| **4/22/2026** | Spencer Burstall | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/21/2026** | Spencer Hardin | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |
| **4/21/2026** | Spencer Hardin | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Spencer Michalke | I'm requesting that a full Environmental Impact Statement be done for the proposed MoPac expansion project. Due to the size of the project, there will be environmental disruptions and what has been concluded as no significant impact is incomplete and false - this environmentally sensitive area WILL be impacted by both the construction and additional traffic the current proposal is predicting. Additionally, other innovative alternatives should be explored for this corridor. I take MoPac daily to commute to work and adding toll lanes will not save daily commuters any time. CTRMA's alternatives should align with Austin's future transportation goals and should respect Austin’s identity as a city that values its parks, water, and |

| | | |
|---|---|---|
| | | natural beauty. I deserve a solution that protects our environment, keeps our air and water clean, and invests in modern, sustainable alternatives like transit, biking, and demand management. |
| **5/2/2026** | Spencer Muncey | This is an extremely environmentally sensitive area. Any expansion of impervious cover is a deterrent and detriment to the enivronment regardless of what safety and environmental precautions are taken place. Construction vehicles track invasive species on tires and equipment. |
| **5/1/2026** | Spencer Thompson | Hello,<br><br>One of my favorite stretches to bike on is the Mopac mobility bike and pedestrian bridge, along with the other bike paths next to Mopac. It adds so much and creates a whole city. Please consider including bike paths in the Mopac South Project and do not expand the highway. Look at i-35 and the colossal mess it is and will continue to be in for the foreseeable future. We don't need more lanes! We need alternative modes of travel not more car lanes. Stop it! It's 2026 let's think differently.<br><br>Cheers,<br><br>Spencer |
| **4/28/2026** | Spring Lee | No. Just no. We don’t need the environment jacked up just to save a few minutes commuting. |
| **3/28/2026** | Sridevi kesavanatha n | Our family would greatly appreciate if this trail is connected to our community. It would help us enjoy the nature |

| | | |
|---|---|---|
| **4/18/2026** | Stacey Barnes | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Stacey Barnes |

| | | |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Stacey Barnes |
| **3/14/2026** | Stacey Gardner | This expansion project is misguided, misleading, and misaligned with what the Mopac corridor was intended to be: providing local community residents with easy access to north and south Austin without having to drive through neighborhoods and smaller streets. The scope of this project jeopardizes the environment, the residents living on both sides of Mopac, the students at Austin High School, and the people using Zilker Park and Lady Bird Lake, putting them at risk from noise and air pollution, not to mention the increased congestion on all the arteries east and west. This plan must not go forward. |

| | | |
|---|---|---|
| **4/23/2026** | Stacey Lemire | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Stacey Smith | I am an Austin resident and taxpayer and supported the BOND to provide LIGHTRAIL to this city not more cars and highway expansion. The CTRMA needs to do a FULL IMOSCT study that includes a seven generations impact on wildlife habitats and quality of life at Barton Springs. I thought this city had forward-thinking and out-of-the-box leadership. We must move toward better, easier public transportation like rail and not more cars/highways. Full impact study now. The CTRMA can afford it! I pay money to them too. |

| | | |
|---|---|---|
| **4/30/2026** | Stacey Speck | Dear CTRMA Officials and Stakeholders,<br><br>As an EverGreen Austin Board Member, I'm writing to encourage you to incorporate the following outlined mitigations before advancing the MoPac South expansion. We recognize the corridor's congestion demands action, and ask for the same level of effort exercised in SH 45 SW for MoPac South. We also recognize that action without environmental accountability produces infrastructure Austin will regret. This proposed roadway project impacts the City's Crown Jewels: Zilker Park, Barton Creek, Barton Springs, Dick Nichols Park, Volma Overton Sr., and Williamson Creek Greenbelt.<br><br>As stated in Ben Thompson's Community Impact article - "Austin Faces Diminished parks growth" dated 02.05.2026: "Austin already falls short: less than 18.5 acres of parkland per 1,000 residents — 77% of the residential goal, a gap of roughly 5,700 acres."<br><br>This project must not widen that deficit.<br><br>_____<br><br>EGA requests these mitigations to be written in Section 8.0 Post Environmental Clearance Activities:<br><br>Trees. Preserve all trees 19" diameter or greater. Replace removed trees at 4:1 (native species only); trees 4"–19" at 3:1 |

| | | |
|---|---|---|
| | | (native species only) in the right-of-way and in parks. All terrestrial plantings must be native or regionally adapted, with a watering and maintenance plan ensuring 85% survival. (See Exhibit A.)<br><br>Parkland. Adjust alignments to avoid parkland encroachment. Require construction materials and trucks to stay beneath the highway near Zilker Park and the three other parks impacted. Where impacts are unavoidable, CTRMA should fund full restoration to previous conditions or better. Provide a Park Impact Assessment evaluation of the loss or impairment of park acreage, trees, park features, ecosystem services, recreational programming, and community access resulting from the change in use of parkland.<br><br>Capital Improvement Reimbursement. Funding for the implementation of infrastructure improvements to address construction-related displacements of park usage, including new sidewalks, bike paths, vehicle routing/parking areas and new access points, to replace existing vehicle and pedestrian infrastructure disrupted by the construction phase of the project.<br><br>Noise Walls. Hold a workshop with EGA and CTRMA designers on the design and placement of noise and aesthetic walls before finalizing plans. As part of this meeting, we will want to discuss the installation of high-performance concrete or transparent noise walls within Zilker Park boundaries to maintain visual connectivity where appropriate.<br><br>_____<br><br>EGA also requests two Non-Required Mitigations: |

| | | |
|---|---|---|
| | | Open Space Fund. Provide $35M in mitigation funding to be used exclusively for land acquisition located over the Barton Springs segment of the Edwards Aquifer Recharge and Contributing Zone. This initiative aims to protect water quality and quantity, safeguard groundwater, enhance flood and fire protection, support wildlife, and impacts from impervious cover.<br><br>Permanent Green Toll. Add a voluntary $0.10 to every toll transaction in perpetuity to fund ongoing land acquisition for environmental mitigation and green infrastructure. Over time these funds should also incorporate an escalation clause to compensate for traffic demands.<br><br>_____<br><br>The stakes are real. Zilker Park has 2,000,000 annual visitors. The greatest impacts will be to the 160,000 visitors to Zilker Botanical Garden, 150,000 to the Austin Nature and Science Center, and 65,000 to the Rowing Dock. Mopac is less than one mile from Barton Springs Pool. CTRMA must ensure public health and safety for all of these park patrons at all times.<br><br>EGA commends the effort undertaken by CTRMA and partner agencies to evaluate mobility improvements along a highly congested corridor serving thousands of Central Texans each day. The public's active participation demonstrates the importance of this project to Austin's residents and underscores the need for thoughtful, transparent decision-making. |

| | | |
|---|---|---|
| | | EGA is a strategic partner in this process. We will advocate within current political realities while holding firm on the protections Austin deserves. EGA urges CTRMA to include all recommended mitigations, thereby demonstrating that superior infrastructure and environmental stewardship are not in conflict.<br><br>Thank you for your consideration.<br><br>stacey speck<br><br>Evergreen Austin Board Member<br><br>--<br><br>Stacey Speck |

| | | |
|---|---|---|
| **5/3/2026** | Stacey Tester | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Stacey Tester |
| **4/27/2026** | Stacey Wuest | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/28/2026** | Staci Fincher | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. As a mother and wife to an avid cyclist, the safety of cyclists and pedestrians in this area is deeply personal. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |

| | | |
|---|---|---|
| **4/23/2026** | STACIA WOODS | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>STACIA WOODS |
| **3/20/2026** | Stacie Murphy | This plan needs to address the growing problem of the traffic at MoPac and SW Parkway. The MoPac and SW Parkway intersection appears to be largely ignored in the plan, but it is a major traffic issue. there should be on and off ramps to the MoPac express lanes from SW Parkway. |

| | | |
|---|---|---|
| **4/24/2026** | Stacy Brodie | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. | **4/30/2026** | Staryn Wagner | I have an interest in maintaining the public trails and protecting Johnson Creek |
| **5/3/2026** | Stasiya B | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Stasiya B |
| **5/3/2026** | Steely Horne-Lalande | I was born in Austin and love my home town. I use the trail and Zilker Park almost daily. My mom ran with me in the stroller along the trail since I was a baby, we flew kites in the park when I was a child and we enjoy long walks today and the views from the foot bridge underneath Mopac. This Mopac project being proposed will destroy the most beautiful parts of Austin, such as the trail around town lake and Zilker Park. I urge CTRMA to drop the plans that impact the area near Lady Bird Lake/Bee Caves Road which will cause horrible impacts to this sensitive, beloved region. Please don't proceed. Let the costs be what they are and abandon the project! Traffic will ALWAYS be an issue. People need to deal with it, take public transportation, carpool, bike and learn how to problem solve without government entities destroying what exists...especially when it's critical and valued green space and nature that can't be replaced. Do not ruin the quality of life for us Austinites who value the trail and parks far more than any issues with traffic. People need these spaces to destress and unwind. We don’t need more concrete. |
| **4/21/2026** | Stefanie Chafin | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Stefanie Taylor | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. * If we had more connected East-West traffic flow options, instead of adding to North-South that would be better, and also, we do not need more toll roads! Respectfully, Stefanie Taylor |

| **4/21/2026** | Stephanie Asmus | Don't do it |
| **5/3/2026** | STEPHANIE BRYNES | I am firmly opposed to any project that encroaches on the environment surrounding Barton Springs. I am very concerned about the project’s impact on local biodiversity, including many of the flora and fauna that are unique to Barton Springs. |

| | | |
|---|---|---|
| **5/3/2026** | Stephanie Chavez | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Stephanie Chavez |

| | | |
|---|---|---|
| **4/23/2026** | Stephanie Cree | Dear CTRMA Board Members,<br><br>I oppose the MoPac South Expansion and encourage you to invest this money and time into improving public transit in Austin instead.<br><br>Research shows that widening highways does not improve traffic congestion or traffic flow. Adding more lanes would additionally significanly increase pollution across our city and cause damage to our natural habitats and springs. Instead, please invest that money into actually improve traffic congestion by improving public transit options in Austin, something our city is in desperate need of and actually reduces our environmental impact instead.<br><br>Austin is known for our incredible and unique ecology and ecosystem, including Edward's Aquifer. Construction over the recharge zone and next to some of our biggest green spaces would do irreparable damage on our ecosystem and the animals that live here. Please do a full and transparent environmental impact report to better understand that damage.<br><br>I've lived in Austin almost my whole life and our incredible natural spaces and wildlife are one of the most magical things in our city that is unlike anywhere else. We're known internationally for not just how unique it is, but also what our city does to protect it. Please continue that legacy by protecting it from harmful and unneeded construction.<br><br>In addition to worsening environmental damage, pollution also leads to health issues for Austinites. Lung disease, childhood asthma, heart disease and learning delays are all linked to increased pollution. To me, protecting myself and my future kids from these effects is more important than having an extra lane to drive on the highway.<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the |

| | | |
|---|---|---|
| **4/29/2026** | Stephanie Creel | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |
| **5/3/2026** | Stephanie Dille | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. | **4/20/2026** | stephanie duprie routh | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Stephanie Grant | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. As always, nobody cares about protecting nature. It's the same story every time. Please please reconsider this. Respectfully, Stephanie Grant |
| **5/3/2026** | Stephanie Hagemeister, | Hi, this is Stephanie Hagemeister, and I'm calling about the SOST MOPAC expansion, andI'm really concerned about the impact on our waterways and the springs, and I would liketo demand that there be a full environmental impact report produced and made public sothat we can all make this decision together and understand the consequences of this expansionand what it actually means to the safety of our waters.Thank you. |
| **4/28/2026** | Stephanie Hoffman. | Hello.My name is Stephanie Hoffman. I live at -, here in Austin, 78721.Phone number -. I'm calling because we've got to protect our endangered species. And I'm against the expansion of MOPAC. The expansion will adversely affect four federally endangered species. And I think you all refuse to consider design alternatives that could avoid these impacts. Construction will threaten the clean flow of groundwater in Barton Springs and kill the cave ecosystem that cannot be restored. Please pay attention to this. Please reject the FONSI, please proceed with a full environmental impact statement. I am a nature-based educator for K-12 students, and I just believe that the Barton Springsrelies entirely on the Edwards Aquifer Recharge Zone for replenishment. Expanding MOPAC will increase traffic and the likelihood of hazardous materials spillingdirectly over the sensitive recharge areas.Thank you for your time, and please, I really demand that you reject the FONSI and proceedwith a full environmental impact statement.Thank you very much. |

| | | |
|---|---|---|
| **5/3/2026** | Stephanie Niermann | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Stephanie Niermann |
| **4/20/2026** | Stephanie Parker | Dear CTRMA Board Members,<br><br>The length of time to finish the proposed construction is longer than my life expectancy. I will never see the completion, yet have to put up with construction for the rest of my life.<br><br>Moreover, who knows what transportation needs will look like in 2050! This boondoggle will be obsolete before finished.<br><br>Sincerely,<br><br>Bob Swaffar |

| | | |
|---|---|---|
| **4/20/2026** | Stephanie Parker | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/28/2026** | Stephanie Rill | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Stephanie Rivera | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br>Thank You for listening to your neighbors, Stephanie Rivera |

| | | |
|---|---|---|
| **4/21/2026** | Stephanie Saulmon | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Stephanie Schrader | Shut down this extra lane idea, and frankly, convert the existing toll lanes to free, too, while you're at it. Toll lanes and toll roads are a ridiculous grift. We used to make fun of Oklahoma for charging to use its public road infrastructure, so why on earth did it ever become ""acceptable"" (to the gullible) here?! As a 13-year former resident of the Austin area who only just now had to move for work, building another lane—much less a toll lane that will only cause extra jams at its on-off points and not help regular commuters—will only hurt the ACTUAL things people go to Austin for: its proximity to nature, glorious parks, and its natural beauty. I'm legitimately sad I had to move, as being so close to so many opportunities to enjoy the great outdoors was fantastic, and I miss Central Texas. Now that I only visit, I don't want this eyesore lane, either. These are confusing enough for locals to navigate, which is to say, they suck at it, and I know from living next to the lane's starting point by downtown since 2018. The toll folks have a horrific track record of getting billing wrong and blowing up your account with fees even when they make a mistake. Their customer service sucks and they do not deserve public support or the ability to operate in Texas, much less in Austin. It's time to for Texas to divorce itself from Okie-style toll roads. MoPac is constantly under construction already and our collective sanity can't take any more of it for a bad idea that solves nothing. See also: 183. YOU HAVE A RECENT EXAMPLE OF THE UNLIVABLE CHAOS THAT ADDING A TOW LANE ENTAILS AND THE INSUFFERABLE CONSTRUCTION DELAYS THESE PROJECTS PUT UP WITH. No one wants to be covered in 183-style dirt clouds while trying to enjoy Town Lake, Barton Springs or any part of the watershed parks to the south. Those delicate ecosystems can't handle this mess. Tell CTRMA to pack its bags and never come back. Austin's quality of life should NOT be sold out for a pointless toll lane! |

| | | |
|---|---|---|
| **4/20/2026** | Stephanie Syed | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>These spaces are what make Austin, Austin!!! Please don't sacrifice them just for another highway expansion that won't solve our problems and won't be done for DECADES.<br>Thank you for your time and consideration. |
| **5/2/2026** | Stephanie Talbott | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Stephanie White | Dear CTRMA,<br>"Just one more lane" isn't going to fix the traffic congestion, and your actively ruining what makes the city great in the process. As an Austin resident I do not support this construction project. I do not support my tax dollars being used for this. The city needs a better public transportation system in that of new railways. Not another lane.<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Stephen Beers | COMMENTS ON DRAFT ENVIRONMENTAL ASSESSMENT (EA) FOR THE PROPOSED TOLLED EXPANSION OF SOUTH MOPAC Submitted by Stephen Beers, Austin, TX 78745 May 3, 2026 This project is questionable given the blatant waste and inefficiency of this proposed project revealed in the Draft EA. The National Environmental Policy Act (NEPA) requires a close look at the possible impacts of federally assisted major projects and/or projects that require federal permit actions, like this one. Rather than just viewing this as a formality and a chance to employ consultants, the Central Texas Regional Mobility Authority (CTRMA) should take the mandate seriously to steward the public resources rather than waste them. The alternatives analysis claims that there will be 1,185 million hours of travel delay saved over a “no build” scenario. The reported $825 million base cost of this project does not include interest on bonds. Should the total cost swell to $1.1 billion with interest included -- as is likely a low estimate -- then spreading that sum over ten years that would be $110 million/1 million hours saved per year, or $110 per hour saved. If we assume 20 years, $55 each driver hour saved. Perhaps some other solution can be found for that much. Moreover by the mere fact of tolling the new extra capacity (four express lanes each direction), the CTRMA necessitates numerous new bridge structures (the drainage Appendix F lists 38 of them). There are new transition lanes, elevated ramps, and auxiliary lanes. All of these swell the costs without themselves adding capacity compared to simple lane additions, meanwhile increasing the paved area by approximately 2.5 times the existing freeway footprint (not counting frontage roads). This is more than 100 acres of new impervious cover added to the sensitive aquifer recharge zone. Increasing capacity to handle increased traffic is given as the reason for this boondoggle project. However, while the pavement grows by 150 percent over base, the new traffic increase handled is only 33 to 58 percent. We need to go back to the drawing board. |

| | | |
|---|---|---|
| **3/27/2026** | Stephen Craig | CTRMA Board Members,<br><br>Barton Springs is an iconic Austin place. It is not a want to have. It is a MUST HAVE!<br><br>Making Mopac traffic 8% better is not worth messing with Barton Springs and spending that much money.<br><br>Make the obvious choice<br><br>Thank You for listening to your neighbors,<br><br>Stephen Craig |
| **5/3/2026** | Stephen Finos | Mopac South cuts through sensitive terrain, where groundwater, wildlife, and habitat are directly connected. Drilling into cars can permanently damage underground ecosystems that formed over thousands of years. Under federal law projects that harm endangered species require serious scrutiny. CTRMA is attempting to push through a “finding of no significant impact “without the full environmental impact statement this project demands. I resent the fact that we austenite who care about the city have to continue to fight this battle to preserve our natural spaces against development! This project must be carefully scrutinized and should not proceed. |

| | | |
|---|---|---|
| **4/29/2026** | Stephen Graham | Dear CTRMA staff,<br><br>I'm writing to register opposition to the MoPac South extension project. My parents are both retired and live directly along MoPac north of the lake, in a community with hundreds of other people over 60. The last thing they need is an even greater volume of cars jamming into the northern section of MoPac induced by extension in the south.<br><br>I realize your organization is built on the presumption that more is better when it comes to highways, but the research is clear that demand management and transit alternatives are the only reasonable ways to improve movement around Austin at this point.<br><br>The entire city is choking with cars, so it's time to get our mindset out of the 1970s, acknowledge the research, and understand that adding highway lanes in a city of Austin's configuration will not work for reducing congestion. These projects merely move the congestion around and increase it overall by inducing more driving. Please don't spend our hard-earned tax dollars to make Austin worse,<br><br>Thank you,<br><br>Stephen Graham |
| **3/19/2026** | Stephen Hartness Graham | Please do not even think about widening MoPac. My mother and father both live at -, a retirement home with hundreds of residents immediately adjacent to MoPac at 42nd Street. Hundreds of people live there, and more senior living is going up across the neighborhood as we speak. Particulate matter air pollution from inviting even more cars onto MoPac would be directly harmful to this community with the respiratory conditions of the elderly. And of course, most people in transportation know by now that widening highways is a fool's errand that does not ease congestion, because any extra space is filled up with extra driving. The solution to traffic on MoPac is dynamic tolling for congestion, as is obvious from excellent flow of the adjacent tolled lane. But short of that, what the north/south corridors and the neighborhood around Westminster need is more frequent buses to be able to drive less, not more lanes to drive more. Thank you, Stephen Graham |

| | | |
|---|---|---|
| **4/28/2026** | Stephen Harvey | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Stephen Harvey |

| | | |
|---|---|---|
| **5/2/2026** | Stephen Henderson | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/23/2026** | Stephen Laughrun | Dear CTRMA,<br>Austin has been making meaningful steps to protect community in the last 10 years, but the highways and whatever authority builds them/manages these projects is tearing it all apart. The things that work must be maintained. I don't want to live in a beltway, overpass, concrete nightmare.<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation.<br>Thank you for your time and consideration. |
| **3/30/2026** | Stephen Pak | As a resident, I am writing to support the proposed path between Meridian and Escarpment Blvd. Currently, walkers and cyclists are forced onto the narrow shoulder of Hwy 45, which is a major safety concern. By funding this construction, the County will provide a protected, direct route through Circle C to the broader MoPac trail system. We have already seen progress with the initial design funding; now we need the County, CTRMA, or TxDOT to step up and ensure our families have a safe way to stay active and connected without risking highway traffic. his project isn't just a local sidewalk; it’s a critical link to the Circle C network, Slaughter Lane, and the MoPac trail system. Investing in this 'missing link' will significantly improve safety and provide a truly viable non-motorized route for the community. Furthermore, this path creates an essential 'last-mile' connection to nearby bus stops, making public transit a viable option for our residents. |

| | | |
|---|---|---|
| **4/18/2026** | STEPHEN RICE | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>STEPHEN RICE |
| **4/6/2026** | Sterling Harden | I do not believe we need more tolled express lanes built. This does not solve the issues. Just add another general lane if that's what is needed. Adding toll lanes is just another money grab. |

| | | |
|---|---|---|
| **4/14/2026** | Steve Barnick | Central Texas Regional Mobility Authority April 14, 2026 Attn: Project Manager, MoPac South Project 3300 N. IH-35, Suite 300 Austin, Texas 78705 RE: Formal Request for Environmental Mitigations – MoPac South Project – Section 8.0 Post-Environmental Clearance Activities and Design/Construction Commitments To the CTRMA Board and Project Leadership, As stakeholders dedicated to preserving and enhancing one of Austin's most iconic urban greenspaces, as past President of Friends of Barton Springs Pool, an Austin-based 501(c)(3) nonprofit, submits this letter to request specific environmental mitigations and design commitments that will address the expected significant impacts from the MoPac South Project. Recognizing CTRMA's projected timeline of up to six years, and knowing how disruptive road construction can be to the public, we offer the following adjustments to address the expected significant impacts. We acknowledge and appreciate that CTRMA has already committed to mitigations for the project which may overlap with these requests, but as the project moves toward Section 8.0 Post-Environmental Clearance Activities, we urge CTRMA to integrate the following commitments into the final design and construction contracts to ensure improved traffic safety on roads surrounding and accessing the park, and to maintain the ecological and recreational integrity of Zilker Park. I. Traffic Safety & Active Transportation - Given CTRMA's successes in redefining regional connectivity by integrating a world-class trail system into our transportation infrastructure, the funding and construction of a grade-separated active transportation crossing at MoPac and Barton Springs Road will improve safety for all transportation and park users at this intersection. This bridge project will provide a high-visibility opportunity for CTRMA to extend its important trail work in the region, and address critical traffic safety and public health concerns with the MoPac South project. Grade-Separated Crossing: Fund and construct an elevated bridge crossing over Barton Springs Road on the East side of MoPac thus providing a safe, grade-separated crossing located at a dangerous pinch point along Barton Springs Road. II. Tree Canopy & Light Pollution Protections - Zilker Park's tree canopy is irreplaceable and deserves to be protected or replaced in recognition and support for our commitment to the environment. Comprehensive Tree Replacement Funding: Mitigation for all trees lost to highway expansion, noise barriers, or shared use path construction by replacing native species in Zilker Park at a 3:1 ratio for trees 4"–19" in diameter and a 4:1 ratio for those at least 19" in diameter. TreeFolks arborists recommend this standard. Dark Skies Compliant Design: Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. III. Parkland Protection - Restore and mitigate encroachment of the MoPac South highway project. Encroachment Mitigation: Adjust alignments and construction methods to avoid or minimize parkland encroachment. Ensure that materials and trucks stay under the highway when near Zilker Park. Where encroachment is unavoidable, fully fund mitigation measures with best practice solutions, such as providing funding to facilitate land restoration, conservation, and ongoing stewardship measures. Direct the Environmental Compliance Manager to produce an annual compliance check-in for three years after the project is complete to ensure SW3P and Edwards Aquifer Rules are met. IV. Noise Abatement and Sound Mitigation - To mitigate environmental impacts from adding express lanes and lateral expansion of the highway. Noise Workshop: Conduct a Community Noise Workshop to identify feasible noise abatement and sound mitigation measures for the portion of the South MoPac project in Zilker Park, and build public support and understanding of the project. Advanced Pavement Technology: Use the most advanced pavement technologies and materials to improve safety and provide environmental protection by reducing road spray and noise at the source, and protecting water quality. Noise Barriers: Install high-performance concrete or transparent noise walls along the northbound and southbound sides of the project within Zilker Park boundaries, incorporating best practice path intervention designs, (e.g., landscape barriers or advanced absorption and diffraction barrier designs to trap and dissipate sound energy). V. Construction-Related Displacement & Public Health and Safety Mitigation - Recognizing CTRMA's record of coordinating with city staff to ensure safe access for all park users, we request these additional steps be taken to address public health and safety concerns. Infrastructure Improvement Reimbursement: Fund vehicle and pedestrian infrastructure improvements, e.g., sidewalks, bike paths, vehicle routing/parking areas, and new access points, to mitigate construction-related displacements of park usage and access to businesses operating within the park pursuant to a construction-phase local access study. Park Stakeholder Consultation: Consult with park non-profit entities, vendors, and concessionaires whose work and livelihoods are threatened by construction-phase activity, including Rowing Dock, Austin Nature and Science Center, Zilker Botanical |

| | | |
|---|---|---|
| | | Garden, The Trail Conservancy, and Waterloo Disc Golf Club. Ecological Restoration: Restore parkland areas or roadways damaged or degraded by infrastructure improvements, such as environmental restoration/improvement of the relocated parking areas which temporarily replace existing parking areas for visitors to Zilker Park. VI. Non-Required Mitigation Requests - Beyond the required environmental commitments, we propose the following context-sensitive mitigations to further the CTRMA's mission of environmental stewardship. Aquifer Conservation Funding: Offset the increased impervious cover, tree loss, degraded water and air quality, and aesthetic and visual impacts of the MoPac South project by providing mitigation payments of $35 million to the City of Austin. These funds would be earmarked for the purchase of permanent conservation easements over the Edwards Aquifer Recharge and Contributing Zones. As past President of Friends of Barton Springs Pool I appreciate CTRMA's consideration of these mitigation improvements which residents and the public at large will recognize and appreciate, too. We look forward to seeing these mitigation and funding commitments in the Section 8.0 documentation and final project schematic. We are available to meet with your team to answer questions and provide clarifications. Sincerely, Steve Barnick Past president of Friends of Barton Springs Pool |
| **4/1/2026** | Steve Carrell | No benefit for me. |
| **4/1/2026** | Steve Carrell | No tolls. |

| | | |
|---|---|---|
| **5/3/2026** | Steve Gates | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Steve Gates |

| | | |
|---|---|---|
| **4/26/2026** | Steve Gerson | Dear CTRMA Board Members,<br><br>I am very concerned that the plans for the MoPac south extension have not been fully vetted.<br><br>* I am shocked that there will not be a formal Environmental Impact Statement, especially considering that this construction would be happening on top of the Edwards Aquifer Recharge zone. I am a regular year-round swimmer at Barton Springs and I have seen over the years how development has adversely affected water quality.<br><br>* The rerouting of traffic on and off of the toll lanes north of Lady Bird Lake will cause a change in character of the area near and around Austin High School.<br><br>* The justification for this project does not take into account improvements in public transportation that we can make that could affect the number of cars on the road. This project once complete would save someone only a few minutes compared to not doing the project. And I don't think you have taken into account the phenomena of "induced demand" which has shown that traffic and delays will increase back to the same level it was before any construction was done.<br><br>Please let us look for creative solutions for the future needs of our community, instead of deciding that the answer to traffic problems is always Build More Roads.<br><br>Thank you.<br><br>Steve Gerson |
| **4/6/2026** | Steve Hayes | Expanding a highway here means over 110 acres of additional pavement, more polluted runoff, and years of disruptive construction in one of the most environmentally sensitive regions in Central Texas. Due to constant addition of impervious cover and development in the recharge zone, the aquifer and water table is already under extreme stress. |

| | | |
|---|---|---|
| **5/3/2026** | Steve Lin | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>- No impacts to the Edwards Aquifer and the City's Crown Jewels: Zilker Park, Barton Creek, Barton Springs, Dick Nichols Park, Volma Overton Sr., and Williamson Creek Greenbelt.<br>Thank you for your time and consideration. |
| **5/2/2026** | Steve McMillen | This project will have significant environmental impacts. This project will have significant aesthetic and quality of life impacts. This project will have no actual, practical benefit to the public in the long run because, if built, the capacity of the project will be rapidly filled with demand. In other words, more lanes, more cars as drivers believe it's a "faster" way. This concept of "induced demand" is well documented. In contrast and in reality, traffic congestion is a self-correcting issue - if there is congestion, drivers will discover their own alternatives such that equilibrium is obtained. In other words, build this project and travel times, in relatively short order, will revert back to pre-build travel times, evidencing no actual benefit, but only after years of quality of life detriments, increased travel times, and significant environmental and aesthetic impacts.<br>For the reasons above, I strongly endorse the no build alternative. In alternative, I do not believe the Environmental Assessment supports a Finding of No Significant Impact, and therefore a full Environmental Impact Statement must be completed. I believe the EIS must looks closely at cumulative impacts, including quality of life, aesthetic, near-term traffic flow detriments, the well-known "induced demand" phenomenon, environmental, noise, light, visibility, and safety. Such cumulative impacts study must closely look at project reductions in travel times given the induced demand phenomenon and analyze using the latest knowledge, modeling and science the true benefits of this project, which I would strongly argue are none, again, due induced demand and population growth. Moreover, the EIS must look at the MoPace North project of several years ago as an analogue for actual, realized gains (i.e., reduced travel times) from a project like this. Having lived through the MoPac North project, and using MoPac almost every day, I can assuredly and empirically testify that travel times north and south on MoPac north of the river have only increased over time. I believe studying MoPac North project as an analogue is critical to truly and honestly understanding whether this MoPac South project will have any actual, realized benefits. The no action alternative, as mentioned above, will actually create more benefits over time, even with population growth, as the physical constraints of Mopac will force people and policies into alternative modes of travel and work. Thank you. |

| | | |
|---|---|---|
| **3/30/2026** | Steve Simmons | Please find below my comments on the MoPac South project.<br><br>1. Consider the extension of the project to SH 45 Toll SW. It makes more sense that the Express Lanes have a connection to SH 45 SW due to the increased traffic along SH 45 SW and FM 1826.<br>2. The South Bay Crossover needs to be removed due to the increased use for the new Valor School at the NW corner of MoPac and SH 45 causing unsafe conditions. In addition, a 1,000-unit apartment complex is being planned on the western side of La Crosse and SH 45.<br>3. There should be a U-Turn for westbound SH 45 and Escarpment again due to the heavy traffic coming from the Valor School causing unsafe back up during peak hour traffic.<br><br>Steve Simmons |
| **4/1/2026** | Steven Anderson | I oppose expanding mopac because adding lanes does not alleviate traffic. Additional construction adds too much pain. We need to invest our tax dollars in alternative measures |
| **4/24/2026** | Steven Ascherl | I can't believe this is a serious proposal. 12 to 14 minutes by 2045?! At how much per mile? You could save that by simply changing the on/off ramp situation. Drivers avoid delays by exiting/entering local ramps to go around traffic. Exit 35th then get back on, exit Westover then get back on etc… The problem is, is that it works! It's slowing everything down for the rule followers. Make one exit at 45th that runs all the way to Windsor. I could go on and on. It's currently a glorified boulevard. Make it a highway. Secondly, you can not connect it to a I-35 bypass. Total disaster! Mopac doesn't need the I-35 disease. Go back to the drawing board. 15 minutes in 20 years!!!! I expect that argument from its detractors! Hardly a SELLING point! Good Lord. |
| **4/22/2026** | Steven Kuhn | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Steven March |
| **4/29/2026** | Steven R Zucker | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |

| | | |
|---|---|---|
| **5/3/2026** | Steven Ramos | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Steven Ramos |
| **5/3/2026** | Steven Rastrelli | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Steven Rastrelli |

| | | |
|---|---|---|
| **4/24/2026** | Steven Severance | To Whom It May Concern: I am an Austin resident and submit these comments as part of the official record for the MoPac South Draft Environmental Assessment (EA). After reviewing the Draft EA, I have significant concerns regarding the adequacy of the document under the National Environmental Policy Act (NEPA). I respectfully request that TxDOT address these deficiencies before issuing a Finding of No Significant Impact (FONSI). 1. ESA Consultation Is Incomplete — A FONSI Cannot Be Issued Prematurely The Draft EA acknowledges that consultation with the U.S. Fish and Wildlife Service (USFWS) regarding the Austin blind salamander, Barton Springs salamander, Bee Cave harvestman, and Tooth Cave spider is ongoing, with a commitment only to complete it "prior to the final EA" (Section 6.0; Post-Clearance Activity #19). Under Section 7 of the Endangered Species Act, a FONSI cannot lawfully be issued before formal consultation is complete and a Biological Opinion has been received. The public also cannot meaningfully evaluate the adequacy of the EA without knowing the outcome of that consultation. This alone warrants withholding a FONSI until the consultation is complete and its conclusions are incorporated into the public record. 2. Noise Barriers Are Not Binding Commitments The EA identifies 864 impacted residences and 22 non-residential land uses (Section 5.13), yet deems noise barriers "reasonable and feasible" for only 5 of 40 evaluated locations. Critically, even those 5 proposed barriers are explicitly conditioned on a post-FONSI constructability assessment and a vote by benefiting property owners (Post-Clearance Activity #5; Design/Construction Commitment #17). The EA therefore concludes "no significant noise impacts are anticipated" based on mitigation measures that are not guaranteed to be constructed. NEPA requires that mitigation relied upon to support a FONSI be binding and enforceable. Contingent, vote-dependent noise walls do not meet this standard. I request that either: (a) the noise barrier commitments be made legally binding in the final EA, or (b) the project be elevated to a full Environmental Impact Statement. 3. The Induced Demand Analysis Is Inadequate The EA's Induced Growth Analysis Technical Memorandum (TxDOT 2025k) concludes that induced growth impacts are negligible because the corridor area is "mostly developed" (Section 5.2). This analysis conflates induced land use changes with induced vehicle travel demand — two distinct phenomena. The peer-reviewed literature (Duranton & Turner, 2011, "The Fundamental Law of Road Congestion") establishes that highway capacity additions generate proportional increases in vehicle miles traveled, regardless of surrounding land use development status. The EA does not address this traffic-induction effect. I request the final EA include an analysis of induced VMT using accepted elasticity-based methods, and that forecasted 2045 traffic volumes reflect induced demand rather than assuming static travel patterns. 4. Greenhouse Gas Analysis Is Voluntarily Truncated Section 5.15 of the Draft EA explicitly states the GHG section is "not required by FHWA" and punts entirely to a statewide TxDOT report. No project-specific GHG analysis is provided. Given the direct relationship between highway capacity expansion, induced VMT, and $CO_2$ emissions, and given Austin's adopted climate commitments, the public deserves a project-specific analysis of GHG consequences, including the induced-demand scenario. I request this analysis be included in the final EA. 5. EA Classification Is Inappropriate for This Project's Scale This is an $824 million project spanning 8.77 miles through a dense urban corridor, crossing the Edwards Aquifer Recharge Zone, impacting nearly 900 residential receptors, and requiring ESA consultation for four listed species. An EA is appropriate only where the significance of environmental impacts is not clearly established. The cumulative weight of these factors — noise impacts on hundreds of homes, incomplete endangered species consultation, crossing of a critical recharge zone, and a multi-billion-dollar regional traffic effect — strongly suggests that a full Environmental Impact Statement is the appropriate NEPA instrument. I formally request that TxDOT and the Mobility Authority evaluate whether this project warrants elevation to an EIS. I respectfully request that the Mobility Authority and TxDOT address each of these comments in the final EA response document. These are not objections to improved mobility — they are requests for a legally adequate NEPA process that fully discloses environmental impacts and ensures that any mitigation relied upon is binding and enforceable. |

| **5/1/2026** | Stewart Bradley Cloth | I oppose the expansion. It'll make traffic worse and affect the environment among other issues. |

| | | |
|---|---|---|
| **5/3/2026** | Stirling Duncan | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. I have lived in Austin for all 24 years of my life, I love this city and it breaks my heart to see rich out of touch people destroy what makes it so special. I'm frustrated that Austinites voices are being trumped time and time again for the same stupid plan of MOPAC expansion. WE WANT VIABLE AND RENEWABLE PUBLIC TRANSPORTATION. We have been screaming that from the roof tops for years, but it's not profitable to whoever is making money off of cars and highways so we the people get ignored. Renewable public transportation would make I-35 AND MOPAC safer and less crowded, and it would prevent the need for highway expansion in the future because everyone within city limits would have access to an alternative form of transit. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Stirling Duncan |

| | | |
|---|---|---|
| **5/3/2026** | Storey Flowers | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |

|---|---|---|
| **5/3/2026** | Stuart Ritchie | Dear CTRMA Board Members,  With due respect for your efforts, I oppose the MoPac South highway expansion project. <br /><br />I concur with the position of the Save Our Springs Alliance. Once the aquifer system is impacted, there is no effective downstream remedy. <br /><br />I've looked at the Mobility Authority's Public Hearing Presentation on the subject, and while it does demonstrate a good deal of due diligence, I have to disagree with its conclusions on the basis that it amounts to a kind of circular argument. The nature of the problem is that the conclusion is assumed in the premises. The CTRMA would not exist if there were not already a long history of development of the internal combustion engine, the petroleum industry, and the resulting expansion of roadways, all of which are interconnected with an even longer history of the development of our social, economic and political structures.??  The presumption is that automobile traffic (with its various supporting industries) is an inevitability, that economic well-being is impossible without constant growth, and that our current set of social, economic and political structures are the only possible way to organize a society.?  What's usually missing from these presumptions is the recognition that collectively we human beings create all these things. Human conventions are not the same thing as immutable laws of nature. There is no immutable law of nature that requires us to maintain any particular set of industries, infrastructure or cultural norms. History is replete with turning points. We can change things if we want. However, doing so requires collective effort, motivated by a spirit of goodwill and co-operation for the common good.?  Personally, I have no confidence in any assessment claiming that building a highway expansion over a sensitive aquifer zone would somehow have "no significant impact," simply because in practice every highway system has a polluting effect. I can say this because I have driven all over the United States, and my direct observation is that highways are synonymous with pollution.  ??Just one example in particular is Interstate Highway 10 between Austin and El Paso — I've  observed that the roadway shoulders along on both sides of this whole long stretch of road are thoroughly scattered with bits of broken tires and other trash and debris. Automotive waste is a consistent problem, as vehicles leave trails of tire rubber residue, oil deposits, and other byproducts of petroleum combustion. All of this type of pollution will certainly affect the Edwards Aquifer, merely by the presence of significant traffic passing through the area. To suggest that some amount of pollution is merely "the cost of doing business" would be missing the point.  ??I recognize that our traffic is terrible in Austin, it's impossible to miss or ignore. However this problem is the result of a whole combination of contributing factors that have not been effectively addressed at the level of root causes. If we really want to solve the traffic problem, then we can't maintain this endless cycle of treating symptoms, while continuing to create the very causes that produce the problems in the first place. ?  What's needed is a real re-orientation of priorities on a fundamental level, at every level of society, and on a global scale. This means a real, concerted effort to work our way back along the chain of causation, spot the mistakes, and do everything we possibly can to correct them. Metaphorically speaking, a tree is known by its fruit. If we don't like the effects, then we have to stop planting the same seeds. If we continue to fixate on purely commercial concerns and unbridled market forces as the only organizing principle, then we will never solve our many pressing problems. Not solving them is not really an option.?  The solutions to these pressing problems are already known; there are many blueprints in place for effective ways to re-orient our infrastructures and social structures along more sane, just and compassionate lines. However it would be beyond the scope of this comment to go into much detail about that here. The best I could do would be to offer some reference to other sources.??  Consider for example the work of Share the World's Resources (STWR), a UK based non-profit civil society organization with consultative status at the Economic and Social Council of the United Nations. [sharing.org]  While at first glance their work may not seem directly applicable to this local issue, in my view it points in the right direction for re-evaluating our local situation in light of alternative possibilities that I think would end up being much better for everyone. I hope you'll consider taking a look at it.<br /><br />Thanks for your time and consideration.  Thank You for listening to your neighbors,  Stuart Ritchie |

| **5/3/2026** | Sue Brightman | I am against this project and want to save the springs!!! |
| **5/3/2026** | Sue Craven | Hi, my name is Sue Craven calling the city to let you know I oppose the MOPAC highway expansionproject that would further jeopardize Edward's aquifer beauty and unique cave systems in Austin.It would be a massive step backwards for our city. I just wanted tobe one of the people who let you know that we are totally opposed to this project.Thank you. |
| **5/3/2026** | Sue Gall | I demand a full Environmental Impact Statement (EIS) and real alternatives that avoid irreversible damage to our water, wildlife, and public health. |

| | | |
|---|---|---|
| **5/3/2026** | Sue Reading | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Sue Reading |
| **4/2/2026** | Suellen Maloney | For the future environmental health of Austin, stop this project! Austin is losing its soul. Could we go back to being a city that cared about the environment? |
| **5/3/2026** | Sullivan Meservey | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Sullivan Meservey |
| **3/19/2026** | Sumit Dutta | Traffic noise at Dick Nichols Park is already loud. Please avoid cutting into the forestry around the park and the Violet Crown Trail. Please also reduce additional traffic noise near those parks and trails as much as possible. Bike and pedestrian improvements along South Mopac would be very welcome, especially near Spyglass Drive where bikes have to use the sidewalk after coming from the path that crosses Barton Creek and 360. |
| **4/28/2026** | Sumit Dutta | If you do proceed with the project, please prioritize preserving access to and fully restoring the Violet Crown Trail, just as you plan to prioritize re-opening the Butler Hike & Bike trail around Lady Bird Lake. Please do a full Environmental Impact Study, which is essential considering the likely harm of this proposed expansion. |

| | | |
|---|---|---|
| **4/19/2026** | Summer Orosco | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Summer Orosco |

| **4/24/2026** | Sunny Smith | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/25/2026** | Surya Garcia-Crow | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Surya Garcia-Crow |

| | | |
|---|---|---|
| **4/27/2026** | Susan Paine-Keesey | Dear CTRMA Board Members,<br><br>As an Austin resident (specifically South Austin), MoPac commuter, and frequent visitor to Barton Springs, the surrounding parks and natural areas, I am submitting this comment in opposition to the proposed MoPac South expansion. I demand the Central Texas Regional Mobility Authority (CTRMA) conduct a comprehensive Environmental Impact Statement (EIS) to fully evaluate the environmental, social, and economic consequences of this project and to consider sustainable alternatives.<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on MoPac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north MoPac, Cesar Chavez and other streets. CTRMA's Environment Assessment, which I understand concludes this highway expansion project will have no impact on the environment, is completely inadequate -- *a full and thorough EIS (Environmental Impact Assessment) must be completed and the real potential consequences evidenced by an EIS acknowledged and weighed before a project such as this should ever begin to be implemented*.<br><br>*Specifically with reference to above, "...the proposed MoPac expansion endangers up to ten known habitats of the Barton Springs and Austin blind salamanders and threatens the Edwards Aquifer itself. Scientific dye-tracing and field studies by the City of Austin and the Barton Springs/Edwards Aquifer Conservation District show that pollution entering the aquifer in the Sunset Valley and Manchaca basins can reach Barton Springs in a matter of days, putting these irreplaceable waters and species directly in harm's way." - From Better Mopac Coalition's website (citing: Hauwert, et al 2004 <https://bseacd.org/uploads/Hauwert-et-al_-2004-Edwards-Symposium.pdf> ).<br><br>*Five to seven years of construction will likely cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*There is no evaluation of less harmful, more affordable options that should be considered first, including, as a possible option, removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). |

| | | |
|---|---|---|
| | | Finally, it's very important to mention that it is already known that highway expansion is an ineffective and unsustainable solution to traffic problems. Many studies (some dating back decades) have shown that more lanes actually just amounts to more traffic, and more time spent in the car / more emissions -- see links to numerous studies / articles citing studies evidencing this:<br><br>- https://www.aeaweb.org/articles?id=10.1257%2Faer.101.6.2616&fbclid=IwY2xjawRdBV1leHRuA2FlbQIxMABicmlkETEzMW8zYklvOWdMcXRwVWhzc3J0YwZhcHBfaWQQMjIyMDM5MTc4ODIwMDg5MgABHlwsb5l5n22_IJ6qysa3zhmqQmEeuhCMjrzPClO8YSNGfhqKUucy2QLP2giG_aem_Ku1A-n-Lt4OVF-PPUfq4Sw<br><br>- https://www.researchgate.net/publication/315534829_Closing_the_Induced_Vehicle_Travel_Gap_Between_Research_and_Practice?fbclid=IwY2xjawRdBXxleHRuA2FlbQIxMABicmlkETEzMW8zYklvOWdMcXRwVWhzc3J0YwZhcHBfaWQQMjIyMDM5MTc4ODIwMDg5MgABHrbDYN-pXdvgrn4xXPUyL6Uwsq7CuLIKe80gFZs92Bo0CLbo8k_e_8oz-9Ao_aem_1FxNz3ebiTipmNz0ngvqJw<br><br>- https://arstechnica.com/cars/2021/08/please-stop-adding-more-lanes-to-busy-highways-it-doesnt-help/?fbclid=IwY2xjawRdBclleHRuA2FlbQIxMABicmlkETEzMW8zYklvOWdMcXRwVWhzc3J0YwZhcHBfaWQQMjIyMDM5MTc4ODIwMDg5MgABHrbDYN-pXdvgrn4xXPUyL6Uwsq7CuLIKe80gFZs92Bo0CLbo8k_e_8oz-9Ao_aem_1FxNz3ebiTipmNz0ngvqJw<br><br>- https://www.reuters.com/world/us/us-highway-expansions-increase-traffic-pollution-environmental-groups-say-2021-10-20/?fbclid=IwY2xjawRdBfRleHRuA2FlbQIxMABicmlkETEzMW8zYklvOWdMcXRwVWhzc3J0YwZhcHBfaWQQMjIyMDM5MTc4ODIwMDg5MgABHnqRz8SWDijY99e0dp4UjmKixFuPNEaTVwTMT2HoAmxOLLaaCWLXV3K-QY0q_aem_GysFWeypL3BiWJqhjQipyg |

| **5/3/2026** | Susan Davenport | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |

| | | |
|---|---|---|
| **5/3/2026** | Susan Erickson | Dear Board of Central Texas Regional Mobility Authority,<br><br>I am asking for an in-depth Environmental Impact Statement to clarify the real environmental impact of the proposed South Mopac expansion. An Environmental Assessment is inadequate to predict that the plan "would not result in significant impacts on the human or natural environment," as CTRMA's draft assessment states<br><br>Austin has a history of respecting quality of life and our natural gifts over unbridled development. Please respect that history and get an in-depth Environmental Impact Statement.<br><br>Susan C Erickson |

| | | |
|---|---|---|
| **4/20/2026** | Susan Gay | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration!<br>Sincerely,<br>Susan |
| **4/30/2026** | Susan Harrell | I want to strongly voice my wishes to NOT expand Mopac South. I have lived in Austin since 1982 and have seen the changes to the Green Belt with my own eyes. I am a frequently walker, hiker, biker and swimmer in the Green Belt/360/Barton Springs/Lady Bird Lake area. There once was constant water flowing along the Green Belt/360 Trail with many folks swimming, swinging from ropes into water. Now I rarely see water there. I travel Mopac South and have never had an issue with traffic. The traffic is briefly during peak times, which I avoid or take an alternative route. If Mopac South is developed, it will lead to further development in the area, which I oppose. The GreenBelt should remain Green and open for hikers, bikers and swimmers, we do not NEED more lanes for more cars, which will happen if the expansion goes through. I do not want the disruption to nature in the area, including filling in or destroying fragile limestone caves which currently do their job in collecting rain fall, nor do I want the animals disturbed and more noise with more cars. |

| | | |
|---|---|---|
| **4/20/2026** | Susan I Jones | Dear CTRMA Board Members,<br><br>I understand the need for expansion to mitigate some of Austin's increasing problems with lack of infastructure. I am pro infastructure in that regard. I am writing to strongly oppose the MoPac South expansion as proposed. I do not believe that the impact of the current plan will not affect the environment as they say. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. This job can be done right. It may cost more, it might take longer, but Austin will be proud of it's results.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. |

| | | |
|---|---|---|
| | | Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. This level of review is required and should be the minimal baseline.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Susan I Jones |

| | | |
|---|---|---|
| **5/3/2026** | Susan Kleinman | Please consider that a highway expansion will only aggravate problems, rather than solve them. For a growing city like Austin it would well serve it to improve public transportation. At minimum, there should be an environmental impact study that would inform it.<br><br>Thank you,<br><br>Susan Kleinman<br><br>Austin, TX |
| **5/3/2026** | Susan Lazarus | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Susan Lazarus |
| **4/7/2026** | Susan M Pascoe | Provide elevation renderings showing vertical heights. What are the noise pollution solutions? How does this effect lake Austin / Deep Eddy Pool? Are there going to be any Johnson Creek protections? Any safety reports? Any heritage tree protections? etc. What is being done about sensitive areas - endangered species, caves etc, |
| **5/3/2026** | Susan Moffat | I oppose the proposed Mopac expansion and support a full EIS and alternatives that do not harm wildlife and our environment. |
| **5/3/2026** | Susan Moore | I am opposed to the expansion of MOPAC over Barton Springs and Edwards Aquifer. There needs to be a thorough environmental impact study as this project threatens our water quality, endangered species, a precious natural resource and the future of a healthy Barton Springs. We have so little natural areas and what we have has to be protected for our future health and well being as a community. Water is an ongoing issue with climate change and the drought and this area of construction will hugely adversely impact our water quality not just with the construction but increased traffic and pollution. I grew up above Barton Springs and live now in the Edwards Aquifer recharge zone. Please do the right thing and consider the community's health first. |

| | | |
|---|---|---|
| **3/13/2026** | Susan Pantell | Dear CTRMA Board Members,<br><br>I strongly oppose the MoPac South expansion as proposed. If you expand MoPac South, it will fill up with cars in a few years from induced demand, and then you will have to expand it again. Instead, you should spend the money to expand and improve transit, as well as bike and pedestrian options.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts, but I do not think it adequately addresses the significant environmental concerns.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The EA also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>The Draft EA does not adequately assess the impacts to quality of life of the community. The proposed expansion would widen the MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. The EA concludes that visual impacts would be "neutral", which does not make sense, since clearly MoPac will occupy a larger footprint and have negative aesthetic impacts. It is not clear that the noise impacts, both from construction and operation, would be adequately mitigated. People who live, work or recreate in the area will have heightened noise impacts on a daily basis. Conducting the construction at night does not mitigate the impacts for people who live nearby and are trying to sleep. In addition, years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>The CTRMA should conduct a full Environmental Impact Statement, which would provide the transparent, comprehensive analysis required under federal law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation.<br><br>Thank you for considering this input.<br><br>Respectfully, |

| | | |
|---|---|---|
| | | Susan Pantell |

| | | |
|---|---|---|
| **4/20/2026** | Susan Pascoe | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Please evaluate this planned destruction carefully and fully. I vote NO.<br><br>Sincerely,<br><br>Susan Pascoe |
| **5/3/2026** | Susan Reardon | Water is life. Water is sacred. We need to protect it all costs. Roadways are negotiable, water is not! |

| | | |
|---|---|---|
| **4/14/2026** | Susan scace | Dear CTRMA Board Members,<br><br>I strongly oppose the MoPac South expansion as proposed. It will not significantly reduce traffic congestion. It will cost too much money.<br><br>Many people object due to environmental concerns and that is valid. But there are a multitude of other reasons this is a bad idea. There are other solutions!<br><br>Additionally, I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. |---|---|---|
| **5/3/2026** | Susan Tepper | Dear CTRMA Board Members, Austin has experienced explosive growth over the last decade and access to high quality greenspace within city limits is an essential part of what has drawn so many people to this city. The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Please prioritize the wellbeing of Austin locals and the greenspaces that make our city so special. Respectfully, Susan Tepper |

| **4/18/2026** | Susan Tietz | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Susan Tietz |

| | | |
|---|---|---|
| **4/23/2026** | Susan Van Haitsma | Dear CTRMA Board Members,<br><br>Please register my sincere objection to the proposed construction of 6-8 new traffic lanes on MoPac over the most sensitive environment in Austin. With all that we have learned over the years about how more lanes lead to more traffic, how water, air and habitat are always degraded by more high-speed roadways and how costs of construction always balloon, this proposal is clearly unwise and unnecessary. I am very disappointed that such a proposal was even made much less promoted by road planners.<br><br>I am a regular swimmer at Austin's world-famous treasure, Barton Springs and a regular walker on the Butler Trail all the way around Ladybird Lake. Now that the wishbone bridge has been completed on the east end of the Butler Trail, why would planners now consider blocking the western MoPac pedestrian bridge for years of destructive inaccessibility, negating the much-heralded benefit of having a 10-mile continuous loop?<br><br>By every measure, this MoPac expansion proposal is ill-conceived. As a daily bus rider who is trying to reduce my own ecological footprint, I urge road planners to pursue public transportation solutions that reduce rather than increase the numbers of cars on the road and protect rather than harm our most revered natural resources in Austin.<br><br>Respectfully,<br><br>Susan Van Haitsma |

| | | |
|---|---|---|
| **4/30/2026** | Susan Walsh | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project. Austin is losing parkland and green spaces as development on every level is not requiring attention to the details needed to reduce pollution from building, replace green space removed by comproable spaces, and replacing trees and meadows. Part of what makes Austin great is our parks and green spaces. Please protect them.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting. In our hot summers trees are vital.<br>- Avoid parkland encroachment. The more space between parks, busy streets, and cement, the better our park sancuaries can be. Care needs to be taken during building to protect nearby parks and green spaces.<br>- Capital improvement reimbursements for affected community assets. Every green space is important in urban areas from pocket parks and creek banks to large parks. The city must work with affected neighborhoods to identify areas to protect and have money to replace damaged areas from construction.<br>- A noise wall workshop with meaningful community input. On going noise from construction needs to be addressed.<br>- An open space fund dedicated to long-term preservation and restoration. It can take years to rebuild parks and green spaces. Money and planning will be key.<br>- A permanent green fund to support ongoing environmental mitigation. For Austin to remain being known as a beutiful city will take work from the City govenment and neighborhoods. This is a long term goal that is important to current and future residents.<br>Thank you for your time and consideration. |
| **5/3/2026** | Susan Welborn | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Susan Welborn |

| | | |
|---|---|---|
| **4/20/2026** | Susan Welsh | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Susanna Sharpe | Dear CTRMA Board Members, Below is a pre-written message since I can't say this any better than below. Our environment is at a tipping point in so many ways. Human beings can no longer afford to ignore the impacts of our actions on waterways, animal and plant life, and human life. The Mopac expansion would cause serious harm to Barton Springs and the Edwards Aquifer. The plans should not go forward. It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. | **4/26/2026** | Susannah Benton | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Susannah Benton |

| | | |
|---|---|---|
| **4/19/2026** | Susie Dudley | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>I strongly oppose the southern expansion of MoPAK. Disastrous for the environment and our neighborhood. , |

| **5/1/2026** | Suzanne Dietrich | This is an unfortunate project. The environment impacts need to be studied as they could be incredibly damaging to the delicate ecosystems within Austin. This is not a desired project, more lanes, especially toll lanes, will not solve the traffic issues. I would rather have mopac stay untouched and deal with traffic as it is. I'm wholly against this project and hope that TxDot would take environmental impacts seriously. |

| | | |
|---|---|---|
| **4/22/2026** | Suzanne Hood | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration of the aquifer and surrounding land<br><br>Thank you for your time and consideration. |

| **3/24/2026** | Suzanne LaPinta | My neighborhood, Sendera Glen, sits right at the intersection of Slaughter Lane and South MoPac. I can only imagine that the toll lanes will add to the already LOUD road noise level. At this time, it does not appear that any noise abatement walls will be built alongside my neighborhood. I'm just curious: why do all the neighborhoods along the northern part of the toll lanes have noise abatement walls and we will not? |

| | | |
|---|---|---|
| **5/3/2026** | Suzanne MacGillivray | South Austin doesn't have enough bus routes, the light rail isn't going into south Austin - i would rather that people had those different routes to move around and not have every single person trying to get on mopac, in a car. Our air quality already bad so more driving isn't going to help. This project is over the aquifer where we get our drinking water so i especially do not want it for that reason. I dont know where y'all think we'll get our water if we poison what we have now. We need other solutions than just roads. More people able to work from home would certainly help, like it did during the pandemic. We can use more tools than just roads. |
| **3/24/2026** | Suzanne Mudd | I would like to make the comment that the project should be postponed until all work is completed on IH35. The bottlenecks with traffic going in or out of the city will be worsened by starting another project on a functioning north and south freeway. Please stop construction until IH35 is completed through the downtown corridor. There is too much construction going on that negatively affects the environment when all roads are being worked on at once leading to even more traffic when semi functioning roads are being worked on in tandem. Thank you for your consideration to this matter. |
| **4/21/2026** | Suzanne Whittenton | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Suzi Stern | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Suzi Stern |

| | | |
|---|---|---|
| **4/24/2026** | Suzy Lipton | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planted<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>I've grown up in Austin my entire life. The downtown/mopac area is so nostalgic and reminds me of when I was younger. This city is beautiful and what we need in unpredictable times is to maintain what makes Austin special. We don't need more highways. We need community.<br>Thank you for your time and consideration. |
| **4/16/2026** | Swee Paw Shum | To whom it may concerned<br><br>I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45, which is very dangerous. City Council District 8 has now allocated $117,000 to the design of this path as they recognize the important need for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request, and I can provide further information, including graphics. Thank you.<br><br>Kind regards<br>Swee Paw Shum<br>Resident of Meridian |
| **5/3/2026** | Sydney | There are much better ways at expanding than ruining the heart of Austin! |

| | | |
|---|---|---|
| **5/3/2026** | Sydney Bell | To Whom It May Concern,<br><br>I am writing to oppose the proposed MoPac South project as it is currently presented in the Environmental Assessment and public hearing materials.<br><br>Right now, the project is framed almost entirely around congestion — how many cars use the corridor and how travel times might increase if nothing is done. But that feels like a narrow way to define the problem. Roads like MoPac are not just traffic corridors. They run through real places, and decisions about expanding them shape how those places change over time.<br><br>Projects like this don't just move traffic more efficiently. They influence what gets built, who can afford to stay in the area, and what those spaces actually feel like day to day. Expanding capacity can speed up development in ways that are hard to undo, and those changes usually go beyond what is captured in traffic models. That side of the impact doesn't feel fully addressed here.<br><br>I also want to point out an issue with the public input process. The document says that public engagement is "paramount" , but verbal comments at the in-person hearing are not recorded for the official record. That makes it harder for people to meaningfully participate, especially if they are not able to submit written comments separately.<br><br>More broadly, this proposal leans heavily on roadway expansion as the solution. That approach tends to come with long-term tradeoffs, including induced demand and greater reliance on driving, without really solving congestion in a lasting way. It would be worth taking a harder look at alternatives that focus on reducing that dependence rather than reinforcing it.<br><br>For these reasons, I strongly encourage you to reconsider the proposed build alternative and more carefully evaluate options that address mobility while also considering long-term impacts on surrounding communities.<br><br>Thank you for your time and consideration.<br><br>Sincerely, |

| | | |
|---|---|---|
| | | Sydney Bell |

| | | |
|---|---|---|
| **5/3/2026** | Sydney Dwoskin | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Respectfully, Sydney Dwoskin |

| | | |
|---|---|---|
| **3/19/2026** | Sydney Fuller | Please do not expand Mopac. Research has shown that expanded highways actually worsens traffic. Highway expansion also harms communities adjacent to the highway, often exacerbating social inequality. Instead, please invest in public transportation and pedestrian/bike friendly infrastructure. Public transportation and more bike lanes uses less energy than cars and releases fewer greenhouse gases, an urgent matter given the climate crisis. Traffic accidents are also extremely common and deadly. Public transportation leads to fewer traffic accidents. I hope this reasoning influences your decision, which would impact millions in the Austin area. Say no to Mopac expansion and yes to public transit, bike lanes, and pedestrian-friendly infrastructure. |
| **4/21/2026** | Sydney Hollaway | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration<br><br>ZILKER PARK IS THE HEART OF AUSTIN, right next to deep eddy, the historic spring fed pool with the greenbelt that is used by thousands of people PER DAY…. don't F with the heart of AUSTIN, she's so perfect as she is |

| | | |
|---|---|---|
| **4/21/2026** | Sydney Holloway | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration.<br>ZILKER PARK IS THE HEART OF AUSTIN, right next to deep eddy, the historic spring fed pool with the greenbelt that is used by thousands of people PER DAY…. don't F with the heart of AUSTIN, she's so perfect as she is |
| **4/28/2026** | Sydney Huffman | I am writing in opposition to the proposed MoPac expansion between Slaughter Lane and Enfield. While reducing commute times is a worthwhile goal, this project comes at a disproportionate cost to critical community assets and environmental resources. The Violet Crown Trail is one of South Austin's only safe, continuous, shared-use nature corridors. It serves not just as a recreational amenity, but as a vital active transportation route for residents of all ages. Disrupting access to this trail for an estimated seven years of construction would significantly impact public safety, mobility, and quality of life. Beyond access concerns, the proposed expansion raises serious environmental risks. The corridor lies within the Edwards Aquifer recharge zone, an area essential to the health of Barton Springs and the broader regional water system. Large-scale construction and increased roadway capacity threaten water quality, sensitive cave systems, and endangered species. These are not easily reversible impacts. The projected benefit—approximately five minutes of travel time savings for non-toll users during peak hours—does not justify the long-term environmental degradation and loss of public space access. At a minimum, this project should not proceed without a full Environmental Impact Statement that thoroughly evaluates risks to the aquifer, ecosystems, and public lands. Additionally, any consideration of moving forward must include binding commitments to preserve continuous access to the Violet Crown Trail and fully restore it to its current or better condition. Austin has previously recognized the importance of protecting these resources. I urge decision-makers to uphold that standard and reject this proposal in its current form. |

| | | |
|---|---|---|
| **4/21/2026** | Sydney Jansen | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>However, if you understand the ecological impact of the original spaces, most people will actual vote against the expansion of Mopac entirely. No one wants nor needs this expansion.<br>The ecological toll will haunt us for centuries, but what I assume matters most to this committee is money. So, let me expound. You destroy the trails, you get no hikers, daytrippers, field trippers, etc. No one comes to Austin for its natural beauty, buys food or supplies around the local area. There will also be a decrease in species richness, so you get very little incentive for College of Natural Science and Geoengineering graduate students to come, receive EcoLab funding, landowners don't get tax cuts, students and professors no longer apply for grants to research here, the University no longer receives indirect funding, the University funding decreases dramatically, the campus suffers, few students see incentive to attend, the student-fed economy plummets, the football team starts to fail, no one comes for the games, and the economy suffers further.<br>Additionally, this project will impact the water table, and then no one will live here when there is no water.<br>Do you understand the cascading impacts of this deliberately cataclysmic plan?<br>Don't build this.<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/29/2026** | sydney mantrom | This project is a mess. An easy way to solve just some of the MoPac clog would be to A) Stop taking notes from the oil companies and build more public transport and B) block the entrance from 360 to MoPac so there's not such a horrible traffic back up all the way to Ben White. You could also open up the express lane to be just a normal traffic route because it feels like the same waste of money that the tolls are over near the airport because the majority of traffic ends up avoiding the "fee"way entirely. Can you please find another method that doesn't further add environmental destruction to the Edward's Aquifer? What ever happened to Save our Springs? If I-35 is so bad you plan to divert traffic to yet another road, don't you think it will eventually turn into another I-35-like problem in the future? Plan for the next 100 years, not the next 10. If you really wanted to fix 35, you'd get together with whoever is charge of Texas interstates and make noise about the need for the 18 wheelers who aren't stopping in the city to go around. The proposed MoPac expansion endangers up to ten known habitats of the Barton Springs and Austin blind salamanders and threatens the Edwards Aquifer itself. Scientific dye-tracing and field studies by the City of Austin and the Barton Springs/Edwards Aquifer Conservation District show that pollution entering the aquifer in the Sunset Valley and Manchaca basins can reach Barton Springs in a matter of days, putting these irreplaceable waters and species directly in harm's way. :CITY OF AUSTIN, TEXAS= ORDINANCE NO. 920903- D AN ORDINANCE CODIFYING THE SOS ORDINANCE AS APPROVED BY THE QUALIFIED VOTERS OF THE CITY ON AUGUST 8, 1992; AMENDING THE AUSTIN CITY CODE OF 1992 TO EFFECTUATE SAID SOS ORDINANCE; WAIVING THE APPLICATION OF SECTIONS 2-2-3, 2-2-5, 2-2-7, AND 13-1-981 OF THE AUSTIN CITY CODE OF 1992; AND PROVIDING AN EFFECTIVE DATE. BE IT ORDAINED BY THE CITY COUNCIL OF THE CITY OF AUSTIN: PART 1. Chapter 13-7 (Environmental Protection and Management) Article I (Water Quality) of the Austin City Code of 1992 is hereby amended to codify the SOS Ordinance by adding a new Division 5 to hereafter read as follows: Division 5. SOS ORDINANCE Sec. 13-7-36.1 TITLE AND PURPOSE (a) This Division, to be known as the SOS Ordinance, sets out special requirements for development of land in watersheds within the City's planning jurisdiction which contribute to Barton Springs. (b) Sections 13-7-36.3 through 13-7-36.13 codify the Save Our Springs Initiative Petition Ordinance as adopted by popular vote on August 8, 1992. Sec. 13-7-36.2 AMENDMENT This Division shall not be repealed or amended by City Council until two years after the effective date of the SOS Ordinance, August 10, 1992. Thereafter, this Division may be repealed or amended only by an affirmative vote of a three-quarters majority of the City Council. Sec. 13-7-36.3 DECLARATION OF INTENT The people of the City of Austin declare their intent to preserve a clean and safe drinking water supply, to prevent further degradation of the water quality in Barton Creek, Barton Springs, and die Barton Springs Edwards Aquifer, to provide for fair, consistent, and cost-effective administration of the City's watershed protection ordinances, and to promote the public health, safety, and welfare. The City of Austin recognizes that the Barton Springs Edwards Aquifer is more vulnerable to pollution from urban development than any other major groundwater supply in Texas, and that the measures set out in this ordinance are necessary to protect this irreplaceable natural resource. Sec. 13-7-36.4 POLLUTION PREVENTION REQUIRED (a) In the watersheds contributing to Barton Springs, no development nor any revision, extension, or amendment thereof, may be approved unless it is designed, carried out, and maintained on a site-by-site basis to meet the pollution prevention requirements set forth below for the life of the project. In order to prevent pollution, impervious cover for all such development shall be limited to a maximum of fifteen (15) percent in the entire recharge zone, twenty (20) percent of the contributing zone within the Barton Creek watershed, and twenty-five (25) percent in the remainder of the contributing zone. The impervious cover limits shall be calculated on a net site area basis. In addition, runoff from such development shall be managed through water quality controls and onsite pollution prevention and assimilation techniques so that no increases occur in the respective average annual loadings Page 1 of 22 :CITY OF AUSTIN, TEXAS: of total suspended solids, total phosphorus, total nitrogen, chemical oxygen demand, biochemical oxygen demand, total lead, cadmium, fecal coliform, fecal streptococci, volatile organic compounds, total organic carbon, pesticides, and herbicides from the site. For a given project, impervious cover shall be reduced if needed to assure compliance with these pollutant load restrictions. (b) Within the watersheds contributing to Barton Springs, Section 13-7-23 of the Land Development Code is amended so that in no event shall the boundary of the critical water quality zone be less than 200 feet from the centerline of a major waterway or be less than 400 feet from the centerline of the main channel of |

| | | |
|---|---|---|
| | | Barton Creek. No pollution control structure, or residential or commercial building, may be constructed in the critical water quality zone in these watersheds. Sec. 13-7-36.5 NO EXEMPTIONS, SPECIAL EXCEPTIONS, WAIVERS OR VARIANCES The requirements of this ordinance are not subject to the exemptions, special exceptions, waivers, or variances allowed by Article V of Chapter 13-2 of the Land Development Code. Adjustments to the application of this ordinance to a specific project may be granted only as set out in Section 13-7-36.8 below. Sec. 13-7-36.6 APPLICATION TO EXISTING TRACTS, PLATTED LOTS, AND PUBLIC SCHOOLS (a) This ordinance does not apply to development on a single platted lot or a single tract of land that is not required to be platted before development if: (1) the lot or tract existed on November 1, 1991, and (2) the development is either: (i) construction, renovation, additions to, repair, or development of a single-family, single-family attached, or a duplex structure used exclusively for residential purposes, and construction of improvements incidental to that residential use; or, (ii) development of a maximum of 8,000 square feet of impervious cover, including impervious cover existing before and after the development. (b) This ordinance does not apply to development of public primary or secondary educational facilities if the City and the school district enter into a development agreement approved by a three-quarters vote of the City Council protecting water quality pursuant to Section 13-2-502(o)(7) of the Land Development Code. Sec. 13-7-36.7 EXPIRATION OF PRIOR APPROVALS Within the watersheds contributing to Barton Springs, the following provisions shall govern the expiration of certain prior approvals: A. Previously Approved Preliminary Subdivision Plan: (a) Unless it has or will have expired sooner, a preliminary subdivision plan initially approved before the effective date of this ordinance expires one year after the effective date of this ordinance, or two years after its initial approval, whichever date is later, unless an application for final plat approval is filed before this expiration date and a final plat is approved no later than 180 days after filing. (b) No approved preliminary plan, and no portion of an approved preliminary plan, shall be valid or effective after the expiration date established by this part, or shall be Page 2 of 22 -CITY OF AUSTIN, TEXAS= extended, revised, or renewed to remain effective after the expiration date, except according to subpart C. B. Previously Approved Site Plan: (a) Unless it has or will have expired sooner, a site plan or phase or portion thereof initially approved before the effective date of this ordinance shall expire one year after the effective date of this ordinance, or three years after its initial approval, whichever date is later, unless: (1) an application is filed before this expiration date for building permits for all structures shown on the site plan or phase or portion thereof and designed for human occupancy, and the building permits are approved and remain valid and certificates of occupancy are issued no later than two years after this expiration date; or, (2) If no building permits are required to construct the structures shown on a site plan described in subpart (a), construction begins on all buildings shown on the site plan or portion or phase thereof before this expiration date, and the buildings are diligently constructed and completed, and certificates of compliance or certificates of occupancy are issued no later than two years after this expiration date. (b) No approved site plan, and no separate phase or portion of an approved site plan, shall be valid or effective after the expiration date established by this part, or shall be extended, revised, or renewed to remain effective after the expiration date, except according to subpart C. C. Approved Plans Which Comply: An approved preliminary subdivision plan, portion of a preliminary plan, approved site plan, or separate phase or portion of an approved site plan that complies with this ordinance or that is revised to comply with this ordinance does not expire under subpart A or subpart B and remains valid for the period otherwise established by law. Sec. 13-7-36.8 LIMITED ADJUSTMENT TO RESOLVE POSSIBLE CONFLICTS WITH OTHER LAWS (a) This ordinance is not intended to conflict with the United States Constitution or the Texas Constitution or to be inconsistent with federal or state statutes that may pre-empt a municipal ordinance or the Austin City Charter. (b) The terms of this ordinance shall be applied consistently and uniformly. If a three-quarters majority of the City Council concludes, or a court of competent jurisdiction renders a final judgment concluding, that this ordinance, as applied to a specific development project or proposal, violates a law described in subpart (a), then the City Council may, after a public hearing, adjust the application of this ordinance to that project to the minimum extent required to comply with the conflicting law. Any adjustment shall be structured to provide the maximum protection of water quality. Sec. 13-7-36.9 CONSTRUCTION OF ORDINANCE This ordinance is intended to be cumulative of other City ordinances. In case of irreconcilable conflict in the application to a specific development proposal between a provision of this ordinance and any other ordinance, the provision which provides |

| | | |
|---|---|---|
| | | stronger water quality Page 3 of 22 :CITY OF AUSTIN, TEXAS= controls on development shall govern. If a word or term used in this ordinance is defined in the Austin City Code of 1981, as that code was in effect on November 1, 1991, that word or term shall have the meaning established by the Austin City Code of 1981 in effect on that date, unless modified in this ordinance. Sec. 13-7-36.10 REDUCE RISK OF ACCIDENTAL CONTAMINATION Within one year of the effective date of this ordinance the City of Austin Environmental and Conservation Services Department shall complete a study, with citizen input, assessing the nsk of accidental contamination by toxic or hazardous materials of the Barton Springs Edwards Aquifer and other streams within the City of Austin and its extraterritorial jurisdiction. The assessment shall inventory the current and possible future use and transportation of toxic and hazardous materials in and through Austin, and shall make recommendations for City actions to reduce the risk of accidental contamination of the Barton Springs Edwards Aquifer and of other water bodies. Within 60 days of completion of the study, and following a public hearing the City Council shall take such actions deemed necessary to minimize nsk of accidental contamination of city waters by hazardous or toxic materials. Sec. 13-7-36.11 EFFICIENT AND COST-EFFECTIVE WATER QUALITY PROTECTION MEASURES In carrying out City of Austin efforts to reduce or remedy runoff pollution from currently developed areas or to prevent runoff pollution from currently developed or developing areas, the City Council shall assure that funds for remedial, retrofit or runoff pollution prevention measures shall be spent so as to achieve the maximum water quality benefit, and shall assure that the need for future retrofit is avoided whenever feasible. Sec. 13-7-36.12 SEVERABILTIY If any provision, section, subsection, sentence, clause, or phrase of this ordinance, or the application of the same to any person, property, or set of circumstances is for any reason held to be unconstitutional, void, or otherwise invalid, the validity of the remaining portions of this ordinance shall not be affected by that invalidity; and all provisions of this ordinance are severable for that purpose. Sec. 13-7-36.13 ADOPTION OF WATER QUALITY MEASURES fa) The adoption of this ordinance is not intended to preclude the adoption at any time, by a majority vote of the City Council of stricter water quality requirements upon development in the watersheds contributing to Barton Springs or of further measures to restore and protect water quality. PART 2. The Austin City Code of 1992 is hereby amended to effectuate the SOS Ordinance as follows: m Amend the title of Chapter 13-1 Article V (Appeals, Variances, and Special Exceptions); and the title of Chapter 13-1 Article V, Division 3 (Special Exceptions) to read as follows: ARTICLE V. APPEALS, VARIANCES, SPECIAL EXCEPTIONS, AND ADJUSTMENTS DIVISION 3. SPECIAL EXCEPTIONS AND ADJUSTMENTS Page 4 of 22 ^CITY OF AUSTIN, TEXAS= [2] Add new Sections 13-1-304 and 13-1-305 to read as follows: Sec. 13-1-304 APPLICATION FOR ADJUSTMENT (a) An application for an adjustment authorized by the Land Development Code shall be considered only in connection with the review of a site plan or subdivision. (b) An application for an adjustment shall be submitted to the Director on a form provided by the Director and shall be considered only in connection with the review of a specific development project or proposal in the Barton Springs Zone, (c) An application for an adjustment shall include: (1) the name and address of the applicant and owner; (2) the address and legal description of the property in which the specific development project or proposal is located; (3) adequate proof that the applicant is either the owner of record or the authorized agent of the owner; (4) a review fee, as established by ordinance; (5) the specific section(s) of the Land Development Code which, as applied to the development project or proposal, the applicant asserts violate(s) the United States Constitution, the Texas Constitution, federal or state statutes; (6) the specific provision^) of the United States Constitution, the Texas Constitution, federal or state statutes which the applicant asserts are violated by application of the Land Development Code to the development project or proposal; (7) a statement including a complete factual basis supporting applicant's assertions; (8) a legal brief supporting applicant's assertions; and, (9) the specific adjustment requested, along with an explanation of how the requested adjustment is limited to the minimum extent required to comply with the conflicting law, and how it provides the maximum protection of water quality. Sec. 13-1-305 CONSIDERATION OF AN APPLICATION FOR ADJUSTMENT An application for adjustment is considered in accordance with a two phase process, as hereinafter described: (a) PHASE ONE: (1) The applicant submits a complete application for adjustment to the Director, as set forth in Section 13-1-304. (2) The application for adjustment is reviewed by the Law Department. (3) The application for adjustment, along with the recommendation of the City Manager is presented to the City Council to determine whether application to Page 5 of 22 - |

| | | |
|---|---|---|
| | | CITY OF AUSTIN, TEXAS= the applicant's development project or proposal of the SOS Ordinance in Chapter 13-7, Article I, Division 5 violates the United States Constitution, the Texas Constitution, federal or state statutes. An affirmative determination must be supported by a three-quarters majority vote of the City Council. (4) If an affirmative determination is made in accordance with subsection (a) (3) above, the application moves forward to Phase Two, if not, the application for adjustment is denied. (b) PHASE TWO: (1) The application for adjustment is reviewed by the Environmental and Conservation Services Department. (2) The application for adjustment, along with the recommendation of the City Manager is presented to the City Council at a public hearing. After the^ public hearing, the City Council determines the minimum adjustment required to comply'with the conflicting law and provide maximum protection of water quality, and grants such adjustment to the applicant. [3] Add a new Section 13-1-615.1 to read as follows: Sec. 13-1-615.1 EXPIRATION OF SITE PLAN IN THE BARTON SPRINGS ZONE Subject to the provisions in Section 13-7-36.8(a) regarding consistency with state and federal law, expiration of approved site plans in the Barton Springs Zone is governed by Section 13-7-36.7. [4] Amend Section 13-1-489 (Expiration of Approved Preliminary Plan) to hereafter read as follows: Sec. 13-1-489 EXPIRATION OF APPROVED PRELIMINARY PLAN (a) Approval of a preliminary plan expires unless an application for final plat approval for all or a portion of the preliminary plan is filed no later than two years after the date it was approved and a final plat is approved. (b) Except in the Barton Springs Zone, the Commission, for good cause, may grant a single one year extension to the deadline established by subsection (a) if requested by the applicant before the preliminary plan has expired. (c) Subject to the provisions in Section 13-7-36.8(a) regarding consistency with state and federal law, expiration of approved preliminary plans in the Barton Springs Zone is governed by Section 13-7-36.7. [5] Amend Section 13-2-502 (Exemptions) to hereafter read as follows: Sec. 13-2-502 EXEMPTIONS (a) This Article shall not apply to watersheds defined as Urban; development in the Urban Watersheds, however, is subject to all the requirements of the Town Lake Critical Water Quality Zone. Additionally, all commercial and multifamily development within 500 feet of the 429.0 foot contour of Town Lake must provide water quality controls in accordance with Sec. 13-7-18. Page 6 of 22 -CITY OF AUSTIN, TEXAS= (b) Except as provided in subsections (c), (d) and (e), this Article shall not apply to any development for which: (1) a preliminary plan, final plat, site development permit, Travis County development permit, zoning site plan, planned unit development, planned development agreement, or development phasing agreement was approved by the applicable governmental authority, before May 18, 1986; (2) a land use plan for an out-of-City MUD was approved by the City Council after a public hearing which occurred before May 18, 1986; or, (3) a land use plan with permanent zoning for an in-City MUD was approved by the City Council before May 18, 1986. (c) This Article shall apply to subdivisions and site developments that were approved before May 18, 1986, and propose to withdraw water from the South Edwards Aquifer, and propose residential development other than single-family, with a maximum density of two units per acre. (d) Development otherwise exempt under subsection (b) loses its exemption unless, before May 18, 1991, the development: (1) has or obtains a site development permit or building permit; (2) has or obtains an approved final plat for at least 50% of the land area of the development shown on the preliminary plan; or, (3) has or obtains permanent zoning tied to a site |

| **4/27/2026** | Sydney Mantrom | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Sydney Michael | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Sydney Michael |

| **4/21/2026** | Sydney Mike-Mayer | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/29/2026** | Sydney S | I oppose expanding MoPac South for environmental concerns, damage to our beautiful city, and the overall proven inefficiency of expanding highways. First, I want to see a full, comprehensive Environmental Impact Statement so that citizen can understand the damage this will cause to the surrounding natural areas (specifically Barton Springs). Second, I have lived through the past six years of construction on 183, and I am sick of the constant, never-ending, and expensive construction in Austin. It has doubled my commute, increased my frustration on the highway, and ultimately seems pointless. Expanding highways and adding more lanes does not help traffic--it's easy to see how it hasn't improved roadways in cities like Houston, Dallas, and Los Angeles. Additionally, I've seen it firsthand in the increased traffic on 183 for the past six years with unfamiliar and unintuitive traffic pattern changes. I've lived in Texas my entire life, I know highway construction never goes according to schedule. (I reiterate, the 183 express lane has been under construction for six years. And the I-35 construction is a permanent fixture in the state.) The traffic this creates overshadows any potential benefit another few lanes would add to MoPac.<br><br>Austin is growing, but it doesn't have to grow like the sprawling, inhospitable concrete jungles in the DFW metroplex and Houston. Other more environmentally friendly, human-centered, less expensive, and less invasive options exist. The city should put its funding toward developing a bike and pedestrian network, and to fixing the worsening housing problems in the city. Austin is a beautiful, unique city. It's why I moved here eight years ago, and why I've stayed. Don't Dallas, Houston, or Los Angeles my Austin. |

|---|---|---|
| **4/23/2026** | Sylvie Phillips | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| **4/21/2026** | Syndey Jansen | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>However, if you understand the ecological impact of the original spaces, most people will actual vote against the expansion of Mopac entirely. No one wants nor needs this expansion.<br>The ecological toll will haunt us for centuries, but what I assume matters most to this committee is money. So, let me expound. You destroy the trails, you get no hikers, daytrippers, field trippers, etc. No one comes to Austin for its natural beauty, buys food or supplies around the local area. There will also be a decrease in species richness, so you get very little incentive for College of Natural Science and Geoengineering graduate students to come, receive EcoLab funding, landowners don't get tax cuts, students and professors no longer apply for grants to research here, the University no longer receives indirect funding, the University funding decreases dramatically, the campus suffers, few students see incentive to attend, the student-fed economy plummets, the football team starts to fail, no one comes for the games, and the economy suffers further.<br>Additionally, this project will impact the water table, and then no one will live here when there is no water.<br>Do you understand the cascading impacts of this deliberately cataclysmic plan?<br>Don't build this.<br><br>Thank you for your time and consideration. |

| | | |

| **4/20/2026** | Tahnee Sauer | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/20/2026** | Tai Hallstein | I do not want a wider highway. It is not necessary and it's crazy to think we'd have more highway construction along with the I35 expansion. I would like more bike lanes, investment in hiking trails, or turn an existing lane into a carpool lane. We do not need more highway expansion! |

| | | |
|---|---|---|
| **3/16/2026** | Taki Afsaneh | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Afsaneh Taki |
| **5/3/2026** | Takuma Katagiri | this mopac project would destroy what's special about Austin. barton and zilker areas are the crown jewel of austin. we must protect what is. |

| | | |
|---|---|---|
| **5/3/2026** | Takuma Katagiri | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Takuma Katagiri |

|---|---|---|
| **5/3/2026** | Talitha Durgin | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Talitha Durgin |
| **5/3/2026** | Talullah McColgin | I would like to voice opposition to the MoPac expansion project. This project comes a time when our hometown is already stressed by drought, pollution, overdevelopment, and not to mention the concurrent I-35 expansion that will significantly affect traffic in the city. Disrupting Austin's two major North/South arteries will make navigating the city very difficult in the foreseeable future. This project will significantly effect the most important recreational and environmental spaces in Austin: Zilker Park and Barton springs. People come to Austin to visit our parks. We have something unique, and this project would permanently change the look of the landscape and the way people can expirience it. The addition of huge sound barriers would disrupt the historic and charming feel of the parks and surrounding neighborhoods. The Edwards aquifer is our lifeblood. It's home to many important species, such as the Texas Blind Salamander, which has been endangered since 1967. Additionally, the aquifer provides drinking water for 1.5 million people in Central and South Texas. The proposed Expansion would be built over the Edwards Aquifer Recharge Zone, where water flows directly into the aquifer through karst limestone formations. The addition of more impervious cover over this important ecological site would funnel contaminates into the aquifer via increased runoff. The construction of the highway has a high chance of disrupting a fragile underground ecosystem, potentially infilling the porous caves below. The CTRMA says that if MoPac is expanded, by the year 2045, drivers in non-toll northbound lanes will save four minutes travelling from Slaughter Lane to Cesar Chavez, and five minutes in the opposite direction (during rush hour). Spending 825 million dollars to save five minutes twenty years down the road is ridiculous. These funds could be used instead to better Austin's public transportation, or to protect the natural spaces that make our city beautiful. |

| **5/3/2026** | Talullah McColgin | Dear CTRMA Board Members, I would like to voice opposition to the MoPac expansion project. This project comes a time when our hometown is already stressed by drought, pollution, overdevelopment, and not to mention the concurrent I-35 expansion that will significantly affect traffic in the city. Disrupting Austin's two major North/South arteries will make navigating the city very difficult in the foreseeable future.  This project will significantly effect the most important recreational and environmental spaces in Austin: Zilker Park and Barton springs. People come to Austin to visit our parks. We have something unique, and this project would permanently change the look of the landscape and the way people can expirience it. The addition of huge sound barriers would disrupt the historic and charming feel of the parks and surrounding neighborhoods. The Edwards aquifer is our lifeblood.  It's home to many important species, such as the Texas Blind Salamander, which has been endangered since 1967. Additionally, the aquifer provides drinking water for 1.5 million people in Central and South Texas. The proposed Expansion would be built over the Edwards Aquifer Recharge Zone, where water flows directly into the aquifer through karst limestone formations. The addition of more impervious cover over this important ecological site would funnel contaminates into the aquifer via increased runoff. The construction of the highway has a high chance of disrupting a fragile underground ecosystem, potentially infilling the porous caves below. The CTRMA says that if MoPac is expanded, by the year 2045, drivers in non-toll northbound lanes will save four minutes travelling from Slaughter Lane to Cesar Chavez, and five minutes in the opposite direction (during rush hour).  Spending 825 million dollars to save five minutes twenty years down the road is ridiculous. These funds could be used instead to better Austin's public transportation, or to protect the natural spaces that make our city beautiful.   Sincerely, Talullah McColgin |

|---|---|---|
| **4/27/2026** | Tamara Engle | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Tamara Engle |

| | | |
|---|---|---|
| **4/16/2026** | Tami Esson | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| **5/3/2026** | Tammie Snider | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Tammie Snider |
| **4/20/2026** | Tammy Knezevich | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Tammy Nordan Nordan | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Tammy Nordan Nordan |

| **4/20/2026** | Tammy Sajak | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Tammy Sajak |

| | | |
|---|---|---|
| **5/3/2026** | Tammy West | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Paul Oeste |

| | | |
|---|---|---|
| **4/22/2026** | Tammy Zientek | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Tammy Zientek |

| | | Respectfully,<br><br>Tammy Zientek |

| | | |
|---|---|---|
| **4/22/2026** | Tammy Zientek | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. |---|---|---|
| **4/24/2026** | Tanya Payne | Dear CTRMA Board Members,<br><br>It feels like CTRMA has a death wish. Water from Edward's Aquifer is critical for life in Central Texas and yet you guys are acting like it's a nice to have by putting big roads and all their accompanying polution over the Edwards Aquifer Recharge Zone without doing due dilligence.<br><br>And for what? To save 5 minutes on a freeway 10 years from now? Is that worth the risk? To me, it is not.<br><br>I encourage you to consider if this is the legacy you want to leave. You are signing your name to a very dangerous project that hasn't gone through a full environmental impact study. Will you be proud of that decision in the future?<br><br>Please require that the MoPac South Expansion project does a full envrionmental impact study, including health and community considerations, before allowing the project to continue. It's the right thing to do.<br><br>Sincerely,<br><br>Tanya Payne |

| | | |
|---|---|---|
| **4/21/2026** | Tanya Zal | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Tanya Zal |

| | | |

| **5/3/2026** | Tara Mccall | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Tara Mccall |

|---|---|---|
| **4/23/2026** | Tara Parker | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Tara Parker |

| | | |
|---|---|---|
| **5/3/2026** | Tara Reynolds | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Tara Reynolds |

| | | |
|---|---|---|
| **5/3/2026** | Tara Vaughn | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Tara Vaughn |
| **5/3/2026** | Taraney | I don't want to see Mopac expanded. As a daily driver it is perfect as is. |
| **5/3/2026** | Taren Hodges | Our water is infinitely more important to the wellbeing and prosperity of Texas than toll roads. This is a BAD investment for Texas. NO TOLLS IN THE WATERSHED. |
| **3/20/2026** | Tarran Mohan | Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin’s climate and mode-shift goals. Instead, we must focus on initiatives that prioritize-people oriented transit; large pedestrian-bike paths that run along the project's length, conversion of highway lanes into transit lanes, and further investment into public transit, bike infrastructure, and walkability. |

| | | |
|---|---|---|
| **4/29/2026** | Tarran Mohan | Good afternoon,<br><br>My name is Tarran Mohan, and I am a student at UT Austin. I am writing as a constituent concerned with the expansion of the MoPac expressway. As someone who regularly uses the existing bike and pedestrian networks that exist in Austin, I would love to see them upgraded and expanded, alongside a widespread public transit network that would connect all residents of Austin to those amazing facilities. The benefit to the greater public far outweighs any seconds purported to be saved by a road expansion, especially in terms of environmental impact. I would like to see a comprehensive Environmental Impact Survey, rather than any surface-level, incomplete Environmental Assessment. I also oppose the toll road - these are flat-rate, regressive taxes that only serve to add an extra cost to already economically vulnerable Austinites. These are harmful developments that only serve to further drive a wedge between the downtown and the rest of the city. As someone who does not own a car, and probably never will alongside many others that share in a fear of driving due to the constant risk of accidents (which only augment with more cars on the road!), I would greatly funds going towards better, more widespread bus service, regional rail service, and much more widespread bicycle infrastructure.<br><br>I hope you will take these comments into consideration when making this decision.<br><br>Thank you very much,<br><br>Tarran |

| **5/3/2026** | Taryn Lavery | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Taryn Lavery |
| **3/16/2026** | Taryn Quinlivan | a highway expansion at the expense of the environment is ridiculous. I grew up in austin and I have been inspired by the environmental preservation and consideration I saw happening in my city, and now that Austin is letting all these tech companies in the environmental push is less and less. If we continue to industrialize austin it is going to lose its spunk and beautiful green spaces that used to be the identifying mark. Please keep my city green and keep austin weird. people can deal with the traffic. patience is an important lesson to learn. |

|---|---|---|
| **5/3/2026** | Tasha Barnes | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Tasha Barnes |

| | | |
|---|---|---|
| **5/3/2026** | Tasnia Bari | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to believe given the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Tasnia Bari |

| **5/3/2026** | Taylor Griffin | Please do not expand Mopac! |

| | | |
|---|---|---|
| **4/23/2026** | Taylor Harrison | This construction project is unacceptable — and it needs to stop until we have real answers. The current plan does not solve our transportation problems. It makes them worse. Redirecting toll lane traffic near Austin High School is a safety crisis waiting to happen. Young drivers will be put in danger, and that is not a risk this community should be asked to accept. Before a single shovel hits the ground, we demand a comprehensive traffic study that reflects how Austinites actually use this space. And the health consequences cannot be ignored. Children play and compete in sports in this area. Chronic exposure to traffic particulates causes lasting respiratory damage. We are talking about lifelong health impacts on kids — and that demands more than a footnote in a planning document. The environmental stakes are equally alarming. Scientists are clear: water shortages will be severe in the coming decades. Groundwater is not a luxury — it is a lifeline, for people and for the ecosystems that depend on it. Damage those systems, and the consequences ripple outward in ways we cannot easily reverse. This body has a responsibility to make decisions backed by evidence and guided by the long-term wellbeing of this community. That standard has not been met. We are asking you to go back, get the data, and do this right. |

|---|---|---|
| **5/3/2026** | Taylor Ruthven | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Respectfully, Taylor Ruthven |

| **4/28/2026** | Taylor Swinford | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Taylor Terrazas | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Taylor Terrazas |
| **4/27/2026** | Taylor W Johnson | Our natural spaces and the plants and animals within them are a huge part of what makes Austin a great place to live, and they need to be protected. When our natural environment, and especially our waterways, are paved over, redirected, and/or destroyed, we threaten the ecosystem that sustains us. I do NOT want a highway expansion if it means a threat to the Barton Springs aquifer and demand a proper environmental impact analysis be completed so that the community may be aware and subsequently make an informed decision regarding this highway expansion. |

| | | |
|---|---|---|
| **4/20/2026** | Tayo Ezekoye | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>As a civil engineer, I know firsthand how infrastructure projects can affect the ecosystem both negatively and beneficially, and I think we can work around some of the fears and concerns that Austin citizens have by implementing some of these measures.<br>Thank you for your time and consideration. |
| **4/28/2026** | Teagan Kafer | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Ted Meredith | This whole project is dumb & bad — particularly the proposal to connect mopac to I-35. But the entire premise that more lanes reduce traffic has been proven false time & time again. We want a future with fewer roads not more, and the plan to wreck the most vulnerable area of Austin for upward of ten years for the empty promise of 5 minutes saved on a commute is insulting. Stick to managing your other terrible useless toll roads and leave my neighborhood alone. |

| | | |

| **4/29/2026** | Teresa Anderson | Since TxDOT only expends on vehicles, instead of trains, buses, etc. has been terrible for our Austin zone. Currently, the I-35 expended lanes has been more crazy HIGHER CRASH RISK <https://www.google.com/search?q=Why+is+I-35+Austin+tx+has+more+accidents&oq=Why+is+I-35+Austin+tx+has+more+accidents&gs_lcrp=EgZjaHJvbWUyBggAEEUYOTIHCAEQIRigATIHCAIQIRiPAjIHCAMQIRiPAtIBCTIxNDczajBqN6gCALACAA&sourceid=chrome&ie=UTF-8#fpstate=ive&vld=cid:6ba677b7,vid:Tl2gCuAjoEA,st:216> !!!<br><br>Those people at TxDOT have never been to other countries that have great options that you do not have to have a vehicle.<br><br>I've been hit with one of my bike and one on my motor scooter and APD DID NOTHING which is stupid!!<br><br>TxDOT at 51st street rollover at I-35 have not fixed the pedestrian tower light and it is terrible to try to walk over that place with the lights that drivers do not pay attention and next time I'll have to bring a rocks to throw at them.<br><br>* I OPPOSE expanding MoPac South<br><br>* Instead, I SUPPORT regional rail and a world class bike/pedestrian network<br><br>* I want a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA)<br><br>* Most of all, tell YOUR story about how highway-centric planning impacts your life, how expanding MoPac would impact you, and your vision of a more positive future<br><br>MOPAC SOUTH EXPANSION: THE FACTS<br><br>* The project proposes to expand 8+ miles of MoPac between Slaughter Ln & Enfield Rd (CTRMA incorrectly states the project only extends to Cesar Chavez St)<br><br>* The project proposes adding two toll lanes in each direction in addition to flyovers and numerous other lanes - some sections would see increases of 6-8 lanes (CTRMA does not mention these extra non-tolled lanes)<br><br>* Despite proposing to add 100+ acres of new pavement in an environmentally-sensitive area, CTRMA claims there will be no significant environmental impacts |

| | | |
|---|---|---|
| **4/30/2026** | Teresa Becker | I have read many comments regarding the environmental impact; more concrete, neighborhood noise and threats to businesses, especially small businesses in the area and surrounding areas. And all of these factors come down to our future, our quality of life, our livelihood, recreation, enjoyment of facilities, our own backyards, quaint little businesses and our favorite restaurants, and the biggie - the environmental impact! Look at Oak Hill as a prime example of what a monstrosity the South MoPac project could adversely affect. I don't live in the area where the project is being proposed. I don't work there, but I do enjoy hanging out and the ease of local streets to get to/from where I am going. We do not need more freeways, expressways, flyovers, etc. Unsightly, unhealthy, unnecessary. If those who govern and those who are governed could collectively come together to agree to tackle the big issue of how central Texas can continue to grow without addressing the water situation rather than building a new extension to MoPac then we would all be better served. Maybe it's not "your department", but maybe it is. It's all of ours. Please, I implore you, take this project off the table and let's work on something vitally important to the well being of us all. |
| **5/3/2026** | Teresa Carpenter | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Teresa Carpenter |

| | | |
|---|---|---|
| **4/24/2026** | Teresa Finley | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Teresa Finley |

| **5/3/2026** | Teresa Pumps | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Teresa Phillips |
| **5/3/2026** | Teresa Pumps | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. I am an artist, photographer, gardener, and all around nature lover. When anyone visits from out of state I tell them that Austin's little known gems are nature based, not just music, food and the nightlife. I would argue the natural nightlife is more my vibe. These changes would severely destroy the environment we all know, love, and depend on for survival. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. | **5/3/2026** | Teresa recar | Concerned citizen opposed to this project |
| **3/23/2026** | Teri Adams | The environmental cost is too high. It feels like this is being done to justify the existence of TXDOT, not because of logic or reason. Figure something else out. If we poison our well nothing else will matter. |
| **5/3/2026** | Terra McGuire | as proven by research and analysis of similar projects, expanding roadways does not result in a reduction of traffic congestion. Our city would benefit from using these funds to assist the unhoused and beautify spaces to reduce crime. Our waterways need protection and pollution management. This is not a good use of funds. |

| **5/3/2026** | Terri Hall | Comments submitted by:<br><br>Terri Hall<br><br>Founder/Executive Director<br><br>Texans Uniting for Reform and Freedom<br><br>317 Sidney Baker St. S., #400-308<br><br>Kerrville, TX 78028<br><br>(210) 275-0640<br><br>www.TexasTURF.org<br><br>Please accept these public comments for submission regarding the MoPAC South Tolled Express Lane project on behalf of the thousands of anti-toll supporters we represent across the state of Texas.<br><br>First, Gov. Greg Abbott promised the people of Texas in 2014 when he ran for office, once again when he took office in 2015 when announcing his Texas Clear Lanes initiative, and repeatedly since being in office (including by the Chair of the Transportation Commission who reiterated such to contractors, MPOs, and policymakers), that his highway department was going to fix Texas roads without new fees, taxes or tolls. ANY added toll lanes since 2014 would be a breach in trust with the voters who elected Gov. Abbott.<br><br>Second, the current MoPAC express toll lanes have been underperforming for the last two years. This is an indication that cost and affordability in Austin continues to negatively affect residents and commuters' ability to pay extra to get to work. You don't have a 'choice' if you simply cannot afford to pay a toll - you don't have the option when you can't afford it. So you leave out those of modest incomes and low incomes from the benefits of expanding the highway in this corridor. They'll be stuck in the congested non-toll lanes with NO relief. Therefore, any added capacity to this corridor MUST BE NON-TOLL.<br><br>Third, as we've also seen with similar transportation projects, like DART, merely extending the service area of a project |

| | | |
|---|---|---|
| | | DOES NOT EQUAL MORE RIDERS. The thinking is you'll attract or capture more commuters to pay the toll if it goes further, captureing longer trips or new areas of commuters. Having to pay a toll for more miles is NOT the answer to getting more riders. Eliminating that extra cost is. General purpose lanes open to ALL traffic consistently carries more traffic, more efficiently, and at higher speeds than express toll lanes in the middle of a highway where high speed cars in the middle of a corridor have to cross into lanes and navigate/mix with low speed cars to get into and out of toll lanes and to and from exits, interrupting the free flow of traffic in both the toll lanes and the non-toll lanes.<br><br>We strongly urge that ANY expansion of lanes in this corridor be non-tolled only. With skyrocketing and persistently high gas prices hurting every day working families in Texas, as well as businesses both large and small, a multi-million highway expansion that's tolled will not carry the needed traffic or solve the congestion in this corridor as well as general purpose lanes open to all cars regardless of economic status. Gov. Abbott needs to keep his promises to the voters and taxpayers of Texas to fix our roads without more TOLL taxes! |

| | | |
|---|---|---|
| **5/3/2026** | Terri Siegenthaler | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Respectfully, Theresa Siegenthaler |

| | | |
|---|---|---|
| **4/21/2026** | Terry Henry | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Terry Henry |

| | | |
|---|---|---|
| **3/26/2026** | Terry Karasewich | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Terry Karasewich |
| **4/22/2026** | terry ross | I am not in favor of mopac south toll expansion lanes due to the impact on the environmentally sensitive recharge zone along a 9 mile stretch of the proposed project.  expansion would do irreparable harm to the cave systems below |

| | | |

| **5/2/2026** | Thatcher Fernandes | I am born and raised in Austin since 1998. There are a few things in Austin that inspire me every time I see them. The Texas Capitol, The Greenbelt, and Barton Springs in no particular order. I wish for every Texas resident to be able to experience these places when they are at their best, the same way I got to. This starts with respecting our countryside. I agree that growth is happening and we need reliable transportation but this project in it's current scope is excessive. It encourages unchecked sprawl that is currently having negative impacts on the Texas Hill Country. I believe that a few extra minutes spent on Mopac in 2045 will be worth it we do everything in our power to protect some of the last truly beautiful locations in Austin. Central Texas highways will always be congested whether or not we build. |

| | | |
|---|---|---|
| **5/1/2026** | Theana Snyder | I think there needs to be more study of the environmental impacts of this project. |
| **3/28/2026** | Theo Clemmons | CTRMA Board Members,<br><br>The MoPac South expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br>Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br>Tree removal and vegetation loss eliminate natural filtration.<br>Warmer runoff will reduce oxygen in streams and promote algae blooms.<br>Karst features and caves supporting unique ecosystems will be destroyed.<br>Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Theo Clemons |

| **4/30/2026** | Theo H. | This project needs an independent environmental study done! We cannot cut corners when our state lives on the precipice of complete desertification. Our water, and our wildlife cannot be an afterthought! |

| | | |
|---|---|---|
| **5/3/2026** | Theo Reynolds | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. I live right next to Zilker, and in very close proximity to Barton Springs, and I can't imagine how building these new roads would have "minimal impact." It will destroy ecosystems and I find that horrible. I don't want the nature near me to be destroyed. Respectfully, Theo Reynolds |
| **4/23/2026** | Theo van Haren | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Theodore Fernandes | I am opposed on the idea to construct Mopac bigger over greenbelt land. That land is the recharge zone for the Edward's aquifer and numerous endangered species. |

| | | |
|---|---|---|

| **5/3/2026** | Theresa Veach | I object to the MoPac South expansion as it would be an expensive project that will not alleviate the issues it is trying to solve and will only disrupt established neighborhoods in doing so. |
| **4/30/2026** | Theresa Zelasko | Instead of more lanes and flyovers, I would like to see a proposal for the MoPac South area that: Adds wide, shaded bike and pedestrian paths to nearby roads and neighborhood streets. Creates bike-pedestrian east-west crossings every quarter mile. Improves transit reliability in the area (and throughout Austin, frankly). Does NOT expand the highway. I'm tired of cars-only thinking when it comes to transportation and mobility in this city. Oil is old news. Pollution is hurting Austinites and the wildlife we share our environment with. |
| **4/23/2026** | Theresa Zelazny | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. Keep Austin Green! Protect vulnerable species. |

| | | |
|---|---|---|
| **5/3/2026** | Thomas Forbes | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Respectfully, Thomas Forbes |

| **4/23/2026** | Thomas Goss | Dear CTRMA Board Members,<br><br>I am an 80 year old native Texan that has lived in Housto, Dallas and Austin all of my life. I have seen a multitude of projects aimed to reduce traffic congestion. At best they succeed for 3 to 5 years and then traffic is again a problem. Why do you continue to do these projects that do not fix the problem?<br><br>Rail is the solution! Look at the rest of the world and see how they address traffic problems similar to this.. I do not support a short term solution that will degrade the prime resource that Austin enjoys<br><br>Sincerely,<br><br>Thomas Goss |
| **4/29/2026** | Thomas Holubec | CTRMA, Thank you for all of your work on this project. I believe it is essential to keep up with the past, current, and future growth of Central Texas. |
| **5/1/2026** | Thomas Murphy | I am unalterably opposed to the south Mopac Expansion Project. Stop paving over the Barton Creek watershed. I have been a daily swimmer at Barton Springs Pool and at Deep Eddy Pool for fifty years. No more concrete, no more noise and air pollution, no more assaults on groundwater quality and quantity, no more absence of democratic process. Reveal the truth about the environmental impact of a project considered and rejected years ago. |

| | | |
|---|---|---|
| **4/20/2026** | Tia Butler | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/21/2026** | Tifarah Canion | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/26/2026** | Tiffany | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd. This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to cut through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists that bike on the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this ask and I can provide further information including graphics of this ask. Thank you. |
| **5/3/2026** | Tiffany Fiede | Hi, my name is Tiffany Fiede and I represent the women who are experiencing breast cancer.I have been diagnosed with stage four metastasis and also a widow.And I came to Austin in 2020 when my husband passed and the Springs Board saved me.the springs bring together so much joy and love and our city is what it is because of the healinghours of the springs and the gathering at the springs the entrepreneurs the creators the buildersthe water is the magic that we've threw in and throughout each and every one of us we come togetherto heal, to pray, and to build, and if you were to take that |

| | | |
|---|---|---|
| | | away, that would be a bigmistake for the entire city, for the community, and for the financial structure of it all,because this is where people come to transform and to heal, and to get away and get inspired. |
| **4/21/2026** | Tiffany Hentrup | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| | | |
|---|---|---|
| **3/19/2026** | Tiffany Laclé | Please stop expanding the highway. You are making traffic WORSE not better. It will only increase congestion and drive time. Invest in better solutions! |
| **4/21/2026** | Tiffany Miranda | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/22/2026** | Tiffany Moroney | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Tiffany Moroney |

| | | |
|---|---|---|
| **4/24/2026** | Tiffany Stiver | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Tiffany Stiver |

| **4/24/2026** | Tiffany Stiver | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Tiffany Stiver |

| | | |
|---|---|---|
| **5/3/2026** | Tiffany Valdez | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Tiffany Valdez |

| | | |
|---|---|---|
| **5/3/2026** | Tiia Alzamora | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Tiia Alzamora |
| **3/19/2026** | Tim | Against: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. For: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **3/25/2026** | Tim Davis | Howdy! If you drive this area you know it's terrible. Let's fix this now. Your help is appreciated.. Thanks, Tim Davis<br>Sent from my iPad |

| | | |
|---|---|---|
| **4/20/2026** | Tim J Zoerner | Where Mopac south merges with the flyover from 290/71, the reduction in lanes from 3 lanes to 2 at William Cannon makes no sense. There is opportunity to simply re-stripe and add that 3rd lane back for probably a couple miles. Simply doing this or slightly extending the available lanes to Davis Lane via new construction seems to be a much better alternative to traffic congestion, at least in the short-term. If this is not a consideration, then it should be analyzed and considered. |
| **5/1/2026** | Tim McCool | Widening Mopac would be incredibly irresponsible. I want to encourage you to think of better ways to spend all of this money. With the on-going widening of I-35, Austin is going to experience construction, congestion, and traffic that will not ultimately be resolved by the widening. Adding lanes only adds more traffic, and does nothing to resolve traffic issues. Widening Mopac will result in untold environmental damage. It's insane that Texas continues to squander and destroy its natural resources. We need to shift away from this mindset of just paving everything, pouring concrete like there's no tomorrow. This expansion will only cause harm and have no benefits for the future generations of Austin. Please consider how you want the world to be, in which your children and grandchildren will inhabit. Widening Mopac will only harm the future of Austin. Please invest this money in something worthwhile, to encourage people to take transit and get out of their cars and off the highway. |
| **5/2/2026** | Tim Rinkerman | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/17/2026** | TIMOTHY D WITHAM | Please begin construction now. You have done your due diligence in studying this for over a decade. The results are published and it fits in the existing boundaries. The people already need the extra lanes last year. We cannot afford any more delay. Thank you for your work so far, and please get it built as soon as practical. |
| **4/28/2026** | Timothy Ford | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/27/2026** | Timothy Greathouse | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |
|---|---|---|
| | | Timothy Greathouse |
| **4/22/2026** | Timothy Keitt | I oppose the expansion of MoPac. It will encourage people to take more trips, which we don't need. I am already impacted by MoPac noise and this will make it worse. |
| **3/21/2026** | Timothy Tuggey | Appreciate the professionalism of the presentation and report.<br><br>Sent from my iPhone |

| | | |
|---|---|---|
| **5/3/2026** | Tina Donahoo | Dear CTRMA Board Members, <p data-start="171" data-end="311">I have lived in this neighborhood for over 22 years, and I am writing to express my strong opposition to the proposed MoPac South expansion. <p data-start="313" data-end="698">This project asks our community to accept significant and lasting environmental, health, and quality-of-life impacts in exchange for minimal benefit. After years of disruptive construction, the expansion is projected to save only about five minutes across the full corridor—an outcome that simply does not justify the scale of harm being proposed. <p data-start="700" data-end="1258">The scope of this project—adding five to seven new lanes, including tolled lanes, across nearly nine miles—will bring five to seven years of construction that will significantly disrupt daily life in Austin. Traffic flow on MoPac and surrounding streets will be heavily impacted, with access challenges affecting nearby neighborhoods, downtown, Austin High School, and Zilker Park. During this time, access to Lady Bird Lake will be severely limited, disrupting use for rowers, boaters, and the broader community, including closures of key trail connections. <p data-start="1260" data-end="1787">The environmental risks are deeply concerning. The project threatens the Edwards Aquifer and the health of Barton Springs and surrounding waterways, which are central to Austin's identity. Construction in sensitive recharge zones creates serious risks of sedimentation and pollution that could cause irreversible damage. In addition, the plan acknowledges adverse impacts to federally endangered species, yet fails to meaningfully explore alternatives that could avoid or reduce that harm. <p data-start="1789" data-end="2256">The expansion will also worsen air quality by significantly increasing vehicle miles traveled, exposing students at Austin High School and nearby residents to higher levels of harmful pollutants. Increased noise and light pollution will further degrade the quality of life for surrounding communities. At a time when Austin should be prioritizing public health and sustainability, this project moves us in the opposite direction. <p data-start="2258" data-end="2644">Equally troubling is the use of beloved public spaces for construction. Zilker Park, the Barton Creek Greenbelt, Lady Bird Lake, and the Butler Trail are not just amenities—they are part of what makes Austin, Austin. The proposed tree removal, parkland use, and long-term disruption will diminish these spaces in ways that cannot be fully restored. <p data-start="2646" data-end="3074">Finally, the premise that expanding highways will meaningfully reduce congestion is outdated and misleading. Induced demand is well documented—adding lanes leads to more driving, not less traffic. Rather than pursuing this expansion, we should first evaluate less harmful and more cost-effective alternatives, such as improving existing bottlenecks, implementing HOV lanes, and investing in traffic demand management strategies. <p data-start="3076" data-end="3333">This project should also not be considered in isolation. It must be evaluated alongside the proposed connection to I-35, which would effectively turn MoPac into a western bypass—further increasing traffic and compounding environmental and community impacts. <p data-start="3335" data-end="3525">Austin deserves better. We deserve a thoughtful, forward-looking approach that protects our natural resources, prioritizes public health, and invests in sustainable transportation solutions. <p data-start="3527" data-end="3667">I urge you to reconsider this project, require a full Environmental Impact Statement, and explore less harmful, more effective alternatives. <p data-start="3527" data-end="3667"> Thank you for your consideration. Tina Donahoo |

| **3/24/2026** | Tom France | 1. Permeable friction course pavement is not an effective WQ treatment control. Any treatment provided is temporary as sediment clogs pore space and renders it non-effective. Significant maintenance (street sweeping TSS removal) will be needed to keep it functional.<br>2. I have lived in this area since 1999. To this day we still do not have a decent public transportation (buses, etc.) available. I wonder how much of the traffic congestion could have been reduced had Cap Metro provided service to the large subdivision in the area. |

| | | |
|---|---|---|
| **3/24/2026** | Tom Griebel | Suggest the project be extended to SH 45, not the managed lanes but make improvements south of Slaughter. With the traffic flow improvements considering closing the South Bay crossover between La Crosse and SH 45 to improve the safety of South Mopac. Currently there is a private school at the NW corner of Mopac/SH 45 that creates a safety hazard durning peak school hours. Also a 1,000 unit apartment complex is planned to access the site at the South Bay stub out on the west side of Mopac. As part of the project extension add a northbound turnaround at La Crosse and a westbound turnaround at Escapement. I do support the project. Thanks you. |
| **5/3/2026** | Tom Hammond | Any construction that might impact the Barton Creek greenbelt and wilderness park should be taken seriously. The construction of additional lanes on Mopac should be weighed against how it will impact this treasured city park. From my own personal observations, here are two reasons why an Environmental Impact Statement is needed: I use to live in the Travis Country neighborhood and on occasion would hike home from my work downtown. One issue pretty obvious from the Barton Creek Trail is how the 360 and Mopac bridges impact the area with extensive garbage strewn everywhere— in the trees, on the forest floor and in the water of Barton Creek. City departments and volunteer groups would periodically removed it, but it always built up again. There were even appliances pushed off the smaller Mopac bridge near Best Buy that sat next to the trail for years. I would think more lanes would increase the amount of trash. Is there a practical fence design that can be added to a bridge to keep the trash from dropping into the woods and the creek below? One day while hiking north on the Violet Crown Trail I arrived at the junction with the Barton Creek Trail and noticed that Barton Creek was dry but Gaines Creek was still flowing and it was disappearing into the dry creek bed of Barton Creek. Where was it going? If there is construction going on at the Mopac bridge, just above this area, I would think you would want to protect the construction runoff from also disappearing into the creek bed here. |
| **4/20/2026** | Tom Pedretti | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/20/2026** | Tom Wald | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/19/2026** | Tommy Joaquin Hancock | CTRMA, Please deny MOPAC expansion. This would increase pollution, worsen sprawl, and deepen car dependency, while also encroaching on environmentally sensitive areas and putting Austin High School students' health at risk. I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. Thank you, Tommy Joaquin Hancock |

| | | |
|---|---|---|
| **3/18/2026** | Tommy Joaquin Hancock | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Tommy Joaquin Hancock |

| | | |
|---|---|---|
| **4/17/2026** | Tommy Landry | CTRMA Board Members,<br><br>The MoPac South expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Tommy Landry |

| | | |
|---|---|---|
| **5/3/2026** | Tommy Main | Yes, my name is Tommy Main and I've been coming to Barton Springs since I was 10 years old.And the expansion of MOPAC will greatly, greatly impact the Springs.These healing waters are so precious to our community.Please, please hear my voice.Do not allow the expansion of MOPAC.Barton Springs is the heart and soul of our city.So many people come to these springs to heal and in community and to sing.We're singing now at Barton Springs, singing for no expansion of MOPAC because it willdeeply impact the quality of the water, of the precious natural resource of our SpartanSprings that we love.I can't help but be emotional about this, because this place is a healing center forthe entire city.And if we don't stand up to save this precious resource,we will lose something that we could never get back.So please, please, please, I beg you to hear this message in your heartand know that it's wrong to destroy a resource as precious as the strength,which the expansion will greatly affect.Thank you very, very much for hearing my voice.Aloha. |
| **3/19/2026** | Tommy Vinyard | Do not expand Mopac. It will not decrease travel times. I drive this stretch every day for work and I do not want it expanded. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **4/29/2026** | Toni L | Hi I am opposed to this due to the necessary destruction of permeable land which leads into the Edward's aquifer and also adding more lanes will not address the traffic issues our city is facing . We do not want to recreate the grand divide and pain that 35 has caused through east of downtown austin.<br><br>Also the addition of toll lanes instead of 3+ person HOV lanes is something that will just induce more demand for cars on the highway instead of encouraging people to carpool<br><br>Thank you,<br><br>Toni Leon |
| **4/15/2026** | Tony Broglio | The current plan for the MoPac South expansion is terrible in almost all regards. Rollingwood and West Lake Hills residents and municipalities have commented on this for years, and our input has been consistently disregarded. The elevated tollways will be very ugly and will dramatically increase the noise into our neighborhood from the tollway. The exit lanes off the toll lanes remove critical access to Bee Caves. This will be bad for commerce and incredibly inconvenient for residents that rely on MoPac for work commutes. It forces traffic past our main thoroughfare and onto neighborhood roads with school and bus traffic. The proposed design also creates dangerous and unnecessarily complicated merging and weaving across lanes of traffic. Please take this input seriously and come up with a design that addresses the concerns of Rollingwood & West Lake residents |
| **5/3/2026** | Tony Cacci | This project will cost more, take more time, have an irreversible environmental impact, and negatively impact the lives of thousands of Austinites. The net result will save some people a few minutes of their commute. |

| | | |
|---|---|---|
| **4/22/2026** | Tony Le | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. | | | |
|---|---|---|
| **4/22/2026** | Tony Le | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. |---|---|---|
| **4/24/2026** | tori rudder | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| **4/20/2026** | Tori Sylvester | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Tori Sylvester | Hello, my name is Tori Sylvester. I am an Austin resident, District 9, zip code 78704. I have already sent an email, but I just wanted to really reiterate my feelings. I am in complete opposition to the MOPAC South expansion, and I, you know, there needs to be a full environmental study done before this proceeds.This is over a really delicate recharge zone. I mean, we're already in a drought, the ad, it just doesn't make sense that thegreen belt is beautiful.It's what keeps me in Austin.It's what keeps many people in here in Austin.And every time I bring this up to other people, they're horrified.They're scared of what it's going to do to our green belt, to Barton Creek, um, and the Edwards aquifer.So, um, I'm in complete opposition. I hope y 'all, uh, really think about what you're doing and also the tools, you know, it's already so expensive to live here in Austin. Now y 'all are wanting to add moretolls to our roads. Every single highway is under construction right now, and you're goingto be adding another one to add toll lanes? It just, this isn't, this isn't what Austin needs at all. That road is fine. We don't need a wider highway there. It's fine. Thanks for your time. Hope you have a good day. Bye bye. |
| **4/25/2026** | Torian Franklin | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Tosin Awofeso | I am writing as an Austin resident to formally oppose the MoPac South expansion as currently proposed, and to urge that the project be subjected to a full Environmental Impact Statement (EIS) rather than the Environmental Assessment (EA) released in February.<br><br>I got two autistic kids who have never gotten to experience what i have, it'll take years before its safe enough to take them and I don't want it ruined just because the time wasn't taken to do a full study.<br><br>The scale and sensitivity of this project demand the more rigorous review. The corridor crosses the Edwards Aquifer recharge zone — Austin's drinking water source — and habitat for federally listed endangered species including the Barton Springs salamander, Austin blind salamander, and Tooth Cave spider. It would require construction in Zilker Park, the Barton Creek Greenbelt, and over Lady Bird Lake. By any reasonable standard, these are exactly the conditions a full EIS exists to evaluate.<br><br>Comparable Austin-area transportation projects have received full EISs. The I-35 Capital Express project required one. Project Connect required one. There is no defensible reason an $825 million, 8-mile expansion through some of the most ecologically sensitive land in the region should receive a less thorough review. The Austin City Council and the Travis County Commissioners Court have both unanimously passed resolutions making this same request.<br><br>A finding of "no significant impact" is not credible without the full analysis an EIS would provide. I urge CTRMA and TxDOT to require an EIS before this project advances any further.<br><br>Oluwatosin Awofeso |
| **5/2/2026** | Towson | Hello, my name is Towson. I am a constituency and Austin resident, and I would like the South MoPAC expansion to not be proceeded without a full environmental impact study done.I repeat, a full environmental impact study done.My name is Towson. I am an Austin resident and a voter in Austin, and the South Austin MoPAC expansion cannot be done without a full environmental impact study. |

| | | |
|---|---|---|
| **5/3/2026** | Traci Cerna | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Traci Cerna |
| **4/28/2026** | Tracy | I am strongly opposed to this project. Having driven the north section for years, I did not see any traffic improvement with added lanes during peak times. During some times, yes, but when really busy--all lanes come to a standstill. That design seems to be clearly about making money, not solving traffic issues. Based on carefully reviewing the plan, I believe the MoPac South plan would also make a negligible impact, except on making money from drivers paying high fees. The environmental impact and distruption from construction is not worth it for drivers. I drive this section now 3-4 times per week. The proposed changes do little to address bottlenecks or design flaws that would improve safety and traffic flow. |

| | | |
|---|---|---|
| **4/20/2026** | Tracy Bibby | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Tracy Davis | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/13/2026** | Tracy E Wolfe | I support expansion and improvements for traffic congestion. While I approve the recommended plan I am strongly opposed to any design that adds/converts roadways for bicycle paths. This has created issues with other roads and does not deliver congestion relief. Cyclist do not use these lanes for commuting and other identified uses. |

| | | |
|---|---|---|
| **4/30/2026** | Tracy Geraldez | I support the "no build" alternative to Mopac South Expansion. I urge CTRMA to undertake a full Environmental Impact Study (EIS) per federal standards, including a traffic study on the impacts of the project on surrounding roads and propose lower impact, lower cost alternatives. Construction congestion The years of construction-related traffic congestion and environmental degradation caused by this project are simply not worth the minimal projected improvements in travel time. Central Austin residents, including students at Austin High, and everyone who enjoys Zilker Park, Barton Springs, the Hike and Bike Trail at Lady Bird Lake, the Barton Creek Greenbelt, and Deep Eddy Pool will suffer through many years of construction congestion and bear the brunt of the environmental impacts (noise pollution, poor air quality, and compromised water quality) while enjoying the tiny benefit of a couple minutes travel time even many years after this project is built. Toll Roads don't help general users Toll roads are not a solution to the root cause of congestion and only serve a small portion of roadway users (30,000 to 40,000 users per month / 180,000 roadway users = 16-22%). Limited entry and exit points and demand pricing keep toll roads from being useful to most people who live in Central Austin, while prioritizing those who choose to live far from the city center. Environmental Degradation I do not believe the environmental harm caused by this construction is worth a few minutes of travel time. Increasing air pollution, noise pollution, and toxic runoff from cars will negatively impact one of the most environmentally sensitive and cherished areas of our region. We must protect the Edwards Aquifer, Barton Springs, the Barton Creek Greenbelt, the hike and bike trail, Deep Eddy Pool, and Zilker park from excessive development and traffic and its negative environmental impacts. Fiscal irresponsibility There are a wide variety of low cost congestion relief measures that could improve the South Mopac Corridor and reduce peak time congestion without expansion that should be explored and tested before proposing expansion. These strategies include lengthening entry and exit ramps, restriping, HOV lane at peak times, park and ride facilities, transit routes, addressing surface and connector road congestion that backs up onto MoPac, among others. We should not be jumping into a $824 million dollar project without first exploring and testing low cost congestion relief measures that will help all roadway users before expansion. The future is unknown This project or any expansion of MoPac should not take place until I-35 construction is complete and resulting traffic patterns can be studied. The simultaneous creation of the SH-130 autonomous trucking route also has the potential to majorly impact traffic flows in our region by rerouting trucking traffic from I-35 and should be allowed to play out and be studied as another factor in assessing the need of MoPac expansion. Furthermore, we are on the horizon of autonomous vehicle adoption in many sectors which will change traffic patterns throughout our region. Expanding MoPac based on the outdated information in the MoPac South draft environmental assessment risks over or underbuilding the road based on incomplete and outdated demand projections. |

| | | |
|---|---|---|
| **3/18/2026** | Tracy Harp | Dear CTRMA Board Members,<br><br>I am a resident of the Barton Hills neighborhood and my children attend Austin High School. I appreciate the opportunity to provide comment regarding the proposed expansion of MoPac South.<br>As an 18-year Barton Hills resident, I am concerned about the direct impacts this project would have on the surrounding neighborhoods and on Zilker Park, one of Austin's crown jewel attractions. Expanding MoPac will increase traffic volumes, noise, and air pollution for the residents who live nearby and for the thousands of people who use Zilker Park every day. Adding more highway capacity directly adjacent to it will diminish the experience of one of Austin's greatest assets.<br><br>I strongly encourage decision-makers to carefully reconsider the long-term impacts of this expansion and prioritize solutions that reduce congestion without sacrificing the environmental integrity of the Edwards Aquifer recharge zone, the livability of nearby neighborhoods, and the character of Zilker Park.<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have "no significant impacts," yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. |

| | | |
|---|---|---|
| | | • Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>Thank you for your time and consideration.<br><br>Deeply concerned,<br><br>Tracy Harp |

| **4/27/2026** | Travis Burroughs | You are building more exclusive lanes for people with a higher income that can afford the toll. This is classism. People with more money will have a better commute is the plain and simple truth about this. If you cannot afford to take the toll road your drive will be worse. Is this what the City of Austin and TxDot want to our community to be divided into? Rich lanes and poor lanes? Segregation in this city is not based on color any more but on wealth? I am against all toll or express lanes, future and existing. Prove to the public that this won't only benefit the people of wealth. You can't because that is exactly what it is. Classism is the new Austin and projects like this prove that without a doubt. |

| **3/16/2026** | Travis Holler | My name is Travis Holler. I am a resident of the Barton Hills neighborhood and also a business owner on Bee Caves Road in Rollingwood. I appreciate the opportunity to provide comment regarding the proposed expansion of MoPac South. As a Barton Hills resident, I am deeply concerned about the direct impacts this project would have on the surrounding neighborhoods and on Zilker Park, one of Austin's most treasured public spaces. Expanding MoPac will inevitably increase traffic volumes, which means increased noise and air pollution for the residents who live nearby and for the thousands of people who use Zilker Park every day. Zilker Park is not just another piece of parkland — it is one of the city's most important recreational and cultural spaces. Adding more highway capacity directly adjacent to it will diminish the experience of one of Austin's greatest assets. I am also concerned about the environmental implications of this project. Much of this corridor sits within the environmentally sensitive Edwards Aquifer recharge zone. Increasing impervious cover and traffic pollution in this area raises legitimate questions about long-term impacts on water quality and ecosystem health. These are resources that cannot easily be restored once degraded. From a business perspective, I am also skeptical that this project will meaningfully address congestion where it is actually experienced by residents and commuters. I operate a business on Bee Caves Road in Rollingwood, and the Bee Caves corridor is already significantly gridlocked on a daily basis. Yet very little of this proposal appears to address the choke points where traffic leaving MoPac converges onto local streets like Bee Caves Road. Without comprehensive solutions that address these downstream impacts, expanding MoPac may simply shift congestion from one location to another while increasing traffic volumes overall. Austin is at an important moment in determining how we invest in transportation infrastructure. Projects of this scale should not only consider moving more vehicles, but also protecting the environmental resources, neighborhoods, and public spaces that make this city unique. I strongly encourage decision-makers to carefully reconsider the long-term impacts of this expansion and prioritize solutions that reduce congestion without sacrificing the environmental integrity of the Edwards Aquifer recharge zone, the livability of nearby neighborhoods, and the character of Zilker Park. Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Trenton Moy | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Trenton Moy |

|---|---|---|
| **4/26/2026** | Tressa Gilmer | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>I have been an Austin Resisdent since 2006. I have moved away and returned because the waters that bless this incredible land are some of the most special relationships Ive ever tended to. Ive organized and been apart of clean up efforts, sat in townhalls, submitted comments for almost every threat Barton has ever experienced. I cant believe we're having to defend this still. Without water, nothing lives. It is our most valuable resource and should be protected at all cost.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow |

| | | |
|---|---|---|
| | | patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. |

| | | |

| | | Trevor Masters |
| **4/20/2026** | Trey Montoya | I am in favor of this project. The necessary protections for the environment have been deeply researched and provides me comfort as a resident of Austin who cares about the environmental safety and habitat. |

| | | |
|---|---|---|
| **4/19/2026** | Triana Dominguez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Trinity Walsh | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Trinity Walsh |
| **5/3/2026** | Tristan | I oppose the MoPac South project as proposed. I urge CTRMA to complete a full Environmental Impact Statement—the current Environmental Assessment is not sufficient for a project of this scale. Key concerns: * Construction impacts the Edwards Aquifer recharge zone, risking Barton Springs, drinking water, and 8 endangered species. * Up to 9 years of closures affecting Zilker Park, Butler Trail, Barton Creek Greenbelt, and the MoPac pedestrian bridge. * Dynamic tolls exceeding $18 create inequitable access for lower-income commuters. * Expanded highway capacity will likely induce demand and fail to solve long-term congestion. I support the resolutions from Austin City Council and Travis County Commissioners Court calling for deeper review. CTRMA should conduct a full EIS before moving forward. |
| **3/19/2026** | Tristan Brooks | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin’s climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project’s length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **5/1/2026** | Tristan Bry | I am submitting a comment to express my concerns over this development. The expansion will dramatically impact the local nature and trails that make south Austin special while no doubt fail to solve the problem. It has been clearly documented that expansion of roadways like this will only lead to more cars driving through this corridor, likely resulting in just as much, if not eventually more, congestion as before. I do commute north on Mopac daily and it's not fun sitting in traffic, but more road is not the solution, it rarely ever is. |
| **3/21/2026** | Tristan Scott-Seghpossian | I do NOT support the highway expansion. Lane additions are outdated, ineffective, and counterproductive approach to transportation. Multiple studies have shown the adding lanes actually increases traffic, and even TxDOT has published in their Statewide Multimodal Transportation Plan that widening highways doesn't deliver on transportation or safety goals. I DO support investing in transit, walking, and biking. Even converting an existing lane into an HOV/transit lane would be preferable to expansion. |
| **4/25/2026** | Troy Abbott | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/25/2026** | Trudy Hasan | Dear CTRMA Board Members,<br><br>I am a long-time south Austin resident who uses Mopac on almost a daily basis. I find it unacceptable that CTRMA continues to advance the MoPac South expansion plan without fully addressing the environmental and community impacts.<br><br>A full Environmental Impact Statement (EIS) is absolutely warranted for a highway expansion project of this size and must be required. The Environmental Assessment is woefully inadequate, and frankly, an insult to Austinites with its "finding of no significant impact".<br><br>The level of habitat destruction and the harm to endangered species, the Edwards Aquifer, and Barton Springs is completely unjustified for the expected 5-6 minutes of travel time saved. This plan is ludicrous. Can you not see that?<br><br>With this plan, CTMRA is sacrificing Austin's environment, public health, and our quality of life. Nothing about this plan justifies the 5-7 years of construction traffic delays for only a miniscule amount of travel time saved. Nothing. The costs completely outweigh any benefit.<br><br>There are better ways to solve the congestion on South Mopac. I urge you to complete the full EIS and evaluate less harmful alternatives.<br><br>Sincerely,<br><br>Trudy Hasan |

| | | |

| **3/29/2026** | Truman Arthur | It has been proven over and over that highway expansions make congestion WORSE over time, while permanently destroying the urban fabric of cities. Do NOT expand MoPac and further tear up neighborhoods, culture, and walk/bikability just to please suburbanites behind the wheel! Nobody wants this except people who don't live in the city! |
| **3/20/2026** | Trung Nguyen | We need more bike and bus infrastructure. Not more highways. Wide highways during rush hour are a nightmare. |

| | | |
|---|---|---|
| **4/25/2026** | Trupti Sarang | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/27/2026** | Tucker Mathews | Barton Springs is the bit of soul that is still left in this city. No one will want to move to this city or visit if Barton Springs is neglected or treated with contempt by this administration. I urge you to complete a full Environmental Impact Statement. |
| **4/22/2026** | Tuesday Becker | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/22/2026** | Ty Connery | I vehemently oppose this project. Clearly the proposed outcome would NOT have a net positive impact on our community, however would in fact endanger fragile ecosystems. |

| | | |
|---|---|---|
| **4/20/2026** | Ty Hutchens | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Ty Olcese | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Ty Olcese |
| **5/3/2026** | Tye Derrick | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Tye Derrick |

| | | |
|---|---|---|
| **5/3/2026** | Tyler Canine | We need to protect this irreplaceable natural resource. We need to guarantee out grand children and out grandchildren's grandchildren have this protected |
| **5/3/2026** | Tyler Espino | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Tyler Espino |

The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. Best, Tyler Hill |
| **5/1/2026** | Tyler Jacks | I strongly do NOT support the MoPac South toll expansion project. It will have a negative impact on the environment, it will take too long to complete, and there isn’t enough of a benefit to justify the costs. |
| **5/3/2026** | Tyler Jones | I don't support the expansion. |

| | | |
|---|---|---|
| **3/15/2026** | Tyler Markham | I do not support this project. Austin does not need more highway lanes, especially ones that cross critical water zones and will increase impervious cover, leading to more runoff, emissions from increased traffic, and sprawl out into the hill country. |
| **5/3/2026** | Tyler McAlpin | DO NOT expand the roads we don’t need more roads or construction leave - alone |
| **4/29/2026** | Tyler McGee | To whom this reaches,<br><br>* I OPPOSE expanding MoPac South<br><br>* Instead, I SUPPORT regional rail and a world class bike/pedestrian network<br><br>* I want a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA)<br><br>* Expanding highways never reduces traffic<br><br>Sincerely,<br><br>Tyler<br><br>Sent from my iPhone |

| | | |
|---|---|---|
| **3/29/2026** | Tyler Miller | I commute to work using mopac from slaughter lane to enfield road on a regular basis. I think it is one of the most beautiful roadways in Texas, and am concerned this will ruin one of the most beautiful places in the state just to save a few minutes for people driving the highway in 2045. I'm a stakeholder that this project aims to serve in sure and I know it sounds great to have less congested roadways to which I'd say, why are we not striping the massive amounts of paved shoulder between William cannon and slaughter where the road needlessly bottlenecks. Also the money would be better spent on park and rides for those in Hays. I will vote for whoever I need to just to make sure this project does not proceed. No tolls and no more paving on the Edward's aquifer. Please. |
| **5/3/2026** | Tyler Naylor | Dear CTRMA Board Members, Absolutely not worth the price tag, damage inflicted, or effort to construct. Improvement is minuscule and a waste of effort. Sincerely, Tyler Naylor |
| **4/25/2026** | Tyler Rhoads | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/26/2026** | Tyler Smith | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Tyler Whitney | Dear CTRMA Board Members,  The nature and wildlife in Austin is one of the most amazing parts of our city. They should be valued and protected above all else. Moving forward with this project without a comprehensive environmental impact statement is irresponsible and frankly disrespectful to the voters, the community, the wildlife, and the history of our city. Growth shouldn't come at the cost of what makes our city worth living in!  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely,  Tyler Whitney |
| **4/22/2026** | Tyson Frederick | Hello! I will keep my comments tight. The sole reason I chose to spend my limited life in Austin is because of Barton Springs and the barton green belt. Anything to put that unique part of my life and others in jeopordy for 5 mins to 15 mins estimated less traffic time just doesn't equate. I hope this comment leaves some influence in any readers mind. Please reconsider. |
| **3/19/2026** | Unji Udeshi | Stop expanding highways in major cities. I DONT WANT:  A wider highway.  Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin’s climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project’s length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion |

| | | |
|---|---|---|

| **5/3/2026** | Ursula Walker | As an Austin resident who originally moved here from Dallas in 2012, I can earnestly say that the most significant and special part of this city is the Greenbelt forest and water system. As a kid, I never grew up with access to real natural treasures such as Barton Springs and Lady Bird Lake. I never went hiking through forests and trekking to find waterfalls. Many young people in major urban centers across the nation don't grow up with these experiences; instead, they grow up with polluted and smelly waterways like the Trinity River that runs through Downtown Dallas. Yet how special is it that children across our city — perhaps even children of your own — get to grow up with the unique experience of enjoying one of Texas' most beloved aquifers, which gives life to all of Austin's waterways. In today's world, these spaces of natural delight are a becoming a rarity — and with it, the natural elements that connect and soothe us all. Therefore preserving the ecological balance of Austin's Greenbelt system — at the center of which springs the fresh waters of Edwards Aquifer — serves to protect the single-most important element that gives this city it's true appeal. Beyond the music scene, the food culture, the tech industry and UT's football, something that everyone seems to enjoy about Austin is our range of natural landscapes. No matter who you are, at one point or another you've found yourself enjoying the water from one our lakes, or watching the sunset from a blanket out in Zilker Park. You know the joy of jumping into the brisk waters of Barton Springs, or the beauty of walking with family along the river. And if you don't yet know, I urge you to go out and sit in one of Austin's natural marvels for even 10 minutes. Then ask yourself if you're comfortable with contributing to the imbalance of our waterways… The decay of our lakes… The stench of polluted rivers… These things are inevitably at risk of occurring if the boundaries in place which allow the Aquifer to recharge go ignored… As I said, the only river I ever knew as a kid was one that we often joked smelled like "rotten eggs"… The Trinity River. It was always my least favorite part of the city, as it created a dirty sensation that pushed people away from that area. I never knew until now that it was connected to the Trinity Aquifer that has long been in decline due to factors such as population growth and over-pumping without enough time to recharge. Therefore I ask you to take heed to the dilemas facing the Trinity Aquifer system amidst its current state of decline — something that has led to lower levels of more salinated waters, and I ask that you not underestimate the significance of your actions on the Edward's Aquifer here in Austin. Nearly 10 years of a road expansion project in such a sensitive recharge zone would pose a devastating effect on the entire ecosystem that makes this city (and beyond) what it is. I believe it would also drastically affect the tourism industry in ways that have yet to be fully measured or understood. While traffic is nobody's favorite thing, I believe that there are more effective, creative and ecologically-thoughtful ways to resolve the "traffic crisis." There could be incentive programs for carpooling, and more electric or even solar-powered trains in other non-sensitive zones of the city. I'm sure many other ideas exist that have been tested in other cultures or countries, such as mindfully using the river as a means of daily transportation. In the end, there is nothing more important than protecting and preserving the balance of our natural habitats — the land and especially waters that give so much back to us. Along with such lies the intertwined fate of endangered species such as the beloved Barton Springs salamander. Therefore I beg you to please reconsider this project, and to help protect something that has united Austinites, transplants and visitors for so long — our shared love of nature. |
| **5/3/2026** | Urvish Parikh | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and |

| | | |
|---|---|---|
| | | neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Urvish Parikh |
| **4/28/2026** | Vaeda Rolph | PROTECT PUBLIC LAND, PLANT NATIVE TREES, SECURE OPEN SPACE FUNDING, PROTECT EDWARDS AQUIFER, ALLOW SAFE PUBLIC ACCESS DURING CONSTRUCTION. |
| **4/28/2026** | Vaeda-Raven Rolph | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/20/2026** | Vajray Crenshaw | I oppose the proposed MoPac expansion. Widening the highway will increase air pollution and will harm surrounding Austin High School students. I instead prefer separated bike paths along the project and converting the current highway into a HOV/transit lane. TxDOT approach by widening MoPac is outdated and inefficient way of improving traffic flow. Please do not move forward with the expansion of MoPac. |

| | | |
|---|---|---|
| **5/2/2026** | Valarie Campbell | As a long-time resident of Austin, going on 35 years, one of the greatest things about this city is how green it is. Coming from Houston in the mid-90's, I relished in how much the people of Austin loved and appreciated their access to beautiful nature, especially on the green belts and in the Hill Country. There was always flowing water in Austin, it wasn't only concrete and highways, like Houston. In 2021, I started a small non-profit that was originally created to protect Williamson Creek. Over time, more people joined from different parts of South Austin, and thus we became South Austin Creek Alliance. Our mission is to protect and preserve south Austin waterways and the green spaces that surround them. At the time, we didn't see what was coming with the Oak Hill "Parkway" project. Native forest was obliterated overnight. Williamson Creek became a concrete conduit that cut off a native wildlife corridor. And even today, the water in Williamson Creek never runs clear from HWY 71/290 in Oak Hill to past MOPAC after a decent rain event. Concrete sediment has settled into a lot of the karst features and often coats the roots of trees and leaves of plants once the water evaporates. That means less water making it into our aquifer. And we're right in the Recharge Zone, which makes it even worse. There have been times I have walked along the creek bed after a good freeze, and if there was water there, it became ice. But not in this part of the creek because what happens is the concrete sediment that is left in the water contains polymers. And those polymers and sediment turn what would have been ice, into frozen plexiglass. It is unfortunate with all the intelligent people and engineers that work on transportation, especially in Central Texas, it feels they don't really value the significance of our natural resources. The new MOPAC expansion project will span multiple watersheds and not only that, one of Central Texas's LIFELINES, the Edwards' Aquifer Recharge Zone. There are a multitude of reasons why we are vehemently against this expansion. The main reasons are clear: • Austin does not need more pavement. • Austin does not need more destruction to our environment. • Austin needs to protect its water resources now more than ever. • Our critical environmental features, such as our caves, springs, creeks, and the Edward's Aquifer are in danger of disappearing forever. Once a project like this starts, there is no going back. There is truly a life-source on the line, and it needs to be protected. We say NO to MoPac South project. That will be a complete detriment to our aquifer and all the freshwater resources south of Enfield Road. Highway expansion cannot be the only answer. But just to add a little more to this, making a highway wider doesn't make traffic go away. Telling people to spend years in even worse traffic caused by construction for a fifteen minute deduction in their drive after it's complete, is the most backwards thinking. Would that deduction be 15 minutes before the construction started, or 15 minutes deducted from during the construction? Will people have to pay for that deduction in tolls? What about the people that can't afford to pay tolls? Any way you slice this, there is no logic. We need smarter transportation plans, not more concrete. |
| **5/2/2026** | Valarie Campbell | I've seen the havoc the Oak Hill Parkway project has caused to Williamson Creek. Our fragile ecosystems that rely on our Central Texas waterways and Edward's Aquifer cannot survive another onslaught of complete destruction that another highway expansion will cause. And you cannot prove to anyone that tearing apart the earth and paving it is harmless. That's my first concern. My other concern is the lie CTRMA is selling. I work north but I live south. I often have to use MOPAC to get there and back. Adding more time to the drive because of construction, will in the end, cost more in time (not to mention gas) overall, even once the construction is complete. There will be a time deficit. Not just the time, but the money will be another hurdle. Spending time in traffic causes wear and tear on a car, and it reduces fuel efficiency. With gas prices as high as they are, this can be problematic. And once everything is finished, you want people to pay to use the roads if they don't want to sit in traffic. That's not affordability and it's not helping anyone. This is incredibly illogical, inhumane, and ridiculous. Overall, this just shows that CTRMA does not care about the people in Central Texas and it definitely doesn't care about our critical natural resources. Traffic problems cannot be solved with highway expansion. Highway expansion only leads to environmental problems which can be exponential. |

| | | |
|---|---|---|
| **4/23/2026** | Valarie Gold | Dear CTRMA Board Members,<br><br>I am a native Austinite who regularly comutes on MoPac South as well as an Austin High School alumnus.<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. | **5/3/2026** | Valeria | Please stop ruining Austin with expansion that nobody is asking for |

| | | |
|---|---|---|
| **5/3/2026** | Valeria Amaya | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Valeria Amaya |
| **4/27/2026** | Valeria Gonzalez | Barton Springs is more than just a place, it's a living piece of Austin's soul. For generations, it has quietly witnessed the city's many transformations while remaining a constant source of connection, joy, and belonging for the people who call this place home. The thought of it being severely affected by this project is deeply concerning, not just for me, but for the countless community members whose lives are intertwined with its waters. For many of us, Barton Springs is where we learned to swim, where we challenged ourselves and trained for competitions, and where families and friends gathered to share simple, meaningful moments. It is a space that brings people together across generations, a rare and irreplaceable thread in the fabric of this city. As an Austin native, it is painful to imagine losing even a small part of what makes this city so special. Austin's rapid growth has already changed so much, and while change is inevitable, not everything should be left behind. I plan to stay here, to raise my children here, and I want them to experience the same sense of wonder, community, and connection that Barton Springs has given me. We owe it to future generations to protect what remains of Austin's magic to preserve the places that define us and ground us in a shared identity. I urge you to complete a full Environmental Impact Statement. |
| **5/3/2026** | Valeria Leija | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Valeria Leija |

| | | |
|---|---|---|
| **5/3/2026** | Valeria Ramirez | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Valeria Ramirez |
| **5/3/2026** | Valeria Ramos | Oppose Mopac expansion |

| | | |
|---|---|---|
| **4/22/2026** | Valerie Bermudez | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **4/22/2026** | Valerie Bermudez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/19/2026** | Valerie Sims | Please do not induce demand by expanding 8 miles of MOPAC South. |

| | | |
|---|---|---|
| **4/29/2026** | Valerie Sims | Please read the comments from me and the others who oppose the expansion of MOPAC South.<br><br>We want a full Environmental Impact Statement, not only an Environmental Assessment. There is so much to consider in this potential expansion that is more important than the traffic which would produce more traffic due to induced demand. Now is the time to learn the lessons from so many other freeway expansions which have not solved the problems and have caused environmental disruption. Austin has much to offer in the way of the natural environment. We citizens do not want it spoiled which would cause more damage than the advantages from the expansion would enable.<br><br>What Austin needs is much more non-vehicular outlets that are safe and help the traffic problems. Rail, bike, and pedestrian connectivity are essential. Instead of more and more cars and trucks on the roads, we need ways for less damaging transportation to be supported.<br><br>While this proposed expansion is being constructed, the very things that Austinites need more of—outdoor access, transportation that supplies physical outlets, safer networks than cars provide for some examples—will be compromised for years. This is the opposite of what we should be focused on!<br><br>Thank you for your attention,<br><br>Valerie Sims<br><br>resident in SW Austin |

| **5/2/2026** | Valerie Tamburri | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Van Harrison | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/24/2026** | Van Short | I support constructing the preferred alternative as soon as possible. |
| **4/29/2026** | Vanessa | This highly invasive project needs to go to a larger research body and be more investigated from environmental and quality of life impacts. Austin would not be Austin if this massive roadway is created. Do an EIS. Get recent data. Don’t rely on years old data. Austin is very different now. |

| | | |

| | | |
|---|---|---|
| **4/28/2026** | Vanessa Burden | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Vanessa Juarez | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Vanessa Juarez |

|---|---|---|
| **5/3/2026** | Vanessa Lively | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Vanessa Lively |

| | | |
|---|---|---|
| **4/24/2026** | Vanessa McNamara | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. More roads equals more cars, and that's not beneficial.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Vanessa McNamara |

| | | |
|---|---|---|

| | | |
|---|---|---|
| **4/24/2026** | Vanessa Reiser | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |
|---|---|---|
| | | Vanessa Reiser |
| **5/3/2026** | Vanessa Reiser | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Please, please, please do not let this happen. No one who lives in this area wants this to go forward. It is unpopular.  Sincerely,  Vanessa Reiser |

| **4/27/2026** | Vanna Van Oss | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Vanna Van Oss |

| | | |
|---|---|---|
| **5/3/2026** | Varyana Graffeo | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Varyana Graffeo |
| **4/24/2026** | Vearl A Williams | No affiliation |
| **4/24/2026** | Vearl A Williams | We should have built this 10 years and we would be finished by now with traffic moving smoothly. The environmental impact statement has answered all of the requirements, however, will never satisfy the tree huggers. The tree huggers do not pay the majority of the taxes, nor do they represent those of us who need to use the highway on a daily basis. Build it now! |
| **4/17/2026** | Veronica Barrio | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/3/2026** | Veronica Crownover | Dear CTRMA Board Members,<br><br>Here:<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Veronica Crownover |
| **5/3/2026** | Veronica Crownover | I am against the MOPAC expansion. More highways will compromise the watershed for the springs. |

| | | |
|---|---|---|
| **5/3/2026** | Veronica Mognato | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Veronica Mognato |
| **4/22/2026** | Veronica Puente | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/1/2026** | vickie tatum | |
| **3/11/2026** | Vicky Edwards | Please build it as fast as you can. |

| | | |
|---|---|---|
| **4/21/2026** | Victor Diaz | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| **3/19/2026** | Victor Ude | If you think you're going to profit off of making traffic worse for South Austin residents, think again. Multimodal transit or we go to war, and you will lose. |

| | | |
|---|---|---|
| **4/29/2026** | Victor Ude | You all can do whatever you want, honestly. Given the present proliferation of toll roads in Austin it is painfully obvious that the decision makers have more interest in generating profit than delivering solutions for remedying transportation related problems in Austin. Not only do Austin residents, visitors to Austin, and commuters passing through Austin not benefit from additional lanes, the addition of more lines has without a doubt contributed to increased traffic accidents and fatalities.<br><br>Building RAIL or don't. I am leaving Austin for a mature city that has figured this sort of thing out. |
| **4/21/2026** | Victoria Campbell | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/21/2026** | Victoria Caparra | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Victoria Castañeda | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Victoria Castañeda |

For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Victoria Hoffmann |
| **5/3/2026** | Victoria Juarez | I do not want a toll road expansion |

| | | |
|---|---|---|
| **5/2/2026** | Victoria Lugo | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Victoria Ojeda | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Victoria Ojeda |
| **4/27/2026** | Victoria R | This expansion is unnecessary and unwanted. Large pieces of Austin are already lost, please don't not ruin the remainder of what we have. |
| **5/1/2026** | Victoria Rose | I am against the expansion of MoPac South. The expansion is not needed, and any time savings currently predicted by CTRMA will be eaten away by construction delays and induced demand after the project's completion. At the very least, a full environmental impact statement must be completed for the project. The draft environmental assessment describes significant impacts to wildlife, endangered and threatened species, water quality, air quality, and noise. This project will harm the Austin area without any benefits. |

| | | |
|---|---|---|
| **4/22/2026** | Vincent Dowden | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |
| **4/29/2026** | Vincent Musat | With the construction of these toll lanes, for pavement that is existing that was built under a previous project, the public will not be charged a fee to drive this portion of MoPac. There is currently enough space for another lane to be added to the Southbound Mainlanes Cross-section where the left lane currently tappers and merges with the Center lane. This impedes traffic flow Southbound during rush hour. Now TxDOT is proposing Toll Lanes to address this issue. Enough pavement exists to add a Lane until you reach the souther side of the elevated section that crosses Convict Hill Road and Latta Drive. Then a small piece of pavement needs to be extended to reach the next elevated section that crosses the Violet Crown Trail. Following the elevated section that crosses the Violet Crown Trail a small section of pavement would be needed to transition back to the existing pavement crosssection. this would allow for the left two lanes to not involve weaving or merging all the way from Ben White until the exit to Davis Lane. The Right lane south of William Cannon to Davis Lane can function as a entrance and exit lane for it length between those points thus improving traffic flow. I am not sure why this has not already been completed as a similar lane was added on Southbound MoPac from Barton Skyway south to the Highway 360 North Exit, with additional improvements to the Highway 360 South exit as well. |
| **4/23/2026** | Vincent Ramirez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **3/24/2026** | Vincent Tomasetti | This project could provide important design to relieve traffic and future congestion. Currently traveling both NB and SB on MoPac is a massive delay especially currently working and living off S. Park Meadows and William Cannon.. Having utilized express lanes before and knowing of their benefits, I fully support this proposed expansion project. |
| **4/24/2026** | Virginia Acker | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/27/2026** | Virginia Palmer | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Virginia Palmer |

| | | |
|---|---|---|
| **5/3/2026** | Virginia Palmer | Please No South MoPac expansion! At least do a profession environmental impact study! The citizens of Austin do not want or need this disastrous double decker<br><br>toll road that will destroy the health of our local environment: rivers, springs, creeks, trees and the physical health of all in the area - car, noise, toxic pollution, much more. Too expensive too!<br><br>Thank you,<br><br>Virginia Palmer, Ph.D.<br><br>Resources Unlimited<br><br>www.virginiapalmer.com <http://www.virginiapalmer.com> |
| **5/1/2026** | Virginia Palmer | Please do not devastate our lake, aquifer, park, environment in general, the health of our people, especially the students and more with this horrific proposed MoPace extension toll road expansion. The impact would be the of the beauty and health of nature in our city. Thank you! |
| **5/3/2026** | Virginia Palmer | Please do not destroy the nature, water, neighborhood, physical health environment with your double decker toll road. |
| **5/3/2026** | Virginia Palmer | Yes, this is Virginia Palmer and I joined thousands of other longtime Austin residentsin opposing this South MOPAC expansion for all the reasons that you have already heard.I've heard them too.And on the personal level, I'll say it's close to MOPAC and Enfield and just, well, the whole thing is so ill thought and poor planning and not taking in any consideration the severe impact certainly on our neighborhoods, on the traffic,but to say what eight minutes and the environment and the aquifer and thehigh school students I could go on and on you've heard it and you know it to betrue I could say so much more but thank you for your time |
| **5/3/2026** | Virginia Palmer Ph.D. | No South MoPac expansion! No more toll roads! |
| **5/1/2026** | Virginia Shurgar Hassell | Expanding mopac in the critical Barton springs zone is destructive and awful. Do not do it. |

| | | |
|---|---|---|
| **4/27/2026** | Vivek Gani | Hello, my name is Vivek Gani and live in South Austin. This comment represents myself though for full disclosure am also on the board of the nonprofit organization South Austin Creek Alliance. I am not employed by TxDOT nor do any business with TxDOT and don't see myself benefitting monetarily by the MoPac South expansion project.<br><br>I am writing this comment to express my current opposition to the proposed expansion of MoPac South with some questions around the environmental assessment and models used in proposing the project, along with some ideas on other approaches to handling MoPac South congestion. These questions, comments, and ideas are below:<br><br>* In the MoPac South environmental study meeting notes from January 24, 2024 (page 169 of the Draft Environmental Assessment) there's mention of "TCEQ requires 80% capture of runoff for new impervious, but our goal is 100% for project." Is this mention of percent capture only in regards to handling Total Suspended Solids (TSS) or something more than this? I'm wondering whether there's consideration around the net increase of impervious cover (which from other resources estimate it to be about 110 acres increased) and not just whether runoff water is captured & filtered, but the impact of the increased impervious cover on the speed of water runoff, soil quality changes to the area impacted, and changes in evapotranspiration (particularly in areas where tree removal occurs for the South MoPac expansion) and how that may impact weather from a microclimate level to impact on the water cycle.<br><br>* In the document 'Preliminary Water Quality Analysis and Design' on page 195 it says "Chemical Oxygen Demand, E.coli and Total Nitrogen were not studied, primarily because these are not constituents of concern with roadway projects." How valid is this statement with roadway projects when dealing with highways that handle traffic beyond 30,000 vehicles per day? My rough understanding is that this project estimates "between 206,250 and 261,250 vehicles per day" according to page 42 of the Draft Environmental Assessment. |

| | | |
|---|---|---|
| | | * How will this project be addressing the issues around silt and concrete runoff during construction? While my brief search couldn't find a reference to 'silt fences' or 'temporary controls' in the environmental assessment and related documents, others such as Dr. Lauren Ross have brought up their concerns around the effectiveness of these mitigation approaches. Anecdotally as someone who has participated in and organized cleanup events, I've sometimes encountered what seems similar to these 'silt fences' usually damaged and warped to where they no longer seem effective at their original purpose. Additionally, groups such as South Austin Creek Alliance (disclosure: I am a board member of South Austin Creek Alliance) have observed & photographed concrete sediment during the recent construction of the Oak Hill Highway expansion - see https://southaustincreekalliance.com/so/f7PKL3SRD?languageTag=en&cid=d6abfee5-0c30-4e13-8e72-fae4bbee1130 <https://southaustincreekalliance.com/so/f7PKL3SRD?languageTag=en&cid=d6abfee5-0c30-4e13-8e72-fae4bbee1130> (scroll down / search for "Williamson Creek February 2025 post rain event", alternative archive link: https://web.archive.org/web/20260426185531/https://southaustincreekalliance.com/so/f7PKL3SRD?languageTag=en&cid=d6abfee5-0c30-4e13-8e72-fae4bbee1130 <https://web.archive.org/web/20260426185531/https://southaustincreekalliance.com/so/f7PKL3SRD?languageTag=en&cid=d6abfee5-0c30-4e13-8e72-fae4bbee1130> ).<br><br>* With these above points in mind, I think a full Environmental Impact Statement (EIS) process should be done before considering any build option. When talking to Mopac South staff back in March at the in-person public hearing I recall some of the reasoning was that an EIS wouldn't be needed due to how there were proposed mitigations around areas impacted by construction of the proposed highway expansion. However, there's still more questions around the post-construction impacts on the small water cycle, contributions to urban heat island effect, noise, and effects of highway runoff chemicals (such as Gasoline & Fuels, Lubricants & Grease, Gasoline additives like MTBE, Nitrous Oxides, Copper, Lead, Chromium, Cadmium, Microplastics, Polycyclic aromatic hydrocarbons (PAHs), Pthhalates, alkylphenols, 6PPD-quinone, etc.).<br><br>* Have there been any design approaches and/or traffic modeling approaches that carried more of a 'transit-first' approach where mass transit was utilized along with on-demand last-mile connection options? One example is CapMetro's 'Pickup' service. And in other cities are the King County 'Metro Flex' program (formerly called 'Via to Transit') in Seattle, Washington. Or the Access-on-Demand program in Denver, Colorado. Some of these approaches also partner with Transportation Network Companies (TNCs). I bring this up because I wonder if there could be pilot projects that utilize the existing South Mopac roadways (i.e. before committing to build any expanded highways) and consider the many usage changes due to technological shifts that have happened such as: |

| | | |
|---|---|---|
| | | * Emergence over the past 15+ years of TNC companies with smartphone-based ride hailing (e.g. Lyft, Uber, along with former non-profit entities like Ride Austin) and the more recent emergence of autonomous rideshare (e.g. Waymo, Zoox, etc.) vehicle companies - some of which also offer pooled ride options. While some of studies will talk about how these TNCs are increasing vehicle roadway congestion (which is a traffic problem in dense urban areas), I wonder if they could be used in partnership with mass transit (i.e. CapMetro buses) to reduce congestion specifically on highways such as South MoPac. There were also smartphone-based carpool programs (e.g. Waze Carpool) which existed in some cities until 2022 as they were impacted by the pandemic and shifts toward remote work.<br><br>* Has there been any consideration in the modeling of MoPac South around the current lack of Park & Ride locations in service to the southwest Austin area that could be an alternative<br><br>to individual passenger vehicles along MoPac South? As of April 2026 when I look at the CapMetro Park & Ride website (https://www.capmetro.org/park-ride & https://www.capmetro.org/docs/default-source/plan-your-trip-docs/destination-schedule-book-docs/park-ride-station-locations.pdf ) which has a map of current locations, I notice that while there are a number of Park & Ride locations generally along the central, east, and north areas of Austin, there are nearly no Park & Ride locations that are in close proximity to MoPac South - there's only been the 'Pinnacle Park & Ride' location and 'Westgate Transit Center' which are along Route 290. I'm wondering if there could be opportunities to pilot/create more Park & Ride locations around southwest austin that alleviate current South MoPac congestion and potentially leverage existing parking lots that may have less utilization due to changes in shopping behavior (e.g. at large shopping malls). I'm proposing this in conjunction either expanding the CapMetro 'Pickup' service or a partnership between mass-transit & TNCs. I'm also wondering if 'road diets' during less busy times of year (i.e. summertime when K-12 school isn't in session) could be done to temporarily create dedicated bus & carpool lanes to measure how congestion could be managed better without building a highway expansion.<br><br>* In addition to the thoughts brought up in the previous point, how is the ‘2045 Model no build’ ( https://www.mopacsouth.com/MPS%202045%20Update.pdf <https://www.mopacsouth.com/MPS%202045%20Update.pdf> ) estimate factoring in emergent technologies such as what was described in my previous point (e.g. TNC+mass-transit partnerships, autonomous rideshare) along with the rise in the use of telecommuting and some hybrid work approaches that started to become more common for some occupations after |

| | | |
|---|---|---|
| | | the start of the 2020 pandemic? Is this what is already factored in by the statements around 'decentralized working trend' mentioned in the "2045 Traffic Forecast Update" document? Are there models that try to visualize and factor in degrees of increase both in use telecommuting/decntralized work and increase of transit services used in a multi-mode manner?<br><br>* The prior points around design approach and traffic model beg a bigger question - how would an expansion of Mopac South help Central Texas towards stabilizing and ideally reducing Vehicle Miles Traveled (VMT) per-capita? My understanding is that some metropolitan areas in central Texas like City of Austin have statements on their website that "Reducing VMT is a major goal of Imagine Austin" (see https://data.austintexas.gov/stories/s/Compact-and-Connected/jqwk-xf8g/ <https://data.austintexas.gov/stories/s/Compact-and-Connected/jqwk-xf8g/> ).<br><br>My argument is that there are other potential ways to prioritize coordination towards less highway congestion that I feel should be explored by CTRMA in collaboration with cities, public transit organizations, and Transportation Network Companies - specifically that could be done on a shorter timescale and influence whether an expansion should be done.<br><br>* I have questions about select documents (i.e. some, not all) on the mopac south website being unavailable as of the morning of Sunday April 26, 2026. Specifically:<br><br>* As of April 26, 2026 - why does trying to access the link to the "Biology: Species Analysis Form and Summary Spreadsheet" ( https://www.mopacsouth.com/draftea/Bio%20-%20SpeciesAnalysis.pdf <https://www.mopacsouth.com/draftea/Bio%20-%20SpeciesAnalysis.pdf> ) redirect to ( https://www.mopacsouth.com/cgi-sys/suspendedpage.cgi <https://www.mopacsouth.com/cgi-sys/suspendedpage.cgi> )? If I recall correctly I was able to access this PDF back in March 2026. |

| **4/26/2026** | Vivek Mehta | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| **4/22/2026** | Viviana Jo Rocha | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **5/3/2026** | Vivielle Bowler | Hi, my name is Vivielle Bowler.I live at - Austin, Texas, 78722.I have lived in Austin for 10 years, for that Houston.I am calling about the expansion of MOPAC and to stop the expansion of MOPAC as an artistand movement instructor in the community.I do a lot for the community.And myself and my community rely on the springs and the green beltto go back to and commune and feel like a cityand to really take in what the city has.The reason why I stay is the nature and it has so much to offer us more than a few lanesof traffic that is proven to not do much to help our traffic crisis.I encourage revisiting this and thinking over new ways to handle the traffic crisis withtransportation, our green space is a huge, huge reason why people stay inAustin and why people visit Austin. I think it is a huge mistake, this decisionthat you are making to expand MOPAC. I think it'll be very harmful to our greenspaces and harmful to so many communities that rely on the green spaces and the speciesthat rely on our green spaces specifically that are only found here in Austin.And it would be an extreme detriment and sadness to lose these because of traffic expansion.I really call that you rethink this decision, revisit this decision, listen to your community.Everyone that I have spoken to is against this.We need our green spaces more than we need room for cars.Yes, we are all begging you to please halt this decision, end this decision, revisit,listen to your community, let us come up with something together that allows us to saveour green spaces while allowing more ease for day-to-day transit.Please reconsider.Thank you.Again, my name is Vivielle Bowler.I live at -, 78722.Thank you so much.Bye-bye. |

| | | |
|---|---|---|
| **5/3/2026** | Vivienne Bennett | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Vivienne Bennett |
| **5/2/2026** | Vladimir Montoya | Hi there, my name is Vladimir Montoya and I am calling in regards to theexpansion of the Milpac Highway and the impact on Barton Springs and I wouldlike to just say that I'm in full support of there being a environmentalimpact and I don't feel like that's being done right now and we haven'tit out why so we just love for there to be some initiatives around making surethat there's an environmental impact statement and that way we can go aheadand keep Springs alive and this is something that really supports the cityand all its inhabitants and just everyone in the city and something that I personallylove.So thank you.I hope you guys listen to this. |
| **4/30/2026** | Vladislav Marom | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |
| **4/29/2026** | Vyronika Deleon | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/29/2026** | W Gaines Bagby | Hugely important to install two Express lanes each way. Only one lane slows all to the slowest car. Two allows for passing, keeping the flow at rated speeds. Also two lanes allows for at least one lane when vehicles stall or have an accident. |

| | | |
|---|---|---|
| **4/29/2026** | W. Tucker | Hello Folks !<br><br>I want to throw my two cents in and say that I 100% OPPOSE expanding MoPac South.<br><br>You all need to do a FULL ENVIRONMENTAL IMPACT STATEMENT ! NOT THE ABBREVIATED ENVIRONMENTAL ASSESSMENT THATS BEEN<br><br>DONE.<br><br>Even though Austin has heavy traffic (during rush hours for sure - and some just other times of the day) MoPac is a fairly decent road to<br><br>drive on. That will seriously change if you all proceed with this new road - traffic may be better for a minute, but the road will quickly fill back<br><br>up. Studies show that you would be saving folks maybe five minutes of travel time. And to make MoPack a major thoroughfare - opening it up as an<br><br>Austin bypass would bring a serious number of 18 wheelers on to the road .... turning MoPac into another I35.<br><br>When my wife and I moved to Austin in 2008 we were told by friends - even back then - if you can manage to stay off of I35, you will have<br><br>a happy life in Austin.<br><br>If you all continue with this plan, folks will quickly be saying the same about MoPac.<br><br>Please think long term and take care of Austin .... the parks, barton spring, the lake ... and not keep playing the short game.<br><br>Again - I OPPOSE EXPANDING MOPAC SOUTH. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>William Tucker |

| | | |
|---|---|---|
| **4/17/2026** | Wade Beesley | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Wade Beesley |

|---|---|---|
| **5/2/2026** | Wallace Goodman | Hi, my name is Wallace Goodman, I'm a resident of Austin.I want to register strong opposition to this project going forward.What we need to be doing as a city is making it more environmentally sustainable ratherthan making it easier for more cars to come into the city.In large part, I'm not a NIMBY, but I'm concerned about the environment and the environmentin Austin is a real concern, not only because of dramatic weather but because of increasingheat and what if we encourage cars to travel more that's going to increase the effectsof climate change because there'll be more carbon and so we need to be looking for otherways that are less carbon intensive.A quote from one of the climate journalists that I've looked at that doesn't apply onlythis project to many of them. And by the way, TexDOT has also gone on record as saying buildingmore highways isn't the solution because it just induces greater demand and increases traffic.Dave Roberts quote is, this generation of humanity is engaged in a moral crime,the scale and consequences of which dwarf anything in our species history.Going forward, and I would add to that, going forward with the Mopec South projectwould send us further down this path of environmental destruction.And there are so many other things we could do with that moneyto make our city a better one.Thank you. |
| **5/2/2026** | Wallis Goodman | Climate journalist Dave Roberts has said this: "This generation of humanity is engaged in a moral crime, the scale & consequences of which dwarf anything in our species' history." This planned expansion of MOPAC would send us even further down that road. |

| | | |
|---|---|---|
| **5/3/2026** | Walter Harrell Harrell | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. These are generational decisions on investments and need much more careful consideration. The entire proposal is a 20th century solution for a 21st century problem. It needs to be reimagined and redeveloped as a rail solution for moving people with opportunities for comercial development along the area to the north and south of the critically sensitive areas. The project is ill conceived and by the time it is developed the problem will be worse. It solves nothing, creates irreversible problems, |

| | | |
|---|---|---|
| | | and leaves us with a very poor and potentially catastrophic return on investment. For the love of water in Central Texas, Walter Harrell |

| | | |
|---|---|---|
| **4/28/2026** | Ward Tisdale | I support the expansion of MOPAC South to provide the maximum amount of lanes to enable better traffic flow. Austin has doubled in population every 20-25 years since its founding and that trajectory is not expected to change. Our region has done a poor job of investing in infrastructure to plan for future growth. The "If-we-don't-build-it, they-won't-come" crowd, best represented by the SOS organization, has done nothing but put us in a bind to stay ahead of planning for growth. SOS has also killed the creation of housing supply, making Austin a much more expensive place to live than it would have been had we planned for growth. The ability to plan for growth and protect the environment has been widely established and proven. Growth brings jobs, keeps families together as kids can grow up here and live here as adults and makes Austin a much more interesting place to live with great food, restaurants, venues and a growing status as an international city. When you expand, I encourage you to prioritize preserving access to and fully restoring the Violet Crown Trail, just as you plan to prioritize re-opening the Butler Hike & Bike trail around Lady Bird Lake. I'm a big supporter of trails and the CTRMA needs to continue its past success in improving and building additonal bike trails. Build it big so we don't have to do it again in 30 years. Build it well so it enhances trails and bike access. And build it clean so our environment is not harmed. Thank you, Ward |

|---|---|---|
| **5/3/2026** | Waterloo Disc Golf Club Austin Texas | My name is Gordon Kelley, I'm the President of Waterloo Disc Golf Club here in Austin. We are a large volunteer organization and we do a lot of work on maintenance and improvements at the city's disc golf courses, including at Zilker Park.<br><br>We are concerned that the 12 foot wide multi-use path that was added to the project will cause serious problems to the Zilker Disc Golf Course, a course that is almost 40 years old and was only the 2nd course in the city back when it opened in 1987.<br><br>The path in question is on the northbound side of MoPac. As it makes its way from north to south, the plans indicate a crossing of Barton Springs Rd. and the path then running alongside the western edge of Zilker Park / eastern edge of the northbound MoPac access road. We've been told the plan is to push for an elevated crossing of Barton Springs Rd. due to safety issues.<br><br>The distance from the edge of the disc golf course in that area to the northbound access road is very small, and there is already an existing sidewalk there. There are multiple Crepe Myrtle trees there to protect the sidewalk users from errant golf discs that don't stay on the fairway.<br><br>Ideally we would like to see the path cross Barton Springs Rd., but stay on the western side of the northbound MoPac access road; this would keep it off the part of Zilker that contains the disc golf course. It could stay there until it crosses Andrew Zilker Rd, and then it could cross the access road to join up with the existing sidewalk as it heads further south. |

| | | |
|---|---|---|
| | | Our second choice would be having the path stay on the north & west side of Barton Springs Rd (and the western side of the southbound access road) until it crosses Rollingwood Dr., then having it turn eastward crossing the southbound access road and then the northbound access road.<br><br>Our third choice would be this: The only possible way we see this new path not greatly affecting the disc golf course is for it to remain elevated along the entire stretch of the northbound access road, from where the path crosses over Barton Springs Rd. until it crosses over Andrew Zilker Rd; and it would need to be elevated enough for it to run directly over the existing sidewalk for that whole stretch.<br><br>Even then it will likely cause the removal of at least some of the Crepe Myrtle trees, and both the path and the sidewalk will need some kind of protective barrier, and it may still negatively affect one or more of the disc golf holes.<br><br>If the path does NOT remain elevated until after crossing Andrew Zilker Rd. then it will definitely greatly affect many of the disc golf holes. This is important because the disc golf course is in a fairly small piece of the park and the holes are very close together. It is impossible to adjust one of the holes without causing the other holes around it to be affected. Those other holes then need to be changed, and this causes the holes around them to be affected as well. The need for a small change cascades quickly and ends up requiring huge changes. |

| | | |
|---|---|---|
| | | There is no way a path that is elevated when it crosses Barton Springs Rd. could then descend to ground level before Andrew Zilker Rd. without cutting greatly into the disc golf course, there just isn't room.<br><br>Thanks,<br><br>Gordon Kelley |
| **3/22/2026** | Wayne Allen | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. Sincerely, Wayne Allen Austin |
| **5/3/2026** | Wendell Colberg | Don't. Just don't. |

| | | |
|---|---|---|
| **5/2/2026** | Wendell Mitchell | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Wendy Corn | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Wendy Corn |

|---|---|---|
| **5/3/2026** | Wendy Corn | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Wendy Corn |
| **4/23/2026** | Wenyu Lu | No expansion.  Leave the good part of Austin along |
| **4/6/2026** | Wes Heathcock | This whole project is a complete waste of time, money, resources, and safety of environmental areas  This is the definition of creating a problem and coming up with a solution  The Infrastructure is already in place. All you need to do is PAINT a lane for the pre-existing merge at William Cannon South. This is the only bottleneck of concern.  With a few days of work it can be done, preserving the environment, saving taxpayer money, and longer commutes for ongoing construction  There is only one tiny section that would need to be modified  Zero need for this project. It’s a total shame we are trying to squeeze money and destroy the environment for something that already is in place.  Thank you |
| **5/3/2026** | Wes Neely | I am against the MoPac expansion, it will devastate the spring and pollute the lake even further |

| | | |
|---|---|---|
| **4/23/2026** | Wesley Strobel | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |

| **4/26/2026** | West Weichert | Austin and the greater Austin area already struggles with having ample public green space for everyone. Lovely outdoor spaces are a large part of what makes Austin a wonderful city and the destruction of it diverges us further from that charm. This project also acts as another bandaid on the real issue of poor public transportation and suburban sprawl due to a lack of new housing development in key economic areas. |

| | | |
|---|---|---|
| **5/3/2026** | Weston Montgomery | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Weston Montgomery |

| | | |
|---|---|---|
| **4/17/2026** | Whitney Colm | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |

| **4/30/2026** | Whitney Dutton | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/14/2026** | Whitney Johnson | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45, which is very dangerous. City Council District 8 has now allocated $117,000 to the design of this path as they recognize the important need for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request, and can provide further information, including graphics. Thank you. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Will Bahr |
| **5/3/2026** | Will Bahr | Expanding the Mopac expressway is as shortsighted as it is inefficient. Not only will this damage the most fragile ecosystem in all of Texas, but it will NOT improve the traffic problem of Austin. This has been proven time and again with municipal congestion. Invest in public transportation and expanding bike lanes, not a profoundly expensive project that will threaten four separate endangered species all to save commuters a grand total of five minutes on the road. The fact that TxDOT has refused to do a full environmental impact assessment thus far says it all. |

| | | |
|---|---|---|
| **4/26/2026** | Will Becker | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Will Becker |
| **3/21/2026** | Will Branch | Please do not expand MoPac. The I-35 expansion is bad enough, and neither of these projects will actually address the issue. |
| **5/3/2026** | Will Conley | These project is merited for major improvements to improve water quality, public safety, and mobility for those of us that use this roadway daily in western Hays and Travis County. It's been study at the deepest level, and Central Texas Regional Mobility Authority is extremely competent to carry out this development. |
| **5/3/2026** | Will Daltharp | Good afternoon. It's May 3rd, 2026. I'm Will Daltharp. I'm a resident of Austin and havebeen for the last seven years. Barnes Springs is my favorite place in the whole, whole,whole world. I go to exercise there three to four times a week. I found community there.It's where I find peace and respite. It's my favorite place in the whole world. I wouldheartbroken, |

| | | |
|---|---|---|
| | | devastated if anything happened to it. Please don't do this expansion project.I would be heartbroken. Oh my gosh, yeah, it would be heartbreaking to me and so many others.Please don't do it. I beg of you. |
| **5/3/2026** | Will Dalthorp | I strongly oppose the plans for MoPac expansion. I am strongly concerned it will have permanent negative impacts on Barton Springs Pool, my favorite place in the entire world and the number one reason I love and want to stay in Austin. It is my form of exercise, and my place of mental restoration, and a place where I come for community 3-4x/week! I would be heartbroken if anything happened to it |
| **5/3/2026** | Will Dathorp | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Will Dalthorp |
| **5/3/2026** | Will Reddall | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Will Reddall |

|---|---|---|
| | | proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Will Reddall |
| **4/21/2026** | William A Rodriguez | Intersted in the options for traffic improvements. |
| **4/20/2026** | William Arline | "When all you have is a hammer, everything looks like a nail" is a useful piece of wisdom that the CTRMA board ought to reflect on. The CTRMA plan to add more elevated ramps, more construction, more lanes, etc., operates on the faulty logic that commuters simply lack space to accommodate their routes. And since CTRMA can build more road, it insists on doing so. Ostensibly, this is to "fix" our traffic problem. Nevertheless, the best studies on traffic show that it isn't just the number of commuters that makes traffic bad--it is the number of cars on the road at any particular time (it is the number and frequency of trips that creates congestion). Adding more lanes, more ramps, and so on, only encourages people to take more trips, paradoxically, adding to traffic congestion. This will not fix the problem (the insistence that every trip, and more trips, need to be taken) and will, in fact, make things worse. Worse yet, CTRMA wants to do this by yet again threatening the delicate and vulnerable Barton Creek watershed (the Edwards Aquifer). While I frequently use, and enjoy, the 183 toll road, not everything needs to be expanded, and not every solution requires a construction project. CTRMA's decision to double-down on what has been demonstrably shown to be a bad idea (increasing car-focused infrastructure) will solve nothing, while risking damage to what little green space we already enjoy. |
| **4/21/2026** | William Baltz | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | William Bass | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | William comer | This proposal will not help traffic txdot has done studies and calls this area an already developed roadway which it states adding another lane to these types of corridors does not improve traffic. A toll lane seriously this seems to just be a money grab. I'm am completely against this expansion and it's sad that as Austin native I have to keep fighting obsurdity and fight it more and work harder at fighting it. My opposition to this project is strong and a good fight. |
| **3/19/2026** | William Curtis | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **5/3/2026** | William Eagle | As an Austin native, a hydrogeologist, and a lover of the unique outdoor recreation opportunities this city offers I would like to express my opposition to the Mopac South Expansion in it's current form. I'm especially concerned about the potential impact Barton and Cold springs. There are at least two known karst features which could be impacted which flow to Barton and Cold springs, as shown by previous dye traces and reported in the draft environmental assessment. It is hugely irresponsible to put these at risk during construction to the detriment of the residents of the city. Even if I ignore the environmental issues, I'm not convinced this is a project that is worth it, with no consideration of pedestrian impacts, just toll lanes for people who can afford it, and years of construction, this seems like a bad idea. |
| **5/3/2026** | william gardner | Do not support due to environmental impact |

| | | |
|---|---|---|
| **5/2/2026** | William Gaynor | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | William Hamstard | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |
| **3/19/2026** | William Moore | I am opposed to this project. Study after study shows that highway expansions only make traffic worse, all while contributing to greater environmental destruction and pollution in the surrounding community. Please reconsider this project and focus instead on improving bike and pedestrian facilities along MoPac. |

| | | |
|---|---|---|
| **4/21/2026** | William Parrish | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/22/2026** | William Piper | I enjoy the west end of Zilker park and the nearby bird sanctuary. Additional lanes of traffic will generate noise and pollution there. |
| **3/24/2026** | William R. Loudon | I strongly favor the Project and the Build Alternative. The Project will significantly improve mobility by multiple modes and give more choices to travelers. I have reviewed the environmental assessment of the Build Alternative and feel that there would be no unacceptable impacts. I think the geometric design is well thought out and it includes some improvements to existing mixed flow segments of roadway that will produce significant improvement to bottleneck. |
| **5/3/2026** | William Sellari | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/24/2026** | William Wadkins | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/23/2026** | William Weston | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>William Weston |

|---|---|---|
| **5/3/2026** | Willow Dalehite | Dear project team: My name is Willow, and I was born and raised in Austin. I have been a swimmer at Barton Springs my entire life. I went to Barton Hills elementary school. I remember how full the creeks used to be, and how clear the water of the springs once was. I remember when you could drive southwest and see uninterrupted swathes of juniper, and I have watched in incremental grief as the development of the hill country, the mopac 45 connection, and increased runoff from car traffic through the Edwards aquifer has impacted the springs - the heart and soul of Austin's natural spaces. For those of you who have not lived long in Austin, or are not descendants of the tradition of caring about its natural spaces, it may be easy to take for granted that these places will continue to thrive. This is mistaken. The continued beauty and existence of Barton Springs, in its clean, safe, gorgeous form, is thanks to the endless, exhausting work of Save Our Springs and other coalitions who have fought project after project over the Edwards Aquifer. Sometimes they have been successful, other times not – with creeping consequences over time. Please do not see these groups as an enemy of progress, or simply naysayers. These people are visionaries who understand what is truly valuable about this city, what makes people want to live here, what creates a feeling of culture and community. In twenty years, how many people will live in Austin? Will this project need to be rebuilt, over and over again, to accommodate the vast suburban sprawl of construction in the hill country? When we've trampled over our aquifer and developed over the hills, what will be left of the beauty that made people want to live there? This project may seem to you like a small impact, but it will be a part of the history of city planning decisions that prioritised short-term convenience over long-term sustainability and stewardship. It's nonsensical to sacrifice our hard-won natural spaces for such a paltry public benefit. Toll lanes? Seriously? This project will exacerbate inequity in transport, not alleviate it. If this city really cared about connectivity in the urban landscape, we would be implementing wide-scale public transportation (metro, tram) networks with the capability of efficiently moving vastly higher numbers of people. In twenty, fifty years, the only thing that would adequately mitigate the congestion on mopac is if people rode the train to work instead. What a wonderful world that would be! It's obvious that this environmental impact statement is the bare minimum, completed merely to satisfy state requirements rather than with any care and attention to the long-term impacts a project like this would have. I believe you all have good intentions. But there are serious problems with the current plan as it stands. • This environmental impact statement is almost so vague as to be useless. It identifies areas, waterways, and species that will be impacted, yet one solution is seemingly to liaise with other local organisations. Offloading these tasks onto other entities doesn't actually achieve mitigation. The descriptions of other mitigation activities are also incredibly vague because they do not address, in my view, the extent of the impact that years of construction will have over one of the most sensitive environmental regions in this city. • As others have mentioned, increasing capability merely increases congestion, rather than alleviate it. "Build the road and they will come." The impact of increased road traffic and runoff in the decades following this project doesn't seem to have been extensively considered. • The construction on this corridor would coincide with updates to I-35 and the reduction of Lamar to one lane in either direction, which combined would negatively impact South Austin residents. • The "opportunities for pedestrians and bicyclists" is perplexing. The plan will cut off access to the public hike & bike trail for years during construction. And elsewhere along the corridor is generally unsuitable for this kind of transportation. I'm all for public walking and biking access, but we really need mass-scale public transit to deal with the congestion problems we are facing. I hope you will reconsider this plan and instead, for now, opt for the "No-Build" alternative until we are ready to make visionary changes to the ways we all coexist and move around the city we call home. Transport is obviously important, but the purpose of transport is to connect people to the places they want to be. Not degrade those places for the sake of a project which will invite more congestion, not less. Like you, I want this city to continue to be liveable and beautiful - for all the species that call it home. Sincerely, Willow Dalehite |

| | | |
|---|---|---|
| **5/3/2026** | Willow Walpole | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Willow Walpole |

| | | |
|---|---|---|
| **5/3/2026** | Wilson Huddleston | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Wilson Huddleston |
| **5/2/2026** | Winter Kane | Hello, I have just found out about this project, and I think it is harmful to not only Austin,but to the entire country and the world as a whole.Yes, MOPAC is clogged, but a five-minute change of traffic after years and years and yearsof loss of flow of traffic and the harm it'll cause endangered species and ourwater and the most diverse environment in the country is pretty terrible. Don'tdo this. Thanks. My name is Winter Kane. |
| **3/19/2026** | withheld | Do not widen any freeways or stroads! Adding lanes does not fix any problems. It just worsens sprawl and car dependence and destroys the environment and makes life worse for everyone. Stop wasting money on useless highway expansions! |
| **4/20/2026** | Wolfgang Burst | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **3/16/2026** | Worthy LaFollette | My name is Worthy LaFollette, and I live in Barton Hills. Every weekday, I commute along MoPac to Far North Austin, so I experience both the daily congestion and the character of this corridor firsthand. I care deeply about Austin's livability and natural environment, which is why I'm strongly opposed to the MoPac South expansion. Adding more lanes through this part of the city will not solve congestion—it will simply invite more traffic, more noise, and more air pollution into neighborhoods that are already carrying the burden of constant vehicle flow. The idea that we can widen our way out of traffic has been disproven again and again. What we'll end up with is a larger, louder highway cutting through sensitive areas without providing real relief for commuters. My concerns go beyond traffic. This section of MoPac passes directly over the Edwards Aquifer recharge zone, a fragile system critical to the region's water quality. Once we disrupt the natural filtration and increase runoff from new pavement, those consequences can't be reversed. We should be protecting this resource, not putting it at greater risk. Then there's Zilker Park, which sits at the heart of Austin's identity. Expanding MoPac in close proximity to the park means increased noise and pollution in a place meant for recreation and community. For many of us, Zilker is the city's front porch—it deserves better than to be bordered by even more highway lanes. I hope the agencies responsible for this project take a serious look at the long-term implications. Instead of doubling down on outdated highway approaches, Austin should invest in smarter mobility solutions: better transit, improved bike and pedestrian infrastructure, and policies that reduce the need for so many car trips in the first place. The MoPac South expansion risks doing lasting harm to the neighborhoods, parks, and environmental systems that make this city worth living in. I urge you to reconsider this project and pursue alternatives that move people—not just cars—while preserving what makes Austin unique. Thank you for considering my comments. |
| **3/25/2026** | Wyatt Campbell | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **5/3/2026** | Wyatt Rogers | Hi, my name is Wyatt Rogers. I am a retired Barton Springs lifeguard and a devoted memberof the Austin community. I live in this city because of Barton Springs and the green belt.And I really, really request and actually demand that a full environmental report bedone for any of the MOPAC expansion considerations.I believe that what makes Austin, Texas the unique citythat it is is its healthy integration with the naturethat it has and that there is only oneBarton Springs on the planet.There is only one example of such an amazing natural springbeing integrated with a city and being beloved by its people.and any amount of development and growth that could possibly diminish the value of the naturalresources and the community that we have here that is based on Barton Springs and the BartonCreek Greenbelt be highly reconsidered in the light of the value of this city comesfrom these natural resources and this is what makes it so great.Please take these words into deep considerationfor these proposed developments of the MOPAC expansion project. |
| **4/27/2026** | Wynn Prager | My name is Wynn Prager. I live in South Austin, off of Davis Lane. I am calling to strongly oppose the construction of the toll lines and the work that's being proposed on MOPAC South. This will disrupt our area for years. It will cost millions and millions of dollars, and at the end of the project,at the project's completion, it will make hardly a dent in the commute time.I could go on and on that the things that will have to be closed, the problems that it's going to cause for those of us in South Austin. Yes, the traffic's terrible, but I can't believe this is the only solution the city can come up with for a city this size.There needs to be a better form of public transportation or something besides just building bigger, bigger and more roads. It's a horrible proposal, no, no, no.Thank you very much. |

| | | |
|---|---|---|
| **4/28/2026** | Wynne Prager | Tuesday, April 28, 2026<br><br>To whom it may concern:<br><br>I am writing to register my very strong opinion AGAINST<br>the proposed expansion, toll lanes, etc. for MoPac South.<br><br>This will cost millions, take years, cause an intolerable<br>amount of disruption, increase noise and pollution for my area<br>of town, destroy trees and habitat and make this beautiful part of<br>Austin ugly.....and after all that, the commute time saved will be<br>negligible.<br><br>I will also add that the project will close parts of the Violet Crown Trail,<br>which was just completed!!!!!! and is heavily used. Same with Dick<br>Nichols park.<br><br>This project will ruin the South Austin way of life that drew us to this<br>area in the first place.<br><br>NO, NO, NO.<br><br>Thank you, |

| | | |
|---|---|---|
| | | Wynne Prager |
| **4/27/2026** | Wynne Prager | I strongly oppose the construction of toll lanes on MoPac South. It will take years, millions of dollars, and the end result will barely make a difference in commute or drive times. The disruption, destruction, and cost are not worth the outcome. Again, I strongly OPPOSE the changes to MoPac South. (Additionally, I can't believe that building more and bigger highways is the main solution to traffic problems in a metro area the size of Austin. Shortsighted and backwards thinking.) |
| **5/3/2026** | Xochitl Acheson | As a resident of Austin I oppose the expansion of Mopac. The amount of potential benefit is not anywhere near worth the potential harm on our watershed, springs and environment. Austin is so great because of its natural environment and this expansion could hurt the reason why so many of us live here. We are also in a drought and any damage to the watershed will hurt the city and be difficult to undo. Because of these reasons i oppose the expansion of Mopac and will continue to be involved and educated on this project. |

| | | |
|---|---|---|
| **5/3/2026** | Yahir Saldana | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. | | | |
|---|---|---|
| **5/3/2026** | Yahoska Martinez | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Yahoska Martinez |

|---|---|---|
| **5/3/2026** | Yara Rose | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. | **4/20/2026** | Yasmin Haq | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Yasmine Anderson | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/21/2026** | Yesi Hernandez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Yessika Perez | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Yessika Perez |

| | | |
|---|---|---|
| **4/20/2026** | Yi Zhou | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/22/2026** | Yines Hong | Strongly against this mopac expansion project. We. Austin already lost too much land, too many trees, too much clean water, too many public places. You are making Ausitn like a concreate city. It is time to stop it. Return Austin like a beautiful living place for people. |
| **5/3/2026** | Yoshiks Gonzalez | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Yoshiks Gonzalez |

| | | |
|---|---|---|
| **4/24/2026** | Ysel Soeung | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Ysel Soeung |

| | | |

| | | |
|---|---|---|
| **5/3/2026** | Yusuf Nail | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Yusuf Nail |

| | | |
|---|---|---|
| **4/23/2026** | Yvette El-Hage | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **5/1/2026** | Yvonne Lim Wilson | I do not want this toll road expansion for environmental reasons. It's my understanding we can pursue alternatives, and I would prefer that to the toll lanes. I do not plan on utilizing these toll lanes if they are built. |

| | | |

I feel every effort made to preserve the environment impacts our planet as a whole and is crucial to the future of mankind.<br>Thank you for your time and consideration. |
| **5/1/2026** | Zach Bowers | Conduct a full Environmental Impact Statement! It's insane to go through with a project this massive without one. |
| **5/3/2026** | Zach Greul | This is atrocious. Another prolonged construction project being built over the watershed for Barton springs. Everyone proposing this and trying to make it happen should be ashamed of themselves. Scumbags |

| | | |
|---|---|---|
| **5/3/2026** | Zach Horvath | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Zach Horvath |

| | | |
|---|---|---|
| **5/2/2026** | Zach kosta | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/24/2026** | Zach Ryan | I am in favor of the project. I do recommend considering an aux lane for the SB entrance ramp at William Canon and the exit ramp at Davis Ln. Traffic does not ever accelerate to full speed and congest the outside lane. Great project. |
| **4/30/2026** | Zach Stirling | This expansion is unnecessary and making toll lanes profits someone else and are way to expensive. Also, this is Edward's Aquifer and would disrupted the biology. |
| **5/3/2026** | Zach Thompson | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Zach Thompson |

| | | |
|---|---|---|
| **5/3/2026** | Zachary Dunn | I want a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA)<br><br>I do not want Mopac expanded. I want the other methods of mobility expanded instead. Biking, walking, and mass transit are preferred.<br><br>Mopac is probably the highway I've used most in my life and I've never felt like expanding it would suit my needs. We need to think larger and smarter instead.<br><br>I oppose expanding MoPac south. |

| | | |
|---|---|---|
| **5/2/2026** | Zachary Faddis | It is highly doubtful that expanding MOPAC will have achieve the outcome of reducing congestion. Please consider redirecting the funds to active transportation and non-car orientated mobility projects. We have more highway capacity than this region will ever need, and increasing it will not improve congestion. What it will do is work against every environmental goal we have.<br><br>Thanks for your consideration,<br><br>Zach Faddis<br><br>Sent with Notion Mail <https://www.notion.so/product/mail> |
| **4/22/2026** | Zachary Lawton | Do not expand Mopac (No Build). This will do huge damage to the environment in very vulnerable areas and will not solve traffic issues (research “induced demand”). |

| | | |
|---|---|---|
| **3/13/2026** | Zachary McCrimmon | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. You will find many reasons below. Before we get to that, I would like to introduce myself and elaborate on my relationship with Austin's natural areas that are being threatened by this expansion.<br><br>I was born and raised in 78704. I went to Barton Hills Elementary School. During my childhood, I spent the majority of my time either at Barton Springs or on the Greenbelt. I would not be the person I am today if I did not have those experiences. The thought that future generations will not be able to experience the joy and love I had for nature in order to cut traffic down by 5 minutes makes me sick to my stomach.<br><br>I spoke up 10 years ago when the previous expansion plan was proposed. Fortunately, that proposal was denied. Unfortunately, the plan has returned disguised as an option that is safe for the environment and the Austin community. I hope you take our words in consideration when we say we do not want this expansion. The same goes for other expansion plans proposed in the future. I don't want to write a plea to stop the expansion every 10 years, but I will do it if that is what must be done to protect Austin.<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. |

| | | |
|---|---|---|
| | | The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Zachary McCrimmon |
| **4/23/2026** | Zachary Salvo | You need to do an environmental impact study. I as a native austinite do not want to see this destroy our springs so people can save 6 min traveling |

| | | |
|---|---|---|
| **4/24/2026** | Zachary Stavrou | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Zak Triplett | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Zak Triplett |

| **4/20/2026** | Zarina Adams | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/20/2026** | Zephyr DeGrote | I am a lifelong Austinite. I love our city and would embrace any/all changes that make it better. I have also traveled all over the world and one consistent difference between world-class cities and the ones aspiring to be is PUBLIC TRANSIT!!!! more highway lanes is short sighted and ecologically and aesthetically a bad call by transportation and city leaders. People can go live in Dallas if all they want is highways. Give people coming from southwest options frequent, reliable public transit, not more lanes which will just fill up anyway. I BELIEVE THE FOLLOWING WILL HARM AUSTIN COMMUNITIES: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **4/23/2026** | Zhipeng Xing | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/21/2026** | Ziona Rodriguez | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Ziona Rodriguez |

| | | |
|---|---|---|
| **4/29/2026** | Ziv F | Hi,<br><br>As an Austin resident and someone who lived in cities with great public transportation:<br><br>I OPPOSE expanding MoPac South!<br><br>Instead, I SUPPORT regional rail and a world class bike/pedestrian network.<br><br>I want a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA).<br><br>Respectfully,<br><br>Ziv Fishfedder |
| **5/3/2026** | Zoe | Please don't build Mopac South in a way that interferes with the watershed. Evaluate the impact this expansion will have on the environment. Austin's growth is slowing. The expansion is less important than the livability of this city. |
| **5/3/2026** | Zoe Apsel | It is absurd to think that harming the environment and especially something as cherished by the city as the Barton Springs watershed would improve Austin in any way. Invest in better public transportation, not more highways |
| **4/27/2026** | Zoe Axelrod | I am against this expansion and am extremely concerned about the environmental impacts on Ladybird Lake and Barton Springs. The construction would impact wildlife and impede people using trails and our natural resources. There should be a full environmental impact statement. |

| | | |
|---|---|---|
| **5/3/2026** | Zoe Bechtel | Humans need to leave nature alone, especially in Austin. We have destroyed so much of the natural beauty that the city is known for in the name of advancement. These green spaces and water ways must not join that pattern. These areas need to be protected, preserved, and maintained for future generations to enjoy. Destroying the areas is selfish and greedy as these lanes will not decrease traffic. If you are interested in decreasing traffic, add more bus routes and side walks. |
| **5/3/2026** | Zoey Kaul | My name is Zoey Kaul and I am an Austin resident writing to oppose the MoPac South project as currently proposed. I urge CTRMA to conduct a full Environmental Impact Statement before any further action is taken. The current Environmental Assessment is insufficient given the scale and duration of this project's impacts. My specific concerns: The proposed construction crosses the Edwards Aquifer recharge zone, putting Barton Springs and Austin's water supply at risk from years of construction runoff and drilling. CTRMA's own assessment lists 8 endangered species — including the Barton Springs salamander — as potentially affected. The project would temporarily close portions of Zilker Park, the Butler Hike and Bike Trail, the Barton Creek Greenbelt, and the MoPac pedestrian bridge over Lady Bird Lake — public spaces that Austin residents depend on daily — for up to 9 years. Dynamic toll pricing of $18+ per trip creates an inequitable two-tiered road system that disproportionately burdens lower-income commuters. Finally, expanding highway capacity has been repeatedly shown to induce demand — attracting more drivers over time and ultimately recreating the congestion it was meant to solve. A project of this cost, scale, and duration deserves a more honest accounting of its long-term traffic impact. I support the unanimous resolutions passed by both Austin City Council and Travis County Commissioners Court calling for a deeper review. I ask that CTRMA honor those resolutions and conduct a full EIS before proceeding. |
| **5/3/2026** | Zona Martin | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS), an alternatives study with a report that describes alternatives to this proposed expansion and reasons why those alternatives weren't chosen , and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Zona Martin |

|---|---|---|
| **5/3/2026** | Zulema Nguyen | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Zulema Nguyen |

| | | |
|---|---|---|
| **5/3/2026** | Zuri Mahogany | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Zuri Clark |
| **5/3/2026** | zyla alaniz | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. | **4/30/2026** | Miles | Dear Board member of the CTRMA: I am a high school student at - and would like to make a comment on the plans for the MoPac South Project. I believe the expansion of MoPac is a great idea to increase transportation and reduce traffic congestion. Highway expansions such as this should reduce traffic congestion in theory, however it does not account for the increased demands it will create for the trips from suburbs to the city the detrimental environmental consequences of the expansion. Finally, the project would increased impervious cover, runoff from tires, and air pollution over environmentally sensitive areas, including the habitat of the federally endangered species. There environmental effects would coupled with an increased demand for trips to the city a more reliable route. I believe that a Full Environmental Impact Statement (EIS) under NEPA would compel CTRMA to study, in greater detail, environmental effects, traffic impacts, and alternatives to expansion. Highway expansions of the have been proven to link more vehicle miles traveled (VMT) and have a track record of failing to reduce congestion due to induced and latent demand. - to be true, I believe that this project is divert hundreds of millions of dollars from the projects which benefit the environment and improve traffic by – only proven method: providing viable alternatives to driving thereby reducing VMT.<br>Sincerely, Miles |
| **4/30/2026** | Tommy Clark | My name is Tommy Clark, and I go to - in austin tx. As long as I have lived here I have loved ow small this town feels, even if it's very big now, I have always loved the lakes, the nature that runs through austin, making it a small fun town and not a Concrete Jungle like other Cities. I have lots of friends that go to austin high and I think expanding MoPac would take over the nature and the beauty of austin and replace it with something artificial. It would be beneficial because of a rapid growing city and for traffic, but it would take our environment and increase pollution, both – and noise, and would affect some of my friend as austin high. We are too focused on spending money to expand while destroying natural habitats of animals and protect our environment. I hope yall take this under concideration to keep austin the small town I know and love.<br>Thanks so much, Tommy Clark |
| **4/30/2026** | Emilio Hong | Hi, My name is Emilio Hong and I am a hs junior. The Central Texas Regional Mobility Authority needs help on the Draft Environmental Assessment for Mopac South Project. I believe the City of Austin should vote against funding the project and push for a full Environmental Impact Statement. Under the National Environmental Policy Act, implementing this MoPac South Project would increase impervious cover, toxic runoff from tires and air pollution over environmentally sensitive areas, increases the harm of two federally recognized endangered species! Due to the project location, an environmental assessment does not adequately study the adverse effects as expands the highway. A full EIS would awake and show you the environmental effects and traffic impacts. For example, air pollution and noise would get worse as an increase of VMT would worse the noise and environment carbon to the atmosphere. Austin High would get hit extremely hard for this change. Not to mention, the hundreds of millions of dollars spent on this project could be used to improve the environment and traffic. I am extremely frustrated in this way and that protections. Thank you for acknowledging me and I have to see upcoming changes.<br><br>Best regards, Emilio Hong |

| | | |
|---|---|---|
| **4/30/2026** | Dasher | Dear Mr. Doss,<br>I am a tenth grade student at -, my name is Dasher. I am writing today to speak against the expansion of MoPac South Project. This project is environmentally harmful to the city that I love. The increase of impervious cover, toxic runoff from tires, and air pollution from increased traffic over environmentally sensitive areas in central Texas is a very harmful thing. Austin is a city I love being outside in, whether it's hiking in the hill country or swimming in the lakes, and although this is only a small step towards the disappearance of these activities, it is still harmful. Because of the project location a full environmental impact statement under NEPA is necessary and would ensure that the CTRMA study the entire effect this expansion would have on both the environment and traffic. In addition to this the expansion would increase the vehicle miles traveled on the corridor. Highway expansion has been proven to cause an increase in VMT, this would come with noise pollution from surrounding areas, including Austin High. Thank you for reading this, I hope you can now make a better decision with this information in mind.<br>-Dasher |
