 300<br><br>Austin, Texas 78705<br><br>RE: Formal Request for Environmental Mitigations – MoPac South Project – Section 8.0 Post-Environmental Clearance Activities and Design/Construction Commitments<br><br>To the CTRMA Board and Project Leadership,<br><br>As a board member of Zilker 351 dedicated to the preservation and enhancement of Austin's most iconic urban greenspace, we are writing to formally request specific environmental mitigations and design commitments for the MoPac South Project.<br><br>As the project moves toward "Section 8.0 Post-Environmental Clearance Activities," we urge the CTRMA to integrate the following commitments into the final design and construction contracts to ensure the ecological and recreational integrity of Zilker Park is maintained.<br><br>I. Tree Canopy & Light Pollution Protections<br><br>With its dense collection of heritage oaks, pecans, and elms serves as a living symbol of Austin's commitment to balancing rapid urban growth with environmental preservation, Zilker Park's canopy is irreplaceable and should be protected or replaced at as a generous gesture of goodwill to our past and future commitment to the environment. Accordingly, we request: |

| | | |
|---|---|---|
| | | * Comprehensive Tree Replacement Funding: Mitigation funding for the loss of any tree displaced by the highway expansion, noise barrier footings, or shared use path construction, including replacement funding for trees between 4-19 inches in diameter being replaced in Zilker Park with native species at a 3:1 replacement ratio, and replacement funding for trees larger at or above 19 inches in diameter being replaced in Zilker Park with native species at a 4:1 replacement ratio. Additional details are set forth in the attached tree planting recommendations from TreeFolks (Exhibit A).<br><br>* Dark Skies Compliant Design: Implementation of advanced light shielding and full-cutoff fixtures to eliminate light trespass and preserve the night sky within Zilker Park.<br><br>II. Parkland Protections<br><br>To prevent encroachment of the MoPac South highway project into Zilker Park, we request:<br><br>* Encroachment Prevention: Adjust alignments and constructions methods to avoid parkland encroachment. Ensure that materials and trucks stay under the highway when near Zilker Park. Where impacts are unavoidable, provide compensatory land acquisition mitigation payments towards purchasing permanent conservation easements over the Edwards Aquifer Recharge and Contributing Zones. Incorporate an annual compliance check-in for three years after completion by the Environmental Compliance Manager after construction is completed to ensure SW3P and Edwards Aquifer Rules are continually met. Specific requirements are attached in Exhibit B.<br><br>III. Noise Abatement and Sound Mitigation<br><br>The introduction of express lanes and lateral expansion of the highway roadway creates a permanent increase in decibel levels that threatens the tranquility of Zilker Park. To mitigate these unpleasant environmental impacts, we request:<br><br>* Noise Workshop: A "Community Noise Workshop" to determine what noise abatement and sound mitigation measures are feasible for the portion of the South MoPac project extending through Zilker Park, with the leadership of Austin Parks and Recreation having the final vote for approving any noise abatement and sound mitigation measures, such as listed below. |

| | | |
|---|---|---|
| | | * Advanced Pavement Technology: The use of Permeable Friction Course (PFC) or Next Generation Concrete Surface (NGCS) throughout the Zilker Park corridor to reduce tire noise at the source.<br><br>* Noise Barriers: The installation of high-performance concrete or transparent noise walls along both the northbound and southbound sides of the project within Zilker Park boundaries to shield sensitive areas while maintaining visual connectivity where appropriate. The noise barrier mitigations are described in the “Traffic Noise Mitigations” slide of the MoPac South Environmental Study Public Hearing (www.mopacsouth.com/PH/2603 MPS PH Exhibits Virtual.pdf <http://www.mopacsouth.com/PH/2603%20MPS%20PH%20Exhibits%20Virtual.pdf> ) as extending 6,919 feet along both sides of MoPac South through Zilker Park.<br><br>* Path Intervention Designs: The use of advanced absorption and diffraction barrier designs, such as T-Top and Y-Top Caps atop noise walls, absorptive noise walls which "trap" and dissipate sound energy, or bio-based & green barriers which combine structural mass (to block sound) with thick vegetation or bio-materials that scatter and absorb higher frequencies where appropriate.<br><br>IV. Construction-Related Displacement & Public Health and Safety Mitigation<br><br>Construction of this magnitude will inevitably disrupt park access and usage. To mitigate these public health and safety impacts, we request:<br><br>* Capital Improvement Reimbursement: Funding for the implementation of infrastructure improvements [[identified in a local access study]] to address construction-related displacements of park usage, including new sidewalks, bike paths, vehicle routing/parking areas and new access points, to replace existing vehicle and pedestrian infrastructure disrupted by the construction phase of the project.<br><br>* Ecological Restoration: The restoration of any parkland areas or roadways damaged or degraded by infrastructure improvements, such as environmental restoration and improvement of any relocated vehicle parking areas in Zilker Park that are used to replace existing dedicated parking areas used by visitors to Zilker Park.<br><br>V. Visual Impact & Active Transportation<br><br>To offset the visual blight of an expanded highway through the scenic Zilker Park and to mitigate disruption caused by the construction project, we request “betterment” funding for: |

| | | |
|---|---|---|
| | | * Elevated Shared Use Path (SUP): The construction of a dedicated, elevated SUP along Barton Springs Road alongside the northbound side of MoPac Freeway providing a grade-separated, safe crossing over Barton Springs Road. The location of the SUP should not interfere with the existing disc golf tees, fairways, and protective plantings along Barton Springs Road, and any displaced trees should be replaced in consultation with Austin Parks and Recreation. This will serve as both a safety feature and a signature "betterment" for the community.<br><br>VI. Non-Required/Discretionary Mitigation Requests<br><br>Beyond the required environmental commitments, we propose the following "context-sensitive" mitigations to further the CTRMA's mission of environmental stewardship:<br><br>* Aquifer Conservation Funding: Land acquisition mitigation payments totaling $25 million specifically designated for the purchase of permanent conservation easements over the Edwards Aquifer Recharge and Contributing Zones to offset the project's increased impervious cover, tree loss, water quality and air pollution degradation, and aesthetic and visual impacts of the highway construction project.<br><br>We look forward to seeing these mitigation commitments and related non-required betterments in the Section 8.0 documentation and final project schematic. We request a formal response regarding the inclusion of these items in the environmental record.<br><br>Sincerely,<br><br>Karen Brimble<br><br>Zilker 351 Board Member |

| | | |
|---|---|---|
| **4/20/2026** | Karen Farabee | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. I look forward to you doing the right thing for Austinites, now and in the future. |
| **5/3/2026** | Karen Furey | I am writing to strongly oppose the proposed MoPac expansion. The plan to take approximately three acres of public parkland is unacceptable. These green spaces are not surplus land—they are essential environmental, recreational, and community assets that cannot be replaced once lost. This area supports the health of Barton Springs Pool, Lady Bird Lake, and the surrounding greenbelt ecosystem. The assertion that there will be “no significant impacts” is not credible. Removing parkland, increasing roadway capacity, and introducing additional runoff and pollution will inevitably degrade water quality, habitat, and the overall environmental integrity of this area. These impacts are cumulative and long-term. This proposal prioritizes short-term traffic relief over the preservation of irreplaceable natural resources. Once this land is gone, it is gone permanently. I urge you to reject this expansion and pursue transportation solutions that do not sacrifice Austin’s limited and vital parkland |

| | | |
|---|---|---|
| **4/23/2026** | Karen Grant | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br><br>- Avoid parkland encroachment<br><br>- Capital improvement reimbursements for affected community assets<br><br>- A noise wall workshop with meaningful community input<br><br>- An open space fund dedicated to long-term preservation and restoration<br><br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration.<br><br>***** I actually don't want Anything done to Mopac. I drive this stretch multiple times a week, and while it can be annoying at times, it is SOOOO not worth destroying that stretch of Austin to 'fix the annoyances'. It's just fine. Please reconsider everything you are planning. We don't need to "pave paradise to put up a parking lot." I'm sure there are minor improvements that can be made that won't endanger the parks, the aquifer, the environment-and won't cost as much. Surely, someone can care more and come up with a better solution. Thank you for your time. |

| | | |
|---|---|---|
| **5/3/2026** | Karen H. Clary | I do not support the use of an Environment Assessment (EA) to evaluate the environmental impacts of the proposed South Mopac Project. I request that CTRMA conduct an Environmental Impact Study (EIS) instead. I live in Travis Country, a neighborhood directly adjacent to the northeast side of the current MoPac/US 290 and Southwest Parkway intersection. Our neighborhood would be directly and adversely impacted by the proposed project. The proposed expansion of MoPac will greatly increase traffic noise, volatile (gasoline) air pollution from automobile exhaust and airborne particulate pollution, all of which will cause detrimental impacts to the health of us residents of the neighborhood. As I write this letter to you, I can hear the traffic noise from the MoPac overpass outside, even with with windows shut. On certain days in the winter, I can smell the vehicle exhaust (It's strong and already worrisome) coming off of MoPac and Southwest Parkway. I live 1/4 mile away from MoPac! I can only expect the noise and exhaust pollution to get much worse, and fear it will further erode my ability to enjoy my home and neighborhood, and threaten the value of my property. I do not believe that the significance any of these impacts have been adequately addressed as the National Environmental Policy act mandates. Before moving forward, I ask you to take a HARDER LOOK at this project, and conduct an Environmental Impact Study to adequately address all of the adverse impacts to our precious human and natural environment that I mention in this letter. Thank you for your consideration. |
| **5/3/2026** | Karen Habib | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Karen Habib |

| | | |
|---|---|---|
| **3/18/2026** | Karen Holocomb | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Karen Holcomb |
| **5/3/2026** | Karen Kelly | The city needs to do a comprehensive environmental study that includes what happens when I35 connects a to MoPac. There is no way that this massive project will alleviate traffic. I am completely opposed to to this plan and that y'all are hiding behind an incompetent pollution study. Don't destroy Barton Spring a green belt further!! |

| | | |
|---|---|---|
| **4/20/2026** | Karen Kocher | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project as well as some additional comment and concerns.<br>First, in alignment with Evergreen, I respectfully urge you to include at minimum the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>In addition, I strongly urge that<br>CTRMA should do EVERYTHING to prevent any degradation of water quality in the aquifer as a result of the project. Travel times for water entering the aquifer and discharging from Barton Springs ranges for hours to days along the footprint of the project. What are your spill plans for containment and treatment of spills during construction? Water quality controls during construction should be inspected and repaired at least weekly. Water quality controls during construction should be checked prior to expected rains of 1 inch and greater. Please have independent environmental inspectors on hand every day to examine the project.<br>Determine contributing drainage areas for all karst features along the proposed project and within 1 mile downstream of the project. Develop agreements with COA/Watershed and BSEACD to have their geological staff examine all karst features encountered during construction. Conduct subsurface geophysical investigations along the entire length of the project.<br>Important questions remain:<br>1. What are criteria to protect karst features found during construction.<br>So many karst features in, near and adjacent to the project footprint (Jones Sink and rest of Barton Cr downstream, Baby Fox Cave, Whirlpool Cave, Dick Nichols Park Cave, Buddy's Vault, Pipeline Sink and others nearby and others.<br>2. What percentage of impervious cover, existing and new will have water quality treatment and to what standard? At a minimum ALL the new impervious cover should be treated to 100% total suspended solids (TSS) removal. Existing impervious cover should be treated to 100% TSS removal as possible.<br>3. If CTRMA is using pervious pavement to as water quality treatment for TSS, how long pervious pavement is effective before it clogs. Is there a plan or schedule to revitalize the pavement after some period of time so it is again effective for TSS removal.<br>4. Are partnerships with COA being pursued to enhance water quality treatment in at least certain locations?<br>This project is extremely concerning because of the potential for irreparable damage to the land and water resources that we all know and love.<br>Sincerely,<br>Karen Kocher |

| | | |
|---|---|---|
| **3/12/2026** | Karen Kreps | Dear CTRMA Board Members,<br><br>I live on close to the area you are threatening to damage irrevocably. I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin’s most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin’s most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Karen Kreps |

| | | |
|---|---|---|
| **4/24/2026** | Karen Kreps | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Karen Kreps |

| | | |
|---|---|---|
| **5/3/2026** | Karen Kreps | A full EIS must be done! It is especially harmful to Barton Springs. Federal law mandates a full Environemtnal Impact Study. You must not ignore it. The public hearing and open house at Bowie HS was designed to divide and ignore questions and opposition to the massive highway footprint by spreading displays around the room, centralized discussion is prevented. People who won't ask questions can't hear questions for the group developers divide to conquer. Take cars off the road. Give people stress-free community. Look at alternatives. |
| **5/3/2026** | Karen Kreps | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Karen Kreps |
| **5/2/2026** | Karen Lee Hanson | Hi, my name is Karen Lee Hanson and I am calling to oppose the Mopac South expansion. I do not want a four-year construction that will add permanent increase in noise and emissions for our neighborhoods here in the Circle Sea area. I don't want to take away more trees. Mopac already did that with the last expansion and habitat along the freeway and I don't think that an average of five minutes commuter save time is going to be worth the amount of money and the environmental impact. So I am against this. I hope this public comment gets to you for the deadline of May 3rd and that you will take that into consideration. Thank you. Bye. |

| | | |
|---|---|---|
| **4/23/2026** | Karen Miller | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Karen Miller |

|---|---|---|
| **5/3/2026** | Karen Rascon | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Karen Rascon |
| **5/3/2026** | Karen Skloss | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Karina Gavin |

| **4/30/2026** | Karl Loftis | It sounds like a pedestrian/bicyclist ramp is proposed for the east side of MoPac, descending from crossing town lake to along Barton Springs Rd/MoPac feeder road, impacting a section of Zilker Park Disc Golf Course where holes 10, 11, and 12 are. This is a premiere course on Texas, played by over 100,000 people every year (UDisc stats plus estimates of non-UDisc users). Just like the City Parks department, these courses are treated dismissively by planes, over and over again. It is simply lazy planning to take out part of a park amenity that is used by so many people, rather than considering another alternative. Take Barton Springs Rd down to one lane instead. Or move the pedestrian/bicyclist path to the west side is MoPac instead. Do better. |
| **5/3/2026** | Karla Chirinos | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Karla Chirinos |
| **5/2/2026** | Karla Flores | No it'll kill all the beauty of the natural side of Austin |

| | | |
|---|---|---|
| **4/25/2026** | Karla Mireles | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/28/2026** | Karleigh Lindsay | I love Barton Springs so much and think this poses too much risk to it. It's an important part of our community and a space that should be protected. I urge you to complete a full environmental impact statement. |

| | | |
|---|---|---|
| **4/21/2026** | Karlene Berger | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Karlene Berger |

| | | |

| | | |
|---|---|---|
| **5/1/2026** | Karlie Barnett | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. RECA writes in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |
| **3/9/2026** | Karole Fedrick | I appreciate your efforts to reduce merging and weaving with the new project. You can do that right now on a portion of north-bound Mopac at Wm. Cannon.<br><br>Mopac northbound goes from two lanes to three where traffic from Davis Lane comes on to Mopac. Mopac remains three lanes handling traffic very well until it becomes an exit-only lane for Wm. Cannon. It is signed and painted to exit only. At the exit, the pavement becomes a third traffic lane again and remains a third lane until the 290 East exit.<br><br>The result is that cars in the right lane at Davis must merge into the left lane until we clear the Wm. Cannon exit, at which point we can move back into the third right lane. The road as is creates totally unnecessary merging and weaving.<br><br>The pavement is there. The only thing that needs to be done to already have a third lane is change the sign and repaint the surface. I expect that to be done during the nightmare that's coming with the expansion. I ask that we be given that third lane now. Reduce merging and weaving now. Make it safer for us now. Please.<br><br>Thank you |
| **4/20/2026** | Kary Mares | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/23/2026** | Kasey Carroll | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Kasey Carroll |

| | | |
|---|---|---|
| **5/3/2026** | Kasey Delgado | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Kasey Delgado |

| | | |
|---|---|---|

| **4/21/2026** | Kat Fleming | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Kat Fleming |

| | | Respectfully,<br><br>Kat Fleming |
| **5/3/2026** | Kat Phillips | Please find other solutions to traffic that don’t disrupt our fragile water supply and delicate ecosystem. |
| **5/3/2026** | Kat Villareal | SAVE OUR SPRINGS. We don’t need wider roads, we need SMARTER people making the roads!!! If yall just added more exits PASSED the bridge no one would be sitting in traffic all in the same freakin spot. |

| | | |
|---|---|---|
| **4/20/2026** | Kat Xiquin | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/15/2026** | Kate Andrade | The current proposal which eliminates a toll exist at bee caves road ignores years of public feedback and comment. It would force residents to exit by schools and forces more traffic into dangerous weaving and merging patterns. Please listen to years of resident input and ensure that the design will not negatively impact residents and schools. There should be a toll exit that allows drivers to exit the toll lane at bee caves road. |
| **5/2/2026** | Kate Aoueille | Hello,<br><br>Please find attached Rowing Dock's formal feedback regarding the CTRMA proposed Mopac expansion. Please don't hesitate to reach out if you have any questions.<br><br>Sincerely,<br><br>Kate & Susan<br><br><<Attachment>> |

| **5/3/2026** | Kate Chrisco | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Kate Chrisco |

| | | |
|---|---|---|
| **3/13/2026** | Kate Csillagi | Dear CTRMA Board Members,<br><br>You have the power to stop this abhorrent proposal from moving forward. As a resident of the affected MoPac South corridor, I walk and play with my dog right near Whirlpool Cave EVERYDAY. The number of recharge features and trees and critical green space that will be demolished and filled if this plan moves forward will devastate our aquifer and my personal favorite area of Austin. I am also a daily swimmer at Barton Springs. This project is less than a quarter mile from the gem of Austin, and I will do anything in my power to protect it. You should too. As a board that seeks to find transit SOLUTIONS that take into account the long term viability of our region, you have a responsibility to seek alternatives when a plan is short sighted.<br><br>I VEHEMENTLY oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. This conclusion is bonkers and completely unfounded in science. The assessment presents a litany of reasons why this proposal SHOULD NOT move forward, then seems to ignore that very fact.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin’s most historic public high schools and the students who learn there every day. |

| | | |
|---|---|---|
| | | The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. |---|---|---|
| **3/17/2026** | Kate Csillagi | Dear Members of the Central Texas Regional Mobility Authority Board, I am writing to strongly oppose the MoPac South expansion. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.7-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. And o substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow at temperatures between roughly 70 and 72 degrees Fahrenheit, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor from six to eight lanes to as many as thirteen to eighteen lanes total in some places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2015, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as |

| | | |
|---|---|---|
| | | we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Kate Csillagi |

| | | |
|---|---|---|
| **4/26/2026** | Kate Csillagi | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Kate Csillagi |

| | | |

| | | |
|---|---|---|
| **5/3/2026** | Kate Csillagi | I am writing as an Austin resident to formally oppose the MoPac South expansion as currently proposed, and to urge that the project be subjected to a full Environmental Impact Statement (EIS) rather than the Environmental Assessment (EA) released in February. The scale and sensitivity of this project demand the more rigorous review. The corridor crosses the Edwards Aquifer recharge zone — Austin's drinking water source — and habitat for federally listed endangered species including the Barton Springs salamander, Austin blind salamander, and Tooth Cave spider. It would require construction in Zilker Park, the Barton Creek Greenbelt, and over Lady Bird Lake. By any reasonable standard, these are exactly the conditions a full EIS exists to evaluate. The Barton Springs salamander and Austin blind salamander are under more pressure than ever. Rapid growth, shrinking habitat, and increasingly extreme weather tied to climate change are all closing in at once. On top of that, the Edwards Aquifer may be entering a drought unlike anything on record, pushing existing habitat protections to their limits. The proposed MoPac South Project sits right on top of the aquifer's recharge zone, essentially the lifeline for these species. This area isn't just important; it is everything. It contains all known habitat for the Austin blind salamander and is surrounded by nearly half of the known Barton Springs salamander sites. We now understand those "known" spots are just the tip of the iceberg, part of a much larger underground population that depends on connected, flowing water to survive. Construction in this zone is expected to affect water quality, which directly threatens that fragile system. Yet the scope of those impacts has not been clearly measured or meaningfully addressed. If we cannot even quantify the damage, it is not credible to claim there will not be significant harm. Put simply, this project adds another serious risk to species already under strain. That alone is reason enough to require a full environmental impact statement before moving forward. Comparable Austin-area transportation projects have received full EISs. The I-35 Capital Express project required one. Project Connect required one. There is no defensible reason an $825 million, 8-mile expansion through some of the most ecologically sensitive land in the region should receive a less thorough review. The Austin City Council and the Travis County Commissioners Court have both unanimously passed resolutions making this same request. A finding of "no significant impact" is not credible without the full analysis an EIS would provide. I urge CTRMA and TxDOT to require an EIS before this project advances any further. Kate Csillagi - Austin, TX 78749 |
| **5/3/2026** | Kate Csillagi | Hi, my name is Kate Chilie, K-A-T-E-C-S-I-L-L-A-G-E-I. I oppose the MopacSouth expansion. I am with Save Our Springs Alliance. You can reach me [redacted personal information]. |
| **4/29/2026** | Kate Davy | I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |

| | | |

|---|---|---|
| **4/12/2026** | Kate Kirby | Dear CTRMA Board Members,<br><br>Having worked in local government, I get it. The challenges are complex, the solutions may not be sufficient, the resources are limited.<br><br>I moved to Austin in 2017 knowing that the traffic would be terrible for much of the afternoon and early evening. I knew that if I wanted to go north to south, I'd need to factor in more buffer time than I think I need. I know that not everyone has the luxory of factoring-in additional time. People need to get to work, appointments, pick up their kids from school.<br><br>In unsteady times, when businesses come and go, whole neighborhoods change in a matter of months, wars pop-up suddenly, the economy waivers on the brink of recession, people need a place they can reliably go to for rejuvination, peace, joy, and connection. Barton Springs provides that for the people of Austin. That no matter what happens in your personal life, your relationship, your neighborhood, the city, state, country, world, you have a place to go to just be. To be yourself. To be a part of something simple and beautiful. This is why I strongly believe we need to do whatever we can to protect Barton Springs, and the fragile ecoystem that sustains it, that sustains us.<br><br>I oppose the proposed MoPac South expansion and instead advocate for a lowbuild solution, that addresses the problems every fast-growing city has, while preserving that which sustains us: our natural habitat.<br><br>Below are some concrete examples of what is at stake. Please do everything you can to protect the lifeblood of this incredible city.<br><br>Thank you,<br><br>Kate Kirby |

| | | |
|---|---|---|
| | | • Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. | **5/2/2026** | Kate Kirby | Hi, my name is Kate Kirby, and I'm calling in opposition to the MOPAC expansion.I demand a full environmental impact assessment, and I'm advocating for protection of the aquifer,Barton Springs, our water, and the endangered species that this project would impact andharm.My name is Kate Kirby, and I'm at 78721.Thank you for taking this comment down. We really encourage you to thinkabout the future and think of this invaluable resource of water and thegathering place of Barton Springs and the diversity of ecosystems and thevulnerability of the aquifer. Thank you very much. |

| | | |
|---|---|---|
| **5/3/2026** | Kate Kirby | Hi, my name is Kate Kirby. I live in 78721, and I'm just calling to request a full environmentalimpact statement. I am opposed to the MOFAC extension, and Barton Springs is just a reallyspecial sacred place for me. It's one of the main reasons I moved to Austin, being arounda place that really has this high quality of life and green space and connection toand all the people it brings together such a diversity from all over the cityall walks of life all coming together in one place and making people feel asense of belonging in the city and you can look around and you know experiencethe togetherness at a time that's where that can be hard to find it's such animportant community gathering space and we need to do all we can to protect thisSo, yeah, I'm just calling to demand that vessel impact statement, and in protectionalso of the endangered species, and the protection of this vulnerable aquifer and this preciousgem.Thank you very much. |
| **5/2/2026** | Kate LeSueur | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/24/2026** | Kate McConnell | My name is Kate McConnell and I have lived in Austin for 4 years. This is the place I have become an adult, and my community needs safeguards to make sure that nature in Austin continues to be there for us to enjoy. I demand the MoPac South project conduct a full Environmental Impact Statement. The current Environmental Assessment finding of “No Significant Impact” is dishonest. I support multi-modal regional planning, investment in public transit, and better walking and biking infrastructure in Austin. I support protecting what makes Austin unique: our water, wildlife, and citizens. |
| **5/3/2026** | Kate McConnell | I am against the expansion of pMOPAC and specifically think it’s horrible that there has been no care taken to protect our public lands affected by this road! To say there is no environmental impact is a load of crap! |

| | | |
|---|---|---|
| **4/29/2026** | Kate McKinzie | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Kate Mesches | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Kate Mesches |

| | | |

| **4/23/2026** | Kate Morales | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/29/2026** | Kate nemec | Not only am I personally disappointed that this project is even being considered, I am also dumbfounded that nobody has seemingly realized the immense negative impact this project would inevitably have on the city, the wildlife, and those that have any intent on enjoying Austin. As a born and raised Austinite I can confidently say that ladybird lake and zilker park are the primary reasons I continue to live in Austin. It's hot and expensive and overrun with traffic. I have worked in the lake for around 5 years and can confidently say this is the draw of Austin. Without zilker and ladybird as they are, you are taking away the heart of Austin, and many peoples reason to live here or visit. This project also signals to those that live and work in Austin that they are unimportant compared to revenue and capital. I personally believe that if this project is even started, the city will irreparably damage the trust of its loyal residents and fall off anybody's radar. I love this city, I've left and come back, but without access to these public areas as it is now, there is not a lot keeping me here, and I'm not alone in that. The public spaces and incredible wildlife are what make Austin special, don't sacrifice those for the false hope of more money. |
| **5/3/2026** | Kate O'Occonor | Hi, my name is Kate O 'Connor-Snack. I'm a registered voter in Austin. I've signed a petition.The Mopac expansion is not good for the Springs. It's not good for the endangered species.It's not good for the people that walk here, that ride their bikes in Soka Park.And it's not good for the kids that go to Austin High because of the pollution that'sgoing to be generated by the project.Also, the more highway lanes you build, the more cars that will be and the more highwaylanes you think you need to build again.Again, this is Kate O 'Connor-Schnack.I have already signed a petition.I'm a registered voter in Austin, 712-326-4820.And again, Austin High polluted their lungs.The people that come to the springs,the springs is going to be affected,dried up, not dried up, polluted.And the endangered species, of course, are going to be gone.There's got to be a better way, maybe more bus lanes, maybe more a rail system sincethat seems to have stopped.Houston has one, Dallas has one, not sure about San Antonio.Anyway, we have got to stop this expansion because there'll just be more cars and thenyou'll want to expand again.Thank you, Kate O 'Connor-Schnack, and do not expand MoTAC.Thank you.It is May 3rd. |

| | | |
|---|---|---|
| **4/22/2026** | Kate Robberson | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Kate Robberson |

| | | |
|---|---|---|
| **4/22/2026** | Kate Shultz | I do not appreciate construction in my city that not only does a poor job of addressing mass transportation needs, but also will be detrimental to our environment.<br><br>We need a better traffic study to make these decisions. The current plan will create an even more chaotic situation. Young drivers at Austin High will be in danger with redirected toll lane traffic. Instead of making the situation worse, you need data on how Austinites use this space. Children also do sports there and inhaling particles from traffic can affect their health for life.<br><br>Water shortages are predicted to be extreme in the coming decades. Protecting our ground water is more important than ever. Protecting ground water also means protecting wildlife as these are ecosystems -- every party of the system relies on every other part.<br><br>Do better |

| | | |
|---|---|---|
| **4/22/2026** | Kate Stubbs | Dear CTRMA Board Members,<br><br>I am writing to oppose the MoPac expansion project and to request a full environmental impact assessment to be completed prior to considering approval.<br><br>I am an Austin native and longtime resident of South Austin. I grew up in Circle C ranch and have spent thousands of hours on the strip of MoPac affected by this project, so I am no stranger to the issues resulting in congestion on the highway.<br><br>The things that make Austin special are its natural spaces, its bountiful wildlife, and its beautiful views. All of which are at risk with this project. Austinites do not want 7 years of construction.<br><br>Please oppose this project and instead invest in public transportation throughout the city. Listen to the people who live here and use MoPac daily.<br><br>Thank you for your time,<br><br>Kate Stubbs<br><br>Respectfully,<br><br>Kate Stubbs |

| | | |
|---|---|---|
| **5/3/2026** | Kate Thomas | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Kate Thomas |
| **5/2/2026** | Kate Tomasino | $824 million. For 8 miles of road. No one wants this besides those who benefit financially. There hasn't been an adequate environmental impact study. The traffic reduction does not justify the price tag or the potentially negative impact to an environmentally senstive area. Zilker park, barton springs and endagered species in the area are way more valuable and important to Austin's identity than the modest to non-existant benefit of expanding MoPac. Not to mention health conerns surrounding Austin High School students during construction. If the impact of the $181M AISD deficit isn't enough, expansion of MoPac only adds insult to injury to AHS students. I am vehemently OPPOSED to the expansion of MoPac and if this ill-advised plan is set on proceeding, as a 22-year austin resident, I demand a thorough environmental and health impact study. |
| **5/3/2026** | Kate Tomasino | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Kate Tomasino |

| | | |
|---|---|---|
| **5/3/2026** | Kate VanSkoy | My name is Kate VanSkoy. I'm a nativewe need to prioritize water and things that help humans over things that helpmachines like cars. If we need to lighten the traffic, which frankly, I drive in thetraffic, it's busy, but it's not impenetrable, okay? So we don't need to go on building moreand more and more and more and more and more roads, okay, in a city that doesn't need tocontinue expanding, to be honest, why don't somebody can build another city someplaceelse where there aren't the most vulnerable and beautiful water in the state, right here.The system of springs and underground water that is in this region has been home tohuman beings for longer than any other place that we know of in the Americas.So what are you guys doing exactly? Just totally disregarding that to build moreroads for more cars? Nobody wants that. Nobody wants that. That is, the onlypeople you're serving there are corporations, which in our system are people.So you need to stop that. Nobody wants it. Everybody hates you. Please stop. |
| **5/3/2026** | Kate Wade | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Kate West | Hi, my name is Kate West. I am a resident of Austin and I have lived here for 17 years.The green belt around Mopac and Austin High and Barton Springs is the heart of our city.If this nature is impacted by a predicted sprawl of growth, it will negatively impact the health of our entire city.I'm asking and calling for a full environmental impact statement so that more research canbe done more thoroughly to investigate the true impact of urban sprawl and expandingMOPAC on the species, the trees, the waters, and all of this nature that needs to be protected.Thank you.Thank you.Thank you.Thank you. |

| | | |
|---|---|---|
| **4/20/2026** | Katelyn Begany | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Katelyn Begany | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Katelyn Begany |
| **5/3/2026** | Katelyn Henry | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Katelyn Henry |

| | | |
|---|---|---|
| **5/3/2026** | Katelyn Terry | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Katelyn Terry |

| | | |
|---|---|---|
| **3/17/2026** | Katerina Dittemore | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. This expansion has been discussed in the past and REJECTED because of the important environmental issues and Master Planning that has been completed by the City of Austin and the Regional Mobility Authority.<br><br>As has been clearly documented, creeks, recharge lands, and Greenbelt have been spirityal landmarks of indigenous communities for thousands of years and continues to define the character and spirit of our city. The body of knowledge outlines the rare relationship between water, geology, and community which includes significant caves, trails, threatened, rare and endangered species as well as archeological and acquatice sensitive regions that traverse the heart of this urban area.<br><br>The Draft Environmental Assessment is the wrong instrument to utilize in the envrionmental analysis of this proposed transportation project, regardless of the funding source (federal/state/private funds) . In error it concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. Given the documented fragile nature of this project site, that conclusion is inconsistent with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool.<br><br>The mitigation section of the EA document provides little-to-no effective protections of these natural features.<br><br>Construction Methods: Substantial constructiuon activities and expansion of pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. Suggested mitigation measures are uneffective.<br><br>T&E Species: The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Suggested mitigation measures are uneffective.<br><br>Cultural/Archeological: The study does not consider the following documented sites:Key Archaeological and Cultural Sites<br><br>Vara Daniel Site (Zilker Park): Located near the rugby fields north of Barton Springs Road, this is one of Texas's largest, most deeply stratified sites, with deposits 6 meters deep showing thousands of years of human activity.<br>Barton Springs Pool (Main Spring): A sacred site to indigenous groups and a historic swimming hole operating since the |

| | | |
|---|---|---|
| | | 1920s. The area is part of a sacred arc of four springs.<br>Eliza Spring (Concession Spring): Known for its amphitheater-style swimming enclosure from the early 20th century, now a habitat for the endangered Barton Springs Salamander.<br>Old Mill Spring (Sunken Gardens): Located on the south side of the pool, this site also features historic, now-closed 20th-century spring structures.<br>Spanish Mission Locations (1730–1731): Historical records indicate three Spanish missions were located here, though their precise locations are not finalized, notes this Reddit post.<br>Comanche Trail: A historic trail passing through the area.<br>Limestone Quarry (Walsh Family): Active in the 1860s near the shallow end of the pool, with documented fossil collection.<br>Suggested mitigation measures are unnamed.<br><br>Impacts of Increased Traffic Loads: Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. Suggested mitigation measures do not address increases in traffic load.<br><br>Community Impacts: The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are integral component of this community's daily life. This includes thousands of individual walkers, cyclists, runners, students, and families from across the region and throughout Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Suggested mitigation measures do not address community impacts.<br><br>Economic/Tourist Impacts: The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. |---|---|---|
| **4/24/2026** | Katerina Dittemore | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>QUESTION: Why has the CTRMA Board/Program Managers decided that the impacts of this project are LESS THAN the impacts of Project Connect and the IH 35 Expansion Project. BOTH of those projects completed a full Environmental Impact Statement (EIS).<br><br>REGIONAL IMPACT INCOMPLETE: In addition, the section of the Environmental Assessment Draft Report fails to consider the impacts of connecting to SH45 and the additional connection of IH 35 to SH45 which will increase the pollution as more vehicles travel along the expanded MoPac from Slaughter Lane to Enfield. The project area should include Mopac from Enfield to SH45, SH45 from MoPac to IH35.<br><br>CONCLUSION: Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Katerina Dittemore |

| | | |
|---|---|---|
| **4/26/2026** | Katerina Dittemore | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Spring. These concerns are shared by numerous Austin neighborhood groups, the Travis County Commissioners Court, The City Council of the City of Austin, the Urban Transportation Commission of the City of Austin and hundreds of local citizens. TIME TO CHANGE COURSE NOW<br><br>Increased Polluted Runoff: More lanes mean more oil, heavy metals, tire particles, and chemical runoff washing directly into creeks and aquifer recharge features. Studies on SH 45SW construction found elevated polycyclic aromatic hydrocarbons (PAHs) and nitrogen levels in nearby waterways.<br><br>Warming Waters & Algae Growth: Increased heat from expanded pavement and congestion raises water temperatures, reducing oxygen levels and fueling harmful algae blooms—a growing problem already observed in Lady Bird Lake and Barton Creek.<br><br>Endangered Salamanders: Increased pollution and sedimentation will degrade the unique, spring-fed habitat of the Barton Springs Salamander and Austin Blind Salamander—species that exist nowhere else on Earth and depend on clean, consistent spring flow to survive. Changes in the water will clog their external gills with sediment and pollution destroys their limited habitats.<br><br>Pavement in a Grow Zone: The expansion will pave over 8 miles of undeveloped land, fragmenting essential green spaces and cutting off migration routes for native wildlife, including golden-cheeked warblers, Texas garter snakes, and bobcats.<br><br>Loss of Natural Filtration: Construction will require 35 foot easements on either side of the expansion, destroying thousands of trees and stripping away native vegetation that naturally filter and slow down runoff before it reaches the aquifer. Without these, contaminants move faster and deeper into our drinking water. |

| | | |
|---|---|---|
| | | Rare Cave-Dwelling Species: Excavation, blasting, and construction vibrations could collapse delicate karst caves that house endangered species like the Tooth Cave spider, Bone Cave harvestman, and Tooth Cave ground beetle, pushing them closer to extinction.<br><br>Disruption of Nesting & Breeding Sites: Noise, light pollution, and habitat destruction will impact breeding grounds for golden-cheeked warblers and black-capped vireos, species already struggling due to habitat loss.<br><br>Higher Risk of Toxic Spills: Expanding MoPac increases traffic and the likelihood of hazardous material spills directly over sensitive recharge areas. A single fuel or chemical spill could rapidly infiltrate the aquifer and contaminate Barton Springs.<br><br>Stormwater Risks: New pavement will create more impervious surface, intensifying stormwater runoff and overwhelming the already fragile watershed. In previous projects, such as US 183 expansion, increased runoff led to severe erosion and sediment buildup, clouding local waterways.<br><br>Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Katerina Dittemore |

| | | |
|---|---|---|
| **4/28/2026** | Katerina Dittemore | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the air quality and health impacts to students, teachers and staff at Austin High School and users of the recreational spaces adjacent to MoPac.<br><br>CTRMA has not sufficiently considered the following:<br><br>Environmental Protection Agency has recently strengthened the National Ambient Air Quality Standards for particulate matter (PM) 2.5 due to its harmful effects on respiratory and cardiovascular health, especially for children<br><br>Travis County's PM 2.5 levels already exceed the safe threshold of 9.0 micrograms per cubic meter, putting the region at risk of a "nonattainment" designation if air quality does not improve<br><br>Primary Air Quality Impacts: Direct Pollution Exposure: The proposed expansion includes lanes that would hang directly over the school, placing students at direct risk of breathing highway-generated pollutants daily.<br><br>Primary Air Quality Impacts: Increased Emissions: Critics argue that highway expansions lead to "induced demand," attracting more cars and increasing releases of nitrogen oxides (NOx) and volatile organic compounds (VOCs), which contribute to ground-level ozone (smog).<br><br>Primary Air Quality Impacts: Fine Particulate Matter (PM 2.5): Higher vehicle volumes are expected to increase airborne PM 2.5 from tailpipe emissions, brake dust, and tire wear. These particles are small enough to enter the bloodstream and are linked to respiratory and cardiovascular harm.<br><br>Primary Air Quality Impacts: Urban Heat Island Effect: The addition of 110 acres of new pavement may intensify local temperatures, which can exacerbate existing air pollution and heat stress for students |

| | | |
|---|---|---|
| | | Primary Air Quality Impacts: The proposed project will result in worsening air quality, further accelerating the climate crisis at a time when urgent action is needed. The addition of 110 acres of pavement will not only destroy green spaces but also intensify Austin's urban heat-island effect, making the city hotter, less livable, and more vulnerable to extreme weather events.<br><br>Primary Air Quality Impacts: Highway expansions, like this one, lead to increased vehicle miles traveled (for this project, a 331 million increase in VMT annually–equivalent to a single car traveling around the earth 13,000 times). Increased VMT means more cars on the road, more oil drilled, more fuel burden, and more tailpipe emissions, which releases harmful pollutants into the air like nitrogen oxides (NOx), particulate matter, and greenhouse gases. These pollutants degrade our air quality, create hotspots near the highway particularly the adjacent Austin High School, contribute to climate change, and exacerbate respiratory problems and cardiovascular conditions, particularly in vulnerable populations (think, children with developing lungs).<br><br>Primary Air Quality Impacts: It is disingenuous for CTRMA to state that air quality will improve over the lifespan of the project. This claim is not based on any design choice for the project; rather, it's based primarily on the presumption that vehicle fleets will transition to cleaner fuel technologies over time. While advancements in vehicle technology and stricter emission standards can reduce per-mile emissions, this assumption is entirely speculative and not guaranteed. Recent declines in electric vehicle (EV) sales after the expiration of federal tax credits demonstrate that rapid fleet transitions depend on external factors, not within the control of CTRMA or TxDOT. Given the State of Texas's proclivity to sue against federal regulations mandating the monitoring of highway-related emissions and the enforcement of federal vehicle emission standards, any reliance on the assumption of "cleaner cars" as a universal outcome lacks credibility and fails to account for the contested nature of these policies.<br><br>CONCLUSION: Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Respectfully,<br><br>Katerina Dittemore |

| **3/24/2026** | Katerina Dittmore | I am opposed to project<br>I am surprised at the inadequacy of maps and environmental report |

| | | |
|---|---|---|
| **3/17/2026** | Katerina Rice Dittemore | I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. This expansion has been discussed in the past and REJECTED because of the important environmental issues and Master Planning that has been completed by the City of Austin and the Regional Mobility Authority. As has been clearly documented, creeks, recharge lands, and Greenbelt have been spiritual landmarks of indigenous communities for thousands of years and continues to define the character and spirit of our city. The body of knowledge outlines the rare relationship between water, geology, and community which includes significant caves, trails, threatened, rare and endangered species as well as archeological and aquatic sensitive regions that traverse the heart of this urban area. The Draft Environmental Assessment is the wrong instrument to utilize in the environmental analysis of this proposed transportation project, regardless of the funding source (federal/state/private funds) . In error it concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. Given the documented fragile nature of this project site, that conclusion is inconsistent with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The mitigation section of the EA document provides little-to-no effective protections of these natural features. Construction Methods: Substantial construction activities and expansion of pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. Suggested mitigation measures are ineffective. T&E Species: The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Suggested mitigation measures are ineffective. Cultural/Archeological: The study does not consider the following documented sites: Key Archaeological and Cultural Sites • Vara Daniel Site (Zilker Park): Located near the rugby fields north of Barton Springs Road, this is one of Texas's largest, most deeply stratified sites, with deposits 6 meters deep showing thousands of years of human activity. • Barton Springs Pool (Main Spring): A sacred site to indigenous groups and a historic swimming hole operating since the 1920s. The area is part of a sacred arc of four springs. • Eliza Spring (Concession Spring): Known for its amphitheater-style swimming enclosure from the early 20th century, now a habitat for the endangered Barton Springs Salamander. • Old Mill Spring (Sunken Gardens): Located on the south side of the pool, this site also features historic, now-closed 20th-century spring structures. • Spanish Mission Locations (1730–1731): Historical records indicate three Spanish missions were located here, though their precise locations are not finalized, notes this Reddit post. • Comanche Trail: A historic trail passing through the area. • Limestone Quarry (Walsh Family): Active in the 1860s near the shallow end of the pool, with documented fossil collection. Suggested mitigation measures are unnamed. Impacts of Increased Traffic Loads: Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. Suggested mitigation measures do not address increases in traffic load. Community Impacts: The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would |

| | | |
|---|---|---|
| | | impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are integral component of this community's daily life. This includes thousands of individual walkers, cyclists, runners, students, and families from across the region and throughout Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Suggested mitigation measures do not address community impacts. Economic/Tourist Impacts: The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are integral component of the tourism draw of the City. This includes thousands of tourists who visit the City during events such as SXSW, ACL and hundreds of conventions throughout the year. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter the appeal of Austin to many tourists. Suggested mitigation measures do not address disruption and effect on tourism. Documentation of past opposition: Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. Today's Risks: The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. Proposed Project Requirements: A full Environmental Impact Statement provided by an independent third party not procured by CTRMA , would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. There is only ONE Barton Springs, and once it is gone, it's gone forever. The lessons learned from the depletion of the Blue Hole in the Wimberly area should be heeded. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. |
| **5/3/2026** | Kateryna | NO to mogąc south highway!!! |

| | | |
|---|---|---|
| **4/20/2026** | Katharine Beisner | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Katharine Kies | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/23/2026** | Katherine | Adding more lanes to mopac is a waste of funds, time, and effort. If we add express lanes, the funds collected from the express lanes should be fully reinvested into the community, since it will add strain during construction and drain funds from individuals who would never see a benefit otherwise. |

| | | |
|---|---|---|
| **5/3/2026** | Katherine Byers | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Katherine Byers |
| **5/3/2026** | Katherine Cabrera | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Katherine Cabrera |
| **5/3/2026** | Katherine Crumpacker | Hi, my name is Katherine Crumpacker. I am a resident of Austin, Texas. I have lived here for almost 50 years.I want you to know that I completely oppose the MOPAC Highway Expansion Project that would further jeopardizeEdward's Aquifer and all the fragile, beautiful, and unique cave systems in Austin that wouldhave concrete poured into them and directly impact Austin's water supply, our endangeredspecies like the salamander, and part of what makes Austin so special, Barton Springs, allfor an estimated five minutes shaved off commuting traffic, but in the meantime adding an enormousamount of commute time for years. I don't like it. I don't want it. I don't acceptit. Don't do it. Please do not approve the MOPAC expansion project. Just get them outof the discussion and stand up for the water.Thank you. |

| | | |
|---|---|---|
| **5/3/2026** | Katherine Eisen | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. I am a Capital Area Master Naturalist and so one of my main focuses is ensuring that EVERYONE has access to a safe and clean natural environment. The green spaces in Austin are what make the city what it is -- people move here to spend time outside. More days than not on my commute home I see people walking the trail around Lady Bird Lake, sharing community in a beautiful outdoor setting. My favorite days are spent walking, hiking, and swimming around Austin. My friends feel the same. There is so much diversity in the plant-life and animal-life in our natural spaces. Other cities don't have what we have. Our city was built on water - the river, the springs, the aquifer. Barton Springs is a treasure and MUST be protected. This project threatens the very being of what Austin is. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the |

| | | |
|---|---|---|
| | | middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Katherine Eisen |
| **4/12/2026** | Katherine Ervin Goldsberry | We do not need this expansion. It will also not have the benefits of reducing traffic along this corridor, if previous (and numerous) recent examples of Texas highway expansions in Texas are to show - Katy (i10), 290, I35. After years and years of construction that doesn't benefit the people living here, I would say the congestion is never worth the expansion. Do we really need more air pollution, noise pollution, and general construction activity in this environmentally sensitive area? No. We do not. I do not support giving more money for a subpar result that has the potential to damage a fragile ecosystem and waterway. |

| | | |
|---|---|---|
| **4/21/2026** | Katherine Huizar | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Katherine Huizar |

| | | |
|---|---|---|
| **4/24/2026** | Katherine Lain | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. | | | |
|---|---|---|
| **5/1/2026** | Katherine Lee | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Katherine McChurch | As an Austin resident, I am strongly opposed to this project. We must protect Austin's natural beauty. |
| **4/2/2026** | Katherine Minns | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Ln and the Capital Metro bus stop (11241 Escarpment / South Bay). As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45, which is very dangerous. City Council District 8 has now allocated $117,000 to the design of this path as they recognize the important need for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request, and I can provide further information, including graphics. Thank you for your time. |
| **5/3/2026** | Katherine Mullin | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Furiously, Katherine Mullin |

|---|---|---|
| **5/3/2026** | Katherine Strandberg | Dear CTRMA Board Members,  I am writing to share my concern about the MoPac expansion and the impact on our green space and water. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt.  The promised traffic benefit is only about five minutes across the full corridor, a meaningless gain. More to the point, I-35's expansion is already underway, as are investments to improve Austinites' use of public transit.  <br />I join other community members in urging CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely, Katherine Strandberg |
| **4/23/2026** | Katherine Strickland | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city’s cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Katherine Strickland |

| | | |
|---|---|---|
| **4/26/2026** | Katherine Vissio | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | Respectfully,<br><br>Katherine Vissio |
| **4/29/2026** | Katheryn Jager | The current expansion plan travels through our aquifer's recharge zone. As a resident of Travis County since 1991, I have watched more and more of our recharge zone get paved over. This is not only irresponsible, it is detrimental to our region at a time when growth is exceeding our ability to maintain our water supply. Additionally, sensitive species are threatened by the project. It should not proceed as it stands, and certainly without a full review by qualified experts in the aquifer, local flora and fauna, and our regional water needs. Thank you. |
| **5/2/2026** | Kathie Tovo | I'm writing in opposition to the Mopac South expansion project. It's bad for the aquifer, bad for air quality, bad for Barton Springs, bad for Austin High School, bad for wildlife, and bad for humans moving around our city. Please explore alternatives. |

| | | |
|---|---|---|
| **4/23/2026** | Kathleen Higgins | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Kathleen Higgins |

| | | |
|---|---|---|
| **4/28/2026** | Kathleen Sledge | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Kathleen Sledge |

| | | |
|---|---|---|
| **5/3/2026** | Kathleen Armstrong-Durfee | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Kathleen Armstrong-Durfee |
| **3/9/2026** | kathleen deaver | I am all for finally improving MoPac South to move our growing population more efficiently. Would there be a bottleneck north of Cesar Chevaz going both north + south? I know it's already slow at peak times from Enfield, Windsor up to 183. |
| **5/3/2026** | Kathleen Hummer | I grew up in Houston and always dreamed about moving to Austin. Austin always seemed like the free spirited and nature loving city. I knew I belonged in a place like that. Austin has SO MUCH greenery compared to Houston. I fell in love instantly when I finally got to move here in my adult life. I have seen the city grow and grow and I fear it's too much. Especially now with a highway expansion project directly above an essential part of the Edward's Aquifer. I DO NOT WANT MOPAC EXPANDED AT ALL. This will truly ruin the cities beauty. I don't want to move out of Austin as I have dreamt of living here my whole life. The MOPAC expansion project is a big F you to the nature that makes this city. If the unnecessary MOPAC project is expanded, I have to think about the next best city for me. I love Texas, but not what we are doing to our natural land. SAVE OUR LAND! |
| **4/22/2026** | Kathleen Schneeman | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Kathleen Taylor | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Kate Taylor |
| **5/3/2026** | Kathleen Thornberry | This project is a disaster that is not needed and it will have a huge negative impact on Barton Springs VOTE NO |
| **4/22/2026** | Kathleen Walsh | This expansion will negatively impact one and my community. I am a tutor and coach children and am extremely concerned about the health of people, espeically students @ Austin High School. PLEASE PLEASE PLEASE do a proper environemtal impact report! And please protect our home and ecosystem. |
| **5/3/2026** | Kathleen Weiler | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Kathleen Weiler |

| | | |
|---|---|---|
| **4/20/2026** | Kathleen Zarsky | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/28/2026** | Kathrine gibson | If you do proceed with the project, I urge you to prioritize preserving access to and fully restoring the Violet Crown Trail, just as you plan to prioritize reopening the Butler Hike & Bike trail around Lady Bird Lake. Please also conduct a full Environmental Impact Study, which is essential considering the likely harm of this proposed expansion. |

| | | |
|---|---|---|
| **3/12/2026** | Kathryn Defee | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. And o substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow at temperatures between roughly 70 and 72 degrees Fahrenheit, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor from six to eight lanes to as many as thirteen to eighteen lanes in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2015, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. | **5/1/2026** | Kathryn Flurry | Please consider implementing mitigating strategies such as preserving all trees 19” and up in diameter and “Replace removed trees at 4:1 (large) and 3:1 (mid-size), using native or regionally adapted species with an 85% survival plan. Additionally please consider funding replacement sidewalks, bike paths, and access points impacted by the project, installing high-performance or transparent noise walls in park areas without impacting views, providing $35 Million to Austin for land acquisition in the Edwards Aquifer, and taking a portion of any future tolls collected for environmental uses. |

| | | |
|---|---|---|
| **5/3/2026** | Kathryn Hernandez | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Kathryn Hernandez |
| **5/3/2026** | Kathryn Lovell | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Kathryn Lovell |
| **4/23/2026** | Kathryn Moir | As an Austin citizen I oppose expanding the expressway at the expense of our essential local trails and nature. These spaces are what make Austin the beautiful place it is and even though traffic isn’t ideal I would rather deal with traffic than have our public access to nature impacted long-term. No to highway expansion, protect and preserve our natural spaces! |
| **4/23/2026** | Kathryn Moore | I use this portion of Mopac on an almost daily basis. I would rather sit in 10x the amount of current traffic than go through with a project like this that impacts our wildlife, walking trails, park access, and the things that make Austin, Austin. Please do not proceed with this. |

| | | |
|---|---|---|
| **4/20/2026** | Kathryn Puckett | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>I this is the worst possible option to relieve traffic congestion! An eight lane freeway through the center of the most beautiful, special part of Austin is a dumbfoundingly stupid idea. The damage to Zilker park, Barton Springs, Austin High School would be horrendous.<br><br>Respectfully, |

| | | |
|---|---|---|
| | | Kathryn Puckett |

| | | |
|---|---|---|

| | | |
|---|---|---|
| **5/3/2026** | Kathryn Rogers | Dear CTRMA Board Members, <p data-start="120" data-end="304">I was born in Austin in 1981 and now live in northwest hills. My young children frequent the Austin nature and science center - I suspect the expansion will ultimately affect that property and the young lungs playing there. Obviously traffic is an issue, but in my opinion this "solution" is not worth the sacrifices necessary to execute this plan. At least provide a full environmental assessment before moving forward. It the Austin thing to do! I'll also add what others have mentioned: The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:  *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.  *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.  *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.  *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).  <p data-start="120" data-end="304">*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. <p data-start="306" data-end="515">The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. <p data-start="517" data-end="776">• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. <p data-start="987" data-end="1230">• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. <p data-start="1232" data-end="1454">• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. <p data-start="1656" data-end="1913">• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. <p data-start="1915" data-end="2063">• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. <p data-start="2306" data-end="2499">• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. <p data-start="2712" |

| | | |
|---|---|---|
| | | data-end="2935">• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.  <p data-start="2937" data-end="3189">• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. <p data-start="3375" data-end="3535">• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. <p data-start="3537" data-end="3695">The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. <p data-start="3982" data-end="4260">For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. Thanks for your consideration, Kathryn Rogers |

| | | |
|---|---|---|
| **5/3/2026** | Kathryn Rosenbluth | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Kathryn Rosenbluth |

| | | |
|---|---|---|
| **3/24/2026** | Kathryn Tuten | Dear CTRMA Board Members,<br><br>One of the greatest treasures of Austin is Bartons Springs & the Aquifers. Once it is destoryed its gone forever. No turning back. What will you tell your grandchildren?<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Kathryn tuten |

| | | |
|---|---|---|
| **4/20/2026** | Kathryne Bosco | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/29/2026** | Kathy Carr | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I have also lived is SW Austin and drive that corridor almost everyday. The improvements envisioned would be a welcome respite. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |
| **4/20/2026** | Kathy Gaillour | I am encouraged by the amount of work that has gone into the project so far and what has been provided to the public via hearings and this website. Having gone through the construction of the Slaughter/MoPac interchange I believe this is a project that will be managed as well as that one. During the Slaughter/MoPac project, the public was well informed, the construction appeared to be efficient and definitely the traffic was handled well during the project. Although that's a much smaller project than this one, if that's an indication of how well this one can go, then I feel confident in it all. I moved to Austin in 1971 and we're beyond the days of 'if they don't build it, they won't come'. They came, they're here and they're not going away. Let's do something now for our future. It's not clear to me in watching the fly through video that the frontage roads are new or the existing ones. I'll have to read more material to get my answer on that, because if new frontage roads will be built, I'm not sure that's necessary. That video was very instructive and helpful - it would be even more so if during the 'ride' the colors depicting the categories of roads were highlighted constantly with a translucent overlay. It was good to have the legend pop up every once in a while as it did though. I'm in favor of this project and I hope it clears the next hurdle to go through. |
| **5/3/2026** | Kathy Genet | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and |

| | | |
|---|---|---|
| | | neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Kathy Genet |
| **4/21/2026** | Kati Gregg | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Katia Pineda | Growing up in Austin I understand the importance Edward's aquifer plays in not only Austin's ecosystem, but central Texas as a whole. A large portion of Central Texas relies on this water source to sustain life. This is our drinking water and so much more. Texas and the US as a whole are currently experiencing some of the lowest recorded water levels in history. This is leading to many places experiencing or on the precipice of experiencing water poverty, where the prices of water are so high families are unable to afford it. Places like Barton springs only exist if Edward's aquifer is protected as the critical lifeline that it is. Our Texas ecosystem is precious, it is not to be taken for granted, or millions of us will not have the pleasure of enjoying water as a whole. We don't need more high ways, we need effective and sustainable development in public transportation to unify our community and save our water. |

| | | |
|---|---|---|
| **3/15/2026** | Katie Bailey | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Katie Bailey |

| | | |
|---|---|---|
| **4/28/2026** | Katie Cavanaugh | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Katie Coleman | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Katie Coleman |
| **4/29/2026** | Katie Comer | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. Thank you, Katie Comer |

| | | |
|---|---|---|
| **4/21/2026** | Katie Conley | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration.<br>Katie Conley |
| **4/21/2026** | Katie Conley | Dear CTRMA,<br>Please don’t ruin our beautiful city with more roads, noise, pollution and loss of parkland.<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>- take care to limit light pollution<br>Thank you for your time and consideration.<br>Katie Conley |

| | | |
|---|---|---|
| **5/3/2026** | Katie Drackert | No expansion on Mopac South! The harm and stress it will cause to all beings and environments is not what we need! This is NOT desired by the people of Austin. Please do not follow through with this! |
| **4/22/2026** | Katie Duffy | Expanding MoPac is a costly step backward for Austin. Decades of transportation research show that adding highway lanes does not solve congestion—it induces more driving, leading to the same or worse traffic within a few years. We risk spending millions on a short-lived "fix" while locking ourselves into higher emissions, more sprawl, and greater dependence on cars. The environmental impacts are especially concerning. Widening MoPac would increase greenhouse gas emissions at a time when Austin has committed to climate goals. It would also degrade local air quality, worsen urban heat island effects, and threaten nearby waterways through increased runoff and pollution. These are not abstract risks—they directly affect public health, especially for communities living near the corridor. Instead of doubling down on highway expansion, Austin should invest in solutions that actually reduce congestion and improve quality of life: reliable and frequent public transit, safer biking and walking infrastructure, and smarter land use that shortens commutes. Every dollar spent on new lanes is a dollar not spent on a system that moves more people efficiently and sustainably. We have an opportunity to choose a future that is cleaner, healthier, and more equitable. Expanding MoPac doesn't get us there. Investing in public transit does. |
| **5/3/2026** | Katie Ferguson | No to the mopac expansion project! |
| **3/28/2026** | Katie G | I believe in a future where Texas agencies implement large scale green infrastructure. Please see this highway example: https://www.cnu.org/what-we-do/build-great-places/cheonggye-freeway I would like for you to know that checking boxes is not enough. Texas as a whole has so much attention right now from national/international businesses, due to our incentives and quality of living/working. Yet, in Austin the capitol city, residents have to settle for paying to use just about every ounce of land and roads. You do too. We're all in it together. And yes, some can pay for things like tolls more easily than others. I've always taken the road less travelled- metaphorically. Creativity leads to problem solving if you let it. Building materials come from resource extraction which is happening so often in Texas especially in Bastrop. And then, Texas' state budget has a surplus, but building resiliency through nature-based solutions is underfunded or largely ignored. I would do anything to use these factors of profit, scalability, and resource management to help you create a green corridor that our children can be proud of, but I leave this comment as more of a message of inspiration. I understand tolls and expressways help congestion. Why not go above and beyond by giving back to the ecosystems that sustain us? Young adults are watching and learning. There is no naïveté to this comment. Thank you for your consideration, I hope you have a wonderful day. |
| **4/22/2026** | Katie Hastings | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| | | |
|---|---|---|
| **3/13/2026** | Katie Hayes | Dear CTRMA Board Members,<br><br>As a native Austinite and an advocate for our precious water resources, I am writing to strongly oppose the MoPac South expansion as proposed. A full Environmental Impact Statement (EIS) is needed for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>I don't believe that the Draft Environmental Assessment's conclusions are enough to justify this expansion. How could all that construction not have an impact on the water, animals, and people that are in the immediate area?<br><br>The last thing our city needs is more pavement. I know traffic is a pain point, but I support other ways to ease commuter issues in Austin rather than just expanding MoPac.<br><br>I walk, paddle board, and hang out right along that area near Austin High, and I think a lot of other people do too. It's not only beautiful, it's sort of THE draw to Austin, for many people.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas’s most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Please reconsider the route of going ahead with this without at least doing more research, public hearing, and a full and complete EIS.<br><br>Thank you for your consideration.<br><br>Respectfully,<br><br>Katie Hayes |

| | | |
|---|---|---|
| **4/29/2026** | Katie Hendrix | I live near Mopac around the Barton Springs Rd / Bee Cave Rd exit. I have two (soon to be three) young children and we love living in Austin because we can spend so much time outside and enjoying nature. I have observed that the current plan will cause damage to the local environment, harm of federally protected endangered species, increase air and noise pollution, and reduce east/west access. All of these things will negatively impact health and quality of life for families in the area. Children playing outside will suffer from air pollution that Austin prides itself on avoiding compared to larger, industrial cities. It is a major step backward. What is the tradeoff? Likely increased toll revenue; at best, through-traffic saving 5 minutes on the entire ~9 mile stretch of highway. For my commute (and those in the surrounding area as well), it will actually be worse because the toll road exit for Bee Cave is dropped in the current proposal and so I would have to weave through school zones (Austin High). For many folks, this actually means longer drive times, and traffic directed to local neighborhoods instead of the highway. The benefits here are mild and the costs are sky-high for Austin families. Please reconsider. At the very least, please complete thorough due diligence on the environmental impact. Austin is an amazing city because of our people and our environment. Damage to the environment is likely to be permanent, with irreversible harm caused to federally protected endangered species. This will negatively impact the city, current and future residents, for the foreseeable future. |
| **3/19/2026** | KATIE LYN HOWARD | I do not agree that we should widen MoPac. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. Many studies on other cities has shown that widening highways is not effective to solve traffic problems. It also closes local business and enroaches on citizens property lines which is never positive. Instead I think we should have continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane could be more effective. More investing in transit, walking, and biking rather than highway expansion. |
| **4/21/2026** | Katie Mackey | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | katie newkirk | girl don't do it. we don't want more roads. we want our natural areas preserved. barton creek and barton springs are the jewel of the city and without them, austin is nothing. don't be an -. |

| | | |
|---|---|---|
| **4/23/2026** | Katie Petersburg | Dear CTRMA,<br>The parks are the heart of Austin. While improving infrastructure is critical now and may make a commute across the bridge way less stressful, I want to voice some requests to make the expansion of MoPac as minimally damaging as possible. As a native Houstonian who moved to Austin in 2017 (and never left), I would be devastated to see Austin turn into the same concrete lawn that Houston is. The history of Austin development has been shaped by people who use their voice to protect parks, springs, and aquifers, and it is part of the Austin culture that has kept the city so beautiful.<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/22/2026** | Katie Schultz | I do not appreciate construction in my city that not only does a poor job of addressing mass transportation needs, but also will be detrimental to our environment.<br><br>We need a better traffic study to make these decisions. The current plan will create an even more chaotic situation. Young drivers at Austin High will be in danger with redirected toll lane traffic. Instead of making the situation worse, you need data on how Austinites use this space. Children also do sports there and inhaling particles from traffic can affect their health for life.<br><br>Water shortages are predicted to be extreme in the coming decades. Protecting our ground water is more important than ever. Protecting ground water also means protecting wildlife as these are ecosystems -- every party of the system relies on every other part.<br><br>Do better |

| | | |
|---|---|---|
| **4/30/2026** | Katie Shultz | This expansion will:<br><br>* Pave over 110 acres of the Edwards Aquifer Recharge Zone, threatening groundwater quality, our creeks and Barton Springs;<br><br>* Harm 4 federally endangered species and their habitats, including the Barton Springs Salamander and Austin Blind Salamander;<br><br>* Carve through some of Austin's most iconic parkland and recreational spaces, including Zilker Park, the Barton Creek Greenbelt, and the Lady Bird Lake Hike and Bike Trail; and<br><br>* Pollute our air with massive increases in cars (increasing annual vehicle miles traveled on MoPac by a whopping 331 million) with more car emissions directly next to neighborhoods and Austin High School (If you didn't see it, Austin's air quality just received a failing grade from the American Lung Association).<br><br>WE DO NOT WANT IT! How about doing actual mass transportation and giving us bus rapid transit? Contact Richard Shultz if you want a real plan for improving traffic and not this lame excuse to line the pockets of contractors and politicians.<br><br>WE CAN SEE YOUR BULL- |

| | | |
|---|---|---|
| **4/30/2026** | Katie Shultz | This expansion will:<br><br>* Pave over 110 acres of the Edwards Aquifer Recharge Zone, threatening groundwater quality, our creeks and Barton Springs;<br><br>* Harm 4 federally endangered species and their habitats, including the Barton Springs Salamander and Austin Blind Salamander;<br><br>* Carve through some of Austin's most iconic parkland and recreational spaces, including Zilker Park, the Barton Creek Greenbelt, and the Lady Bird Lake Hike and Bike Trail; and<br><br>* Pollute our air with massive increases in cars (increasing annual vehicle miles traveled on MoPac by a whopping 331 million) with more car emissions directly next to neighborhoods and Austin High School (If you didn't see it, Austin's air quality just received a failing grade from the American Lung Association).<br><br>Water shortages are already projected. Why would you destroy one of Austin's most crucial resources??<br><br>We Austinites will not stand for this.<br><br>We are in a cycle of constantly expanding highways and yet it still never seems to solve our traffic. I'm so tired of living in a city that continues to make it difficult to get around. We need better mass transportation options that don't take 5x as long as driving. It should not take an hour to go 4 miles. We need better options. Other lower-density cities have solved this problem without trains. Austin can do it too without tearing up a natural resource, polluting our air and groundwater, and making a worse traffic pattern.<br><br>--<br><br>Thank you, |

| **5/3/2026** | Katie Struth | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. We don't need more highways here. And we don't need more paved roadways cutting through the places that make Austin, Austin. If you cared about moving traffic around this city that we all love, you'd focus on public transit, not making more paved roadways and allowing more cars to pollute our air and waterways. Barton Springs and the Edwards Aquifer are the beating heart of Austin, and this project will harm them and our city in the long run, especially if you proceed without a full environmental impact statement. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas II, Katie Struth |

| **5/3/2026** | Katie Struth | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. We live in a special place that draws millions of tourists and new residents every year, and this project puts that specialness at risk without making dramatic improvements to the city. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Part of the beauty of Austin is its green space, and we need to preserve that as best as we can across all facets. I want my kids to be able to enjoy a clean Barton Springs one day. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. How horrible that we put such a iconic Austin species at risk just so we can add a few lanes of highway. Is that worth it? Not to me. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Katie Struth |

| **5/3/2026** | Katilyn Rybicki | Hi, my name is Kaitlyn Rybicki and I am an Austin resident in zip code 78757and MOPAC is literally my backyard. It is literally my backyard.And I'm up and down MOPAC all day long. I work all around townand use MOPAC every single day.I do not need an extra five minutes saved on my commute to or from.That is not worth five minutes of my commute time.It's not worth nine years of environmental damage being doneand additional lanes being built that we do not need.I want to ask for a full environmental impact statementand that you seek less harmful alternatives as this project moves forward.Like I mentioned, MOPAC is my backyard and so if you begin expanding those lanesin that area, surely there will be more expansions to comeand you will literally put me out of a homebecause my home backs up right into MOPAC.So I just see this as a very negative thingfor the future of people who live along MOPACand for those of us who care about our waterwaysand our very precious aquifer, which is drying up.This is about tolls and not people and resources and our community.Thank you very much for your time.Please, please, I oppose this.Please get a full environmental impact statementand really evaluate that because this is wrong for Austin.Thank you. |
| **4/20/2026** | Katrina Garza | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **5/3/2026** | Katrina Kosted | I am opposed to the MoPac South Project. I do not support the expansion at the same time that I-35 in Austin is under construction -- it is madness to have multiple major arteries under construction at the same time. It's dangerous. We've already seen deadly vehicle accidents on I-35 and MoPac at 183 due to construction in those areas. Central Texas does not have water during times of drought to support the population we have; it is insane to invite more population to move south of Austin by expanding MoPac. The MoPac South expansion is in a critically environmentally sensitive area, which is another reason I am opposed to the project. If you have to, got to, must spend money on transportation, create a comprehensive, accessible public transportation system. Austin needs fewer cars, not provide means for moving more cars. Just no no no to the MoPac South expansion plans. |
| **4/23/2026** | Katrina Sherr | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. | **4/23/2026** | Katy Hamill | Please stop making the roadways bigger bigger bigger, particularly over our sensitive and already stressed aquifers! It strips away all that is good about Austin (green spaces, relaxed pace) and turns this city into just another generic urban metropolis. Invest in public transport, more bike & bike lanes, ANYTHING to get us away from MORE single vehicle traffic patterns! |

| | | |
|---|---|---|
| **4/29/2026** | Katy Huff | Hello,<br><br>Please please PLEASE do not expand MoPac. Austin is getting hotter every year, the last thing we need is to make this town more car-centric. More bike lanes, dedicated bus lanes, and light rail are where we should be looking.<br><br>And not for nothing! This will have a miserable impact on Zilker park, Austin's best feature.<br><br>I am on my hands and knees begging... please don't do this.<br><br>Thank you<br><br>--<br><br>Katy Huff<br><br>Partnerships<br><br>(804) 878-9677 |

| | | |
|---|---|---|
| **4/23/2026** | Katy Miller | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Additionally, I have 3 children who attend Austin High School and play tennis. The expansion would seriously impact the High School tennis courts with noise and pollution. The added traffic will also affect the air quality for the 4,000 students at Austin High and is a danger to those who walk and bike to school! This should not be done on or near a high school for the health of everyone!!<br><br>Thank You for listening to your neighbors, |

| | | |

| **4/23/2026** | Katy Miller | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>I have lived in central Austin for 25 years and seen swimming hole after swimming hole disappear one by one... Places I took my children no longer exist. This summer was one of the lowest recharge speed of the spring feeding Barton Springs pool measured in cubic feet per second. This is measured from a spring coming in below the diving board ,and measured around 11cfs, much below the recommended flow of >38cfs. This construction will most surely impact the aquifer in a negative way and the pool cannot exist at any lower flow rate:( Think of the repurcussions of your action on our community.<br><br>Thank You for listening to your neighbors, |

| | | |
|---|---|---|
| | | Katy Miller |
| **5/1/2026** | Katy Miller | I stand firmly AGAINST this mopac expansion! I have 3 children who attend Austin High and they all play tennis. The tennis courts are directly adjacent to the current mopac- and are used not only by Austin High students but the entire community of Austin. Any expansion will directly create pollution, fumes and noise that will drastically degrade the environment and the health of 4000 highschool students and staff. It would become similar to the i35 crossing where pollution, trash and homeless people underneath is a menace (there is no highschool at that location). The impact to Edwards Aquifer and Barton Springs pool would be immeasurable and irreversible! The spring is already at the lowest flow ever (reaching a mere 11 cfu when anything under 38 cfu is of concern). This treasure needs protection.The health and environmental risks of this expansion are too extreme, please consider the impacts before any action is taken. Look at the growth in Wimberley that |

| | | |
|---|---|---|
| | | has emptied Jacobs Well.... do not let that happen to Barton Springs Pool. Do not build more highway and bring more cars to the heart of the City of Austin, we just went through expansion with the express lanes!! enough is enough- |
| **5/3/2026** | Katy Shayne | I object to this expansion as it puts the springs and surrounding natural habitats in jeopardy. |
| **5/3/2026** | Katy Troy | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Katy Troy |
| **4/21/2026** | Katya Gonzalez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/1/2026** | Kaushik V | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |

| | | |
|---|---|---|
| **4/24/2026** | Kay Corbin | Dear CTRMA Board Members,<br><br>Hi this is Kay, I'm writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>Find another solution! Be a protector, not an extractor. It's more rewarding long term *wink, wink* |

| | | |
|---|---|---|
| | | For the love of water in Central Texas,<br><br>Kay Corbin |

| | | |
|---|---|---|
| **5/3/2026** | Kay Pils | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. On a personal note my great grandparents, grandparents, mother, father, sister were all born in Austin and love Barton Springs! I learned how to swim there in 1953 when I was 2 years old! Why do us human beings have to destroy instead of protect? Aren't we supposed to be the stewards of Earth? Thank you for your time and consideration. Respectfully, Kay Pils |

| | | |
|---|---|---|
| **5/3/2026** | Kaya Shellhammer | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Kaya Shellhammer |

| **3/18/2026** | Kayla Jade | I do not want a highway built over a crucial recharge zone for the Edwards Aquifer. This will worsen the quality of our drinking water and endanger native wildlife. |
| **5/2/2026** | Kayla Mielke | I am against this south mopac expansion. It will destroy our coveted natural beauty and water source for Barton Springs and Deep Eddy, if not more. These are the reason Austin is special, the preserved natural areas and respect for the springs, without these I would not have moved here. Once the aquifer for Jacobs Well was too low, the damage had already been done. Let's not destroy the natural habitats and community gathering that keeps Austin welcoming. If we cannot return to nature to relax and ground ourselves, especially in the Austin summer peak, we will lose our unique identity as a city, a community. |

| | | |
|---|---|---|
| **5/3/2026** | Kayla Mielke | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Kayla Mielke |
| **4/22/2026** | Kayla Padilla | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Kayla Snell | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Kayla Snell |

| **4/22/2026** | Kaylee Locklear | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| | | |

| **4/29/2026** | Kayte Weeks | For very obvious reasons, this project will cause significant negative environmental impact. This project is almost entirely located over the Edwards Aquifer Barton Springs recharge zone, an extremely sensitive environmental area in the Austin area. This will obviously harm the Barton Springs and Austin blind salamanders due to increased construction sediment pollution into the karst features of that area. Further, this will obviously cause increased car pollution into Lady Bird Lake where recent studies have shown that the number one microplastic pollution within the lake sediment is tire particles. There is no need for this project, and no one is asking for it. TXDOT is already affecting Lady Bird Lake with the CapEx I-35 project- don't do this one also in a much more environmentally sensitive area. |
| **4/21/2026** | KC Kitchen Coats | Dear CTRMA,<br>I want to be honest with you: I almost didn’t write this letter. There’s always the feeling that these things go into a drawer somewhere, that the machinery is already in motion and the rest of us are just making noise. But then I thought about the trees. And I wrote it anyway.<br>I’m writing in support of the mitigation requests EverGreen Austin has put forward for the MoPac South Expansion project. They’ve done the hard, careful work of naming what this community needs, and I’d like to add my voice to theirs.<br>The list isn’t radical. It’s not asking for the project to stop. It’s asking for trees, and for the ones already standing to be left alone. It’s asking that parkland not be quietly swallowed in the process. It’s asking for a noise wall workshop where people actually get to show up and be heard – not as a formality, but as a real thing. It’s asking for funds that stay dedicated to open space and environmental restoration, not just now but over time, because these things take time.<br>Capital improvement reimbursements for affected community assets. A permanent green fund. These sound like bureaucratic line items, but what they really are is a promise – that the people who live here, who walk these streets and breathe this air and send their kids to play in these parks, matter in the final accounting. I hope you’ll include them.<br><br>Thank you for reading this. |

| **5/3/2026** | Kedra Priest | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Kedra Priest |

| | | |
|---|---|---|
| **4/23/2026** | Keely Figi<br>Figi | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Keely Figi |

| | | |
|---|---|---|
| **5/1/2026** | Keely Penn | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/27/2026** | Keely Ramirez | Barton Springs is a natural landmark of Austin for residents, families, and visitors to enjoy Texas nature in the city. I personally love Barton Springs and do not want the expansion of the MoPac over the natural water that feeds into the spring. It is a disservice to the residents that live here and pay taxes to pollute the springs that are a highlight of Austin. This city has promoted forward thinking in environmental protections and should show commitment by NOT expanding the MoPac over a waterway. |

| | | |
|---|---|---|
| **4/5/2026** | Kegan Remmey | Dear CTRMA Board Members,<br><br>Here:<br><br>I have lived in denver when they did this same style expansion and it didnt change the traffic at all, and didnt increase the ease of travel. they just made more space for the city to make money, instead of installing a train to minimize traffic and emissions, they just built lanes that create a feeling of elitism rather than care for the land and the people to make the most of their city. A train betweeen Denver and boulder would have been so used. just like here in Austin, why not build a train or alternate measure that other parties recommend who know what actually works and is forward thinking, look at european countries and what they do for advice on care for the world, not just someones bank account.<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover. |

| | | |
|---|---|---|
| | | * Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Kegan Remmey |

| | | |
|---|---|---|
| **4/28/2026** | Keith Hood | Dear CTRMA Board Members,<br><br>Doing any work on MoPac without doing an exhaustive study of environmental impacts should be a felony. Barton Springs is unique, and once it's ruined, there is no way to ever get it back. The right answer to concerns about traffic on MoPac is to subsidize working from home so there's no need for traffic.<br><br>Keith Hood |
| **3/24/2026** | Keith Jackson | Do something all ready, 45 minutes from 1st to Slaughter morning and night has to be horrible for the environment, not to mention quality of life. Mona needs to be improved today. Stop delaying and waiting move now. |

| | | |
|---|---|---|
| **5/3/2026** | keith langford | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Keith Langford |

| **5/3/2026** | kelli weiblen | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Kelli Weiblen |
| **5/3/2026** | Kellie Roop | No expansion over Barton creek or the greenbelt! Protect our waterways. Also, we can't have ALL North/south highways under construction at the same time. |
| **5/2/2026** | Kelly Bach | Hi there, my name is Kelly Bach and I am a resident of Austin, Texas, and I am callingto tell you that we should not be building this passageway, this MOPAC extension overthe springs.Austin deserves clean water and clean air, and the project is going to interfere withthe Edwards Aquifer Recharge Zone.It is riddled with caves and endangered species, and it flows into Barton Springs.Please do a full environmental impact statement.No shortcuts.I am against this expansion of MOPAC and it will directly impact our waterways and theendangered species that live here in Austin and will impact the citizens of Austin.Thank you for listening.Please do something about this. |
| **3/24/2026** | Kelly Bell-Nolte | I moved into South Austin in 2014, that is when toll roads were chosen for this project and I had no idea. 12 years later, I would like a chance to vote since this project was put on hold for so long. So much has changed. Toll roads are not needed.  I recommend regular HOV lanes. The additional nontoll lanes on the river will be nice. William Cannon MoPac needs more help! It narrows too much even with the proposed changes it will not be enough. Slaughter will need more to help with congestion. Cesar Chavez, 5th street, Enfield going south all merge together. More non toll lanes are needed to help with the congestion! It's crazy how all of that is merging together right there. |

| | | |
|---|---|---|
| **5/3/2026** | Kelly Goetz | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Merlot Kelly |

| **5/3/2026** | Kelly Goetz. | Hello, this is Kelly Goetz. I am calling on behalf of the Saver Springsorganization to speak on not moving forward with the MOPAC expansion.Barton Springs is a very valuable place and all the construction highwaysthat would be interfering with all of our natural resources is a veryor intuitive idea that won't serve us in the long run.We see a lot of expansions in other cities like Houston,and the traffic is still really bad.So it's proven that this isn't an effective wayto solve our traffic issue.And ultimately, it's a decision that would put a lot at risk.And the people that make the decision to move forwardI think would have a lot of grief for them - up the springs.So yeah, I'm sure that you've gotten a lot of comments from our wonderful Austin communityand most everyone I talked to is not in support of this project and expansion.And so I think everyone's happy to rethink a solution of our traffic like public transportation,biking, mopeds, adding to the metro, adding more bus lines, and I think everyone's verydedicated to meet and problem solve together.Ultimately, Austin is not aligned with this expansion and it needs to be reconsideredand it needs to not move forward.Um, so yeah, hope everyone has a heart out there and cares about more than just profit.Uh, so wishing well to the city and thank you for not doing the expansionbecause it's a - up idea.Um, ours, 3204 Breeze Terrace is where we live.Thank you.Thank you. |

| **4/21/2026** | Kelly Hayden | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration.<br>I go to Zilker once a month with my dog and love this part of Austin. It is what makes it so unique and beautiful |
| **5/3/2026** | Kelly Hulse | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Kelly Hulse |

| | | |
|---|---|---|
| **4/24/2026** | Kelly Hutchinson | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Kelly Hutchinson |

| | | |
|---|---|---|
| **5/2/2026** | Kelly Lam | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Austin isn't Austin without our beautiful green spaces and the lake to enjoy!<br>Thank you for your time and consideration. |
| **5/3/2026** | Kelly Lively | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Kelly Lively |

| | | |
|---|---|---|
| **4/20/2026** | Kelly Rogers | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Kelly Scott | I'm strongly opposed to the proposed MoPac overpass because of the lasting damage it would do to Austin's watershed and the natural spaces that make this city feel like home. We are already seeing the strain on our springs, creeks, and aquifers, and adding more concrete and runoff will only accelerate that decline. This isn't just about traffic, it's about protecting the ecosystems, green spaces, and character that people come here for and that we're at risk of losing. Austin's identity has always been rooted in its connection to nature and community. Once we disrupt that balance, we don't get it back. Please choose solutions that protect our environment and keep Austin, Austin. |
| **5/3/2026** | Kelly Stocker | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. As everything that is important and beautiful about Austin is slowly eroded, it is your your affable and moral responsibility to ensure that Barton Springs is absolutely sacred. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Kelly Stocker |

| | | |
|---|---|---|
| **4/21/2026** | Kelly Tassler | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Kelly Wright | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| | | |
|---|---|---|
| **4/20/2026** | Kellyn Lappinga | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Kelsey | Voting against mopac toll. |

| | | |
|---|---|---|
| **4/24/2026** | Kelsey Baker | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Kelsey Baker |
| **3/25/2026** | Kelsey Baker | I am firmly against expanding a toll lane onto the south end of Mopac. The environmental impact to the greenbelt is too great. Another toll lane will not have enough of an effect on traffic to justify damage that will be done. |

| | | |
|---|---|---|
| **4/20/2026** | Kelsey Biggar | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Kelsey Daiber | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/2/2026** | Kelsey Day | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/22/2026** | Kelsey Edson-Harris | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/13/2026** | Kelsey Kennedy | Since 2020, our community has been advocating for the completion of a short (just 1.2-mile) paved path along Hwy 45, connecting Meridian to Escarpment Blvd. While the distance is small, the impact would be significant. This connection would safely link more than 3,000 residents to the broader Austin trail network—allowing cyclists and pedestrians to travel through Circle C and access the future paved path beginning at Slaughter Lane. Right now, that connection doesn't exist, and residents are left navigating the narrow shoulder of Hwy 45, which is not only uncomfortable but genuinely dangerous. This gap has become increasingly concerning as more people look for safe, active ways to move through the city. We're encouraged that City Council District 8 has recognized this need and allocated $117,000 toward the design of the path. It's a meaningful step forward, and we're hopeful it will lead to full implementation. Our Meridian neighborhood has a dedicated committee supporting this effort, and I'd be happy to share additional details, including visuals and supporting materials. Thank you so much for your time and consideration—this is a small project with the potential to make a big difference in safety, accessibility, and connectivity for our community. Warmly, Kelsey |

| | | |

A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| **4/21/2026** | Kelsey Ortiz | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Kelsey Parker | Do not expand the toll lanes. Private toll have worsend our cities and our job market. There are so many ecological, issues as well as tourism impacts that these tolls would negatively impact. |

| | | |
|---|---|---|
| **5/3/2026** | Kelsey Pearl | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Kelsey Pearl |

|---|---|---|
| **4/21/2026** | Kelsey Whittman | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Kelsey Wittman |

| **4/20/2026** | Ken Moench | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/28/2026** | Kendal Anderson | It’s come to my attention that this project could lead to this disruption of our air quality, local environment, and the habitats of local wildlife. It would be both unethical and deplorable to continue this project for the sake of business deals or profit without doing a full comprehensive Environmental Imapct Statement and showing proof that this project will have no harmful impact(s) on our environment or any wildlife. |

| | | |
|---|---|---|
| **5/3/2026** | Kendal Flanagan | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Kendal Flanagan |
| **5/2/2026** | Kendall Brewer | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/23/2026** | Kendall Kibby-Deck | Please do NOT expand MoPac. We don't need more traffic and pollution. What we do need is better and more public transit, more bike and pedestrian connectivity, and less noise. |
| **5/3/2026** | kendall mastin | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, kendall mastin |
| **5/3/2026** | Kendra Tellez | Please do not allow the expansion of the road and destroy important areas of Barton Springs. It will not alleviate the traffic and it will destroy public parks and important ecosystems |

| | | |
|---|---|---|
| **4/23/2026** | Keni Takahashi | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Keni Takahashi |

| **4/23/2026** | Kennady Childers | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **4/29/2026** | Kenneth Willis | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. Thank you! |

| | | |
|---|---|---|
| **4/20/2026** | Kenneth Wood | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/21/2026** | Kent Killough | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **3/22/2026** | Kent Miller | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Kent Miller |

| | | |
|---|---|---|
| **5/3/2026** | Kenzie Dennis | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Kenzie Dennis |

| | | |
|---|---|---|
| **4/28/2026** | Keri Wilson | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Keri Wilson |

| | | |
|---|---|---|
| **5/2/2026** | Kerrie Boodt | I travel this section of MoPac often and while the traffic is horrendous at peak times of the day, this project will be far more detrimental to the area than that of the inconvenience to many of us. For the love of god, put in a functioning public transit rail if you must do anything! Otherwise, just… invest the dollars elsewhere and move on (or have your project leads move out of Steiner Ranch, Oak Hill, Drip or wherever else might benefit from this). |
| **4/24/2026** | Kerrie Monahan | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Kerrie Monahan |

| | | |
|---|---|---|
| **5/3/2026** | Kerry Ef | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Kerry Fitz |

| **5/3/2026** | Kerry Ef | Dear CTRMA Board Members, <p class="p1" style="margin: 0px; font-width: normal; font-size: 17px; line-height: normal; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal; -webkit-text-size-adjust: auto;">The Edwards Aquifer Recharge Zone is integral to Austin, brings value to the city for recreation, beauty and tourism.  The natural features of Austin need to be preserved through prioritization over expansion. <p class="p2" style="margin: 0px; font-width: normal; font-size: 17px; line-height: normal; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal; min-height: 22px; -webkit-text-size-adjust: auto;"> <p class="p1" style="margin: 0px; font-width: normal; font-size: 17px; line-height: normal; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal; -webkit-text-size-adjust: auto;">The Austin water table and springs are threatened by persistent drought and torrential rains, the effects of which are amplified by impermeable surfaces, like the suggested 8+ miles of pavement. <p class="p2" style="margin: 0px; font-width: normal; font-size: 17px; line-height: normal; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal; min-height: 22px; -webkit-text-size-adjust: auto;"> <p class="p1" style="margin: 0px; font-width: normal; font-size: 17px; line-height: normal; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal; -webkit-text-size-adjust: auto;">The traffic expansion is unnecessary.  It threatens Austin's jewels.  It is imperative the environmental impact be studied. Sincerely, Kerry Ef |
| **4/22/2026** | Kerry Hugins | please do not build through over or in the Edward aquifer or through any parks so many birds rely on us ea fall and spring we need to protect nature and water is so important to a good life thank you |
| **5/1/2026** | Kerry Hugins | Please do not build in the edward's aquifer recharge zone or through or over any parks, thank you<br><br>kerry |

| | | |
|---|---|---|
| **5/3/2026** | Kessa Kupec | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/28/2026** | Kevin Baker | My name is Kevin Baker and I live near Mopac and Zilker Park. I use Mopac for commuting weekly, and visit the surrounding area around Zilker/Barton Springs/Lady Bird Lake trail daily both on foot and by bicycle. For obvious reasons, I am opposed to the Mopac Expansion. As a commuter on that very road, the idea of the expansion's end goal to save 5 minutes of commuting time is nonsensical. The repercussions of the time spent, disruption from the construction work, not to mention construction cost raises red flags in so many areas. One of the main concerns being the environmental impact. As a tax paying member of this community that values the greenspace this city has respected for so many years, I demand the Mopac South Project conduct a full Environmental Impact Statement. The current Environmental Assessment finding of "No Significant Impact" is dishonest and a low attempt to deceive the caring citizens of Austin. I support multi-model regional planning, investment in public transit, and better walking and biking infrastucture in Austin. I support protecting what makes Austin unique: our water, wildlife, and citizens. |
| **4/20/2026** | Kevin Boyle | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **3/10/2026** | Kevin Heerema | In reviewing the plans, I believe it is a major mistake that there is no planned 3rd lane for the non-tolled lanes when heading northbound on Mopac, at 290. This is an existing 2-lane bottleneck that is not being addressed and will remain a 2 lane bottleneck. It makes zero sense that mopac will be 3 lanes from slaughter to 290, drop down to 2 lanes, and then go back up to 3 lanes like it does now! This needs to be 3 lanes from slaughter all the way over the damn town lake bridge!<br><br>For people that work south of downtown, we cannot access the tolling lanes as there are no exits south of bee caves. I don't see this as an improvement in any sense except for some toll authority to get paid with ridiculous variable tolling! |
| **4/25/2026** | Kevin Ivester | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/16/2026** | Kevin Koch | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>We don't need to induce more development in this direction. We have plenty of other, non-sacred directions to grow, that don't impact endangered species, and Austin's soul.<br><br>For the love of water in Central Texas,<br><br>Kevin Koch |
| **5/1/2026** | Kevin Miner | Shame on you. |

| | | |
|---|---|---|
| **4/30/2026** | Kevin Opp | Spending hundreds of millions to expand a highway will only induce greater demand for driving, and doesn't improve mobility. The only way to improve mobility is by giving Austinites another option to driving.<br><br>Any improvements to MoPac should be centered on continuous, safe, and pleasant walking and biking paths along either side of the highway with frequent east-west crossings. Any additional lanes should only be for transit. More car lanes would be a massive waste of money and hurt the environment.<br><br>Kevin Opp |
| **5/3/2026** | Kevin Palms | Hello, I support the "no build" alternative to Mopac South Expansion. I urge CTRMA to undertake a full Environmental Impact Study (EIS) per federal standards, including a traffic study on the impacts of the project on surrounding roads and propose lower impact, lower cost alternatives. Construction congestion The years of construction-related traffic congestion and environmental degradation caused by this project are not worth the minimal projected improvements in travel time. Central Austin residents, including students at Austin High, and everyone who enjoys Zilker Park, Barton Springs, the Hike and Bike Trail at Lady Bird Lake, the Barton Creek Greenbelt, and Deep Eddy Pool will suffer through many years of construction congestion and bear the brunt of the environmental impacts (noise pollution, poor air quality, and compromised water quality) while enjoying the tiny benefit of a couple minutes travel time even many years after this project is built. Toll Roads don't help general users Toll roads are not a solution to the root cause of congestion and only serve a small portion of roadway users (30,000 to 40,000 users per month / 180,000 roadway users = 16-22%). Limited entry and exit points and demand pricing keep toll roads from being useful to most people who live in Central Austin, while prioritizing those who choose to live far from the city center. Environmental Degradation I do not believe the environmental harm caused by this construction is worth a few minutes of travel time. Increasing air pollution, noise pollution, and toxic runoff from cars will negatively impact one of the most environmentally sensitive and cherished areas of our region. We must protect the Edwards Aquifer, Barton Springs, the Barton Creek Greenbelt, the hike and bike trail, Deep Eddy Pool, and Zilker park from excessive development and traffic and its negative environmental impacts. Fiscal irresponsibility There are a wide variety of low cost congestion relief measures that could improve the South Mopac Corridor and reduce peak time congestion without expansion that should be explored and tested before proposing expansion. These strategies include lengthening entry and exit ramps, restriping, HOV lane at peak times, park and ride facilities, transit routes, addressing surface and connector road congestion that backs up onto MoPac, among others. We should not be jumping into a $824 million dollar project without first exploring and testing low cost congestion relief measures that will help all roadway users before expansion. The future is unknown This project or any expansion of MoPac should not take place until I-35 construction is complete and resulting traffic patterns can be studied. The simultaneous creation of the SH-130 autonomous trucking route also has the potential to majorly impact traffic flows in our region by rerouting trucking traffic from I-35 and should be allowed to play out and be studied as another factor in assessing the need of MoPac expansion. Furthermore, we are on the horizon of autonomous vehicle adoption in many sectors which will change traffic patterns throughout our region. |

| | | |
|---|---|---|
| | | Expanding MoPac based on the outdated information in the MoPac South draft environmental assessment risks over or underbuilding the road based on incomplete and outdated demand projections. Thank you, Kevin |
| **5/2/2026** | Kevin Shepherd | Induced demand is real; if you expand highways, they will simply fill faster. This isn't going to be effective at decreasing traffic, and is just a bandaid solution that kicks the real issue -- lack of real transit options in Austin -- down the road by a couple years. There's no reason to incur the construction costs, overhead, damages to the environment, and all the other negative side effects of the build for such a minor win, particularly when even that minor win will be fully and rapidly absorbed by new traffic. |
| **5/3/2026** | Kevin Webster | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Kevin Webster |

| | | |
|---|---|---|
| **4/29/2026** | Kevin Young | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing.<br><br>Sincerely,<br>Kevin Young |

| | | |
|---|---|---|
| **4/29/2026** | Kevon Mitchell | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |
| **4/20/2026** | Khammila Shimray | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Kianna Broadway | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Kianna Broadway |

| | | |
|---|---|---|
| **5/3/2026** | Kiersten Bell | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Kiersten Bell |

| | | |
|---|---|---|
| **5/3/2026** | kiley lovejoy | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  kiley lovejoy |
| **5/3/2026** | Kiley Mckenzie | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Kim | I do not support the MoPac expansion and the damage it will do to our Springs. |

| | | |
|---|---|---|
| **5/3/2026** | Kim Baker | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Kim Baker |

| | | |
|---|---|---|
| **4/29/2026** | Kim Corral | To  Central Texas Regional Mobility Authority CTRMA,<br><br>I OPPOSE expanding MoPac South. The city needs to SUPPORT regional rail and a world class bike/pedestrian network. I want a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA).<br><br>The CTRMA needs to solve traffic by investing in the bus system, the regional rail system, and multi-modal transportation systems. More lanes creates more traffic and we are tired of living our lives inside a car. The community wants to take the bus/train, walk, bike, scooter safely; we can't do that if we are trapped in a network of highways. Expanding MoPac is the biggest waste of money, will be detrimental to the local ecology, and will reduce the quality of life of everyone. DO NOT EXPAND. |

| | | |
|---|---|---|
| **5/3/2026** | Kim Flores | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Kimberly Flores |
| **5/3/2026** | Kim Meyer | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Kim Meyer |

|---|---|---|
| **4/28/2026** | Kim Schaefer | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| **4/24/2026** | Kimberly Bolanos | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Kimberly Dircio | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Kimberly Dircio |

| | | |
|---|---|---|
| **5/3/2026** | Kimberly Fassiotto | Hello,<br><br>As a LONG-TIME resident and citizen of Austin, you need to know that I OPPOSE the expansion plans of South MoPac!<br><br>Research shows that: the expansion of lanes and widening roads do not improve traffic patterns!<br><br>* Sinking $825 million dollars in to this project? NO!<br>* 9 years of construction noise and pollution? NO!<br>* Adding over 110 acres of pavement? NO!<br><br>Austin citizens need to see a full Environmental Impact Statement (EIS)!<br><br>It is also important that you know that I SUPPORT funding for rail transit and biking options instead!<br><br>Do we want to be another Houston or Dallas!? NO!<br><br>Please protect Austin and its citizens by providing more environmentally-safe and thoughtful transit options!<br><br>Kim Fassiotto |

| | | |
|---|---|---|
| **3/29/2026** | Kimberly Giambrone | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |
| **5/3/2026** | Kimberly Giambrone | I do not want this project to continue at the detriment of the watershed. Please reconsider we have to protect what makes Austin beautiful. |
| **5/3/2026** | Kimberly Haas | I am against the south mopac expansion project. I am an affected homeowner in the neighborhood, and I am strongly against the disruption during construction, the environmental expense, the noise and pollution caused by construction, and the monetary expense. There is minimal benefit for the overwhelming costs, and I am firmly against this project. |
| **4/29/2026** | Kimberly Hill | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |
| **5/3/2026** | Kimberly Jagst | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Kimberly Jagst |
| **3/19/2026** | Kimberly Levinson | There is no need to expand MoPac. All you will do is induce more demand. Expanding the Katy Freeway hasn't helped at all, it's still a congested mess. Put the money into mass transit, like a train, or refund it to taxpayers. Either would be far more useful. |

| | | |
|---|---|---|
| **5/1/2026** | Kimberly LEVINSON | To Whom It May Concern:<br><br>Please reconsider your current expansion plan. There are serious questions about environmental damage that your lack of a comprehensive environmental assessment have not answered.<br><br>Also, the benefits are unclear. A one-lane each way expansion would provide almost the same benefits with far less environmental impact, and travel time throughout the whole corridor would only be about five minutes more even at rush hour. I believe our environment is worth five minutes extra.<br><br>Thank you for your consideration,<br><br>Kimberly Levinson<br><br>Vice President, Downtown Austin Neighborhood Association. |

| | | |
|---|---|---|
| **4/23/2026** | Kimberly Love | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Kimberly Love |

| | | |
|---|---|---|
| **4/23/2026** | Kimberly Love | I oppose the expansion of MoPac based on the negative impact it will have on the land and water, the animals and plants, and our way of life in Austin. The generations before us have had to fight to preserve the work of Lady Bird Johnson, and other environmentalists, and we will now take up the charge to protect what belongs to the people that live in Austin. These green spaces, these waters, and the life they house are to be protected, not destroyed for more lanes of highway. There are other viable solutions to our traffic issues. We should look to well functioning large cities around the world and learn from their design and planning. Adding highway lanes will not prove to be the answer. I want to see a full environmental impact report, with full transparency on all facets of this proposed project. The people of Austin should get to vote on this issue, but if we are not to cast ballots, then we will make ourselves heard in other ways. I am a teacher, a mother, a local, and someone who spends a lot of leisure time along Lady Bird Lake, in and around Barton Springs, and on the green belt. It is essential to my mental health to be able to walk in these green spaces nestled within our increasingly urban environment. Thank you for your time. |

| | | |
|---|---|---|
| **5/3/2026** | Kimberly Love | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Kimberly Love |

| | | |
|---|---|---|
| **5/3/2026** | Kimberly Luna | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Kimberly Luna |

| | | |

| | | |
|---|---|---|
| **4/25/2026** | Kindra Welch | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Kindra Welch |

| | | |
|---|---|---|
| **5/3/2026** | Kinsey Cole | I am formally requesting that the proposed MoPac South (Loop 1) expansion not move forward in its current form. This project poses serious and unacceptable risks to the Edwards Aquifer and Barton Springs, which are among the most environmentally sensitive and culturally significant natural resources in Central Texas. Increased impervious cover, roadway runoff, and construction activity over the recharge zone threaten water quality and long-term ecosystem health. Barton Springs is not only a natural landmark, but a critical habitat and a defining feature of Austin. Any project that jeopardizes its water quality should be reconsidered with far greater caution. I strongly urge you to halt or significantly revise this expansion to prioritize aquifer protection, invest in alternative transportation solutions, and ensure that environmental preservation is not compromised for roadway capacity. |
| **3/19/2026** | Kira McCool | Do not expand MoPac. We have plenty of highway and building more will make congestion worse on MoPac and in surrounding areas. I support converting a lane into an HOV lane and continuing bike infrastructure from 71 all the way down to Slaughter to give people who don't drive a highway of their own. The only way to fix traffic is taking cars off the road; widening the highway will not accomplish this, it will make the problem worse. Do not expand Mopac South. |
| **4/20/2026** | Kiran Ireland | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/21/2026** | Kirk Runyon | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Kirsten Whitney | Expansion of the proposed highway would detrimental to not only the environment, but also the beauty of the downtown area. Please don't lose sight (quite literally) of this beautiful city we've built  together and love. |
| **5/3/2026** | Kirsti Harms | This project needs a full EIS because of the impact on our caves, and as a result, our clean water (and endangered species). It is going to have a negative impact on the neighborhoods and schools along Mopac—including air quality. I live along I-35 and know what it is like to live by a busy highway, which is also in the process of expanding. It is impacting the quality of life in my neighborhood. I've watched the Oak Hill "Y" expansion and it has been shocking. The impact to the creeks and surrounding environment has been massive. All for the benefit of the sprawl in Dripping Springs and Bee Cave. The amount of digging and concrete has completely altered that landscape and community of Oak Hill. If Austin's goal has been infill, this is not the answer. And, if it ultimately doesn't significantly shorten the commutes of people living outside the city, why destroy some of the most sensitive and nicest parts of this city? We need to rethink transportation in Austin! |

| | | |
|---|---|---|
| **4/21/2026** | Kirstin Boyd | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Kirstin Boyd |

| | | |
|---|---|---|
| **5/3/2026** | Kit Bell | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Kit Bell |

Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |

| **5/3/2026** | Kollyn Saenz | PLEASE for the love of our city, do NOT add another construction project.Mopac 1 doesn’t not need any new additions. It flows and only backs up at peak hours. Adding or expanding would only create more traffic. All traffic being redirected from the construction of opposing highway (interstate 35) having multiple MAJOR traffic areas under construction would be catastrophic to the already struggling flow of traffic during peak. As I do understand the potential long term effects of not expanding our growing city, I feel as though there are many more high priority reasons NOT to. Bring me to my next plea, Austin is known for its outdoor encouraged activities and accessibly not only to locals but also to travelers which bring over |

| | | |
|---|---|---|
| | | $750 million in annual local tax revenue, supporting roughly 68,000 to over 140,000 jobs in the hospitality sector. Please consider all of the people who would be negatively impacted on a daily basis and understand that this is not okay. |
| **4/30/2026** | Konstanze Johnson | Environmental Impact Study is hugely important and must be done to ensure no harm is done to Zilker, Lady Bird, or the wildlife in the area. |
| **4/22/2026** | Korben White | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| **5/3/2026** | Kourtney Boyd | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Kourtney Boyd |

| **4/20/2026** | Krista Cedergren | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/22/2026** | Krista Del Gallo | N/ A |

| | | |
|---|---|---|
| **4/27/2026** | Krista Grigoriou | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. | **5/3/2026** | krista leon | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  krista leon |
| **4/30/2026** | Kristen Attaway | I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |

| | | |
|---|---|---|
| **4/29/2026** | Kristen Bowdre | One of the things I love about living in Austin is the proximity to beautiful, well cared for outdoor spaces, including Zilker Park and Barton Springs. These are beloved spaces that many Austinites and tourists enjoy on a regular basis. The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. |
| **5/3/2026** | Kristen Duron | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Kristen Duron |
| **5/3/2026** | Kristen Fare Langham | As a native Austinite, born and raised I am urging the city council to authorize a full environmental impact study that does not cut corners. The city council is elected by the residents to act as our voice and protect our interests. CTRMA does not have our best interest at heart. The mopac expansion project will rob the citizens of clean water, park lands, and tree canopy which are all reasons that so many have chosen to reside in Austin. Please do the right thing. |
| **3/28/2026** | Kristen Hudgens | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |

| | | |
|---|---|---|
| **4/21/2026** | Kristen ONeill | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/29/2026** | Kristen Parietti | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |
| **5/3/2026** | Kristen Poklg | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.Sincerely,Kristen Pokky |

| | | |
|---|---|---|
| **4/29/2026** | Kristen Williams | I support the "no build" alternative to Mopac South Expansion. I urge CTRMA to undertake a full Environmental Impact Study (EIS) per federal standards, including a traffic study on the impacts of the project on surrounding roads and propose lower impact, lower cost alternatives.<br><br>Construction congestion<br><br>The years of construction-related traffic congestion and environmental degradation caused by this project are simply not worth the minimal projected improvements in travel time. Central Austin residents, including students at Austin High, and everyone who enjoys Zilker Park, Barton Springs, the Hike and Bike Trail at Lady Bird Lake, the Barton Creek Greenbelt, and Deep Eddy Pool will suffer through many years of construction congestion and bear the brunt of the environmental impacts (noise pollution, poor air quality, and compromised water quality) while enjoying the tiny benefit of a couple minutes travel time even many years after this project is built.<br><br>Toll Roads don't help general users<br><br>Toll roads are not a solution to the root cause of congestion and only serve a small portion of roadway users (30,000 to 40,000 users per month / 180,000 roadway users = 16-22%). Limited entry and exit points and demand pricing keep toll roads from being useful to most people who live in Central Austin, while prioritizing those who choose to live far from the city center.<br><br>Environmental Degradation<br><br>I do not believe the environmental harm caused by this construction is worth a few minutes of travel time. Increasing air pollution, noise pollution, and toxic runoff from cars will negatively impact one of the most environmentally sensitive and cherished areas of our region. We must protect the Edwards Aquifer, Barton Springs, the Barton Creek Greenbelt, the hike and bike trail, Deep Eddy Pool, and Zilker park from excessive development and traffic and its negative environmental impacts.<br><br>Fiscal irresponsibility |

| | | |
|---|---|---|
| | | There are a wide variety of low cost congestion relief measures that could improve the South Mopac Corridor and reduce peak time congestion without expansion that should be explored and tested before proposing expansion. These strategies include lengthening entry and exit ramps, restriping, HOV lane at peak times, park and ride facilities, transit routes, addressing surface and connector road congestion that backs up onto MoPac, among others. We should not be jumping into a $824 million dollar project without first exploring and testing low cost congestion relief measures that will help all roadway users before expansion.<br><br>The future is unknown<br><br>This project or any expansion of MoPac should not take place until I-35 construction is complete and resulting traffic patterns can be studied. The simultaneous creation of the SH-130 autonomous trucking route also has the potential to majorly impact traffic flows in our region by rerouting trucking traffic from I-35 and should be allowed to play out and be studied as another factor in assessing the need of MoPac expansion. Furthermore, we are on the horizon of autonomous vehicle adoption in many sectors which will change traffic patterns throughout our region. Expanding MoPac based on the outdated information in the MoPac South draft environmental assessment risks over or underbuilding the road based on incomplete and outdated demand projections. |
| **5/3/2026** | Kristen Wollmuth | Do not build the expansion for MoPac South. Please put the money towards public transportation! |

| | | |
|---|---|---|
| **5/3/2026** | Kristene Mouton | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Kristene Mouton |

| | | |
|---|---|---|
| **4/22/2026** | Kristi Frederick | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for time and consideration<br><br>Respectfully,<br><br>Kristi Frederick |

|---|---|---|
| | | Respectfully,<br><br>Kristi Frederick |
| **4/30/2026** | Kristi H Shock | I love Barton Springs! It’s where I take friends and family when they visit, it’s where my kids have grown up going every summer and we DEMAND A FULL ENVIRONMENTAL STUDY of the enormous impact that the Mopac expansion will have on Barton Springs. It is the law that this study is done. |

| | | |
|---|---|---|
| **4/20/2026** | Kristian Poe | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/28/2026** | Kristie Bryant | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |

| | | |
|---|---|---|
| **4/28/2026** | Kristin Bramblett | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Kristin Bramblett |
| **4/29/2026** | Kristin Kibbee | We take daily walks through the remaining sliver of woods between Mopac and our street (Nairn). The road noise is heard in our bedroom 100% of the time. The damage to the remaining wildlife habitat due to destruction and noise pollution is not worth saving anyone only 5 minutes of travel time. For us it will be the difference between continuing to live here or moving away. Please pursue other projects, but leave Mopac and our slice of nature alone. Thank you. |
| **5/2/2026** | Kristin McHenry | I oppose converting South MoPac into a toll road. Expanding capacity will likely increase traffic over time, worsening air quality, noise, and runoff affecting nearby green spaces and Barton Creek Greenbelt. The addition of toll lanes also creates inequitable access, where faster travel depends on ability to pay. I urge consideration of alternatives that reduce congestion without expanding the roadway footprint, including transit and demand management strategies. |

| | | |

| **4/23/2026** | Kristina Kokkonos | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |
|---|---|---|
| **3/28/2026** | Kristine Bradley | This project will allow more Austin residents access to great cycling options. And significantly increase safety along the 45/mopaq stretch of highway. Let's do it! I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |
| **5/3/2026** | Krittika Krishnan | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the |

| | | |
|---|---|---|
| | | parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Krittika Krishnan |

| | | |
|---|---|---|
| **5/3/2026** | Kurren Zapata | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Kurren Zapata |
| **4/29/2026** | Kurt | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |

| | | |
|---|---|---|
| **5/3/2026** | Kye Suggs | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Kye Suggs |

| **4/23/2026** | Kyla Peterson | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/23/2026** | Kyla Scott | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/29/2026** | Kyle G. Saathoff | I am reaching out in opposition to the expansion of MOPAC for fiscal and environmental reasons. Decades of research on transportation methods and effects have taught us that expanding a freeway in length or width only serves to expand development and encourage more/longer drives. You can look at the internationally-scorned Katy Freeway where billions of taxpayer dollars have gone into a project which has resulted in longer travel times for commuters and higher transportation costs for businesses and thus consumers. USDOT, TXDOT and local government dollars have all been thrown at a project which costs us all additional time and money on top of that. If the goal of the MOPAC project is to move people or to decrease congestion, you as an agency must follow the research which shows that private automobiles are ineffective at accomplishing either of those goals. The way to reduce congestion (and the resultant traffic deaths, lost time and idling motor pollution) is to provide effective and reliable alternatives to driving. If a train or bus goes where people want to go and it doesn't suck, they can be convinced to use it. The environmental impact of over a hundred lost acres of wild hill country is obvious, as is the obvious damage caused by vehicle exhaust, expanded home construction, pavement runoff, microplastics from tire rubber and increased heat island issues as asphalt coverage expands as a direct result of MOPAC expansion. These factors are obvious, but must be stated to show that the constituency cares about these things. I want the |

| | | |
|---|---|---|
| | | Austin metropolitan area to remain livable and that means easy transportation for PEOPLE and long-term thinking from our leaders to ensure we don't encourage and subsidize outward expansion and the resulting waste |
| **4/20/2026** | Kyle Hayes | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>-creating more pollution into the lake<br>-will possibly make the lady bird lake killer harder to catch<br>Thank you for your time and consideration. |
| **5/3/2026** | Kyle Matthews | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT |

| | | |
|---|---|---|
| | | proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Kyle Matthews |
| **5/3/2026** | Kyle Peters | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Kyle Pursell | Dear CTRMA,<br>We don’t need more toll roads. We should be spending this money on advancing innovative transportation initiates in Austin.<br>Not to mention, the risk we’re taking by moving forward on this plan. It’ll likely compromise some of the most beautiful landscape, parks, and species that make Austin unique.<br>Please do not proceed with this plan. It’s bad for Austin. |

| | | |
|---|---|---|
| **5/3/2026** | Kyle Selby | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Kyle Selby |
| **4/21/2026** | Kyle Spencer | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | Respectfully,<br><br>Kyle Spitzer |
| **4/30/2026** | Kyle Z | Let's put aside for a moment that this is yet another on a long, LONG list of attempts to alleviate highway congestion by adding more lanes to the highway (a trick which, as we should all know by this point, does not work). Even if we had the slightest hope that this project would help in the long term, the stretch of road you're looking to build runs right into town lake, Zilker, the greenbelt, and countless creeks and streams across the Edward's aquifer recharge zone. A project of this magnitude cannot be undertaken without a comprehensive analysis of the environmental impact that it will have on our natural spaces; in no universe is a simple environmental assessment sufficient to that end. I'm sure you all know this, and I'm sure you know that there will be a lawsuit if these concerns go unaddressed and the project pushes ahead without taking the proper steps to understand the potential consequences. Do the right thing and save yourselves the trouble. |

| | | |

A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |
|---|---|---|
| **4/25/2026** | Kyler Burke | Dear CTRMA Board Members,<br><br>I am writing to express my absolute and vehement opposition to the proposed expansion of highways through Austin's critical aquifer recharge zones. The sheer disregard for the long-term environmental and public health consequences of such a project is not only appalling, but a reckless betrayal of our responsibility to future generations.<br><br>It is beyond comprehension that anyone would consider plowing through these protected areas to pave the way for more concrete and asphalt. Are we truly willing to jeopardize our precious water resources for the sake of convenience and short-term gains? The aquifers that provide the lifeblood of our city's water supply deserve far more respect than to be put at risk for an outdated, ill-conceived transportation plan.<br><br>This expansion is not a solution, but a symptom of an old, backward way of thinking that continues to prioritize cars over communities, the environment, and the sustainable future we all deserve. The potential damage to the aquifer—through runoff, pollution, and the inevitable disruption of natural water filtration processes—would be catastrophic. It is a slap in the face to every resident who values clean, reliable water and a livable environment.<br><br>Rather than pushing forward with a highway expansion that will only worsen congestion, air quality, and sprawl, we must shift our focus to forward-thinking, sustainable solutions. We need investment in public transit, bike infrastructure, and green spaces—not more highways that prioritize cars over the very natural resources we rely on.<br><br>I implore you to reconsider this reckless proposal, stand up for the protection of our aquifers, and instead advocate for projects that truly reflect the values of sustainability, innovation, and respect for the environment.<br><br>Contemptuously Disgusted,<br><br>Kyler Burke |

| | | |

| **4/27/2026** | Kylie Hogg | Barton springs and the Edward's aquifer is a historic water source and ecosystem that benefits the entire hill country, not just Austin. It gives it culture and brings it together. It is already facing major change and under threat and an expansion of Mopac could disrupt this already fragile ecosystem and potentially destroy it forever. This project would be a disaster and a disgrace to the Texas people. |
| **5/3/2026** | Kylie Mask | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. This city is so beautiful compared to other cities in the South because it is still accessible and welcoming. Please don't make it more difficult for citizens to enjoy what makes Austin unique. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Kylie Mask |

| **5/3/2026** | L Johnston | Dear CTRMA Board Members, I was born ad raised in Austin Texas. One if not THE reason people stay and move to Austin, is not the traffic or building more roads ( <span style="caret-color: #080809; color: #080809; font-family: system-ui, -apple-system, BlinkMacSystemFont, '.SFNSText-Regular', sans-serif; font-size: 15px; white-space: pre-wrap; background-color: #ffffff;">Mopac expansion) but the natural resouses and enjoyment of outdoor areas starting with BARTON CREEK. There are always "deciiders" who do not care about nature which is a HUGE part of living in Austin. This is simply a land grab when there are plenaty of other choices. The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, L Johnston |

| **5/1/2026** | L. Mir Sommerfeld | Hello,<br><br>I'm reaching out to voice my opposition for the south Mopac highway expansion project. Highway expansion projects have proven time and time again over the past 100 years that they don't improve traffic, they just create more of it. We've seen this in our own backyard with the Katy freeway, and Austin can't afford to make the same mistake. Increased pollution, more driving, and suburban sprawl will only create more problems for the next generation to address.<br><br>The funding would be more efficiently spent on increased transit reliability, creating shared use paths for pedestrians and cyclists, as well as crossings over the highway at regular intervals. I walk, bus, and bike most places, but I am often forced to drive when the highway cuts off access to the destinations in town that I would rather visit on foot or bike, and this is a great opportunity to provide that access via quarter mile frequency crossings. I don't want to further entrench driving as the only way to get around our city.<br><br>I love visiting Barton Springs and Zilker Park frequently; I want a full environmental impact statement because this is such a delicate ecosystem and we wouldn't be Austin without it.<br><br>Thank you,<br><br>Louie Sommerfeld |

| **3/19/2026** | Laine Hardy | I strongly oppose the proposed South Mopac Expansion. I live [Redacted Personal Information] from Mopac and strongly believe that no expansion should take place. I believe that all plans to alter MoPac south should be suspended until after the I-35 construction is complete. I do not trust that the traffic projections take into account the behavior changes that will take place for drivers related to the I-35 construction, nor do they take into account the rise of autonomous vehicles, and changing economic growth in the region. The proposed plans to elevate lanes will increase noise pollution in many areas surrounding the project, not to mention increase other environmental degradation from increased impervious cover. This project will become an eyesore in an otherwise lovely place while not providing a significant benefit to users. I am also appalled to see another unjust proposal to include a demand priced toll lane which serves only to line the pockets of its operators and increase the inequality between those who can afford to pay and those who cannot. Public roadways should remain public. The project also spend a huge amount of time and money and will not relieve major congestion points, such as the intersection of westbound 360 at Mopac, which shows that this project is not fully thought out in the best interest of regional mobility. The best option for South MoPac is to do nothing! No expansion! |

| | | |
|---|---|---|
| **4/8/2026** | Laine Hardy | I strongly support a no build alternative to this plan! The proposed cloverleaf freeway entry at Lake Austin Blvd will create excessive congestion on West 6th and Lake Austin Blvd that will create a local traffic nightmare for those of us who live in West Austin, Tarrytown, and Deep Eddy. This ramp is also shown crossing a major bike lane and bike route which will create an unsafe condition for pedestrians and cyclists. I strongly oppose any roadway design for MoPac that includes raised travel lanes like those being proposed for the toll lanes in this project. These elevated roadways are an eyesore and encourage homeless encampments and trash dumping. I recently walked the Johnson Creek trail below MoPac between 7th Street and West 5th Street. It is full of trash, many homeless camps, and terrible erosion and environmental degradation. If TxDot or Central Texas Regional Mobility Authority are not going to maintain these areas, elevated concrete bridges and travel lanes should not be allowed, especially in environmentally sensitive areas. I also demand a more fiscally responsible solution. While I understand that the toll lanes are a revenue source, the initial spend for elevated concrete lanes will be excessive. As taxpayers, we need to see solutions that improve congestion without expansion by properly designing expressway access and exit points, re-striping, reducing confusion and merging, and safety improvements. Furthermore, I am concerned about the safety of drivers during construction. North MoPac at 183 - Anderson Lane has been under construction for some time and the temporary lanes and merging conditions are very unsafe for drivers. I have seen numerous crashes in that construction zone and I hardly ever travel through there. This plan doesn't take into account rapidly changing technologies. Technology is changing and it is impacting our mobility. Autonomous vehicles and AI are sure to change transportation and there is no way for the authors of this study to have incorporated those changes into this plan. If the planners of this project are using projections for 2045 started in 2015 and documented in 2018 and 2023, long before autonomous vehicles became commonplace on Austin streets. I do not trust that congestion will grow as these traffic studies project. Study after study of expressway construction does show that demand swells to fit the roadway. Yet again, this plan is an outdated solution when planners have many examples of how these sorts of expansion plans do not help in the long run. Its time Central Texas Regional Mobility Authority proposes a visionary solution that sets the standard for future infrastructure. |

| | | |
|---|---|---|
| **4/29/2026** | Laine Hardy | CTRMA,<br><br>I do not support the proposed expansion of Mopac South. I am in favor of a no build alternative.<br><br>I am a Central Austin resident who lives near Deep Eddy Pool. I believe the project will create significant harm to myself and my community by creating excessive traffic congestion during construction, generating additional noise pollution in addition to that we already suffer from, and poor air quality from increasing traffic. The years of construction-related traffic congestion and environmental degradation caused by this project are simply not worth the minimal projected improvements in travel time. Central Austin residents, including students at Austin High, and everyone who enjoys Zilker Park, Barton Springs, the Hike and Bike Trail at Lady Bird Lake, the Barton Creek Greenbelt, and Deep Eddy Pool will suffer through many years of construction congestion and bear the brunt of the environmental impacts (noise pollution, poor air quality, and compromised water quality) while enjoying the tiny benefit of a couple minutes travel time even many years after this project is built. In addition, the design of these limited exit and entry toll lanes create a situation whereby Central Austin residents are subjected to years of construction congestion, noise and environmental degradation, but it rarely makes sense for us to use them. These toll lanes prioritize a small percentage of drivers who are heading far across town while leaving the thousands of us who bear the brunt of the project with no better way to access places within 3 miles of our homes.<br><br>In addition, I do not support elevated lanes of any kind. I live just two blocks from the Johnson Creek waterway which was devastated by the many layers of ramps and bridges that previous construction of MoPac created. The Johnson creek area is home to incredible landforms that were once a beautiful riparian watershed. The area is now destroyed by the elevated roadways which are a terrible eyesore, generate excess runoff and pollution from the concrete roadways, and create a sheltered environment for illegal dumping and homeless camps. CTRMA must not create elevated roadways, which are a magnet for trash and environmental degradation, especially not in the environmentally sensitive Edwards Aquifer zone. Beyond the mess that elevated lanes create below, elevated lanes generate excessive noise that is not effectively blocked by at grade noise barriers. I experience this daily at my own house where no sound barrier was installed to prevent the noise from reaching my house (built in 1930, long before the highway).<br><br>I believe that CTRMA must undertake a full Environmental Impact Statement (EIS) per federal standards and a traffic study that studies the congestion that will result from this project on connecting roadways. We deserve to be presented with the full picture of how these projects will impact the lives of people who live and travel within the project area.<br><br>There are a wide variety of low cost congestion relief measures that could improve the South Mopac Corridor and reduce peak time congestion without expansion that should be explored and tested before proposing expansion. These strategies include lengthening entry and exit ramps, restriping, HOV lane at peak times, park and ride facilities, transit routes, |

| | | |
|---|---|---|
| | | addressing surface and connector road congestion that backs up onto MoPac, among others. We should not be jumping into a $824 million dollar project without first exploring and testing low cost congestion relief measures that will help all roadway users before expansion.<br><br>This project or any expansion of MoPac should not take place until I-35 construction is complete and resulting traffic patterns can be studied. The simultaneous creation of the SH-130 autonomous trucking route also has the potential to majorly impact traffic flows in our region by rerouting trucking traffic from I-35 and should be allowed to play out and be studied as another factor in assessing the need of MoPac expansion. Furthermore, we are on the horizon of autonomous vehicle adoption in many sectors which will change traffic patterns throughout our region. Expanding MoPac based on the outdated information in the MoPac South draft environmental assessment risks under or overbuilding the road based on incomplete and outdated demand projections.<br><br>Thank you,<br><br>Laine Hardy |

| | | |
|---|---|---|
| **5/3/2026** | Lainey Brown | To Whom It May Concern, As a native Austinite, I grew up in a time (90s/00s) when we were taught to respect the uniquely beautiful environment that makes Austin special. Austin was known as an environmentally conscious city, we had Keep Austin Beautiful, and many organizations and local businesses committed to keeping the waterways, green belts, and air quality clean for our natural ecosystems and the community at large. As a 34 year old who moved back home to Austin in 2019, it saddens me deeply to see these values quickly be thrown by the wayside in favor of expensive projects that benefit developers over our environment and citizens time and time again. The people do not want more toll roads. We don't want mega highways like in California--the mass migration of Californians I'm sure would agree, they moved here to Austin for a reason. The five minutes of time on the road that this expansion would save drivers is nowhere near worth the value of protecting our sensitive Edwards Aquifer recharge zone and the natural heart of our city, Barton Springs. Not to mention the years of construction that will surely make traffic worse for the next 5-7 (to who knows how long) years this project will be ongoing. This project will benefit no one but the contractors building it. And the CTRMA profiting from tolls. And just to be clear, I am a commuter--I live north of the river and commute to south Austin via mopac multiple times a week. I would much rather sit in traffic than see this happen. It is simply not worth the environmental and time cost. I also have family in both north and south Austin and this kind of major long-term construction will make it much harder on my family to be able to get to each other. It will put added stress on our lives. I believe this project will further alienate north and south Austin communities from one another. Thank you for your time. And please find another way to make the improvements you want to make without costing our environment and people so dearly. There are many creative people in this town. Hire some of them. Lainey Brown, Native Austinite |
| **5/3/2026** | Lainey Brown | Dear CTRMA Board Members, We need to stop prioritizing the wrong things. So what if it takes people a little longer to get where they're going? What truly matters is clean air, the health of our ecosystems, and protecting the natural beauty of Austin which is what attracts so many people to live here in the first place. And I say this as a commuter who crosses the mopac bridge multiple times a week. I would gladly stay in traffic longer if it means our environment is protected. ?? Thank You for listening to your neighbors, Lainey Brown |
| **5/3/2026** | Lainey Brown | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Lainey Brown |

| | | |
|---|---|---|
| **5/3/2026** | Laith Toma | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Chip Douglas |

| | | |
|---|---|---|
| **5/3/2026** | Lallitha Grace | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Lallitha Grace |

| **4/20/2026** | Lambra Lewellen | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Lana Lominguez | Hi, this is Iana Lominguez. I oppose the Mopac Highway Expansion Project that would further jeopardize Edward Aquifer and the fragilebeauty and unique cave systems in Austin that would have concrete poured into them and directly impact Austin's water supply.Our endangered species like the salamander at Barton Springs and part of what makes Austin so special,All of an estimated five-minute traffic shaved off of commuting traffic, but in the meantime,adding an enormous amount of commute time for years.Ultimately, it would add to our commuting problem.It makes no sense, we're better off investing in public transportation like the train systemalready in development, more biking and walking trails.Cities have traffic, highway expansion hasn't been effective or efficient in preventingtraffic in other major cities who have invested lots in these projects, like Dallas, for example.I oppose.Please, please, please don't further this project.Thank you. |
| **5/3/2026** | Lana Nelson | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Lana Nelson |
| **3/19/2026** | Lance Gliser | I do not believe that additional lanes create an effect solution. Options for more efficient transit are required to get additional transit throughput. |

| | | |
|---|---|---|
| **4/27/2026** | Lance Morrison | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |
| **5/3/2026** | Landon Alhadef | This project must not go on. |

| **4/20/2026** | Lara Alvarez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Lara Hallock | I support the "no build" alternative to Mopac South Expansion. I urge CTRMA to undertake a full Environmental Impact Study (EIS) per federal standards, including a traffic study on the impacts of the project on surrounding roads and propose lower impact, lower cost alternatives. Construction congestion The years of construction-related traffic congestion and environmental degradation caused by this project are simply not worth the minimal projected improvements in travel time. Central Austin residents, including students at Austin High, and everyone who enjoys Zilker Park, Barton Springs, the Hike and Bike Trail at Lady Bird Lake, the Barton Creek Greenbelt, and Deep Eddy Pool will suffer through many years of construction congestion and bear the brunt of the environmental impacts (noise pollution, poor air quality, and compromised water quality) while enjoying the tiny benefit of a couple minutes travel time even many years after this project is built. Toll Roads don't help general users Toll roads are not a solution to the root cause of congestion and only serve a small portion of roadway users (30,000 to 40,000 users per month / 180,000 roadway users = 16-22%). Limited entry and exit points and demand pricing keep toll roads from being useful to most people who live in Central Austin, while prioritizing those who choose to live far from the city center. Environmental Degradation I do not believe the environmental harm caused by this construction is worth a few minutes of travel time. Increasing air pollution, noise pollution, and toxic runoff from cars will negatively impact one of the most environmentally sensitive and cherished areas of our region. We must protect the Edwards Aquifer, Barton Springs, the Barton Creek Greenbelt, the hike and bike trail, Deep Eddy Pool, and Zilker park from excessive development and traffic and its negative environmental impacts. Fiscal irresponsibility There are a wide variety of low cost congestion relief measures that could improve the South Mopac Corridor and reduce peak time congestion without expansion that should be explored and tested before proposing expansion. These strategies include lengthening entry and exit ramps, restriping, HOV lane at peak times, park and ride facilities, transit routes, addressing surface and connector road congestion that backs up onto MoPac, among others. We should not be jumping into a $824 million dollar project without first exploring and testing low cost congestion relief measures that will help all roadway users before expansion. The future is unknown This project or any expansion of MoPac should not take place until I-35 construction is complete and resulting traffic patterns can be studied. The simultaneous creation of the SH-130 autonomous trucking route also has the potential to majorly impact traffic flows in our region by rerouting trucking traffic from I-35 and should be allowed to play out and be studied as another factor in assessing the need of MoPac expansion. Furthermore, we are on the horizon of autonomous vehicle adoption in many sectors which will change traffic patterns throughout our region. Expanding MoPac based on the outdated information in the MoPac South draft environmental assessment risks over or underbuilding the road based on incomplete and outdated demand projections. |

| | | |
|---|---|---|
| **4/22/2026** | Laraine Ruiz | Dear CTRMA,<br><br>I am deeply concerned about the continued expansion of major roadway construction in Austin, especially with both I-35 and MoPac being subjected to major disruption at the same time. These are the two primary north-south corridors that much of the city depends on every day, and in an already congested city, this overlap will place an enormous and deeply unfair burden on residents, commuters, emergency access, and overall quality of life. Austin traffic is already at a breaking point, and layering major disruption onto both of these essential routes will not just create inconvenience. It will worsen gridlock across the city, force traffic into surrounding neighborhoods, increase commute times, raise stress levels, and make dangerous driving and road rage even more common. Residents are being asked to absorb the cost of planning decisions that feel poorly coordinated and detached from the reality of daily life in this city. At the same time, this project raises serious environmental concerns because it runs through an area connected to the aquifer. That should alarm anyone who cares about Austin's long-term water security and ecological health. The public should not be expected to accept worsening traffic, heightened safety risks, and potential environmental damage as the price of "progress".<br><br>I request there is full disclosure of all voting members relation to the companies active in the MoPac project. |

| **4/28/2026** | Larissa Slota | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Larissa Slota | Don’t expand mopac plz. No one wants that. We will happily sit in traffic if you don’t touch our beautiful green spaces |
| **5/2/2026** | Larry D. Higgins | Against |
| **3/28/2026** | Larysa Mysyk | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it’s only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |

| | | |
|---|---|---|
| **4/13/2026** | Laura Farb | Dear CTRMA Board Members,<br><br>Also, to add to my previous comment, toll lanes ruin everything. It doesn't spread out the traffic. Take a look at Denver and other cities. Look at the back up right at the bottle neck of the 5th/caesar Chavez area leading up to the Barton Skyway exit. Doesn't create a safer flow of traffic. Creates people speeding by stopped traffic and then dangerous merges in the left and right.<br><br>Please reconsider the mopac expansion with statistical driven research and the integrity to protect our resources: for Barton Springs and for our natural habitats, which wildlife can't advocate for.<br><br>Thank you.<br><br>Sincerely,<br><br>Laura Farb |

|---|---|---|
| **4/23/2026** | Laura Morgan | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Laura Morgan |
| **3/19/2026** | Laura Beck | Please don't expand the highway anymore. It's too much construction and very little benefit |

| | | |
|---|---|---|
| **4/7/2026** | Laura Beck | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. |

| | | |
|---|---|---|
| | | Overall, this is a stupid project and I'm tired of all the construction. Stop making things worse in the environment for little to no benefit of anything else.<br><br>For the love of water in Central Texas,<br><br>Laura Beck |

| | | |
|---|---|---|
| **4/22/2026** | Laura Benson | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/27/2026** | Laura Bettor | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Laura Bettor |
| **4/27/2026** | Laura Bettor | I am against this project for many reasons. It is not worth it. What happens to the traffic getting dumped on Cesar Chavez? It will be worse than ever. Austin High School students are not even being considered. The drive times stated are not good enough - it's not worth it! And as stated, this will encourage more traffic due to more development, and will move traffic off of I-35 and onto Mopac. I know that you have heard all of these arguments. One that I have not heard anyone mention is that this is horrible for older people! So many older people are already too afraid to drive in this town. This will isolate older people and people who suffer from anxiety. So not worth it! One more thing. South Austin is all we have left of Austin, and it's going fast. This will put the nail in the coffin and ruin the beautiful landscape. If you want crazy highways, go to Dallas. |

| | | |
|---|---|---|
| **4/23/2026** | Laura Brown | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. | **5/3/2026** | Laura Bryant | I support the "no build" alternative to Mopac South Expansion. I urge CTRMA to undertake a full Environmental Impact Study (EIS) per federal standards, including a traffic study on the impacts of the project on surrounding roads and propose lower impact, lower cost alternatives.<br><br>Construction congestion<br><br>The years of construction-related traffic congestion and environmental degradation caused by this project are simply not worth the minimal projected improvements in travel time. Central Austin residents, including students at Austin High, and everyone who enjoys Zilker Park, Barton Springs, the Hike and Bike Trail at Lady Bird Lake, the Barton Creek Greenbelt, and Deep Eddy Pool will suffer through many years of construction congestion and bear the brunt of the environmental impacts (noise pollution, poor air quality, and compromised water quality) while enjoying the tiny benefit of a couple minutes travel time even many years after this project is built.<br><br>Toll Roads don't help general users<br><br>Toll roads are not a solution to the root cause of congestion and only serve a small portion of roadway users (30,000 to 40,000 users per month / 180,000 roadway users = 16-22%). Limited entry and exit points and demand pricing keep toll roads from being useful to most people who live in Central Austin, while prioritizing those who choose to live far from the city center.<br><br>Environmental Degradation<br><br>I do not believe the environmental harm caused by this construction is worth a few minutes of travel time. Increasing air pollution, noise pollution, and toxic runoff from cars will negatively impact one of the most environmentally sensitive and cherished areas of our region. We must protect the Edwards Aquifer, Barton Springs, the Barton Creek Greenbelt, the hike and bike trail, Deep Eddy Pool, and Zilker park from excessive development and traffic and its negative environmental impacts. |

| | | |
|---|---|---|
| | | Fiscal irresponsibility<br><br>There are a wide variety of low cost congestion relief measures that could improve the South Mopac Corridor and reduce peak time congestion without expansion that should be explored and tested before proposing expansion. These strategies include lengthening entry and exit ramps, restriping, HOV lane at peak times, park and ride facilities, transit routes, addressing surface and connector road congestion that backs up onto MoPac, among others. We should not be jumping into a $824 million dollar project without first exploring and testing low cost congestion relief measures that will help all roadway users before expansion.<br><br>The future is unknown<br><br>This project or any expansion of MoPac should not take place until I-35 construction is complete and resulting traffic patterns can be studied. The simultaneous creation of the SH-130 autonomous trucking route also has the potential to majorly impact traffic flows in our region by rerouting trucking traffic from I-35 and should be allowed to play out and be studied as another factor in assessing the need of MoPac expansion. Furthermore, we are on the horizon of autonomous vehicle adoption in many sectors which will change traffic patterns throughout our region. Expanding MoPac based on the outdated information in the MoPac South draft environmental assessment risks over or underbuilding the road based on incomplete and outdated demand projections. |

| | | |
|---|---|---|
| **5/3/2026** | Laura Bryant | I support the "no build" alternative to Mopac South Expansion. I urge CTRMA to undertake a full Environmental Impact Study (EIS) per federal standards, including a traffic study on the impacts of the project on surrounding roads and propose lower impact, lower cost alternatives. Construction congestion The years of construction-related traffic congestion and environmental degradation caused by this project are simply not worth the minimal projected improvements in travel time. Central Austin residents, including students at Austin High, and everyone who enjoys Zilker Park, Barton Springs, the Hike and Bike Trail at Lady Bird Lake, the Barton Creek Greenbelt, and Deep Eddy Pool will suffer through many years of construction congestion and bear the brunt of the environmental impacts (noise pollution, poor air quality, and compromised water quality) while enjoying the tiny benefit of a couple minutes travel time even many years after this project is built. Toll Roads don't help general users Toll roads are not a solution to the root cause of congestion and only serve a small portion of roadway users (30,000 to 40,000 users per month / 180,000 roadway users = 16-22%). Limited entry and exit points and demand pricing keep toll roads from being useful to most people who live in Central Austin, while prioritizing those who choose to live far from the city center. Environmental Degradation I do not believe the environmental harm caused by this construction is worth a few minutes of travel time. Increasing air pollution, noise pollution, and toxic runoff from cars will negatively impact one of the most environmentally sensitive and cherished areas of our region. We must protect the Edwards Aquifer, Barton Springs, the Barton Creek Greenbelt, the hike and bike trail, Deep Eddy Pool, and Zilker park from excessive development and traffic and its negative environmental impacts. Fiscal irresponsibility There are a wide variety of low cost congestion relief measures that could improve the South Mopac Corridor and reduce peak time congestion without expansion that should be explored and tested before proposing expansion. These strategies include lengthening entry and exit ramps, restriping, HOV lane at peak times, park and ride facilities, transit routes, addressing surface and connector road congestion that backs up onto MoPac, among others. We should not be jumping into a $824 million dollar project without first exploring and testing low cost congestion relief measures that will help all roadway users before expansion. The future is unknown This project or any expansion of MoPac should not take place until I-35 construction is complete and resulting traffic patterns can be studied. The simultaneous creation of the SH-130 autonomous trucking route also has the potential to majorly impact traffic flows in our region by rerouting trucking traffic from I-35 and should be allowed to play out and be studied as another factor in assessing the need of MoPac expansion. Furthermore, we are on the horizon of autonomous vehicle adoption in many sectors which will change traffic patterns throughout our region. Expanding MoPac based on the outdated information in the MoPac South draft environmental assessment risks over or underbuilding the road based on incomplete and outdated demand projections. |

|---|---|---|
| **5/3/2026** | Laura Burkett | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Laura Burkett |

| | | |
|---|---|---|
| **5/3/2026** | Laura Childers | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Laura Childers |
| **5/3/2026** | Laura Cross | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Laura Cross |
| **3/19/2026** | Laura Detke | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **5/2/2026** | Laura ellington | We can not move forward with this. Austin can not afford to lose or have its gem Barton springs threatened in anyway. The problems with Austin growing is all of the things that made Austin so magnetic are slowly being pushed out. Also we DONT NEED ANY MORE TOLL ROADS. What we need are more buses, a rail system…better public transport system over all. How about that? Let's not jump to a privately funded 8 lane mess of a solution when there are many more community benefiting solutions besides this. |

| | | |
|---|---|---|
| **4/13/2026** | Laura Farb | Dear CTRMA Board Members,<br><br>Here:<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts.<br><br>One of the last vestiges and reasons to live in Austin is Barton Springs. Threating this precious gem in the middle of our city is eroding not only life for us but also for the natural inhabitants who need our protection for their survival and sustainability.<br><br>Proper assessments need to be done. These actions of expansion without mitigating risk to our natural habitats and to us cannot be undone.<br><br>Please take the long term view and consider alternatives to just labe expansion and help us protect our natural landscape and habitats.<br><br>Sincerely,<br><br>Laura Farb |

| | | |
|---|---|---|
| **5/3/2026** | Laura Farb | Hello, my name is Laura Farb.I live in zip code 78757.I've lived in Austin for 24 yearsand I want to protest the expansionof the South MOPAC freeway.I would like there to be an environmental auditI think is absolutely necessary.It's going over the one of the most protected areasin our region, the Edward AquiferAnd it's really threatening Barton Springs, which is sort of one of the only havens that we have in the city.A natural protected area, not only for the wildlife, but also for us as humans, the waterways.So I think we need to really take this seriously. The quality of life in the city has been declining with the growth in population.I don't think that expanding the freeway is going to help. There are other studies in other cities that just show it creates more congestion.And the impact that that development is going to have over the wildlife area and the aquiferis going to be detrimental and it's not reversible.So I would like you all to take it very seriously.And really it's threatening the quality of life in the city, which has already been goingdownhill for years.If we could at least keep this last vestige and protect nature, I think it's our ethicalmoral obligation, but also to help us in the long run as well as humans.Thank you. |

| | | |

| **5/1/2026** | Laura Feeney | I am writing to provide specific feedback regarding the Mopac South infrastructure project. To ensure the development effectively serves the community, I would like to request the inclusion of wide, shaded bike and pedestrian paths throughout the design.<br><br>Additionally, it is essential for the project to incorporate dedicated bike and pedestrian east-west crossings at every quarter-mile interval. These additions will significantly enhance accessibility and safety for all residents.<br><br>Thank you for your time and for considering these recommendations to improve our local transit options.<br><br>Best regards,<br><br>Laura Feeney |
| **4/20/2026** | Laura Grady | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/2/2026** | Laura Henderson | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45, which is very dangerous. City Council District 8 has now allocated $117,000 to the design of this path as they recognize the important need for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request, and I can provide further information, including graphics. Thank you. |
| **5/3/2026** | Laura Hetherington | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity |

| | | |
|---|---|---|
| | | of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Laura Hetherington |

| **5/3/2026** | Laura May | Dear CTRMA Board Members,  I have lived in Austin for 43 years. My first home was up the hill on the corner of Kerr and Gardner (when I was just a toddler). Barton Springs and Zilker Park were my first public play spaces. I remember being a tiny girl, wading in the shallow end before I learned how to swim. The diving board was one of the first ones I ever jumped off of. In high school, The Springs was a favorite hangout spot. We used to sneak in at night! Now as a middle-aged woman- I look forward to early morning swims in the summer. We have made it our family tradition to attend the polar plunge  every New Year's Day. <br />I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Laura May |

| | | |
|---|---|---|
| **4/22/2026** | Laura Monroy | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Laura Monroy |

| **5/3/2026** | Laura Natal | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Laura Natal |
| **5/3/2026** | Laura Reilly | Do not build over the springs. |
| **5/3/2026** | Laura Rubenstein | Hello. My name is Laura Rubenstein. I am a native Austin resident, grew up here, andI would love for there to be more of a impact screen report made for us. This project isto damage the ecosystem of our aquifer,which our entire city depends on.And the expansion of MOPAC is not a good idea.And I think me and a lot of other people agree with that.And there needs to be more research that goes to thisbefore the aquifer system is irreversibly damagedand the city gets impacted in a very negative way.Please, please think of the springs and our beloved water table.Thank you for your time and inspiration and have a good day. |
| **4/20/2026** | Laura Shapiro | Dear CTRMA,<br>I am writing as a parent to express my support for the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>Like many families, we rely on nearby green spaces not just for recreation, but for our children's well-being, development, and sense of connection to their community.<br>As this project moves forward, I respectfully urge you to include the following measures in the project scope:<br>-Trees and expanded tree planting to preserve shade, air quality, and the natural environment our children depend on.<br>-Avoidance of parkland encroachment so that families do not lose critical shared spaces<br>-Capital improvement reimbursements for affected community assets that serve children and families<br>-A noise wall workshop with meaningful community input, ensuring that residents—especially families—have a voice in decisions that affect their daily lives<br>-An open space fund dedicated to long-term preservation and restoration of green areas<br>-A permanent green fund to support ongoing environmental mitigation for future generations<br>As a parent, I am thinking not only about today, but about the kind of environment we are shaping for our children over time. These measures would help ensure that growth and infrastructure improvements do not come at the expense of the health, safety, and livability of our communities.<br>Thank you for your time and consideration.<br>Sincerely,<br>Laura Shapiro |

| | | |
|---|---|---|
| **5/3/2026** | Laura Spragans | Hello. My name is Laura Spragans. I'm an Austin resident of District 3. I'm calling to urgethe board to require a full environmental impact statement before moving forward withthe MOPAC south expansion. I've lived here for nine years and a huge reason I chose Austinto like make my life here is its access to nature. I'm on the Roy and Ann Butler trailin the Greenbelt and on Barton Springs multiple times a week. These places are core partsof my life and what makes this city special.I'm already seeing the negative impactsof highway expansion from I-35.It's more traffic, more pollution,and disruptions to access.I'm a member of the Festival Beach Community Gardenand it's directly affecting my plot,the wildlife I see, as well as my access to my gardenthrough the pedestrian trails.I really don't wanna see the same thing happento another cherished part of my city.What's especially frustrating is that this project,that projects like this typically only save a few minutes of travel time, and even thatdoesn't last.But the damage to our water, green spaces, and community is long-term, and in some cases,especially this one because of how sensitive the recharge area is, it will likely be irreversible.This project sits over the Edwards Aquifer Recharge Zone, which directly feeds into BartonSprings, which is a host to our beloved salamanders, as well as a slew of endangered species, andthat's too important and too fragile to riskon an incomplete environmental review.I'm asking you to requirea full environmental impact statementbefore moving forward.Austin's water, wildlife, and public spacesare not replaceable.Thank you for your time. |

| | | |
|---|---|---|
| **5/3/2026** | Laura Spraggins | Dear CTRMA Board Members, <p data-start="133" data-end="352">I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. <p data-start="354" data-end="975">I have lived in Austin for nine years, and a central reason I chose to build my life here is the city's deep connection to nature and its extraordinary public green spaces. Running along the Roy and Ann Butler Trail, hiking and birding in the Greenbelt, and swimming in Barton Springs are foundational parts of my weekly life. I visit these places at least three times a week. These are not occasional amenities to me; they are where I gather with friends, exercise, and find peace and wonder in the natural world. They are also vital habitat for wildlife and part of a larger ecosystem that sustains our entire community. <p data-start="977" data-end="1034">Because of that, I am vehemently opposed to this project. <p data-start="1036" data-end="1599">I am already experiencing the impacts of major highway expansion through the ongoing I-35 project. Road closures and construction have increased traffic and disruption in my daily life, and I've seen direct effects on the quality of my plot at Festival Beach Community Garden, which sits adjacent to the expansion. Increased pollution, noise, and access limitations—including pedestrian bridge closures—have affected both my ability to tend my garden and the surrounding wildlife. I do not want to see another cherished space in our city degraded in the same way. <p data-start="1601" data-end="2137">The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin—a landscape that has nurtured communities for thousands of years and continues to define the spirit of our city. Yet the Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For those of us who live here and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented. <p data-start="2139" data-end="2654">The project corridor lies directly over the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with little natural filtration. The assessment acknowledges karst features and multiple creeks within the project area, including Barton Creek and others that flow into Barton Springs, yet provides minimal protection for these features during construction. Expanding pavement will inevitably increase polluted runoff, threatening water quality. <p data-start="2656" data-end="2982">The document also recognizes habitat near the project area for endangered species such as the Barton Springs salamander and the Austin Blind salamander—species that depend entirely on the stability and health of the aquifer. Even small disruptions to water quality or flow can have irreversible consequences for these species. <p data-start="2984" data-end="3577">Beyond environmental risks, the project would significantly impact the surrounding community. The proposed expansion—up to thirteen to eighteen lanes in some areas—would bring increased noise, air pollution, and structural changes to the landscape near Lady Bird Lake, Austin High School, and some of the city's most heavily used trails and public spaces. Construction would disrupt access to the Butler hike-and-bike trail, pedestrian bridges, and the broader network connecting Zilker Park and the Greenbelt—spaces that are central to daily life for thousands of Austinites, myself included. <p data-start="3579" data-end="3797">Austin residents have voiced strong opposition to similar proposals in the past, and the need for careful, comprehensive review is even greater now as our aquifer faces increasing pressure from drought and development. <p data-start="3799" data-end="4004">A full Environmental Impact Statement is the minimum level of analysis required to fully understand the cumulative environmental and community impacts of this project and to ensure meaningful public input. <p data-start="4006" data-end="4282">Austin's water, wildlife, and quality of life are too important to risk on incomplete analysis. These natural spaces are not replaceable. I respectfully ask the CTRMA Board to direct staff to prepare a full Environmental Impact Statement before advancing this project further. <p data-start="4284" data-end="4326">Thank you for your time and consideration. Respectfully, Laura Spraggins |

| | | |
|---|---|---|
| **3/11/2026** | Laura Tabor | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br>I do not think we need more toll roads that are never paid off and I am against disrupting wildlife habitats, and increasing traffic and pollution. Austin keeps making bad decisions based on this "supposed future growth". I think it is just a money grab for the short term because with the water usage of hardly regulated data centers, and the overblown hype of Austin's specialness, this huge growth won't be happening-hopefully. We should not be "growing" Austin but regulating what we have to keep people already here healthy and prospering.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Laura Tabor |
| **5/3/2026** | Laura Westcott | Dear CTRMA Board Members, The proposed addition of MoPac, will have significant negative impacts in ongoing construction for five to seven years. I was born in Austin in 1957 and have lived in the Zilker neighborhood since 1998. This expansion will do major harm to traffic flows and my beloved Zilker Park as well as downtown Austin. Such construction will cut off use of Lady Bird Lake where I hike and cycle daily and kayak frequently. The project would increase pollution and harm endangered species and their habitats. There are other much more viable alternatives. Please please do not destroy the city i've called home for close to 70 years but adding more pavement and taking away exactly what makes Austin special. Let's be a progressive city that offers practical solutions to everyone. Respectfully, Laura Westcott |

| | | |
|---|---|---|
| **5/2/2026** | Laura Wright | CTRMA,<br><br>I absolutely OPPOSE the MoPac South expansion! More lanes just invite more traffic, don't solve the problem and will just lead to ANOTHER stupid toolway.<br><br>Rail, mass transit and bike lanes are much better solutions.<br><br>If you choose to pursue this, I want to see a Complete, Detailed Environmental Impact Statement! We deserve to know exactly how this is going to destroy the surrounding environment and introduce more damage to our daily lives.<br><br>Please reconsider this very bad proposal. Austin is smarter than this.<br><br>Laura<br><br>----------<br><br>Laura P. Wright |

| | | |

| | | |
| **4/27/2026** | Laurel Bodah | This expansion will cause serious environmental issues, and despite the study, will most definitely impact the wildlife, the nature, and the citizens that enjoy Barton Springs. |

| | | |
|---|---|---|
| **5/3/2026** | Laurel Petriello | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Laurel Petriello |
| **5/3/2026** | Lauren | Please do not impact Barton springs!! No more toll roads. |
| **5/3/2026** | Lauren | Please protect the green spaces we have left in Austin! These are what makes Austin beautiful and desirable. We don’t need more concrete! |

| | | |
|---|---|---|
| **3/23/2026** | lauren ashley simkins | Sitting in traffic on mopac isn't that bad because we're next to the beautiful greenbelt most of the time. I'm comparing this to driving in houston where it looks like the apocalypse already happened. Austin is special, our aquifer and barton creek and barton springs are so so special and if we mess them up we can't get them back. We do not want more lanes. There is plenty of space, people just don't understand zipper merging and are scrolling. If the goal of the expansion is to reduce traffic, there should at least be a push for public education around those things + exploration of other minimally invasive solutions first. If the goal of the expansion is to make work for whoever builds highways, they should pick a different spot or get a hobby <3 The hobby could be putting together a full environmental impact statement! I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. • Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. • More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. • Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. • Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. • Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors. • Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. • Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I |

| | | |
|---|---|---|
| | | respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. Sincerely, Lauren Simkins |
| **4/18/2026** | Lauren Bailey | Please don’t jeopardize Barton springs! This will not make traffic better it will only perpetuate it and destroy a beautiful part of our unique city. |

| | | |
|---|---|---|
| **5/3/2026** | Lauren Barter | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. | **4/23/2026** | Lauren Clendenin | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br><br>- Avoid parkland encroachment<br><br>- Capital improvement reimbursements for affected community assets<br><br>- A noise wall workshop with meaningful community input<br><br>- An open space fund dedicated to long-term preservation and restoration<br><br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Lauren Coffman | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Lauren Coffman |

| | | |
|---|---|---|
| **4/21/2026** | Lauren Daly | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Lauren Daly |

| | | Respectfully,<br><br>Lauren Daly |

| | | |
|---|---|---|
| **5/3/2026** | Lauren Dupas | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Lauren Dupas |
| **5/1/2026** | Lauren Dupuis | I urge a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. I live in this area of Austin, despite its high prices, because of its location near the springs, greenbelt, parks, etc. and I fully support all efforts to protect and enhance these important assets. |
| **4/28/2026** | Lauren Etienne | I was born in raised in Austin, most nights growing up we were driving downtown and spending lots of time at Barton springs, little and big Stacy's, and getting milk shakes at huts and I think almost every elementary kid in the area has taken a field trip to Edwards aquifer, but even if you're not from here Barton springs is something everyone can appreciate and a HUGE part of the community that brings people together, it would be a definite issue if Austin decided to effectively take away any part of its nature, and it's important that this shouldn't even cross the minds of people in charge of these decisions. South congress is already losing its soul I think it should be natural beauty that is next. |
| **4/21/2026** | Lauren Evans | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| | | |
|---|---|---|
| **5/3/2026** | Lauren Garza | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Lauren Garza |

| | | |
|---|---|---|
| **5/3/2026** | Lauren Hagar | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Lauren Hagar |

| | | |
|---|---|---|
| **4/18/2026** | Lauren Hovey | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Lauren Hovey |

| | | |

| **5/2/2026** | Lauren Johnson | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Lauren Johnston | Dear CTRMA Board Members, <p data-start="216" data-end="289">I'm writing to share my opposition to the proposed MoPac South expansion. <p data-start="291" data-end="708">I moved to Austin in 1981, and what drew me in was how different it felt from other cities. The music, the energy, the affordability—but most of all, the connection to nature. Barton Springs Pool was always the heart of that for me. A spring-fed pool right in the middle of a city—it's something rare and special, and it says a lot about what Austin has always valued. <p data-start="710" data-end="828">Even though I no longer live in the U.S., I still own a condo there, and I care deeply about what happens to the city. <p data-start="830" data-end="1286">Expanding MoPac like this just feels like the wrong direction. It would mean years of construction, more noise, more traffic disruption, and added strain on areas that are already some of the most loved parts of the city. Places like Lady Bird Lake , Zilker Park , and the Barton Springs area are part of what makes Austin special, and it's hard to imagine this kind of project not impacting them in some way. <p data-start="1288" data-end="1632">What's also confusing is that voters already supported investing in public transit durning a city electection some years back. I thought the goal was to move toward better, more sustainable transportation—not keep expanding highways. It makes me wonder why we aren't focusing more on those solutions instead of taking on a project like this. <p data-start="1634" data-end="1872">Austin has grown a lot, and I understand that growth brings challenges. But I don't believe more lanes are the answer. It feels like it risks chipping away at the very things that made Austin such a unique and special place to begin with. <p data-start="1874" data-end="2031">I hope you'll reconsider this project and look more closely at alternatives that better protect the character, environment, and long-term future of the city. <p data-start="2033" data-end="2057">Sincerely, <p data-start="2033" data-end="2057">Lauren Johnston Lauren Johnston |
| **5/3/2026** | Lauren Lehman | Hi, my name is Lauren Lehman. I'm an Austin resident, and I just wanted to call and make a comment that I am against the MOPAC expansion road, and I also wanted to request a full impact study of this, and just wanted to put my request in and make a comment again that I'm against this. Thank you. Bye bye. |

| | | |
|---|---|---|
| **5/3/2026** | Lauren Lightfoot | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Lauren Lightfoot |
| **3/28/2026** | Lauren Linahan | nderstand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Additionally, I'd like to recommend these pathways restrict the use of dirt bikes and motorbikes with signage posted. This will ensure more safe passage of families not on them. |
| **4/27/2026** | Lauren Logan | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/19/2026** | Lauren Luft | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **5/3/2026** | Lauren Lyness | Dear CTRMA Board Members,  I would rather continue to endure traffic as we know it than compromise our environment and existing green spaces. They should be valued as a part of what makes Austin so wonderful.  <br />I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Lauren Lyness |
| **5/3/2026** | Lauren Medel | Dear CTRMA Board Members,  I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.  Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement  and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors,  Lauren Medel |
| **4/9/2026** | Lauren Morris | I'm from Raleigh NC and moved to Austin two years ago. I live in North Loop and regularly use I-35 and Mopac to go to work downtown. Given the traffic science data, adding more lanes will only increase traffic. The money that's allocated to this project should be used to better our existing public transit options, or expand the Metrorail program. Citing "pedestrian improvements" to garner public support does not make sense, as pedestrians do not want to walk alongside a highway. The construction will also harm local wildlife, making Town Lake less hospitable to tourism and small businesses offering water sports equipment. Furthermore, shutting down a side of Mopac while I-35 is under construction in the same part of town will be stressful for drivers and will increase traffic wait times throughout Austin. |

| | | |

| **5/3/2026** | Lauren Napolitano | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Lauren Nevarez | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Lauren Nevarez |

| **4/21/2026** | Lauren Pascale | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Lauren Revels | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  <p data-start="2198" data-end="2385">Please conduct a full Environmental Impact Statement to guarantee the protection of our wildlife and caves. Austin's access to natural spaces is a key factor in quality of life for our community, as well as tourism.  Sincerely,  Lauren Revels |

| **5/3/2026** | Lauren Ross | Attached please find my report with comments on the MoPac South Draft EA.<br><br>D. Lauren Ross, Ph. D., P. E.<br><<Attachments>> |
| **5/3/2026** | Lauren Shafford | Hello, I would like to note that I do not believe adding separated toll lanes will improve the flow of traffic, especially if permanent infrastructure must be added for them. (separate onramps, etc.) the toll lane for north mopac has not appeared to improve the flow of traffic or travel times. I do think the potential separate overpasses at william cannon/290 and mopac may be beneficial however. that stretch is a huge pain point for many Austinites during their commute south. It would be a great improvement and be favorable with the public if that section of mopac is reconfigured. I also have many environmental concerns, especially over the edwards aquifer recharge zone. we should absolutely protect that area, and not construct any new separate roads over it, especially for a toll lane. |

| | | |
|---|---|---|
| **3/23/2026** | Lauren Simkins | Dear CTRMA Board Members,<br><br>Sitting in traffic on mopac isn't that bad because we're next to the beautiful greenbelt most of the time. I'm comparing this to driving in houston where it looks like the apocalypse already happened. Austin is special, our aquifer and barton creek and barton springs are so so special and if we mess them up we can't get them back. We do not want more lanes. There is plenty of space, people just don't understand zipper merging and are scrolling.<br><br>If the goal of the expansion is to reduce traffic, there should at least be a push for public education around those things + exploration of other minimally invasive solutions first.<br><br>If the goal of the expansion is to make work for whoever builds highways, they should pick a different spot or get a hobby <3 The hobby could be putting together a full environmental impact statement!<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their |

| | | |
|---|---|---|
| | | water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>Sincerely<br><br>Lauren Simkins |

| **4/20/2026** | Lauren Wood | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/28/2026** | Lauren Woosencraft | I do not support the Mopac expansion over the Edwards aquifer. Texas nature is what makes Texas great! |

| | | |
|---|---|---|
| **4/23/2026** | Laurie Bell | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Laurie Bell |

| | | |
|---|---|---|
| **5/3/2026** | Laurie Bell | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, laurie bell |

| | | |
|---|---|---|
| **4/30/2026** | Laurie Coffin | I oppose the proposed MoPac expansion. Spending 5-7 years on construction to add an additional 6-8 lanes that results in saving ~5 minutes on commute time is ridiculous. Especially when considering the financial cost and environmental impact of this project.<br><br>This proposal will vastly increase vehicle emissions, produce constant traffic noise, and put our water and neighborhoods at risk from increased polluted runoff and significantly degraded air quality.<br><br>Runoff and construction impacts also pose a direct threat to Ladybird Lake, putting water quality, habitat, and the health of this central urban ecosystem at risk, while also completely ruining the the experience of the hike and bike trail. This project endangers several known habitats of the Barton Springs and Austin blind salamanders and threatens the Edwards Aquifer. Scientific dye-tracing and field studies by the City of Austin and the Barton Springs/Edwards Aquifer Conservation District show that pollution entering the aquifer in the Sunset Valley and Manchaca basins can reach Barton Springs in a matter of days, putting these irreplaceable waters and species directly in harm's way.<br><br>Why is CTRMA pushing this project forward without a full Environmental Impact Statement? Federal law requires a full Environmental Impact Statement for projects with potentially significant effects, and the draft Environmental Assessment's own findings make the case for a deeper, more rigorous review.<br><br>We deserve a better solution.<br><br>Sincerely,<br><br>Laurie Coffin |

| | | |
|---|---|---|
| | | |

| | | |
|---|---|---|
| **5/3/2026** | Laurie LeBoeuf | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Laurie LeBoeuf |

The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Laurie Sauls |

| | | |
|---|---|---|
| **5/3/2026** | Laurie Winnette | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, LAURIE WINNETTE |

| **5/2/2026** | Lavinia Martin | I am against the South Mopac Expansion plan at this time.<br><br>Would welcome alternate transportation such as buses and light rail.<br><br>Please make sure a thorough and comprehensive environmental impact study is completed before a decision is made.<br><br>Thank you.<br><br>Lavinia Martin |
| **4/9/2026** | Lawrence Coleman | I do not support any expansion of tolls on MOPAC. The north toll expressway only made traffic worse and would harm traffic for much more expense. It will only benefit the corporations running the toll, not Austin drivers. |

| | | |
|---|---|---|
| **5/3/2026** | Lawrence F. Lander | Dear CTRMA Board Members,  I am writing to strongly oppose the proposed MoPac South expansion since the project does not even address traffic congestion--which I would think would be its prime driver.  Hoping to save a few minutes commute time based on outdated data and plans that are decades old, seems particularly shortsighted.  In this case, when the Austin City Council and Travis County Commissioners Court have questions, I certainly do too.  The disruption and impact in my specific neighborhood will be significantly negative, and the very real environmental concerns for one of Austin's most important treasures.  I visit Zilker Park almost every day,  I walk the Hike and Bike Trail daily, I'm a regular driver on MoPac--exactly where this project would have such an impact.  When people talk about what to see when you come to Austin and why the quality of life is consistently rated so highly here, they talk about Barton Springs, the Barton Creek Greenbelt, Lady Bird Lake and the Hike & Bike Trail.  They don't say, "you have to see MoPac."  Let's make moves that make Austin a better place for all our citizens, not create I-35's little sister.  As a first step, CTRMA's own Draft Environmental Assessment must be read more critically.  The very serious environmental and community concerns raised require a much more rigorous review and response.  "Nothing to see here" is truly laughable.  I would suggest each member of the board revisit the story of how the Barton Creek Greenbelt came to be (maybe start here:  <a href="https://bartoncreektimestream.org/foreverland.php">https://bartoncreektimestream.org/foreverland.php) </a>and then ensure that we have a full Environmental Impact Statement as a prerequisite for any project in this environmentally-sensitive area.  Once the aquifer system is destroyed, there is no going back.  Adding more lanes to existing highways has proven to be a highly ineffective solution to congestion--indeed, Houston's Katy Freeway debacle is used to teach planners and engineers exactly what not to do.  That widest freeway in the world continues to be one of the most congested in the state.  Let's not build projects just to keep our highway construction friends in business.  Let's embrace Austin's goal to place less emphasis on cars.  Let's not let solutions proven to fail be our path in Austin.  Lawrence F. Lander |
| **4/20/2026** | Layla Tavakolian | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>First and foremost, full protection of Barton springs and the Edwards aquifer.<br>It’s so critical we protect the endangered salamander that is crucial for the ecosystem.<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/22/2026** | Layla Tavakolian | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>LLT |

|---|---|---|
| **5/3/2026** | Lea Klumpp | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Lea Klumpp |

| | | |
|---|---|---|
| **3/19/2026** | Leah | As a user of MoPac, I do not support the proposal to expand the highway to more lanes. It has been found that expanding highways does not result in a decrease in traffic (https://www.sciencedirect.com/science/article/abs/pii/S0967070X18301720). Instead, I would like CTRMA to invest in transit, walking, and biking infrastructure. There are also other creative solutions–such as turning an existing lane into an HOV or transit lane–that don't require expansion of the highway. There are so many creative solutions to traffic that are better for the environment and our communities than expanding the highway system. |
| **4/21/2026** | Leah Autry | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/2/2026** | Leah Fritz | Hello,<br><br>As a resident of Austin, I am writing to formally express my strong oppositionto the proposed MoPac South expansion. Expanding our highway infrastructure is a dated solution that fails to address our long-term mobility needs while threatening our local environment.<br><br>The current proposal claims to have "no significant impact," but adding over 100 acres of new pavement in an environmentally sensitive area demands the highest level of scrutiny.<br><br>I am calling for a full Environmental Impact Statement (EIS). An abbreviated Environmental Assessment (EA) is insufficient for a project of this magnitude and ecological risk.<br><br>On a personal level, I am exhausted by the cycle of highway-centric planning. I see the constant expansion of lanes as a failure of imagination that only leads to induced demand and more traffic. My vision for Austin is a city connected by a world-class bike and pedestrian network and a robust regional rail system—not more asphalt. We need leadership with the creativity to invest in a future that prioritizes people over more toll lanes. If you're not up for the challenge to build a better future, get the hell out of the way of the creative people who have more imagination and vision than you.<br><br>It is time to move past ineffective "solutions" that have been proven not to work. I urge you to reject this expansion and pivot toward sustainable, regional transit.<br><br>Sincerely,<br><br>Leah<br><br>Austin, TX |

| | | |
|---|---|---|
| **4/24/2026** | Leah graham | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/28/2026** | Leah McLaughlin | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |
| **3/19/2026** | Leah Meltzer | Hi there, I am an Austin resident living in the Rosedale/Allandale area not too far from MoPac and I am strongly opposed to MoPac being expanded. Research since the 1960s has shown that widening highways actually makes traffic congestion worse than before. Additionally, I deal with chronic bronchitis and my lungs really do not need any increase in air pollution from car exhaust. Instead you could consider converting Mopac into a transit lane with walking and biking paths. Texans need better transit options, clean air, and we generally need options to get away from the financial burden of owning and maintaining a private vehicle. We don't need or want wider highways. We need public transit. |
| **5/3/2026** | Leah Meltzer | I am writing to express my opposition to the expansion of MoPac. I am extremely concerned about the disruption for natural habitats and ecosystems, the immense cost of this project for taxpayers, and the overall car-dependent infrastructure that is being built rather than public transit infrastructure. I am having to spend so much money on car repairs due solely to weather-related damage, I am so sick of being forced to own a car to live here. Please invest in transit and pedestrian safety, not more highways and roads. |

|---|---|---|
| **5/3/2026** | Leah Meltzer | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Leah Meltzer |
| **4/22/2026** | Leah Moon Mohamadi | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| **4/29/2026** | Leah Norman | Hello,<br><br>I am writing to oppose expanding MoPac South. Rather, I support regional rail, a world class bike/pedestrian network, and converting highways to more usable streets. The weather in Austin permits biking year round and our city should be the most bikeable in America. I want a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA) conducted on the expansion of MoPac.<br><br>With the I-35 expansion underway despite massive unpopularity with residents and council members, expanding MoPac would only worsen traffic conditions in the city. Expanding highways induces demand and ultimately does not solve the concerns that they are trying to solve.<br><br>Thank you,<br><br>Leah Norman (Austin, TX 78741) |

|---|---|---|
| **5/3/2026** | Leah Schiman | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Leah Schiman |

| | | |

| **4/22/2026** | Leah Stein | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Leah Stein |

| **5/3/2026** | Leahanne Alexander | I do not want the expansion of Mopac to go through, and believe it would affect the water source for Barton Springs, a priceless piece of our city. |

| | | |
|---|---|---|
| **5/3/2026** | Leana Layton | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Leana Layton |
| **4/20/2026** | LeAnn Gillette | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Lee Ann Cameron | I can’t believe anyone would even THINK about this before I-35 is done. Terrible idea! I oppose this under any circumstances because of the environmental impact. We need trains, not cars! |
| **5/1/2026** | Lee Campos | I am happy to see our representatives moving rapidly to address our road crises. This is extremely important and it is extremely important that we accomplish the project in a considered and exacting way. Part of your due diligence should be to produce a comprehensive EIS for every one to see. The Edwards deserves thorough and comprehensive EIS. Thank you for your time. Lee Campos Princeton ‘82 |
| **4/22/2026** | Lee Chavez | As a 13 year resident of Austin, and having grown up in the concrete hellscape that is Dallas, I definitely wish that this project *NOT* move forward. Plenty of examples of this same idea being utilized and failing exist in cities like Dallas, LA, and Houston. More highway lanes don’t equal better traffic flow. And additional toll lanes won’t help that either. I’m also tired of these toll lanes being owned by foreign entities, and collecting revenue long after they’re paid off. I don’t believe that this project will do what it’s intended to do. I believe instead, it will waste financial and physical resources (where ever they come from) that would be better spent updating old and failing infrastructure around the city. |

| | | |
|---|---|---|
| **5/3/2026** | Lee Jewett | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Lee Jewett |
| **5/1/2026** | Lee Lawson | Good morning. This is Lee Lawson. I'm a West Texan, 70 years old, been living in Austin for about 22 years now. So I am not, I am against the expansion of South Mopac. We need more trains, we need more buses, and we need more public transportation, not more cars. If they insist, there needs to be an impact study, a proper environmental impact study, over construction, over the Edwards Aquifer, because this is only going to add to pollution of critical water, beautiful water, protected water here in Austin, Texas. We need to move forward, not backwards. We need to quit moving backwards because of the current political regime. We don't want to mix politics with water qualityor air quality. So perhaps an electric train along the MOPAC side, yes. And if you do animpact study, I think you will know that there are endangered species and endangered BartonSprings that need to be protected. Appreciate you taking the time to get my opinion. I will continue to voice my opinion on this. I live very close to South MOPAC and drive it. I understand the issues and the problems, but the solutions being proposed by TxDOT, by CTRMA, are backwards.Texas needs to move forward, please.Thank you. |
| **4/28/2026** | Lee Nudelman | I regularly utilize the violet crown multiple days a week for my exercise routine which is primarily biking. I am regularly accompanied by my disabled friend that has a specialized recumbent bike because she has no lower limbs. I cannot convey in words how much relief and relaxation as well as fulfillment, and fitness the trail brings to mine and my friends life. Please prioritize no disruptions to trail access as you consider the steps if this construction moves forward. I do not believe in toll roads in general and this one in particular does not seem necessary or to be a good Stewart of government funds. I am hopeful this project will not be approved but if it is please consider my comments above as part of the plan. Thank you for your time and consideration. |
