| **4/26/2026** | Lee robinson | Dear CTRMA Board Members,<br><br>I oppose the the proposed addition of 6 to 7 new lanes, extending 8.8 miles from Enfield Road to Slaughter Lane, as it will have significant negative impacts in, at least, the following ways, both environmental and lack of practicality.<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Lee Robinson |

| | | |
|---|---|---|
| **5/1/2026** | Lee Urbanovsky | <Attachment><br>Lee Urbanovsky<br><br>mayor<br><br>City of Buda |
| **5/3/2026** | LeeAnn | I urge a full Environmental Impact Statement due to risks to the Edwards Aquifer and Barton Creek. As someone who lives by and uses mopac south every single day, we do not need an extension. It is completely fine as is. |
| **5/3/2026** | Leeann C Funk | Absolutely NO TO MORE LANES OF TRAFFIC ON MOPAC. NO. NO. NO. There are better ways than hurting the places that make Austin, Austin! Do NOT TOUCH ZILKER OR BARTON SPRINGS!!!! |
| **4/27/2026** | Leela Mckenna | Do not build over Barton's Springs. It's the last sacred part of Austin we have left. People move here because of the nature not because they want clear, traffic free, roads. If saving Barton springs means making traffic worse, any true Austinite would choose to save our springs. |

| | | |
|---|---|---|
| **4/23/2026** | Leigh Ennis | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Leigh McSkimming | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Leigh McSkimming |
| **3/24/2026** | Leigh Ziegler | 1. Why is Gaines Creek Park not recognized as protected land?<br>2. Consider roadway noise deduction or acceleration at MoPac and highway 290 where elevated ramps produce excessive noise; is there any pavement mitigation please do a noise evaluation |

| | | |
|---|---|---|
| **4/29/2026** | LEIGH ZIEGLER | Expanding MoPac now conflicts with Council's goals for Austin. It primarily speeds access from the suburbs while breaking up community life and degrading the green corridor along MoPac. The benefit to Austin taxpayers is minimal.<br><br>With I-35 and SH 130 available, this project is hard to justify—especially while Austin is already losing water quality, clean air, and basic greenspace. Widening MoPac would remove mature landscape and habitat that make this corridor livable, while inviting more traffic and pollution (including heavy trucks) as an alternate route.<br><br>The cost is not just dollars—it's irreversible loss. Most residents do not want more lanes and another toll if the tradeoff is less greenspace and a weaker community fabric.<br><br>Our priority should be protecting water quality, air quality, and resident health. Adding multiple lanes—no matter the price—fails that obligation.<br><br>Leigh Ziegler<br><br>District 8 |

| | | |
|---|---|---|
| **4/25/2026** | Leigha Massey | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/24/2026** | Leika Aguinaldo | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Leika Aguinaldo |

| | | |
|---|---|---|
| **3/24/2026** | Leila Levinson | Dear CTRMA Board Members,<br><br>Add Your Unique Comments Here:<br>This proposal will be profoundly detrimental to so much that is precious abut Austin, especially the Edwards Aquifer that feeds the two most precious fetaures of Austin: Barton Springs and Deep Eddy.<br><br>What will Austin be without the natural resources of the water the aquifer provides? A desert.<br><br>A wider highway will only lead to more traffic. At the cost of a safe high school environment and our swimmng holes.<br><br>I completely oppose this plan.<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Leila Levinson |

| | | |
|---|---|---|
| **4/22/2026** | Leila Levinson | CTRMA Board members,<br>It is unacceptable for the Central Texas Regional Mobility Authority (CTRMA) to continue disregarding the significant environmental and community impacts of widening and elevating portions of MoPac South through the neighborhoods of Austin, Rollingwood, and West Lake Hills. The porposed highway expansion directly over the Edward Aqufier Recharge Zone, threatens water quality and endangers the alread precarious survivial of four federally listed endangered species, including the Barton Springs and Austin Blind Salamanders. Furthermore, the expansion will exacerbate localized air quality concerns, near sensitve areas like Austin High School, where students and teachers will bear the brunt of increased air pollution.<br><br>Without a full Environmental Impact Statement (EIS), CTRMA is risking irreversible environmental harm, years of disruptive construction, and the permanet loss of endangered species; all for a project that may fail to deliver the minscule, promised traffic benefits. The Austin community rejects the proposed "finding of no significant impact" and demands that the CTRMA, as part of a full EIS, prioritize meaningful community engagement to develop modern, sustainable alternatives that address congestion without sacrificing environmental protections or public health.<br><br>The ill-conceived project profoundly misrepresents. - the need for + benefit of such expansion<br>= the threat to the Edwards Aquifer, the most threatened aquifer in the state<br>- the levels of pollution that will result from the additional cars the expansion will bring<br>- the severely determined health consequences for Austin High students<br>do not lie about potential environmental impacts. Produce an EIS |
| **4/21/2026** | Leila Moss | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **3/26/2026** | Lela Ellison | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Lela Ellison |
| **3/25/2026** | Leland Murphy | I am deeply opposed to this expansion. Stop splitting up our city for Big Oil/Gas interests! |
| **5/3/2026** | Leland zietz | This highway expansion makes zero logical sense. It has long been known that adding more lanes fails to alleviate traffic. Continuing this project would only endanger the environment more and increase congestion |

| | | |

| **4/27/2026** | Lena Schultz | Barton springs is an integral part of the Austin ecosystem and community. Expanding mopac through the center of the Edwards aquifer is absolutely unnecessary and a waste of taxpayer dollars. I do not support the mopac expansion plans. We need to preserve and maintain the ecosystems that allow our environment to thrive, building a highway through the middle of our biggest water source is not the right move. |

| | | |
|---|---|---|
| **4/26/2026** | Lenia Warrenfells | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Lenia Warrenfells |

| | | |
|---|---|---|
| **4/29/2026** | Lenora DuBose | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |
| **5/3/2026** | Leo Heinzel | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Leo Zonn | Dear CTRMA Board Members, <p class="MsoNormal">May 3, 2026 <p class="MsoNormal"> The purpose of this message is to state my strongest possible opposition to the Proposed MoPac South Expansion. I am a retired Professor of Geography (University of North Carolina, University of Texas) whose interests have long included an array of urban planning issues. <p class="MsoNormal"> There is no need here to reiterate the many negative environmental outcomes of the project, that range from potential impacts on the all-important Edwards Aquifer Recharge Zone to the detrimental effects on the cardiovascular health of the population of Austin High School, which clearly lies within the construction zone. Such outcomes have been detailed in a variety of venues, including this “public comments” forum. <p class="MsoNormal"> This project is a mammoth and long-term undertaking that requires far more study—I should say legitimate study—of its impacts on the lives of people throughout a large swath of Austin.  The nature and scope of the project are inconsistent with the strategic plans that have been conducted over the last decade that consider the many social and environmental implications of unbridled urban growth. Clearly, a thorough and substantive examination is needed, starting with a valid Environmental Impact Statement. <p class="MsoNormal"> I suggest the forces behind this expansion stop for a moment and consider the many implications of this plan, most of which have been conveniently ignored. This careless and hurried approach is reminiscent of the historic divides created by the bulldozing of central Austin for I-35 several years ago. We are still feeling the effects. Let's not repeat such a haphazard approach to such a massive undertaking and rethink a vision of Austin that reflects its people, not just planners, developers, and politicians.  <p class="MsoNormal"> Leo Zonn, PhD Respectfully, Leo Zonn |

The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | Respectfully,<br><br>Lesley L |
| **4/27/2026** | Leslie | I oppose the expansion of MOPAC South. Numerous studies have shown that expanding a highway does not actually reduce the length of a trip. Even if it did, a few extra minutes is a small price to pay to preserve our environment. |

| | | |
|---|---|---|
| **5/2/2026** | Leslie Currens | Dear CTRMA,<br><br>I oppose the Mopac South expansion from Slaughter to Enfield.<br><br>This expansion would add over 110 acres of pavement and bring 9 years of construction noise and pollution to the area at a cost of $825M+.<br><br>This expansion would increase air and water pollution in the impacted region, while not reducing traffic, because more roads just brings more cars.<br><br>I request that you please implement a Full Environmental Impact Statement (EIS) for this project so that the full impacts of this plan can be understood.<br><br>I support instead funding of alternative methods for reducing car traffic through Central Austin.<br><br>Sincerely,<br><br>Leslie Currens<br><br>Austin, Texas |
| **3/20/2026** | Leslie F Currens | Do not widen MoPac. This type of solution will draw more traffic onto the expanded roadway and ends up making traffic WORSE rather than better. As someone who lives along MoPac, this type of change will cause so much harm without providing traffic benefits. MoPac expansion will cause irreparable harm. Communities along the path will be negatively impacted, the environment will be harmed, while the benefit will be minuscule, saving at best a few minutes of someone's drive time. In the long run, it will make traffic much worse along the entire MoPac route by drawing traffic to MoPac that belongs on I-35.Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mobility goals. Instead of widening Mopac at great expense with little payoff, please consider: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. Encouraging more traffic to use the HW 130 Bypass around Austin to relieve I-35. |

| | | |
|---|---|---|
| | | Removing Tolls on HW 130 to make that highway usage more economically advantageous. Move traffic to HW 130, not into Central Austin via MoPac. |
| **5/1/2026** | Leslie Hart | Please do not advance this project. It places too heavy a burden on the already sensitive environment. The goal of opening additional lanes on Mopac in the subject corridor should be accomplished with more modest additions (one additional lane in each direction) that would have more reasonable fiscal and environmental impact. |

| | | |
|---|---|---|
| **3/21/2026** | Leslie John Bourne | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. | **4/28/2026** | Leslie Lindzey | I am strongly opposed to the plan to add so many lanes to mopac across the lake. Especially without an environmental impact assessment. The impact this project could have on Zilker park, the lake, and adjoining neighborhoods is immense. Please stop this insanity. |

| | | |
|---|---|---|
| **4/20/2026** | Leslie Ragland | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **3/20/2026** | Leslie Valentine | Dear CTRMA Board Members,<br><br>My family and I are totally against the MoPac expansion and request that you drop this horrendous project, which would devastate the Barton Creek and Lady Bird Lake area. This iconic part of Austin is beloved by Austinites and draws people from around the world.<br><br>As native Austinites, we do NOT want a wider highway that would entail long-term construction over the fragile Edwards Aquifer recharge zone, causing air and water pollution, harm to endangered species such as salamanders and bats and increased noise and disruption to the thousands of people like myself who swim at Barton's Springs and walk on the Greenbelt.<br><br>Having grown up here, I have seen the destruction and paving over of so many beautiful green spaces and natural areas to build or widen highways. It is truly heartbreaking.<br><br>Other cities backed by science-based studies have realized that widening highways is not a solution to traffic. What we do want is for CTRMA to invest in transit, walking, and biking—not double down on highway expansion.<br><br>Please drop your plans for this short-sighted, environmentally harmful project!<br><br>Thank you,<br>Leslie Valentine<br><br>For the love of water in Central Texas,<br><br>Leslie Valentine |

| | | |
|---|---|---|
| **4/24/2026** | Lesly Veliz | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Lesly Veliz |

| | | |
|---|---|---|
| **5/3/2026** | LESLY VELIZ | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Lesly Veliz |

Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Lexi Mooney |

| **5/3/2026** | lexi sav | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  lexi sav |

The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing P.S. I did a research assignment as an undergrad looking at flooding in Austin. It has been proven that increasing impervious cover leads to more runoff and potentially more flooding. Austin has a history of serious floods, and as it continues to grow and more impervious cover is built, our risk of serious flooding grows. This is not just about the ecosystem. This could be a danger to the people of Austin if ignored. For the love of water in Central Texas, Liam O'Connor |

| | | |
|---|---|---|
| **5/3/2026** | Lianne Aponte | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Lianne Aponte |

| | | |
|---|---|---|
| **4/20/2026** | Libby Hendee | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Libby Linton | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |
| **5/2/2026** | Libby Spencer | I'm deeply concerned about this project. It's being rushed through without appropriate attention to its environmental impact and looks like to cause irrevocable damage. Also appears not to be worth the expense and disruption for such a small benefit in travel time. Please reconsider embarking on this folly. |

| | | |
|---|---|---|
| **4/14/2026** | Liberty Baker | Dear CTRMA Board Members,<br><br>Here:<br><br>Austin is an incredible hub of culture and life for central texas. part of that culture is a love and appreciation of the wildlife around us ESPECIALLY the wildlife in barton springs and the greenbelt. This proposal is not only wasteful and unhelpful to the public but it also directly threatens the health of the barton springs ecosystem and the aquifer. We are shooting ourselves in the foot if we allow for such a destructive and polluting project to continue. You are not doing this for the people of Austin, it will help no one and just cause more congestion. Austin sees enough unnecessary construction, don't allow this project to destroy our community's health and happiness.<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent |

| | | |
|---|---|---|
| | | damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Liberty Baker |

| | | |
|---|---|---|
| **5/3/2026** | Liberty Baker | Dear CTRMA Board Members, If the City of Austin allows for this unnecessary and terrible project to begin/continue, the city will undoubtedly be worse for it. You will poison our water, air and desecrate miles of already fragile wildlife and land. No one who understands the damage this will do wants this to happen. It is a stupid and selfish project to pursue, and will benefit absolutely no one in the long run. The area surrounding the proposed construction, especially the Springs and rivers, have been a sacred and indispensable gathering place for humans and wildlife alike for thousands of years, much longer than "Austin" has even existed for. This land is not anyone's to pollute and destroy. If this project continues, and you do not listen to the thousands of people telling you to stop your plans, you will anger and turn all of those people against you. Don't continue to be selfish and thoughtless and listen to what everyone is telling you to do: STOP THE MOPAC EXPANSION I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even |

| | | |
|---|---|---|
| | | higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Liberty Baker |

| | | |
|---|---|---|
| **5/3/2026** | Lillia Glover | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Lillia Glover |
| **5/3/2026** | Lillian Hogan | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Lillian Hogan |
| **5/3/2026** | Lillian Johnson | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. |---|---|---|
| **5/3/2026** | Lillian Kazanoff | Dear CTRMA Board Members, <p data-start="120" data-end="304">As a local Austinite, I cherish the Springs and our community. I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project - and Austin City Council, Travis County Commissioners Court, and the Urban Transportation Commission agree. Work with us, and we will work with you to sustainably grow and protect our Austin.  <p data-start="306" data-end="515">The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. <p data-start="517" data-end="776">• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. <p data-start="987" data-end="1230">• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. <p data-start="1232" data-end="1454">• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. <p data-start="1656" data-end="1913">• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. <p data-start="1915" data-end="2063">• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. <p data-start="2306" data-end="2499">• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. <p data-start="2712" data-end="2935">• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.  <p data-start="2937" data-end="3189">• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. <p data-start="3375" data-end="3535">• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. <p data-start="3537" data-end="3695">The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is |

| | | |
|---|---|---|
| | | necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. <p data-start="3982" data-end="4260">For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Lillian Kazanoff |

| | | |
|---|---|---|
| **5/3/2026** | Lilly Banks | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Lilly Banks |
| **5/3/2026** | Lily Kazanoff | As a local Austinite, I cherish the Springs and our community. I urge you to recognize the impacts of the proposed project. I request a full Environmental Impact Statement (EIS) and less harmful alternatives - and Austin City Council, Travis County Commissioners Court, and the Urban Transportation Commission agree. Work with us, and we will work with you to sustainably grow and protect our Austin. |
| **4/21/2026** | Lily Walker | I am opposed to this plan for MoPac South. Please do not prioritize pavement and motor vehicle traffic over the health of our environment, specifically the Edwards Aquifer recharge zone. The Edwards aquifer and Barton Springs deserve protection, they are fragile ecosystems that have a significant amount to do with the founding of this city "Waterloo" we now call home. Please be pragmatic and reject more climate warming pavement in the short term in favor of watershed protection that will benefit our community long term. Water is life. |
| **5/3/2026** | Linda | Please do not expand Mopac in a way that will jeopardize Barton springs, Edward’s aquifer and all of the watersheds and natural habitats Austin is famous for. People visit Austin and are amazed by the natural beauty. The same can’t be said for Houston or San Antonio which are both filled with highways and strip malls. It’s not worth it. Protect our natural resources and land for generations to come! It’s what makes Austin special. |

| | | |
|---|---|---|
| **4/23/2026** | Linda Galloway | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. | **5/3/2026** | Linda Aldrich | Hello- I am worried about the environmental impact such a large highway expansion project will have, especially in such a sensitive recharge zone. There are several caves in the area, and it seems like these caves would be irreversibly damaged. One of my favorite crawling caves, Whirlpool, is right under MoPac. How will it be affected by this construction? Also, the project seems like it will be truly unsightly. Is there a way to add a single extra lane each way on Mo-PAC to lessen the impact? Please reconsider this project and reimagine it's that it fits better into its environs. Thank you, Linda Aldrich |

| | | |
|---|---|---|
| **4/23/2026** | Linda Badillo | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Linda Badillo |
| **3/24/2026** | Linda Beltran | 1. I am not convinced this project is necessary- rather it would be more beneficial to redirect resources to better public transportation.<br>2. Noise mitigation is insufficient- current noise from MoPac is already too loud and constant; the bend travels through the Dick Nichols Park<br>3. A break down of the "pain of building" timeline should be projected for each stage of each option.<br>4. The impact to the natural resources is too high; water, karsts, aquifers, green space, trees, animals. |
| **5/1/2026** | Linda Czisny | I am against adding toll lanes to Mopac. This environmental area must be protected. I so value the biking hiking trails along Mopac. This expansion is not in the best interest of our community. |

| | | |
|---|---|---|
| **5/3/2026** | Linda Glass | Our city has grown to a point that it is almost unrecognizable. Please do not take our beautiful waterways and pollute our grounds so that my grandkids can enjoy it safely. |
| **5/3/2026** | Linda Goodale | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Linda Griffith | CTRMA should prepare a full-scale Environmental Impact Statement for MoPac South before it proceeds any further with the project. The MoPac South expansion could have disastrous effects on air and water quality, noise and light pollution, parks, endangered species, and neighboring communities. |
| **5/2/2026** | Linda Lester | Hi, my name is Linda Lester. I'm a resident of Austin, TexasI live in South Austin and I just wanted to say that the Barton Springs is like a really important part to my communityWe go there all the time. We definitely don't want the Mopec running through Barton Springs, you know, polluting the water making it unsafe. A lot of people come from out of town, tourists come to visit as well, because in additionto my full-time job, I also uber a lot of hours and a lot of tourists come down andlike to enjoy the spring and walk around, which brings in tourism money. It directly impacts the green area of our city and is a critical important part of Austin,Texas than old Austin and we hope to keep it clean. I'd be happy to participatein any efforts to keep Barton Springs from getting the MOPAC through. If youever need to reach me for any reason, you could leave a voicemail. My number is-. And I appreciate you taking the time to listen to this voicemail and listen to the othervoicemails.Thanks for watching! |

| | | |

| | | |
|---|---|---|
| **5/3/2026** | Lindsay Beckman | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Lindsay Beckman |

| | | |
|---|---|---|
| **5/3/2026** | Lindsay Gorman | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Lindsay Gorman |

| | | |
|---|---|---|
| **4/24/2026** | Lindsay Hutchens | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Lindsay Hutchens |

| | | |
|---|---|---|
| **3/29/2026** | Lindsay lane | Dear CTRMA Board Members,<br><br>I think you now that once green space is destroyed, it is gone forever. Part of the hopelessness and reactivity today stems, I think, from the degradation of our natural world and the feeling that there is nothing we can do to stop it. Here is a project which can be stopped in favor of our natural environment. It's up to you to say no to an expanded highway which is unnecessary (are we really going to be a city with more cars?) and certainly will degrade this area we have protected for so long. Thank you for reading.<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Lindsey Lane |

| **4/30/2026** | Lindsay Muse | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/15/2026** | Lindsay Nicole McClune | As improvements move forward on the South Mopac corridor, I want to highlight a critical safety and connectivity need for our community. Since 2020, Meridian residents have been advocating for a paved path along Hwy 45 from our neighborhood to Escarpment Blvd, a distance of only 1.2 miles. Completing this short segment would unlock safe access for more than 3,000 residents, connecting us to Circle C and the new paved path beginning at Slaughter Lane. Today, many cyclists, runners, and pedestrians are forced to use the narrow Hwy 45 shoulder, creating an unnecessary and dangerous situation. City Council District 8 has acknowledged the urgency of this issue by allocating $117,000 for the design phase. Meridian has an active committee dedicated to this initiative, and we can provide supporting materials and graphics upon request. We appreciate your consideration of this essential safety and connectivity improvement. |
| **5/3/2026** | Lindsay Williams | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Lindsay Williams |
| **5/3/2026** | Lindsey Allen | There are other ways to reduce traffic in Austin rather than putting the Barton springs watershed in danger of being polluted and/or destroyed/damaged. Please find another way. Do something else. Do not endanger Barton springs. |

| | | |
|---|---|---|
| **5/3/2026** | Lindsey Creel | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Lindsey Creel |
| **5/3/2026** | Lindsey DiCello | To whom it may concern, I'm writing to oppose the proposed toll expansion on Mopac. Decades of transportation research show that adding lanes doesn't reduce congestion. It creates more of it through induced demand. More capacity invites more drivers, and within a few years traffic returns to the same gridlock we started with, except now with more emissions, more pavement, and more cars on surrounding streets. The environmental costs are significant. Construction will damage the tree canopy along the corridor, increase impervious cover that worsens runoff into the Barton Springs watershed, and add to the heat island effect in central Austin. More vehicle miles traveled also means more tailpipe emissions in a city that has committed to serious climate goals. Austin should redirect these resources toward solutions that actually move people: protected bike infrastructure, expanded bus service, and meaningful investment in public transit. Those are the tools that reduce congestion long-term, not more lanes. Sincerely, Lindsey DiCello, Austin resident |
| **5/3/2026** | Lindsey Smith | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Lindsey Smith |

| **4/27/2026** | Lindsey Watson | Dear CTRMA Board Members,<br><br>I STRONGLY oppose the proposed Mopac South expansion!<br><br>There is no place in the world like Austin. The natural areas and the waters that run through this city are sacred. I have lived here for 15 years and I have been a lifeguard at Barton Springs. I am so lucky to call this place home and am able to swim in these waters. We have such a unique landscape here that requires care and stewardship. We have an ethical and moral obligation to keep these natural spaces clean.<br><br>That being said, more lanes??? Have yall even driven through Katy? Have you not learned anything about transportation? More lanes = more accidents = more traffic.<br><br>Please be serious right now.<br><br>For the love of water in Central Texas,<br><br>Lindsey Watson |

| | | |
|---|---|---|
| **5/3/2026** | Lindsey White | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Lindsey White |

| | | |
|---|---|---|
| **4/24/2026** | Lindsey Yazbek | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. | | | Respectfully,<br><br>Lindsey Yazbek |
| **5/1/2026** | Lindsey Zischkale | I am writing to vehemently oppose the proposed south MoPac expansion. City residents have been utterly tolled to death, not to mention the disastrous environmental impact highlighted in the (not even complete!) environmental impact study. Study after study has shown the only thing that eases congestion is public transport-- adding more lanes only adds more traffic, in a never-ending cycle. If you are truly interested in helping your fellow Texans and not just adding to your bottom line you will stop this project. |

| | | |
|---|---|---|
| **4/23/2026** | Linh Ong | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |
|---|---|---|
| | | Linh Ong |
| **3/23/2026** | Lisa | I DONT WANT:  A wider highway.  Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **5/1/2026** | Lisa | As I am sure many others have commented - this project is TOO big and TOO negatively impactive for what it will supposedly provide...a few saved minutes on our commutes...years in the future when it is completed. Despite what the shared reports say - the environmental impact alone will be devastating to the parkland, aquifers, wildlife (including endangered species), and humans in the construction and surrounding areas. It will create unnecessary habitat destruction, noise & vehicle pollution, danger to our aquifers, and more. Of course, there are many more reasons to halt this project and look for a more sustainable and smaller scale solution...please consider shelving this plan. We do NOT want this to go forward. |
| **4/27/2026** | Lisa A | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Lisa Albracht | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Lisa Albracht |

| | | |
|---|---|---|
| **5/3/2026** | Lisa Alley | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/1/2026** | Lisa Audiffred | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Lisa Cameron | No more traffic in Austin! |

| | | |
|---|---|---|
| **4/20/2026** | Lisa Garcia | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Lisa Gener | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Lisa Gener |

| | | |
|---|---|---|
| **5/3/2026** | Lisa Gonzalez | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Lisa Gonzalez |
| **3/28/2026** | Lisa Locke | This will make it safer for cyclists such as my family. |

| | | |
|---|---|---|
| **4/20/2026** | Lisa Loperfido Loperfido | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Or don't do it at all!!!!!! Save what's left of Austin. We don't want wider roads! We want to enjoy the springs and the greenery!<br>Thank you for your time and consideration. |
| **5/3/2026** | Lisa Maxwell | As someone living on the Mopac access road, I can attest that the environmental impact of this construction will be negative and far reaching. My life and home were directly affected by the last Mopac expansion in such a way that I cannot support doing what is arguably more extensive damage through the beautiful green heart of our city. Please find a more creative and thoughtful solution than wider. |
| **5/3/2026** | Lisa Miele | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Lisa Miele |

| | | |
|---|---|---|
| **4/23/2026** | Lisa Muir | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |
| **4/28/2026** | Lisa Ramie | Dear CTRMA Board Members,<br><br>I ask that, at the bare minimum, you do a full environmental impact statement for this project. As an Austin resident who drives on Mopac, I can't see how decreasing traffic marginally is worth the potential harm to our local natural treasures. We need an objective review of this expansion project from an environmental standpoint before proceeding.<br><br>Respectfully,<br><br>Lisa Ramie |
| **5/2/2026** | Lisa Smith | Stop the MADNESS of destroying the one thing we all need-WATER and the beauty we all crave- green belt! |

| | | |
|---|---|---|
| **4/22/2026** | Lisa Sutherland | It is unacceptable, and frankly, unconsionable, not to complete a FULL ENVIRONMENTAL IMPACT STATEMENT on a project of this scale in such an important and environemtally sensitive area as the land that will be used for the proposed mopac south expansion. There are too many potential negative impacts not to get a complete study. 1. the health of our citizens, particularly Austin High Students, people who love and use zilker park, hike and bike trail, the greenbelt, barton springs, the Edwards Squifer.<br>2. the cost of the project<br>3. the disruptiveness of construction for limted time savings<br>4. redirection of traffic into downtown around Austin High School<br>5. the closing of the pedestrian bridge under Mopac<br>6. environmental \effects of highway run off chemcials and fiet during construction |

| | | |
|---|---|---|
| **5/3/2026** | Lisa Tippett | Several questions<br><br>1. Will the additional lanes be toll lanes? If so, this seems inherently unfair since wealthier drivers will be able to more easily afford this, but regular working people would have to stay on the general access roads at a slower, more congested pace.<br><br>2. Any estimates as to how long this will work until population grows and we are again facing congestion?<br><br>3. Was any attention given to the possibility of mass transit options?<br><br>4. Several locations currently have abundant wildflowers in the spring and summer. These will apparently be plowed over. Will any attempt be made to replenish those or will it be a concrete jungle?<br><br>5. Will those environmental mitigation options be enforced, or is this just proposals?<br><br>6. Where exactly would the noise barrier walls be placed? We have a park (Dick Nichols) that is already somewhat noisy from existing traffic.<br><br>Respectfully.<br><br>Lisa Tippett |

| | | |
|---|---|---|
| **4/23/2026** | Lisa Wakefield | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/26/2026** | Lisa Wells | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/27/2026** | Lissa Rabon | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Lissa Rabon |

| **4/22/2026** | Livia Belferman | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Livia Belferman |

| | | |
|---|---|---|
| **4/16/2026** | Liz Baker | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |

| | | Respectfully,<br><br>Liz Baker |
| **3/22/2026** | LIZ BERMEL | As an ER nurse in the Austin area, I am begging you not to expand MOPAC. This is an outdated way of handling traffic congestion which leads to worsening of congestion in the long-run. That means more air pollution, which is a known carcinogen and leads to premature death from all causes, as well as miscarriages and stillbirths. That also means more deaths and life-changing disabilities from car accidents. Instead, please increase access to bike, bus, and pedestrian infrastructure. These are far more efficient modes of transit when invested in properly, and they increase quality and quantity of life, rather than taking it away. |

| | | |
|---|---|---|
| **5/1/2026** | Liz Bermel | To Whom It May Concern:<br><br>I am writing in opposition of the expansion of MoPac South. Any funds that would be used for that purpose should be used to build public transit/pedestrian/bike infrastructure.<br><br>As an ER nurse, I see the public health consequences of air pollution daily. According to the World Health Organization, about 9 million people die prematurely on an annual basis due to the impacts of air pollution on their health. Highway expansions are known to increase commute times and therefore increase air pollution. Possible consequences for the city at large, but particularly those living near the highway, include but are not limited to: increases in heart attacks and strokes, more complications from diabetes, higher rates of asthma and COPD, increased risk of miscarriage and stillbirth, increased risk of cancer of all types (not just lung cancer.)<br><br>As an individual, I have noticed the impacts of air quality on my own health. I regularly monitor AQI numbers for the Austin area and I have noticed that I have trouble breathing on days when the numbers are high. For the last few days, my coworkers, patients, and I have all felt worn down and exhausted. Our eyes burn, our throats burn. This is not a virus, and the pollen counts are too low to blame it on allergies. The air quality has ranged from 50s up to 130. We are already not meeting the EPA standards and people feel it physically in their bodies.<br><br>Please prioritize less polluting modes of transit. This is a matter of life and death. Thank you for your time and consideration. |
| **5/3/2026** | Liz Hund | This would destroy austin |

| | | |
|---|---|---|
| **5/2/2026** | Liz S | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Liz Stice | Can you please make sure to do an impact study to make sure this will not pollute or otherwise damage our wonderful pools and other water bodies. |

| | | |
|---|---|---|
| **4/27/2026** | Liz Swanson | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.Thank you for your time and consideration.Respectfully,Liza Cabrera |

| | | |
|---|---|---|
| **4/28/2026** | Lochlyn McClure | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |
| **5/3/2026** | Logan Ackerman | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Logan Ackerman |
| **5/3/2026** | Logan Donna | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Logan Donna |

| **3/24/2026** | London Darce | As a resident of Austin who frequently drives on MoPac and recreates in the caves here, I am very frustrated by the proposed project and the impacts on the caves it will inevitable have. No amount of mitigation you promise will undo the actual impacts of more cement on the ground. For a few more lanes?? That is so short sighted. Please consider the No Build option. You cannot mitigate way the impacts of filling caves with cement, like happened in the original MoPac construction. I hope you will consider a reasonable option. |

| | | |

| | | |
|---|---|---|
| **5/3/2026** | Lorde Little | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs  to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as |

| | | |
|---|---|---|
| | | we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Lorde Little |
| **5/3/2026** | Lorelai M. | Austin is shooting itself in the foot. Barton Springs is one of our greatest tourist attractions and selling points, not to mention a haven for our residents, but it seems the city has no problem jeopardizing it. "Expansion" is stretching our resources thin. We should be known as a city of quality, not quantity. Fix the roads we already have and take care of those who live here, both Austinites and the rare salamanders only found in Barton Springs. Don't try to become another sprawling metroplex like DFW. |

| | | |

| **5/2/2026** | Lori Ellington | My name is Lori Ellington, 310-993-3147, resident of Austin, Texas for the past almost 30 years,and I demand a full environmental statement regarding the reconstruction of MOPAC, theexpansion.I think this is a terrible idea, given the fact that this is a very high-costing projectthat has an incredible, incredibly bad impact on the environment, including the four endangeredspecies that are located in Austin, Texas, and the precious water Edwards Aquifer that is partof the livelihood of this community, as well as Barton Springs, as well as our drinking water,and just the environment in general. I think this is a terrible idea, and I am asking you tonot do this project and that you must have a full environmental statement ifthis is to happen. Otherwise this is just ridiculous. Thank you. |

| | | |
|---|---|---|
| **4/30/2026** | Lori McClure | To Whom it May Concern,<br><br>I strongly urge CTRMA to take into account the preferences of Austin residents, homeowners, drivers, and taxpayers like me who are OPPOSED to the Mopac South expansion project.<br><br>The change I've seen during the 45 years I've lived in Austin has been significant, and the volume of traffic has undeniably increased, but the expansion project is not in the interests of our community and the relief it would provide is not substantial enough to warrant consideration given the tremendous effects it will have on Austin's most precious resource (water), its crown jewel (Barton Springs), and its best-in-Texas environmental attributes.<br><br>Austin's growing population has definitely resulted in more congestion on our city's roadways, and transportaiton authorities have responded by expanding and enhancing major thoroughfares and highways. City leaders have attempted to enhance transportation corridors and to encourage ride-sharing, biking, and other methods of commuting. Sadly, TxDOT and CTRMA seem to think only of asphalt and expansion, without regard for the sensitive locations that will be bulldozed and paved over to achieve the goals of more lanes and more cars moving [minimally] faster during a small portion of each day. Alternatives should be considered!<br><br>The Mopac South expansion project began more than a decade ago—I know, as I attended the public hearings held at that time. A lot has changed in the 14+ years since the traffic model that forms the basis for the project was finalized, and yet that model still underlies the project! The data are no longer relevant, especially given altered work arrangements post-pandemic, changes made during those 14 years to address traffic flow and to increase transportation options, and changes in the Austin economy generally that have resulted in different transit patterns. Furthermore, people who live in areas that require long commutes on Mopac to and from work have MADE A CHOICE to live in an area that REQUIRES A LONG COMMUTE. No one is guarateed a commute that will not exceed a specific number of minutes. In a state that supposedly stands for individual responsibility, why can't our transportation authorities spend funds to work cooperatively with developers and community groups to EDUCATE people about THE REALITIES of life in subdivisions and then to think creatively about how to REDUCE the number of single-driver cars leaving and returning to a subdivision during peak traffic times? Mopac should be improved within its existing footprint and officials should work cooperatively to educate and inform residents about why more lanes are not the answer for this segment of Mopac. |

I live in Austin because of Barton Springs. I have been swimming there on a daily basis, year round, for 45 years. I know that when construction occurs anywhere over the aquifer the spring water entering the pool is affected. I've been in the water at the very moment that white plumes of sediment or the smell of fertilizers enter the pool through Parthenia spring. When we get large amounts of rain over the aquifer now, the pool is cloudy for days, that didn't happen before all the development over the aquifer, and that development is directly tied to Mopac South. Drilling into karst limestone features kills and/or irrevocably alters fragile ecosystems. Undertaking this expansion project now, when water resources are becoming ever more scarce, when the state faces a growing number of water crises, and as we are coming to understand more and more about the interconnectedness of humans and nature (including endangered species that are throughout the Edward Aquifer recharge zone) is short-sighted and ignorant.

Moreover, to propose doing so without a thorough and complete Environmental Impact Statement is the height of iressponsible public management. CTRMA's attempt to argue that the project would have no significant environmental impact is laughable and undermines the agency's credibility. Austinites deserve respect from CTRMA for the city's identity—we value and want to preserve our water, air quality, parks, natural beauty, and endangered species— that's why I demand a Full Environmental Impact Statement for this project. CTRMA should also acknowledge—rather than trying to obfuscate and deny—that the Mopac South expansion is part of the larger effort to connect Mopac to I-35

There is little evidence that the proposed project will do anything meaningful to improve traffic congestion. In fact, it is likely to worsen congestion in areas that have no capacity to adapt. The costs and impacts associated with the project are too high. I hope you listen to me and others who urge you to pursue alternatives that will preserve and protect the fragile assets that make Austin the attractive city it is. More lanes, more pavement, more pollution, and more cars do not enhance our city.

Sincerely,

| | | |
|---|---|---|
| | | Lori McClure |
| **5/1/2026** | Lori Rose | Please conduct a stringently thorough environmental impact study before initiating any work on MOPAC South expansion. The traffic projections and models used to justify the project are outdated and any time savings will be eaten away by construction delays and induced demand. It will be bad for the salamanders and karst invertebrates. Please protect the environment and the Texas watershed!! |
| **3/19/2026** | Lorn MacDougal | We have seen many times that when lanes are added, they 'relieve' traffic for only a limited time while destroying what was there before. Called 'induced demand', it should be eliminated when trying to alleviate congestion as it is a proven failure. We need public transportation which saves space and reduces pollution. Not to mention that it makes people healthier and wealthier. Austin needs to be more visionary in shaping the City to accommodate the continual influx of new residents attracted by the progressive thinking one is supposed to be able to find here. |

| | | |
|---|---|---|
| **5/3/2026** | Lorraine Atherton | Dear CTRMA Board Members,<br><br>On a recent trip from my home in South Central Austin to Johnson City, with an experienced Texas driver maneuvering a fairly new vehicle through construction detours with the guidance of Siri, it occurred to me that planning for the expansion of Mopac through Austin has overlooked important changes in navigation systems. In just the last few years, most vehicles on Austin's roads have been equipped with some sort of electronic navigation device; more and more of them include driverless options. Because the proposed Mopac expansion is designed for vehicles and traffic management systems that will soon be obsolete, it is bound to be an enormous waste of money and resources, producing economic as well as environmental damage.<br><br>I urge you to go back to the project's Alternatives Evaluation and focus on incorporating the recent advances in transportation technology and navigation into a new design that will make more efficient use of the existing roadway. There are better ways to "optimize corridor utilization," "provide opportunity for reliable travel time," "reduce congestion delay," and "maximize travel time savings," without building more lanes. We won't solve car congestion by throwing more concrete at it. Just ask Siri. |

| | | |
|---|---|---|
| **5/3/2026** | Lorraine Atherton | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Lorraine Atherton |
| **5/3/2026** | Lorri | I am against this proposed expansion which will harm some of Austin's most important places that my kids and I, wildlife and many others humans and animals enjoy. Please do not move forward with this. |

| | | |
|---|---|---|
| **5/1/2026** | Lorrie OBP | More lanes creates more traffic- it is well researched and well proven. There are SO MANY white papers outlining why and how this is true. It is ridiculous that we are still butting heads with this issue on the WRONG side of a solution.<br><br>We need reliable and well planned PUBLIC TRANSPORTATION.<br><br>Don't waste money and the environment expanding the highway.<br><br>MoPac South needs safe bike & pedestrian paths, more crossings, and reliable transit — NOT more lanes.<br><br>We need a better proposal for MoPac South that:<br><br>* Adds wide, shaded bike and pedestrian paths<br><br>* Creates bike-pedestrian east-west crossings every quarter mile<br><br>* Improves transit reliability<br><br>* Does NOT expand the highway |

| | | |
|---|---|---|
| | | South Austin Resident,<br><br>Lorrie Tumlinson |

| | | |
|---|---|---|
| **4/27/2026** | Lou Davidson | Dear CTRMA Board Members,<br><br>Dear CTRMA,<br><br>I strongly oppose the proposed MoPac expansion, and ask that you abandon it. It is an irresponsible decision that is clearly made with no consideration for the ecosystem, public health, and what Austinites actually want. Nobody I have talked to has expressed support for this project, only exasperation and annoyance that there's going to be more construction, and ANOTHER lane added to a highway that does not need it. We are sick and tired.<br><br>It is obvious that there is a financial incentive to build this highway inefficiently in order to force people into the toll lanes and turn a larger profit for your company. The toll prices during peak hours today are anywhere from $9-$12. This clearly creates an unfair situation, with only certain people being able to afford the ridiculous tolls, and everyone else forced to sit through bumper-to-bumper traffic. There are much more efficient ways to reduce traffic than to add additional lanes, toll or regular. In fact, it has been proven that adding lanes only worsens congestion instead of relieving it. It is clear to anyone who has done an ounce of real research that CTRMA only cares about profit, not the people. A 14 lane highway is the absolute worst thing you could do.<br><br>There is a huge environmental concern with this expansion going through the St. Edward's recharge area, bringing even more pollution and habitat loss to an already sensitive area. Studies show that highway construction will add heavy metals and harmful chemicals, including significant levels of phthalates, microplastics, cadmium, and lead- all of which have extreme health effects on humans and wildlife. Nitrous oxides cause algae blooms which deplete water of oxygen, resulting in lower biodiversity across the whole food chain. Fish, turtles, herons, bobcats, insects, bats- all life is affected by these decisions. Not to mention the two endangered salamander species that exist only in the Barton Springs area. A fully functioning ecosystem is essential for humans as well- the ecosystem services provided by plants and animals are invaluable and include things like cleaning the air and water, keeping pest populations under control, preventing erosion, |

| | | |
|---|---|---|
| | | and pollinating plants. Allowing these services to go on saves us billions of dollars nation-wide every year, and affects us more closely than you would like to admit. This is a fragile and delicately balanced ecosystem that is already suffering due to the extreme urbanization of the area. We demand a full Environmental Impact Statement that prioritizes a comprehensive assessment of all pollutants and environmental hazards that will be created in the process of this project.<br><br>As for public health, the dust and particles from construction that get into the air, soil, and water, will only add to the thousands of sicknesses and deaths that occur every year due to pollution. These, along with the aforementioned heavy metals and chemicals in the water, cause asthma, cancer, brain damage, and reproductive issues. The excess of pollution in our city will affect Austinites for generations to come. Imagine Barton Springs so polluted with sediments and chemicals that nobody can swim in it anymore. Think of the many AISD schools, notably Austin High School, are right in the area of construction, where young lungs will experience all of these health effects tenfold. Not to mention the increased traffic due to the long construction process will make it even more unsafe for young drivers and walkers trying to get to school on time. Noise from construction also makes it difficult for students and teachers alike to focus in class, preventing top-level learning. Your children and grandchildren will have to live with the vast negative effects of this expansion.<br><br>Please, if you care about people at all, if you care about the natural world at all- do not go forward with this highway expansion. Austin is begging you.<br><br>Lou Davidson<br><br>Respectfully,<br><br>Lou Davidson |

| | | |
|---|---|---|
| **4/27/2026** | Lou Davidson | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Lou Davidson |

| | | |
|---|---|---|
| **4/23/2026** | Louis Birdsong | Y'all need to do an environmental impact study before moving forward with this project. It's the professional thing to do and it says a lot about how you conduct business by trying to move forward without one. If it's worth doin' it's worth doin' right, and, to be honest, this project doesn't seem worth doin'. Think of the Austin high students, Austin residents, and Austin environment and use some common sense while you're at it. 6 minutes ain't worth 5-7 years of construction and billions of dollars in this Austin residents opinion. |
| **4/28/2026** | Louis Limas | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Louisa Nash | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Luan Borgeson | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Luan Borgeson |

| **4/26/2026** | Lucas Bustardo | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Lucas Bustardo |

| | | |
|---|---|---|
| **5/3/2026** | lucas farris | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, lucas farris |

| | | |

|---|---|---|
| **5/3/2026** | Lucas Kiser | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Lucas Kiser |

| | | |
|---|---|---|
| **4/27/2026** | Lucca Ostrovich | The expansion of Mopac is not only not necessary but incredibly harmful to Edward's Aquifer. It will severely impact the communities's ability to access green spaces surrounding Mopac, and will cause great harm, that has not been accounted for, to the already historically low bodies of water in Austin, many of which are home to rare and sensitive species that cannot live anywhere else. The proper precautions should be taken if this project is to occur. Every possible safeguard should be put in place to make sure the environment is not hard, including but not limited to studies on how it could potentially effect Edward's Aquifer, and the usage of the least amount of harmful material possible. |
| **5/3/2026** | Lucca Ostrovich | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Lucca Ostrovich |
| **4/20/2026** | Lucia Martinez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, L. Lopez |
| **5/3/2026** | Lucy Frost | I am concerned about the environmental impact of this proposed project and the lack of quality transit options. |
| **4/2/2026** | Lucy Joyce | I oppose the proposed addition of lanes to Mopac South. The potential traffic improvement is not worth the environmental cost. Zilker Park will be negatively impacted, as will the Austin Area Garden Center. I urge you to reject this plan, the 2C. |
| **3/26/2026** | Lucy K Tucker | Expanding MoPac will do nothing but further degrade our environment. More lanes never has and never will reduce traffic because it further incentivizes driving. Reducing traffic only happens when you give people viable options besides driving. Up with rail (sidewalks, bike lanes, other public transit), down with roads (and only roads). |
| **5/3/2026** | Lucy Parrish | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Lucy Parrish |

| | | |
|---|---|---|
| **3/16/2026** | Lucy Tucker | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. It will not help traffic at all and it will continue to deteriorate Austin's environment at a rapid rate. The city, and all those (human and animal) who inhabit it, deserve better than these ineffective and environmentally catastrophic traffic plans.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin’s most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin’s most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor |

| | | |
|---|---|---|
| | | would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Lucy Tucker |

| | | |
|---|---|---|
| **3/25/2026** | Lucy Tucker | Dear CTRMA Board Members,<br><br>Add Your Unique Comments Here:<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Lucy Tucker |

| | | |
|---|---|---|
| **5/3/2026** | Lucy Tucker | To Whom It Concerns,<br><br>Expanding MoPac would be continuing an unsustainable pattern in supporting transportation infrastructure that is incompatible with the density of people using these routes every day. As a commuter and otherwise frequent user of MoPac, it is clear to me that there are simply too many cars trying to get through somewhere where space is more constrained than ever. Having everyone ride by themselves in their own two-ton vehicle makes no sense when there are dozens if not hundreds of people trying to go that way all day every day.<br><br>The answer is in infrastructure MoPac already parallels: rail. Commuter rail is a much more efficient means of moving large numbers of people not laden with equipment from point a to b by simple reasoning that 10 people can occupy about 40 square feet while one car occupies about 80. I am not going to say eliminate cars, but I am going to say that the only way to reduce traffic is to make traveling outside of it possible. Building another highway expansion will put already threatened ecosystems critical to our water security at greater risk of contamination and do nothing to help with the problem of traffic, thereby wasting tax-payer dollars. Reject this proposal and help build transportation infrastructure in Austin to support the city it has become.<br><br>Sincerely,<br><br>Lucy Tucker |
| **5/3/2026** | Luis Caballero | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Luis Caballero |

| **5/3/2026** | Luis Ponce | Austin, Texas has been always known for the nature it is embedded into. There are other ways to improve daily commute ways that do not involve the disruption of natural landscapes. Austin does not need more highways or roads; it needs better public transportation such as trains, subways, buses (rural areas and hill country) and overall less pollution from traffic. Austin is a city that was not meant to evolve into the metroplex it currently is. Preserve the land left and find other ways to improve congested areas for daily commuters. Leave the wilderness alone from TXDOT expansions! |

| | | |
|---|---|---|
| **5/3/2026** | Luisa Pineda | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Luisa Pineda |
| **4/28/2026** | Luisa Williams | I am writing to oppose this project. I have lived in the Circle C neighborhood for 20 years. I am a sales representative who drives 2-3,000 miles a month. The toll road going between Cesar Chavez to Slaughter is not needed and will not actually help with traffic for the following reasons: 1. Most traffic going south gets off at Bee Caves Rd or at 360/290 East 2. With the completion of 290, a lot of traffic will go west instead of down mopac to Slaughter as a cut through. 3. The main congestion comes when the 3 lanes go to 2 at William Cannon. After William Cannon, the traffic eases, a lot of people get off at Davis leaving Mopac to Slaughter and beyond pretty open. To help with the congestion there is plenty of room to add one regular lane between William Cannon and Davis- This would help significantly without the dramatic construction/destruction of Mopac South and all of the sensitive land. 5. Mopac North- I believe a lot of this congestion will be alleviated with the completion of I-35. Mopac construction should not be started until I-35 is finished because it will absorb a lot of this Hays to Austin traffic. 6. Mopac North- current traffic can be alleviated by adding one lane - there is room. The William Cannon exit should not be an Exit Only lane. The lane should be extended all the way to the 290 exit. I strongly believe that after I-35 is finished less people will try to come up 45 to Mopac. Right now, all the people coming north are using Mopac to avoid the disaster that is I-35 construction. To make these new lanes tollways is an unnecessary waste of money and detrimental to the environment for a very short amount of roadway with minimal time improvement. Please, I implore you, do not start this project. Thank you for your time and consideration. |

|---|---|---|
| **4/23/2026** | Lukas Malone | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Lukas Malone |
| **5/3/2026** | Luke | Fund public transit, not highway expansion or more lanes |

| | | |
|---|---|---|
| **4/26/2026** | Luke Driver | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| **5/3/2026** | Luke Weber | Highway expansions are not an effective tool to combat congestion. We know this. YOU know this. Austinites deserve a livable future, and car dependence threatens our environment, health, and quality of life. We ask that you order a full Environmental Impact Statement (EIS) and pursue less harmful alternatives. Invest in high quality and safe mass public transit, and create a better world for the future generations of Texans who cannot yet advocate for themselves. |

| | | |
|---|---|---|
| **5/3/2026** | Luke Weber | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. We know that car dependence is not the future, and that widening projects have been proven time and time again to be an ineffective strategy for combating congestion. Ausinites deserve REAL solutions, not short term band-aids that threaten our environment, public health, and quality of life. We've witnessed the never ending cycle of roadway expansions over and over, and MoPac is just another victim of the same. Our children and future generations of Ausinites who are unable to advocate for themselves deserve a livable world, and this project directly stands in the way of that vision. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public |

| | | |
|---|---|---|
| | | participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Luke Weber |
| **4/29/2026** | Luke Wood | Strongly support expanding roadways in Austin. All citizens pay the price when we are not proactive here. |

| | | |
|---|---|---|
| **4/21/2026** | Luna Wilson | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| **5/3/2026** | Lux mcbroom | Please do not expand the road as it will impact sensitive lands. Austin has very beautiful nature and it is downright evil to hurt it so people can get home faster. |
| **5/3/2026** | Lydia Bryan-Valdez | We vote NO to the Mopac Project as we wish to protect our environment/water. |
| **5/2/2026** | Lydia Kamm | Barton Springs is an Austin staple and a home to so much wildlife. It brings community and a feeling of home to those of us who grew up here and have been swimming there our whole lives. Please do not do anything to change that. I urge you to complete a full Environmental Impact Statement. |

| | | |
|---|---|---|
| **4/21/2026** | Lydia Thompson | Dear CTRMA Board Members,<br><br>Though I am no longer a resident in Austin, I highly value the parks and wildlife system established in that city. It is something to protect and cherish and needs to be preserved and respected. Once harm is done it can often be irreversible. Expanding the highway to make more room for toll roads or traffic does not address the root issue of transportation in Austin. There needs to be more focus on other programs.<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Lydia Thompson |

| **4/28/2026** | Lyn Navarro | I don’t wanna mess up the caves underground if that’s gonna happen billing this new freeway |
| **5/3/2026** | Lyndsey Resnik | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Lyndsey Resnik |

| | | |
|---|---|---|
| **5/3/2026** | Lynn Boswell | Dear CTRMA,<br><br>I'm writing to share public comment about the proposed MoPac South plan. My name is Lynn Boswell, and I am the Austin ISD Trustee for District 5, which includes many of the areas that will be impacted by this plan. I am writing as an individual trustee, not on behalf of the board. I also shared comments in early 2025.<br><br>AISD's District 5 includes the Austin High School campus at MoPac and Cesar Chavez, as well as the portions of Austin ISD that border MoPac from 38th Street to just south of 290. That includes more than 5.5 miles of MoPac within the proposed MoPac South project area. I know both the area and the community around it well.<br><br>The highway is used every school day by many Austin ISD families, students, employees, and school buses. Our community also values the recreational opportunities provided within this area – on Lady Bird Lake, in the greenbelt, on the hike and bike trail that runs past both Austin High and downtown, and in other areas that will be impacted by this project.<br><br>The impacts and potential benefits of this proposed project would be felt by people who use MoPac to get to and from school in those areas, as well as by the Austin High community which students throughout that area attend when they reach high school.<br><br>While I personally question the need for this major expansion of MoPac and the major disruption that will result, I also appreciate CTRMA's work to engage the Austin ISD community during this process, and to include AISD staff during meetings. As a major stakeholder, it has been immensely helpful to have a seat at the table and to have CTRMA working to inform and engage our community, and to hear concerns and questions that the community has.<br><br>The community has shared concerns about the impact of this proposed project near Austin High for many years – both within the renewed community feedback process with the redesigned project, and many years ago when the project was first proposed. While some concerns have been mitigated, most remain unaddressed. I hope you will consider other, less high-impact alternatives to the full project that is being considered. And, whatever is considered, I hope you will do more work to both understand and mitigate impacts before any project moves forward.<br><br>As we have explained before, the concerns fall into several categories – all related to predictions that the project will add many millions of additional travel miles to MoPac. |

AIR QUALITY

Austin High is a high school by a highway – in an area that is already impacted by pollution and emissions from the cars, trucks, and trains that travel on the roadway and railway. Every day, students play tennis, practice sports, and rehearse for marching band outdoors. Every day, they are exposed to pollutants in the air while their bodies, hearts, and lungs are working hard. And that risk will only increase if traffic increases with additional capacity on MoPac.

In 2024, there was discussion of a new air quality study. But I am not aware that any has been done. I believe it is crucial to do a full Environmental Impact Assessment – one that will include a study of particles down to PM2.5 - sizes small enough to meet the most current best practice for health. That's important for the entire community. But it is especially important for growing bodies that spend a great deal of time exercising outdoors.

This will also benefit local residents and visitors to Austin who use the hike and bike trail around the lake and who use the lake itself for recreation – in kayaks and canoes, on paddleboards, and as rowers. All face potential risks from additional traffic that can create additional air pollution.

While risk currently exists in the area, CTRMA has predicted that a MoPac South expansion will add millions of additional travel miles to this highway. That will impact the health of students and others. It is crucial to understand the impact on air quality and health before this project is approved.

NOISE

Similiarly, there was discussion in 2024 about seeking an updated noise study. And again, I am not aware that any has been done. I recognize that a new design eliminates a double decker bridge, addressing one major noise concern from an earlier version of this project. However, I still believe it is crucial to understand how much additional noise is expected from additional traffic in the area near Austin High. Like any high school, the campus is used for learning, testing, performances, and other activities that would be deeply impacted by increased noise.

TRAFFIC AT THE CESAR CHAVEZ RAMP

The proposed project includes a major expansion of the capacity of MoPac. It also shows northbound toll lanes merging with the non-toll lanes just before the ramp at Cesar Chavez. That ramp carries traffic into downtown at the same time

| | | |
|---|---|---|
| | | students are arriving for the school day. It is so close to Austin High that it essentially wraps around the west and north sides of campus. People looking out the windows in the Austin High library have a close-up view of the ramp.<br><br>I recognize that the current proposed design mitigates a ramp that exits from the toll lanes directly into the area around Austin High. And we appreciate that response to concerns that were shared in earlier phases of the project development. However, the main concern remains with the current design – that the project will increase the volume of traffic on the ramp in ways that are likely to be deeply disruptive to traffic to and from the campus. That includes traffic for our school buses, for families dropping students off, for our educators and other staff, and for students who drive themselves to school – all of whom are relatively new drivers.<br><br>In 2024, there was discussion about exploring a new traffic study. That clearly has not happened, and the need remains – from the City of Austin or from CTRMA. Given the growth of Austin and our metro region, it seems certain that the volume of traffic will be far larger than it was in 2015, when the last traffic study was done. This is an issue for everyone who uses these roads, including more than 2,000 students and staff who need access to Austin High each weekday and – for many participating in athletics, arts, and other activities - on many weekend days, as well.<br><br>EAST-WEST TRAFFIC IMPACTS<br><br>It's also crucial to understand the impact of east-west traffic – something that CTRMA has said is beyond the scope of this project. Given the fact that Austin High and the City of Austin share a major access point to downtown at the Cesar Chavez ramp, it seems crucial to have a clear understanding of the proposed project's impacts to east-west traffic – not only for the Austin High community and for Austin ISD school buses, but also for commuters and others that travel north to downtown on that route. I remain extremely concerned that this is not being done, and that the project could proceed without a clear understanding of the impact on east-west traffic.<br><br>STUDENT SAFETY NEAR AUSTIN HIGH<br><br>Increased traffic brings increased risk to drivers and pedestrians. That risk is amplified when many drivers in the area are young – relatively new to being behind the wheel, and already navigating a complicated system of roads, ramps, and turnarounds near Austin High. The increased traffic volume and complicated traffic patterns seem certain to increase risk to our students who drive to and from school.<br><br>The area also includes many pedestrians and cyclists, both before and after school. Many students are dropped off in the area, both across the pedestrian bridge under MoPac and across Cesar Chaves near the WAYA fields. Others walk or bike to campus from their homes. If the project moves forward and traffic increases, we hope there will be clear plans for |

| | | |
|---|---|---|
| | | improving safety for students and others who walk and cycle in the area that will be impacted.<br><br>I see no evidence that these concerns have been addressed in the project design. If this project moves forward, I hope CTRMA could work with the City of Austin and Austin ISD to understand the risks in this area and to mitigate risks to drivers, pedestrians, and cyclists using CTRMA funds in collaboration with the city, the district, and the campus.<br><br>ACCESS<br><br>As you have heard from the community, many students are dropped off on the south side of the river under the MoPac bridge, where they use the pedestrian bridge to cross to and from the Austin ISD campus. That benefits families and students coming from the south who have shorter commutes to school. And it benefits the larger community by significantly reducing the number of cars that must cross the river on MoPac. I recognize that is a concern for a future phase if the project moves forward, not for this one. Still, I appreciate your awareness of this use and your consideration of that if the project moves forward.<br><br>Thank you for your work to engage the public and for the chance to share this public comment.<br><br>Truly,<br><br>Lynn Boswell |
| **4/19/2026** | Lynn R. Langley | Do not build Mopac South. It would destroy Austin's only land natural feature, Zilker Park and Barton Springs pool, that are utilized by large populations in Austin. These two features, together with Barton Creek must be preserved and saved from highways and more traffic. Austin can solve the traffic problem with more mass transportation on highways we already have. More busing and light rail will improve traffic congestion. Don't make Austin look like every city and destroy its natural benefits. My family and I are against any Mopac South expansion. |
| **3/24/2026** | Lynn Schoenfield | No conflicts |

| | | |
|---|---|---|
| **5/1/2026** | Lynne C Andrus | Please, please finally address the traditionally dismissed needs of south Austin by expediting the project as presented above. We need this overdue project for safety (EMS/Fire/Police access) and environmental reasons (too much idling in traffic) I. Please do not overvalue the selfish comments of those who do not live south or understand the true stewardship of south Austin. |
| **4/26/2026** | Lynne Dobson | Dear CTRMA Officials and Stakeholders,<br><br>This project is controversial for most residents of Austin, because it feels disrespectful and destructive. Most studies, experience tells us adding more lanes dont help traffic mitigation in the long run.<br><br>Please complete a full, official environmental impact study and honor the people, water and vegetation, BEAUTY, that exist near Barton creek , Barton Springs, our beloved Lady Bird Lake and Trail , and Zilker park.<br><br>Please don’t pave over paradise- We need to keep green not endanger it, to preserve our mental and physical health and our quality of life in Austin.<br><br>If this unwise and unwanted road construction happens- Please listen and consider these suggestions below from the group I serve on, EverGreen Austin.<br><br>These ideas will lessen the harm that will occur to the green spaces, trees, nearby neighborhoods and especially to the |

| | | |
|---|---|---|
| | | Austin High students and teachers.<br><br>---<br><br>As an EverGreen Austin Board Member, I'm writing to encourage you to incorporate the following outlined mitigations before advancing the MoPac South expansion. We recognize the corridor's congestion demands action, and ask for the same level of effort exercised in SH 45 SW for MoPac South. We also recognize that action without environmental accountability produces infrastructure Austin will regret. This proposed roadway project impacts the City's Crown Jewels: Zilker Park, Barton Creek, Barton Springs, Dick Nichols Park, Volma Overton Sr., and Williamson Creek Greenbelt.<br><br>As stated in Ben Thompson'sCommunity Impact article - "Austin Faces Diminished parks growth" dated 02.05.2026: "Austin already falls short: less than 18.5 acres of parkland per 1,000 residents — 77% of the residential goal, a gap of roughly 5,700 acres."<br><br>This project must not widen that deficit.<br><br>_____<br><br>EGA requests these mitigations to be written in Section 8.0 Post Environmental Clearance Activities:<br><br>Trees. Preserve all trees 19" diameter or greater. Replace removed trees at 4:1 (native species only); trees 4"–19" at 3:1 (native species only) in the right-of-way and in parks. All terrestrial plantings must be native or regionally adapted, with a watering and maintenance plan ensuring 85% survival. (See Exhibit A.) |

| | | |
|---|---|---|
| | | Parkland. Adjust alignments to avoid parkland encroachment. Require construction materials and trucks to stay beneath the highway near Zilker Park and the three other parks impacted. Where impacts are unavoidable, CTRMA should fund full restoration to previous conditions or better. Provide a Park Impact Assessment evaluation of the loss or impairment of park acreage, trees, park features, ecosystem services, recreational programming, and community access resulting from the change in use of parkland.<br><br>Capital Improvement Reimbursement. Funding for the implementation of infrastructure improvements to address construction-related displacements of park usage, including new sidewalks, bike paths, vehicle routing/parking areas and new access points, to replace existing vehicle and pedestrian infrastructure disrupted by the construction phase of the project.<br><br>Noise Walls. Hold a workshop with EGA and CTRMA designers on the design and placement of noise and aesthetic walls before finalizing plans. As part of this meeting, we will want to discuss the installation of high-performance concrete or transparent noise walls within Zilker Park boundaries to maintain visual connectivity where appropriate.<br><br>_____<br><br>EGA also requests two Non-Required Mitigations: |

| | | |
|---|---|---|
| | | Open Space Fund. Provide $35M in mitigation funding to be used exclusively for land acquisition located over the Barton Springs segment of the Edwards Aquifer Recharge and Contributing Zone. This initiative aims to protect water quality and quantity, safeguard groundwater, enhance flood and fire protection, support wildlife, and impacts from impervious cover.<br><br>Permanent Green Toll. Add a voluntary $0.10 to every toll transaction in perpetuity to fund ongoing land acquisition for environmental mitigation and green infrastructure. Over time these funds should also incorporate an escalation clause to compensate for traffic demands.<br><br>_____<br><br>The stakes are real. Zilker Park has 2,000,000 annual visitors. The greatest impacts will be to the 160,000 visitors to Zilker Botanical Garden, 150,000 to the Austin Nature and Science Center, and 65,000 to the Rowing Dock. Mopac is less than one mile from Barton Springs Pool. CTRMA must ensure public health and safety for all of these park patrons at all times.<br><br>EGA commends the effort undertaken by CTRMA and partner agencies to evaluate mobility improvements along a highly congested corridor serving thousands of Central Texans each day. The public's active participation demonstrates the importance of this project to Austin's residents and underscores the need for thoughtful, transparent decision-making. |

| | | |
|---|---|---|
| | | EGA is a strategic partner in this process. We will advocate within current political realities while holding firm on the protections Austin deserves. EGA urges CTRMA to include all recommended mitigations, thereby demonstrating that superior infrastructure and environmental stewardship are not in conflict.<br><br>Thank you for your consideration.<br><br>~Lynne Dobson<br><br>Evergreen Austin Board Member and long time environmental philanthropist.<br><br>The information contained in this e-mail and any attachments from Las Aguilas Enterprises LLC, including its associate entities and/or subsidiaries, may contain confidential and/or proprietary information, and is intended only for the named recipient to whom it was originally addressed. | | | |
|---|---|---|
| **5/3/2026** | Lynne Dobson | To CTRMA :<br><br>This long term expansion road project would bring many serious effects and detrimental impacts for the environment and for people's quality of life - for little in return to provide relief to car congestion, nor decrease travel times.<br><br>I am an Austin citizen living within 3 miles of the beloved Lady Bird Lake Trail which I've donated to for 30 years. I love the Barton Creek wilderness area and Barton Springs Pool, Zilker, the Trail and all the trees that line MoPac. We can't tear<br><br>down heritage trees to replace it with hardscape and more gray concrete- bringing more heat and noise- and creating serious damage to the aquifer waters along this route.<br><br>PLEASE CONDUCT AN EIS , to accurately and fairly determine the real impact on our environment, around the only special green park space we have in that area of the Mopac bridge over Lady Bird Lake.<br><br>I believe will cause the irreparable destruction in sensitive areas of our parks, pools, lake and trails.<br><br>The CTRMA's draft assessment is not enough. Austin residents and taxpayers deserve and request a detailed official, in-depth, environmental impact statement.<br><br>Noise and air pollution will impact the health of Austin High students, teachers, staff, and neighboring communities. It is unfathomable that the Roberta Crenshaw pedestrian trail bridge under Mopac would be closed<br><br>for years... as well as the lake area below-' filled with barges and cranes- disruptive visual pollution. This large beautiful area will become an ugly, loud construction zone -- for 6-7 years or longer.<br><br>The suffering from the construction is NOT WORTH the few minutes of driving time saved. There must be other solutions.<br><br>Please slow down on implementing this wrong solution to traffic , and study the impacts further and speak more with residents and Austin citizens who use MoPac and the trails and parks there.<br><br>The parking at the bridge on both sides, near Austin High, is one of the main entry points to our beloved trail, for over 30 years now. This is an iconic area of the entire trail.<br><br>This plan would take away the joy for trail lovers using our cherished Lady Bird Lake trail- and it will sacrifice our environment, our peace, and ability to just get out in pure, undisturbed nature. |

| | | |
|---|---|---|
| | | Public health and quality of life will be impacted negatively and adding more lanes and destroying trees will not stop traffic conjestion. The payoff of a few mins saved, is not enough to live through years of this massive project.<br><br>While the trail is a priority to so many users who come from all over Austin, I am concerned about how the neighborhoods, wildlife and green spaces will endure this construction and blocked roads and more traffic delays,<br><br>along the 9 mile corridor for 6-7 years, at least-- or when this is delayed which huge projects always are, for more years.<br><br>PLEASE CONDUCT AN EIS - and research other solutions. Austin people are nature lovers, and since the 80s and 90s, we have proven we want to protect and preserve green spaces so we can live healthier, happier lives.<br><br>Concrete and asphalt can't do this- nor can they save enough driving time to warrant years and years of damage to the lake, the acquifer, Austin high school students and neighborhoods along this 9 mile path.<br><br>These types of huge massive expansions can't be the only solution.<br><br>ALSO, it is not smart planning to build this extensive of a road expansion at the same time as the massive I 35 project.<br><br>Thank you,<br><br>Lynne Dobson |

| | | |
|---|---|---|
| **4/23/2026** | Lynne Skinner | Dear CTRMA,<br>I am BEGGING YOU -- as a 45 year resident of this fair city -- to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | lyssa myska zotlen | I do not believe this proposal meets the actual need of increasing mobility throughout austin. Expanded alternative options to freeway driving much better meet this need and don’t negatively impact the ecosystem.<br><br>Lyssa Zotlen<br><br>Sent from my iPhone |
| **4/29/2026** | Mac McElwrath | To Whom It May Concern: I appreciate all the thought and effort that's gone into the future expansion of MoPac South. As the report reveals, these proposed improvements are essential to address the projected 85% population growth in Travis and Hays counties over the next 20 years. I support the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. Loud voices to the contrary with no evidence to support their dissent are no basis for delaying what's in the best interests of all. |

| | | |
|---|---|---|
| **4/23/2026** | Mac Ragsdale | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| | | |
|---|---|---|
| **5/3/2026** | Macie Jones | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Macie Jones |

| **5/3/2026** | Mackenzie Evans | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. | | | |
|---|---|---|
| **5/3/2026** | Macy Hata | Dear CTRMA Board Members, Please reconsider damaging our beautiful city further. There are other ways to effectively manage traffic. Highways are amazing feats of technology but ugly as hell. <br />It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Macy Hata |
| **5/3/2026** | Macy Sloan | I am abhorrently opposed to this project due to environmental and cultural concerns. I do not want our watersheds or wildlife habitats to be interrupted for lanes that will not provide much benefit to congestion in the long term. |
| **4/20/2026** | Maddi Hurd | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Maddi Hurd | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. if you're so concerned about traffic, please look into expanding public transportation systems in Austin. We could set an example for the rest of Texas and the country. In addition, more efficient and widespread public transportation would help decrease traffic, preserve our ecosystems, and create a better quality of life, one that isn't car-dependent. Sincerely, Maddi Hurd |

| | | |
|---|---|---|
| **5/3/2026** | Maddux Moshaver | Dear CTRMA Board Members, I'm a third year civil engineering student at The University of Texas at Austin and I oppose the MoPac South highway expansion project. So much of Austin's environment has been sacrficed to "free flowing traffic," a concept that forfeits our livelihoods and environment with each additional lane. Increasing space dedicated to cars only increases their number and the pollution they cause, evidenced repeatedly with each roadway expansion. Automotives are literally the LEAST efficient and effective way of moving people around--if you care about Austin at all, you will prioritize transit and active transportation. The trend of building out infrastructure for personal automobiles at the expense of literally everything else must end. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. The UT community thrives off of our green spaces, public trails, and natural springs. This expansion harms not only the environment, but the community's very livelihood. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Maddux Moshaver |

| **3/20/2026** | Madeleine Flexer Harrison | I am against the plan to widen 8 miles of MoPac by 4-7 lanes between Cesar Chavez and Slaughter Lane. Stop eating into our neighborhoods! Tax dollars would be put to better use if they were funneled into creating efficient public transportation (like a train) ! |
| **4/21/2026** | Madeleine Graniel | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/20/2026** | Madeline Black | Expand the road! |
| **5/3/2026** | Madeline Bruce | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Madeline Bruce |
| **5/3/2026** | Madeline Darden | MoPac crosses the Edwards Aquifer recharge zone, the porous underground limestone where rainwater can move quickly underground to wells and Barton Springs. We Texans don't want another toll road. This is insanity and horrible for Austin's important wildlife. Austinities I know want an actual working high speed railway not more concrete highways causing pollution and environmental risks and concerns. I do not support this in anyway and am extremely disappointed this is even being considered. As someone who uses the current toll road only occasionally because I feel roads should be free with our tax paying money not paid to travel on this is not needed or wanted. I love Barton springs and lady bird lake and hike and swim often at the springs. This will impede on Austin's beauty and important natural spaces. Do not do this. |
| **5/3/2026** | Madeline Doyle | I am concerned about the environmental impact, especially so close to the already polluted lake and Barton Springs. I am especially concerned about the impact on the federally endangered species nearby. I like the expansion and improvement of bike lanes and pedestrian walkways. The thought of the two main highways that run north-south through Austin being under construction at the same time seems like a bad idea. I'd be interested in seeing the city invest more in public transportation like most other major metro areas. |

| | | |
|---|---|---|
| **5/3/2026** | Madeline Gladu | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Madeline Gladu |

| | | |
|---|---|---|
| **5/3/2026** | Madelline Mathis | I am writing to express concern regarding the proposed MoPac expansion due to its location within watersheds that directly recharge the Edwards Aquifer—one of the most sensitive and critical groundwater systems in Texas. 1. Project History Demonstrates Unresolved Environmental Risk The MoPac South corridor has previously faced litigation, delays, and sustained opposition tied to impacts on karst recharge systems and protected species. These concerns have not been resolved—they have been deferred. 2. Karst Hydrology Creates Elevated Vulnerability This corridor intersects the Barton Creek and Shoal Creek watersheds, where fractures, caves, and sinkholes allow stormwater to enter the aquifer within hours, often with minimal filtration. In this system, surface runoff becomes groundwater contamination on a very short timescale. 3. Impervious Cover – Quantified System Impacts Peer-reviewed watershed science consistently shows: ~10% impervious cover → degradation begins ~15–20% → functional impairment In Central Texas recharge zones, studies indicate: Recharge can decline by ~25–30% as impervious cover increases Pollutant loads increase proportionally with roadway runoff Highways represent disproportionately high-impact impervious cover due to direct connectivity, high runoff velocity, and elevated pollutant loads. 4. Limitations of Conventional Stormwater Design Standard roadway stormwater systems primarily address peak flow—not: Distributed infiltration across karst landscapes Subsurface filtration processes Protection of discrete recharge features In karst terrain, concentrated discharge can increase contamination at specific recharge points, rather than mitigate it. 5. Need for Low Impact Development (LID) Approach If any project proceeds within a recharge-sensitive corridor, stormwater management should shift from conventional detention to low impact development (LID) strategies that better mimic natural hydrology, including: Bioswales and vegetated filter strips to slow and filter runoff Infiltration basins and permeable shoulders to restore recharge function Distributed, rather than centralized, treatment systems Soil-based filtration systems designed for pollutant removal prior to recharge These approaches are more aligned with protecting karst systems, though even they may not fully offset the impacts of increased impervious cover at a corridor scale. Recommendation I urge TxDOT to: Evaluate impacts relative to watershed-level impervious cover thresholds Conduct more rigorous environmental review where warranted Reconsider expansion in a known recharge corridor with karst connectivity Prioritize alternatives that reduce impervious cover and protect long-term water resilience If pursued, incorporate LID-based stormwater design at a system-wide scale, not as isolated features Conclusion The Edwards Aquifer supplies water to over 2 million Texans, and contamination in karst systems is often rapid and effectively irreversible. Given the project's history and the well-established relationship between impervious cover and aquifer degradation, the risks associated with this expansion are known, measurable, and long-term. This is not just a transportation decision—it is a water infrastructure risk decision. Thank you for your consideration. |
| **3/19/2026** | Madison Andrews | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **5/3/2026** | Madison Falco | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. | | | |
|---|---|---|
| **5/3/2026** | Madison Harrelson | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Madison Harrelson |

| | | |
|---|---|---|
| **5/3/2026** | Madison jetty | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Madison jetty |
| **3/22/2026** | Madison L Mallett | This project to expand MOPAC will only destroy that which we love about Austin TX, and enforce that which we don't love. The aquifer rests exactly at the place where y'all are considering adding more traffic lanes for vehicles we *know* destroy the environment and reinforce antisocial behavior. No one wants traffic. Even the most avid drivers complain about traffic. And, what's funny, is that so much research has proven that expanding highways only induce more traffic, not reduce it. This is funny because despite the enormous amount of research proving that this induced demand of highway expansion doesn't work, it seems to be the only thing you're considering. Think differently. Build the world you want to see, not perpetuate the world that exists.  The only way to truly reduce congestion on highways is by investing in alternative transportation methods. By spending money on projects that encourage alternative transportation--such as bike lanes, public transit, walkability, mobility infrastructure--people will not need to depend on their personal motor vehicles to navigate the city. When people do not depend as much on their personal motor vehicles for daily mobility use, the motorways that exist are less congested. Even TXDOT has openly admitted that we need to encourage alternative transportation methodologies rather than investing in what we know doesn't work (cars). Listen to the science! Listen to the research! Look at what actually works--see Paris, Minneapolis, Netherlands--and make that happen here. It is more than possible, and it is not nearly as costly to the environment nor to our fiscal budget.  Don't create the demand for more traffic. Create a better Austin. Spend our tax dollars wisely. Preserve our wild spaces and sacred water. Don't let the past define our future. |

| **5/3/2026** | madison mallett | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, is the wrong move for Austin. This is not going to help traffic, it's going to harm waterways. Expanding highways does nothing more than increase congestion, see examples like Los Angeles and Houston. Expanding traffic lanes only induces *more* traffic. We need to prioritize mobility throughout the city that doesn't reinforce car dependency, but rather reduces it. Make Austin better for all!!!!!! Furthermore, this expansion project will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Make a better Austin, not a deprived, car-dependent one. Be better. Your leadership can do more than you think it does. Respectfully, madison mallett |

| **4/20/2026** | Madison Martin | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/23/2026** | Madison Murphy | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Madison Murphy |

| | | |
|---|---|---|
| **4/25/2026** | Madison Selby | Dear CTRMA Board Members,<br><br>I was born in Austin in 1991, and have lived here most of my life. I have always loved our greenbelt and have countless memories hiking and swimming there. It is an incredibly valuable public resource and should be protected and maintained at all costs. I grew up learning about how all life in this part of Central Texas relies on our aquifers, and how important it is to preserve and protect them.<br><br>I cannot emphasize enough how strongly I oppose any project or construction that will harm and damage the Edwards Aquifer recharge zone, or any other environmentally sensitive area in our beautiful city.<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." | | | disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>As an Austin native and long time resident, I STRONGLY OPPOSE the MoPac South expansion project proposed by CTRMA, for all of the reasons detailed above, and am in favor of a full environmental impact statement as well as active input and control granted to the Austin community that will be impacted by the project.<br><br>Sincerely,<br><br>Madison Selby |

| | | |
|---|---|---|
| **5/3/2026** | Madison Stewart | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Madison Stewart |
| **5/1/2026** | Mady Hall | As an Austin Resident I do not support the Mopac South expansion as it will effect one of Austin's treasured beauties Barton Springs |
| **5/3/2026** | Maerose Head | As a life long austinite who has benefited from the use of zilker park and Barton springs I can see how the impact expansion would be detrimental to the fragile ecosystem there. I know traffic has ALWAYS been terrible in Austin, but I have also seen how adding "just one more lane" is not the solution! Please reconsider other options so we can keep one of the last remaining parts that are truly Austin…Austin. Thank you |

| | | |
|---|---|---|
| **5/3/2026** | Magaly Ruiz | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Magaly Ruiz |

| **5/3/2026** | Maggie Armendariz | I'm against the expansion of MoPac. I think that there needs to be more research about the environmental impacts. We don't want to damage our local ecosystems, particularly the sensitive Edwards aquifer region. I think we should be able to improve bike lanes and pedestrian trails/walkways without expanding Mopac. It's going to create a lot of traffic on a city that's already undergoing a major highway construction on 35. |

| | | |
|---|---|---|
| **5/3/2026** | Maggie Cook | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Maggie Cook |
| **5/3/2026** | Maggie Dolan | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Maggie Dolan |
| **5/3/2026** | Maggie gorski | I am in opposition to any new roads or expansion that would in any way affect our watershed, recharge zones or springs. Including the proposed toll road and expansion. |
| **5/3/2026** | Maggie Herndon | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Maggie Herndon |

|---|---|---|
| **5/3/2026** | Mailande Vise | Dear CTRMA Board Members, I'm extremely worried about the MoPac South expansion, it's impact on our environment, and how it will disrupt, destroy, and change the natural spaces that make Austin so unique. People don't move to Austin to zip around town, they come here for Barton Springs, Lady Bird Lake trails, and the green belt.  This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Mailande Vise |
| **4/26/2026** | Maile Roberts-Loring | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/21/2026** | Mak Kay | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/20/2026** | Mak Szewczyk | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/28/2026** | Makayla Minnes | A full EIA needs to be done |
| **4/29/2026** | Makayla Simpson | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| **5/1/2026** | Mali Calvo | This project will be bad for our communities. It will disrupt commuters and worsen environmental quality. Instead, focus on projects that enhance public transportation and active transportation options, or shade existing roadways. |
| **4/27/2026** | Malia Moss | I am a lifelong Austinite and a homeowner in South Austin, and I strongly oppose the Mopac expansion. Edwards aquifer is more important to maintain than widening highways. I would like a different environmental study to be done to explore the impact This will have on our local ecosystem. |

| | | |
|---|---|---|
| **5/3/2026** | Mallorh Thompson | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Mallorh Thompson |

| | | |
|---|---|---|
| **4/23/2026** | Mallory Bellinger | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Mallory Bellinger |

| **4/22/2026** | Manda Levy | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Manda Levy |
| **5/3/2026** | Mandy Millican | This project will not increase the travel time on these roads, and will impact an environmentally sensitive area. There is absolutely no need to spend money, time, manpower on this with the ecological impacts it will impart. It seems like it's solely to increase the amount of drivers on the road who will pay tolls, thus making more money for you. We don't want this! |

| | | |
|---|---|---|
| **4/24/2026** | Manon Bond | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to avoid parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |
| **4/20/2026** | Manthan Upadhyaya | I oppose this expansion since it will reduce a large number of green spaces that are vital to Austin culture. |

| | | |
|---|---|---|
| **4/14/2026** | Manuel Alfonso García Juanatey | Dear MoPac South Project Team,<br><br>We hope this message finds you well.<br><br>We are writing as a group of concerned residents from communities located southwest of the MoPac Expressway, in close proximity to the La Crosse Avenue overpass. We have been closely following the proposed expansion plans outlined on the MoPac South project website and appreciate the efforts being made to improve regional mobility and reduce congestion.<br><br>While we recognize the benefits of the project, we would like to formally express our collective concern regarding the anticipated increase in traffic volume and the resulting noise impact on nearby residential areas. Due to our proximity to the corridor, we expect a significant rise in roadway noise levels, particularly in areas south of Slaughter Lane.<br><br>On behalf of our community, we respectfully request that the project team evaluate and include a sound barrier wall along |

| | | |
|---|---|---|
| | | the segment south of the La Crosse Avenue overpass, especially in areas directly adjacent to existing neighborhoods.<br><br>We recommend that any proposed sound barrier be consistent with the wall constructed northbound of the La Crosse Avenue overpass as part of previous MoPac/I-45 connection improvements. This would ensure continuity and provide a proven level of noise mitigation for nearby residents, as well as for visitors to the Lady Bird Johnson Wildflower Center.<br><br>We believe this measure is essential to balancing the transportation benefits of the expansion with the quality of life of the surrounding communities. Additionally, if noise studies are currently underway or planned as part of this project, we kindly request that their findings and any related mitigation strategies be shared with the community.<br><br>We appreciate your time and consideration of this petition and look forward to continued engagement to ensure this project serves both mobility needs and community well-being<br><br>Best Regards, |

| | | |
|---|---|---|
| | | Manuel Garcia Juanatey |
| **3/22/2026** | Manuel Esparza III | I support Build Alternative 2C. We must have 2 lanes each direction and options for downtown connections. This team should also address the congestion with the existing toll lane at the entrance. It's unsafe and very, very slow moving which needs to be addressed. Find a way to unclog it. The tolls at peak must be addressed as well. They are way too high and very little benefit which is frustrating moving at a snail pace. |

| | | |
|---|---|---|
| **5/3/2026** | Manuela Arango | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Manuela Arango |
| **4/21/2026** | Manuela Quiroga | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

Thank You for listening to your neighbors, Maraba DiRaddo |
| **5/3/2026** | Marc McCann | I'm a daily commuter on Mopac. Before taking any action on this project, we need a full environmental report to be completed to ensure that new infrastructure won't harm or irreparably damage resources around the construction area. Additionally, the multi-year project just doesn't seem like it has commuters best interest in mind. The worst part of Mopac traffic begins and exists north of the river where the toll lane exists. Inconsistently don't run into the same issues when going from Southwest Parkway to the Mopac bridge. I'd love to see what evidence exists that the express lane will help and not hurt traffic. Seems like it'd really just a way to drive revenue for whoever benefits from the frequently-outlandish prices of the toll road. |
| **4/24/2026** | Marc Pereira | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Marci Brown | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Marci Brown |

| | | |

|---|---|---|
| **5/3/2026** | Marcia Bilderback | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Marcia Bilderback |
| **5/3/2026** | Marcia Bilgerback | Hello, my name is Marcia Bilgerback.I'm a resident and I live in 78741.And I'm very concerned about the proposed expansionof Mopac South.I love to go to Barton Springs.I love to go to Zilker.I love to discover all of the trails.There are many areas that I'm still exploring and enjoying.I'm on my own, bringing friends with me, so, and I do have a background in ecology, andI am really concerned that there's not a proper environmental impact statement being done.It seems like they're bypassing that step.And so I'm asking, rather respectfully demanding, a full environmental impact statement forthe entire 8.77-mile zone where the widening is proposed.We have a very unique aquifer with Edwards Aquifer RechargeZone.And it's very fragile to their endangered salamanders.And there is water quality at stake.There is recreation at stake.There is flora and there is fauna.and there's so many people that really, really value having this for all the purposes of recreation and habitat conservation.So it's really what makes Austin Austin, aside from the music scene.And my understanding is that the proposed development would save maybe five minutes of people's commute time.Nobody cares about that.It seems like it's just more of a quick money-making endeavor involving whatever construction companiesand the city and whatnot.Highly unpopular.There's going to be pollution with the project, and there's potentially pollution with thelittle bit of increased traffic, so it's just a no all around, so please, please, please.At the very least, get the complete environmental impact statement.Thank you for your time.Goodbye. |
| **5/1/2026** | Marcia Curtis | As a resident of Austin since 1970, I am opposed to the expansion of Mopac from Slaughter Lane to the north. This area over the Edward’s aquifer is fragile and must be protected. No matter how many safeguards are put in place, you can bet Barton Springs will be impacted negatively. I realize Austin’s traffic is bad and the population is growing, but more highway construction in this area is a hard no for me. |

| | | |
|---|---|---|
| **4/20/2026** | Marcia Lucas | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Marcia R Lucas | I am adamantly opposed to the MoPac expansion over Austin High, Zilker Park and the recharge zone for Barton Springs. It would increase Air pollution, Water Pollution and Noise pollution. It would be a detriment to all of Austin and our Hike and Bike Trail. |

| | | |
|---|---|---|
| **5/1/2026** | Marcia Shultz | As an Austinite, I say NO! to the South MoPac Expansion - because this expansion will:<br><br>* Pave over 110 acres of the Edwards Aquifer Recharge Zone, threatening groundwater quality, our creeks and Barton Springs;<br><br>* Harm 4 federally endangered species and their habitats, including the Barton Springs Salamander and Austin Blind Salamander;<br><br>* Carve through some of Austin's most iconic parkland and recreational spaces, including Zilker Park, the Barton Creek Greenbelt, and the Lady Bird Lake Hike and Bike Trail; and<br><br>* Pollute our air with massive increases in cars (increasing annual vehicle miles traveled on MoPac by a whopping 331 million) with more car emissions directly next to neighborhoods and Austin High School (If you didn't see it, Austin's air quality just received a failing grade from the American Lung Association).<br><br>Thank you for your consideration to my perspective.<br><br>Marcia Shultz |

| | | |
|---|---|---|

| **5/3/2026** | Marcus Brown | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Marcus Brown |

| **5/3/2026** | Maren Curtis | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. <br /><br /> This would be devastating to our community and our environment. Most of the reason why people live here and we've grown so much is because of this area, and to desecrate it with more highway would be one of the worst decisions ever made by this city. They recently added a lane to Mopac with an exit only on the left side for 360 and I can tell you as someone who drives that stretch of road back-and-forth almost every single day, it only made traffic worse. Adding that lane… Made traffic worse! Can you imagine what doubling it will do?! It's just not smart and it's not going to solve the problem so why ruin everything that makes the city great for a solution that's not even a good one?<br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A |

| | | |
|---|---|---|
| | | full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Maren Curtis |

| **4/20/2026** | Margaret Demirs | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Margaret Grace | Hi, my name is Margaret Grace and I am calling to demand an environmental inspection of theBOPAC expansion.I highly disagree with what is going to, what you would like to be doing.I think that as a community member and a person who values our waters deeply, we need moreunderstanding of how this would affect our waterways and the animals andcreatures that live in there, especially the endemic creatures. So pleaseconsider, please take all of these considerations into a much more seriousunderstanding of the actual impact that this will cause through our environmentand I demand that there be more research done on this project. |
| **4/22/2026** | Margaret Kim | NO TO THE MOPAC EXPANSION. we have to protect our water, and that includes the Edwards Aquifer Recharge Zone. studies show that adding more lanes does not improve congestion and would increase pollution and reduce air quality. increasing emissions will also affect temperatures, which will impact health and increase energy costs for everyone across the city. this is bad for everyone, now and in the years to come. |

| | | |
|---|---|---|
| **4/30/2026** | Margaret LaMore | I have lived in Central Austin for over 20 years in a house built in 1938. I love the feel of our neighborhood and seeing children walking or riding to the Brykerwoods school and so many neighbors out walking their dogs. This area of town is already impacted by MoPac with additional noise and drivers using our streets to access. Expansion of MoPac will only make this worse. My father was born and raised here in Austin, and I went to school at UT as did two of my grown daughters. For all those years, Austin was a small but lovely town. In the last decade especially, it has grown into a large city with an emphasis on expansion (at any cost). Enough is enough! I DO NOT support making Austin into a little Houston (where I grew up), and therefore will not support MoPac South expansion.<br><br>Thank you for your consideration.<br><br>Best regards,<br><br>Margaret<br><br>[Redacted Personal Information} |
| **5/3/2026** | Margaret Marchant | Please reconsider the plans to expand Mopac. As a resident in this area, the natural beauty of south Austin and the greenbelt and Barton Springs is incredibly important to me and my family. This project would devastate the natural ecosystem in the affected area, threaten the endangered species who we share the land with, increase traffic and related noise and pollution, and the harm could spread much further than simply the area of the planned construction——— the Edwards Aquifer is a vital water resource in this area and every measure must be taken to protect it. This state and in particular central TX is in a water crisis —- if the aquifer is damaged by this project it cannot simply be replaced or repaired. We must consider this vital water resource, and the surrounding ecosystem and natural beauty of this area and protect it for our children and their children and generations to come. Please do not proceed any further with this project without a full assessment and consideration of the environmental risks associated with it. Thank you! |

| | | |
|---|---|---|
| **4/20/2026** | Margaret Rine | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Margaret Schulenberg | I oppose the proposed expansion of MoPac, as well as the attempt to speed the process. The first and critical step must be a full Environmental Impact Statement involving expert input. This Impact statement must at a minimum take into consideration the air and water quality, noise pollution and traffic, light pollution effects on the local environmentally sensitive area, endangered and sensitive species, local parks, and the local community. This area is critical to Austin's environmental health. Reject the fast-track Environmental Assessment process. And protect our air, water, sensitive and endangered species, and communities. |
| **5/3/2026** | Margaret Shanks | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Margaret Shanks |
| **5/3/2026** | Margaret Suttles | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and |

| | | |
|---|---|---|
| | | neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Margaret Suttles |

| | | |
|---|---|---|
| **4/30/2026** | Margaret Taylor | Hi there,<br><br>I’m writing as an Austin resident (78756, Central Austin) to express my strong opposition to the proposed expansion of MoPac South.<br><br>I’m really concerned about the plan to add so much new pavement (over 100 acres!!) in such an environmentally sensitive part of our city.<br><br>Claiming there will be "no significant impact" to the environment doesn't sit right with me. Because of the scale of this project and the potential for increased noise and pollution, I am asking for a full Environmental Impact Statement (EIS) rather than just an abbreviated assessment.<br><br>Instead of spending $825 million on more highway lanes and years of construction, I want to see that funding used for regional rail and a high-quality bike and pedestrian network. We need real solutions that move people efficiently, not more toll lanes that encourage sprawl and lead to more crashes.<br><br>Also, it’s frustrating that the project maps don’t clearly show the full extent of the work up to Enfield Road. We deserve full transparency on how many lanes are actually being added.<br><br>Please prioritize a sustainable, multi-modal future for Austin instead of doubling down on highway expansion (which has been proven to actually NOT decrease traffic) |

| | | |
|---|---|---|
| **5/2/2026** | Margaret Ximenes | Hi ya'll,<br><br>To put it briefly: I'm against the expansion of MoPac South.<br><br>As an Austinite, I'm asking that you guys do NOT move forward with further expansion. It's just goofy all around! We deserve a full vetting of the environmental impact via EIS (environmental impact statement) and consideration for the people here!<br><br>* Adding lanes NEVER helps congestion - Dallas and Houston are living case studies of this, induced demand makes traffic worse!<br><br>* Paving over our beautiful nature is erasing Austin's heart and soul. WE LOVE OUR NATURE! It's what differentiates us from other cities and brings people back. Tearing down more to add highway lanes compromises this. This'll also make the city HOTTER - Trees are so important to regulating climate!<br><br>If we want to make getting around easier, we should prioritize developing our growing Metro and making it as easy and accessible as possible. I've ridden it, and it's actually great! However, in its current state, there's so much opportunity for the places it can serve. Imagine all of those commuter cars clogging MoPac instead just being those individuals in a single train. So much more efficient and environmentally friendly! :)<br><br>We as a city (and a state, really) need to start looking beyond the cars. With unpredictable oil prices, volatile weather, our changing environment, and the changing landscape of the city, we can't depend on cars like this forever. It is dangerous and unpleasant.<br><br>Think of the most desirable places to live and visit. People often say New York City. Paris. Rome. Tokyo. What do these places have in common? Walkability, reliable public transportation, and nature integrated into the city. I'm not saying we have to be like one of these super dense cities, but we also don't need to be a giant suburb, either.<br><br>If you read this, thanks for your time. |

| **5/2/2026** | Margaret Ximenes | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Margery Segal | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Margery Segal |

| | | |
|---|---|---|
| **5/3/2026** | Margi Jones | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Margi Jones |
| **5/3/2026** | Margo Pflum | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Margo Pflum |
| **5/3/2026** | Margo Shaw | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Margo Shaw |

|---|---|---|
| **4/20/2026** | Margo Weisz | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Margot Becker | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/27/2026** | margot thomas | Dear CTRMA Officials and Stakeholders,<br><br>I'm writing to encourage you to incorporate the following outlined mitigations before advancing the MoPac South expansion. I recognize the corridor's congestion demands action, and ask for the same level of effort exercised in SH 45 SW for MoPac South. I also recognize that action without environmental accountability produces infrastructure Austin will regret. This proposed roadway project impacts the City's Crown Jewels: Zilker Park, Barton Creek, Barton Springs, Dick Nichols Park, Volma Overton Sr., and Williamson Creek Greenbelt.<br><br>As stated in Ben Thompson's Community Impact article - "Austin Faces Diminished parks growth" dated 02.05.2026: "Austin already falls short: less than 18.5 acres of parkland per 1,000 residents — 77% of the residential goal, a gap of |

| | | |
|---|---|---|
| | | roughly 5,700 acres."<br><br>This project must not widen that deficit.<br><br>_____<br><br>Along with other environmental organizations in Austin, such as EverGreen Austin, and many Austin residents, I would request these mitigations to be written in Section 8.0 Post Environmental Clearance Activities:<br><br>Trees. Preserve all trees 19" diameter or greater. Replace removed trees at 4:1 (native species only); trees 4"–19" at 3:1 (native species only) in the right-of-way and in parks. All terrestrial plantings must be native or regionally adapted, with a watering and maintenance plan ensuring 85% survival. (See Exhibit A.)<br><br>Parkland. Adjust alignments to avoid parkland encroachment. Require construction materials and trucks to stay beneath the highway near Zilker Park and the three other parks impacted. Where impacts are unavoidable, CTRMA should fund full restoration to previous conditions or better. Provide a Park Impact Assessment evaluation of the loss or impairment of park acreage, trees, park features, ecosystem services, recreational programming, and community access resulting from the change in use of parkland. |

| | | |
|---|---|---|
| | | Capital Improvement Reimbursement. Funding for the implementation of infrastructure improvements to address construction-related displacements of park usage, including new sidewalks, bike paths, vehicle routing/parking areas and new access points, to replace existing vehicle and pedestrian infrastructure disrupted by the construction phase of the project.<br><br>Noise Walls. Hold a workshop with environmental organizations and CTRMA designers on the design and placement of noise and aesthetic walls before finalizing plans. As part of this meeting, we will want to discuss the installation of high-performance concrete or transparent noise walls within Zilker Park boundaries to maintain visual connectivity where appropriate.<br><br>_____<br><br>I would also also requests two Non-Required Mitigations:<br><br>Open Space Fund. Provide $35M in mitigation funding to be used exclusively for land acquisition located over the Barton Springs segment of the Edwards Aquifer Recharge and Contributing Zone. This initiative aims to protect water quality and quantity, safeguard groundwater, enhance flood and fire protection, support wildlife, and impacts from impervious cover.<br><br>Permanent Green Toll. Add a voluntary $0.10 to every toll transaction in perpetuity to fund ongoing land acquisition for |

| | | |
|---|---|---|
| | | environmental mitigation and green infrastructure. Over time these funds should also incorporate an escalation clause to compensate for traffic demands.<br><br>_____<br><br>The stakes are real. Zilker Park has 2,000,000 annual visitors. The greatest impacts will be to the 160,000 visitors to Zilker Botanical Garden, 150,000 to the Austin Nature and Science Center, and 65,000 to the Rowing Dock. Mopac is less than one mile from Barton Springs Pool. CTRMA must ensure public health and safety for all of these park patrons at all times.<br><br>I commend the effort undertaken by CTRMA and partner agencies to evaluate mobility improvements along a highly congested corridor serving thousands of Central Texans each day. The public's active participation demonstrates the importance of this project to Austin's residents and underscores the need for thoughtful, transparent decision-making.<br><br>Thank you for your consideration. |

| | | |

| **5/3/2026** | Maria Abernathy | 1) The proposed addition of massive amounts of concrete over environmentally sensitive (and beautiful) areas of Austin is obscene.<br><br>At the very least, a new, comprehensive environmental impact study is warranted NOW.<br><br>2) I have stated this opinion in the past, and it apparently has always fallen on deaf ears: Moving people vs cars should be the goal. Trying to accommodate increased car traffic will never achieve its goal - More concrete will always be demanded. Instead, invest in mass transit (light rail lines with very frequent runs, linked to frequent buses to areas of high demand and shuttles to areas of lower demand) could transform this pattern. I have used this type of transit in many European cities with great ease and would love to have it available in Austin.<br><br>3) Incentives are necessary to reduce the glut of traffic heading into and out of central Austin daily. If large employers can be persuaded to locate their facilities closer to their workers' home areas (e.g., far south Austin, Hays county) and also to allow work-from-home and 4-day-week schedules, highway congestion can be considerably reduced.<br><br>I sincerely hope that CTRMA's plan can be stopped and re-evaluated.<br><br>Maria Abernathy (78746) |

| | | |
|---|---|---|
| **5/3/2026** | Maria Albiter | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Maria Albiter |
| **5/3/2026** | Maria Dailey | I strongly oppose the draft environmental assessment and proposed build alternative for the MoPac South Project. My comments are against the CTRMA project. I urge the agency to select the no-build alternative. The current proposal to expand the corridor with multiple told express lanes is incompatible with our regions commitments to ecological conservation, watershed protection, and sustainable infrastructure. This creates a threat to the Edwards aquifer which is already suffering from recent and ongoing environmental violations due to non-compliant developments. The proposed highway expansion cuts directly through the environmentally sensitive Edwards aquifer recharge zone. The construction footprint and expansion pose unacceptable risks to karst features, water quality, and critical natural habitats, including Barton Springs. This also will increase the amount of a vehicle miles traveled, which is a capacity that contradicts local climate initiatives and the Austin Strategic Mobility Plan which seeks to reduce VMT and prioritize high capacity transit. This also continues the increase to lack of long-term multimodal solutions for Transit. Focusing on a single occupancy vehicle expansion in toll Lanes fails to solve the need for balanced, sustainable regional mobility. The community requires solutions that support alternative transportation rather than increasing traffic congestion over time. I urge CTRMA to abandon the build alternative and prioritize environmental preservation in sustainable transportation management to keep our city beautiful and attractive for all for generations to come. |
| **4/20/2026** | Maria Gonzalez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Maria Hardy | Dear CTRMA Board Members, Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I |

| | | |
|---|---|---|
| | | respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Maria Hardy |
| **4/30/2026** | Maria M Maiz | More lanes will only induce more traffic and pollution. Our neighbor city of Houston is the perfect example of more lanes and never ending traffic congestion. Houston commuters loose 2-3 hours of their lives commuting daily on those 20+ lanes highways. The amount of fatal crashes in those highways is also alarming. It makes no sense to keep supporting this form of mobility. Stop spending resources and energy in building lanes, instead invest in a robust public transportation system in hand with the appropriate density so citizens and visitors can all enjoy a better quality of life. Public transportation provides a viable solution for improving the health of cities and its citizens, there are many sources of data that confirms this. |

| | | |
|---|---|---|
| **5/3/2026** | Maria Morrow | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Maria Morrow |

| **5/3/2026** | Maria Nasr | Lady Bird Lake, the Hike and Bike Trail, Zilker Park, and Barton Springs Pool are among the crown jewels of our city. Besides being beautiful recreational areas, they also protect the Edwards Aquifer and provide precious habitat for wildlife. As a resident who enjoys these places frequently, I believe the potential negative impacts on these areas are more consequential than any projected improvement to traffic flow. We should be solving our traffic problems by improving public transportation, not by expanding roads through or near the places that make Austin special. For that reason, we must require a full Environmental Impact Statement before any final decision is made or work proceeds. |

| | | |
|---|---|---|
| **4/20/2026** | Maria Paz | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **3/16/2026** | Maria Perea | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Maria Perea |

| **5/3/2026** | Marian Ladd | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Marian Ladd | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Marian Ladd |
| **4/29/2026** | Marian Yeager | If this project is going to hurt the green space, trails, or environment ecosystem then the expansion should not happen. Austin is such a special place for its trails. Destroying Barton Creek you will destroy our beautiful city and uniqueness. Stop this expansion. |
| **4/27/2026** | Mariana Becks | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Mariana Krueger | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Mariana Krueger |

|---|---|---|
| **4/29/2026** | Marie Butcher | To Whom it May Concern,<br><br>I want to voice my strong opposition to the Mopac Expansion CTRMA is planning in South Austin. With every fiber in my being I beg you to not disrupt this precious area we all enjoy for recreation and, more importantly, the very fragile ecosystems this project would damage.<br><br>Barton Springs is the very reason this city exists. Do not miss the forest for the trees or the aquifer for the highway and ruin this incredibly rare and fundamentally Austin resource. Our aquifer and the lands that overly it are PRICELESS. We need to be thinking about public transit and not more highway lanes which, as we know, do not truly solve traffic problems long term.<br><br>Please do not do this.<br><br>Marie Butcher |
| **5/3/2026** | Marie Mckeefer | I wish not that this expansion would happen. It would be greatly detrimental to the environment and community that surrounds suggested expansion. Please do not do this. |

| | | |
|---|---|---|
| **5/3/2026** | Marie-Christine Girard | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Marie-Christine Girard |

| **5/3/2026** | Marilyn Arenas | My family and I vehemently oppose the expansion of MOPAC in South Austin. There will indubitably by profound and disconcerting damage done to the gorgeous green spaces in the area and the quality of life for the community's citizens. Expansion and construction that generates increased use of vehicular traffic is NOT the path forward for Austin. We urge the city to invest in alternatives that leverage public transportation and other infrastructure to manage the city's growth and to double down on valuing and protecting what true Texans value: water, land, wildlife—and our ability to enjoy it without the noise and pollution a behemoth and hideous highway structure would bring. |
| **5/3/2026** | Marilyn Cruz | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. | **4/21/2026** | Marina Chavez | Dear CTRMA,<br>Austin is one of my favorite cities in our US… please don't do this!!!!!<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Marina Kugler | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Marina Kugler |

| | | |
|---|---|---|
| **5/3/2026** | Marina Kugler | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Marina Kugler |

| | | |
|---|---|---|
| **4/28/2026** | Marion Burch | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Marion Burch |
| **5/2/2026** | Marion Martin | I am opposed to the MoPac South expansion and would much rather see funds invested in transit that reduces cars on the road rather than building for more cars. I am concerned about the environmental impacts in this environmental sensitive area, as well as impact on recreational users of the hike and bike trail and Lady Bird Lake, as well as students, faculty and staff at Austin High School. Thank you for opportunity to voice my concerns |

| | | |
|---|---|---|
| **5/3/2026** | Marion Trent | Dear CTRMA Board Members, <p class="isSelectedEnd">To Whom It May Concern, <p class="isSelectedEnd">I strongly oppose the proposed MoPac South expansion project as currently planned and urge CTRMA to require a full and transparent Environmental Impact Statement (EIS) before moving forward. <p class="isSelectedEnd">Austin is not just growing. It is reaching a critical point where decisions about development directly affect our water supply, air quality, public health, wildlife habitats, and overall quality of life for future generations. Expanding MoPac South with 6-8 additional lanes over the Edwards Aquifer Recharge Zone is not a minor infrastructure adjustment. It is a major environmental decision with long-term consequences. <p class="isSelectedEnd">The Edwards Aquifer is one of Central Texas' most precious natural resources. Increased polluted runoff from years of construction and expanded roadway surfaces creates a serious risk to water quality. Once damage to the aquifer occurs, it cannot simply be undone. This proposal also threatens nearby wildlife habitats, Greenbelt areas, and the natural environment that makes Austin unique. <p class="isSelectedEnd">I am also deeply concerned about the impact on surrounding communities during the estimated 5-7 years of construction, including increased traffic congestion, noise pollution, degraded air quality, and disruption to daily life for residents, businesses, and commuters. Adding more lanes has repeatedly been shown in cities across the country to encourage more traffic over time rather than solve congestion in a meaningful or lasting way. <p class="isSelectedEnd">It is unacceptable that a project of this scale is being advanced under a Finding of No Significant Impact (FONSI) without a complete Environmental Impact Statement and without fully exploring less harmful alternatives. The public deserves transparency, independent analysis, and a thorough examination of environmental and community impacts before irreversible decisions are made. <p class="isSelectedEnd">Austin's future depends on responsible planning that protects both people and natural resources. Water protection, environmental stewardship, and public health must take priority over short-term expansion strategies that may ultimately create greater long-term harm. <p class="isSelectedEnd">Please require a full Environmental Impact Statement and seriously evaluate safer, more sustainable alternatives before proceeding. <p class="isSelectedEnd">Sincerely, Marion Trent<br />Austin, Texas Thank You for listening to your neighbors, Marion Trent |

| **5/3/2026** | Marissa Coleman | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Marissa Coleman |

| | | |
|---|---|---|
| **5/3/2026** | Maritza Felan | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Maritza Felan |

| | | |
|---|---|---|
| **3/18/2026** | Mark Barta | Dear CTRMA Board Members,<br><br>I am writing to voice my strong opposition to the proposed MoPac South expansion. This terrible idea has been brought up before and this time isn't any better. It doesn't serve the people that actually live around it.<br><br>It's going to be a monstrous concrete eyesore that effectively makes an I-35 west loop, which is not needed nor wanted by Austin residents.<br><br>Zilker park and barton springs bring significant economic activity every year and this project would severely degrade that experience.<br><br>It will also negatively impact Austin High school students with the increased noise, traffic and pollution. A double decker bridge over Lady Bird Lake is outrageous.<br><br>Barton Springs and the Edwards aquifer are already under severe strain and this project would poison those vital waters even faster.<br><br>The supposed assessment that this project would have no significant impacts is laughable.<br><br>As someone that sits on this road more days than not and have been since before it was even finished over William cannon, this plan is not helpful and not wanted. All that's needed is repainting the lanes to be more logical at the chock points where lanes go to 2 from 3 at the same place that an onramp is trying to merge. I've been commuting North and South on mopac for 20 years and I've seen bottlenecks on mopac be alleviated in the past with repainting the lanes instead of having lane wide shoulders, so I know it's possible. Also, no one wants more toll lanes! You're trying to spend a bunch of money that doesn't need to be.<br><br>The mopac south expansion is a terrible plan that shows a lack of creativity that's going to greatly harm the folks that actually live here. Please don't do it.<br><br>Sincerely,<br><br>Mark Barta |

| | | |
|---|---|---|
| **4/22/2026** | Mark Dennison | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Mark Dennison |

| | | |
|---|---|---|

| | | |
|---|---|---|
| **5/1/2026** | Mark Glowacz | Please do not move forward with any plan without a proper environmental impact study. The current assessment is dubious at best, and forgive me if I don't trust the judgment of a board led by a pest control business leader. Where is the expertise and consideration for solutions that don't create a massive increase in footprint for a 5-minute savings of road time? Everyone would like to see improved traffic flow, but simply adding more lanes is a band-aid with serious side effects for both immediate communities and downstream ecosystems. Slow down, and do the appropriate studies. While that takes place, speak to the communities further and explore holistic solutions that don't require a massive two lane expansion. |
| **3/28/2026** | Mark Hilpert | I have to commute in south Mopac to work. I don't any changes whatsoever. Adding the toll lane to north Mopac was an absurd waste of money which did NOTHING to improve traffic and took WAY longer than what we were told. Whatever you're proposing is yet another boondoggle making someone rich who doesn't have to deal with Austin traffic. |
| **4/25/2026** | Mark Hilton | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request. Thank you. |
| **4/22/2026** | Mark Kimbell | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/22/2026** | Mark Kimbell | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/23/2026** | Mark LeGare | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| **4/23/2026** | Mark May | Dear CTRMA Board Members,<br><br>Please do not move forward with the proposed Mopac expansion. The impact on Austin high, the hike and bike trail and the aquifier is not worth the financial and enviornmental cost.<br><br>It is almost comical how expensive the project is for 5-6 minutes savings. Are you kidding me?<br><br>The conclusion of no significant impact is ridiculous. I challenge you to do a full EIS and be forced to reckon with the actual impact to traffic and the surrounding aquifer.<br><br>Someone at CTRMA should be fired for bringing this project forward, it is an embarassment.<br><br>Please reconsider your plan<br><br>Mark May |
| **4/23/2026** | Mark May | I strongly oppose this project. Way too expensive for 5-6 minutes of travel savings (at best). There are much less intrusive solutions to ease congestion. The impact on Austin High is outrageous and the years of construction are not worth the results. The lack of a full EIS would be comical if it weren't our water supply you are messing with. Go build your tollways somewhere else. |
| **4/30/2026** | Mark McCartney | Stop the expansion of South MoPac. I commute on MoPac every day to work at Intel Corporation, and I don't want more lanes. I don't want this expansion because I know it won't help traffic and instead will just cause additional traffic fatalities and increase pollution and runoff into fragile aquatic ecosystems and threaten the endangered Barton Springs salamander. We need a full, transparent Environmental Impact Statement on this project. |

| | | |
|---|---|---|
| **4/30/2026** | Mark Metcalfe | Dear  Sir or Madame,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |

| **4/23/2026** | Mark Phillip | Dear CTRMA Board Members,<br><br>Please, no. Please.<br><br>Car sales are slowing, gas prices have soared, and the City of Austin took a stand against parking minimums just last year. Expanding MoPac is two decades too late--missing the boat isn't a reason to do it now, when the city wants smarter, environmentally-friendly transit.<br><br>Thanks,<br><br>Mark Phillip |
| **4/18/2026** | Mark Pruett | I appreciate the desire to reduce congestion. However I do not believe expressway lanes will solve the problem and prioritize the longer distance travelers instead of more local traffic. There is already enough space at William Cannon on the shoulder to add an addtional lane that would not require this build. Consider going with that first. The additional cost of maintaining the roadway for the state, creating more noise for residents and distrupting local mobility for years while reducing quality of life and increasing pollution is not worth it. Thank you for your work. |
| **5/2/2026** | Mark Ramos | Provided that the environmental impacts are handled as effectively as possible to mitigate the impacts on the ecosystem and community. I think that the build alternative is a great solution to the corridor. As a south Austin resident, I'd like to see access to downtown Austin via bicycle be more accessible. I also think that the Bee Caves intersection could be improved with the proposed ideas shown. |

| | | |
|---|---|---|
| **4/29/2026** | Mark Ramseur | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. | **3/19/2026** | Mark Sainsbury | Widening is no long term solution as it will not reduce future traffic volume. A stiff toll for through traffic, or at least through goods traffic, would be much more effective and actually make money for the City rather than lose it. Through traffic would divert to the existing bypass routes to avoid the toll. |
| **5/3/2026** | Mark Sullivan | Opposition to the significant impacts |
| **5/3/2026** | Mark Sullivan | I don’t trust CTRMA.  This seems like an inside job.  The ctrma board is voting on their own project.  Reject this nonsense |

| | | |
|---|---|---|
| **4/20/2026** | Mark Warren | Build it and they will come. That's been the experience for Austin area highways for decades. Yes, they are coming anyway, by the scores of thousands; which, of course, everyone on earth believes to be a good and desirable thing: that is an accepted, sacred precept here in Austin and the US in general. Eat up more natural landscape, cover it with more asphalt, concrete, and storefront shops and gas station/quickie-marts, suck more water out of the ground, build more highways, pollute more streams, introduce more traffic noise and air pollution into neighborhoods, etc… $825 million to save 5 minutes rush hour commute time in 2045 versus today? If you are estimating $825 million, it is a given that it will cost well over $1 billion. Here's an idea. Use that billion dollars and the $600k a year in lane maintenance costs to promote, encourage, and/or subsidize city businesses going to 2 or 3 day in-office work weeks and staggered work hours. Any idea how much traffic might be reduced in that way? I admit Austin traffic was considerably nicer in the 1950's when I grew up here. It has become a nightmare, and building more and more and more roads is, ultimately, not the answer. But let's face the facts: TXDOT and the road-builders absolutely love building more roads, and virtually never see an opportunity for building more highways that they do not love. It is a foregone conclusion that your recommendation, regardless of non-traffic impacts, will be to build Mopac into an even bigger monster than it is today. Then repeat the process 15 years from now. Then repeat… Try a change of outlook. |

| | | |
|---|---|---|
| **4/22/2026** | Mark Weiler | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| **4/25/2026** | Marlee Jenkins | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Marlene Clark | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Marlene Clark |

| | | |
|---|---|---|
| **3/21/2026** | Marley Collins | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Marley Collins |

| | | |
|---|---|---|
| **5/3/2026** | Marley Jones | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

There are SEVERAL Heritage Trees you absolutely cannot cut down<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>There is zero consideration for east/west residents. What you are doing is destroying further the historic areas around lake Austin Blvd.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Marsha Fatino |
| **3/19/2026** | Marsha Fatino | I DO NOT WANT This Mopac expansion!!!! I oppose it for multiple reasons. This does NOT belong anywhere near residents, the schools, deep Eddy, historic buildings, zilker park and the absolute most sensitive - our aquifer. PS sound walls are hideous and do not work. |
| **4/7/2026** | Marsha Riti | I do not support the expansion of Mopac. I think this expansion would cause too much degradation to our environment and further enforce a car-centric modality in Austin. |

| | | |
|---|---|---|
| **4/5/2026** | Marshall Fish | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/17/2026** | Marta Mcdougle | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Marta Mcdougle |

| | | |
|---|---|---|
| **5/3/2026** | Martha Adams | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |

|---|---|---|
| **3/18/2026** | Martha Leonino | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Martha Leonino |

| **5/1/2026** | Martha Rogers | I am concerned about the proposed southern expansion of MoPac because of possible harm to endangered species, the Edwards Aquifer, Austin High School students and parks. CTRMA must conduct a full Environmental Impact Statement (EIS) analysis. Under the National Environmental Policy Act, a full EIS is required when a project will significantly impact the environment. Drilling into the Edwards Aquifer, harming endangered species, damaging parks, and worsening air quality next to Austin High School are all significant impacts that should trigger a full EIS. This project started in 2011, and the traffic model used to dismiss alternatives was finalized in 2012—over 14 years ago. Since then, we've had a pandemic, expanded telecommuting, and approved Project Connect. CTRMA needs to rethink this project with reconsideration of alternatives, updated data, and consideration of local goals and policies. After 5 to 7 years of disruptive construction, the project will save only 5 to 6 minutes for someone traveling the entire 8.77-mile length during rush hour. Meanwhile, construction delays will largely zero out these minimal improvements. CTRMA admits the expansion will adversely affect 4 federally endangered species, but it refuses to consider design alternatives that could avoid these impacts. Construction will threaten the clean flow of groundwater to Barton Springs and kill cave ecosystems that cannot be restored. Austin High School students and nearby residents will be exposed to higher levels of fine particulate matter (PM2.5) from increased traffic, tire wear, and brake dust. CTRMA's claim that air quality will improve — even though 331 million more Vehicle Miles Traveled (VMT) will be added to the corridor per year — is not credible. The proposed water quality treatment doesn't meet the standards that Travis County and the City of Austin use for their own roads. During construction, rain runoff will carry sediment and pollutants directly into the Edwards Aquifer Recharge Zone, causing irreversible harm. |

| **4/23/2026** | Marti Martinez | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Marti Martinez |
| **3/11/2026** | Martine Boursiquot-LaConte | The plans looks great, really hoping the project can start sooner rather than later considering how long it'll take. |
| **5/3/2026** | Mary | I am opposed to the proposed expansion over zilker park and baron springs watershed. I am a regular swimmer at barton springs pool. The springs are already compromised with any heavy rains carry runoff. It takes days for the barton spring pool waters to clear with the existing traffic levels on loop 1. Why not work to decrease the traffic levels thru loop 1 at peak times w remote work and staggered hours/or divert traffic to loop 360 or 35 but not through this fragile ecosystem. Explore other options and do a more thorough environmental impact study. |

| | | |
|---|---|---|
| **4/24/2026** | Mary Bailey | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Mary C Hooper | To whom it may concern: I've lived in Austin for 39 years. The natural beauty of our city, along with the ease of accessing it, is one of the main reasons why my husband and I chose to raise our family here. We frequent the hike and bike trail, and enjoy various outdoor activities on and around Ladybird Lake. I am concerned about the proposed plans for the South MoPac extension, which may impact our beloved river, Zilker Park, Barton Creek and Barton Springs, as well as wildlife in the area. I'm writing in support of a full Environmental Impact Statement (EIS), in order to better understand the impacts. Thank you for your consideration. |

| | | |
|---|---|---|
| **5/2/2026** | Mary C Kahle | Hi, my name is Mary Kahle, and I oppose the Mopac South extension. I fear that simply adding more lanes will just increase the number of cars (induced demand) on our roads while damaging the environment in the area affected by the extension. I urge you to conduct a full environmental impact statement. The short- and long-term effects of the proposed extension on the surrounding areas need to be fully documented so that good decision-making takes place. Such a study would also inform how we mitigate any detrimental effects of whatever we do as a city decide to do.<br><br>I also urge you to look into increased funding for bike trails as well as various forms of public transit. Austin needs to fully embrace alternatives to cars to make our city more livable and environmentally-friendly. I'm so sick of having to take a car everywhere I could scream...<br><br>Thank you.<br><br>Mary C. Kahle |

| | | |
|---|---|---|
| **4/22/2026** | Mary Catherine Finley | Dear CTRMA Board Members,<br><br>To whom it may concern:<br><br>I am writing to you as a citizen of the City of Austin, who works within Parks and Recreation and works specifically with the Edward's Aquifer. I find the actions taken by CTrMA regarding the MoPac South Expansion reprehensible and irresponsible for the following reasons.<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Mary Catherine Finley |

| | | |
|---|---|---|
| **4/22/2026** | Mary Catherine Finley | Dear CTRMA Board Members,<br><br>To whom it may concern:<br><br>I am writing to you as a citizen of the City of Austin, who works within Parks and Recreation and works specifically with the Edward's Aquifer. | | | |
|---|---|---|
| | | Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Mary Catherine Finley |
| **5/2/2026** | Mary Catherine Spinks | As a part of the Austin community, I oppose this proposed project. |

| | | |
|---|---|---|
| **5/3/2026** | Mary Chaney | Dear CTRMA Board Members, Please do not move forward with this project. Many in the community do not wish for this to move forward including myself. More road is not the answer. I commute 5 days a week on Mopac and do not feel like this is necessary, just another waste of money that will affect the quality of life for people and wildlife. I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Mary Chaney |

| **5/3/2026** | Mary Fero | Progress means making things better. Don't threaten our environment with these plans. |

| | | |
|---|---|---|
| **4/20/2026** | Mary Furey | Dear CTRMA,<br>I am a born and raised Austinite. One thing I love about my city is the green space that surrounds us. It's so easily accessible!<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/2/2026** | Mary Griffith | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45, which is very dangerous. City Council District 8 has now allocated $117,000 to the design of this path as they recognize the important need for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request, and I can provide further information, including graphics. Thank you. |

|---|---|---|
| **4/23/2026** | Mary Kahle | Dear CTRMA Board Members,<br><br>As an environmental historian with a focus on Barton Springs and the surrounding area, I'm deeply concerned about plans to extend Mopac south. I urge you to to conduct thorough analysis of other options so that this incredibly valuable part of our natural landscape (the entire area of the extension, not just Barton Springs) will not be permanently damaged. I'm also concerned about the public's access to the recreation areas around Zilker Park and Lady Bird Lake during and after construction.<br><br>Thank you.<br><br>Respectfully,<br><br>Mary Kahle |
| **5/3/2026** | Mary Kraemer | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Mary Kraemer |

| | | |
|---|---|---|
| **4/23/2026** | Mary Lagroue | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br><br>- Avoid parkland encroachment<br><br>- Capital improvement reimbursements for affected community assets<br><br>- A noise wall workshop with meaningful community input<br><br>- An open space fund dedicated to long-term preservation and restoration<br><br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |

| **4/22/2026** | Mary Leedy | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **4/22/2026** | Mary Leedy | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/1/2026** | Mary Lou Bell | I am seriously worried about the effect on Zilker Botanical Gardens. Losing land is not acceptable for this jewel of Austin. The traffic noise and pollution from cars are already extreme and extremely detrimental |

| | | |
|---|---|---|
| **5/1/2026** | Mary Lou Bell | Please rethink the extension. It will irreparably hurt the environment plus the additional noise pollution. I'm most worried about the damaging effects on the Zilker Botanical Garden. This is a jewel and it will be reduced in size and the effects of the traffic will impact the animals and plants. Andrew Zilker did not donate his land to be used as a speed through highway but as a place of recreation and beauty for Austin. Please use the money for adding bike and pedestrian lanes and other less damaging ways to help with traffic.<br><br>Mary Lou Bell |
| **5/3/2026** | Mary Martin | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Mary Martin |
| **5/2/2026** | Mary McKeown-Christie | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/22/2026** | Mary McManis | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration of the aquifer and surrounding land<br><br>Thank you for your time and consideration. |
| **4/22/2026** | Mary McManis | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Mary Oliver | Hello, my name is Mary Oliver. I am an Austin resident for 18 years, a registered voter,and I strongly object to what is happening with the MOPAC expansion plan. I think it'scompletely irresponsible. I think it does not honor the public's wishes. I believe itto be a misuse of taxpayer dollars, and I find it reprehensible that there has beencomprehensive publicly available or even done at all environmental impact studyand I really feel incensed that you are putting at risk what makes Austinspecial our greenbelt our waterways Spartan Springs and we don't need moretraffic we don't need more temporary solutions and the next few years wouldbe a disaster to have this even done so thank you for honoring the public'sand stopping the MOPAC expansion plan.Again, Mary Oliver, registered voter,longtime Austin resident. |

| | | |
|---|---|---|
| **3/20/2026** | Mary Olmstead | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Mary Olmstead |

| | | |
|---|---|---|
| **5/1/2026** | mary olmstead | I oppose the proposed MoPac extension. Instead, let’s make it more user friendly for different modes of transportation.<br><br>* Adds wide, shaded bike and pedestrian paths<br><br>* Creates bike-pedestrian east-west crossings every quarter mile<br><br>* Improves transit reliability<br><br>* Does NOT expand the highway<br><br>Mary Olmstead |

| | | |
|---|---|---|
| **4/20/2026** | Mary Reed | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Mary Ruth Wilmore | Do not do this and destroy what's left of Barton Creek. |
| **5/3/2026** | Mary Sahs | I object to using any park land for the project. Additionally, if it is built, extraordinary safeguards must be required to ensure no adverse impacts to lakes, streams, or other natural environments. This is a huge project and in the past, TXDOT has not shown itself to be stongly protective of such fragile places. |
| **5/1/2026** | Mary Smith | This project needs to do an environmental impact survey in order for me to support it. This stretch of road is also the LEAST clogged stretch of my commute down to dripping springs- that title would go to all of the stoplights along 290 west of the Y at oak hill. I would prefer that these resources be allocated towards road repairs and creation of new roads rather than tolls, but at a minimum if toll construction is going to be forced upon me then at a minimum I expect CTRMA to do their due diligence to not adversely affect the delicate ecosystem that we share with the creatures beyond humans that call Central Texas their home. |

| | | |
|---|---|---|
| **5/3/2026** | Mary Standifer | I am writing to plead-- indeed, demand-- that a full environmental statement be prepared for this project.<br><br>I am vehemently opposed to this project on the grounds that the cost, for the pitiful projected benefit, is egregious, and even more so because the blindingly obvious damage the project would cause to our water, air quality, and endangered species is unconscionable.<br><br>Sincerely,<br><br>Mary Standifer<br><br>Austin, Texas 78703 |

| | | |
|---|---|---|
| **3/13/2026** | Mary Taylor Scherz | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Mary Taylor Scherz |

| | | |
|---|---|---|
| **4/29/2026** | mary warren | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Mary Wheelock | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **3/27/2026** | Mary Wilson | Dear CTRMA Board Members,<br><br>I recently heard about the proposed Mopac South Expansion and I STRONGLY oppose this project. I have lived in south Austin (Circle C Ranch) for 30 years. And yes, the traffic on South Mopac has increased significantly over time. It is my experience traveling up and down Mopac that while traffic can move slowly at times, I always get to where I'm going in a fairly reasonable time. Major construction for a widening project along 8+ miles of Mopac sounds HORRIFIC! The extreme regional disruption, endless traffic congestion, major driver stress and serious environmental disturbances (a construction that will last for who knows how long!) are negative consequences that far out weight the "slow moving traffic" during rush hours. I strongely urge you to do a full Environmental Impact Study with full public comment/imput before moving ahead with this project. Thank you, Mary Wilson<br><br>For the love of water in Central Texas,<br><br>Mary Wilson |
| **4/30/2026** | Maryssa Bradley | I'm concerned about the environmental impacts that could result from this expansion. Additionally, I would love more information on why another toll road is considered necessary if this expansion were to happen. |
| **5/2/2026** | mason clark | Dear CTRMA,<br>Please work with city council on the best options here. Please be environmentally conscious. And for the love of God, don't let this construction project last for years. I'm tired of the entire city being under construction.<br>—<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Matalee gentry | Do not put Barton springs and our aquifer at risk by expanding mopac. We do not need a tollway from Cesar Chavez south, it is unnecessary, costly, and a huge cluster for years during the process. It puts businesses, wildlife and nature at risk!! Also, let's use those funds to support AISD instead and get our public schools out of 181M in debt! We don't need this. |

| | | |
|---|---|---|
| **4/20/2026** | Mateo Gupta | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/29/2026** | Matt | * Hi,<br><br>*<br><br>* I OPPOSE expanding MoPac South. Instead, I SUPPORT regional rail and a world class bike/pedestrian network. I want a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA).<br><br>*<br><br>* Most of all, highway-centric planning impacts my life. I am unable to drive due to disability. Expanding MoPac would make walking and cycling more dangerous for people like me, while depriving us of better alternative transport options. The best vision for our future is one that prioritises multi-modal transport access for all people, where cities are designed for people, not cars, where driving is not viewed as a necessity.<br><br>* |

| | | |
|---|---|---|
| **5/1/2026** | Matt | We stand with the Better MoPac Coalition in OPPOSING the expansion of MoPac South.<br><br>The results of expansion:<br><br>-More traffic, pollution, noise, and crashes.<br><br>-110+ acres of new highway pavement destroying the pristine natural landscape.<br><br>-$825m+ wasted, which could fund transit, bicycling, & walking.<br><br>-9 years of construction for a worse outcome. |
| **5/3/2026** | Matt Beaman | Please do not build anything that will affect the very fragile ecosystem of Barton Springs. It is truly the soul of Austin that it would be a travesty to further destroy it. |
| **5/3/2026** | Matt Beatrickson | Hello, yes, my name is Matt Beatrickson.I am a long time Austin resident,lives here about 15 yearsand I've been quite involved in a lot ofjust community efforts, community engagementsand I'm very interested in sustainability.And the more I've looked at this highway expansion project,I'm very much not in favor of it.It seems quite short-sightedand only benefits more sprawl developmentAnd, I don't think that's the way we should be developing our precious home.It seems really ignorant in the long run.And the downstream impacts are not being looked at near enough, in my opinion, as far as actuallong-term impacts on traffic and where people are going to move to and all the environmentalimpacts thereof, I'm strongly opposed to this.And I think I'd really appreciate if,if this whole thing stopped.Thank you. |

| | | |

| **5/3/2026** | Matt Dietrichson | Dear CTRMA Board Members, I am not in support of this. No more sprawl. No more endless unsustainable development --- I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Matt Dietrichson |

| **4/30/2026** | Matt Geske | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |

| | | |
|---|---|---|
| **5/3/2026** | Matt Grebosky | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Matt Grebosky |
| **5/3/2026** | matt gunn | Dear CTRMA Board Members, To my astonishment I have been watching the MoPac South expansion plan unfold with virtually minimal concern on its impact on the community or the environment. This project is a huge threat to the Edwards Aquifer Recharge Zone, which ,e and my family depends on for water, which we have no alternative way of obtaining unless at prohibitive costs. It is regretful that those who will profit the most from this expansion, either do not live here, or have the means to import whatever water is necessary for them from wherever. I and most of my neighbors simply are not at that level of wealth. I implore you to reconsider your position, giving full voice to the environmental and sustainibility concerns that are being raised. Sincerely, Hasmet Akgun |

| | | |
|---|---|---|
| **4/29/2026** | Matt Harriss | This project represents another step in catching our infrastructure up to the last 20 years of population growth. The traffic is already here! This will simply improve the traffic flow into and our of downtown as well as improve the existing stormwater infrastructure. |
| **4/6/2026** | Matt Hirschy | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten |

| | | |
|---|---|---|
| | | survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. |

| | | |

|---|---|---|
| **4/28/2026** | Matt Lipps | I have never seen a highway expansion, of any sort, that hasn't, in short order, returned to the exact same levels of congestion as before the construction, to say nothing of the interruptions of construction themselves. This expansion is pointless and incentivizes social ills — high-emission super commutes, smog, noise pollution, you name it. And it costs us access to beautiful trails, the source of our relief in the summer and refuge from Domain-ified hellscapes elsewhere in the city. The construction will cause traffic until it is completed, then congestion will be modestly alleviated, then increased home construction in suburbs and exurbs will restore traffic to prior levels. This is a gift to builders and would-be residents of these exurbs, at the expense of Austin communities. Without Austin's fine local trails, she is a sterile blemish on the land. We are better than arcade bars and restaurants. Everything precious about Austin comes from her trails. We deserve access in our neighborhood! I hate to see my city become Houston, all for some stupid utilitarian, GDP-brained argument that does permanent damage to the city's finest outdoor features all for some hairbrained, falsifyable "more jobs" mumbo jumbo. Get it together, Austin and friends, you're falling fast. |
| **5/2/2026** | Matt Miller | I know this is likely not going to change anyone's mind since it seems like more lanes is the go-to answer for Texas roads these days, but please do not expand MOPAC further with this proposed project. This area is one of the most precious, environmentally sensitive areas our city has. A negligible increase in the amount of cars this highway can hold will only disrupt the environment and the people of Austin at a time when every other major highway is already under constructions right now. No matter what area of the city I travel to, it feels like I'm navigating the highways out of a MAD MAX movie—dangerously uneven lanes, swerving through endless orange signs & cones and lane markers that come and go as they please. It's dangerous. The city needs better alternative transportation options, not endless funding of more cars, more lanes, more traffic. We're very lucky to live in such a prosperous city but it's time we grow up and act like a mature city that funds other types of projects (rail, public transit, biking, etc.) and not continue our current cycle of impetuous waste on quick fixes that destroys what continues to attract people to Austin only to be torn up and expanded in another 15 years. Please, stop this madness.<br><br>-Matt Miller<br>Austin resident since 2009 |
| **3/20/2026** | Matt Plotz | DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. Better city design and mix use policies will encourage more jobs closer to home. This will cut down on traffic and bring in more sales tax to the suburbs. |

| | | |
|---|---|---|
| **5/3/2026** | Matt Shook | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Matt Shook |
| **5/3/2026** | Matt Shuff | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Matt Shuff |
| **3/22/2026** | Matt Welch | DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin’s climate and mode-shift goals. DO WANT: Continuous pedestrian-bicycle paths along the project’s length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **3/27/2026** | Matthew Arth | I would urge y’all to only install one variable toll lane in each direction, not two. I would also request that y’all consider a non-toll overpass connector from westbound 360 to northbound MoPac. Finally, I would recommend that the toll lane extend all the way to 45 South. |

| | | |
|---|---|---|
| **4/20/2026** | Matthew Burkhart | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/11/2026** | Matthew Condon | To Whom It May Concern,<br><br>I am writing to oppose the MoPac South Build Alternative (2C) as presented in the draft Environmental Assessment.<br><br>Decades of transportation research consistently demonstrate that adding highway capacity does not resolve congestion. Induced demand — the well-documented phenomenon in which new road capacity generates new vehicle trips — means that the projected travel-time savings in the draft EA are likely overstated and temporary. The Texas Transportation Institute's own data shows this pattern across the state's metro areas, including Austin.<br><br>The $825 million price tag, funded primarily through federal loans and toll revenue, locks the region into a car-dependent infrastructure model for decades when Austin should be investing in transit, protected bike infrastructure, and land use strategies that actually reduce vehicle miles traveled. The existing MoPac North express lane opened in 2017, and congestion on that corridor has not meaningfully improved — there is no reason to expect a different outcome to the south.<br><br>I also share the concerns raised by the City of Austin's Urban and Transportation Commission: this project warrants a full Environmental Impact Statement, not a lighter Environmental Assessment. The draft EA does not adequately address impacts to the Edwards Aquifer recharge zone, east-west traffic disruption for communities like Rollingwood and West Lake Hills, or alignment with Austin's climate and mobility goals.<br><br>I urge CTRMA and TxDOT to pursue the No Build Alternative and redirect resources toward multimodal transportation investments that will serve the corridor's long-term needs. |

| | | |
|---|---|---|
| **5/1/2026** | Matthew Hardy | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |
| **5/3/2026** | matthew holmes | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Matthew Maldonado | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Matthew Maldonado |

| **4/20/2026** | Matthew Przybyla | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/24/2026** | Matthew Rerecich | I am firmly opposed to the Mopac South toll lane project with three main objections (limited by space...):<br>1. This project concept has negligible benefits for non-tolled users, and none at all for travel times for these users. As such, all of the expense and environmental damage is a waste of money and harm to local eco- and-hydrosystems, and doing nothing would absolutely be the better choice.<br>2. This project design predates Project Connect by 6-8 years and should be thrown out and restarted. The whole cost benefit assessment and selection process is absolute.<br>3. Project costs are to be carried by the City, while the benefits go to rich, out of Austin residents that really don't need a big infrastructure project to get downtown. |
| **4/23/2026** | Matthew Rodriguez | MoPac should not be expanded. Not only would there be environmental damage done to surrounding areas because of this project, but this project is something that residents do not want. Residents want more public transportation options, not highways that destroy our green spaces |

| | | |
|---|---|---|
| **5/1/2026** | Matthew Sanchez | We don’t need lane expansions or overhead freeways. $800 million + for 8 miles of roadway, increased traffic delays and environmental impact to our green spaces is a horrible idea! As someone that does the commute to downtown and back to slaughter ln on mopac everyday we don’t need it or want it. |
| **5/2/2026** | Matthew Sever | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/29/2026** | Matthew St Germain | Dear CTRMA, Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |
| **5/3/2026** | Matthew Stanford | Research and history do not reflect this project having merit. You're willfully damaging a sensitive area at great expense for minor, temporary improvement. Please do not do this. |

| | | |
|---|---|---|
| **4/28/2026** | matthew vonderahe | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Matthew Vonderahe |
| **5/2/2026** | Matthew Waghorn | Hi, good evening. My name is Matthew Waghorn. I'm a new resident of Austin. I moved here two years ago.It's just come to my attention that the development on the Mopac Expressway is proceeding without a comprehensive environmental report or certification.and I'm not quite sure the nomenclature here,but I strongly oppose the buildingor the progress of this projectwithout a full environmental protection investigation. |

| | | |
|---|---|---|
| **4/30/2026** | Matthew Welch | * I oppose expanding MoPac South.<br><br>* Instead, I support other, more efficient forms of transportation, including improvement to our bike and pedestrian network.<br><br>* Resources are not limitless. We need to stop building as though they are.<br><br>* I want a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA).<br><br>* I have seen the areas south and west of Austin devastated by unsustainable urban sprawl. This will only encourage more of that. |
| **5/3/2026** | Matthew Wigglesowrth | Hello. My name is Matthew Wigglesworth. I'm the founder of Ayala Austin, which is a danceand meditation event, a community building event that was born by the monkey tree atBarton Springs with encouragement to go swimming in Barton Springs after the dance and meditation.And Barton Springs really saved my life, the water of Barton Springs.When I moved to Austin four years ago, I was an alcoholic.And I made the decision to quit drinking two and a half years ago, almost exactly.And Barton Springs was my sanctuary, has been my sanctuary since.It's the reason I found my sober community right outside of the entrance of Barton Springsat the Monkey Tree.And it's where my heart is.I love the waters of Barton Springs.They have a healing quality to them.I have a goggle that I love to go diving in Barton Springs with and look at the fish.I've never seen the salamanders, but I love that we have and host two endangered speciesof salamanders in Barton Springs.It's incredibly special.I've never seen anything like Barton Springs in anywhere I've ever been in my travels.I urge you to complete a full and lawful environmental impact statement.It is the right thing to do, is what this community is owed.It's what Barton Springs deserves.It's the right thing to do.And I know that from this community outreach, you'll hear our voices, hear how much thisplace means to us, hear how important the water quality is at Barton Springs.Take our voices into account.You are not our enemy. You are our fellow community members, and we are pleading with you.Please, please listen to us. Please do the right thing.Please do an environmental impact statement. We appreciate you listening to us, cheering us out.We urge you to do the right thing, do the lawful thing and listen to the community membersthat love Barton Springs and Edwards Aquifer and Zilker Park.Thank you. |
| **4/26/2026** | Matthew Wigglesworth | I love Barton Springs with all of my heart. It is my place of peace and exercise. I swim in the water daily. This expansion will most likely impact the quality of Barton Springs water. The only way to truly know is to do a true EIS. I URGE a full and transparent environmental impact statement. |

| | | |
|---|---|---|

| | | |
|---|---|---|
| **3/24/2026** | Maureen | Hello<br><br>I am Maureen Zachas, a resident of Austin, Texas. I am reaching out to make it known that I oppose the expansion of the mopac highway. The biggest reason I oppose this project is because it doesn't solve the problem. The only way to save time (5 mins) is if you are going along the whole 10 miles. Most people aren't commuting along the whole stretch of the highway. Also it's known that if you create more space then people will come, the expansion will work for a month or two but soon enough it's going to be bumper to bumper again. Another reason i oppose this project is the environmental aspect of it, filling in caves, doing construction right next to a fragile ecosystem is frankly stupid. We need to think about the environmental consequences when planning a construction project. and poisoning the water where animals like salamanders live. Salamanders animals breathe through their skin so any changings to their water, like construction runoff is gonna cause them to die. Another reason I oppose this expansion is because its going to make the commute more dangerous for the highschoolers trying to get to Austin highschool due to the detours that have to happen while the road is under construction, sending more traffic right in front of the school where new drivers have to go. Lastly the timing of the project isn't practical, having both major highways that take you north and south through Austin under major construction is going to be a nightmare for everyone involved and will create even worse traffic in the meantime. What the public really wants is more reliable and safe public transit. Invest in bussing systems by making the stops safer and easier to get to, and a reliable schedule. Construct commuter trains that help move people throughout the city without putting more cars on the road, and paving over more of our beautiful nature. Please listen to the people and cancel highway expansion and put that time and energy into more reliable public transit!!!<br><br>Thank you<br>Maureen |
| **4/24/2026** | Maureen Brown | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project. Please preserve what makes Austin a great place to work and live.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/1/2026** | Maureen Dee | Hello,<br><br>I would like to share my opinion on the planned expansion of MOPAC South. I oppose this expansion and instead support a regional rail and a world class bike and pedestrian network.<br><br>I know many people feel scared when they think of "public" transportation, sometimes so much so that they feel it is dangerous to their lives and well being when in fact the opposite is true. Rail and bike/pedestrian networks are so much better for health and wellness, business, the city, the environment and will save so much money. We keep expanding lanes and car-centric "solutions" that don't actually solve anything. We just see induced demand with these expansions and destruction of third spaces, removal of healthy areas, and we just increase the costs across the board to maintain and repair all of this pavement and road.<br><br>Cars are very loud -- not just because of horns and engine noise, but the wheels on the road generate noise. Cars pollute our air (and air pollution causes heart disease which is the number 1 killer of human beings). We will just see more crashes and human beings being harmed, maimed, and killed by these crashes. We already lose more than enough souls on Texas roads each year.<br><br>The ultimate point is that decades worth of hard evidence and studies prove that expanding lanes and car infrastructure does NOT provide relief, but provides more of the negative effects of a car centric society. If nothing else, if we do not care about human lives, well being and health, children's safety, the environment, noise, pollution, loss of beautiful and walkable healthy spaces, loss of places for people to happily congregate and feel safe -- think of the COST. The MONEY. These "solutions" are not solutions. They solve absolutely nothing. They just add more pavement, roads, injuries, deaths, and demand. They add more to have to repair. We will have to be taxed higher and higher to cover all these costs.<br><br>We need a RAIL system. We need it desperately. We need to get as many people off the roads as possible and using a rail system, a strong bike network, and a safe pedestrian network. That way those people who MUST use cars can do so more safely at a lower cost plus they will see way more convenience with less cars on the road. You won't help the congestion by increasing car lanes. People will always fill those lanes and they'll just get congested again and again. This is what we have seen in the historical data from the beginning of car centric city planning.<br><br>It is illogical, unreasonable and irrational to ignore all of the evidence. Yes, people get scared of public transport and they're |

| | | |
|---|---|---|
| | | all emotional about feeling that the "wrong kind" of people will come through "their" neighborhoods. This is outright racism first and foremost, but it also creates a prison for these NIMBYs whereby they harm themselves by giving up their liberty in pursuit of an imagined safety. They're not even safer! Every person who goes to a meeting and says that public rail will harm the area are thinking only of themselves and only through a lense of fear. These folks live in fear and facts can't get through. I hope that you will see beyond feelings and study the evidence. It's clear that we need spaces designed for people. People want health and peace and they could have a lot more of both with proper systems in place that serve their needs instead of created "needs" that come from car manufacturers who want to convince everyone that sitting in a car makes you better than everyone around you and that you'll die of you don't have a car or use one constantly. This works well for the car companies, but is killing actual people and making miserable, ugly, expensive, and unhealthy cities.<br><br>I also want a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA).<br><br>Thank you for listening.<br><br>Maureen Dee |

| | | |
|---|---|---|
| **4/17/2026** | Maureen Haskell | Dear CTRMA Board Members,<br><br>Here:<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Maureen Haskell |
| **5/2/2026** | Maureen Haskell | Please do not add on to Mopac in the area that will impact local water ways and native plants and species in such a significant negative way. This endangers Barton Springs Pool and the surrounding areas. Please find another way to improve traffic. Thank you for your consideration. Longtime Austin resident and Native Texan. |

| | | |
|---|---|---|
| **5/3/2026** | Maureen Ryan | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | maureen zachas | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, maureen zachas |

Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, maureen zachas |

| **4/24/2026** | Max Efremov | Dear CTRMA Board Members,<br><br>Hello Board Members,<br><br>We are on the verge of AI, robotics, and mass automation. Traffic is about to be a non-issue. Let's not tear up the precious remaining land, water tables, and nature that surrounds us.<br><br>We made it!! Meaning, there's nothing really left to worry about as we enter a post-economic scarcity society—nothing left for us to do BESIDES be excellent to each other, love another more skillfully. The only thing that will remain scarce is wisdom and love. It's kind of a head trip.<br><br>Big love<br><br>Max<br><br>Sincerely,<br><br>Max Efremov |

| | | |
|---|---|---|
| **4/24/2026** | Max Geller | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Max Geller |

| | | |
|---|---|---|
| **5/1/2026** | max hensley | In 2005 I moved to Texas from California. My first stop was Austin, where initially I planned to put down roots. I lasted two weeks there before moving on to San Antonio. The traffic was EXCRABLE - side streets so jammed it would take several turns to pass through lights, the freeways backed up night and day, horrible. It was obvious that the environmental types had so wrecked things that nobody was going to get around that town and I wanted no part of it. Let me use this opportunity to protest the continuing gumming up of cross-Austin traffic by the granola types. Happy to be living now in a city that knows how to build freeways. |
| **5/3/2026** | Maximillian Henton | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. Key concerns include: Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement. *** Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.***Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.***Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover. With the increased impervious surfaces, water will not be able to recharge the Edwards Aquifer. We are already in a drought, and we need to increase water storage, not decrease it. The run off creates flooding of water that we can't even use. Impervious surfaces also create urban heat islands, and it is already way too hot<br><br>What good is another toll road that nobody wants to pay for if there is no clean water? It's bad for people, it's bad for business, and it is bad for our local government. We need better design and solutions, rather than building another road. People will come to the places where government and the citizens take care of the land that was fought for, not land that is drying up from mismanagement and poor choices. Once you run out water, you run out of life Sincerely, Maximillian Henton |

| **4/26/2026** | Maya F Madere | I grew up in Austin and have experienced first hand how important the Edwards aquifer and Barton creek waterways/ green spaces are to the people of Austin. I implore you not to go through with this project. As it's currently planned the impact on the surrounding environment, ecosystem and community will be disastrous. Please do not destroy the land that gives Austin its heart in the name of convenience. These tax dollars would be so much better spent improving the infrastructure of Austin in other ways that enrich the lives of residents rather than imperiling their health and quality of life. |
| **4/22/2026** | Maya Malev | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| **5/3/2026** | Maya Martinez | I am strongly against any construction that would negatively impact Barton springs. A majority of Austinites are against the Mopac South tollway and don't want this. Protect our springs, save our springs, keep Austin beautiful and environmentally protected. |
| **3/31/2026** | Maya Mendivil | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Maya Mendivil |

| | | |
|---|---|---|
| **5/3/2026** | Maya Misikoff | I was born in Austin, went to UT, and recently moved back after several years living in other major cities to raise my family. Please do not expand Mopac at the expense of our springs. Recent expansions of other major highways have already eroded so much of the city's beauty and appeal. Austin is unlike other cities because of natural glimmers that give it character. Please do not move forward with Mopac expansion. It will not help with traffic long term but will permanently diminish the appeal of this wonderful city. |
| **5/3/2026** | Maya Talamantez | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful |

| | | |
|---|---|---|
| | | public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Maya Talamantez |

| | | |
|---|---|---|
| **4/30/2026** | Mayra Cerda-Gomez | Hello There,<br><br>As citizen who travels MoPac often, I oppose its expansion. Expanding roads has not solved the congestion--only worsens the pollution.<br><br>It's better if Austin improves the public transportation system, for example, the regional rail and the bike/pedestrian network. That is, investing more in these modes of transportation would make them a preferred choice, which would reduce congestion, improve our environment by reducing pollution, and have healthier citizens.<br><br>It is also important to have a Full Environmental Impact Statement, so we have a rounded understanding of the impact of this expansion.<br><br>Thank you for your time reading this,<br><br>Mayra Cerda-Gomez |

| | | |
|---|---|---|
| **5/3/2026** | Mayra Leen | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Mayra Leen |

| | | |

| **5/3/2026** | McKenna Foster | I have live in austin my whole life and have seen the changes to our creeks and waterways over the years, they are devastating. We cannot afford to damage these fragile systems any further. They are the reason people live in this city. No one will care about saving a little time on the highway when we are out of water. Please protect our home. |

| | | |
|---|---|---|
| **5/3/2026** | McKenna Glenn | I'm new to the ATX area like most of the residents here. I moved because of the natural resources and outdoor recreation. I'm an avid environmentalist and hiker. Since moving here I have heard time and time again from Austin natives how the greenbelt isn't what it used to be. How you can go swimming nearly all summer in the iconic swimming holes that are too many to name. But since moving here I have noticed how dried up everything is. I find remnants of "no jumping" near spyglass and I'm shocked that people used to swim there given how dry it is. The city of ATX needs to seriously consider whether this toll road is actually necessary to the livelihoods of Austinites. The road would critically affect the already weakened aquifers. I personally feel guilty after moving here knowing that I'm contributing to the water usage that is affecting the outdoor recreation that generations and generations of Austinites have enjoyed. I wish that those who come after me also get to enjoy the outdoor recreations. Please reconsider this TXdot project. Please protect the water and the outdoor recreations that so many of us have moved here for. I see the pain in the locals eyes when they talk about how much Austin has changed and not necessarily for the better. We do not want this project. We want clean swimming water for all |
| **5/3/2026** | McKenna Haynes. | Hi there, this is McKenna Haynes. I am a resident from Austin, Texas, boredomraised and I just urge y 'all to actually go through with a full environmentalimpact statement with the full consensus of what the ramifications of the tollroads will be in terms of like I mean we've already like town like we can'tsummon anymore because of the bacteria and all the runoff from theconstruction so just like the additional I like actually want to see the statson like what the additional construction would lead to especially with like likeAustin like Travis like all the runoff like it's all connected and BartonSprings all the all the great green spaces that we have in Austin so yeah Iurge all to take that into consideration and keep Austin where it's supposed to be.Thank you.Bye. |
| **5/2/2026** | McKinley Lucas | Hello<br>To whom it may concern<br>I was born in Austin. I have lived here my whole life. I went to Austin High School, which happens to be right in your line of construction. I walked the pedestrian bridge to school daily for two of my years at Austin High. That bridge and the open overhead sky, mixed with the already awful MoPac sound with morning traffic, but it was sacred and special. Rowers on the lake, birds, trees changing colors, etc. Expanding MoPac (esp with toll lanes ??? what?) is anti-Austin and not what the constituents of this city need.<br>I understand the population has grown but there are other ways to mitigate traffic. Don't disrupt the lake and all of its wonderful wildlife and scenery. |

| | | |
|---|---|---|
| **5/3/2026** | Meagan Butler | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Meagan Butler |

| | | |
|---|---|---|
| **4/24/2026** | Meagan Harris | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Meagan Harris |
| **5/3/2026** | Meagan Stagg | Dear CTRMA Board Members, As an Austin native I feel like I've signed countless petitions with the goal of preserving one of the main and only reasons I continue to live here, the beautiful natural springs. Please, please, please. Think of the power that you hold as an entity, the power to make or break the natural geography of this land, the land that was here before us and will continue to exist when we're all gone, but could potentially be ruined beyond recognition. Everything we love about Austin is constantly under threat. I can sit in traffic just fine, I can't bear to stand any further threat to our natural geography. NOBODY WANTS THIS. For the love of water in Central Texas, Meagan Stagg |

|---|---|---|
| **5/2/2026** | Megan | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |
| **5/3/2026** | Megan | Hi, my name is Megan, I live in 7-8-7-4-1 and I am in opposition to this.What needs to happen is that we need to do a full environmental impact statement as tohow this will impact the natural nature of Austin.And water quality and endangered species are not indispensable, they should be at the forefrontof this study and the forefront of how they're impacted before anything occurs.Our traffic data is outdated and quote-unquote no significant impact is not credible andoutdated.As an Austinite, I deserve clean water and clean air as do the rest of our residentsas does nature itself.Thank you and I do hope that you preserve what makes Austin what it is and what hascreated a destination city, a living city, and not driving out that which makes us greenand beautiful.Thank you very much.Thank you very much. |
| **4/24/2026** | Megan Armstrong | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/21/2026** | Megan Bennett | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Megan Bennett | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Megan Bennett |
| **4/27/2026** | Megan Bickford | Edward's Aquifer and Barton Springs are one of the coolest and most enjoyable things about Austin. We don't need highway expansion, we need to be protecting the land and our Springs! There are so many other places in the world that don't have what we have and it's obvious some people have taken natures beauty here for granted. I urge you to do a FULL environmental report study from a non-related organization about the effects the expansion will have on our local environment here. Regardless, I urge you to NOT expand Mopac. Statistically, more lanes only cause more traffic. Not less. Especially with how crazy and bad Austin drivers can be! Please do not make some idiot have to get over 5-7 lanes of traffic trying to make an exit they're not going to make. Logically, it will only cause more congestion, more traffic, and more road rage. Not to mention, there are so many better uses of our tax dollars. Please do not expand Mopac. It will cause irreversible damage to our environment and make Austin even less appealing overall (less tourist dollars and less money for our local economy if tourists don't want to come here). Please, please, please reconsider. I love the city of Austin and only want to see it thrive. Expanding Mopac is not the way. Thank you. |

| | | |
|---|---|---|
| **4/17/2026** | Megan Brinkerhoff | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Megan Brinkerhoff |
| **4/29/2026** | Megan Denae Lasch | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |

| | | |
|---|---|---|
| **5/3/2026** | Megan Flanagan | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Megan Flanagan |

| | | |
|---|---|---|
| **5/3/2026** | Megan Hess | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Megan Hess |
| **4/30/2026** | Megan Hill | Do NOT work on Mopac without any environmental oversight or testing! Last time Mopac was worked on a huge cave was found! Constructing Mopac without doing an environmental survey would impact MY and YOUR neighbors water supplies! Enough of our water is being taken by AI, don’t ruin our beautiful creeks and means of survival for more construction and concrete. SAVE OUR SPRINGS, DO THE ENVIRONMENTAL SAFETY CHECK FOR OUR CITIZENS SAKE. We demand TxDOT use our tax money properly and conduct a safety survey. |
| **5/3/2026** | Megan Kay | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Megan Kay |

| | | |
|---|---|---|
| **5/3/2026** | Megan lane | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/19/2026** | megan leriche | Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin’s climate and mode-shift goals. Instead consider: Continuous pedestrian-bicycle paths along the project’s length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **5/3/2026** | Megan McLoughlin | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Megan McLoughlin |

|---|---|---|
| **5/3/2026** | Megan Norregaard | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Megan Norregaard |
| **5/3/2026** | Megan Okonsky | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Megan Okonsky |
| **5/3/2026** | Megan Parker | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/29/2026** | Megan Raby | As an Austin resident, I'm writing to oppose the proposed MoPac South expansion in the strongest terms. This proposal will add 100+ acres of new pavement in an environmentally-sensitive area. CTRMA's claims that there will be no significant environmental impacts are laughable. I OPPOSE expanding MoPac South. Instead, I SUPPORT regional rail and a world class bike/pedestrian network. I demand a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA).<br><br>Megan Raby<br><br>Austin, texas |
| **5/3/2026** | Megan Ramey | Stop the TOLLS |
| **5/3/2026** | Megan Rumpf | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Megan Rumpf |

| | | |
|---|---|---|
| **4/28/2026** | Megan Ryan | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Megan Ryan |

| | | |
|---|---|---|
| **5/3/2026** | Megan Schwab | Dear CTRMA Board Members, As a native Austinite, one of the things I am proudest to show visiting friends and family are the things that make Austin unique and beautiful. That includes things like Bartom Springs. This expansion not only risks damaging or ruining one of the truly best things about a thriving metropolis like Austin, but the environmental impacts, which will eventually cost the city even more down the road, would further ruin this city. During a time when we are seeing the environment increasingly taken for granted, we should not be adding more layers of concrete and construction to an already vital and fragile ecosystem. We would be damaging the city's future by implementing this project. I ask you to reconsider this project in the name of not only our city, or for future geneations of Austinites, but also Mother Earth who is very much near the point of no return. Thank you. P.S. Below is the generated response, which is also important. It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Megan Schwab |
| **4/21/2026** | Megan Sieffert | Dear CTRMA,<br>Our green spaces are crucial for drainage, flood mitigation, and thermal management. This isn’t just about the future of green spaces. This is about the future of All Spaces.<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |

| **4/23/2026** | Megan Thompson | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I used to spend my days walking through Zilker park and running miles by Eddy's, under MoPac, and along Lady Bird lake. was made this runs so great wasn't the traffic I ran under Mopac, but the serene lake and park once i got to the other side.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/29/2026** | Megan W Frey | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. Thank you for your consideration. |
| **4/25/2026** | Meggan Dunne | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Meggan Dunne | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Meggan Dunne |
| **5/3/2026** | Meghan Graham | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Meghan Graham |
| **4/28/2026** | Melaina Newman | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| **5/3/2026** | Melanie Babbitt | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Melanie Babbitt |
| **5/2/2026** | Melanie Maroney | Hi. My name is Melanie Maroney. I live in Austin, Texas. I'm here to speak up againstthe MOPAC expansion. I demand to see a full environmental report. I want to save the endangeredspecies. This saving the waters and the animals is key and priority. I do not agree or supportthis expansion. Thank you. |

| | | |
|---|---|---|
| **4/22/2026** | Melanie Moroney | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Melanie Moroney |
| **5/1/2026** | Melanie Ritter | My name is Melanie Ritter.I am a local to Austin, Texas. I was born here. I've lived here for over 28 years of my life. I grew up in the area that that road will affect, you know,all the way from Westlake area to Circle C. I've lived in both.And I genuinely do not see any reason for that road to be built. There is no need.And we already have accessible enough roads, sure we have traffic, but there are otherways that we could mitigate that without building a second monstrosity. It would directly impact Austin's green spaces.The little it has, these are our most protected green spaces, these are our public parks.This would effectively destroy that, which it's already being encroached on. Y 'all haven't even finished I-35 yet.And I remember growing up, the MOPAC expansion project itself was kind of ridiculous. It took all over 10 years to finish. And even then, like, you only worked on it for two out of those 10 years.I just, I don't think Austin needs another road project now, especially we're on topof limestone caves.We have protected animals that are already endangered in that creek bed |

| | | |
|---|---|---|
| | | that y 'all wouldbe destroying.So as a local, I think you'll need to get the - out with whatever the - this is. I am not supporting this project. |
| **3/26/2026** | Melanie Stamps | I commute to work three days a week, and my travel patterns really highlight why this project matters. I often drive from Cedar Park to South Austin, and traffic regularly turns what should be a straightforward trip into nearly an hour one-way. By comparison, when I travel from Cedar Park to Round Rock, the commute is much more predictable. The most time-consuming part of my commute is getting onto IH 35, where just a few miles can take 10 minutes due to congestion. Improving travel time reliability would make a meaningful difference for people like me who rely on the system multiple days a week. I also appreciate the project's focus on emergency response reliability, transit integration, and better options for pedestrians and bicyclists, which are clearly needed as our city continues to grow. Whenever I visit other cities, I am struck by how connected and coordinated their transit networks feel. I have lived in Austin my entire life, and while transit plans have been discussed for as long as I can remember, progress feels slow. Seeing this project prioritize multimodal integration and long-term mobility gives me hope that we are moving in that direction with momentum. I support the goals outlined in the Purpose and Need. Austin will continue to expand and change, and we need to invest in making it safe, reliable, and easy to live here. |
| **4/19/2026** | Melba Whatley | Your message is ready to be sent with the following file or link attachments:<br><br>Board Letter to CTRMA (1) (002).pdf<br><br><<Attatchment>> |

| | | |
|---|---|---|
| **4/24/2026** | Melissa Avedon | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Most importantly, there must be ecological impact studies and approval from experts in that field based on those studies, making sure that this project doesn't destroy or damage in the corridor proposed our aquifers, native wildlife, and doesn't increase congestion and pollution in the areas where the expansion is going to take place and exit/enter.<br>Thank you for your time and consideration. |
| **4/22/2026** | Melissa Beckham | We need a full environmental assessment on the Mopac South expansion project. I am very concerned about the health consequences for students and staff at Austin High. I am very worried about the environmental effects on our water and Bartron Springs. We need transparency. |
| **4/23/2026** | Melissa Beckham Gass | The Mopac expansion product is not good for Austin. It is environmentally dangerous, poor for the health of students at Austin high, and the environmental study is incorrect. We do not want more toll lanes on Mopac. This should be voted on by the constituents in Austin. Please do not build more lanes or at least address our health and environmental concerns. |
| **5/3/2026** | Melissa Booth | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Melissa Booth |

| | | |
|---|---|---|
| **5/3/2026** | Melissa Burke | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Melissa Burke |

| | | |
|---|---|---|
| **5/3/2026** | Melissa Butcher | Dear CTRMA Board Members, I am writing to oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| **5/3/2026** | Melissa Chavez | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. | **5/2/2026** | Melissa Diller | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Melissa Duncan | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Melissa Fandos | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project. Please, please do not expand MoPac in any way! We do not need expansion. It displaces people and threatens our water source, which is already in severe conditions. The expansion prioritizes cars and the oil industry over everything else. And for what?<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>A permanent end to expansion. We need stop!!<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/24/2026** | Melissa Friesen | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Melissa Friesen |

| | | |
|---|---|---|
| **5/3/2026** | Melissa Grogan | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Melissa Grogan |

| | | |
|---|---|---|
| **4/4/2026** | Melissa Hagen | Dear CTRMA Board Members,<br><br>I am writing to submit my formal opposition to the proposed MoPac South expansion (Alternative 2C) and to urge the Central Texas Regional Mobility Authority and TxDOT to halt this project, conduct a full Environmental Impact Statement, and pursue genuinely sustainable transportation alternatives.<br><br>This project demands an EIS, not an EA.<br><br>The 8.77-mile corridor sits directly atop the Edwards Aquifer Recharge Zone — the geological heart of Central Texas water security, and the source that feeds Barton Springs Pool. Barton Springs is a civic and ecological jewel: a living, cold-water oasis that has drawn people to swim, gather, and connect with the natural world for generations, and that sustains rare species found nowhere else on Earth. A project of this scale and cost ($825 million) is precisely what a full Environmental Impact Statement was designed for. The City of Austin's Urban Transportation Commission, City Council members, and numerous community organizations have already called for an EIS. CTRMA's insistence that an EA is sufficient — over these objections — undermines the integrity of this entire review.<br><br>The aquifer and its species cannot be mitigated away.<br><br>The EA itself identifies endangered species potentially affected by this project, including the Austin blind salamander, the Barton Springs salamander, the bee cave harvestman, and the tooth-cave spider. These animals exist nowhere else on Earth. Years of heavy construction — grading, bridge widening, stormwater disruption — directly threaten the recharge zone above which all of this would occur. The EA's mitigation measures do not adequately address the cumulative, long-term risk of increased pollution runoff from widened impervious surfaces over this aquifer.<br><br>Expanding highways does not solve congestion.<br><br>Decades of transportation research confirm that added highway capacity generates new vehicle trips, recreating the congestion it was meant to relieve. Genuine alternatives — enhanced transit, protected cycling infrastructure, and demand management — have not received adequate study alongside this proposal. This community deserves a transportation plan built on that evidence. |

| | | |
|---|---|---|
| | | Barton Springs, the Greenbelt, and the Edwards Aquifer are not sacrificial offerings to traffic throughput. They are the living heart of this city. I strongly oppose Alternative 2C and request that my comment be entered into the official record<br><br>Respectfully,<br><br>Melissa Hagen |

| | | |
|---|---|---|
| **4/21/2026** | Melissa Hochadel | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Melissa Hochadel |

| | | |

|---|---|---|
| **4/17/2026** | Melissa Hsieh | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |
|---|---|---|
| | | Melissa Hsieh |
| **5/3/2026** | Melissa Huber | I'm a NO on expansion! We must preserve what is most valuable to Austin. |

| | | |
|---|---|---|
| **5/3/2026** | Melissa Klein | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. |---|---|---|
| **5/3/2026** | Melissa Knight | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| **4/28/2026** | Melissa Neslund | I firmly support moving the project forward based on the findings of the EA and the sheer need. I navigate Mopac daily to get to work and get my son to and from Austin High activities. We also live near the Y at Oak Hill and have been living through the long overdue road improvements at that interchange. Much like this current opposition, people fought for years against the improvements at the Y. Meanwhile people are still driving and for years, have been unnecessarily idling for extending periods of time, harming our environment. Delaying this project won't make the need go away and will only cost taxpayers more money, add to pollution while we sit on Mopac and delay a long overdue project. No more delays. Please proceed! |

|---|---|---|
| **5/3/2026** | Melissa Roetker | I do not want any lanes added to Mopac. I am against all expansion or construction over the greenbelt and Barton Creek. I commute to work downtown from southwest Austin every day and the traffic does not bother me. Road expansion is not worth any potential adverse effects on the environment particularly the aquifers of Barton creek and the endangered salamanders. Please do not move forward with construction. It will not improve quality of life and will destroy the beauty of our city! |
| **5/2/2026** | Melissa smith | I am against the highway expansion and toll roads that will close the Mopac walking bridge and effect Barton Springs. |
| **5/1/2026** | Melissa Swanepoel | I am writing to implore that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Please don’t carelessly hand over the future of such a treasured community space and natural eco-treasure. Once it’s gone we will never be able to get it back. |

| | | |
|---|---|---|
| **4/30/2026** | Melissa Webb | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |
| **5/1/2026** | Mellie Zadeh | I am writing to express my strong opposition to the current MoPac South expansion proposal. Adding 6–8 additional lanes across 8.8 miles of the Edwards Aquifer Recharge Zone represents a fundamental risk to the region’s long-term environmental health and community character. I am particularly concerned about the following issues: Environmental Integrity: The project area covers critical recharge zones for our primary water source. Increasing impervious cover with new toll and auxiliary lanes will inevitably lead to higher levels of polluted runoff, threatening both water quality and the fragile ecosystems of the Barton Creek Greenbelt. Air Quality and Pollution: Expanding highway capacity often leads to "induced demand," ultimately increasing the total volume of traffic and associated tailpipe emissions. This directly contradicts local goals for air quality improvement and climate resilience. Habitat and Community Disruption: The proposed 5–7 years of construction will cause significant noise and dust pollution, disrupting both native wildlife habitats and the peaceful character of established neighborhoods adjacent to the corridor. Lack of Transparency: Given the scale of this project and its location over a sensitive aquifer, the "Finding of No Significant Impact" (FONSI) is insufficient. A project of this magnitude demands a full, transparent Environmental Impact Statement (EIS) to properly evaluate less harmful alternatives and long-term consequences. I urge the CTRMA to pause the current plan and prioritize a comprehensive EIS that considers the preservation of Austin’s water, wildlife, and community health over further highway expansion. Sincerely, Mellie Zadeh, PhD |

| | | |
|---|---|---|
| **4/20/2026** | Melody Gilliam | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Melody McClary | Access to Barton Springs is the only thing that keeps me in Austin. Spend the money for this project on reliable public transit, or any other solutions. I do not want more construction that goes on forever or more toll roads. |
| **4/27/2026** | Melvin Sureshbabu | Im strongly in favor of the no build option! Expanding road capacity only leads to an increase in vehicle miles driven. Traffic during construction would only be worse and by the time the new lanes open Austin would have grown and there would be more transportation demand anyway which means we probably wouldn't see any benefit for long. I think we should invest in better alternatives like rail with dedicated right of way and pedestrian bike infrastructure which would help more cars off the road thus decreasing travel times while providing alternatives to people who want to live in Austin without a car! |

| | | |
|---|---|---|
| **5/1/2026** | Melvin Sureshbabu | Hi,<br><br>I am a longtime Austin resident and I'm writing to express my thoughts on the mopac south expansion!<br><br>After a couple of decades of widening highways - especially in our own state - there's a lot of conclusive evidence that widening highways does almost nothing to alleviate traffic in the long run.<br><br>1. During the expansion construction traffic is significantly worse and widening usually takes several years<br><br>2. After widening traffic usually goes down temporarily and then comes right back due to induced demand. When a highway becomes the fastest option from widening -> more people take the highway -> right back to where we started.<br><br>Here's a really great video explaining the concept:<br><br>https://youtu.be/CHZwOAIect4?si=DTGlcS84WiYXWS3j<br><br>3. Our city and our region are growing so rapidly that we need more effective alternatives that don't involve giving up all our land to cars!<br><br>Some great alternative to expanding the highway would be great regional rail and bike lanes. Both of these alternatives are FAR more effective at moving the most people, the most efficiently, with the least amount of negative externalities.<br><br>I hope we will consider a more long term solution that will actually meet the needs of our growing region and not fall into the same ineffective traps that we've done for decades. |

| | | |
|---|---|---|
| | | Happy to talk about this more or give more comment.<br><br>Thanks,<br><br>Melvin |

| | | |
|---|---|---|
| **5/3/2026** | Mely Velez | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. We've done more than enough damage to ruin our ecosystem. Let's not contribute to moreharm. Sincerely, Melissa Velez |
| **5/3/2026** | Mercie Mares | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. Our waters are already diminishing and our environment is suffering as a direct cause.<br><br>Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br>* Tree removal and vegetation loss eliminate natural filtration.<br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br>* Karst features and caves supporting unique ecosystems will be destroyed.<br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Mercy Mallett |
| **4/27/2026** | Meredith Archer | Please conduct a full environmental impact study. I love Barton Springs and do not want to lose more nature to concrete toll roads. We have enough roads and not enough nature!! |

| | | |
|---|---|---|
| **5/3/2026** | Meredith Badali | Access to Barton Springs Pool is not a luxury for Austin residents—it is a vital part of daily life and community well-being. As one of the city's most cherished natural spaces, Barton Springs offers a place for people to gather, cool off, and connect with nature in an increasingly urban environment. Protecting and improving access to this spring-fed resource ensures that current and future residents can continue to enjoy the outdoors and benefit from a shared public space that defines Austin's identity. Any efforts to support its sustainability, accessibility, and preservation should be treated as a priority for the health, culture, and livability of our city. |
| **5/3/2026** | Meredith Brashear | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under |

| | | |
|---|---|---|
| | | federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Meredith Brashear |

| **5/3/2026** | Meredith Dreiss | To the Board of Central Texas Regional Mobility Authority regarding the proposed South Mopac Expansion,<br><br>As long-time Austin residents with special appreciation for the protected Barton Creek Wilderness and the public access to Barton Springs, Lady Bird Lake, the Butler Hike and Bike Trail and our beloved Zilker Park, we are insisting on a full Environmental Impact Statement (EIS) as should have been required by law given the number of affected local residents and the potential environmental damage. Only the in-depth EIS will gather adequate accurate data to assess the real environmental and human impact of the proposed South Mopac expansion. While Environmental Assessments (EA) can be useful in small projects with limited impact, given the location and complexity of the project, the proposed EA would be wholly inadequate to predict that the plan "would not result in significant impacts on the human or natural environment," as CTRMA's draft assessment suggests.<br><br>There is simply no reason to accept as fact an incomplete environmental assessment when the crown jewels of our city and Central Texas are at risk. Has the public been fully informed of potential impacts? Have all forums and comments by concerned citizens been made public by CTRMA? Has the public been informed of the real predicted benefits, or lack thereof, of the South Mopac expansion, which will surely have a negative impact on our quality of life during a long construction period and long after? Does the benefit of more lanes on Mopac, which studies predict will not solve the traffic problem, outweigh the permanent negative impact on the damaged landscape? Can the public access that study?<br><br>We believe that CTRMA's offer of an EA, which may not provide real, in-depth data regarding environmental impacts, is incomplete. CTRMA must demand a study that does not gloss over potential significant impacts. Public input must be included in the planning of all projects that can negatively impact our natural landscape, our quality of life and Austin's reputation for protecting beautiful parkland that is accessible to all. Austin residents' early campaign to protect these jewels made Austin the city that it is--and recognized as a city that once chose quality of life and nature over unbridled development. Please respect that history.<br><br>Thank you for your consideration,<br><br>Meredith L Dreiss & David O. Brown<br><br>ArcheoProductions Inc. |

| **4/27/2026** | Meredith Edsel | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Meredith Haas | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. For over 20 years not one day has passed in the state of Texas when a person has not died on a state highway, according to TXDot and their #Endthestreaktx movement. I know you think, what does this have to do with the expansion? Well, if we look at the impact of Texas highways and roads, we see that they always lead to death. That's an irrefutable fact, due to the statistic provided by TXDot. So I ask, what is the point in focusing on highways? I get that I have little knowledge on this project, but I do know that the construction is never ending. The noise never goes away. Allowing for more traffic to flow allows for more chaos, and most likely the deterioration of the environment around it. I come to Austin for the nature. I love the capitol, food, margs, and people, but the trails are amazing and peaceful. This city needs to be more walkable, not less. This city needs to keep its soul, not have it sucked away because of a money grab that is disguised as a way to "help the people." I think people are over it, but maybe I am projecting. I am over it. I am over the political talk which makes us think we are being taken care of. Actually take care of the people in Austin and focus on what will really enhance the lives of those living in and around the city. If you can't keep people safe on Texas highways, at least give the people the decency of conducting a study which would prove the environment around the project will not be harmed. Please Require a Full Environmental Impact Statement at the very least. For the love of water in Central Texas, Meredith Haas |

| **5/3/2026** | Meredith Haas | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Meredith Haas |

| **4/26/2026** | Meredith Shaw | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, and does not fully explain how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>As a lifelong Austinite, I must stand up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Meredith Shaw |

| **5/3/2026** | Merideth Weddle | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Merideth Weddle |
| **5/3/2026** | MeriJayd O'Connor | Dear CTRMA Board Members, I strongly oppose expanding Mopac. This will tear into the heart of what makes Austin unique, a special place to live, and attractive to tourists. Expanding Mopac is short sighted and damaging to wildlife, the beloved Barton Springs and our quality of life. We need better public transportation not more lanes!! Dothe environmental study and consider the options detailed below. The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, MeriJayd O'Connor |

| | | |
|---|---|---|
| **4/25/2026** | Mia Hodges | Dear CTRMA Board Members,<br><br>Dear CTRMA,<br><br>I strongly oppose the proposed MoPac expansion, and ask that you abandon it. It is an irresponsible decision that is clearly made with no consideration for the ecosystem, public health, and what Austinites actually want. Nobody I have talked to has expressed support for this project, only exasperation and annoyance that there's going to be more construction, and ANOTHER lane added to a highway that does not need it. We are sick and tired.<br><br>It is obvious that there is a financial incentive to build this highway inefficiently in order to force people into the toll lanes and turn a larger profit for your company. The toll prices during peak hours today are anywhere from $9-$12. This clearly creates an unfair situation, with only certain people being able to afford the ridiculous tolls, and everyone else forced to sit through bumper-to-bumper traffic. There are much more efficient ways to reduce traffic than to add additional lanes, toll or regular. In fact, it has been proven that adding lanes only worsens congestion instead of relieving it. It is clear to anyone who has done an ounce of real research that CTRMA only cares about profit, not the people. A 14 lane highway is the absolute worst thing you could do.<br><br>There is a huge environmental concern with this expansion going through the St. Edward's recharge area, bringing even more pollution and habitat loss to an already sensitive area. Studies show that highway construction will add heavy metals and harmful chemicals, including significant levels of phthalates, microplastics, cadmium, and lead- all of which have extreme health effects on humans and wildlife. Nitrous oxides cause algae blooms which deplete water of oxygen, resulting in lower biodiversity across the whole food chain. Fish, turtles, herons, bobcats, insects, bats- all life is affected by these decisions. Not to mention the two endangered salamander species that exist only in the Barton Springs area. A fully functioning ecosystem is essential for humans as well- the ecosystem services provided by plants and animals are invaluable and include things like cleaning the air and water, keeping pest populations under control, preventing erosion, |

| | | |
|---|---|---|
| | | and pollinating plants. Allowing these services to go on saves us billions of dollars nation-wide every year, and affects us more closely than you would like to admit. This is a fragile and delicately balanced ecosystem that is already suffering due to the extreme urbanization of the area. We demand a full Environmental Impact Statement that prioritizes a comprehensive assessment of all pollutants and environmental hazards that will be created in the process of this project.<br><br>As for public health, the dust and particles from construction that get into the air, soil, and water, will only add to the thousands of sicknesses and deaths that occur every year due to pollution. These, along with the aforementioned heavy metals and chemicals in the water, cause asthma, cancer, brain damage, and reproductive issues. The excess of pollution in our city will affect Austinites for generations to come. Imagine Barton Springs so polluted with sediments and chemicals that nobody can swim in it anymore. Think of the many AISD schools, notably Austin High School, are right in the area of construction, where young lungs will experience all of these health effects tenfold. Not to mention the increased traffic due to the long construction process will make it even more unsafe for young drivers and walkers trying to get to school on time. Noise from construction also makes it difficult for students and teachers alike to focus in class, preventing top-level learning. Your children and grandchildren will have to live with the vast negative effects of this expansion.<br><br>Please, if you care about people at all, if you care about the natural world at all- do not go forward with this highway expansion. Austin is begging you.<br><br>For the love of water in Central Texas,<br><br>Mia Hodges |

| | | |
|---|---|---|
| **4/4/2026** | Mia Hodges | CTRMA Board Members,<br><br>The MoPac South expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Mia Hodges |

| | | |
|---|---|---|
| **4/20/2026** | Mia Hodges | Dear CTRMA,<br>I am writing to please ask that you abandon this project for good. It is an irresponsible decision that is clearly made with no consideration for the ecosystem, public health, and what Austinites actually want. Nobody I have talked to has expressed support for this project, only exasperation and annoyance that there's going to be more construction, and ANOTHER lane added to a highway that does not need it. We are sick and tired.<br>There is also a huge concern with this expansion going through the St Edward's watershed, bringing even more pollution and habitat loss to an already sensitive area. Urban wildlife is already struggling to adapt, and the last thing they need is more constriction right through their home. A fully functioning ecosystem is essential for humans as well- the ecosystem services provided by plants and animals are invaluable and include things like cleaning the air and water, keeping pest populations under control, preventing erosion, and pollinating plants. Allowing these services to go on saves us billions of dollars nation-wide every year, and affects us more closely than you would like to admit.<br>As for public health, the dust and particles from construction that get into the air, soil, and water, will only add to the thousands of sicknesses and deaths that occur every year due to pollution. The extra traffic the construction will cause, as well as the emissions of heavy machinery, are just the cherry on top.<br>Please, if you care about people at all, if you care about the natural world at all- do not go forward with this highway expansion. Austin is begging you.<br>Mia Hodges |
| **5/3/2026** | Mia Nicole Collins | Hi, my name is Mia Nicole Collins. I live in South Austin.My zip code is 78745, and I'd just like to be as clear as possibleabout how me and the entirety of my family feel towards the expansionof the Mopac Expressway. While I do understand that there's some kind of benefitto relieving traffic from that area. I also understand that the aquiferis way more important than having a whole express lane that not everyonewill have access to, mind you. Because first of all, look at the economy.Who the **** has the money to pay extra just to commute somewhere?First of all, that's ridiculous. Second of all, I don't think we should be prioritizinga highway over our water because I think that's just common sense.I would like to hope that that's common sense. But I'm also aware of how greedyand money hungry the people who are going for this project are, so that checks out.But that's not going to stop me from expressing how I feel towards this projectand the disgust I have towards it. It's ridiculous that this is even on the table.We could be putting that money towards better things. We could be putting that moneyto help our aquifer, not add another highway when we already have enough as it is.We already have enough people struggling to commute.I would rather deal with the struggle of commuting than having to one, pay extra moneyto God knows who is privatizing that Mopac Expressway.Then I would rather put my money towards the aquifer.I would rather put my money to where it needs it the most, and that's the aquiferand taking care of the environment that we have left in Austin.As we know, Texas is running out of water, so I suggest we use our money wiselyand not spend it on another highway. |

| | | |
|---|---|---|
| **4/21/2026** | Mia Smail | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Mia Wilson | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Mia Wilson |
| **4/30/2026** | Miah | We should invest in better public transportation rather than expanding the highway. Expanding highways show no long term beneficial effect. In fact, highway expansions make this worse. This will disrupt the UT Austin Rowing team, the small local businesses like Rowing Dock and Texas Rowing Center from getting business, and students at Austin High School that park under the mopac bridge for school. This end of the lake is a way to escape the city and this construction will take longer than planned (because everything always takes longer than planned) thus disrupting what makes this city so special; its natural environmental spaces. I don't support this mopac expansion. Build a train instead, please. |
| **5/3/2026** | Miah Izdel White | I believe that the expansion of Mopac Expressway would not benefit the people directly, considering the traffic congestion on newer roads such as in the Greater Metropolitan area and the congestion in historic downtown Austin. Expanding a freeway into an environmentally sensitive zone that serves the people of Austin for recreational and utility services is detrimental to the health of the city. |

| | | |
|---|---|---|
| **5/3/2026** | Mic Navarrete | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Mic Navarrete |

| | | |
|---|---|---|
| **4/30/2026** | Micaela | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |
| **4/8/2026** | Micaela Bacon | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. | **5/3/2026** | Micah Kinne | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Dont turn Austin into a concrete jungle Respectfully, Micah Kinne |
| **5/3/2026** | micah r meyers | It is unacceptable to touch Barton springs, lady bird or zilker park. It is what defines austin, at this point very little is left to make it unique! -life long resident |
| **5/3/2026** | Micah Rynders | There's so much I could say man. We don't need more highway. We don't need more anything. We are good, y'all. This city is beautiful and thriving and growing as is. It's gonna be okay. However, if y'all do this, we are going to lose a lot of that. We will lose a lot of what makes Austin the gem it is. Do not do that. Take a moment to actually think about the impact this would have on everything and everyone. Like bro Barton Springs and the Greenbelt and Zilker Park ARE Austin. Why do you think people have moved here so much and it's so booming? Come on now y'all. Please. |

| | | |
|---|---|---|
| **5/3/2026** | Micah Yang | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. Having spent the last four years studying at UT Austin, I have come to love the organic, close knit feeling of the city. The advantages of green space, reduced traffic, and walkability/bikeability of the city are such that I have decided to start my career in transportation engineering here. I grew up in Houston, and it upsets me to see that Austin feels the need to take after my hometown's preference for serving cars over serving people and protecting the valuable elements of the city that make it so wonderful, including our aquifers and creeks. I am in favor of a full EIS being conducted before continuing work, and oppose the project itself from a taxpayer, nature lover, engineering, urbanist, and resident standpoint. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the |

| | | |
|---|---|---|
| | | CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Micah Yang |
| **5/1/2026** | Michael Avila | Oh no please don't expand Mopac into the Violet Crown trail entrance. Many people park at Specs and enjoy the beautiful trail. Please find a way to expand with out damaging the trail or the aquifer. |

| | | |
|---|---|---|
| **4/22/2026** | Michael Boggs | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **4/22/2026** | Michael Boggs | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Michael Brichford | Really concerned about this project and it's impact on the environment and watershed. Also feel that adding more lanes won't do anything but cause more congestion. I am against this project. |

| | | |
|---|---|---|
| **5/3/2026** | Michael Bruner | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Michael Bruner |
| **3/23/2026** | Michael Buratti | I am staunchly against this expansion. We do not need to expand and privatize our highways. Expansion does not solve for congestion. Privatization does not benefit anyone except for the private company. |

| | | |
|---|---|---|
| **4/17/2026** | Michael Cannatti | Central Texas Regional Mobility Authority April 17, 2026 Attn: Project Manager, MoPac South Project 3300 N. IH-35, Suite 300 Austin, Texas 78705 RE: Formal Request for Environmental Mitigations – MoPac South Project – Section 8.0 Post-Environmental Clearance Activities and Design/Construction Commitments To the CTRMA Board and Project Leadership, As stakeholders dedicated to preserving and enhancing one of Austin's most iconic urban greenspaces, Zilker 351, an Austin-based 501(c)(3) nonprofit, submits this letter to request specific environmental mitigations and design commitments that will address the expected significant impacts from the MoPac South Project. Recognizing CTRMA's projected timeline of up to six years, and knowing how disruptive road construction can be to the public, we offer the following adjustments to address the expected significant impacts. We acknowledge and appreciate that CTRMA has already committed to mitigations for the project which may overlap with these requests, but as the project moves toward Section 8.0 Post-Environmental Clearance Activities, we urge CTRMA to integrate the following commitments into the final design and construction contracts to ensure improved traffic safety on roads surrounding and accessing the park, and to maintain the ecological and recreational integrity of Zilker Park. I. Traffic Safety & Active Transportation - Given CTRMA's successes in redefining regional connectivity by integrating a world-class trail system into our transportation infrastructure, the funding and construction of a grade-separated active transportation crossing at MoPac and Barton Springs Road will improve safety for all transportation and park users at this intersection. This bridge project will provide a high-visibility opportunity for CTRMA to extend its important trail work in the region, and address critical traffic safety and public health concerns with the MoPac South project. -- Grade-Separated Crossing: Fund and construct an elevated bridge crossing over Barton Springs Road on the East side of MoPac thus providing a safe, grade-separated crossing located at a dangerous pinch point along Barton Springs Road. II. Tree Canopy & Light Pollution Protections - Zilker Park's tree canopy is irreplaceable and deserves to be protected or replaced in recognition and support for our commitment to the environment. -- Comprehensive Tree Replacement Funding: Mitigation for all trees lost to highway expansion, noise barriers, or shared use path construction by replacing native species in Zilker Park at a 3:1 ratio for trees 4"–19" in diameter and a 4:1 ratio for those at least 19" in diameter. TreeFolks arborists recommend this standard. -- Dark Skies Compliant Design: Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. III. Parkland Protection - Restore and mitigate encroachment of the MoPac South highway project. Encroachment Mitigation: Adjust alignments and construction methods to avoid or minimize parkland encroachment. Ensure that materials and trucks stay under the highway when near Zilker Park. Where encroachment is unavoidable, fully fund mitigation measures with best practice solutions, such as providing funding to facilitate land restoration, conservation, and ongoing stewardship measures. Direct the Environmental Compliance Manager to produce an annual compliance check-in for three years after the project is complete to ensure SW3P and Edwards Aquifer Rules are met. IV. Noise Abatement and Sound Mitigation - To mitigate environmental impacts from adding express lanes and lateral expansion of the highway. -- Noise Workshop: Conduct a Community Noise Workshop to identify feasible noise abatement and sound mitigation measures for the portion of the South MoPac project in Zilker Park, and build public support and understanding of the project. -- Advanced Pavement Technology: Use the most advanced pavement technologies and materials to improve safety and provide environmental protection by reducing road spray and noise at the source, and protecting water quality. -- Noise Barriers: Install high-performance concrete or transparent noise walls along the northbound and southbound sides of the project within Zilker Park boundaries, incorporating best practice path intervention designs, (e.g., landscape barriers or advanced absorption and diffraction barrier designs to trap and dissipate sound energy). V. Construction-Related Displacement & Public Health and Safety Mitigation - Recognizing CTRMA's record of coordinating with city staff to ensure safe access for all park users, we request these additional steps be taken to address public health and safety concerns. -- Infrastructure Improvement Reimbursement: Fund vehicle and pedestrian infrastructure improvements, e.g., sidewalks, bike paths, vehicle routing/parking areas, and new access points, to mitigate construction-related displacements of park usage and access to businesses operating within the park pursuant to a construction-phase local access study. -- Park Stakeholder Consultation: Consult with park non-profit entities, vendors, and concessionaires whose work and livelihoods are threatened by construction-phase activity, including Rowing Dock, Austin Nature and Science Center, Zilker Botanical |

| | | |
|---|---|---|
| | | Garden, The Trail Conservancy, and Waterloo Disc Golf Club. -- Ecological Restoration: Restore parkland areas or roadways damaged or degraded by infrastructure improvements, such as environmental restoration/improvement of the relocated parking areas which temporarily replace existing parking areas for visitors to Zilker Park. VI. Non-Required Mitigation Requests - Beyond the required environmental commitments, we propose the following context-sensitive mitigations to further the CTRMA's mission of environmental stewardship. -- Aquifer Conservation Funding: Offset the increased impervious cover, tree loss, degraded water and air quality, and aesthetic and visual impacts of the MoPac South project by providing mitigation payments of $35 million to the City of Austin. These funds would be earmarked for the purchase of permanent conservation easements over the Edwards Aquifer Recharge and Contributing Zones. Zilker 351 appreciates CTRMA's consideration of these mitigation improvements which residents and the public at large will recognize and appreciate, too. While we reserve the right to provide additional feedback on the environmental and water quality protections to be implemented in the project, we look forward to seeing these mitigation and funding commitments in the Section 8.0 documentation and final project schematic. Members of the Zilker 351 board are available to meet with your team to answer questions and provide clarifications. Sincerely, Michael Cannatti, Chair Zilker 351 |
| **4/12/2026** | Michael Charlesworth | I strongly support the "Do nothing" option. If, however, the express lane option is the one that gets chosen, we need a very high wall to be built between the new slip road proposed to run from 6th street to the Mopac southbound feeder lane, alongside Atlanta Street. The noise level from Mopac in this corner of the city is already excessive, and we need to be protected from it getting worse. |

| | | |
|---|---|---|
| **4/21/2026** | Michael Cofone | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |
| **4/21/2026** | Michael Cofone | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/1/2026** | Michael Costello | This project will not meet the needs of a growing population and will likely just increase traffic bottlenecking. It will also have EXTREMELY adverse effects to Austin environmentally and will destroy our beloved violet crown cycling trail as it travels through that area. No on South mopac toll lanes. |

| | | |
|---|---|---|
| **4/26/2026** | Michael De La Cruz | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Michael DuVall | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Michael DuVall |
| **5/3/2026** | Michael Hurewitz | Four endangered species are in the path of the MoPac South expansion—and they can’t speak for themselves. 🛑 The Barton Springs Salamander, Austin Blind Salamander, Bee Creek Cave Harvestman, and Tooth Cave Spider rely on clean groundwater and intact cave systems to survive. When those systems are damaged, the loss is permanent ⚠️ This level of risk demands a full Environmental Impact Statement. The Center for Biological Diversity @centerforbiodiv has long emphasized that when endangered species are at stake, anything less than a full review is unacceptable. 📜 Protect the species. Protect the water. |

| | | |
|---|---|---|
| **4/25/2026** | Michael Irielle | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Michael James | I do not support the proposed Mopac expansion. It doesn't make sense to plan for more cars on the road when there will be less and less over the next decade. Self-driving vehicles, combined with a younger generation who cares less about car ownership, is the recipe for less cars needed over the next 10-20 years, not more. |
| **4/26/2026** | Michael Johnson | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Michael Jorgensen | Dear TxDOT Austin District and Central Texas Regional Mobility Authority,<br><br>The MoPac South Draft EA treats congestion as a simple capacity problem solved by express lanes. This premise misses the mark. The corridor's real issues are merge and weaving bottlenecks plus the fact that added capacity generates more traffic, erasing benefits over time.<br><br>MoPac North Shows Exactly What Happens<br><br>The $2.1 billion express lanes north of Cesar Chavez opened in 2016 promising reliable travel. Initial improvements faded as more people drove the corridor, returning congestion to pre-project levels despite toll pricing. MoPac South risks repeating this failed pattern on the same flawed geometry.<br><br>Merge Geometry Creates Most of the Pain<br><br>US 290, William Cannon, and Loop 360 interchanges cause 2-3 times normal delays through excessive ramps, poor spacing, and frontage road conflicts. Adding express lanes on top doesn't fix these fundamental design flaws – it just moves more cars through the same choke points.<br><br>Agency Presentation Shows They Know This<br><br>The March 2026 public hearing presentation admits merge/weaving matters, describing wishbone ramps at Barton Skyway as reducing merging and listing auxiliary lanes, bypass lanes, ramp reversals, and a U-turn bridge as key improvements. This suggests the team understands corridor design complexity beyond just adding lanes.<br><br>Prior Comments Keep Getting Deflected<br><br>The Summary of Public Input shows repeated ramp and access concerns : |

| | | |
|---|---|---|
| | | "Davis Lane ramps" → "Insufficient weaving distance"<br><br>"5th Street/Lake Austin intersection" → "Travis County issue"<br><br>"Bee Cave Road direct ramps" → "Proximity constraint"<br><br>These responses consistently point to jurisdiction, scope, or technical limits rather than exploring whether ramp consolidation, collector-distributor roads, or frontage adjustments could solve the same problems with less environmental impact. Thus avoiding answering rhe real underlykng question which is can these network changes make as big ir a bigger impact than adding lanes? I am asking that direct question here, can network design changes offer improved performance of the stated goals of reliability and capacity imrpovement for the mopac south corridor, given a real analysis effort and not a cursory check?<br><br>TSM/TDM gets dismissed without similar network-level analysis to evaluate real potential impacts with throuough implementation of network redesign.<br><br>Core Problem with the Premise<br><br>The project assumes more throughput fixes unreliable travel times and congestion. But if merge geometry causes most delays and capacity generates more driving, we're treating symptoms while ignoring root causes. The EA alternatives focus on lane additions when network redesign might deliver more lasting relief.<br><br>What Should Be Clarified<br><br>I'd like to see analysis addressing: |

| | | |
|---|---|---|
| | | How MoPac South avoids North's VMT rebound failure<br><br>Why merge-focused redesigns weren't seriously evaluated<br><br>Thank you.<br>Sincerely,<br>Michael Jorgensen<br>South Austin 78748 |
| **5/3/2026** | Michael Laughlin | I am strongly opposed to expanding Mopac any more in any way. We should be spending our money making transportation easier, more efficient, and more accessible with more public transit options and better pedestrian, cycling, and alternative transportation investment. Adding more pavement will not only fail to improve traffic conditions, as we've seen time and time again here and in other major cities, but adding yet more toll lanes just adds another means of class division and inequity to transportation in our city. On top of that, it means another decade of construction, even worse traffic, real loss of beloved green space, and almost certain impact on sensitive environmental areas in and around Lady Bird Lake and Barton Creek/Springs. We should spend our money making Austin a better, more accessible place. We should not spend it adding to the parking lot that freeways are during the day, the waste of space they are the rest of the time, and the environmental tax they place on our air quality, heat island effect, and other negative externalities they encourage. |

| | | |

| **5/3/2026** | Michael Lieberknight | Hello. My name is Michael Lieberknight. I'm just leaving a message expressing love forthe Springs and for the trails and for the kids of Austin High. And I've lived in Austinfor a long time and these Springs have really saved my life. They're the soul of Austin.So, I think it's imperative with what's happening right now, the decisions being made that there'sa full environmental impact statement, it's imperative.I invite you all to experience and enjoy the springs yourself if you haven't already, they'rebeautiful, just the beautiful water. I have to commute through the area thatthe expansion would be happening and too much construction over the course ofyears will have a detrimental impact in so many different ways. There will be allof casualties. There's so many ways in which this is not what needs to happen.So I hope that you can look into yourselves and contemplate what'sactually needed at this time. So again, a full environmental impact statement |

| | | |
|---|---|---|
| | | isneeded during this time. Thank you so much for doing the right thing, foreverything that you all do, praying for you all,praying for us all, and for the waters.Okay, much love to you. |
| **5/3/2026** | Michael Martinez | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion. I have lived in this city my whole life. I was born here. I have been driving on mopac from south to north and back since I was a kid being dropped off at Gullett. The problem with mopac isn't that it is lacks lanes. The problem is that the road layout for this city was poorly planned long ago, and that won't change with a few more lanes. As it stands, mopac is still a pleasant drive when traffic is low. Its a nice highway in an overcrowded city. A slightly bigger, not as nice highway won't change that this city is overcrowded. Don't I-35 my MOPac. I urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public |

| | | |
|---|---|---|
| | | opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Michael Martinez |
| **5/3/2026** | Michael McChesney | I oppose the MoPac South Expansion. A full environmental impact statement must be completed before any such project is considered. Barton Springs is the city's treasure and must be protected. |

| | | |
|---|---|---|
| **5/3/2026** | Michael Mcdaniel | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. | | | |
|---|---|---|
| **4/30/2026** | Michael McMillen | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |
| **5/3/2026** | Michael McNoldy | Dear CTRMA Board Members, JUST ONE MORE LANE BRO! Jesus, when are traffic engineers going to learn from 60 plus years of highway expansion projects only resulting in MORE GRIDLOCK and environmental degradation? I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a |

| | | |
|---|---|---|
| | | place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Michael McNoldy |

| **4/29/2026** | Michael Pellegrini | I oppose expanding MoPac South. It would be an investment in our own demise. It's amazing that we still have to educate people in this day and age that motor vehicles are a horrible transit solution but here we are.<br><br>As we've known for 50 years, highway expansion across the Edwards aquifer will increase the contamination of Barton Creek and Barton Springs.<br><br>Cars also cause noise and air pollution.<br><br>Cars kill as many people as guns, more than forty thousand Americans every year. Imagine if 40 thousand Americans died in plane crashes every year. In my mind it's criminal to invest more into this deadly mode of transit. Officials who approve these road projects are responsible for some of those deaths.Cars also kill untold amounts of wildlife and the roads prevent safe migration of numerous species.<br><br>Roads cause heavy storm water runoff, a serious and expensive problem in "flash flood alley".<br><br>Road building and the sprawl that roads create are a financial Ponzi scheme. Public funds for the initial building go into the pockets of the developers but no funds are allocated for the maintenance of auto infrastructure decades later. See the recent articles about Austin currently needing to find $90 million to maintain its older bridges. The sprawl induced lack of tax base inevitably leads to decay of urban/suburban neighborhoods and further sprawl. We've seen this pattern play out since the 1970's.<br><br>I support regional rail and a world class bicycle/pedestrian network. This will enable common sense, incremental development of existing neighborhoods with the density required to fund long term maintenance of infrastructure through taxes. It will help preserve our natural spaces. It will slow our steady trend towards global warming.<br><br>--<br><br>Michael Pellegrini MD |

| | | |
|---|---|---|
| **5/3/2026** | Michael Rigby | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Michael Rigby |
| **4/20/2026** | Michael Rogers | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/6/2026** | Michael Smith | Dear CTRMA Board Members,<br><br>Please halt the proposed MoPac South expansion. The widening of MoPac will do very little to aleviate traffic as more cars will simply flood onto it until it hits capacity again. The project costs an irresponsible amount. The ecological danger to the aquifer and barton springs should be enough to stop the project completely. Please invest in cheap and reliable busses and trains that get people from the suburbs to work without having to drive on MoPac. This is the only way to actually decrease traffic. If the south MoPac expansion goes through, I will use my person time to seek an end to your political careers.<br><br>Thank you<br><br>Michael Smith |

| | | |
|---|---|---|
| **4/29/2026** | Michael Tsapos | I oppose expanding mopac south. I am in support of regional rail and bike/pedestrian networks. I want a full EIS and not an abbreviated EA for this project due to the sensitive environmental conditions. Areas with no aquifer protection should be mitigated. As an old west Austin resident, I often use mopac as a way of getting north/ south. We should not be subsidizing urban sprawl anymore, we are not setting our city and state up for the future. Are you serious about reducing traffic deaths? Invest in regional rail like every other developed nation in the world. Prove the US and Texas can be a leader in transitioning to rail.<br><br>Michael Tsapos<br><br>c 817.694.5539 |
| **5/3/2026** | Michael Valdez | Hi, my name is Michael Valdez and I don't know where to begin but I can easily say thatI am entirely against the MOPAC expansion project.I don't need our endangered species in the area to be further endangered especially fromblind salamanders, to our yellow-cheeked warblers, without the access to thegreen pout and the beauty of the aquifer, along with garden springs. I don'tknow how many of us, including myself, would cope as things continue toand unfold, we need a place that's sacred and loved to be protected not just for usbut for the many beautiful animals that depend on it for survival. |

| | | |

| **4/23/2026** | Michael Valenzuela | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/28/2026** | Michael Wynne Jr | As a Circle C resident, I cannot stress enough how important the completion of this project is for the neighborhood. I have also been a long time Circle C Bike Club officer and this is something members have been asking about for years. |
| **5/3/2026** | Michaela Hart | I am deeply concerned about the proposed expansion of Mopac South and its detrimental impact on our community. Here in Central Texas, protecting our water sources should be one of our biggest priorities. The proposed construction cuts through one of the most sensitive Recharge Zones for Edwards Aquifer. It is incredibly foolish and ill advised to have highway construction intersect with our underground aquifer system because it could obstruct and alter the natural water flows that our community depends on. To threaten the Aquifer to is threaten a future for our children, not to mention the five endangered species who call barton springs their home which we have a responsibility to protect. It is also absurd to me that this city has ignored its citizens who overwhelmingly opposed I-35 expansion and now wants to expand the other major highway through the city at the same time. Traffic will become even more of a nightmare than it already is, which will endanger the lives of both construction workers and commuters, all for something that no one is asking for, (and in fact that Austinites voted against less than 10 years ago), and something that only brings harm to the ecosystem we should be protecting. Mopac south already cuts right through one of the most environmentally sensitive and biologically diverse areas in the country. The construction will strip away the native vegetation that acts as a buffer between pollution and the aquifer, without which our water will be more easily and deeply contaminated. Adding these 7-8 lanes to Mopac South will cause irreversible damage to one of the most treasured parts of our city, will threaten the health of our citizens by polluting our air and waterways, and will increase the loss of our precious endangered species. Saving a few minutes on a commute is not worth this. We have future generations that we are responsible to, and we must protect our Aquifer. |

| | | |
|---|---|---|
| **5/3/2026** | Michaela Urban | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Michaela Urban |
| **5/1/2026** | michel Hewlett | No No No to expansion! Results population overload, environmental exclusion concerns, removal of greenery (trees, bushes, flowers), View of city limited (we're not living in Houston)! |

| | | |
|---|---|---|
| **5/3/2026** | Michele Fonzi | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Michele Fonzi |
| **5/3/2026** | Michele Mughannam | I swim at Barton Springs several times a week and am absolutely against this highway expansion. I demand a full Environmental Impact Statement and real alternatives that avoid irreversible damage to our water, wildlife, and public health. The Springs is a lifeline for so many of us, in more ways than one. What would this city be without it? |

| | | |
|---|---|---|
| **5/3/2026** | Michelle Broecker | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Michelle Broecker |
| **4/22/2026** | Michelle Camp | Prior to proceeding any further with this proposed project, the CTRMA must complete an Environmental Impact Study (EIS) to consider the full impact of this project on the environmentally sensitive Edwards Aquifer Recharge Zone. |

| | | |
|---|---|---|
| **4/10/2026** | Michelle Cardinal | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. | **5/3/2026** | Michelle Palacios | Mopac Committee, our household strongly disagrees with the destruction to Barton Springs and the surrounding areas this expansion would cause along with damage to the wildlife. Please come up with a better solution that protects our natural resources and environment and makes them a priority when making those decisions. Thank you! |

| | | |
|---|---|---|
| **5/3/2026** | Michelle Soriano | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Michelle Soriano |
| **5/3/2026** | Michelle Sussman | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Michelle Sussman |
| **4/21/2026** | Michelle Valencia | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/18/2026** | Michelle Vasquez | We DO NOT want the mopac expansion! It’ll hurt Barton Springs Edward’s Aquifer!! |

| | | |
|---|---|---|
| **3/19/2026** | Mick F Primmer | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. Seriously guys, this is not cool. |
| **4/30/2026** | Mickenberg, Julia L | I'm writing to encourage you to reject the proposed expansion of lanes, which will have a harmful environmental impact and will encourage more people to drive instead of using more sustainable forms of transportation.<br><br>I'd strongly encourage investing in the the alternative plan that:<br><br>Adds wide, shaded bike and pedestrian paths<br><br>Creates bike-pedestrian east-west crossings every quarter mile<br><br>Improves transit reliability<br><br>Does NOT expand the highway<br><br>Thanks for soliciting input on this issue!<br><br>Best, |

| | | |
|---|---|---|

| | | |
|---|---|---|
| **4/28/2026** | Miette Williams | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Miette Williams |

|---|---|---|
| **4/16/2026** | Miguel Esparza | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Miguel Esparza |
| **5/3/2026** | Mik Hodge | We absolutely cannot build toll lanes over vulnerable watershed recharge areas. There are countless better ways to raise funds for public works and countless better public works to work on. I use these green spaces almost daily. Without them, this city is not worth visiting and would be infinitely less pleasant to live in. Our natural areas are our "crown jewels" for a reason. |

| | | |
|---|---|---|
| **4/4/2026** | Mika Chiba | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>A full Environmental Impact Statement is needed before this irreversible project moves forward.<br><br>Sincerely,<br><br>Mika Chiba |

| | | |
|---|---|---|
| **5/3/2026** | Mika Hollis | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Mika Hollis |

| | | |
|---|---|---|
| **5/3/2026** | Mikaela Kuentz | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. PLEASE DONT DO THIS TO OUR CITY Mikaela Kuentz |

| | | |
|---|---|---|
| **4/28/2026** | Mikahl Doll | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Mikayla Rangel | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Mikayla Rangel |
| **4/6/2026** | Mike | This is not needed at all. Expanding mopac into an a zone which has endangered species is the last thing Austin needs. All you are doing is destroying the environment further and will be causing MORE traffic. Absolutely against this and for once, reconsider and focus on public transport, not endless lane expansions that will do nothing |

| **4/17/2026** | Mike Cannatti/ Zilker 351 | RE: Formal Request for Environmental Mitigations – MoPac South Project – Section 8.0 Post-Environmental Clearance Activities and Design/Construction Commitments<br><br>Greeting Central Texas Regional Mobility Authority Board and Project Leadership,<br><br>On behalf of Zilker 351, <https://www.zilker351.org/> an Austin-based 501(c)(3) nonprofit dedicated to preserving and enhancing one of Austin's most iconic urban greenspaces, we submit the attached letter with our formal request for environmental mitigations on the MoPac South Project to specify Section 8.0 Post-Environmental Clearance Activities and Design/Construction Commitments in response to the South MoPac environmental study. In keeping with the Mobility Authority's commitment to environmental stewardship that balances the need for infrastructure improvements with preservation of the natural resources, we request the mitigation adjustments to address the expected significant impacts from CTRMA's projected timeline of up to six years for completing the MoPac South project.<br><br>Zilker 351 appreciates CTRMA's consideration of these mitigation improvements which residents and the public at large will recognize and appreciate, too. While we reserve the right to provide additional feedback on the project, we look forward to seeing these mitigation and funding commitments in the Section 8.0 documentation and final project schematic. Members of the Zilker 351 board are available to meet with your team to answer questions and provide clarifications<br><br>For the Love of Zilker, |

| | | |

| **3/24/2026** | Mike Clifford | I am opposed to this expansion due to: a. Current Environmental Assessment (EA) is vaguely worded and generalized. A more detailed Environmental Impact Analysis (EIA) is needed.<br>b. Construction and deployment would reduce water quality in the Edwards Aquifer/Barton Springs<br>c. Traffic data is mainly from pre-COVID. Need more recent data to reflect current conditions.<br>d. Toll lanes favor the wealthy while not making a big enough difference for those in non-toll lanes.<br>e. This project assumes SH45 Gap will be completed - another controversial project that would harm the aquifer. |

|---|---|---|
| **3/12/2026** | Mike Dearborn | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. And o substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow at temperatures between roughly 70 and 72 degrees Fahrenheit, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor from six to eight lanes to as many as thirteen to eighteen lanes in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2015, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Erin Hazel |

| **5/3/2026** | Mike J Roy | Don't you dare put another toll road in. You can't figure out how to stop charging us tolls when the road is paid for as is. Second, dont even think about taking barton springs away from us, or any other green space you money hungry pigs. |
| **3/20/2026** | Mike Murphy | We live in Travis Country (1500 homes) and this plan needs to address the growing and severe problem of the traffic bottleneck at MoPac and SW Parkway. In the morning and afternoon, it is very difficult to get into and out of Travis Country due to the heavy traffic on SW parkway backed up from the MoPac intersection. I am concerned that the express lane entrances and exits would not serve drivers entering and exiting MoPac at SW Parkway. SW Parkway is a major thoroughfare and it's intersection with MoPac needs to be addressed, but it appears to be largely ignored in the plan. |

| | | |
|---|---|---|
| **4/28/2026** | Mike Webb | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Mike Webb |

| | | |
|---|---|---|
| **4/30/2026** | Mike Worth | I support the "no build" alternative to Mopac South Expansion. I urge CTRMA to undertake a full Environmental Impact Study (EIS) per federal standards, including a traffic study on the impacts of the project on surrounding roads and propose lower impact, lower cost alternatives. Construction congestion The years of construction-related traffic congestion and environmental degradation caused by this project are simply not worth the minimal projected improvements in travel time. Central Austin residents, including students at Austin High, and everyone who enjoys Zilker Park, Barton Springs, the Hike and Bike Trail at Lady Bird Lake, the Barton Creek Greenbelt, and Deep Eddy Pool will suffer through many years of construction congestion and bear the brunt of the environmental impacts (noise pollution, poor air quality, and compromised water quality) while enjoying the tiny benefit of a couple minutes travel time even many years after this project is built. Environmental Degradation I do not believe the environmental harm caused by this construction is worth a few minutes of travel time. Increasing air pollution, noise pollution, and toxic runoff from cars will negatively impact one of the most environmentally sensitive and cherished areas of our region. We must protect the Edwards Aquifer, Barton Springs, the Barton Creek Greenbelt, the hike and bike trail, Deep Eddy Pool, and Zilker park from excessive development and traffic and its negative environmental impacts. Fiscal irresponsibility There are a wide variety of low cost congestion relief measures that could improve the South Mopac Corridor and reduce peak time congestion without expansion that should be explored and tested before proposing expansion. These strategies include lengthening entry and exit ramps, restriping, HOV lane at peak times, park and ride facilities, transit routes, addressing surface and connector road congestion that backs up onto MoPac, among others. We should not be jumping into a $824 million dollar project without first exploring and testing low cost congestion relief measures that will help all roadway users before expansion. The future is unknown This project or any expansion of MoPac should not take place until I-35 construction is complete and resulting traffic patterns can be studied. The simultaneous creation of the SH-130 autonomous trucking route also has the potential to majorly impact traffic flows in our region by rerouting trucking traffic from I-35 and should be allowed to play out and be studied as another factor in assessing the need of MoPac expansion. Furthermore, we are on the horizon of autonomous vehicle adoption in many sectors which will change traffic patterns throughout our region. Expanding MoPac based on the outdated information in the MoPac South draft environmental assessment risks over or underbuilding the road based on incomplete and outdated demand projections. |

| | | |
|---|---|---|
| **4/26/2026** | MikeCannatti | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: -- Traffic Safety & Active Transportation: Fund and construct an elevated footbridge over Barton Springs Road on the East side of MoPac providing a safe crossing at a dangerous intersection. -- Trees: Preserve all trees 19" diameter or greater. Replace removed trees at 4:1 (native species); trees 4"–19" at 3:1. All plantings must be native or regionally adapted with an 85% survival maintenance plan. -- Dark Skies Compliant Design: Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. -- Parkland Protection : Adjust alignments and construction methods to avoid or minimize parkland encroachment. Restrict construction materials and trucks to beneath the highway near Zilker Park and the three other impacted parks, preferably parking and storing only after business hours. Fund full restoration and mitigation measures where impacts are unavoidable. -- Access: Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. -- Capital improvement reimbursement: Fund new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. -- Noise walls: Install high-performance concrete or transparent noise walls within Zilker Park boundaries to maintain visual connectivity and reduce noise pollution. -- Open space fund: Provide $35M in mitigation funding to the City of Austin, restricted to the purchase of conservation easements over the Edwards Aquifer Recharge and Contributing Zone to protect water quality and assist with flood mitigation. In keeping with the Mobility Authority's commitment to environmental stewardship that balances the need for infrastructure improvements with preservation of the natural resources, PLEASE make these mitigation adjustments to address the expected significant impacts from CTRMA's projected timeline of up to six years for completing the MoPac South project. |

| **4/30/2026** | Milo Calvert | I am opposed to the expansion of MoPac South due to the adverse effects it would have on our city's green spaces. This project would increase noise and air pollution around numerous parks (including Zilker), Barton Creek, Barton Springs, and the Williamson Creek Greenbelt. Any major construction must prioritize the protection of native trees and plants, keep careful construction limits so as not to encroach upon green spaces, and set up well-funded protections for the waters of the nearby Edwards Aquifer. Rather than MoPac expansion, I support the expansion of public transportation services. Should construction on MoPac continue, I urge you to release a full Environmental Impact Statement (not an abbreviated Environmental Assessment). Thank you. |

| | | |
|---|---|---|
| **5/3/2026** | Mimi Monti | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Mimi Monti |

| **4/20/2026** | Mina Loomis | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | mindy carr | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |

| | | |
|---|---|---|
| **5/1/2026** | Minette Aoueille | I support the need to conduct an EIS to gather information about how the proposed MOPAC expansion will affect the wildlife, especially protected native species and impact the beauty of this unique asset in downtown Austin. |
| **3/19/2026** | Mir Sommerfeld | Highway expansions have been proven over and over again for the last 100 years that they do not improve traffic and often make traffic even worse. Repeating the same thing over and over and expecting different results is not how we should be acting in a modern city. We don't need more pollution in the lungs of Austin High students and we don't need a project that is completely contrary to the City of Austin's climate goals and mode shift goals. What we need to improve mobility in the area is continuous pathways for walking and cycling along the entire length of south MoPac to connect people to downtown, as well as encouraging carpooling and transit use by converting a lane to be for transit/HOV use. Let's put our money where our mouth is and actually invest in projects that will improve traffic and lead toward a cleaner and healthier Austin. |
| **4/22/2026** | Mira M | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| **5/3/2026** | Miranda | I am in opposition of the new MoPac South tollway expansion in and around Austin. There are better ways to reduce traffic than building more highways that will negatively impact the ecological environment around them. Expanding the tollways in the planned areas will bring noise and air pollution to spaces that have not had those issues previously. Some of these areas include the water springs around Austin. Natives and tourists alike enjoy spending time in these springs, especially during extremely hot Texas summers. The last thing we want is a tollway anywhere near or above these areas. |
| **5/3/2026** | Miranda Casanova | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Miranda Casanova |

| **4/21/2026** | Miranda Neagle | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/24/2026** | miranda oherron | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Do not hurt my park and my homeland. I grew up on the beauty of Austin and have only seen its decline since I have lived here. Please, the people of Austin urge you to protect our lands. We do not need a bigger highway, we need green solutions. Bigger highways equal more traffic.<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Miranda Pacheco | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Miranda Pacheco |
| **5/3/2026** | Miranda Pacheco | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. | **5/3/2026** | Miranda Wadehra | We do not want expansion of highways at the cost of our watershed. Water is becoming an ever more scarce and precious resource. We cannot afford to do this harm to our watershed and our ecosystem. Barton springs is a part of who we are. I say no to the proposed expansion of mopac. |
| **5/3/2026** | Miranda Zimmerle | Hi, my name is Miranda Zimmerle and I am calling to request a full environmental impact surveyand statement on the impact of the MOPAC expansion on the springs and the environment and thearea and the people and the planet and the animals and all of the things in between,What has been released so far does not feel sufficient or accurate or truthful.And we also request alternatives to this proposed plan.I feel very strongly that this is not needed.It is against what we say society is headed towards as far as efficiency.I think there are other ways to move people with public transportation versus individualcars and there is no need for a three-way expansion and the disruption is not worththe supposed benefits and I would like to see this plan not proceed as it is being discussedand that is my statement. Thank you. Bye-bye. |

| | | |
|---|---|---|
| **5/3/2026** | Miranda Zimmerli | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. <br /><br /> As a Barton Hills resident, who moved here specifically for the proximity to the Springs and Zilker, I have experienced first hand the magic of this place, and wish for it to be protected for the enjoyment of all of the residents, human and non human, and visitors for centuries to come The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to |

| | | |
|---|---|---|
| | | gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Miranda Zimmerli |

| **5/3/2026** | Miriam Murillo Jackson | As someone who loves Austin not just for what it is today, but for what it still feels like, this proposed MoPac expansion honestly breaks my heart. We keep being told that adding more lanes will solve congestion, yet every expansion seems to lead to years of construction, more traffic, more pollution, and less of the natural spaces that make this city worth living in to begin with. The part that gives me pause most is that this project cuts through some of the most environmentally sensitive and beloved areas in our city - near Barton Springs, the Greenbelt, Lady Bird Lake, and the Edwards Aquifer recharge zone. Once that damage is done, we do not get it back. I also can't ignore the reality that many families already feel exhausted by nonstop construction and increasingly expensive toll-dependent infrastructure. Expanding MoPac again feels like doubling down on the same approach instead of investing more seriously in transit, smarter bottleneck fixes, and long-term solutions that don't permanently sacrifice Austin's environment and quality of life. Even traffic experts and residents have pointed out that some of the worst congestion comes from merge design and bottlenecks, not simply a lack of lanes. Please slow this process down and require a full Environmental Impact Statement before moving forward. A project of this scale deserves transparency, caution, and a real conversation about whether this is truly the future Austin wants. |

| | | |
|---|---|---|
| **5/3/2026** | Miriam Reyes | I've lived in Austin the vast majority of my life and I have seen how much concrete has been poured and habitats fragmented. Making more lines does not decrease traffic over time. Austin needs to expand public transportation, not focus on building more lanes over precious habitat. Even worse, toll lanes. This won't benefit the everyday Austinite. Please reconsider. Our natural spaces have already been stretched thin. |
| **5/3/2026** | Missy Colbert nichols | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Missy Colbert nichols |
| **4/23/2026** | Misty Kelch | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/29/2026** | Misty McLemore | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/10/2026** | Misty Odom | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |

| | | |
|---|---|---|
| **5/3/2026** | Moira Bering | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Moira Bering |

| | | |
|---|---|---|
| **5/2/2026** | Moll Brau | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Moll Brau | To Whom It May Concern:<br><br>My family and neighbors strongly oppose the MoPac South expansion. We are requesting a full Environmental Impact Statement (EIS) and we support funding for rail, transit, and biking instead.<br><br>We need to reduce noise, congestion and pollution, not add to it. PLEASE OPPOSE THIS PLAN!<br><br>Thank you,<br><br>A Quintana |
| **3/9/2026** | molly | Hello, I'm a lifelong Austinite. I've enjoyed this section of Mopac for decades. Please don't cut down anymore trees or reduce the beautiful hills on either side of this lovely part of the highway. This is a section of Mopac that has potential to be even more beautiful and environmentally healthy. I wish there could be some sort of wildlife crossing like San Antonio and other cities have. Please don't destroy it... please add the lanes with little impact and please add more native trees and plants. Thank you |

| | | |
|---|---|---|
| **4/20/2026** | molly Cannatella | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/24/2026** | Molly Flynn | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>These parks are greenscapes are what make Austin so incredible compared to other cities… we must preserve the natural habitats that are native to the land that we live on. We need healthy people to make our city thrive and having access to nature, trails etc so that we can move our bodies and commune with our environment is pivotal to that. People will not be happy if these parks and trails are cut through, please vote with your hearts, not your pockets.<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/29/2026** | Molly Hepp | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| | | |
|---|---|---|
| **5/2/2026** | Molly Martin | I oppose the plans to expand MOPAC south. I am a frequent driver on the southern section of MOPAC and believe more lanes will increase current levels of traffic there. This pattern has been seen around the US and Austin is no exception.<br><br>The impact on the aquifer, Barton Springs and endangered local flora and fauna cannot be brushed aside. A full EIS (Environmental Impact Statement) should precede even preliminary discussions of this enormous project.<br><br>Funds spent on such a massive undertaking would be better spent on rail and bus routes as well as bike lanes.<br><br>Construction will cause noise, traffic disruption and poor air quality for area residents for years.<br><br>I hope upcoming discussion will take these concerns seriously.<br><br>Respectfully,<br><br>Molly Martin<br><br>Austin 78756 |

| | | |
|---|---|---|
| **4/20/2026** | Molly Montgomery | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/19/2026** | Molly Pratt | I urge CTRMA to reconsider the expansion of MoPac South. This plan does not align with our city's climate action goals and our collective intention to move towards increasing access to public transit and bike lanes. Highway expansion will increase pollution and traffic--none of which Austin residents want--right in the middle of one of the most treasured, environmentally sensitive, and sacred parts of our city. The springs, town lake, protected salamander habitat, creeks, & greenbelt are a significant part of what makes Austin Austin. As a green-friendly community, Austinites do not want these treasured natural resources to be diminished or compromised in any way. Please consider investing in public transit, converting a preexisting lane to an HOV lane, or any other creative solution that does not require massive highway construction. |

| | | |
|---|---|---|
| **4/22/2026** | Molly Richter | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| **5/3/2026** | Molly Richter | Dear CTRMA Board Members, I am very concerned about the impacts of the proposed MoPac South expansion on our beloved Austin green spaces, our communities, and the endangered species found only here. Please, please require a full Environmental Impact Statement (EIS) before moving forward with this project. I also ask that you seek out the advice of reputable local environmental groups and implement the harm mitigation strategies they recommend. Thank you.  <br>Respectfully, Molly Richter |

| | | |
|---|---|---|
| **5/3/2026** | Molly Richter | Dear CTRMA Board Members, I am very concerned about the impacts of the proposed MoPac South expansion on our beloved Austin green spaces, our communities, and the endangered species found only here. Please, please require a full Environmental Impact Statement (EIS) before moving forward with this project. I also ask that you seek out the advice of reputable local environmental groups and implement the harm mitigation strategies they recommend. Thank you.   Respectfully, Molly Richter |
| **5/3/2026** | Molly Richter | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Molly Richter |
| **5/3/2026** | Molly Sassatelli | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Molly Sassatelli |

| | | |
|---|---|---|
| **3/25/2026** | Molly Wilson | CTRMA Board Members,<br><br>Hi,<br><br>I sincerely hope you are well. It is unfathmoably that this expansion is even being considered. The outcome is supposed to increase transit time by 5 minutes if traveling the full 8 miles... but the contruction will take 7 years. Surely you realize that in that time so many more people will be here that the expension will be totally useless. Five minutes faster makes no meaningful difference anyway, ESPECIALLY when the contruction will CLEARLY put our natual resources at risk. Barton Springs is a major reason people move to and stay in Austin. ALL caution should be taken to protect it and the Edwards Aquifer. I can only conclude that someone's cousin owns the contruction company that would be awarded this job... otherwise the project just makese no sense at all. So, I implore you to have a heart and listen to the innumerable Austin residents who do NOT want this expansion. We already sit in traffic and would still be sitting in trafffic. Five minutes does NOT matter.<br><br>The MoPac South expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br>Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br>Tree removal and vegetation loss eliminate natural filtration.<br>Warmer runoff will reduce oxygen in streams and promote algae blooms.<br>Karst features and caves supporting unique ecosystems will be destroyed.<br>Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>This is very serious and I hope you take it seriously. If not, one would be inclined to hold this decision and the people who make it accountable for any negative impact on the aquifer and water resources in the future not to mention negative economic impact on the city if we run out of water or if Barton Springs becomes unswimmable.<br><br>Thank You for listening to your neighbors,<br><br>Molly Wilson |

| | | |
|---|---|---|
| **3/18/2026** | Mona Mehdy | Dear CTRMA Board Members,<br><br>As a citizen and as a professional biologist, I am writing to strongly oppose the MoPac South expansion as proposed. The process of considering the proposed expansion is flawed including as a major factor the lack of a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>Widening the road will unequivocally bring more use and sprawl, not solving the congested traffic issue. The impacts of increased air, land and water pollution over the fragile, environmentally sensitive land and its vital aquifer, habitat functions for endangered species and other wildlife should not be tolerated. Water is increasingly limited in this era of severe climate change which has brought increased high temperatures, increased drought severity and frequency and Texas needs to shift to far more protection, conservation and how we build transportation. All of these factors, including the vital role of the aquifer that the CTRMA proposal would damage strongly support examination of alternatives to more highway lanes. It is past due for this major metropolitan area to shift to an emphasis consistent with efficient mass transit, ride sharing, high occupancy vehicle lane use and bus/train/bicycle and pedestrian to concentrate development near the urban core advocate. This, not expanding highways, is critical for countless reasons of affordability, preserving our Central Texas hill country environment for residents, our important tourism industry, and safeguarding cherished and environmentally sensitive lands, keeping the land, springs and water, air healthy for all who depend on them.You should not be part of further degrading the environment and quality of life in the same heedless way that brought the Austin area many hours lost to traffic gridlock and harm to the environment. Austin air quality has become significantly dirtier in magnitude and frequency, opposing health and the environment. Transportation is a big source including locally generated, the proposed expansion would further degrade.<br><br>I strongly advocate that CTRMA shift from decades of road building focus to low build alternatives consistent with the above considerations and utilizing a full Environmental Impact Statement. Thank you for your time and consideration.<br><br>Respectfully,<br><br>Mona Mehdy |

| | | |
|---|---|---|
| **4/20/2026** | Mona Sanchez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/25/2026** | Monica Magoon | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. | | | |
|---|---|---|
| **4/27/2026** | Monica Flores | Dear CTRMA Officials and Stakeholders,<br><br>As an EverGreen Austin Board Member, I'm writing to encourage you to incorporate the following outlined mitigations before advancing the MoPac South expansion. We recognize the corridor's congestion demands action, and ask for the same level of effort exercised in SH 45 SW for MoPac South. We also recognize that action without environmental accountability produces infrastructure Austin will regret. This proposed roadway project impacts the City's Crown Jewels: Zilker Park, Barton Creek, Barton Springs, Dick Nichols Park, Volma Overton Sr., and Williamson Creek Greenbelt.<br><br>As stated in Ben Thompson's Community Impact article - "Austin Faces Diminished parks growth" dated 02.05.2026: "Austin already falls short: less than 18.5 acres of parkland per 1,000 residents — 77% of the residential goal, a gap of roughly 5,700 acres."<br><br>This project must not widen that deficit.<br><br>_____<br><br>EGA requests these mitigations to be written in Section 8.0 Post Environmental Clearance Activities:<br><br>Trees. Preserve all trees 19" diameter or greater. Replace removed trees at 4:1 (native species only); trees 4"–19" at 3:1 (native species only) in the right-of-way and in parks. All terrestrial plantings must be native or regionally adapted, with a watering and maintenance plan ensuring 85% survival. (See Exhibit A.) |

| | | |
|---|---|---|
| | | Parkland. Adjust alignments to avoid parkland encroachment. Require construction materials and trucks to stay beneath the highway near Zilker Park and the three other parks impacted. Where impacts are unavoidable, CTRMA should fund full restoration to previous conditions or better. Provide a Park Impact Assessment evaluation of the loss or impairment of park acreage, trees, park features, ecosystem services, recreational programming, and community access resulting from the change in use of parkland.<br><br>Capital Improvement Reimbursement. Funding for the implementation of infrastructure improvements to address construction-related displacements of park usage, including new sidewalks, bike paths, vehicle routing/parking areas and new access points, to replace existing vehicle and pedestrian infrastructure disrupted by the construction phase of the project.<br><br>Noise Walls. Hold a workshop with EGA and CTRMA designers on the design and placement of noise and aesthetic walls before finalizing plans. As part of this meeting, we will want to discuss the installation of high-performance concrete or transparent noise walls within Zilker Park boundaries to maintain visual connectivity where appropriate.<br><br>_____<br><br>EGA also requests two Non-Required Mitigations: |

| | | |
|---|---|---|
| | | Open Space Fund. Provide $35M in mitigation funding to be used exclusively for land acquisition located over the Barton Springs segment of the Edwards Aquifer Recharge and Contributing Zone. This initiative aims to protect water quality and quantity, safeguard groundwater, enhance flood and fire protection, support wildlife, and impacts from impervious cover.<br><br>Permanent Green Toll. Add a voluntary $0.10 to every toll transaction in perpetuity to fund ongoing land acquisition for environmental mitigation and green infrastructure. Over time these funds should also incorporate an escalation clause to compensate for traffic demands.<br><br>_____<br><br>The stakes are real. Zilker Park has 2,000,000 annual visitors. The greatest impacts will be to the 160,000 visitors to Zilker Botanical Garden, 150,000 to the Austin Nature and Science Center, and 65,000 to the Rowing Dock. Mopac is less than one mile from Barton Springs Pool. CTRMA must ensure public health and safety for all of these park patrons at all times.<br><br>EGA commends the effort undertaken by CTRMA and partner agencies to evaluate mobility improvements along a highly congested corridor serving thousands of Central Texans each day. The public's active participation demonstrates the importance of this project to Austin's residents and underscores the need for thoughtful, transparent decision-making. |

| | | |
|---|---|---|
| | | EGA is a strategic partner in this process. We will advocate within current political realities while holding firm on the protections Austin deserves. EGA urges CTRMA to include all recommended mitigations, thereby demonstrating that superior infrastructure and environmental stewardship are not in conflict.<br><br>Thank you for your consideration.<br><br>Monica Flores<br><br>Evergreen Austin Board Member |
| **4/26/2026** | Monica Flores | Do an environmental impact study. Follow the strictest mitigation demands from evergreen Austin. |

| | | |
|---|---|---|
| **3/25/2026** | Monica Magoon | CTRMA Board Members,<br><br>The MoPac South expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br>Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br>Tree removal and vegetation loss eliminate natural filtration.<br>Warmer runoff will reduce oxygen in streams and promote algae blooms.<br>Karst features and caves supporting unique ecosystems will be destroyed.<br>Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Monica Magoon |

| | | |
|---|---|---|
| **5/3/2026** | Monica Mahoney | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Monica Mahoney |

| | | |

| | | |
|---|---|---|
| **5/3/2026** | Monica Skinner | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Monica Skinner |

|---|---|---|
| **4/4/2026** | Montana Wooten | Dear CTRMA Board Members,<br><br>Here:<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Montana Wooten |

|---|---|---|
| **3/19/2026** | Morgan Honaker | DO NOT EXPAND MOPAC. We will worsen our air quality, increase pollution, and further enable a car-dependent city in Austin. We need affordable, clean, and safe public-transit, not a loud, polluting, dangerous 8 lane highway! |
| **5/3/2026** | Morgan Howard | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Morgan Howard |
| **5/3/2026** | Morgan Merchant | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Morgan Merchant |

| | | |
|---|---|---|
| **5/3/2026** | Morgan Nickel | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Morgan Nickel |

|---|---|---|
| **4/26/2026** | Moxie Broz | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Moxie Broz |
| **4/30/2026** | MP | Barton springs is apart of the culture in Austin. I've never seen anything like it before. I BEG for further investigation on the environmental harm this MoPac highway could and WILL cause if this project carries out. Austin Texas will not be the same without THE Barton Springs |

| | | |
|---|---|---|
| **5/1/2026** | Ms. Corn | Hello. My name is Ms. Corn. I live in Sunset Valley. I basically live off of MOPAC, and I am very concerned about the MOPAC expansion. I really question the outdated analysis. This project started in 2011. The traffic model used to dismiss alternatives was finalized 2012, over 14 years ago. Since then, we've had a pandemic, expanded telecommuting, and approved Project Connect. We need CTRMA to rethink this project with reconsideration of alternatives, updated data, and consideration of local goals and policies. We really want you toa full environmental analysis, challenge the benefits, protect our endangered species, and really protect our water. Proposed water quality treatment doesn't meet the standards that Travis County and the City of Austin used for their own roads. During construction rain runoff and it will carry sediment and pollutantsdirectly into the Edwards Aquifer Recharge Zone, causing an irreversible harm.You can reach me at -.I'm very, very, very concerned about this. Please do not move forward without a very completed environmental analysis, and please hear me.Thank you very much. |
| **5/3/2026** | Mukund Gajera | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Muppet August | Hi, this is Muppet August and I am calling to share that I learned how to swim in thosesprings and I want to make sure that we have a full environmental impact investigationto understand exactly what's going on.I grew up here in Austin and I remember hearing about the expansion and how it was importantto make sure to consider all of the things.And now it feels like we're just moving forward without considering all the impact supportthat we take care of this now, and I want us to make sure that we proceed consideringall of the options.Thank you so much.Sure. |
| **4/2/2026** | Murat Baykal | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it’s only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45, which is very dangerous. City Council District 8 has now allocated $117,000 to the design of this path as they recognize the important need for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request, and I can provide further information, including graphics. Thank you. |

| **5/3/2026** | Mykaela Lopez-Roeper | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  My |

| | | |
|---|---|---|
| **4/24/2026** | Myles Cooley | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Myna Manchaca | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Myna Manchaca |
| **5/3/2026** | Myra Lean | calling now. Hi, this is Myra Lean. My number is 936-537-2173. I am born and raised in Austin,Texas. I have been visiting the Barton Springs and all of Austin area since the moment Iwas born in 1991. And I have been recently informed of further expansion of the MOPAChighway that will be impacting the springs and some endangered species, and I am officiallyrequesting for a full environmental impact statement completed in full so that we canunderstand what the impact is, and also understand what the plans are to mitigate the impactif we proceed with the expansion of MOPAT.Okay.Let's forward a hearing back from you.Again, my number is 936-537-2173.Thank you. |

The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| **5/3/2026** | Myron Hess | Dear CTRMA Board Members, <p class="MsoNormal">I live and work near Barton Springs and Zilker Park and those natural features and I drive on South Mopac, Bee Caves Road, and Cesar Chavez Street regularly. The well-being of the springs, the aquifer that supports the springs, the park, and the various at-risk species found nowhere else in the universe will be put at risk by this proposed CTRMA project. The environmental assessment and proposed finding of no significant impact are fatally flawed, failing to provide the hard look required under NEPA.  A full environmental impact statement is necessary to evaluate the risks and to identify if it is possible sufficiently to mitigate adverse impacts to these unique features and to the lives of the many people adversely affected if the project moves forward. <p class="MsoNormal">There can be no serious question that the proposed project will adversely affect the environment in multiple, significant ways, including water quality in the aquifer and springs; air quality for nearby residents, park users, and students at Austin High School; salamanders reliant on the aquifer and cave invertebrates in adjacent areas; and the quality of life for those of us driving on South MoPac and other affected roads during the construction project and beyond. <p class="MsoNormal">The traffic projections relied on in an attempt to justify the project are grossly outdated and flawed. A traffic model based on 2012 conditions is not sufficiently current. Commuting patterns have changed dramatically since then with far more people telecommuting and working flexible hours. The failure to provide an updated assessment makes the purported justification for the project and balancing of commuter impacts unsupported. The one thing that is ensured is that commuters, including students at Austin High, will be greatly adversely affected by disruptions during the construction period. Traffic detriments are guaranteed, whereas prospective traffic benefits—minimal time savings even for those traveling the full project length—are speculative at best and that speculation is based on outdated analyses. <p class="MsoNormal">Water quality impacts from fine particulates, including microplastics from tires, will put threatened and endangered species at further risk. Other water quality impacts from sediment associated with construction activities also put those species at risk as well as the water quality at Barton Springs Pool. Similarly, air quality impacts will put students at Austin High, park users, and nearby residents at risk, during the construction period and beyond. <p class="MsoNormal">The proposed finding of no significant impact is not credible. The environmental assessment is inadequate. A full environmental impact statement based on credible, current data and analysis is required. <p class="MsoNormal"> Sincerely, Myron Hess |
| **5/3/2026** | Myschel Reeve | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Myschel Reeve |

|---|---|---|
| **4/30/2026** | N/A | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | N/A | Both the Austin City Council and the Travis County Commissioner's Court have asked for the Environmental Impact Statement regarding the addition of several lanes to Mopac South.Our most precious life-sustaining needs are air and water. A full EIS will let our leaders and the public know what it is we are risking by the additionof lanes of traffic to the area, paving over acres of the Edwards aquifer recharge zone and by putting more vehicles, vehicular toxins in the air.Increasing the traffic flow at the expense of our resources is short-sighted and a backwardstep in Austin's growth.I am Dionel Robertson, citizen of Travis County |
| **5/2/2026** | N/A | I'm calling on behalf of Farton Springs, the soul of Austin.And so many residents whose whole way of life is in that corridor.The order of things matters.And just because studies and growth suggest nowthat an investment in broadening these highways could be beneficial in certain areas.Given the way Austin has grown, I strongly urge that no such construction be continued.The Mopac Highway is not nearly as busy as I-35, and the least project like this needsto wait until after I-35 is completed, all the way down below Kyle.As it is, having both major highways that run north-south in Austin cut off in any regardwill be a catastrophic loss to the way of life for people who enjoy the soul of Austinthat part in Springs, all up and down Zilker, Casa de Luz.These are the things that make Old Austin special.And this fervor for growth cannot be blindthe most important things that make this city special.Often has a long history of protecting its green spaces.Important to frame this construction projectin that regard.This is about preserving the beautiful spaces in southwest Austin, the caves, Barton Springs,the waterways, the curvy roads.This is the way Austin is going to be.It makes it quirky and special.It's not Houston, it's not Dallas, thank God, Fort Worth.And this urge to grow can't be the expense of what is most vital, life giving to this city. |
| **5/2/2026** | N/A | Hey, I'm calling to just voice my opposition to the MOPAC expansion.It doesn't at all make any sense in terms of how much traffic will be going on, andit's also a major threat to the Edwards Aquifer, and we'll be filling caves along that stretchwith concrete and putting four endangered speciesunder major threat, probably wiping them out.So just voicing that very much opposed to it.And please don't let it happen.Thanks. |
| **5/2/2026** | N/A | Please stop what you're doing when it comes to the freeway expansion and wedemand an environmental impact statement please on sparsity. |
| **5/2/2026** | N/A | Hello, I'm calling to request a full environmental impact study be done because of the endangeredspecies that could be impacted via the highway project and the CTMA projected bill.So I don't agree and I request more investigation be done before this is moved forward.Thank you. |
| **5/2/2026** | N/A | When |

| | | |
|---|---|---|
| **5/2/2026** | N/A | I'm calling to install and review the potential expansion of MOPAC highway, highway one, anywherein the Austin city limits, and that that be published publicly and easily, publicly availableonce complete.Thank you.My phone number is -, full environmental impact review of any and all highway expansionsinside the city limits, in particular the one in question for Mopac Highway, State Highway1.Thank you.Thank you. |
| **5/2/2026** | N/A | I'm calling to say that I am extremely opposed to the MOPAC project and we demand a fullenvironmental impact statement to be made.And yeah, I'm in direct opposition to this project, Protect Our Springs.All right. |
| **5/2/2026** | N/A | saving Barton Springs would be so hot of you it's the hot thing to do you knowthat I know that we all know that I really I really need you to save BartonSprings and that means do not do the Mopac expansion you already know why Idon't even need to tell you the reasons you already know five minutes of trafficyou're gonna save me five minutes that's not worth it for all the species you'reto kill. The math is not mapping. You know that. And I know that. You know it's not likethis. You know it. Everyone else told you why. Okay. Love you. Mean it. Bye. |
| **5/2/2026** | N/A | Hi, I'm calling to demand a environmental impact statement, and to protest the pollution.Thank you very much.Bye. |
| **5/3/2026** | N/A | Hi, I'm an Austin resident. I live in Zilker, 787-04 neighborhood, and Ioppose the MOPAC expansion proposal. I demand a full ecologicalsurvey, and Ithink there is, you know, we would haveseven plus years of more traffic to then save five minutes of trafficeventually, you know, 10 years from now, we're never going to make up that time of the actualtraffic that we've spent, time we spent in traffic, and most importantly, our environmentis going to suffer the most. So, you know, obviously we have multiple endangered speciesin the area. It's that area is the heartbeat of the city. And we don't need more concrete.how about we consider using some of those funds for expanding MOPAC to maybe create a rail systemor better public transportation for those who maybe are not able to afford vehicles oreventually we can be a modern city like some of cities in the rest of the world and be able touse less vehicles, save our carbon footprint, etc. But the solution right now is not toexpand the highway. It's 2026, okay? So yes, please note this down. I'm really very againstthe expansion. |
| **5/3/2026** | N/A | I urge and demand a full environmental and chemical statement.Barton Springs has saved my life. |
| **5/3/2026** | N/A | I oppose the MOPAC expansion and demand release of the full environmental impact study. |
| **5/3/2026** | N/A | I'm recalling to oppose the expansion of MOPAC and demanding a full environmental impact study.It doesn't seem worth it to add a few lanes of traffic with the potential to impact the springs, which have such healing powers for all of us. |
| **5/3/2026** | N/A | Hi, I am calling to request that a full environmental impact statement be done on the study fromLBAC expansion.I really believe that it will impact the trails and the water system and the springs and especiallyat what's aquifer and all the endangered species that are there.I've lived in Austin for the last 35 years and I just really treasure everything aroundthe water and Ladybird Lake and the trails and Barton Springs.So please, please help us protect these versus like, my fear is that they'll be destroyedsignificantly by the expansion of OPEC.Thank you very much. |
| **5/3/2026** | N/A | Hi, I think the MOPAC development that's nearing Barton Springs needs an environmental protectionreview for sure.I've been in Austin for about 10 years of my life.My name is Samuel Kirk Simmons.I lived just down the street from Barton Springs and now I lived in East Austin, the 78742zip code.I don't know.I think people's opinions matter when it comes to this sort of thing and not corporateinterests as hopefully the person receiving this message can also understand.Thank you, bye. |
| **5/3/2026** | N/A | Hi, my name is Mila Santana. I am calling to request a full environmental study for the MOPAC extension.I think it's important that we know the full impact of the highway extension to our aquifer and alsoyeah, of different closures andimpacts of people accessing trails and nature.So I'm speaking as an individual, but I am requesting a full environmental impact study.Thank you. |

| | | |
|---|---|---|
| **5/3/2026** | N/A | There needs to be a full environmental study, and this project should not go forward.It is detrimental to environment, native species, and we don't really need any more MOPAC disruption.So please don't let this project go forward.My name is Beth, and I've lived in Austin for 20 years.Thank you. |
| **5/3/2026** | N/A | Stop the MOPAC extension.We do not need it.The environment doesn't need the MOPAC extension.Please, please stop it.And do more research.See how many animals you're going to kill.And how is it going to affect the natural flow of the water?We don't need to mess with the environment anymore.Stop the expansion of the MOPAC extension.Don't do it.Don't do it.Don't do it. |
| **5/3/2026** | N/A | Hello, I am looking for a phase one, phase two, and phase three environmental impactstudy for the bridge that's going to be built on MOPAC, the MOPAC expansion bridge.Thank you dearly. |
| **5/3/2026** | N/A | Hey, I'm calling to oppose the MOPAC expansion and especially considering there's definitelygoing to be an environmental impact on this and it seems that everyone's ignoring thatfact right now.So I'm just asking for a full, complete environmental study to be done before any further progressis made on this project.I know that money talks a lot of times, but we have to protect our natural resources,and if we ignore those things just for the highest bidder, we're not going to haveBarton Springs and water here much longer.So please do a full environmental study.Thank you.My name is Brian Orapallo, 616-818-5237.Thank you. |
| **5/3/2026** | N/A | I urge and demand a full environmental release study of Barton.Barton is my home and it means so much to me and brings me so much peace and safetythroughout my days and my weeks and this place cannot change because it's perfect the wayGet it. |
| **5/3/2026** | N/A | Hi. We urge and demand a full environmental impact statement of Barton Springs.Barton Springs is my name and it means so much to me.I love Barton Springs and it means so much to me.And it is a sanctuary of peace and lovethat I don't want to be affected. |
| **5/3/2026** | N/a | I oppose you forever paving our city with more highway. Please find some way to funnel tax payer money into something positive and sustainable. |
| **5/3/2026** | Nabil Fayed | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Nabil Fayed |

| | | |
|---|---|---|
| **5/3/2026** | Nadeem Alhasan | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Nadeem Alhasan |
| **4/21/2026** | Nadia Burr | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Nadia Johst | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Nadia Johst |

| | | |
|---|---|---|
| **3/18/2026** | Nadia R | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Nadia R |
| **5/3/2026** | Nadia Russo | We should be taking this project as an opportunity to multiply the number of bike/ped crossings over Mopac. We need bike and ped bridges or dedicated trail underpasses. It is too hard to cross the highway right now. East-west connectivity is important too. $825M+ is too high of a price tag to not include holistic travel options. |

| | | |
|---|---|---|
| **5/3/2026** | Nafi Baksh | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Respectfully, Nafi Baksh |

| | | |
|---|---|---|
| **3/24/2026** | Namrata Chhillar | The build scenario generates 96 million more VMT when compared to No Build Scenario. There is a risk of induced demand. The claimed emissions benefits depend heavily on higher speed and fleet mix but if speed gains erode due to more induced driving, emissions reductions may never materialize. The EA should also disclose fleet mix assumptions as fleet mix is changing differently after federal tax credits expired in late 2025. Also, MSAT discussion says health impacts cannot be qualified. FONSI cannot rest on unknown health impacts. An EIS is required. |
| **5/3/2026** | Nancy Binford | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Nancy Binford |

| | | |
|---|---|---|
| **5/3/2026** | Nancy Binford | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Nancy Binford |

| | | |
|---|---|---|
| **4/26/2026** | Nancy Blanton | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |

|---|---|---|
| **3/18/2026** | Nancy Puentes | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |

|---|---|---|
| **5/3/2026** | Nancy Thomas | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Nancy Thomas |

|---|---|---|
| **5/3/2026** | Naomi Moore | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Naomi Moore |

Please consider!<br>We aren't asking it to stop, we're asking for revisions.<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Natalie | This expansion will definitely destroy landscape. Which is important for certain local species to thrive and not go extinct. Like the blind salamander. Pollution? Will definitely increase, both air and sound. So, no. I don't agree and don't want this project to be done. Find a better solution to stop the traffic congestion. Stop destroying Austin water features and outdoors. We DEMAND clean air and water, and we want to PROTECT AND PRESERVE IT FOR FUTURE GENERATIONS! Stop building express lanes (tolls) to have a reach into our wallets. We don't need more of that. We need better healthcare, education and safe outdoor spaces. |
| **5/3/2026** | Natalie | I oppose the plan for construction on Mopac that will threaten the Edwards Aquipher and our increasing water crisis. Do you want your grand children to be able to swim in Barton Springs? I encourage officials to find alternative solutions that will not have permanent damage for our natural environment |

| | | |
|---|---|---|
| **5/3/2026** | Natalie Amador | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Natalie Amador |

| | | |
|---|---|---|
| **5/3/2026** | Natalie Amador | Hello, my name is Natalie Amador and I live at - Austin, Texas, 78722.I'm calling to say that I oppose the Mopac South Highway Expansion Project due to thisexpansion directly threatening the Edwards Aquifer Recharge Zone and the clean waterof Barton Springs.Construction and increased traffic will increase polluted runoff sediment and in previous coverfurther warming stormwater and stressing the aquatic ecosystem.Over 110 acres of new pavement will intensify the urban heat, island effect, raising thetemperatures and further impacting water quality and aquatic life.I strongly encourage the city of Austin to oppose this project and think of the people and what we need and want. And that is not this project. There are other alternatives toImprove traffic such as public transportation andBike lane mopedYeah, I would really hope that the people in charge of this make the right decisionfor the people of Austin and really listen to what we are needing and wanting.And yeah, Austin wouldn't be the same without the Springs.So, I highly encourage them to rethink how this will affect their future profits andthe people that come here to enjoy the springs from all over.Thank you. |

| | | |
|---|---|---|
| **5/3/2026** | Natalie Bohmer | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Natalie Bohmer |

| | | |
|---|---|---|
| **5/3/2026** | Natalie Bohrer | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Natalie Bohrer |

|---|---|---|
| **4/26/2026** | Natalie Dorn | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| **4/3/2026** | Natalie Galletti | I commute daily from Oak Hill to Downtown Austin via MoPac every weekday. I leave my house with sufficient time to get to work and the traffic is just fine. I think that the construction involved with any of these “improvements” will cause irreversible harm to the Austin environment and will decrease the quality of life for the human and animal residents of South Austin. Our traffic is nothing compared to the traffic in larger cities, why would I want our local roads more crowded? Let’s instead improve the infrastructure (roads and offices) in the suburbs so that we can grow those areas instead of encouraging more people to commute from the suburbs to downtown. That’s how to properly grow a city. Look at Houston and Dallas and San Antonio for examples of how to do this correctly! |
| **5/3/2026** | Natalie Gray | I OPPOSE this project. The damage this project will create is too costly. Mopac north tolls at Shoreline are a infinite waste of money and damage to the natural environment. Hardly anyone drives on that 8 lane wide concrete wasteland. Misguided and misinformed. NO NO NO on mopac tolls south. |
| **5/3/2026** | Natalie Grigson | Hi, my name is Natalie Grigson. I'm calling to give feedback about the proposal to expandMOPAC. I really don't want this to happen because I do believe it will have a negativeimpact on the springs for one, but also just often the environment in that area and alsobe kind of a never-ending urban sprawl. I think that the public deserves a fullenvironmental impact report and I think that the public also deserves to havetheir voices heard. If you have any questions, call me back. My number is -. |

| | | |

| **5/2/2026** | Natalie Guillot | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Natalie Guillot | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Natalie Guillot |
| **5/1/2026** | Natalie Hicks | The environmental ramifications of this project for little to no traffic improvements is morally unjust. No one from the public asked for this express lane - it is an imagined perceived benefit from internal teams that need a larger community perspective before proposing these types of plans. I drive Mopac every single day, and the traffic truly is not that bad. I wish all the mobility authorities across Texas would listen to the people once and for all. We've been shouting it from the rooftops for decades - WE. WANT. TRAINS. PLEASE. |

| | | |
|---|---|---|
| **5/3/2026** | Natalie Mao | Please see attached for the public comment to be submitted for the administrative record.<br><br>Thank you,<br><br>Vienna<br><br><<Attacment>> |
| **5/3/2026** | Natalie Newman | No Mopac Expansion!! The potential contamination of Edward's Aquifer thus the best of Austin's natural water resources is NOT what this community wants. Do not move forward with this project!! |
| **4/23/2026** | Natalie Romo | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **5/1/2026** | Natalie Stone | Hello, my name is Natalie Stone and I am calling because I care deeply for clean air and cleanwater in Austin, Texas.I care for endangered species and would like an environmental, whatever it's called, impact statement, environmental impact statement, and that your plans for MOPAC that would damagewould cause a problem for Edward's aquifer.And like the whatever you're saying is like no significant impactis not credible here. It will, in fact, affect our water and our endangered species. And I am, as a 28-year citizen of Austin,very concerned and upset by this, and I'mfor you guys to do the right thing here, do something about it. Again, water is themost important thing for us as a human species, but especially in Austin aswe've become very overcrowded, but also special places that make Austin Austin, like Barton Springs, would be affected and so many other waterways. So please, I ask for you to reconsider or stop altogether. This expansion of MOPAC is not needed.It's not going to make enough impactto worse the detriment it will cause to our water and endangered species and waterways.So please, please do the right thing here. And I thank you. |

| | | |
|---|---|---|
| **5/3/2026** | Natalie Stone | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Natalie Stone |

| **5/3/2026** | Natalya Doria | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Natalya Doria |

| | | |
|---|---|---|
| **4/28/2026** | Natasha McCarty | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Natasha Morgan | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Natasha Morgan |

| | | |
|---|---|---|
| **4/24/2026** | Natasha Navarro | Dear CTRMA Board Members,<br><br>If you are human you'd understand this is NOT what should happen. Nature over cars 100%<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their |

| | | |
|---|---|---|
| | | water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. |

| | | |
|---|---|---|
| | | For the love of water in Central Texas,<br><br>Natasha Navarro |
| **4/27/2026** | Natasha ritter | PLEASE DO NO EXPAND MOPAC, expand conservation for the spring!! |
| **4/14/2026** | Natasha Scheufele | Please do not pursue further construction on mopac. We have destroyed enough of the wildlife, and should do our best to preserve nature as much as possible. It is impossible to perform construction without damaging some natural habitat. Please leave Mopac alone! |
| **3/19/2026** | Nathan | I don't want a wider highway |

| | | |
|---|---|---|
| **5/2/2026** | Nathan | Hello, my name is Nathan and I am representing citizens of Austin and visitors of SpartanSpring and consumers of water and I am calling because the more I learn about the southernexpansion project, the more concerned I am and I would like to know that this ishaving a full environmental impact statement in study, whatever is needed to make surethat we preserve the Edwards aquifer, because that is a key part of Austin's water supply.It's important to a lot of people, it's important to the ecosystem, it's important to a lotof animals, and a lot of people don't understand that, so they might not even know what's goingon.So I think that's something that we are calling for.So please do what you need to to make that happen.All right, thank you. |
| **5/3/2026** | Nathan Berkowitz | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Nathan Berkowitz |

| | | |
|---|---|---|
| **3/31/2026** | Nathan Eckert | Dear CTRMA Board Members,<br><br>To whom it may concern,<br><br>I do not support the MoPac South expansion. As a resident of Austin for nearly a decade now, I understand how important our highways are. That said, adding more lanes is a solution that appears helpful on paper, but ulitmately does little to change congestion. I implore the allocation of funds directed to be directed to more scientifically-sound improvements.<br><br>I am also aware of how yet more perpetual construction will lead to a significant amount of pollution and the certain destruction of many caves and the important and unique creatures that call them home. The addition of lanes would also further increase the risk of floods, ulitmately making our highways and surrounding areas less safe. This is an important issue to me but I feel this is a misuse of resources for very limited, if any, gains.<br><br>Austin deserves real solutions that keep safety, the enviorment, and efficiency in mind, not only on paper, but in reality.<br><br>Sincerely,<br><br>Nathan Eckert |

| | | |
|---|---|---|
| **3/31/2026** | Nathan Eckert | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Nathan Eckert |
| **5/3/2026** | Nathan Giovinazzo | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Nathan Giovinazzo |

| | | |
|---|---|---|

| **4/20/2026** | Nathan Patrick | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/27/2026** | Nathan Saeger | I am writing to urge our public officials to conduct a full environmental impact report on how this project will affect the Edward's aquifer recharge zone. Since living in Austin I have watched developers try and change things negatively for the sake of growth without any consideration for the people who enjoys these spaces. I hope that instead of haphazardly pushing this project through we can take the appropriate amount of time to assess the situation and keep Austin the oasis that it is clinging to remaining as today. |
| **3/29/2026** | Nathan Sultze | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **4/26/2026** | Nathaniel Bryant | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Nathaniel Elder |
| **5/3/2026** | Nathaniel Woodward | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Nathaniel Woodward |
| **4/29/2026** | Nathlie Varley | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| | | |

| **3/30/2026** | Nawal | We are eager for the paved paths will be built along the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete the short paved path from our neighborhood along Hwy 45 to Escarpment Blvd and then onwards to Meridian Neighborhood. My kids are very active and our family wants the opportunity to be more mobile on foot and with our bikes. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. |

| | | |
|---|---|---|
| **5/2/2026** | Neal Ehardt | I OPPOSE expanding MoPac South. Instead, I SUPPORT regional rail and a world class bike/pedestrian network.<br><br>I want a full EIS, not an abbreviated EA.<br><br>I spend so much money to keep my car insured and running. I don't want to keep driving alone, I want other options.<br><br>Sincerely,<br><br>Neal Ehardt |
| **4/6/2026** | Neek | Please protect the aquifer |
| **4/24/2026** | Neha Rizvi | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/16/2026** | nehira jupiter | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |

| **4/27/2026** | Neil Fontenot | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Neil Fontenot |
| **3/24/2026** | Neil Pascoe | Horrible plan that only increases traffic and environmental damage. More entities and profits for friends of TxDOT and republicans! |

| | | |
|---|---|---|
| **5/3/2026** | Nelda Bruggeman | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. <p data-start="6371" data-end="6517">i agree with all the above statements.  Please protect the Edwards aquifer! Thank You for listening to your neighbors, Nelda Bruggeman |
| **5/2/2026** | Nell Caffey | Dear CTRMA,<br>I have lived in Austin my entire life (34 years) and I am raising my family, the next generation of Austin loving locals, just down the street from Zilker Park.<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration!<br>-Nell (Johnstone) Caffey |
| **5/2/2026** | Nell Caffey | Expanding the footprint of MoPac by 100+ acres just for more car lanes seems like the wrong direction for Austin. Let's use that money to get serious about fixing the car dependency not making it worse.<br><br>--- |

| | | |
|---|---|---|
| **4/17/2026** | Nelson Guda | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Nelson Guda |

| | | |
|---|---|---|
| **5/1/2026** | Neo Jang | To the Central Texas Regional Mobility Authority (CTRMA),<br><br>I am writing to express my firm opposition to the proposed expansion of MoPac South. As a daily bicycle commuter, an active transportation advocate, and a supporter of Rethink35, I see the continuous failures of highway-centric planning firsthand. The assumption that adding 110+ acres of new pavement and expanding the corridor by up to 6-8 lanes will alleviate congestion is a fundamentally flawed engineering approach. We know that building more car infrastructure only induces demand, ultimately leading to more traffic, noise, crashes, and pollution.<br><br>Instead of spending over $825 million and enduring nine years of construction for a worse outcome, we must pivot toward sustainable, equitable connectivity. Those funds should be reallocated to develop a comprehensive regional rail system and a world-class, physically protected active transportation network that naturally guides good behavior and actually reduces car dependency.<br><br>Furthermore, proposing such a massive expansion over environmentally sensitive areas between Slaughter Lane and Enfield Road demands rigorous scrutiny. I strongly urge the CTRMA to conduct a full Environmental Impact Statement (EIS) rather than an abbreviated Environmental Assessment (EA).<br><br>Thank you for registering my comment on this critical issue.<br><br>Sincerely,<br><br>Neo Jang |

| | | |
|---|---|---|
| **4/23/2026** | Nestor Topchy | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Nestor Topchy |

| | | |
|---|---|---|
| **5/3/2026** | Nevaeh gonzales | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Nevaeh gonzales |
| **4/22/2026** | Nia Teague | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Nia Teague |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Nicholas Eastwood |
| **4/30/2026** | Nicholas Gregg | A project like this will cause a significant affect on the recreational spaces in that area and will impact how the community interacts with the nearby recreational spaces. Please commit to a full Environment Impact Survey before committing to this project! |
| **4/23/2026** | Nicholas J Joseph | Please do not expand Mopac over the aquifer. By the projects own numbers, it will save only 5-6 minutes of travel time over the entire 8 mile link after 5+years of construction. This is a waste of taxpayer resources and will decrease quality of life for those in Austin. Please DO NOT expand Mopac South. |

| | | |
|---|---|---|
| **4/29/2026** | Nicholas Kehl | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |
| **4/20/2026** | Nicholas Makuc | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/23/2026** | Nicholas Paulson | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br><br>- Avoid parkland encroachment<br><br>- Capital improvement reimbursements for affected community assets<br><br>- A noise wall workshop with meaningful community input<br><br>- An open space fund dedicated to long-term preservation and restoration<br><br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **4/27/2026** | Nicholas Ryan | Please make this road free, no more toll lanes! The Mopac Express toll lanes provide very little value. Why is it that every Austin road is becoming a toll road. |

| | | |
|---|---|---|
| **5/3/2026** | Nicholas Ryland | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Nicholas Ryland |
| **4/29/2026** | Nicholas Tys | Demand a Full EIS: CTRMA is cutting corners with a predetermined FONSI. Under the National Environmental Policy Act, a full EIS is required when a project will significantly impact the environment. Drilling into the Edwards Aquifer, harming endangered species, damaging parks, and worsening air quality next to Austin High School are all significant impacts that should trigger a full EIS. Question the Outdated Analysis: This project started in 2011, and the traffic model used to dismiss alternatives was finalized in 2012—over 14 years ago. Since then, we've had a pandemic, expanded telecommuting, and approved Project Connect. We need CTRMA to rethink this project with reconsideration of alternatives, updated data, and consideration of local goals and policies. Challenge the "Benefits": After 5-7 years of disruptive construction, the project will save only 5-6 minutes for someone traveling the entire 8.77-mile length during rush hour. Meanwhile, construction delays will largely zero out these minimal improvements Protect Endangered Species: CTRMA admits the expansion will adversely affect 4 federally endangered species but refuses to consider design alternatives that could avoid these impacts. Construction will threaten the clean flow of groundwater to Barton Springs and kill cave ecosystems that cannot be restored. Demand Clean Air for Students: Austin High School students and nearby residents will be exposed to higher levels of fine particulate matter (PM2.5) from increased traffic, tire wear, and brake dust. CTRMA's claim that air quality will improve despite 331 million more vehicle miles traveled per year being added to the corridor is not credible. Protect Our Water: The proposed water quality treatment doesn't meet the standards that Travis County and the City of Austin use for their own roads. During construction, sediment and pollutants will flow directly into the Edwards Aquifer Recharge Zone, causing irreversible harm. |

| | | |
|---|---|---|
| **4/23/2026** | NICHOLS | What is most important to you? The “development” of Austin has been troubling for a lot of reasons. Jacob’s Well has been severely depleted. Lake Austin and Town Lake are full of hydrilla and scum. One day we will wake up and Barton Springs will have stopped flowing. Do you want to take the blame for that? Stop trying to “fix” traffic. You won’t ever fix it. All you’re doing is making room for more cars. You’re making more traffic. No one in Austin wants bigger, uglier freeways. People flooded to Austin to escape all that. And somehow, the officials of this city think they are “improving” the city. You are destroying it. You are making it just like any other big city. Please stop. Allow Austin to grow and evolve naturally. Two years ago, we fought the Zilker Vision Plan. And we won, for a second. And now you are trying to do more. You just can’t help yourself can you? What is it? Why must you continue to “improve”? Your improvements are not wanted. Who asked you to? We are a government by the people, for the people. Have any people asked you to do this? I’d love to see a list of names. I’m sure the petitions to oppose this would dwarf any list of names that has asked for it. It’s that simple. |
| **5/2/2026** | Nick B | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/24/2026** | Nick Jasek | - Will merging NB express lanes north of William Canon create bottleneck?<br>- impressed that all of these alternatives take place with no proposed ROW acquisition. Will be interested to see bridge and retaining wall locations.<br>- with Mopac as the primary north/south relief route of IH 35, it seems inevitable that continued growth will mean higher traffic levels. Improvements like these need to take place. |

| | | |
|---|---|---|
| **4/27/2026** | Nick Kidd | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>As an Austin homeowner, I feel responsibile to protect (and / or preserve) our water and wildlife so future generations may also enjoy them.. A full Environmental Impact Statement would help all stakeholders have a clear, common understanding of this expansion's costs to our city.<br><br>Sincerely,<br><br>Nick Kidd |

| | | |
|---|---|---|
| **5/2/2026** | Nick King | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Nick King | The mopac expansion will destroy areas of parkland and green spaces as well as degrade the underlying aquifer. This is a terrible idea and needs not to happen! |
| **5/2/2026** | Nick King | The mopac expansion will have terrible effects on the enviornment, aquifer, major parks, and wont alleviate traffic as advertised. The violet crown trail has been years in the making and the mile zero trailhead has recently just been completed only to be drstroyed by an ilogical project. Thousands of people use the barton springs area and barton springs is the soul of Austin and a main reason why people come to Austin. Do not destroy what makes Austin desirable! No to the mopac expansion! |
| **4/22/2026** | Nick Olszewski | I greatly oppose this expansion as it will endanger animals, plants, and people who live or use the area. Town Lake Trail and Barton Springs, the crown jewel of Austin, are directly threatened by this needless expansion. You should be ashamed for even proposing such a measure. |

| | | |
|---|---|---|
| **3/18/2026** | Nick Paganini | Dear CTRMA Board Members,<br><br>There is only one Barton Springs! And Barton Springs is the reason I chose to move to Austion rather than any other city!<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, |

| | | |
|---|---|---|
| | | runners, and families and are central to Austin’s outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Nick Paganini |

| **5/3/2026** | Nick Stauffer | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Nick Stauffer |
| **3/28/2026** | Nick von Kreisler | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and can provide further information if necessary. Thank you. |

| **5/3/2026** | nicola cartwright | Four endangered species are in the area for the proposed Mopac extension. The waterways and aquifer in this area are also at a critical level, and this added construction and disruption threatens not only the endangered species, but the environment as a whole. This will also impact the ability of Austinites to enjoy our beautiful city for almost a decade, when climate change, pollutions, water levels and algae are already affecting the areas we can visit.This level of impact demands a full environmental impact study and statement. The need for improved traffic conditions does not negate the need to protect our already delicate ecosystem. I strongly oppose the Mopac expansion. |

| | | |
|---|---|---|
| **3/19/2026** | Nicola Sicchieri | Hi! I am an Austin resident writing to oppose the proposed widening of MoPac between Cesar Chavez and Slaughter Lane. Highway expansion is a well-documented short-term fix that induces demand and ultimately worsens congestion rather than solving it. Adding 4–7 lanes to 8 miles of MoPac would increase vehicle miles traveled, worsen air quality, and deepen our region's car dependency — directly contradicting Austin's own climate and mode-shift goals. I am also concerned about the environmental impact on sensitive areas along the corridor and the public health implications for Austin High School students and surrounding communities. Instead of doubling down on highway expansion, I urge CTRMA to invest these resources in solutions that will actually serve Austin's long-term transportation needs: Convert an existing lane to HOV/transit use to improve throughput without adding capacity Build continuous pedestrian and bicycle infrastructure along the full project length Prioritize transit investment that reduces single-occupancy vehicle demand Austin stopped this expansion in 2015 because the community recognized it was the wrong approach. That remains true today. I strongly urge CTRMA to reject this plan and redirect its focus toward sustainable, multimodal transportation. Thank you for considering my comment. Nicola Sicchieri |
| **4/30/2026** | Nicolas Eran Gronquist | Don't do it. Don't let corporations profit from paving so many acres on top of the Springs - just say no. |

| | | |
|---|---|---|
| **5/3/2026** | Nicolas Sanchez | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Nicolas Sanchez |

| | | |
|---|---|---|

| **3/16/2026** | Nicole | Please DO NOT spend money on expanding MoPac and potentially destroying the Barton Springs eco-system! Our waterways are precious and once destroyed cannot be rebuilt. |
| **4/21/2026** | Nicole | I think this project is a bad idea. The area that it's being built on is incredibly sensitive environmentally, and the impact from this project would be disastrous. Additionally, 2 extra toll lanes would only benefit CTRMA. If you're going to do something as environmentally disastrous as contribute to the destruction of our groundwater resources, then at least do something helpful to Austinites, like put a train line instead of just another blatant money making opportunity for CTRMA at the cost of our environment and average citizen's experience on the road. Toll lanes wont help, they're just a cash grab. |
| **5/3/2026** | Nicole | PLEASE SAVE OUR SPRINGS! |

| | | |

| **5/3/2026** | Nicole Black | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Nicole Cloutier | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Nicole Cloutier |

| | | |
|---|---|---|
| **3/18/2026** | Nicole Corona | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| **5/3/2026** | Nicole Fuccillo | This is completely unnecessary and detrimental to the green space and wildlife of our city causing irreparable damage to the ecosystem. Put an end to this now and never let it be brought up again |
| **3/28/2026** | Nicole Gilbert | I understand that paved paths are planned as part of the South MoPac corridor improvements. Since 2020, my neighborhood, Meridian, has advocated for completion of a paved path along Highway 45 connecting our community to Escarpment Boulevard. This is a relatively short segment, about 1.2 miles, but it would provide critical connectivity for more than 3,000 residents. This path would allow cyclists and pedestrians from Meridian to safely access the Austin trail network by traveling through Circle C and connecting to the paved path beginning at Slaughter Lane. Currently, many cyclists and pedestrians (including children) are forced to use the narrow shoulder of Highway 45, which is extremely dangerous. It's a highway and cars are going very fast, sometimes over 80 mph. There's also no crosswalk from Meridian to Escarpment, leaving almost a mile of road for pedestrians to walk and bike which is extremely unsafe! Austin City Council District 8 has allocated $117,000 for the design of this path, reflecting the recognized need for improved safety and connectivity in this area. Our Meridian neighborhood has a committee dedicated to advancing this request, and I would be happy to provide additional information, including graphics, if helpful. Thank you, Nicole Gilbert |

|---|---|---|
| **5/3/2026** | Nicole James | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *The expanded highway and increased traffic would increase fine partical matter (PM2.5) a pollutant linked to many illness and disease. *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Nicole James |
| **4/20/2026** | Nicole Lakin | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/28/2026** | nicole lee | Please do not build this mopac expansion. I look forward to cooling off at barton springs every summer. It’s my favorite. PLEASE DONT DO THIS. |
| **5/3/2026** | Nicole Mccormick | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Nicole Mccormick |

| | | |
|---|---|---|
| **5/3/2026** | Nicole Mccormick | Dear CTRMA Board Members, There has been no Enviromental impact investigation done! This is illegal. WE THE PEOPLE FUNDING THIS PROJECT DO NOT CONDONE THIS. The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. <br /> *EVALUATION OF ENVIORMENTAL IMPACT IS LEGALLY REQUIRED & WE PLAN TO UPHOLD YOU TO THE LAWS OF THE NATIONAL ENVIORMENTAL POLICY ACT.  <br /><br />please do not cause harm to our luxury of rare nature we hold in this beautiful city. Long term effecrs are horrendous to the springs, the lake, and all the people who enjoy this environments in harmony with the nature here. You will be taking away Austin's charm by proceeding with this. Honestly, Nicole Mccomick |
| **5/3/2026** | Nicole Silva | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Nicole Silva |
| **3/19/2026** | Nicole Smith | I do not want highway expansion. At this moment we need investment in alternative transportation infrastructure rather than increasing demand for vehicle travel and contributing to harmful pollution and congestion to Austin residents. We need city and state actors that are responsive to the data and are concerned with our health. |
