| **5/3/2026** | Ebany Mendoza | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Ebany Mendoza |
| **5/3/2026** | Echo Bond | Mopac expansion is uneconomical, unethical and unneeded. Please reconsider this expansion. Our waterways and wildlife and land surrounding this area is delicate and needs protection. I strongly say no to this proposal. |

| | | |
|---|---|---|
| **4/24/2026** | Ed Crowell | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| **5/2/2026** | Ed Crowell | To the members of the Central Texas Regional Mobility Authority:<br><br>I am a resident of Travis County on the southwest side. I use MoPac south and north of U.S. 290 West. The existing major routes to and through downtown work well enough even during rush hours.<br><br>Please do not subject us to years of "improvements" for some 15 minutes of commute times.<br><br>You haven't provided citizens with a thorough and full Environmental Assessment study of the damage that would be done with more lanes of traffic for nearly nine miles of MoPac. That must be done before the authority acts.<br><br>I and my family members who live next door make up six of the drivers who would be terribly affected by this major project that would take several years to complete. The cost in millions of dollars is so very unwise.<br><br>We wouldn't be able to enjoy Zilker Park during this project. We couldn't walk the pedestrian bridge to Austin High School or access the YMCA on Cesar Chavez Street. We couldn't visit friends living on the west side of downtown. Our daughter's commute to work near the Capitol would take much longer.<br><br>Let's see a full Environmental Assessment before anything is decided.<br><br>Thank you for your consideration of my comments.<br><br>Ed Crowell<br><br>fb.me/ecrowell63 <http://fb.me/ecrowell63> |

| | | |
|---|---|---|
| **4/28/2026** | Ed Johnson | It is really sad that there is no way to get through Austin, without going through constructions projects, which are really unsafe, no headlight screens and extremely narrow lanes, (Pflugerville, Downtown, Slaughter IH35). No wonder there are so many accidents. Now the only way to get through is on a toll road, which costs approximately $20/day. You also have blocked off access to feeder streets so we have no choice. We are taxed for roads on our gas taxes, sales tax & property tax for Capital Metro. How many toll authority employees commute to work? How many work from home. Finish one project before starting another, we are tired of it, and the excuse that the tolls for maintained is BS. Also not to mention the environmental factor. Give it a break! |
| **5/3/2026** | eden walker | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have |

| | | |
|---|---|---|
| | | come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, eden walker |

| **5/1/2026** | Eileen Johnson | The Edwards Aquifer is a fragile ecosystem. While your studies seem to indicate that there's no significant impact with the current design of this project, there are other environmental organizations who have provided evidence that your findings are flawed. I trust the findings of those studies rather than those of the organization that is in place to make sure this project happens. I'm hoping that you are genuinely interested in hearing from the public and will find solutions that don't damage the aquifer or endanger the flora and fauna of this precious part of Austin. Once these systems are damaged, there's no repairing them. While traffic and mobility in Austin are important issues, we must make sure that we don't end up destroying what makes Austin the place where people want to live. Thank you. |

| | | |
|---|---|---|
| **3/23/2026** | Eileen McGinnis | As a Texas mom, I care about our kids' clean air and climate future. Widening highways doesn't solve traffic issues and it endangers our kids' right to clean air and a livable climate. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. Instead, I would like to see investments in infrastructure that benefit kids and families, like continuous pedestrian-bicycle paths along the project's length and converting an existing highway lane to a HOV/transit lane, and investing in transit, walking, and biking. |
| **4/30/2026** | Eileen McGinnis | I'm writing as the mom of an 11-year-old Austinite about the proposed expansion of MoPac South. As a parent, I'm deeply concerned about the regional air quality and children's health impacts of widening highways like MoPac South. Our kids deserve more pedestrian and bike infrastructure and reliable public transit, not more car-centric infrastructure that threatens their respiratory health and their climate future.<br><br>Highway expansions don't work to solve traffic issues. And they certainly are not worth the cost to kids' health and right to thrive.<br><br>Thank you for your time,<br><br>Eileen |

| **5/3/2026** | Eimanie Thomas | Dear CTRMA Board Members, <p style="margin: 0px; font-style: normal; font-variant-caps: normal; font-width: normal; font-size: 17px; line-height: normal; font-family: system-ui; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-variant-emoji: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal;">My name is Eimanie Thomas and I am urging our representatives, any stakeholders involved in this development to put citizens and our environment's wellbeing first and do a full environmental impact statement. The current environmental assessment is the lowest level of federal review. As someone who is is majoring in civil engineering, I am not anti-urbanization. What I advocate for is smart and legal urbanization. This is not that. The state of Texas is already facing a water crisis across multiple cities, and eventually the rest to follow. Traffic is not the primary resource of residents, it's water. The cities with the best urbanization, exceptional tourism, and strong populous satisfaction are those that have invested the money into public transportation and high speed rails. We should not be committing to rushed, minimal public input and awareness infrastrucutre plans that have failed to improve our traffic concerns in the last two decades. Time and time again, more lanes have simply shown to encourage more traffic years later, with the same issue arising. <p style="margin: 0px; font-style: normal; font-variant-caps: normal; font-width: normal; font-size: 17px; line-height: normal; font-family: system-ui; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-variant-emoji: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal; min-height: 20.3px;"> <p style="margin: 0px; font-style: normal; font-variant-caps: normal; font-width: normal; font-size: 17px; line-height: normal; font-family: system-ui; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-variant-emoji: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal;">Austin is special because of our water resources. Not because of our highways. The Edwards Aquifer is extremely sensitive, and pollution can move through it very quickly. The affected area also supports endangered Barton springs salamander and the Austin blind salamander. Imagine if we marketed off of the salamanders as our mascot the way Buc-ee's popularized a beaver? <p style="margin: 0px; font-style: normal; font-variant-caps: normal; font-width: normal; font-size: 17px; line-height: normal; font-family: system-ui; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-variant-emoji: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal; min-height: 20.3px;"> <p style="margin: 0px; font-style: normal; font-variant-caps: normal; font-width: normal; font-size: 17px; line-height: normal; font-family: system-ui; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-variant-emoji: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal;">The scale of this expansion at the least requires a full environmental assessment. Or at the very least, an accurate one. No environmental scientist, scientist, or honest engineer could come to the conclusion through 200 pages that there will be and i quote “no significant impact”. The public timeline to submit comments was 2 months, this is grossly inadequate for the scale of this project. I urge developers to at least be proud of their work by encouraging more input and a longer timeline for public input. <p style="margin: 0px; font-style: normal; font-variant-caps: normal; font-width: normal; font-size: 17px; line-height: normal; font-family: system-ui; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-variant-emoji: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal; min-height: 20.3px;"> <p style="margin: 0px; font-style: normal; font-variant-caps: normal; font-width: normal; font-size: 17px; line-height: normal; font-family: system-ui; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-variant-emoji: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal;">And we still have no idea what to expect the impacts of the data centers coming to Texas will do to our water supply. Water companies throughout |

| | | |
|---|---|---|
| | | Texas are already having to utilize brine water rather than typical ground water. They are lowering health ppm standards to use this brine water. Austin should be setting a model for the rest of Texas on how to prioritize their resources and grow sustainably, rather than harmfully with little review. <br /><br /> <p style="margin: 0px; font-style: normal; font-variant-caps: normal; font-width: normal; font-size: 17px; line-height: normal; font-family: system-ui; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-variant-emoji: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal;">Thank you for your time, <p style="margin: 0px; font-style: normal; font-variant-caps: normal; font-width: normal; font-size: 17px; line-height: normal; font-family: system-ui; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-variant-emoji: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal;"> <p style="margin: 0px; font-style: normal; font-variant-caps: normal; font-width: normal; font-size: 17px; line-height: normal; font-family: system-ui; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-variant-emoji: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal;">Eimanie Thomas Thank You for listening to your neighbors, Eimanie Thomas |

|---|---|---|
| **4/20/2026** | Ela Unverdi | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/27/2026** | Elaine Agatston | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Elaine Agatston |

| | | |
|---|---|---|
| **4/26/2026** | Elaine Berend | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I currently live in Richardson, where I attend UT Dallas, but i come from the Austin area. Whether or not i choose to return to the place I grew up when I graduate will depend greatly on how projects like this one develop.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/16/2026** | Elaine Eidelberg | Mopac, 290, and I35 simultaneously? Work on the damn lightrail! No, no no no, stop this. |
| **4/20/2026** | Elaine Eidelberg | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/23/2026** | Elana Esquivel | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Elana Esquivel |
| **4/25/2026** | Elana Verbin | Expanding Mopac will not ease traffic, it will only destroy one of the areas so central to Austin -- the TownLake trail and parks where people come together to enjoy nature and community. Creating so many lanes will turn Austin into Houston with its huge highways that just seem to encourage more through traffic. Also, given all of the construction on I-35, let's leave the other main thoroughfare across the lake alone otherwise it will feel like a construction nightmare to navigate through the city. This project feels like it benefits construction companies and not Austin citizens. I strongly voice my dissent against moving forward with expanding Mopac. |

| | | |
|---|---|---|
| **4/20/2026** | Eleanor Herasimchuk | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/28/2026** | Eleanor Kwong | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists that bike on the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |
| **4/24/2026** | Eleanor Sanchez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/24/2026** | Elena Ashen | Please do not add lanes. It will damage the aquifer and water quality in the area. It will cause more congestion in an already congested space for not much gain. |
| **5/2/2026** | Elena Ashen | Please do not expand Mopac over the Edward's Aquifer. Please get a full evaluation as this will destroy our aquifer and our wildlife that can not be replaced. Protect our water. Protect our salamanders. Thank you. |

| | | |
|---|---|---|
| **4/20/2026** | Elena Barrera | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/23/2026** | Elena Durbin | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Elena Michaelson | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Elena Michaelson |

| | | |
|---|---|---|
| **4/24/2026** | Elena Savastano | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Elena Savastano |

| | | |
|---|---|---|
| **4/28/2026** | Eli Tostengard | I am a multifamily real estate developer within Austin and its surrounding areas. I am writing to oppose this Mopac South widening project, as the induced demand of the additional lanes will not actually solve the issue of congestion. Yes, it will add capacity, but if the project's stated goal is to reduce congestion, then this project will be of no use. Furthermore, since these are bond-funded projects that get paid back via tolls - this project will increase the 'flywheel' of CTRMA's bonding/financing capacity, and will only lead to more future highway expansions / additions in a city that is already choking on its own traffic. We've hit a tipping point where our urban density is too great to purely utilize driving as our primary form of transportation. We need to learn our lessons of the past and find new ways to move people around other than JUST cars. I would encourage the CTRMA to explore other projects that increase mobility by other means if that authority exists. |
| **5/3/2026** | Elias Frank | I am broadly in favor of civic improvements, but it seems inadvisable to build anything on this scale in that recharge zone. I've looked through your environmental statements, and while I am heartened to see that research indicates mild impacts, I did not see actual data. Would it be possible for you to provide the studies that you are using? Thanks. |

| | | |
|---|---|---|
| **4/28/2026** | Elias Ortiz | Dear CTRMA Board Members,<br><br>Hello as a veteran who lives in Austin and was born here I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the |

| | | |
|---|---|---|
| | | Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Elias Ortiz |

| **4/15/2026** | Elijah Fichtel | This expansion will have dire consequences on the Barton Creek watershed and surrounding feeders to the Edward's Aquifer. Already disrupted by countless construction projects along HWY 290 and Southwest PWKY, this ecosystem needs more protecting, not a couple extra lanes. We can always build more roads - there will NEVER be another Barton Springs/Creek. By disrupting this environment the city threatens countless endangered species as well as the water our city and state relies on to survive. The drought across Texas this year has exemplified how crucial our water systems are and how we rely on them to the upmost degree. Austin is lucky to receive greater rainfall than surrounding areas but our fellow Texans who aren't so lucky are relying on the Edward's Aquifer for survival. By denigrating the existing, established system around Mopac, construction would threaten to permanently alter if not destroy the natural wonders that make up South Austin. No matter how much protection or mitigation takes place construction projects WILL impact the environment both chemically and physically in ways we have scientifically quantified as negative for the area, in addition to ways we may not understand till much further in the future. Runoff and erosion from clear cutting will dissolve our beautiful hills while poisoning the water system. Heavy machinery will disrupt wildlife, businesses, and occupants of the area for an estimated 7 years. That is frankly far too much damage and disruption than is necessary for an already functioning highway. Other solutions must be explored and invested in before we shell out over 800 million for a none-solution to this problem. Because, as far as every other study done on highway expansions has proven, adding more lanes does not improve traffic. I drive Mopac every day for work and have driven it for the past 5 years. There are times of congestion and heavy traffic, surely, but none so bad as to warrant the dissolving of our natural ecosystems and a blatant disregard for the integrity of Austin's waterways. The Department of Transportation must determine alternative solutions if they seek to alleviate traffic in 2035 beyond the destruction of one of our most prized ecosystems in the state. Let the land be. |
| **5/3/2026** | Elijah Parker | Over and over again we, as a people, have seen projects move forward based on the merits of quasi responsibility studies conducted by the companies funding the projects that stand to profit. This is a backwards methodology. Life is a circular thing. The reason we have traffic in Austin is because people love to live here. People have been in the Austin area for thousands of years because of the aquifers and resulting springs and rich lush waterways. If CTRMA is going to be generating revenue off of the people of Austin we all need to ensure they are taking every precaution to preserve Austin's most precious resources. The only responsible path is to enforce that CTRMA collaborate directly with another 3rd company selected by city of Austin officials. The 2 companies should be required to collaborate on ensuring the highest degree of environmental responsibility within the project from end-to-end. Infrastructure is essentially irreversible. We can not get back natural resources like this if we cause harm in the process. And CTRMA can definitely fit environmental |

| | | |
|---|---|---|
| | | studies into their budgets considering they will be profiting from the residents of Austin who love to live here for years to come. |
| **4/26/2026** | Elijah Rivas | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Eline van der Steur | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Eline van der Steur | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Eline van der Steur |

| | | |
|---|---|---|
| **5/3/2026** | Elisa Crawford | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Elisa Crawford |

| | | |
|---|---|---|
| **4/26/2026** | Elisa Rodriguez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Elisabeth Joy | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Elisabeth Joy |
| **5/3/2026** | Elisabeth Whitehead | Do not expand mopac and jeopardize Barton springs |

| | | |
|---|---|---|
| **5/3/2026** | Elise Pullias | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Elissa Cave | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Elissa Cave |

| | | |

| | | |
|---|---|---|
| **5/1/2026** | Eliza Schindler | Demand a Full EIS: CTRMA is cutting corners with a predetermined FONSI. Under the National Environmental Policy Act, a full EIS is required when a project will significantly impact the environment. Drilling into the Edwards Aquifer, harming endangered species, damaging parks, and worsening air quality next to Austin High School are all significant impacts that should trigger a full EIS. Question the Outdated Analysis: This project started in 2011, and the traffic model used to dismiss alternatives was finalized in 2012—over 14 years ago. Since then, we've had a pandemic, expanded telecommuting, and approved Project Connect. We need CTRMA to rethink this project with reconsideration of alternatives, updated data, and consideration of local goals and policies. Challenge the "Benefits": After 5-7 years of disruptive construction, the project will save only 5-6 minutes for someone traveling the entire 8.77-mile length during rush hour. Meanwhile, construction delays will largely zero out these minimal improvements Protect Endangered Species: CTRMA admits the expansion will adversely affect 4 federally endangered species but refuses to consider design alternatives that could avoid these impacts. Construction will threaten the clean flow of groundwater to Barton Springs and kill cave ecosystems that cannot be restored. Demand Clean Air for Students: Austin High School students and nearby residents will be exposed to higher levels of fine particulate matter (PM2.5) from increased traffic, tire wear, and brake dust. CTRMA's claim that air quality will improve despite 331 million more vehicle miles traveled per year being added to the corridor is not credible. Protect Our Water: The proposed water quality treatment doesn't meet the standards that Travis County and the City of Austin use for their own roads. During construction, sediment and pollutants will flow directly into the Edwards Aquifer Recharge Zone, causing irreversible harm. |
| **5/3/2026** | Eliza Springs Dahmen | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Eliza Dahmen |
| **5/3/2026** | Eliza Springs-Dahman | Hello, my name is Eliza Springs-Dahman.I am an Austin resident.I was born here and I care very deeply about the Edwards Aquifer and Barton Springs.The MOPAC expansion project is absolutely unacceptable.It will have a large impact on several endangered species in the environment over a rechargezone in the aquifer and we cannot allow this to happen.We need to demand an environmental impact statement before this project goes through.Please, please get us an environmental impact statement.It is going to have a severe impact on environmentand endangered species.The Barton Springs Salamander,I personally am named after Eliza Springs,which is the sanctuary for the Barton Springs Salamanderwhenever they find one.My name is Eliza Springs Domon,and I care very deeply about this project going through.Please, please do not do it.We need no impact on the trails, no more traffic.It is not going to help.It is going to make things significantly worse.Please do not do this.Get us an environmental impact statement.Thank you. |

| | | |
|---|---|---|
| **5/3/2026** | Elizabeth | The springs are an integral piece of Austin community, history, and culture. Optimizing their health and accessibility is a priority! |

| **4/26/2026** | Elizabeth Avellan | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Elizabeth Avellan |
| **3/19/2026** | Elizabeth B Nowicki | Please don't add to this bloated highway. Please do add more public transportation! I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **4/20/2026** | Elizabeth Baird | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration,<br>Elizabeth |
| **5/3/2026** | Elizabeth Baird | Hello-<br>I am writing to voice my opposition for the MoPac South expansion.<br>Nothing should be approved without a full Environmental Impact Statement, and I'm shocked that leaders thought they could move forward without this.<br>I'm not convinced that more lanes will fix traffic issues due to induced demand....my fear is we would spend exhorbitant amounts of money (and time) to build this project and end up right back where we started. We need full studies on how this expansion would actually help traffic and not just add to it.<br>I believe it would be more forward-thinking and useful to use this large amount of funds to strengthen and diversify our transit methods, including, rail, transit, and biking.<br>Together we can all figure out the best way forward but this is not it.<br>Thank you for your consideration,<br>Elizabeth |
| **5/3/2026** | Elizabeth Baker | Hi, my name is Elizabeth Baker. I live here in Austin and I'm calling to opposethe MOPAC expansion project that is putting Barton Springs and the aquifer,Edwards Aquifer, in danger, requiring a full environmental impact statement.Before anything is started with this project, we need to know what impactthis is going to have on our precious environment before any kind of construction is started.The Barton Springs is the reason I live here, it's the reason I stay here, and I am in fullopposition, very passionately against this going forward project, which could and wouldgreatly impact negatively our precious waters, our drinking waters,our natural waters here, the endangered species,the four endangered species that could be gravely disturbed and harmedin this project. I ask that you please stop this andUm, run a full environmental impact statements before anything ismoved forward on this project.My family depends on this.Um, this is very important to me and my family.Thank you very much.My name is Elizabeth Baker and I'm an Austin resident. |

|---|---|---|
| **5/3/2026** | Elizabeth Crouch | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Elizabeth Crouch |

| | | |

| **5/1/2026** | Elizabeth Engle | Businesses want to local, and their employees want to live here in great part because of our easily accessible outdoors- the green belts, boating, biking, hiking, climbing- and the beautiful vistas which are NOT available in other cities with our level of commerce. Do NOT turn Austin into Houston or Dallas or LA, or NYC with lanes and lanes of high speed traffic. Preserve what we Austinites and Texans have so proudly preserved. Don't give this away. Keep the original one lane expansion. Don't jepardize our children's economic future by overdevelopment. Ms Ellis has called for a full environmental impact survey just like TxDOT always does. TxDot cares. |

| | | |
|---|---|---|
| **4/21/2026** | Elizabeth Gainer | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Elizabeth Galiger | please require a full EIS to examine ALL the impacts of this terrible highway expansion over our river, creek, parks, aquifer, our most precious resources. |
| **5/3/2026** | Elizabeth Galiger | Dear CTRMA Board Members, I am sad and horrified that anyone is considering destroying some of the most precious parts about Austin. Adding so many lanes of traffic really, sadly, doesn't improve traffic problems, it only makes them worse by encouraging I-35 drivers to loop around the city. Money would be better spent supporting ways to actually reduce traffic instead of spendiung billions and years encouraging traffic to grow even worse. The damage to the fragile karst limestone, to the Colorado river, to Barton Creek and the Edwards aquifer is irreperable and especially concerning as we face growing water shortages, reduced pollution controls, more data centers using what water remains. Austin's jewel is our river, springs, pool, parks, trees, and that is more important than ever as Austin is built more densely with more pavement and fewer trees. The number of things wrong with this project are so many. Please do a full Environmental Impact Study before proceeding any further, to comprehensively consider ALL the impacts, from traffic to environment, connecting all the pieces of the western beltway around town. Sincerely, Elizabeth Galiger |
| **4/23/2026** | Elizabeth Garcia | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Elizabeth Garcia | Eagerly begging you to rethink this course of action and to respect the land we live on and love. Every bucket list for Austin TX ever is Barton Springs and our wildlife. It is synonymous with the city. Please hear those who live here, pay taxes, and want to continue to live here!! |
| **4/21/2026** | Elizabeth Gibson | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/19/2026** | Elizabeth Graves | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Elizabeth Graves |

| | | |
|---|---|---|
| **5/3/2026** | Elizabeth Hirsch | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Elizabeth Hirsch |
| **4/24/2026** | elizabeth holsten | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Elizabeth Kernan | A full environmental study must be done for this project. Pollution to water and nature spaces.I do not support this project. You really are ruining what makes this place worthwhile only to make a quick profit. |

| | | |
|---|---|---|
| **4/23/2026** | Elizabeth Long | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br><br>- Avoid parkland encroachment<br><br>- Capital improvement reimbursements for affected community assets<br><br>- A noise wall workshop with meaningful community input<br><br>- An open space fund dedicated to long-term preservation and restoration<br><br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| **4/30/2026** | Elizabeth Middleton | I am totally against this project. I even live in Circle C and deal with this traffic . The beauty of Austin is being taken away. I often SUP on Ladybird and am worried about the environmental and inconvenience this will create. |
| **5/1/2026** | Elizabeth Nevins | This expansion project will hurt so many different species and the ecosystem at Barton. Not to mention the endangered animals there like the blind salamanders. They can't see so we need to be their eyes and not change the environment they know and have been navigating for years. It will also interrupt the human experience there as well, so many people use that as their only place to cool off during a hot summer day and it's a perfect place to "escape" from the growing city because it's filled with life and warmth and joy. Please don't build that highway. We must speak up for the creatures who can't and have no voice, it's not just so land you're building over, it's a home. If I have to sit in a few extra minutes in traffic just to save this place, that is no problem. Maybe everyone needs to just be more proactive and plan accordingly. Everyone knows there is traffic, that is the consequence of all the people who decided to move here, we shouldn't be destroying environments just because people are impatient and ignorant. Thank you. |

|---|---|---|
| **3/22/2026** | Elizabeth Peters | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>ELIZABETH PETERS |

| **4/20/2026** | Elizabeth Record | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Elizabeth Reymond | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Elizabeth Reymond |
| **5/3/2026** | Elizabeth Rodriguez | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. |---|---|---|
| **3/23/2026** | Elizabeth Ross | Dear CTRMA Board Members,<br><br>I live off Slaughter Lane, and take MoPac every day to work. More often than not, that means crawling along in bumper to bumper traffic. However, I'm aware that adding lanes to highways does not solve traffic, and only increases congestion. The only long term solution that is good for the environment, for the economy, and for our health, is investment in a more walkable city and public transit.<br><br>As somebody who is impacted by the traffic daily, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. |

| | | |
|---|---|---|
| | | • Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>Instead of pursuing solutions that don't work and cause irreparable harm, please look at what actual experience and research has taught us. The ecology of the area is too delicate and too important to destroy, just to provide another example of how more lanes don't fix traffic.<br><br>Thank you for your consideration,<br><br>Elizabeth Ross |
| **3/20/2026** | Elizabeth Salgado | This project is not worth the environmental risk or taxpayer expenses. |

| | | |
|---|---|---|
| **4/23/2026** | Elizabeth Shear | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Elizabeth Teague | In addition to the lack of evidence that highway expansions actually relieve traffic congestion, I am opposed to this expansion because it would negatively affect many of the environmental parts of Austin that locals and visitors enjoy, including Barton Springs. With the ongoing I-35 construction, it is important to me to have at least one highway running north-south through this city that is not under construction. This construction would negatively impact my daily commute to and from my place of work, as well as the nature surrounding my office, which we enjoy every single day. I truly believe there are other methods of relieving traffic congestion than another highway expansion. |

| **4/27/2026** | Ella | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| | | |
|---|---|---|
| **5/3/2026** | Ella Ponthier | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Ella Ponthier |

| | | |
|---|---|---|
| **4/29/2026** | Ella Thompson | To whom it may concern,<br><br>I am a life long Austin resident and I wanted to email you to let you know that expanding MoPac South would be a catastrophic mistake. As the state presses on with its disastrous project of expanding I-35, the last thing we need is another highway expansion. Instead, our public funds should be used to build transportation options that are safe and accessible for everyone. Texas needs regional rail connecting major cities inside the state to one another and to bordering states, and we need investments in bike and pedestrian infrastructure.<br><br>I can guarantee you that nobody in Austin has ever said “I love MoPac”. If you ask anyone in the city, they will tell you that it is a headache, an inconvenience, the worst part of their daily commute- why would we even consider expanding a highway that is so universally hated? This proposed expansion would just take all the worst things about MoPac and make them even worse- more traffic, more noise, more pollution, more car crashes, more pavement disrupting an environmentally sensitive area. There has not even been a full Environmental Impact Statement released to examine the effects this project might have on the surrounding area- we absolutely cannot move forward with this project without at least determining what the ramifications might be. An Environmental Assessment is not good enough. We need a full, rigorous EIS, and it needs to be submitted to the people for feedback and criticism.<br><br>In addition to the impacts this project will undoubtedly have on the natural environment, we need to consider the human environment as well. As an Austinite, I don’t want the additional traffic and pollution that an expanded MoPac would bring. Austin is already extremely congested and difficult to get around, and we are already experiencing a climate crisis. Filling our city with more cars that are driving in through a newly expanded MoPac will result in more crowded streets and more carbon emissions in the city. I also don’t want to deal with the car-centric infrastructure. Texas cities, including Austin, are some of the least walkable cities in the country, and building acres and acres of new roadways will not help improve that. Instead, we need a bike and pedestrian network that will serve the people of Austin and neighboring communities. Investing in bike and pedestrian infrastructure is something that helps everyone, not just the people who are wealthy enough to buy and maintain a car- and even if you do own a car, most people in Austin spend more time walking than they do driving, because even a trip in the car starts and ends with walking.<br><br>I encourage all of the above points to be considered when deciding the future of MoPac in Austin, and I urge you to conduct full examinations of the negative consequences of this project, not just an expedited, uncritical review. These decisions won’t just affect Austinites today, they will continue to shape the lives of generations of people, as this highway will likely still stand long after all of us are gone. Don’t let the highway infrastructure you build and the mistakes you make outlive you- make the right choice and improve the lives of Austinites for decades to come.<br><br>Thank you,<br><br>Ella Thompson |

| | | |

| **5/2/2026** | Ella Ulestad | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| | | |
|---|---|---|
| **5/3/2026** | Ella Wick | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Ella Wick |

| | | |
|---|---|---|
| **5/3/2026** | Ellen Campbell | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Ellen Campbell |
| **4/23/2026** | Ellen Davis | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/25/2026** | Ellie Wallace | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Elliot Kralj | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br>Civically Elliot Kralj |

| | | |
|---|---|---|
| **3/26/2026** | Elliot Williams | CTRMA Board Members,<br><br>The MoPac South expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems.<br><br>One of the things that I value most about living in Austin is our exceptional natural environment, and the care that our city has historically given to protecting that environment. I'm an avid birdwatcher, and I know how important the ecosystems around this area are, not just for birds but for many different species, including several species that are only found here.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank you,<br><br>Elliot Williams |
| **3/24/2026** | Ellorie Squier | I would love a reliable transit system in Austin, but I do fear complications with reliability and safety. The majority of CapMetro drivers have been attacked, and there was a stabbing on a CapMetro bus in South Austin this month. These statistics make it unlikely that I would want to ride the transit system, so safety is a top priority for people and will be quite a "learning curve" until people can buy in to this. I'm curious as to how we can effectively combat the reality of unsafe environments on/around transit stops/buses. Reliable transit would be great to help improve air quality, but personally, the benefits do not outweigh the risks. Traffic congestion affects me on a daily basis when I drive into the office, primarily Tuesday-Thursday, as many people WFH on Mondays and Fridays. Getting from East Austin (Manor) to Southwest Austin (West Gate) is not a fun commute, and I prefer driving north to the Round Rock office since I can hop on the toll roads. I would love if I didn't have to spend so much money on toll costs every month just to have a decent commute to work. Sometimes, the predicted travel time for my commute goes up by 10-15 minutes while I am en route to the office. As an Austin resident, I encourage the City to prioritize enhanced bike and pedestrian infrastructure, especially protected bike lanes, safer intersections, and complete sidewalks. Specifically, Cesar Chavez needs bike lanes. These improvements are critical for safety, climate goals, and equitable access to transportation for those who rely on walking and biking. |
| **5/3/2026** | Ellyssa Saldivar | No expansion! Stay out of the watershed! Allowing encroachment into the watershed will be detrimental to the wildlife, water quality and the ecosystem. |

| | | |
|---|---|---|
| **3/11/2026** | Elouise weil | I'm writing to strongly oppose the proposal to add four additional lanes to South MoPac, particularly if it is constructed simultaneously with the I-35 expansion. Undertaking major construction on the only two primary north–south corridors in Austin at the same time would create severe disruption for residents, workers, and visitors. These highways are essential lifelines for the city, and making both largely unusable during overlapping construction would cause unnecessary congestion, economic harm, and daily hardship for the people who rely on them. Beyond the logistical concerns, the environmental impact of this proposal is deeply troubling. South MoPac runs over a critical aquifer recharge zone that ultimately supports Barton Springs and the surrounding watershed. Expanding the highway would require removing large numbers of mature trees and increasing impervious cover in an area that is already environmentally sensitive. In a city facing worsening drought conditions and increasingly intense heat waves, removing tree canopy and adding more pavement is not only environmentally damaging but irresponsible. Austin's green spaces, water systems, and natural landscapes are among its most valuable assets. Projects that threaten them should be approached with extreme caution, not accelerated. Barton Springs and the surrounding greenbelt are the heart of Austin's identity. They are what make Austin unique and what draw people to live here, visit here, and invest here. Undermining the environmental systems that protect these places risks eroding the very qualities that make the city desirable in the first place. If Austin hopes to continue growing and prospering, preserving what makes the city special must remain a priority. Finally, the prolonged traffic disruption that would result from simultaneous expansion of both MoPac and I-35 would have real economic consequences. Increased congestion, longer commute times, and reduced accessibility would discourage visitors, strain current residents, and make the city less attractive to prospective new residents and businesses. Growth should not come at the expense of the environmental and cultural foundations that support Austin's long-term success. Austin has built its reputation on valuing nature, protecting Barton Springs, and preserving the green spaces that define our quality of life. This proposal runs counter to those values. I urge the city to reconsider expanding South MoPac in this manner and instead pursue solutions that protect our environment, minimize disruption, and reflect the priorities of the community. |
| **5/3/2026** | Elsa Wiebrand | Require a full environmental impact study. Prioritize people over cars and stop the damage this project could do in our city's environmentally sensitive areas and public spaces. Full EIS! |
| **4/28/2026** | Elysa Naranjo | Toll roads are making Texas more unsafe because of the high speeds, dangerous and distracted driving, and increasing amount of traffic this city is facing. Put this money in the PUBLIC TRANSIT and give the people different ways to get where they need to be. Get them off the roads and stop this project!! It will change Austin in a horrible way! I protest this highly and request any sort of case hearing or further delaying of this project. Toll roads are not the answer and keep them out of Austin. |
| **4/20/2026** | Elyse Garcia | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/29/2026** | Elyse Lance | To whom this may concern,<br><br>I strongly oppose the expansion of MoPac South. This project would use precious taxpayer money to increase traffic, harm the Edwards aquifer, and take money away from public transportation that Austinites desperately want. I support building world class regional rail, bike routes and pedestrian walkways.<br><br>As a resident of south Austin and member of the community that will be most impacted I demand a full Environmental Impact Statement. I believe the proposed project will irreparably harm the vibrant ecosystems in South Austin like Barton Springs, the Barton Creek Greenbelt, and the aquifer recharge zone. We know by now that adding lanes does not alleviate traffic. If it did, the Katy freeway would be the fastest in the world. Instead it's a glorified parking lot that causes asthma in all surrounding neighborhoods.<br><br>Don't let MoPac become the next I-35. A scar running down the center of Austin, separating east and central Austin. There are other ways to improve traffic and transportation and "one more lane" bro is not it.<br><br>Thank you,<br><br>Elyse Lance |
| **3/19/2026** | Elyse Nicole Lance | We DO NOT NEED a wider highway. It has been proven, time and time again that adding lanes does not mitigate traffic. On top of that adding more lanes to MoPac will further damage our fragile aquifer, increase air pollution , and overall increase traffic. Austinites like me deserve a better future, where we can bike, walk and take public transportation around town. Don't make the same mistake with MoPac as you already have with i-35. |

| | | |
|---|---|---|
| **5/3/2026** | Elyse Villarreal | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Emelia McKay | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **5/3/2026** | Emerson | As a Texan it is painful to see investment in destructive infrastructure. Wildlife and undeveloped space should be cared for not taken for granted. |

| | | |
|---|---|---|
| **5/3/2026** | Emerson Smith | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Emerson Smith |

|---|---|---|
| **5/3/2026** | Emilee Graverson | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Your Constituent |

| | | |

| | | |
|---|---|---|
| **5/3/2026** | Emilio Campos | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. The 5 minutes of traffic time that this overpriced expansion will save is not at all worth the years of disruption, let alone the environmental impact that the highway will have. The highway is fine as it is. Our precious spring and recharge zone will not recover. Lining the pockets of the investors is not worth the loss of this natural jewel thay makes Austin such a magical place. Respectfully, Emilio Campos |

| | | |
|---|---|---|
| **5/3/2026** | Emilio Fernandez | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Emilio Fernandez |
| **5/3/2026** | Emilio Gonzales | We must protect our natural resources not just for ourselves, but for the generations who will inherit this land long after us. Projects that threaten ecosystems, clean air, and water should be approached with caution and deep respect for their lasting impact. Equally important is the voice of the community…public input is not to be taken lightly… it's an indisputable part of community decision making. When people speak up to defend the environment they love, their concerns deserve to be heard, valued, and reflected in the choices we make today. Please listen. |

| | | |
|---|---|---|
| **4/24/2026** | Emily Nolan | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Justin Nolan |

| | | |
|---|---|---|
| **5/1/2026** | Emily Andry | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Emily Dreimiller | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Emily Dreimiller |

| **5/3/2026** | Emily Dugan | This is absolutely idiotic. Do you realize how many endangered species your will kill off? The pollutants in the water? The access to nature in already such a heavy urban environment? This will be devastating to all and impact us heavily for YEARS to come. Do not do this. |

| **5/3/2026** | Emily Mohamed | Please don’t ruin our city and its natural beauty! Let’s be the city that doesn’t allow it, and become the new model for everyone else when they all turn into concrete and highways |
| **3/24/2026** | Emily Munoz | AGAINST<br>- "Raised pedestrian crossings" that are a huge safety concern and would ultimately not increase foot traffic<br>- Any potential to disrupt Edwars Aquifer<br>- 20 ft walls to "prevent noise" being eye sores<br>- Construction causing an increase of automobile accidents (Example: 1 35 Construction 2024)<br>- The amount of time it would take to complete the expansion (4-6 years)<br>- More transparency on funds from express/toll lanes and whether it really is getting poured back into infrastructure, seeing it no where else in Austin after all the rolls we already have. Thank you. |

| | | |
|---|---|---|
| **4/17/2026** | Emily Nolan | I have reviewed the current proposal for MOPAC changes and I'm very concerned about east-west access for Rollingwood and Westlake residents. For years, Rollingwood and Westlake Hills have been asking for a more balanced solution — one that improves traffic without: -bypassing our local business district, -forcing traffic onto school and neighborhood streets, -creating dangerous weaving and merging patterns, -adding unnecessary noise and visual impact. I want a better design that keeps practical east–west access and takes the needs of west-side residents seriously. Thank you Emily Nolan |
| **4/29/2026** | Emily Nolan | CTRMA is cutting corners with a predetermined FONSI. Under the National Environmental Policy Act, a full EIS is required when a project will significantly impact the environment. Drilling into the Edwards Aquifer, harming endangered species, damaging parks, and worsening air quality next to Austin High School are all significant impacts that should trigger a full EIS. This project started in 2011, and the traffic model used to dismiss alternatives was finalized in 2012—over 14 years ago. Since then, we've had a pandemic, expanded telecommuting, and approved Project Connect. We need CTRMA to rethink this project with reconsideration of alternatives, updated data, and consideration of local goals and policies. After 5-7 years of disruptive construction, the project will save only 5-6 minutes for someone traveling the entire 8.77-mile length during rush hour. Meanwhile, construction delays will largely zero out these minimal improvements CTRMA admits the expansion will adversely affect 4 federally endangered species but refuses to consider design alternatives that could avoid these impacts. Construction will threaten the clean flow of groundwater to Barton Springs and kill cave ecosystems that cannot be restored. Austin High School students and nearby residents will be exposed to higher levels of fine particulate matter (PM2.5) from increased traffic, tire wear, and brake dust. CTRMA's claim that air quality will improve despite 331 million more vehicle miles traveled per year being added to the corridor is not credible. The proposed water quality treatment doesn't meet the standards that Travis County and the City of Austin use for their own roads. During construction, sediment and pollutants will flow directly into the Edwards Aquifer Recharge Zone, causing irreversible harm. PLEASE RECONSIDER THIS PROJECT. The harms greatly outweigh the benefits. |

| | | |
|---|---|---|
| **4/24/2026** | Emily Nolan | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Emily Nolan |

| | | |
|---|---|---|
| **5/1/2026** | Emily Ortiz | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Emily Owen | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Emily Owen |
| **4/20/2026** | emily persons | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/1/2026** | Emily Shelley | I'm requesting that CTRMA conduct a full Environmental Impact Statement (EIS) analysis — it appears that you're not taking environmental safety and water stewardship seriously. Under the National Environmental Policy Act, a full EIS is required when a project will significantly impact the environment. Drilling into the Edwards Aquifer, harming endangered species, damaging parks, and worsening air quality next to Austin High School are all significant impacts that should trigger a full EIS. How will this project actually "benefit" Austinites? After 5 to 7 years of disruptive construction, the project will save only 5 to 6 minutes for someone traveling the entire 8.77-mile length during rush hour. Meanwhile, construction delays will largely zero out these minimal improvements Austinites don't want this project to move forward. We want to protect our environment and water. |
| **5/3/2026** | Emily Siegel | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Emily Siegel |

|---|---|---|
| **4/28/2026** | Emily Sladek | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>I know traffic is a problem, but building more highways won't solve it. The way to improve traffic conditons are: improving mass transit, improving incentives for carpooling, and increasing remote work opportunities to name a few.<br><br>Additionally, the promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Emily Sladek |
| **5/3/2026** | Emily Stern Foams | Hello, my name is Emily Stern Foams.I am an Austin resident and I am demanding that there is a full environmental impactstatement to make sure that, yeah, we protect the streets, we protect all of the environmentin this area.Thank you so much.Thank you. |

| | | |
|---|---|---|
| **4/26/2026** | Emily Sternfeld | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Emily Sternfeld |

| **4/21/2026** | Emily Studer | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |
| **4/21/2026** | Emily Studer | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/23/2026** | Emily Underwood | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **4/20/2026** | Emily Vences | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/7/2026** | Emily Weigand | My office is located along 2244. Queues in the PM already reach sometimes past 2 signals along 2244 in current conditions. And congestion for the exit ramp SB mopac to 2244 causes congestion backing to the river most days, which is incredibly unsafe. Improvements to both the exit ramp and interchange will be needed for the future years. |

| | | |
|---|---|---|
| **5/3/2026** | Emily Winter | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. The fact that this expansion is even being proposed is absurd, and the inherent greed that Texas developers possess is insane. It's like we've all forgotten the importance of natural conservation. Clean air is VITAL. Clean water is VITAL. Flourishing ecosystems and green spaces in the ever-expanding concrete suburban hellscape is VITAL. <br /> I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. |

| | | |
|---|---|---|
| | | Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Emily Winter |

| | | |

| **5/3/2026** | Emma Cameron | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/2/2026** | Emma Fritz | Hello,<br><br>As a resident of Austin, I am writing to formally express my strong opposition to the proposed MoPac South expansion. Expanding our highway infrastructure is a dated solution that fails to address our long-term mobility needs while threatening our local environment.<br><br>The current proposal claims to have "no significant impact," but adding over 100 acres of new pavement in an environmentally sensitive area demands the highest level of scrutiny.<br><br>I am calling for a full Environmental Impact Statement (EIS). An abbreviated Environmental Assessment (EA) is insufficient for a project of this magnitude and ecological risk.<br><br>On a personal level, I am exhausted by the cycle of highway-centric planning. I see the constant expansion of lanes as a failure of imagination that only leads to induced demand and more traffic. My vision for Austin is a city connected by a world-class bike and pedestrian network and a robust regional rail system—not more asphalt. We need leadership with the creativity to invest in a future that prioritizes people over more toll lanes. If you're not up for the challenge to build a better future, get the hell out of the way of the creative people who have more imagination and vision than you.<br><br>It is time to move past ineffective "solutions" that have been proven not to work. I urge you to reject this expansion and pivot toward sustainable, regional transit.<br><br>Sincerely,<br><br>Emma<br><br>Austin, TX |

| | | |
|---|---|---|
| **5/2/2026** | Emma Hale | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Emma Horvath | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Emma Horvath McCain |
| **3/19/2026** | Emma Kieninger | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion |

| | | |
|---|---|---|
| **4/29/2026** | Emma Kieninger | Please do NOT expand MoPac South and I want a full Environmental Impact Statement (EIS, NOT an abbreviated Environmental Assessment.<br><br>Induced demand is real, if we continue to expand highways, we will just have to keep adding on and on and on. Texas and the United States need to support and start funding regional rail projects.<br><br>Thank you,<br><br>Emma<br><br>Emma Kieninger<br><br>T: 575.420.2672 |

| | | |
|---|---|---|
| **4/24/2026** | Emma Light | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Emma Light |

|---|---|---|
| **5/3/2026** | Emma Light | Hi, my name is Emma Light.I'm an Austin resident.I was born and raised here.I am calling to voice my oppositionto the expansion of the Mopac Highway for multiple reasons.On the face of it, it doesn't actuallymake any sense starting a highway expansion processfor the purpose of reducing five minutes of traffic long termbut having to deal with multiple years of constructionthat would interfere with our ability to get places on time. It's inefficient, and we wouldde much better investing in forms of public transportation like walking, biking, and thetrain that's already being built in Austin. Secondly, it's kind of ridiculous that we areto do more construction over a very fragile recharge zone that holds a lot of our city'swater, that feeds into Barton Springs, and makes our city the beautiful city that it is,the reason that so many people want to live here anyways. We need to protect these fragileecosystems, all of these beautiful, beautiful, beautiful caves all along Mopac, Edwards Aquifer,the endangered species that we have here. We need to have more, we need to be more proactivein protecting our ecosystems and to just put down this project once and for all and investin more sustainable forms of transportation for everyone in the city. Thank you. |
| **4/20/2026** | Emma Lindrose-Siegel | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/27/2026** | Emma Martin | Barton Springs is one of the well known locations in Austin that highlights community, togetherness, and acceptance. Damaging the aquifer by expanding Mopac would detrimentally affect both the natural ecosystem of Barton and the beauty that it provides for Austin. No one wants Mopac expanded. Do better. |

| | | |
|---|---|---|
| **4/23/2026** | emma ransome | Dear CTRMA Board Members,<br><br>Please do not make a choice that would compromise the sacred nature of our Zilker area. That land is crucial to so many plants and animals and is the heart of Austin.<br><br>Sincerely,<br><br>Emma Ransome |
| **4/21/2026** | Emma Ransome | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **4/13/2026** | Emmett Beliveau | Hi, I'm writing to encourage expansion of the existing pedestrian/bike bridge that crosses Ladybird lake/Colorado River under MOPAC as part of this project. It was hard to find details on what is planned in the project documents. The exiting path is often crowded and tough to navigate on a bicycle alongside other users. Any expansion of this popular path would be appreciated. Thanks. |

| | | |
|---|---|---|
| **5/3/2026** | Emy Garcia | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Emy Garcia |
| **5/3/2026** | Engracia Gill | If we loose Barton Springs, we loose the marvel that makes Austin Austin! No, no, no!<br><br>Engracia Gill, LCSW |

|---|---|---|
| | | Sincerely,<br><br>Epiphnay Hodge |

| | | |
|---|---|---|
| **4/17/2026** | Eric Arntson | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Eric Arntson |

| | | |
|---|---|---|
| **5/2/2026** | Eric Braun | I support the "no build" alternative to Mopac South Expansion. I urge CTRMA to undertake a full Environmental Impact Study (EIS) per federal standards, including a traffic study on the impacts of the project on surrounding roads and propose lower impact, lower cost alternatives. Construction congestion The years of construction-related traffic congestion and environmental degradation caused by this project are simply not worth the minimal projected improvements in travel time. Central Austin residents, including students at Austin High, and everyone who enjoys Zilker Park, Barton Springs, the Hike and Bike Trail at Lady Bird Lake, the Barton Creek Greenbelt, and Deep Eddy Pool will suffer through many years of construction congestion and bear the brunt of the environmental impacts (noise pollution, poor air quality, and compromised water quality) while enjoying the tiny benefit of a couple minutes travel time even many years after this project is built. Toll Roads don't help general users Toll roads are not a solution to the root cause of congestion and only serve a small portion of roadway users (30,000 to 40,000 users per month / 180,000 roadway users = 16-22%). Limited entry and exit points and demand pricing keep toll roads from being useful to most people who live in Central Austin, while prioritizing those who choose to live far from the city center. Environmental Degradation I do not believe the environmental harm caused by this construction is worth a few minutes of travel time. Increasing air pollution, noise pollution, and toxic runoff from cars will negatively impact one of the most environmentally sensitive and cherished areas of our region. We must protect the Edwards Aquifer, Barton Springs, the Barton Creek Greenbelt, the hike and bike trail, Deep Eddy Pool, and Zilker park from excessive development and traffic and its negative environmental impacts. Fiscal irresponsibility There are a wide variety of low cost congestion relief measures that could improve the South Mopac Corridor and reduce peak time congestion without expansion that should be explored and tested before proposing expansion. These strategies include lengthening entry and exit ramps, restriping, HOV lane at peak times, park and ride facilities, transit routes, addressing surface and connector road congestion that backs up onto MoPac, among others. We should not be jumping into a $824 million dollar project without first exploring and testing low cost congestion relief measures that will help all roadway users before expansion. The future is unknown This project or any expansion of MoPac should not take place until I-35 construction is complete and resulting traffic patterns can be studied. The simultaneous creation of the SH-130 autonomous trucking route also has the potential to majorly impact traffic flows in our region by rerouting trucking traffic from I-35 and should be allowed to play out and be studied as another factor in assessing the need of MoPac expansion. Furthermore, we are on the horizon of autonomous vehicle adoption in many sectors which will change traffic patterns throughout our region. Expanding MoPac based on the outdated information in the MoPac South draft environmental assessment risks over or underbuilding the road based on incomplete and outdated demand projections. |
| **4/29/2026** | Eric Escobar | I understand that new paved paths are planned as part of the South Mopac corridor improvements. Our neighborhood, Meridian, has been requesting since 2020 that a paved path be completed from our community along Highway 45 to Escarpment Blvd—a distance of only 1.2 miles. Finishing this connection would give more than 3,000 residents safe access to the rest of Austin. Cyclists and walkers could travel through Circle C and reach the new paved path that will begin on Slaughter Lane. Right now, many people bike or walk along the narrow shoulder of Highway 45, which is extremely unsafe. City Council District 8 has recognized the importance of this project and has allocated $117,000 for its design to improve safety and connectivity. Our Meridian neighborhood has a committee dedicated to this effort, and I can share additional details and graphics if helpful. Thank you. |
| **3/10/2026** | Eric Guenther | This is a project no one is Austin has asked for and no one in Austin wants. It threatens the water quality of Ladybird Lake, and will lead to years of needless construction that won't solve the traffic problem that this project seeks to address. Having lived in Houston, I have experienced first hand how the addition of more lanes without any meaningful investment in public transit only makes traffic worse. I implore you to please go with the "no build" option or an option that actually improves transportation across Austin by investing in public transit. |

| | | |
|---|---|---|
| **3/12/2026** | Eric Radjef | Dear CTRMA Board Members,<br><br>I oppose the MoPac South expansion as proposed.<br><br>The proposed 8.77-mile expansion of South MoPac, from Enfield Road to Slaughter Creek, is a direct threat to Barton Springs, the Edwards Aquifer, endangered species, and the future of Austin.<br><br>The project will likely harm endangered species, including the Barton Springs salamander and federally protected cave invertebrates. Federal law requires a full Environmental Impact Statement for projects with potentially significant effects.<br><br>I oppose the 6-8 lane expansion of MoPac South cutting through the Edwards Aquifer Recharge zone, and I recommend safer, smarter alternatives — including other transit solutions — while protecting our water, wildlife, and communities.<br><br>Respectfully,<br><br>Eric Radjef |
| **5/3/2026** | Eric Reeder | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  <p data-start="2198" data-end="2385">Once the environment, our green spaces, and nature are damaged and destroyed it is impossible to get them back. We owe to our community and to our future generations to protect these spaces by doing our due diligence in evaluating the impact of future construction and infrastructure projects in the Austin area  Sincerely,  Eric Reeder |

| | | |

| **4/20/2026** | Erica Blue | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/23/2026** | Erica Fick | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |

| | | Respectfully,<br><br>Erica Fick |
| **5/3/2026** | Erica Foster | I am against the expansion of MoPac. We do not need more highways, we need better public transportation infrastructure! |

| | | |
|---|---|---|
| **4/23/2026** | Erica Moon | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Erica Moon |

| | | |
|---|---|---|
| **4/23/2026** | Erica Moreno | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Erica Moreno |

| | | |
|---|---|---|
| **5/3/2026** | Erica Prasad | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Ericardo Zuniga | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Ericardo Zuniga |

| | | |
|---|---|---|
| **5/3/2026** | Erik Garven | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Erik Garven |

| **4/20/2026** | Erik Rodriguez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/31/2026** | Erik Ruben | I'm someone who has been lucky enough to enter some of the caves here in Central Texas. I've heard cave biologists talk about endemic invertebrates and hydrologists explain water recharge in karst habitats. I've seen water flowing into swallets along the bed of onion creek, knowing it will reemerge in Barton Springs a few days later. Our modern world is ignoring a growing tide of problems, kicking the can down the road for our children to face,  no wisdom, or transparency. All short term thinking, solving one issue but creating 20 in the process. Humans are part of the living world. We need to stop making decisions that ignore the fact that water quantity and quality are paramount to our lives. That native plants feed pollinators that in turn feed a web that we depend on. Wake up. Let's stop benefiting the few at the expense of so many and our future. |
| **5/1/2026** | Erik Schmall | Seeing the disaster that is the 35 project, bringing this to mopac would be a huge mistake for a very minimal savings. What makes the most sense is to repaint the lines on southbound at william cannon. That would solve a lot of the bottleneck during rush hour for dirt cheap. We also need to protect our drinking water. There is simply no need to jeopardize mopac for years to save a handful of minutes. Thanks for reading. |
| **4/23/2026** | Erika Alam | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/9/2026** | Erika Alam | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. | **5/3/2026** | Erika Gillmeister | Dear CTRMA Board Members, My family has owned a home and lived in Barton Hills since the 1970s, with 4 generations calling it home. We are STRONGLY OPPOSED to the MoPac South Expansion due to serious concerns about health, air, sound and environmental pollution, the aquifer, and quality of life. The pollution, water challenges, traffic noise and other related issues have all increased dramatically since we've lived here and the MoPac Expansion would add to those problems significantly without any gain. We do NOT want even MORE MoPac impacting our neighborhood, aquifer and invaluable green spaces. It's vital that we preserve the resources and quality of life that still remain in tact that made this a desirable place to live and work in the first place instead of destroying it!!! I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. I |

| | | |
|---|---|---|
| | | respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Erika Gillmeister |
| **4/29/2026** | Erika Guin | As an Austin resident since 1995 I have to firmly object to the 2C Express Lane Build Alternative. I do not feel that the environmental impacts have been adequately assessed. The Edwards Aquifer may be impacted, and special and exceptional care should be taken to ensure the project does not pose a risk to the aquifer or its endangered inhabitants. I also do not see sufficient data indicating that the Express Lanes will actually help traffic issues in Austin. Incorporation of other Express lanes have not adequately addressed traffic in Austin. A solution that would be better, but does not appear to have been adequately investigated, is that of investment into public transportation options, including substantial expansion to areas at the edge of Austin or into Pflugerville/Round Rock would substantially improve traffic. Public transit funding would provide a more sustainable, eco-friendly, and more substantially future-proofed solution. |

| | | |
|---|---|---|
| **4/29/2026** | Erika Heinen | To the CTRMA Board of Directors,<br><br>I am writing to formally oppose the proposed MoPac South expansion and to urge the Board to pause and conduct a thorough, independent review before advancing this project further.<br><br>Lane Expansion Doesn't Solve Congestion — The Science Is Clear<br><br>The premise driving this project is contradicted by decades of research. Any congestion relief from added lanes is typically wiped out within 5–10 years as new drivers fill the new capacity — a well-documented phenomenon known as "induced demand." A landmark study in the American Economic Review found an almost perfect correlation between lane-mile construction and vehicle miles driven. Texas has its own cautionary tale: Houston's Katy Freeway was expanded to 23 lanes at a cost of nearly $3 billion, and travel times have only gotten worse. Spending $1 billion on MoPac South will produce the same result.<br><br>A Full EIS Is Required — Not Just an EA<br><br>Given the scale of this project — 8.8 miles, up to 6–8 new lanes, elevated structures through a sensitive watershed — a full Environmental Impact Statement is warranted, not merely an Environmental Assessment. The public deserves an independent, comprehensive analysis of effects on air quality, water quality, endangered species habitat, and surrounding communities before any ground is broken.<br><br>The Public Comment Process Has Lacked Good Faith<br><br>CTRMA initially scheduled the official feedback period over the holidays when residents are least engaged — and only extended it after public outcry. When Travis County Commissioners asked how prior public input had been incorporated, the response was, in a commissioner's own words, "messy and confusing" with no clear explanation. The community deserves genuine transparency about who benefits from this project and why a decade-old plan is being revived now despite sustained opposition. |

| | | |
|---|---|---|
| | | Barton Springs Must Be Protected<br><br>Barton Springs Pool and the Barton Creek Greenbelt are not just amenities — they are the ecological and cultural heart of Austin, and a primary reason people choose to live here. The federally endangered Barton Springs Salamander, found nowhere else on Earth, depends on the springs' water quality. Construction of elevated lanes and expanded impervious cover in this watershed risks permanent, irreversible harm to one of Austin's most treasured natural resources. No temporary congestion relief is worth that cost.<br><br>Every time I have visitors from other states and other countries, Barton Springs is one of the places I take them. To a person, they've never seen anywhere like it and it is a highlight of their Austin visit. Why risk something so special and unique without even doing due diligence?<br><br>I urge the Board to halt advancement of Alternative 2C and invest instead in evidence-based solutions: expanded public transit, improved active transportation infrastructure, and real demand management strategies.<br><br>Thank you for the opportunity to comment.<br><br>With respect,<br><br>Erika Heinen |

| | | |
|---|---|---|
| **5/3/2026** | erika hurst | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, erika hurst |

| | | |
|---|---|---|
| **4/17/2026** | Erika Maassen | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |

| **4/20/2026** | Erika Miller | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Erika Shepherd | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Erika Thot | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Erika Thot |

| | | |
|---|---|---|
| **5/3/2026** | Erin April Leary | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Erin April Leary |

| **4/23/2026** | Erin Ashcroft | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **5/1/2026** | Erin Bell | Stop expanding highways! It doesn't help traffic, hurts the environment, and the community. This MOPAC expansion would be detrimental to Zilker Park and surrounding areas. The citizens of Austin care more about protecting our nature areas. PLEASE LEAVE ZILKER ALONE!!!! Xoxo, born and raised Austinite |

| | | |
|---|---|---|
| **5/3/2026** | Erin Downey | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| **4/24/2026** | Erin Gutierrez | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. | **4/23/2026** | Erin Hamilton | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Erin Hamilton |

| | | |
|---|---|---|
| **3/12/2026** | Erin Hazel | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. | **5/3/2026** | Erin K | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Erin K |
| **5/2/2026** | Erin Leary | Hi, my name is Erin Leary, and I'm calling to request for a full environmental impact statement,not a shortcut, for this CTRMA MOPAC expansion.And I believe that barnsprings is way too precious to risk endangering the species that are there and the aquifer.So please hear my voice. |
| **5/3/2026** | Erin Martin | I am writing to express my opposition to the proposed MoPac South project. I have concerns about its potential impacts on traffic, environmental quality, and the surrounding community. This proposal does not appear to adequately address long-term sustainability or the needs and safety of current residents.  I urge decision-makers to reconsider this plan and explore alternative solutions that prioritize environmental protection, responsible growth, and meaningful community input. Thank you for the opportunity to provide feedback. |

| | | |
|---|---|---|
| **3/28/2026** | Erin Moran | Hello,<br><br>I'm writing in support of adding a paved shared-use path along Hwy 45 to connect Meridian to Escarpment Blvd.<br><br>This 1.2-mile connection would make a meaningful difference for our community. Meridian residents have been advocating for this since 2020 because it would safely connect more than 3,000 people to the broader Austin trail network via Circle C and the planned MoPac shared-use paths.<br><br>Right now, many cyclists and pedestrians are using the narrow shoulder along Hwy 45, which feels unsafe and discourages families and less experienced riders from accessing these routes. Completing this short segment would significantly improve safety and create a continuous, usable connection to existing and planned infrastructure.<br><br>Austin City Council (District 8) has already allocated $117,000 toward the design of this path, demonstrating clear local support and recognition of its importance. This project is a logical and impactful next step.<br><br>I strongly encourage TxDOT and CTRMA to fund and prioritize this connection as part of the South MoPac improvements.<br><br>Thank you for your consideration.<br><br>Erin Moran |
| **4/28/2026** | Erin Rainosek | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/17/2026** | Erin Ridgeway | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. | | | |
|---|---|---|
| | | Respectfully,<br><br>Erin Ridgeway |
| **4/20/2026** | Erin Schroeder | Mopac does south of 290 does not need to be expanded and DEFINITELY does not need a toll lane. There is already existing space to re-stripe the lanes to allow more traffic through. This is an environmentally sensitive area and would be best left as is instead of creating more construction, pollution, and damage to the aquifer recharge zone. |

| | | |
|---|---|---|
| **5/1/2026** | Erin Tassoulas | Please reconsider. This expansion will not help Austin. No cities around the country are expanding their urban highways! We are caving too companies who build roads. At our detriment!<br><br>Erin Tassoulas |
| **4/23/2026** | Erin Tyrrell | I am writing to you as a constituent of District 8 with serious and urgent concerns regarding the MoPac South Environmental Study and the proposed Build Alternative currently moving through the environmental review process. I am deeply troubled by the selection of Configuration 2C, which includes 2 express lanes with elevated ramps near Barton Skyway, as the preferred Build Alternative. This decision will have significant and lasting consequences for our community, and I do not believe those consequences have been adequately weighed against the benefits claimed by the project team. Specifically, I am concerned about: • The impact of elevated ramp infrastructure near Barton Skyway on the surrounding neighborhood, greenspace, and quality of life for District 8 residents. • Whether the public input process was truly representative of community voices, or whether it was structured in a way that favored this outcome. • The long-term environmental effects on the Barton Creek watershed and surrounding natural areas — resources our district values deeply. • The failure to give adequate consideration to transit-oriented alternatives that could address mobility needs without the intrusive footprint of a highway expansion. Time is of the essence. Our neighborhood deserves a transportation future that does not sacrifice our environment and quality of life for a project that primarily benefits through-traffic. I urge you to act now. Erin Tyrrell |

| | | |
|---|---|---|
| **4/27/2026** | Ernesto Valadez | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |
|---|---|---|
| | | Ernesto Valadez |

| | | |
|---|---|---|
| **3/28/2026** | Ernie Leon-Guerrrero | Dear CTRMA Board Members,<br><br>This roadway expansion is not wanted or needed.<br><br>Ask any Austin resident, and they'll tell you that sacrificing the Greenbelt is a cost too high to pay for additional freeways that they won't even use. The toxic air and liquid runoff from this MoPac expansion would irreparably damage the forests, caves, and waterways that support many federally endangered species, such as the Barton Springs Salamander and Austin Blind Salamander. VMT (Vehicle Miles Traveled) will rise by 331 million, increasing $PM_{2.5}$ (fine particulate matter) for nearby schools and neighborhoods as well. This type of particulate exposure greatly increases risks related to asthma, bronchitis, heart disease, stroke, lung cancer, and premature death. The vehicles and 110 acres of pavement will increase the temperature and pollutants in our freshwater, potentially making it unable to sustain the species for which it is known.<br><br>This project needs a full EIS (Environmental Impact Statement) and a meaningful opportunity for local residents to convey how strongly they oppose this proposal.<br><br>Sincerely,<br><br>Ernie Leon-Guerrero |

| | | |
|---|---|---|
| **4/21/2026** | Errin Delperdang | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>I have lived in Austin for over 25 years and Barton Springs and the Greenbelt have been a huge part of my experience with the city. When I am in the spaces I am the most grateful to be in Austinite. The health of the Edwards aquifer is imperative to our ability to enjoy clean water in this city Without protection, these areas are at risk as is the heart of the city.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, |

| | | |
|---|---|---|
| | | blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Errin Delperdang |

| **5/3/2026** | Erykah Resendez | Adding more lanes is proven to not help with traffic. The only sure way would be to provide better public transport for the community. If anything is built, there should be extensive environmental studies to ensure there is no impact to the Austin community and water sources. |

| | | |
|---|---|---|
| **4/20/2026** | Esau Gutierrez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/28/2026** | EsKae Jensbee-Nyad | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>EsKae Jensbee-Nyad |
| **5/3/2026** | Esme tobin | Barton Springs is a natural treasure. There's no benefit to building any more lanes on this highway. We don't need any more car infrastructure through our city. It's fine the way it is. Traffic will not be solved by adding more capacity for more traffic congestion. Invest that money in something that's actually useful like Cap and Stitch for the stupid IH-36 expansion which will be burning money for the next 10-20 years also. |

| | | |
|---|---|---|
| **5/3/2026** | Esmeralda Parra | Hello, my name is Esmeralda Parra and I'm calling in regards to the highway expansion.I'm calling to kind of try to plead with you all for this to cease.The reason being is one, not only endangering animals that live in the springs, but alsothe pollution that it will cause expanding highways.You have to consider that this is only going to cause more traffic, more cars.When I honestly feel that the money would be better suited, if y 'all would provide publictransportation, putting your minds together and actually being creative and creating abetter public transportation within the city or even trains that run from, you know, thecity of San Antonio, New Brown Falls, Austin, which is why this expansion is happening becausethat 35 is always crowded with people coming in and outof the city, but we escape pavement citieslike San Antonio into Austin because y 'all still have greenand beautiful springs and things like that,which is the reason why this city is so popularand is so beautiful and wonderful.And these are the things that y 'all are taking from it.To top it off, if y 'all are gonna be putting in toll roadsto make money for the city,Why instead not use public transportation?This would also cause the revenue for the city and it would cause pollution for the city.I mean, better public transportation would be the answer for this.It's not going to be an easy answer, but it's a better answer than putting in extended larger highwaysand taking what is beautiful from the city, adding pollution to the city,killing wildlife in the city, all of these things that you're going to be causing justby taking the lazy way out and what you think is easier, adding these toll roads to createrevenue for yourself.That's just being creepy.You know, the points that I make are actual things that you all should take into consideration,but it's not the task, therefore you're taking the easy way out.So, I plead with you all to please not expand these highways and take from the springs andtake from nature and take from what's beautiful from your city.You're causing devastation by doing so.And I really think these are things that you all should take into consideration.For example, traveling so many times to Europe and seeing beautiful history that they stillhave these things that still work that existed from when pirates used to come and sailorsused to come to their ports, things like that, because they managed to implement undergroundtrainings and great public transportation.People walk everywhere they go and things like that because the public transportationgets them close enough to where they need to be.All these things are implemented in tons of Europe countries that I've traveled to, whichare capable of doing in the states, in places like in Austin, but y 'all are ready to takethe lazy way out and just build a road and pave everything instead of being creativein implementing the money where y 'all could definitely create these public transportationswithin the city and to connect the cities.And that would be the better use of money in the long run.Don't take the easy way out, be better, do better. |
| **5/3/2026** | Esmeralda Tijerina | Please do not build over the tollway over the watershed for barton springs. it would be incredibly irresponsible towards the environment. |
| **5/2/2026** | Essie Bailey | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/1/2026** | Esteban Maldonado | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| | | |
|---|---|---|
| **4/26/2026** | Ester Harrison | I strongly OPPOSE the MoPac South expansion. I attended the public hearing at Bowie High School. After reviewing all the displays and documentation thoroughly, I saw that this proposal does NOT significantly improve reliable traffic times by any beneficial amount; Instead the project destroys irreplaceable important parklands, trees, waterways, Edwards Aquifier replenishment zones, wildlife corridors, neighborhoods, and quiet natural areas that Austin residents value and cherish. The project and outcome has only cons that creates noise, environmental pollution, ecosystem destruction and ultimately more problems. The project would take minimum 4 years causing MORE and WORSE traffic delays, noise, and environmental harm because of construction, only to ultimately claim to improve travel time by ONLY 5 minutes per commute. THIS MINUSCULE amount is NOT WORTH THE DESTRUCTION the expansion would create. Not only are there RESIDENTIAL NEIGHBORHOODS directly adjacent to MoPac, but WATER, PARKLAND, and WILDLIFE that need to be saved, not destroyed or made worse by the highway expansion. Expanding MoPac would create significant HEAT with the expanded pavements and highly wildfire-sensitive zones - which are already a high concern for the hotter summers and drought periods in Austin Texas. Dust and NOISE would increase not only during the long duration of the project, but after the completion noise would only increase to surrounding neighborhoods between William Cannon and Slaughter. It would eliminate trees and important habitat along the freeway (wildflowers, butterfly and bird migration food sources, greenways that absorb water for the Edwards Aquifier). What are the plans to mitigate destruction of these natural areas during and after construction? The project would destroy the LadyBird Lake bike/run/walk paths adjacent to Zilker Park that runs underneath Mopac. The project would destroy the the quiet parklands and residential neighborhood between William Cannon and Slaughter Lane (Dick Nichols Park, Twin Creeks neighborhood, Sendera Neighbordhood, Legend Oaks neighborhood). What are the proposals for how many trees the project would remove on parklands directly adjacent to Mopac, including Dick Nichols park on both east and west sides? How will you protect the trees and landscape, and the daily active bike/walk paths of Violet Crown Trail? What are the proposals for parkland protection? What are your proposals for reducing the increase of HEAT on expanded highway pavement especially next to neighborhoods that are in wildfire risk areas (between William Cannon to Slaughter) ? What are your proposals for multiple required wildlife migration paths that are NECESSARY and important factors between Dick Nichols Park under Mopac into the adjacent parkland and Twin Creeks neighborhood? What are your proposals for noise mitigation for neighborhoods both sides of Mopac around Davis Lane without building ugly walls? What is your proposal for Permanent Green Space Fund? Why are you not considering mass transit such as a light-rail instead of lane expansions? Ultimately, the proposed Mopac expansion is not a solution. As direct evidence, HOV lanes that were created on Mopac from Enfield Ave northward are just as slow and noisy (sometimes slower) as normal lanes during peak times, so it has not solved any problems of congestion. Those HOV lanes created more noise, dust, and separation of neighborhoods on either side that used to be cohesive communities. We do NOT want the same bad result for South Mopac and our communities. |

| | | |

| **5/3/2026** | Esther Castillo | No development, keep Barton springs |

| | | |
|---|---|---|
| **5/3/2026** | Esther Garza | this expansion should be illegal, building over this flood zone and an environmentally sensitive area is a terrible idea which is also multiple steps back for texas in the name of “progress” . living right next to the proposed area of development i know that this will not improve traffic, it will displace people and endangered wildlife around it. texas is running out of water and damaging the aquifer as well as the ecosystem around it will not only hurt the people but cause irreparable damage to this state and species around us because once they’re gone they’re gone forever and no amount of money or “time” being saved on someone’s commute will bring them back. traffic is always going to happen regardless of wider roads or more highways, as you can see with 1-35 being under construction for the past 30 years nothing has changed, expecting a different result with the same course of action is insanity. austin’s infrastructure was never meant for this many people but creating better ways for people to get in and out of the city that don’t involve damaging environmentally sensitive areas is possible. people love austin because austin has these beautiful nature trails, pools and spaces for live music and events, when you take those away and destroy them you destroy austin. please stop putting profit over people and stop this expansion. |

| | | |
|---|---|---|
| **4/8/2026** | Esther Marsden | CTRMA Board Members,<br><br>The MoPac South expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. | | | |
|---|---|---|
| **5/3/2026** | Esther Shin | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Esther Shin |
| **3/26/2026** | Ethan A Oliver | Fully against the project. We do not have a lack of roadway issue, we have a mobility issue. It's time for Austin to cease increasing roadways and create solutions that move people more efficiently and effectively. |
| **5/3/2026** | Ethan Azarian | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Ethan Azarian |
| **5/2/2026** | Ethan Eufracio | Terrible idea to to develop and have a construction project over the limited recharge zone of the most vital and protected aquifer in Texas. TxDOT needs to invest money in metro & urban transportation, highways just bring more out-of-towners and increase the traffic capacity. Implement practical solutions, not unnecessary infrastructure. |

| | | |
|---|---|---|
| **5/3/2026** | Ethan Gorelick | Dear CTRMA Board Members,  As a life-long Austinite, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Ethan Gorelick |
| **4/22/2026** | Ethan Han | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by Evergreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| | | |
|---|---|---|
| **4/22/2026** | Ethan Han | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/25/2026** | Ethan Muyskens | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **3/16/2026** | Ethan Shade-Shell | There should be a 2nd continuous toll lane on Mopac between Cesar Chavez and 2222 because currently right now with one toll lane it merges from two lanes to one lane and it's lead to a huge bottleneck especially during evening rush-hour and it's led to lots of crashes too If there's a 2nd lane being added in each direction this would really help with that |
| **5/3/2026** | Ethan Stern | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Ethan Stern |

| **4/27/2026** | euben Lewis | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Eucaris Gonzalez | Expanding MOPAC in south Austin is a terrible idea! The risk to our water and our beautiful green spaces is too great! Find another way Austin! |

| | | |
|---|---|---|
| **4/23/2026** | Eunice Aguinaldo | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

|---|---|---|
| **5/3/2026** | Eva Colona | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Eva Colona |
| **4/20/2026** | Eva Kocab | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Eva Laubach | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. The planning process should emphasize preserving Austin's valuable open spaces and involve public comment. Let's not make a mistake without truly considering the costs the community will bear. Sincerely, Eva Laubach |

| | | |
|---|---|---|
| **3/12/2026** | Eva Lorini | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I demand a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone to protect our community, families, and environment that sustains our lives.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>In sincerity and urgency,<br><br>Eva Lorini |

| | | |
|---|---|---|
| **3/18/2026** | Eva Lorini | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Eva Lorini |

| | | |
|---|---|---|
| **3/18/2026** | Eva Lorini | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. | **4/24/2026** | Evan Brown | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Evan Felger | I believe that this project needs to relook at a lot of things. The fact that y'all are willing to do a 5+ year construction project that will cause traffic times to probably double during that time to satisfy the demand for when a quarter of the population of the city will have passed away is unsustainable. Also, doing this is will hurt one of the most precious aquifers and creeks in the Austin area, not even to mention you may KILL an endangered species. And what for? So you can make some more money from a couple extra toll lanes, not even a bus or transit option for those who can't afford the cost of a car? All in all, this project absolutely disgusts me that this much money is going to be spent on more ugly and confusing roads in Austin rather than funding options that most constituents want, like public rail. |
| **3/31/2026** | Evan Patrick | Hi, my name is Ewan Patrick. I think that we shouldn't build toll roads, like, <inaudible> or whatever, because I don't really think it would be worth it, because I don't really think saving eight minutes would be reasonable just to, like, ruin an ecosystem over. And I think it's, like, really dumb. But that's what I think. I don't think it should happen like at all because I don't want to, like, we shouldn't ruin the ecosystem or like another like greedy toll company or whatever. But yeah, that's what I think. So yeah. |
| **3/31/2026** | Evan Shimek | The ecological toll this project will take is IRREVERSIBLE and will poison the region’s drinking water supply for generations. For what purpose would this even serve? Anyone that’s taken the MOPAC express lane north can tell you there is no real benefit to its existence - it actually functions to SLOW DOWN traffic at peak hours. This is absolutely evil and I hereby promise to make life a living hell for any decision makers that allow this harm to come to pass. |

| | | |
|---|---|---|
| **5/2/2026** | Evan Swofford | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **3/19/2026** | Evangeline Mavrommati | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **4/29/2026** | Evangeline Mavrommati | I OPPOSE expanding MoPac South. Instead, I SUPPORT regional rail and a world class bike/pedestrian network. I want a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA).<br><br>Adding lanes, especially toll lanes is simply a lazy solution. It is generous to even call it a solution. Please, let us escape car dependency and become a first-class city like we know is possible. There is ample proof in other cities domestically and internationally that car attrition works. We have ample proof adding lanes doesn't work. Austin wants to compete on the world stage but doesn't want to invest in the things like public transit and walkability that make excellent cities excellent. This will eventually drive away talent, businesses, and families who would otherwise be interested in what Austin has to offer because they can't get anywhere. We can do better. |
| **4/20/2026** | Evann Ogburn | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>One of my favorite things about Austin are the green spaces it provides. It is essential that we preserve this for years to come!<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/21/2026** | Eve Burpo | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Eve Burp |

| **4/24/2026** | Eve Chenu | History shows that building roads eventually creates increased demand. Mopac is already noisy and polluting. To suggest that the environmental impact will be minimal is unbelievable. I am against this project and wish resources could be used instead to build a real multimodal transportation system that really improves mobility for all. This seems to be more of the same pattern of more highways and more cars, not a recipe for sustainable growth and human centric development. |
| **4/30/2026** | Eve Rugarber | A full EIS should be done to determine the impacts this project could have on the local greenbelt and river ecosystem before intimating any work on the project |
| **5/1/2026** | Evelina Warren | We do NOT need a toll road in SW Austin! |

| | | |
|---|---|---|
| **4/20/2026** | Evelyn Bonar | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Evelyn Herrera | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Evelyn Herrera |

Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Evelyn Herrera |
| **5/3/2026** | Evelyn Herrera | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Evelyn Herrera |
| **5/3/2026** | Evelyn Herrera | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Evelyn Herrera |

| **5/3/2026** | Evelyn Herrera | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Evelyn Herrera |
| **5/3/2026** | Evelyn Poplin | Hello, my name is Evelyn Poplin. I am a third generation austenite and I want to make itknown that I want to the full environmental inspection statement for the MoPAC expansion.I believe that it will damage aquifer recharge zone as well as endangered species and thequality of life for the residents here in Austin. |

| | | |
|---|---|---|
| **5/3/2026** | Everett Gray | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Everett Gray |

| | | |
|---|---|---|
| **4/21/2026** | Evergreen Austin Board Member | Dear CTRMA Officials and Stakeholders,<br><br>As an EverGreen Austin Board Member, I'm writing to encourage you to incorporate the following outlined mitigations before advancing the MoPac South expansion. We recognize the corridor's congestion demands action, and ask for the same level of effort exercised in SH 45 SW for MoPac South. We also recognize that action without environmental accountability produces infrastructure Austin will regret. This proposed roadway project impacts the City's Crown Jewels: Zilker Park, Barton Creek, Barton Springs, Dick Nichols Park, Volma Overton Sr., and Williamson Creek Greenbelt.<br><br>As stated in Ben Thompson's Community Impact article - "Austin Faces Diminished parks growth" dated 02.05.2026: "Austin already falls short: less than 18.5 acres of parkland per 1,000 residents — 77% of the residential goal, a gap of roughly 5,700 acres."<br><br>This project must not widen that deficit.<br><br>_____<br><br>EGA requests these mitigations to be written in Section 8.0 Post Environmental Clearance Activities:<br><br>Trees. Preserve all trees 19" diameter or greater. Replace removed trees at 4:1 (native species only); trees 4"–19" at 3:1 (native species only) in the right-of-way and in parks. All terrestrial plantings must be native or regionally adapted, with a watering and maintenance plan ensuring 85% survival. (See Exhibit A.) |

| | | |
|---|---|---|
| | | Parkland. Adjust alignments to avoid parkland encroachment. Require construction materials and trucks to stay beneath the highway near Zilker Park and the three other parks impacted. Where impacts are unavoidable, CTRMA should fund full restoration to previous conditions or better. Provide a Park Impact Assessment evaluation of the loss or impairment of park acreage, trees, park features, ecosystem services, recreational programming, and community access resulting from the change in use of parkland.<br><br>Capital Improvement Reimbursement. Funding for the implementation of infrastructure improvements to address construction-related displacements of park usage, including new sidewalks, bike paths, vehicle routing/parking areas and new access points, to replace existing vehicle and pedestrian infrastructure disrupted by the construction phase of the project.<br><br>Noise Walls. Hold a workshop with EGA and CTRMA designers on the design and placement of noise and aesthetic walls before finalizing plans. As part of this meeting, we will want to discuss the installation of high-performance concrete or transparent noise walls within Zilker Park boundaries to maintain visual connectivity where appropriate.<br><br>_____<br><br>EGA also requests two Non-Required Mitigations: |

| | | |
|---|---|---|
| | | Open Space Fund. Provide $35M in mitigation funding to be used exclusively for land acquisition located over the Barton Springs segment of the Edwards Aquifer Recharge and Contributing Zone. This initiative aims to protect water quality and quantity, safeguard groundwater, enhance flood and fire protection, support wildlife, and impacts from impervious cover.<br><br>Permanent Green Toll. Add a voluntary $0.10 to every toll transaction in perpetuity to fund ongoing land acquisition for environmental mitigation and green infrastructure. Over time these funds should also incorporate an escalation clause to compensate for traffic demands.<br><br>_____<br><br>The stakes are real. Zilker Park has 2,000,000 annual visitors. The greatest impacts will be to the 160,000 visitors to Zilker Botanical Garden, 150,000 to the Austin Nature and Science Center, and 65,000 to the Rowing Dock. Mopac is less than one mile from Barton Springs Pool. CTRMA must ensure public health and safety for all of these park patrons at all times.<br><br>EGA commends the effort undertaken by CTRMA and partner agencies to evaluate mobility improvements along a highly congested corridor serving thousands of Central Texans each day. The public's active participation demonstrates the importance of this project to Austin's residents and underscores the need for thoughtful, transparent decision-making. |

| | | |
|---|---|---|
| | | EGA is a strategic partner in this process. We will advocate within current political realities while holding firm on the protections Austin deserves. EGA urges CTRMA to include all recommended mitigations, thereby demonstrating that superior infrastructure and environmental stewardship are not in conflict.<br><br>Thank you for your consideration.<br><br>Evergreen Austin Board Member<br><br>*<br><br>*<br><br>*<br><br>* |

| | | |
|---|---|---|
| **4/23/2026** | Evie Ho | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br><br>- Avoid parkland encroachment<br><br>- Capital improvement reimbursements for affected community assets<br><br>- A noise wall workshop with meaningful community input<br><br>- An open space fund dedicated to long-term preservation and restoration<br><br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/22/2026** | Evie Ho | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |
| **4/20/2026** | Ezekiel Wheeler | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/22/2026** | Fabian Rey | My name is Fabian Rey, and I lived in Austin for 11 years, and I don't want the south Mopac expansion to happen. We need to protect our springs and our aquifers. At all costs. We got 4 species that are in danger and making more lanes will not help the traffic. Please stop this from happening.This is really bad for Austin. |
| **3/30/2026** | Fabiene Nicole Dickerson | This community does not support the expansion of mopac! Austin’s spring system and fresh water system is at risk. |

| | | |
|---|---|---|
| **4/28/2026** | Faith Williams | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/28/2026** | Faith Williams | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>As a new resident to Austin, a core reason that I was drawn here was how easily accessible and EXPANSIVE the nature was, and how much the community formed around it. In a growing age of technology and industrial development, please please don’t deteriorate part of Austin’s core roots (pun intended).<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/28/2026** | Faith Williams | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Faith Williams |

|---|---|---|
| **4/29/2026** | Fallyn Gawlik | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/22/2026** | Falon Mihalic | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees with equivalent caliper size trees and expand the tree canopy to provide cooling shade and habitat for future generations. —Implement advanced light shielding and utilize certified dark sky light fixtures as well as full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

|---|---|---|
| **4/20/2026** | Farahday Morgan | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |

| **5/3/2026** | Fariah Mahmood | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Fariah Mahmood |

| | | |
|---|---|---|
| **5/3/2026** | Fatima Elmahdawi | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Fatima Elmahdawi |

|---|---|---|
| **5/3/2026** | Fernando Sustaita | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Fernando Sustaita |

The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Fernando Sustaita |

A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Fernando Sustaita |

| | | |
|---|---|---|
| **5/3/2026** | Fernando Sustaita | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. |---|---|---|
| **4/30/2026** | Finn Eagen | I do not support this project. I have lived in Austin for over a decade and witnessed the creation of the northern express lane. I almost never use the express lane and think it was generally a waste of space and resources. I believe there is likely some data to show that it is "effective" in reducing congestion on the northern part of Mopac, but I personally do not believe this is outweighed by the costs to create and maintain the lane. I also believe the "one more lane" mentality is a short term solution that the city will quickly outgrow. I think transportation resources are better put toward future-proof public transit infrastructure that reduces the need for daily commuting via car in the first place. Austin already has one highway that is stuck in an endless purgatory of construction (I-35). Please do not do the same to Mopac. |
| **3/30/2026** | Finny Philip | I oppose any expansion of Mopac over the environmentally sensitive-recharge zone. I'd rather go around. |
| **5/3/2026** | Fiona Hadfield | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of the city. The people are called to this region because of that rare relationship between water, geology, and community. People come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this |

| | | |
|---|---|---|
| | | project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Fiona Hadfield |

| **4/22/2026** | Fiona Robinson | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Fiona Robinson |

| | | |
|---|---|---|
| **5/3/2026** | Fiona Wycoff | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Fiona Wycoff |
| **5/3/2026** | Fiona Wyrtzen | I am strongly urging that this project is redrafted. I appreciate the detailing put into the environmental report, but this project proposes a risk to Austin's vital cultural and environmental resources. As a local Austinite, I am concerned about the impact this project will have on the Lake Austin Watershed, and restriction of access to public spaces. |

| | | |
|---|---|---|
| **4/17/2026** | Fleetwood Jacobs | Dear Central Texas Regional Mobility Authority Board and Project Leadership,<br><br>On behalf of Zilker 351, <https://www.zilker351.org/> an Austin-based 501(c)(3) nonprofit dedicated to preserving and enhancing one of Austin's most iconic urban greenspaces, we submit the attached letter with our formal request for environmental mitigations on the MoPac South Project to specify Section 8.0 Post-Environmental Clearance Activities and Design/Construction Commitments in response to the South MoPac environmental study.<br><br>In keeping with the Mobility Authority's commitment to environmental stewardship that balances the need for infrastructure improvements with preservation of the natural resources, we request the mitigation adjustments to address the expected significant impacts from CTRMA's projected timeline of up to six years for completing the MoPac South project.<br><br>Zilker 351 appreciates CTRMA's consideration of these mitigation improvements which residents and the public at large will recognize and appreciate, too. While we reserve the right to provide additional feedback on the project, we look forward to the realization of seeing these mitigation and funding commitments in the final project.<br><br>I am eager and available to meet with your team to answer questions and provide clarifications. |

| | | |
|---|---|---|
| | | For the love of Zilker Park,<br><br>Fleetwood Jacobs<br><br>--<br><br>Fleetwood Jacobs<br>Executive Director |

| | | |
|---|---|---|
| **4/17/2026** | Fleetwood Jacobs | To the CTRMA Board and Project Leadership, This letter is submitted on behalf of Zilker 351. As a stakeholder dedicated to the preservation and enhancement of Austin's most iconic urban greenspace, we are writing to formally request specific environmental mitigations and design commitments for the MoPac South Project. As the project moves toward "Section 8.0 Post-Environmental Clearance Activities," we urge the CTRMA to integrate the following commitments into the final design and construction contracts to ensure the ecological and recreational integrity of Zilker Park is maintained. I. Tree Canopy & Light Pollution Protections With its dense collection of heritage oaks, pecans, and elms serves as a living symbol of Austin's commitment to balancing rapid urban growth with environmental preservation, Zilker Park's canopy is irreplaceable and should be protected or replaced at as a generous gesture of goodwill to our past and future commitment to the environment. Accordingly, we request: Comprehensive Tree Replacement Funding: Mitigation funding for the loss of any tree displaced by the highway expansion, noise barrier footings, or shared use path construction, including replacement funding for trees between 4-19 inches in diameter being replaced in Zilker Park with native species at a 3:1 replacement ratio, and replacement funding for trees larger at or above 19 inches in diameter being replaced in Zilker Park with native species at a 4:1 replacement ratio. Additional details are set forth in the attached tree planting recommendations from TreeFolks (Exhibit A). Dark Skies Compliant Design: Implementation of advanced light shielding and full-cutoff fixtures to eliminate light trespass and preserve the night sky within Zilker Park. II. Parkland Protections To prevent encroachment of the MoPac South highway project into Zilker Park, we request: Encroachment Prevention: Adjust alignments and constructions methods to avoid parkland encroachment. Ensure that materials and trucks stay under the highway when near Zilker Park. Where impacts are unavoidable, provide compensatory land acquisition mitigation payments towards purchasing permanent conservation easements over the Edwards Aquifer Recharge and Contributing Zones. Incorporate an annual compliance check-in for three years after completion by the Environmental Compliance Manager after construction is completed to ensure SW3P and Edwards Aquifer Rules are continually met. Specific requirements are attached in Exhibit B. III. Noise Abatement and Sound Mitigation The introduction of express lanes and lateral expansion of the highway roadway creates a permanent increase in decibel levels that threatens the tranquility of Zilker Park. To mitigate these unpleasant environmental impacts, we request: Noise Workshop: A "Community Noise Workshop" to determine what noise abatement and sound mitigation measures are feasible for the portion of the South MoPac project extending through Zilker Park, with the leadership of Austin Parks and Recreation having the final vote for approving any noise abatement and sound mitigation measures, such as listed below. Advanced Pavement Technology: The use of Permeable Friction Course (PFC) or Next Generation Concrete Surface (NGCS) throughout the Zilker Park corridor to reduce tire noise at the source. Noise Barriers: The installation of high-performance concrete or transparent noise walls along both the northbound and southbound sides of the project within Zilker Park boundaries to shield sensitive areas while maintaining visual connectivity where appropriate. The noise barrier mitigations are described in the "Traffic Noise Mitigations" slide of the MoPac South Environmental Study Public Hearing (www.mopacsouth.com/PH/2603 MPS PH Exhibits Virtual.pdf) as extending 6,919 feet along both sides of MoPac South through Zilker Park. Path Intervention Designs: The use of advanced absorption and diffraction barrier designs, such as T-Top and Y-Top Caps atop noise walls, absorptive noise walls which "trap" and dissipate sound energy, or bio-based & green barriers which combine structural mass (to block sound) with thick vegetation or bio-materials that scatter and absorb higher frequencies where appropriate. IV. Construction-Related Displacement & Public Health and Safety Mitigation Construction of this magnitude will inevitably disrupt park access and usage. To mitigate these public health and safety impacts, we request: Capital Improvement Reimbursement: Funding for the implementation of infrastructure improvements [[identified in a local access study]] to address construction-related displacements of park usage, including new sidewalks, bike paths, vehicle routing/parking areas and new access points, to replace existing vehicle and pedestrian infrastructure disrupted by the construction phase of the project. Ecological Restoration: The restoration of any parkland areas or roadways damaged or degraded by infrastructure improvements, such as environmental restoration and improvement of any relocated vehicle parking areas in Zilker Park that are used to replace existing dedicated parking areas used by visitors to Zilker Park. V. Visual Impact & Active Transportation To offset the visual blight of an expanded highway through the scenic Zilker Park and to mitigate disruption caused by the |

| | | |
|---|---|---|
| | | construction project, we request “betterment” funding for: Elevated Shared Use Path (SUP): The construction of a dedicated, elevated SUP along Barton Springs Road alongside the northbound side of MoPac Freeway providing a grade-separated, safe crossing over Barton Springs Road. The location of the SUP should not interfere with the existing disc golf tees, fairways, and protective plantings along Barton Springs Road, and any displaced trees should be replaced in consultation with Austin Parks and Recreation. This will serve as both a safety feature and a signature "betterment" for the community. VI. Non-Required/Discretionary Mitigation Requests Beyond the required environmental commitments, we propose the following context-sensitive mitigations to further the CTRMA's mission of environmental stewardship. Aquifer Conservation Funding: Offset the increased impervious cover, tree loss, degraded water and air quality, and aesthetic and visual impacts of the MoPac South project by providing mitigation payments of $35 million to the City of Austin. These funds would be earmarked for the purchase of permanent conservation easements over the Edwards Aquifer Recharge and Contributing Zones. We look forward to seeing these mitigation commitments and related non-required betterments in the Section 8.0 documentation and final project schematic. We request a formal response regarding the inclusion of these items in the environmental record. Sincerely, Fleetwood Jacobs Executive Director Zilker 351 |

| | | |
|---|---|---|
| **5/3/2026** | Flynn Fletcher | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Flynn Fletcher |

| | | |

| | | |
|---|---|---|
| **5/3/2026** | Forrest Aderholt | Dear CTRMA Board Members, Hello, My name is Forrest Aderholt and I am writing to voice my concerns about the Mopac expansion proposal. I am concerned that simply adding more lanes, and especially toll lanes, will only make traffic worse for the 7 years under construction and even after completion no address any of the underlying issues that cause traffic. I live close to highway 71 construction and if this plan moves forward I will have construction to the west of me on 71 and also to the west on Mopac. I will be surrounded by construction and the air pollution, frequent traffic pattern changes, increased traffic, and noise that comes along with it. At the same time I-35 will also be under construction, this is a recipe for disaster for commuters. Even after construction I am doubtful that this expansion will even alleviate stop and go traffic on Mopac. CMTRA has even estimated that this project will only save 5-7 minutes IF you travel in the expensive toll lane. Induced demand is also a well documented phenomenon where more lanes leads to more cars which leads to similar or worse congestion in a few years. I can also speak from personal experience that these toll lanes do not alleviate traffic because I drive home from work on Mopac. I cannot afford the toll lane which is often upwards of $15 in rush hour so I sit in the same stop and go traffic that most people do. I am opposed to tax payer money going towards toll lanes that will not alleviate congestion, degrade, the environment, and will be too expensive for most drivers to use anyway. Sincerely, Forrest Aderholt |
| **5/3/2026** | Forrest Aderholt | Dear CTRMA Board Members, I'm writing to voice my concerns over the extremely negative environmental impacts this Mopac toll lane expansion will have. CTRMA has conceded that 4 federally endangered species will be adversely effected by construction. Drilling into fragile karst ecosystems will destroy habitat that endangered Tooth Cave Spider and Bee Creek Cave Harvestman rely on. Construction will jeopardize the clean, steady flow of water from the Edward's aquifer threatening endangered Barton Springs Salamnders. Even after construction runoff from completed highways have proven to leach toxic chemicals into the environment. How has CTRMA found no significant impact of the environment when there is clear evidence that this expansion will degrade an extremely fragile ecosystem that both endangered species and people rely on? Why have less harmful alternatives like eliminating elevated lanes not been considered? I am demanding a full EIS for this project as required by federal Law under the National Environmental Policy Act. CTRMA is clearly not following the requirements of the Endangered Species Act in the current proposal. Forrest Aderholt Citizen of zipcode 78749 Respectfully, Forrest Aderholt |

|---|---|---|
| **3/17/2026** | Forrest Aderholt | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Forrest Aderholt |

| **5/3/2026** | Frances Stone | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Frances Stone |

| | | |
|---|---|---|
| **5/3/2026** | Frances Washburn | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Frances Washburn |
| **5/3/2026** | Francesca Baci | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Francesca Baci |

| | | |
|---|---|---|
| **5/3/2026** | Francesca Marks | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Francesca Marks |

| | | |
|---|---|---|
| **5/3/2026** | Francesca Villalva | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Francesca Villalva |
| **5/1/2026** | Franchesca LeBaron | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/23/2026** | Francisco Burciaga | Dear CTRMA Board Members,<br><br>I'm writing to oppose the MoPac South expansion as currently proposed and to urge the Board to direct staff to prepare a full Environmental Impact Statement before this project advances further.<br><br>The Draft EA concludes that widening 8.77 miles of MoPac across the Edwards Aquifer Recharge Zone will produce no significant impacts to communities, endangered species, or water quality. That conclusion is not defensible on the record the EA itself presents.<br><br>The corridor sits directly over karst terrain, where rainfall and runoff move through caves, fractures, and sinkholes into the aquifer with almost no natural filtration. The EA identifies karst features within the project area and acknowledges that Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries cross the corridor, all of which ultimately feed Barton Springs. Despite this, the document offers little meaningful protection for these features during construction. Substantially expanding pavement will increase stormwater volume and loading of sediment, hydrocarbons, tire particulates, and heavy metals. Those are not speculative risks; they are standard outputs of urban highway runoff.<br><br>The EA also concedes that suitable habitat exists near the corridor for the endangered Barton Springs salamander and Austin Blind salamander. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer. Both species require a narrow band of water temperature, dissolved oxygen, and flow stability, and small shifts in sediment, chemistry, or hydrology can wipe them out. A finding of "no significant impact" does not reckon seriously with that biological reality. |

| | | |
|---|---|---|
| | | The community impacts are similarly understated. As proposed, the expansion would push the MoPac corridor to 13 to 18 lanes in places, paving nearly the full right-of-way across Lady Bird Lake and alongside Austin High School. Years of construction will degrade air, noise, and access at one of the city's most historic public schools. Construction around new bridges and widening will also affect the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network linking Lady Bird Lake, Zilker, and the Barton Creek Greenbelt. These are daily-use corridors for thousands of Austinites, not optional amenities.<br><br>In 2016, public opposition stopped an earlier version of this project. The pressures on the aquifer since then, including drought, development, and water demand, have only increased. Reviving this proposal without the depth of analysis a full EIS requires is the wrong direction.<br><br>A full Environmental Impact Statement is the baseline for a project of this scale, in this location, above an aquifer system that has no substitute. It would force a full accounting of cumulative impacts, a serious look at alternatives, and a real opportunity for public participation.<br><br>I'm asking the Board to direct staff to prepare a full EIS before moving forward. Barton Springs and the Edwards Aquifer warrant that standard of review. |

| | | |
|---|---|---|
| | | Thank you for your consideration.<br><br>Respectfully,<br><br>Francisco Burciaga |
| **3/19/2026** | Francisco corona | Stop the build! |
| **5/2/2026** | Frank Netscher | Air quality in Austin sucks, more lanes means more driving, and will eat up a ton of money that could be spent on projects that improve our lives. Cost $825m for marginal benefit to some drivers, when this funding could supercharge walking, bicycling, and transit in the Austin area. |
| **5/3/2026** | Frankie Hope | Please postpone any expansion until you've committed to protecting the spaces that define Austin! Barton Springs, Zilker Park & other quintessential ATX spaces should not be impacted by your expansions. Consider the people and animals who depend on these spaces for life & enjoyment. Please don't take away or alter what we love about our home. |

| | | |
|---|---|---|
| **3/24/2026** | Franny McLamy | I strongly opposed the MoPac south project and support the current "no build" alternative for now. In general, I oppose any highway expansion project, as it will NOT reduce traffic congestion. 4-6 years of construction and tons of money is NOT worth the "proposed" "Benefits" of this project to Austinites. After attending the Mopac south environmental study public hearing on March 24, 2026, more concerns about the project have been brought to light for me. One being the "increased pedestrian and cyclist opportunities "benefits" listed. The maps were even labeled "raised pedestrian crossing"- when I asked a Mopac south rep if there were protected or bridged crossings they said no. Simple adding sidewalks next to a congested highway does NOT increase mobility if those sidewalks don't feel safe. These "improvements" are a sorry attempt to make this project seem multi-modal friendly. THIS IS NOT WORTH IT!! I implore the City of Austin and CTRMA to invest the cost of this project into reliable bus networks, protected and safe pedestrian paths, and LIGHTRAIL! |
| **3/20/2026** | Franny McLarty | I grew up in the oak hill area and drove to Austin High School every day on MoPac. I know this stretch well. I left Texas for college and graduated from Western Washington University with a degree in urban planning and am super passionate about ensuring Austin is a more accessible, equitable, and beautiful city as it grows and changes. My urban planning education has led me to be very cautious about highway expansion projects, and I strongly oppose “improvements” to MoPac that add lanes. In the face of Austin’s budget crisis, investing in car infrastructure is a waste of resources and money. Pedestrian and bicycle infrastructure is the cheapest construction to invest in, and I want to see more multi modal transportation options along this stretch of MoPac. If Austin truly wants to fight traffic and congestion, it will invest in alternate modes of transportation than individual cars and give people the choice to commute other ways. If walking, biking, and transit were more accessible in Austin, I would sell my car and leave parking worries behind in a heartbeat! And I’d be one less driver in the road. |

| | | |
|---|---|---|
| **4/23/2026** | Franny McLarty | Dear CTRMA Board Members,<br><br>As a lifelong Austinite, a graduate of Austin High School, and someone who holds a BA in Urban Planning, I strongly oppose the MoPac South Project. I know this stretch of MoPac well, and I know that wider won't work. The stated purpose of this project is to alleviate traffic congestion, and the proposed schematics will not effectively do that due to a well known phenomena called induced demand. Addressing traffic in Austin in a way that actually benefits Austinites will look like investment in a high-quality multi-modal transportation network that encourages less car usage, not accomdate more.<br><br>I demand the MoPac South Project conduct a full Environmental Impact Statement. The current Environmental Assessment finding of “No Significant Impact” is dishonest. We as a city deserve better, and demand real consideration of project alternatives to meet Austin's climate and equity goals as we face population growth.<br><br>I support multi-modal regional planning, investment in public transit, and better walking and biking infrastructure in Austin. I support protecting what makes Austin unique: our water, wildlife, and citizens. Austinites are speaking up and clearly saying NO to this project. I implore the CTRMA to listen and honor the communities wants, needs, and best interests.<br><br>For the love of water in Central Texas,<br><br>Franny McLarty |

| | | |
|---|---|---|
| **4/29/2026** | Fred Heldenfels IV | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing.<br><br>Sincerely,<br>Fred Heldenfels IV |

| | | |
|---|---|---|
| **4/21/2026** | Fred Klimt | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/19/2026** | Freddy Aguirre | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **5/3/2026** | Freddy Aguirre | I am strongly against this being built, and am support of the Do Nothing alternative. Our wildlife, air quality, and water system is more important than anything else. |
| **5/2/2026** | Frederick C. Schwertfeger, Jr. | I stand in thorough opposition to the South MoPac Expansion. I've lived for 36 years in the Westcreek Neighborhood, the eastern portion of which is adjacent to the South MoPac Expressway. My house is 1 mile straight line from MoPac. The proposed Expansion if far too massive for the narrow South MoPac Corridor. It will destroy the settled, compact, neighborhoods, commercial areas, and well-established roadways and trails that now exist in pleasant peacefulness. And all the tremendous disruption will be done for far too little benefit. As one who tries to avoid tolls, the expansion documents say that I could get downtown four minutes faster. Years of environmental and existing community disruption for four minutes. This project is a boondoggle for the Texas highway construction industry; and is neither necessary, appropriate, nor wanted by those of us who live here and will be impacted by such a massive project. NO to the South MoPac Expansion! Frederick C. Schwertfeger, Jr. - 36-year resident of the Westcreek Neighborhood. |

| | | |
|---|---|---|
| **5/3/2026** | Freya Retana | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Freya Retana |

| | | |
|---|---|---|
| **5/3/2026** | Freya Retana | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. |---|---|---|
| **4/23/2026** | Frida Brooks | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Frida Brooks |

| | | |
|---|---|---|
| **5/3/2026** | Frida Garcia | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Frida Garcia |

| | | |
|---|---|---|
| **4/25/2026** | Gabby Ellis | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Gabby Ellis |
| **5/2/2026** | Gabby Finch | This expansion will be a waste of financial resources that should be put towards the completion of I-35. Also, I would want a full environmental impact study performed. This road will take away resources from the community space and likely cause problems with the water supplies. |
| **4/22/2026** | Gabe | Do not move forward with the Mopac expansion without a complete environmental impact statement and reassess the long term negative impacts of this project. Preserve open space, prevent harm to endangered species, and don't damage the aquifer recharge zone. Invest and expand public transit options, lane expansions are not long term solutions to congestion. |

| | | |
|---|---|---|
| **4/24/2026** | Gabe Tobin | No highway expansion ever improves traffic congestion! Don't ruin the best part of this City to feed the dying automobile industry. Improve bike/pedestrian facilities and access and volume will decrease. Embrace emerging new vehicle technology and efficiency will increase. Stop digging this hole deeper! Expanding this highway serves no one, wastes money, risk this City's most valuable resources, and ultimately will not solve any of the problems it proports to be addressing. |
| **5/3/2026** | Gabe Tobin | No to the highway expansion Ponzi scheme! Don’t ruin our city for something with absolutely no upside! Driving is a relic and highway expansions are exponentially expensive. They do not even reduce traffic congestion! |
| **5/3/2026** | Gabi Rajulu | Lifelong Texan and former resident of Austin here. Barton springs is integral to the city’s soul, culture, and ecosystem. Expanding the freeway over its watershed would have a devastating impact. Please don’t hurt such a beloved peace of this city |

| | | |
|---|---|---|
| **4/28/2026** | Gabriel Cossio | Dear CTRMA Board Members,<br><br>My name is Gabriel Cossio and I'm a long time resident of Austin, TX, a small business owner, and PhD engineering graduate from UT-Austin.<br><br>First, it is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone – which I'm not sure if the CTRMA board is aware of – is a MAJOR reason that people choose to live in a city like Austin vs Houston/Dallas.<br><br>It would be incredibly irresponsible of the CTRMA to bulldoze through standard regulatory processes that may harm such a foundational aspect of Austin which is central to it's culture as well as a foundational piece of Austin's recenet high economic growth and it's economic prosperity. People and business move here because of things like the Edwards Aquifer, Barton Springs, and the various other natural spaces that are so easily accessible in Austin and NOT despite these things.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders’ external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. |

| | | |
|---|---|---|
| | | Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin’s environment, public health, and community life.<br><br>Also, why does the CTRMA continue to only develop highway expansions? Is there a complete lack of creativity or future proofing? Time and time again the effect of highway expansions has been shown to provide no useful reduction in traffic decongestion. This expansion will likely cost quite a bit of money and if the CTRMA already has access to the land then build something more useful. If the CTRMA actually cared about improving traffic conditions, minimizing harm to Austin and it's residents, and being financially efficient then it would consider alternatives to high way expansion (trains and/or light rails and/or bus only lanes to improve Austin's emberassing lack of useful public transport).<br><br>Sincerely,<br><br>Gabriel Cossio |
| **4/20/2026** | Gabriel Grossman | Hi, my name is Gabriel Grossman, and I am calling to oppose any and all highway expansionin Austin, Texas, particularly here. I think it is ridiculous that we are spending another billion dollars, almost a billion dollars in taxpayer funds, in building two more lanes of asphalt. Do you guys really think this is going to fix traffic? We've been saying one more lane, one more lane, one more parking spot, and what we're left with is nothing. We're destroying parks, we're destroying homes, we're increasing air pollution. We are literally turning our planet into a wasteland of asphalt. Please take this money, these $800 million, and invest it in something better, like safewalking and biking trails through Austin, like public transportation. These are much better investments that actually pay offbecause I know for a fact that you guys are gonna need more money to maintain this all the time. And then you're gonna say,oh, actually, we have more traffic. We need two more lanes, guys, two |

| | | |
|---|---|---|
| | | more lanes.Give us another billion dollars and we're gonna fix traffic. No, you're not. Please stop wasting your money on more and more asphalt and invest in something that's actually better for Austin and betterfor the world. Thank you. |
| **4/5/2026** | Gabriel Maldonado | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. | **4/20/2026** | Gabriela Barrera | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | gabriela carroll | Please don’t ruin one of the last good vestiges of austin. expanding highways doesn’t actually reduce traffic congestion. In fact, it just increases it. The best cities with the most thriving economies are actually walkable cities with good public transit. This would just ruin austin for everyone. Stop building - nobody wants. |
| **4/20/2026** | Gabriela de Leon | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Gabriela de Leon | Dear CTRMA Board Members, I have lived in Austin for my whole life, and the parks and waterways are such a huge part of what make Austin so special. After over 40 years of public action to keep our green belt and springs safe, I find it appalling that an expansion like this could go into place without transparency about how it will effect our ecosystem. <br />The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Gabriela de Leon |
| **4/23/2026** | Gabriela Jarquin | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Gabriela Pena | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. Stop destroying our ecosystems, Gabriela Pena |

| **5/3/2026** | Gabriela Pena | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Gabriela Pena |
| **5/3/2026** | Gabriela Rivera | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Gabriela Rivera |

| **5/3/2026** | Gabriella Glinski | Dear CTRMA Board Members, Hello, I am an Austinite born and raised and I do not want to see the proposed MoPac Expansion go forward. It would not help our community but only continue to expand issues. This expansion would harm our waters luke Barton springs, th Edward's Aquifuer, and the species who depend on them. Austin is a beautiful city for the mixture of city life and leisure it provides. People do not want more highway we want more of what we love about austin and what keeps it weird and special. Increasing the space MoPac takes up will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Gabriella Glinski |

| | | |
|---|---|---|
| **3/26/2026** | Gabriella Tropea | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. | **3/24/2026** | Gabrielle Adams | I STRONGLY support this initiative. I live in South Austin and work downtown and also North Austin for the past 20 years. Traveling Mopac has been a nightmare. The additional lanes were needed many many years ago. |
| **3/24/2026** | Gabrielle Bauarschi | STRONGLY support!!!! |

| | | |
|---|---|---|
| **5/3/2026** | Gabrielle Boyle | Dear CTRMA Board Members, IF WE DESTROY OUR WATER SYSTEMS, WE CANNOT TAKE IT BACK. Please invest I our future by protecting natural bodies of water and preventing pollution. It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Gabrielle Boyle |
| **4/30/2026** | Gabrielle gore | We love Barton springs!! |
| **5/3/2026** | gabrielle peterson | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, gabrielle peterson |
| **3/19/2026** | Gabrielle Sorrell | Hello, I am commenting regarding the once-again proposed expansion of Austin highways. I do not want any wider highway, nor a wider MoPac. Expanding MoPac is an outdated and ineffective approach to transportation- one we have seen fail to alleviate traffic concerns over, and over, and over again. Use this money differently. Continue expanding sidewalks. Invest more in putting trains throughout the city that actually go places people need to be. Clean the buses and undo anti-homeless measures at bus stops that have made them uncomfortable for everyone. MoPac could benefit more from continuous pedestrian-bicycle paths along the project’s length or cnverting an existing highway lane to a bus-only lane. CTRMA is better served to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **4/22/2026** | Gabrielle Swenson | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Gabryelle Dominey | Dear CTRMA Board Members, One of the few remaining natural beauties of Austin are about to be devolved and ruined completely by this action. NO ONE is asking for toll lanes! NO ONE wants this! NO ONE will benefit by this besides the ones making the decisions who will get more money from the lanes! Please. Listen to the community and DONT DO THIS. Money is not worthy the erosion of our earth. Austin has already lost so many things that make it special and beautiful. The city, its wildlife and its people should not have to suffer more loss. Respectfully, Gabryelle Dominey |
| **5/3/2026** | Gabryelle Dominey | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. |---|---|---|
| **3/12/2026** | Gaby Benitez | Dear CTRMA Board Members,<br><br>As someone with a background in environmental science and community and regional planning, I am writing to strongly oppose the MoPac South expansion as proposed. Firstly, it is well researched in planning that highway expansion ultimately does not positively impact traffic congestion, and so this is clearly a TxDot money grab.<br><br>I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin’s most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin’s most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. |

| | | |
|---|---|---|
| | | These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Gaby Benitez |

| | | |

The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Gaby Benitez |
| **4/28/2026** | Gaby Vergara | The residents of Austin will not stand for this expansion if it knowingly will cause harm to the Edwards Aquifer. The Edwards Aquifer contributes so much to the city of Austin and our surrounding Hill Country cities. I do not want my taxpayer money to go towards expanding the TOLL road. The current construction has already caused extensive traffics and delays. All for something that not every Austinite even uses. I urge you to complete a full environmental impact statement so the city can understand the breadth of the damage they could cause. |
| **3/19/2026** | Gail Rothe | Stop digging! We (citizens, taxpayers) are digging ourselves into a fiscal and environmental hole - a disaster we can prevent if we stop this project NOW. The proposal to widen 8 miles of Mopac represents 20th century thinking. Instead, we do need pedestrian-bicycle paths, conversion of an existing lane to a HOV/transit lane, and most importantly, an overall transportation plan that provides more than a few years and a few minutes of decreased travel time. |

| | | |

| | | |
|---|---|---|
| **3/19/2026** | Garret Nick | Continuing to develop and widen MOPAC over the Barton Springs recharge zone in order to save a handful of drivers 3-5 minutes of travel time is extremely short-sighted. It won't be but a few years before that 3-5 minutes is 1-3 minutes and then back to where we are now. The only way to reduce congestion is to provide actual alternatives. So why then are we going to degrade and destroy Barton Springs for something that does not provide any sort of long term solution? Multiple cities across Texas are running out of water and your plan is to pave over some of the most sensitive land that is the very spot where water needs to absorb in order to recharge our aquifer. No amount of minutes is worth the long term destruction you are imposing on Austin. Stop widening MOPAC and people will find other ways to live their lives. |
| **3/24/2026** | Garret Nick | Widening all of our roads is not a long term transportation solution, especially when that widening occurs over our MOST sensitive natural infrastructure. You are literally destroying Barton Springs in order to save a handful of commuters 3-5 minutes of drive time. At the same time, you are incentivizing MORE people to use MOPAC so that time savings will quickly be diminished to ZERO shortly after the project is completed. At that point the damage to the recharge zone will be permanent. We cannot continue to subsidize the single driver commuter lifestyle, it is unsustainable. |
| **3/24/2026** | Garret Nick | Is there any promise that MOPAC will not be directly connected to I-35 to create a western I-35 bypass? If that were to happen then all of this would be a waste of time since the increase in traffic would be tremendous and all of the watershed would suffer. Also, the disruption to Austin High School parking and access is significant and construction should be limited to the summer. |
| **4/29/2026** | Garret Nick | A billion dollars, years of construction, and irreversible damage done to our parks, creeks, and springs... to save 5 minutes of driving? For people who wanted to save money by living in the suburbs? Now everyone else must suffer because they want a big suburban house and can't be bothered to spend 5 more minutes in the car?<br><br>What other alternatives could be funded with a billion dollars? What sort of incentives for carpooling, adjusted schedules, remote work, etc... could be created and funded to reduce the "need" for this project?<br><br>Your lack of creativity is tiresome.<br><br>Garret |

| | | |
|---|---|---|
| **5/1/2026** | Garret Nick | This project clearly requires a full environmental study. Assuming you ram this through against all the opposition of the citizens of the city you are claiming it will benefit then it should include funding replacement sidewalks, bike paths, and access points impacted by the project, installing high-performance or transparent noise walls in park areas without impacting views, providing $35 Million to Austin for land acquisition in the Edwards Aquifer, and taking a portion of any future tolls collected for environmental uses. Essentially you should provide enough money to Austin to purchase all the remaining undeveloped land in the Barton Springs Recharge Zone to be set aside as parkland and conservation land. That is the ONLY way to offset the massive destruction and pollution you are proposing. |
| **4/29/2026** | Garrett Cotter | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |
| **5/1/2026** | Gary | As a 70 year old who has lived, worked and contributed to Austin for 45 years I have seen the changes and what “progress “ has done to our city. I’ve hiked and enjoyed the area in question all this time. I see the grey runoff when it rains coming from the thousands of tires shedding their chemical make up to form rainbows in the water. Would you drink that? Do you think the environment that obviously supports us will magically filter that and make it inert? The carrying capacity has been reached and surpassed in my opinion. This project will just bring more cars and people to the area which can’t absorb much more of the chemicals and waste that all humans produce everyday. The quality of life is plummeting for our area. So don’t add to and speed up that fall. Don’t build it. |
| **4/29/2026** | Gary Farmer | Please approve the construction of additional lanes on Mopac South in order to improve mobility, safety and quality of life for all Austinites. Additionally, please incorporate environmental safety/water quality features when building the additional lanes as there are no features to mitigate runoff as the roadway currently exists. Building the additional lanes will be a win for people and a win for water quality! Thank you. |

| | | |
|---|---|---|
| **5/1/2026** | Gary Farmer | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |

| | | |
|---|---|---|
| **4/22/2026** | Gather Slauter | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. | **5/3/2026** | Gavin | Please for the love of god don’t ruin our city more than it has been by turning some of the most beautiful land in all of Texas into a concrete hellscape. |
| **5/2/2026** | Gay Faulkner | I'm requesting that a full Environmental Impact Statement be done for the proposed MoPac expansion project. Due to the size of the project, there will be environmental disruptions and what has been concluded as no significant impact is incomplete and false - this environmentally sensitive area WILL be impacted by both the construction and additional traffic the current proposal is predicting. Additionally, other innovative alternatives should be explored for this corridor. I take MoPac frequently and adding toll lanes will not save commuters any time. CTRMA's alternatives should align with Austin's future transportation goals and should respect Austin’s identity as a city that values its parks, water, and natural beauty. I deserve a solution that protects our environment, keeps our air and water clean, and invests in modern, sustainable alternatives like transit, biking, and demand management. |

| | | |
|---|---|---|
| **5/3/2026** | Gayatri Kharod | Dear CTRMA Board Members, As a lifelong Austinite, I write to you in strong opposition of the proposed MoPac expansion. I am a MoPac commuter. I took MoPac every day for four years from South Austin to Austin High School and back. I have been privileged to learn in such a historic environment and surrounded by excellency. I would never trade that for a faster commute. Current and future Maroons deserve to learn in the same, safe environment without disruptions from construction, pollution, and additional roadway structures. I now commute daily to UT Austin, where I receive a world-class education in environmental science -- this training is what has particularly allowed me to understand the devastating ecological impacts this expansion will have for not only Austin, but any areas connected to the Edwards Aquifer as well. The areas impacted by the project lie directly over the Edwards Aquifer Recharge Zone, where rainfall and surface runoff can move very quickly through natural formations into the Edwards Aquifer with very little natural filtration . Allowing construction over this area will certainly increase both stormwater and pollutant runoff into the aquifer, which directly feeds Barton Springs pool and adversely affect one of Austin's most beloved spots. Furthermore, the endangered Barton Springs and Austin Blind salamander populations rely on the stability of the Edwards Aquifer to remain alive. Allowing such a drastic water chemistry change (by result of the proposed construction) could devastate both species, and drive both even closer to extinction than where they lie now. It is gutting to see this city, which I have called my home since birth, come to the brink of disrupting so many areas of Austinites' lives, from the Butler hike-and-bike trail to Zilker Park and the Barton Creek Greenbelt. Austinites are overwhelmingly in opposition to this idea -- in 2016, opposition led to the cancellation of an earlier version of this project. We cannot stand idly by as our city stands on the precipice of such drastic, harmful change. Therefore, it is my duty as an Austinite to respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Gayatri Kharod |

| | | |
|---|---|---|
| **3/21/2026** | Gayle Goff | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion.<br><br>All of the statements below are painfully obvious.<br><br>A full Environmental Impact Statement (EIS) is REQUIRED before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• ANY Project cutting through the Edwards Aquifer Recharge Zone needs a rigorous review!! The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, |

| | | |
|---|---|---|
| | | blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Gayle Goff |
| **5/3/2026** | Gen | Expanding Austin's highway system should not come at the cost of the city's nature or culture. More highways = more traffic and a less pedestrian friendly city. |

| | | |
|---|---|---|
| **5/3/2026** | Gene Evaro Jr | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Respectfully, Gene Evaro Jr |

| **5/3/2026** | Genevieve Schwartz | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Genevieve Schwartz |

| | | |
|---|---|---|
| **5/3/2026** | Genevieve Smith | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Genevieve Smith |

| | | |

| **4/20/2026** | Genevieve Trabulsi-orr | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>The green spaces in Austin are what make the city a beautiful place, and a MOPAC expansion would only allow for more cars. It is clear that adding lanes never works in reducing traffic.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Gengel Robinson | Hello, my name is Gangel Robinson.I am with the Solar Plunk Summit, that is the organization that I head, and we explorethe realms of regenerative culture, technology, and consciousness.I have been in Austin for 13 years and seen many shifts in the city, which I love.There's such a vibrancy, and there's this beauty here, and at the same time, there'sof how beautiful is and the expansion that's taking place. There's rapidmovement and some of that rapid movement changes the nature of this place andcoming from a city, I'm from New York City, coming from a city and winding uphere, it felt very welcoming and you know, particularly with thisexpansion, you know, there's understanding and awareness of the waysthat the city is growing and how it needs to meet those challenges.And also, uh, environmentally as a, as a conscious city, which I thinkoften it's considered that we, it really feels important that it's representedthat the people here really honor nature and really want to know what theimpacts of these shifts are before, before making decisions to move forward.And that there is a way for us to give feedback.There's a way for us to exercise, to express our boundaries around the protection of nature,and that only comes if we really get those impact studies and we go into the conversationreally open about what takes place next.And so this is my desire, and I hope that helps. |
| **5/3/2026** | Geobridge | We all know that population growth is inevitable, which means infrastructure must expand accordingly; however, we can certainly choose the areas best suited for this expansion. As a geologist, my mind is often focused on Earth’s natural infrastructure and how humans fit within those existing constructs. My favorite example is I-35.Due to the faulting that created the Balcones Escarpment, a plethora of natural springs emerged along the fault zone, allowing fresh groundwater to provide an oasis for fauna and flora alike. For early humans traveling from South to North Texas, these springs were critical stopping points. Thanks to the region’s geology, a low-lying pathway naturally connected them. As a result, I-35 follows this ancient route, providing a fast and—geologically speaking—minimally invasive means of transportation. There is something fascinating about generations of Texans using the same paths to accomplish the same mission.In contrast, the original MoPac project did not build upon existing paths. Instead, it sought to cut across geologic features that were never meant to be sliced through, failing to follow any natural path of least resistance. Unsurprisingly, this proposed project has been met with significant public resistance—much more than the I-35 expansion. It has also encountered geologic resistance, as engineers must accommodate uneven terrain, which undoubtedly increases construction costs. Connection is at the core of the human experience, but the affected public should have a say in where those connections are made and where they are best suited. |
| **5/3/2026** | Geoffrey Gibson~Peña | Interested citizen |

| | | |
|---|---|---|
| **5/3/2026** | Geoffrey Gibson~Peña | It seems like a terrible idea. Not only damaging to that delicate area, but will be highly disruptive to travel while it's happening, and in the end, guess what? It will encourage development away from downtown, thereby increasing urban sprawl, which will fill up with even more cars until you're back where you started traffic-wise, except you will have damaged and perhaps lost one of the main attractions Austin has to offer. |
| **5/3/2026** | Geoffrey Krum | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Geoffrey Krum |
| **5/3/2026** | George Castellvi | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Georgia Seeboth | Dear CTRMA Board Members, The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Georgia Seeboth |
| **5/3/2026** | Georgia Seminet | I'm opposed. |

|---|---|---|
| **5/3/2026** | Gilbert Nwaopara | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Gilbert Nwaopara |
| **5/3/2026** | Gilberto S Salazar | I am against the expansion of the Mopac express way. There is a significant amount of populace that will be affected negatively by this project. Do not allow this to ruin my neighborhood and the sensitive land that surrounds the Mopac expressway. This is not progress. Stop putting profit before what's truly important. Do not allow this expansion to happen. |
| **5/3/2026** | Gillian Bynum | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Gillian Bynum |
| **5/3/2026** | Gillian Stolshek | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. |---|---|---|
| **4/27/2026** | Gina Carrion | I strongly disagree with the plan to expand MoPac south. Additional highway lanes have not proved to be viable solutions to traffic in many studies. Better solutions include public transportation or bike infrastructure. Edward's aquifer is an environmentally important and vulnerable area and we must limit human infrastructure in this area to preserve it. I urge a full environmental impact statement to be completed. |
| **3/24/2026** | Gina Livorsi | Austin needs to improve roads AND invest in public transportation. This plan is trying to fix a growth problem with half a solution. |
| **5/3/2026** | Ginaveve Phillips | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Ginaveve Phillips |
| **5/2/2026** | Giovanna Cruz | I would much prefer a light rail solution than construction to add toll lanes than then will dynamically increase price with traffic. Also, just north of William Cannon and down to Davis lane there is an extremely broad shoulder that could be converted to a lane to alleviate that traffic instead of this massive project. |
| **5/3/2026** | Giovanna Rodriguez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **3/24/2026** | Glen Alexander | Sincerely appreciate your effort to provide detailed information! Very effective organization and details! Agree we need better transportation plan, wish more emphasis was on mass transport (trains mostly) connecting areas in Austin and airport. Afraid all this will be overhauled in 25 years (or less) and outdated! |
| **3/20/2026** | Glen Eric Meyer | I strongly oppose widening MoPac between Cesar Chavez and Slaughter Lane. Widening highways is an ineffective way to increase mobility since congestion usually follows within a few months as people drive more. In addition, it increases air and noise pollution as well as Austin's carbon footprint and contributes in other ways to environmental degradation (e.g., runoff from automotive fluids). Austin is too car dependent as it is – widening highways makes us more car dependent. I much prefer finding creative ways to invest in walking-bicycle paths and public transit. Maybe convert an existing highway lane to an HOV/transit lane. |
| **3/24/2026** | Glenn Criswell | The southbound Barton Skyway exit as designed is problematic and should be "braided" with the southbound onramp from Bee Caves Rd. As designed, it gives ALL southbound traffic the opportunity for nonstop access the flyover ramp that results in "pole position" in the far left lane for the exit to eastbound 360 from southbound mopac. I call this an opportunity for a "cheater" lane - and once drivers discover that the normal exit has to merge into this lane (under mopac just south of 360) a HUGE number of drivers will use this pathway and it will dramatically elevate the traffic on this ramp (I expect it would effectively become the exit ramp of choice vs the actual ramp). The on-ramp from Bee Cave Rd could utilize its lower elevation to braid under the southbound exit to Barton Skyway and the ramp would be for Bee Cave Rd and Spyglass Rd on-ramp traffic only, as intended for the design. This is important for traffic flow generally but also because of significant noise concerns for homeowners adjacent to the bridge (adjacent Barton Creek Townhomes development in particular along and west of Capital Parkway) |
| **3/24/2026** | Glenn Criswell | Regarding the ramp originating as the southbound on ramp from both Bee Caves Rd and Barton Skyway and then flying over Mopac and splitting to toll and 360 eastbound: This ramp as designed will be particularly impactful to Barton Creek Townhomes just west of Mopac near Capital Parkway. In a previous comment I suggested "braiding" the on-ramp from Bee Caves Rd (which would require moving it slightly farther north) to deter its use as a preferred exit to eastbound 360 from southbound Mopac. However, even as an on-ramp only (less traffic), the multiple bridge joints in the vicinity and elevation of the townhomes will expose the area to tire interaction noise from multiple joints in addition to visual degradation. I respectfully request that CTRMA/TxDOT investigate the feasability of moving that ramp to below southbound Mopac grade instead of the elaborate flyover, utilizing the distance from the Barton Skyway on-ramp to gradually move blow grade. This would gain the functional benefit that the ramp would not have extreme downhill grade (which clearly destroys capacity as seen at Ben White and I-35 and Grand Parkway and I-10). If the construction grade is too challenging (although please do not jump to that conclusion) our community would very much appreciate any and all noise and headlight mitigation efforts employed on the west side of that ramp, particularly as it passes near Capital Parkway. Thank you for your consideration of these aspects so important to our community. |
| **5/3/2026** | Glenn Glover | Dear CTRMA Board Members, No bueno! I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Glenn Glover |

| **4/28/2026** | Gordon Huth | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Gordon Huth |

| | | |
|---|---|---|
| **5/3/2026** | Grace Arnold | Dear CTRMA Board Members, I am a three year resident of Austin, and I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. I believe Barton Springs and Zilker park are essential public spaces in Austin - and this work, including the harm it would have negative impacts on our precious nature and shared spaces. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Grace Arnold |

|---|---|---|
| **5/3/2026** | Grace Horvath | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Grace Horvath |

| | | |
|---|---|---|
| **5/3/2026** | Gracie Kuntz | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Gracie Kuntz |
| **4/20/2026** | Gracy Salinas | Please do not make the current lanes narrower to make room for these toll lanes. We, the taxpayers, have already paid for the current lanes and shouldn’t have to pay a toll for the using that square footage. |
| **4/30/2026** | Gracy Salinas | Do not disturb, damage, or use any water from the aquifer during or after the project. |
| **4/20/2026** | Grady Bible | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/29/2026** | Graham Carter | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |

| | | |
|---|---|---|
| **4/23/2026** | Graham Dern | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Graham Dern |

| | | |
|---|---|---|
| **5/2/2026** | Graham Gilbert | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/23/2026** | Graham Hill | Please do not pollute and ruin our natural spaces in this city with this wholly unnecessary expansion. RESPECT THE PEOPLE OF AUSTIN! |

| | | |
|---|---|---|
| **4/20/2026** | Grahame JoneS | April 20, 2026<br><br>Central Texas Regional Mobility Authority<br><br>c/o MoPac South Project<br><br>3300 N. IH-35, Suite 300<br><br>Austin, TX 78705<br><br>Re: MoPac South Environmental Study – Draft Environmental Assessment Comments<br><br>To Whom It May Concern,<br><br>The Texas Conservation Alliance (TCA), one of the oldest 501(c)(3) conservation organizations in Texas, established in 1971, appreciates the opportunity to provide comments on the Draft Environmental Assessment (EA) for the MoPac South Project.<br><br>TCA is highly thoughtful and deliberate regarding the issues we engage on. We do not routinely submit comments on infrastructure projects within the City of Austin, and this represents the first time we have formally done so. When we choose to engage, it reflects the significance of the issue and our expectation that the review process meaningfully resolve—not defer—key questions regarding impacts to sensitive natural resources. Our decision to participate here is grounded in the unique sensitivity of the corridor and the long-term implications of the proposed project.<br><br>We recognize the Mobility Authority's efforts to evaluate alternatives and incorporate public input. At the same time, the project corridor includes some of Austin's most defining natural assets—green space, parkland, Lady Bird Lake, and the Barton Springs system—which serve not only as ecological resources, but as foundational elements of the city's identity and quality of life. Projects in this area should be approached with particular care to ensure that these resources are not incrementally degraded or undermined over time.<br><br>Given the ecological sensitivity of the project corridor, we do not believe the Draft EA, as currently presented, demonstrates that impacts to parkland, water resources, and sensitive species have been sufficiently avoided, minimized, or mitigated to support a fully informed decision.<br><br>The project corridor includes and directly influences parkland and ecologically sensitive areas near Lady Bird Lake. These lands provide critical habitat, ecological function, and public recreational value. The EA does not yet provide sufficient analysis to demonstrate how fragmentation, edge effects, and long-term degradation will be avoided or meaningfully minimized. In areas of this sensitivity—particularly those that contribute to Austin's network of accessible green space—avoidance should be the primary objective, with mitigation serving a secondary role.<br><br>The proximity to the Barton Springs segment of the watershed elevates the importance of a rigorous and clearly quantified |

| | | |
|---|---|---|
| | | water quality analysis. The EA relies heavily on general commitments to best management practices but does not adequately demonstrate performance under high-intensity storm events, cumulative pollutant loading, or long-term maintenance conditions. Given the direct hydrologic connection to Barton Springs, this level of analysis is necessary to support the conclusions presented and to protect one of the region's most valued natural resources.<br><br>We appreciate the anticipated consultation under the Endangered Species Act with the U.S. Fish and Wildlife Service. However, deferring key impact determinations and mitigation measures to a future consultation process limits the public's ability to meaningfully evaluate the project at this stage. Given the presence of species such as the Austin blind salamander and Barton Springs salamander, the EA should include clearer, more specific commitments regarding avoidance, minimization, and enforceable mitigation prior to advancing the project.<br><br>While the inclusion of a No Build Alternative is appropriate, the range of alternatives evaluated does not appear sufficient for a corridor with this level of environmental constraint. In particular, the EA does not fully explore alternatives that would materially reduce or avoid impacts within sensitive areas, including transportation demand management strategies, transit enhancements, or operational improvements. Under NEPA, the consideration of reasonable alternatives is central to informed decision-making, and we encourage a more robust evaluation in this regard.<br><br>Finally, the cumulative impacts analysis should more fully account for induced growth and secondary development pressures associated with roadway expansion. Without a clearer assessment of these effects, the EA risks understating long-term impacts to habitat, water resources, and parkland that extend beyond the immediate project footprint.<br><br>TCA supports responsible transportation planning that reflects both current mobility needs and long-term stewardship of natural resources. In a corridor defined by the presence of Lady Bird Lake, Barton Springs, and interconnected parkland, that stewardship carries added weight.<br><br>We respectfully request that the Mobility Authority and TxDOT provide a more rigorous and transparent analysis of impacts to parkland, habitat, and water quality; clearly demonstrate the effectiveness and enforceability of proposed mitigation measures; expand the evaluation of reasonable alternatives that avoid or minimize impacts in sensitive areas; and ensure that Endangered Species Act consultation meaningfully informs project design prior to final decision-making.<br><br>We appreciate the opportunity to participate in this process and remain committed to working constructively toward solutions that protect both mobility and the natural resources that define this region.<br><br>Sincerely,<br><br>Grahame Jones<br><br>Executive Director |

| | | |

| **5/3/2026** | Grant Anderson | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Grant Anderson |
| **4/21/2026** | Grant Burkhart | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| | | |
|---|---|---|
| **4/21/2026** | Grant Burkhart | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Grant Matthews | I am strongly opposed to the use of tolled lanes on projects funded with taxpayer dollars. |
| **5/3/2026** | Grant Rollins | I'm in opposition to the mopac South Toll expansion. Reduce traffic by something besides more traffic lanes. Invest in public transportation. |
| **5/1/2026** | Grant Slape | It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. Key concerns include: Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement. Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution. Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems. Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health. Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover. Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |
| **5/3/2026** | Greer Olenick | This is an ill conceived plan that compromises the environment and precious natural beauty that remains of Austin. The proposed roadway would be a blight on our city and its construction would burden the people and worsen our traffic. Be creative and think about we can incentivize our community and businesses ti solve our congestion issues without ruining our waterways. |
| **4/5/2026** | Greg Bosley | I do not support roadway expansions. Travis County should prioritize investments that reduce the need to drive in the first place and give residents real, reliable alternatives to personal automobiles. CTRMA should redirect a significant portion of its tolling revenues away from highway expansion and toward public transportation and other multimodal investments. |

| | | |
|---|---|---|
| **4/28/2026** | Greg Pierce | I oppose the expansion of MOPAC South. Barton Springs and the Edwards Aquifer are two of Austin's crown jewels and they must be protected. Studies have shown this expansion would have negative impacts on both. Austin has been protecting Barton Springs and the aquifer for decades. To stop doing that now makes no sense, unless the goal is to completely transform Austin into another Dallas. Please protect our environment and the heart and soul of Austin.<br><br>Thank you! Greg<br><br>Greg Pierce<br><br>\ |

| | | |
|---|---|---|
| **4/20/2026** | Gregory Bible | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Gretchen Diede | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **3/24/2026** | Gretchen Pierce | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>As a parent of two children who will attend Austin High in the near future, I am very concerned about the impacts to students due to increased traffic, noise, and most importantly, air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>I am also concerned that increasing the amount of pavement will result in more polluted runoff in Barton Springs.<br><br>Expanding MoPac is not in the best interest of children in Austin and the city itself. We should be doing everything we can to reduce car travel, reduce air pollution, and protect our vulnerable watershed. We should be at the forefront of innovation in transportation, not moving backwards with projects that expand highways.<br><br>I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. We need to consider all alternatives and ensure meaningful public participation in order to adequately evaluate the impacts of this project.<br><br>For the future of our children,<br><br>Gretchen Pierce |
| **5/1/2026** | Griffin Davis | I am wholly and completely opposed to this project. There should be no expansion to the highway under any circumstances. This project would be detrimental to the environment and quality of life for many residents of Austin. Proceeding with this project would mean turning against this community and this city. |

| | | |
|---|---|---|
| **3/16/2026** | Griffin Hawk | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Griffin Hawk |

| | | |
|---|---|---|
| **3/16/2026** | Griffin Hawk | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. | **5/3/2026** | Griffin L. Davis | Please do a full environmental study and protect the parkland and mitigate any changes to the view and green space affected. |

| | | |
|---|---|---|
| **4/20/2026** | Griffin Meinbresse | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>The ecology around mopac has already been devastated with the original construction of the highway. There must be a stop do all development if we wish to sustain any kind of life on our planetary biosphere. Too much native wildlife habitat has already been lost. No more. |
| **5/3/2026** | Guadalupe Mendoza | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Guadalupe Mendoza |

| | | |

| **4/20/2026** | Guillaume Kosmala | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/9/2026** | Guillermo Zenizo Lindsey | I don't want you to pursue adding more lanes to South Mopac. I'm very concerned about the enviromental impact. In another hand, you just can add one line from William Cannon to Slaughter. That would have minimal impact and the area for the additional line is already there. |
| **4/2/2026** | Guo Feng | I understand that paved paths will be included as part of the South Mopac corridor improvements. Since 2020, our neighborhood, Meridian, has been advocating for a relatively short but critical extension: a paved path along Hwy 45 connecting Meridian to Escarpment Blvd (approximately 1.2 miles). This connection would provide safe access for more than 3,000 residents, allowing cyclists and pedestrians to travel through Circle C and link to the planned paved path beginning at Slaughter Lane. Currently, many cyclists and pedestrians are forced to use the narrow shoulder along Hwy 45, which poses significant safety risks. Recognizing both the safety concerns and the connectivity benefits, City Council District 8 has allocated $117,000 toward the design of this path. Our Meridian neighborhood has also formed a dedicated committee to support this effort, and I would be happy to share additional information, including supporting graphics. Thank you for your consideration. |

| | | |
|---|---|---|
| **5/1/2026** | guy leblanc | CTRMA:<br><br>I have driven on MoPac nearly every day for over 40 years. I hate the traffic there is now, and would love to have it be like it was in the 80's. But that is just not going to happen, no matter how many lanes you add. I'm writing to inform you of my opposition to the current plans and the lack of a full environmental assessment for your proposed expansion of MoPac. An expansion of the size you are considering without a full environmental impact assessment is definitely not in keeping with the wishes of the taxpayers who would fund it. I wonder if it is even legal.<br><br>The idea of adding toll lanes, especially since there are currently unused lanes on the south end of this roadway, makes zero sense (I assume those areas were created with the intent of opening them at some point. News flash: that time is now!) . This seems like an over-build on the scale I would expect from TXDOT, ala Oak Hill. So again, since nothing you build will turn the clock back even 20 years, I suggest you aim for minimal improvement with minimal impact and cost. The relatively recent adding of another southbound lane near 360 seemed to involve a short narrow run of asphalt and some re-striping of the merge lane. It looks to me like this could be done in other areas farther south.<br><br>You don't need to go all TXDOT on us.<br><br>Guy LeBlanc<br><br>Remember, I do not access email on a regular basis, so for matters requiring my immediate attention please call me at -, or my mobile number if you have it. THANKS! Guy LeBlanc. |
| **5/1/2026** | Gwen Barton | Hello, I wanted to inquire if there has been a study surrounding the Zilker Park “events” traffic that leads from Mopac north and south into the Zilker Park area. It would be keen to have a direct exit off of Mopac in both directions that go directly to Zilker Park which right now is the Bee Cave road exit. If the Bee Cave BarBQ, I’m not sure how the traffic would flow on both north and south feeder roads. There are neighborhoods and apartments that line the feeder roads and this is their only way out. |
| **3/19/2026** | Gwen Turner | Why are we still doing this? We know expansion doesn't work, and only makes things worse for our communities in the long run, leading to increased sprawl, pollution, environmental damages, and health risks. Find a different solution. |

| | | |
|---|---|---|
| **4/16/2026** | Gwendolyn Ellis | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |
|---|---|---|
| | | Gwendolyn Ellis |
| **5/3/2026** | Gwendolyn Terra | One of the most wonderful and precious things about Austin is the Greenbelt and Barton Springs. As a child I swam in Barton Springs ( and still do at 56), walking the Green Belt and seeing it has been one of the things that is essentiatl supports the well being of the community of this land. Protecting the waters for all, so that we can have these natural treasure is a huge part of what Austin is about for me . Honoring that protection is part of the work of this land, and any expansion of roadways need to take in consideration environmental and cultural impact on the communities of human and other species that live in this land. This expand could impact in harmful ways Austin's water, air, wildlife, schools, neighborhoods, and your quality of life. I am asking for a full Environmental Impact Statement (EIS) and less harmful alternatives. The Austin City Council, Travis County Commissioners Court, and the Urban Transportation Commission |

| | | |
|---|---|---|
| | | agree and are requesting this. Please Honor your duties to the community that you will be impacting with this possible road expansion. |
| **3/21/2026** | Gyla Fowler | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. | | | |
|---|---|---|
| **4/28/2026** | Hailey Wisener | Dear CTRMA Board Members,<br><br>I am writing to express my strong opposition to the proposed MoPac South expansion and the harm it would cause to our neighborhoods, our waterways, and the natural places that make Austin unique. This project puts Barton Springs, the Edwards Aquifer, federally endangered species, and the Barton Creek Greenbelt at risk, and would bring more noise and air pollution to the communities that surround the corridor.<br><br>The draft EA itself acknowledges that the travel time benefit across the corridor is minimal—on the order of only a few minutes—yet it does not adequately address how the resulting environmental damage would be prevented or repaired. More than 110 acres of new pavement would dramatically increase impervious cover, driving hotter surfaces and warmer runoff into already stressed creeks and springs. Fragile salamanders, karst invertebrates, and many other plants and animals depend on clean, cool water and intact habitat; once those systems are degraded, they are extraordinarily difficult to restore.<br><br>Because of these concerns, I feel compelled to speak up on behalf of the people who live, work, and go to school along this corridor, and on behalf of the wildlife and waterways that cannot speak for themselves. I respectfully urge CTRMA to prepare a full Environmental Impact Statement, to engage deeply and transparently with the public, and to actively pursue alternatives that protect water quality, wildlife habitat, and nearby neighborhoods while addressing transportation needs.<br><br>Austin deserves transportation solutions that reflect our shared values and safeguard the ecological and community heritage that define our city. I ask that you reject the current expansion proposal and commit to a path that truly protects Austin’s future.<br><br>Sincerely,<br><br>Hailey Wisener |

| | | |
|---|---|---|
| **5/3/2026** | Haley Hall | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Haley Hall |
| **4/27/2026** | Haley Hein | Edwards Aquifer and Barton Springs are beautiful natural resources to be protected and enjoyed by all. I urge you to complete a full Environmental Impact Statement to see the negative effects this will have. Austin does not need more toll roads. |
| **5/3/2026** | Haley milam | A highway over one of the most sacred places in Texas. Uncanny. No no no. |
| **4/30/2026** | Haley Poorman | As a resident of South Austin near the Mopac and Davis Lane intersection, I am writing to formally express my concerns regarding the proposed expansion. My primary objections center on noise pollution and environmental degradation. Specifically, I am concerned that the proximity of the project to established trail systems near William Cannon, Davis,Slaughter, including dick Nichols park will lead to an accumulation of road debris and litter. This presents not only an ecological risk but a significant safety hazard to the pedestrians and cyclists who frequent these paths. I also have concerns about the aquifer and making sure it is preserved and safe. |
| **3/25/2026** | Haley Ritchie | PLEASE DON'T DO THIS PROJECT - this is a waste of time, money, taxpayer dollars, and I would love to know how I will be compensated for my time with all the traffic I'm going to have to sit in with all this construction. |
| **4/29/2026** | Haley Sharp | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **3/23/2026** | Haley Sommerfeld | I believe extending MoPac is a poor approach to solving traffic issues. Extending MoPac will lead to more congestion and pollution. Instead, Austin should invest in strengthening our public transportation systems! |
| **5/1/2026** | Haley Stearns | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/23/2026** | Halle Dobbs | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Hallie | I do not support the destruction of our water shed and springs. |
| **5/3/2026** | Hallie Lott | More construction equals more traffic while this is being built. Do not sacrifice the already little public spaces we have for another road. |

| | | |

| **5/3/2026** | Hallie Vick | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Hallie Vick |

| **4/26/2026** | Hamilton Steele | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| **4/29/2026** | Hank Smith | I have lived in Austin for 60 years and travel South MoPac on a daily basis and it is time for this expansion. Roadways such as this have and can be built in a manner that alleviate traffic and still protect the Edwards Aquifer Recharge Zone. As we know the population of Austin has doubled every 20 years since 1860 and there is no indication the growth of this region is going to slow down and we must have roadways that are designed to accommodate our future. |

|---|---|---|
| **5/3/2026** | Hanna Herring | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| **5/3/2026** | Hanna Walton | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Hanna Walton |
| **4/27/2026** | Hannah | This needs a true scientific environmental impact report to share. Edward’s aquifer should be avoided at all costs. |

| | | |
|---|---|---|
| **5/3/2026** | Hannah Allred | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Hannah Andrews (she/her) | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Hannah Andrews (she/her) |

| | | |
|---|---|---|
| **5/3/2026** | Hannah Aronson | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. | | | |
|---|---|---|
| **5/1/2026** | Hannah Campbell, | Hi, my name is Hannah Campbell. I'm calling to ask you guys to do a full environmental impact statement for the expansion of MOPAC. Water quality in endangered species should not be dismissed. I think that's really important. I believe that your traffic data is outdated and no significant impact isincredible in this instance and I believe that Austin deserves clean water and clean air. This is important to me because I know that there are some endangered speciesthat could be affected with the expansion of MOPACwithin like the, like Barton Creek area, Barton Springs area. I know it's an aquifer like recharge zone. So I really, really, really implore you to look more into this and just think about, you know, Austin and what makes Austin great and if we really need MOPAC expanded.To be honest, I think it's unnecessary. And I think if we invested more into public transportation, we wouldn't have to be constantly expanding roads and causing more traffic, because there's already I-35 construction. So I hope you heard me out. I hope you guys changed your mind. I don't think anyone wants MOPAC expanded, to be honest with you. I think it'll cause more headaches but hopefully, you know, hopefully it all works out and to have a blessed day. Thank you. |
| **5/1/2026** | Hannah Cohen | This project will make traffic worse, destroy the aquifer, and harm endangered species. Please do not expand highways anymore. |
| **4/21/2026** | Hannah Cweigenberg | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| | | |
|---|---|---|
| **4/21/2026** | Hannah Cweigenberg | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/28/2026** | Hannah Glaw | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Hannah Glaw |

| | | |
|---|---|---|
| **4/28/2026** | Hannah Grassmuck | Dear CTRMA Board Members,<br><br>Are you all insane? Expanding Mopac will do nothing but make traffic worse for the entire city for years to come, and won't even solve the issue once it's finished. I would expect someone on the CTRMA board to know that expanding highways doesn't reduce traffic. That's a simple fact, look it up!<br><br>Not to mention, destroying these natural habitats and green spaces with roads fundamentally goes against what Austin is known for. People come from all over to be able to visit our trails, parks, and most famously, Barton Springs. Putting these areas at risk, as well as the endangered Salamanders who habitate there, would be a grave mistake. Put your capitalist mentality aside and think about the people who actually live here. Stop wasting tax payer dollars on stupid expansion projects like this, and have it go towards improving existing roads and infrastructure instead. That would make Austinites happier, not 6 more lanes on a highway. Get real.<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. | **4/22/2026** | Hannah Heath | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Hannah Hutchinson | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Hannah Hutchinson |

|---|---|---|
| **4/27/2026** | Hannah Leatherbury | Dear CTRMA Board Members,<br><br>If you move forward with this project in the absence of a full, transparent Environmental Impact Statement (EIS), you'll be doing the City of Austin, and everyone who lives here, a major disservice. The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>* Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Hannah Leatherbury |

| | | |
|---|---|---|
| **5/3/2026** | Hannah Lundin | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Hannah Lundin |
| **4/21/2026** | Hannah McBride | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | hannah mccord | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal; -webkit-text-size-adjust: auto;">Thank you for your support, consideration, and honorable leadership in rising above the route of ease and high-pressure enticement from the positions and forces at hand- which you will be honored and rewarded for in your efforts. I believe in the City of Austin to create meaningful and aligned solutions - instead of reacting to them - as we navigate the exciting changes in this robust and evolving city. <p class="p1" style="margin: 0px; font-width: normal; font-size: 17px; line-height: normal; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal; -webkit-text-size-adjust: auto;"> <p class="p1" style="margin: 0px; font-width: normal; font-size: 17px; line-height: normal; font-size-adjust: none; font-kerning: auto; font-variant-alternates: normal; font-variant-ligatures: normal; font-variant-numeric: normal; font-variant-east-asian: normal; font-variant-position: normal; font-feature-settings: normal; font-optical-sizing: auto; font-variation-settings: normal; -webkit-text-size-adjust: auto;">Always, Hannah Olson (2nd generation Texan) It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, hannah olson |

| | | |
|---|---|---|
| **5/3/2026** | Hannah Reaux | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Hannah Reaux |

| **4/22/2026** | Hannah Vanhorn | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

|---|---|---|
| **3/24/2026** | Hannah Woerner | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Hannah Woerner |
| **3/19/2026** | Hannes Mandel | I DON'T WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |

| **4/28/2026** | Harrison Hudson | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |
| **5/3/2026** | Harrison Jensen | The benefits of this project, such as they are, will not outweigh the damage done to the Barton Creek watershed. Please do not move ahead with this project. |

| | | |
|---|---|---|
| **5/3/2026** | Harrison Wells | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Harrison Wells |
| **4/27/2026** | Harry McMahon | South Austin and the Edwards Aquifer have already suffered greatly from expanded construction and the covering of the porous limestone draining sites with pavement and concrete. We know that any construction in this location has detrimental environmental impacts, which is obviously being downplayed for financial gain. This project, especially as a toll road, clearly prioritizing lining the pockets of companies contracted for the job and not the people. The majority of people will not use or benefit from toll lanes. All that will happen is companies will profit, the aquifer will be polluted, and the Green Belt's beauty will be disrupted. This is not a project the people of Austin support! |

| | | |
|---|---|---|
| **3/18/2026** | Harry Miller | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. | **4/4/2026** | Haven Portillo | CTRMA Board Members,<br><br>The MoPac South expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Haven Portillo |
| **4/23/2026** | Hayat Q | Act with caution and please do not build more roads over our sensitive recharge zone, thereby tearing down more trees that are essential for water quality, air quality, and quality of life. We don't need more roads in central texas. Keep the Hill Country country!!! It is not a good idea to build more roads over our karst systems. Listen to the scientists and not the money to be made from another road project. It is maddening that we have to fight so hard to protect our environment. |

| | | |
|---|---|---|
| **5/3/2026** | Hayden Haskins | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Hayden Haskins |
| **4/28/2026** | Hayden Ross | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Hayden Stebbins | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. <p data-start="6371" data-end="6517">I also make a personal promise, I promise I will move away from Austin Texas forever abandoning the idea of raising a family here. The people who control Austin almost seem like they don't understand who lives here and why somebody would want to live here. Take a step back and realize that you are hurting your own clientele. Thank You for listening to your neighbors, Hayden Stebbins |
| **4/20/2026** | Hayden Suber | Dear CTRMA,<br>This is coming from a resident of Austin Texas and the preservation of what makes Austin, Austin!<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **5/3/2026** | Hayley Cline | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Hayley Cline |
| **5/3/2026** | Hayley Gibson | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. |---|---|---|
| **5/3/2026** | Hayley Reeder | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/26/2026** | Haylie Zipoy | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Haylie Zipoy |

| | | |
|---|---|---|
| **5/3/2026** | Heather Buffo | I implore CTRMA to do a full EIS. Even potentially minimal impact on water and blind salamanders should be thoroughly considered. With ongoing construction on I35, 290, S Lamar and 183, starting another project on Mopac and creating more construction is excessive. I support more investment in Project Connect and other solutions to improving transit conditions and incentivizing multimodal transit over more highway expansions. Please at a minimum conduct a full EIS and consider delaying this project entirely until after S Lamar is completed! |
| **4/28/2026** | Heather Burns | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. | **5/2/2026** | Heather Lozada Ubiles | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Heather Miller | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Heather Miller |

| | | |

| | | |
|---|---|---|
| **3/25/2026** | Heather Scroggins | CTRMA Board Members,<br><br>Hello,<br><br>Please reconsider this expansion. Austin has already changed dramatically in the last 5 year, and not for the better. Austin once felt like a city that deeply charished it's natural habitats and enviornment and now it feels like another large industrial boggy city. What made Austin beautiful and special is being taken away and distroyed by expansions like these.<br><br>Please don't do this to our beautiful city!<br><br>Thank You for listening to your neighbors,<br><br>Heather Scroggins |
| **3/30/2026** | Heather Sowder | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Heather Sowder |

| | | |
|---|---|---|
| **3/29/2026** | Heather Vaz | As an avid road cyclist I am hoping you will consider this for the safety of those that ride from Meridian to connect to the other bike paths and to the city as a whole. I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |
| **5/2/2026** | Hector Bustillos | We all know more roads, especially toll roads only create more barriers than they do connections in Austin. We've already seen that adding lanes to Mopac has done little if any wirk in minimizing traffic and slowdowns on the highway. I urge you to go through the entire legal process including a full Environmental Report over lining your own pockets and those of your friends. Thank you! |
| **4/28/2026** | Hector Moya | I understand the need for better passenger travel. If this can be done while being mindful of the existing trail system, that would be great. One idea is that there are workable bypasses to the trail during construction, especially on the weekends/off hours where there may not be construction, but barricades are blocking the trail. Clearly marked designated construction bypasses would be awesome to keep the trail functional. |

| | | |
|---|---|---|
| **4/26/2026** | Hector Zuniga | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |
|---|---|---|
| | | Hector Zuniga |
| **5/1/2026** | Heidi Cruz | I do not agree with the Mopac South Project proceeding. The current environmental review is lacking, but we already know that this is a sensitive environment that should not be subjected to additional assaults. The current infrastructure may not be ideal for traffic patterns right now, but as growth decentralizes from downtown Austin, and other modes of transportation (can we get buses down here) are implemented, avoiding needless growth is a good thing. See AISD infrastructure for proof. Please do not expand the Mopac footprint. |

| | | |
|---|---|---|
| **3/18/2026** | Heidi Gibbons | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. |

| | | |
|---|---|---|
| | | Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Heidi Gibbons |

| | | |
|---|---|---|
| **3/26/2026** | Heidi Gibbons | Dear CTRMA Board Members,<br><br>Add Your Unique Comments Here:<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Sincerely,<br><br>Heidi Gibbons |
| **4/29/2026** | Heidi Gibbons | Please do an environmental impact accessment for real this time - no one believes what you are saying that "your accessment" says there will be no impact on our water, earth, trees, air, etc. Over 300 neighbors showed up at Austin High School last week to hear information about what you are planning and I can tell you than no one was in favor of this! |

| | | |

| **5/2/2026** | Helen Davis | Expanding MoPac would be a catastrophic mistake for Austin and I strongly oppose it. propose. A project of this magnitude, built in an environmentally sensitive and beloved area, cannot possibly be done without adversely impacting Austin's green belt, Barton Springs and Zilker Park. Yet, CMTA has not provided a full Environmental Impact Statement. Nevertheless, based on public documents, what we do know is that adding more highways and pavement will increase run off, pollution, and noise, all of which will contaminate the "jewel" of Austin - the state's Capitol. This issue is very personal. I swim at Barton Springs Pool year round. My husband bikes the trails. My son hikes the greenbelt. They are treasures to be protected not encircled by an ugly, dirty and noisy spider web of highway fly overs and concrete trails. I ardently oppose the project and urge CTMA to halt it. At a minimum, please conduct an EIS. |

| | | |
|---|---|---|
| **5/1/2026** | Helen Huckaba | Please consider expanding your sound wall on the west side of Mopac south of Slaughter Lane. With the expansion of the highway, more cars and trucks will be traveling south to get to 45. In the first Mopac expansion, the sound wall from La Crosse to Slaughter Lane on the west side was partially built. This has caused a tremendous amount of noise for our neighborhood in Circle C, On the Park with sound levels well exceeding what is needed to provide a sound wall for residents. You should consider the traffic and noise impact south all the way to 45, as its the natural end. Don't be short sighted on the increased traffic impact just to Slaughter Lane. |
| **4/20/2026** | Hellen Pennell | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Henrry | We don’t need it |

| **4/20/2026** | Henry Coleman | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | henry mecredy | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, henry mecredy |

|---|---|---|
| **5/3/2026** | Henry Wakeman | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Henry Wakeman |

| | | |
|---|---|---|
| **4/28/2026** | Herb Palmer | To CTRMA board members,<br><br>I wish to share input regarding the proposed MOPAC Expansion.<br><br>My wife and I have lived in our home on Barton Springs Road for nearly 10 years. We have lived in Austin for 17 years. We appreciate the commitment Austin has taken to care for the waterways, aquifer, parks, quality of life, and the protection of creatures living in the area. I share this commitment and I hope the same values will be claimed by generations following us. The Proposed MOPAC Expansion, if it is implemented as proposed, will impact this area negatively forever.<br><br>It is my understanding that an Environmental Impact Study is not part of the proposal that is being presented. Because of the vulnerable life in this area, the need for clean water, need for clean air, and minimizing noise, it is essential for a full study to be done in this area to fully understand the impact that the construction and expansion would have.<br><br>During the construction phase, much of the traffic will shift through Zilker Park and Lamar Blvd. We live between South Lamar and Zilker Park. These streets are already handling a lot of traffic during normal use. Traffic is compounded when festivals are at the park. During the construction phase, traffic will be a nightmare on these side streets every day.<br><br>I suggest an alternative to contraction of additional lanes on MOPAC. Many cities, including cities in Texas (an example is Houston) have identified the inside lane for HOV at certain times of the day. I encourage you to study this option from Enfield to Slaughter Lane. HOV lanes will encourage carpooling. It will also eliminate the need of construction of lanes that are in the proposal for toll, which is limited to those who can afford to pay a toll regularly.<br><br>Thank you for your attention to these concerns.<br><br>Herb Palmer |

| **5/3/2026** | Hilary Parks | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. More roads never fix traffic problems. If you give people more car lanes, studies have shown that they just increase the cars on said lanes. You would be making an already terrible problem worse. Only by removing roads and providing different options do we actually fix traffic and pollution. Otherwise we just increase the nightmare concrete nastiness Austin has already seen. People want to live in Austin because it prides itself on being an urban place connected with and surrounded by nature. It cares about the fragile environment and local ecosystem which cannot take any more hits in the current climate crisis. More people would move to Austin and pay your dumb tolls that already exist if you make it a better place to live. Causing more traffic and adding more concrete, especially in a fragile environmental zone, does not achieve this. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. |---|---|---|
| **5/3/2026** | Hilary Pelham | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Hilary Pelham |

| | | |
|---|---|---|
| **5/3/2026** | Holley Gonzalez | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Holley Gonzalez |

| | | |
|---|---|---|
| **5/3/2026** | Hollie Polk | The expansion of MoPac would devastate the things that make Austin the city Austin is. The negative impacts on four different parks and the Edward's Aquifer in order to add more lanes (which based on a multitude of research does not speed up traffic and does cause more accidents) is completely unnecessary. Zilker Park, the Nature and Science center (and the preschool there!), the water we need so desperately, how this will displace the biodiversity in the greenbelt are just some of the numerous reasons that this expansion is deplorable. We do not need more lanes. We need to protect the land. If the city is looking to move the flow of traffic better, CapMetro should expand rail services. |
| **4/20/2026** | Hollie Schacherl | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have "no significant impacts," yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. |

| | | |
|---|---|---|
| | | • Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. |

| | | |
|---|---|---|
| | | For the love of water in Central Texas,<br><br>Hollie Schacherl |

| | | |
|---|---|---|
| **4/12/2026** | Holly Fletcher | Dear CTRMA Board Members,<br><br>Here:<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|

| | | |
|---|---|---|
| **5/3/2026** | Holly Cerna | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Holly Cerna |
| **4/28/2026** | Holly H | Austin community members do NOT support a Mopac expansion! The environmental costs are far too high. Keep interstate traffic on the - interstate!!! |

| | | |
|---|---|---|
| **5/3/2026** | Holly H | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Holly Holmes Fletcher |

| | | |

Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Holly Reed |

| | | |
|---|---|---|
| **5/1/2026** | Holly Reed | Members of the CTRMA Board,<br><br>After hearing from our community, our neighbors, environmental experts, parkland advocates, and Austin High School students and parents, the West Austin Neighborhood Group Board of Directors has voted to oppose the current plans for the Mopac South Expansion.<br><br>We strongly disagree with CTRMA's conclusion from the TXDOT Draft Environmental Assessment that this plan will have "no significant impact on the environment." There MUST be a FULL ENVIRONMENTAL IMPACT STATEMENT produced and updated analysis for alternatives to the current plan.<br><br>On behalf of our Community, the West Austin Neighborhood Group requires the following before any further plans for Mopac South Expansion proceed:<br><br>A Full EIS: CTRMA is cutting corners with a predetermined FONSI. Under the National Environmental Policy Act, a full EIS is required when a project will significantly impact the environment. Drilling into the Edwards Aquifer, harming endangered species, damaging parks, and worsening air quality next to Austin High School are all significant impacts that should trigger a full EIS.<br><br>An Updated Analysis: This project started in 2011, and the traffic model used to dismiss alternatives was finalized in 2012—over 14 years ago. Since then, we've had a pandemic, expanded telecommuting, and approved Project Connect. We need CTRMA to rethink this project with reconsideration of alternatives, updated data, and consideration of local goals and policies.<br><br>Review of the "Benefits": After 5-7 years of disruptive construction, the project will save only 5-6 minutes for someone traveling the entire 8.77-mile length during rush hour. Meanwhile, construction delays will largely zero out these minimal improvements<br><br>Protection for Endangered Species: CTRMA admits the expansion will adversely affect 4 federally endangered species but refuses to consider design alternatives that could avoid these impacts. Construction will threaten the clean flow of groundwater to Barton Springs and kill cave ecosystems that cannot be restored. |

| | | |
|---|---|---|
| | | Clean Air for Students: Austin High School students and nearby residents will be exposed to higher levels of fine particulate matter (PM2.5) from increased traffic, tire wear, and brake dust. CTRMA's claim that air quality will improve despite 331 million more vehicle miles traveled per year being added to the corridor is not credible.<br><br>Water Protection: The proposed water quality treatment doesn't meet the standards that Travis County and the City of Austin use for their own roads. During construction, sediment and pollutants will flow directly into the Edwards Aquifer Recharge Zone, causing irreversible harm.<br><br>As a neighborhood that borders Mopac, WANG residents, schools and businesses will have to deal with the repercussions of this construction for many years. The plan to reroute traffic is unacceptable and will lead to terrible back up traffic in the neighborhoods. The “time saving” of 5 minutes is not worth the cost of almost $1 billion and 5-7 years of construction. Many of our residents and students depend on access to our parks, the Hike and Bike Trail, and the Roberta Crenshaw Pedestrian and Bike bridge over Lady Bird Lake. Under the current plan, this bridge will go away. We need alternatives that truly serve the people of Austin and minimize any harm to our water sources, protected wildlife and our environment. |

| | | |
|---|---|---|
| **4/28/2026** | holly rich | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed.<br><br>I'm a trail runner, nature lover and I cannot imagine Ausin being ruined by this expansion.<br><br>I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. | **4/28/2026** | Howard Lindemann | "I oppose the expansion of MOPAC South. Numerous studies have shown that expanding a highway does not actually reduce the length of a trip. Even if it did, a few extra minutes is a small price to pay to preserve our environment." |

| | | |
|---|---|---|
| **4/22/2026** | Hpguest Goolsby | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |
| **4/22/2026** | Hpguest Goolsby | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/30/2026** | Hudson Doerge | We absolutely do not need an expansion of mopac. This will be an environmental disaster, destroy communities, and increase car dependency. This is a horrific plan and should never be implemented. |

| | | |
|---|---|---|
| **3/172026** | Hugh K. Higgings | I urge you, and your team, to proceed as prudently rapid as possible to complete the MoPac South undertaking. I've lived in Austin since the middle 60s; I have never witnessed a single roadway delay that helped working Austinites! Central Texas seems to ALWAYS be behind the traffic curve.<br><br>I shall be pleased to respond to any questions that your staff may have regarding my opinion here. |
| **5/3/2026** | Hugh McWilliams | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Hugh McWilliams |
| **4/20/2026** | Hugo Ortiz | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/22/2026** | Hunter Calluna | I do NOT want CTRMA to expand MoPac. I am currently employed at TreeFolks, an Austin non-profit, and the work I do there centers native tree distribution to Austinites. Freeway expansion worsens sprawl and pollution, both of which directly undermine the benefits of trees, as wild trees are bulldozed and urban trees endure worse conditions. I DO WANT an HOV/transit lane conversion on the highway to make bus rides quicker & better and continuous pedestrian/bike paths across the project's length. History will look down on this project if it pushes forward, in a time that calls for modern, functional, long-term transit options, instead of a wasted investment (and continuous money sink) in more singular vehicle use. |

| | | |
|---|---|---|

| **5/3/2026** | Hunter Coy | I am a born Texan. The expansion projects proposed would due untold harm to the natural aspects of Austin that make the city so popular and livable. The lack of access to Barton Springs and increasing the strain on Texas' water table would decrease the quality of life of Austinites, and simply "Band-Aid" an infrastructure problem that only gets worse with time. We need to consider the intersection of transportation, ecology and quality of life for better long term solutions, instead of just the "one more lane bro I swear" mentality that underpins current infrastructure projects. |

| | | |
|---|---|---|
| **3/20/2026** | Hunter Warren | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed.<br><br>As countless highway expansions have shown, expanding highways does not and will not mitigate congestion. What it will do is spawn thousands of acres of more low-density and infrastructure-intensive development. This style of development yields less property tax revenue than what is required to maintain it's infrastructure, resulting on a permanent net liability on Austin's budget.<br><br>As a San Antonio resident who spent nearly a decade living in Austin, I will be personally impacted by this expansion as it threatens the Edwards Aquifer Recharge Zone, which my community depends on for water. Our area too, has seen natural spaces vanish, large heat increases, drops in property value, and communities forever ruined by over-expansion of freeways. Please don't do this to Austin also.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Hunter Warren |

| | | |
|---|---|---|
| **4/21/2026** | Hunter Warren | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Hunter Warren |

| | | |
|---|---|---|
| **4/21/2026** | Hunter Warren | Dear CTRMA Board Members,<br><br>Do not expand MoPac South as this permanently affects my drinking water as a San Antonio resident. This expansion will degrade property values in central Austin, costing the city millions in tax revenue that will not be offset by this project. MoPac will become clogged with traffic as soon as it is expanded multiplying the maintenance cost of this freeway.<br><br>Please send more traffic around Austin and not through it! Freeway projects in town degrade the urban environment leading to decay and declining revenue for the city. They will cause explosive growth in sensitive areas, where my drinking water is collected. The low-density growth in these areas will become a drain on the city and county. This is happening across the country over and over. The booming City of Houston is bankrupt because of this low-density development scheme. Stop repeating it in Austin!<br><br>For the love of water in Central Texas,<br><br>Hunter Warren |

| | | |

| | | |
|---|---|---|
| **4/30/2026** | Hunter Warren | This money is much better spent investing in regional rail. This expansion is already obsolete. We have seen over and over again in Austin that freeway expansions do not fix our congestion. It will encourage massive environmental damage in the Edwards Recharge Zone. It will harm existing pedestrian facilities. TXDOT is already pouring billions into expanding 35. We need a better solution.<br><br>Thank you,<br><br>Hunter Warren |
| **4/21/2026** | Ian Conery | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/29/2026** | Ian Creager | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/19/2026** | Ian Fleming | I oppose expanding MoPac, as widening highways is an outdated strategy that increases air pollution, emissions, and car dependency while working against Austin's climate and transportation goals. Instead, I support adding continuous pedestrian and bicycle paths along the corridor, converting an existing lane into a high-occupancy vehicle or transit lane, and prioritizing investment in transit, walking, and biking infrastructure. This project, as proposed, would worsen sprawl, harm environmentally sensitive areas, and pose health risks to nearby communities, including students at Austin High School. |

| | | |
|---|---|---|
| **5/3/2026** | Ian Johndon | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks, the schools, and the Edwards Aquifer and its underground beating heart are part of the daily life and identity of Austin. These places are where I grew up gathering with my family, where I go to release daily stress, or cool off on hot summer days. The green spaces are more than just places for Austin residents. These places are like family. Austin wouldn't be Austin without them, and threatening to take them is threatening how our city will evolve. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Ian Johnson |

|---|---|---|
| **3/24/2026** | Ian Wilson | Great work on the SUP<br>- Please add as much shade as possible to the Shared Use Path, using trees.<br>- The diverging diamond @ Bee Caves seem good<br>- The bridge for the SUP in Zilker seems great<br>- the extra express lane entrance at Bee Caves seems good<br>- Have the SB ramp before Bee Caves is moving north<br>- I can't wait to see public transit in the express lanes |
| **5/3/2026** | Idahlia Murray | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Idahlia Murray |
| **3/19/2026** | Ignacio Galarza | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin’s climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project’s length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **5/1/2026** | Ilene Mcgarrigle | Please reconsider this expansion. Quality of life, the environment, water quality and animal species will all be adversely affected. This city is losing everything that made people want to come here to live. |
| **5/3/2026** | Ilene York | Please don’t do this. |
| **5/3/2026** | Iliana Medrano | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Iliana Medrano |

| | | |

| **4/25/2026** | Ilicia Stenbak | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Imani Thomas | Hi, my name is Imani Thomas. I'm a student at Austin Community College and here is mycomment. I am urging our representatives, any stakeholders involved in this developmentto put citizens and our environment's well-being first and do a full environmental impact statement.The current environmental assessment is the lowest level of federal review. As someonewho is majoring in civil engineering, I am not anti-urbanization. What I advocate foras smart and legal urbanization.This is not that.The state of Texas is already facing a water scarcity issue.Oh gosh, come on.I'm going to start over.I am going to actually start over.And now here will be my comment officially.I'm calling to urge representatives and stakeholdersinvolved in the MOPAC South expansionto prioritize public health and environmental protectionby requiring a full environmental impact statement.The current environmental assessmentis the lowest level of federal review.And given the scale and location of this projectover the Edwards-Ockleford recharge zone,this level of analysis appears insufficient.As a civil engineering student, Iwant to emphasize that I am not opposed to urban development.I support smart, lawful, and sustainable infrastructure.However, this project raises serious concerns.Texas is already facing growing water challenges, and large portions of the state experiencerecurring drought conditions, and water demand is projected to increase significantly asthe population industrial use expands.In fact, the Texas Water Development Board projects that water demand could increaseby approximately 9 to 17 percent by 2070, while existing supplies may decline withoutnew strategies.In some regions, utilities are already exploring lower quality sources like brackish waterto meet demand.Cities like Corpus Christi are already facing near-emergency water shortages, affectinghundreds of thousands of residents, and regions across South Texas have reservoirs below 25%capacity.Even in central Texas, the Edwards Aquifer has seen historically low levels, showingthat water scarcity is not a future issue, it's already happening.Austin is unique because of its waterways and groundwater systems.Resources like the Edwards Aquifer, which supplies drinking water to over 2 millionpeople in Barton Creek, which feeds Barton Springs,are not easily replaceable.The aquifer is part of a highly sensitive car system,meaning contaminants can move through it rapidlywith minimal natural filtration.The project area also supports endangered species,including the Barton Springs salamanderand the Austin blind salamander, both of whichdepend on clean and stable water conditions.The salamander could become the mascot of Austin,but instead we neglected it.Additionally, research has shown consistentlythat highway extensions often lead to induced demand where increased capacity results inmore traffic over time rather than lasting congestion relief.This raises questions about whether the long-term benefits justify the environmental risk.The environmental assessment concludes there would be no significant impact, yet this determinationis based on a 200-plus page document with limited public review period.A project of this scale, environmental sensitivity, warrants deeper analysis and more accessiblepublic engagement.I respectfully urge you to require a full environmental impact statement, extend thepublic comment period, and ensure a transparent and thorough |

| | | |
|---|---|---|
| | | review process that reflectsthe importance of protecting Austin's water resources.We should be leading the charge within Texas moving towards sustainability, renewables,and protecting our land.Thank you so much. |

| **4/22/2026** | Ina Ashcraft | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Ina Ashcraft |
| **4/22/2026** | Ina Ashcraft | This mopac expansion cannot be allowed. the pollution will affect commuters, the students at austin high, our valuable waters from edward's aquifer. traffic won't even get better!!! |
| **3/17/2026** | India Shackelford | WE DEMAND A FULL ENVIRONMENTAL IMPACT STATEMENT! |

| | | |
|---|---|---|
| **3/30/2026** | Ines Walker | Dear CTRMA Board Members,<br><br>The MoPac South expansion would have serious environmental consequences, both to humans and wildlife, that have not been addressed and require a comprehensive review, including a full Environmental Impact Statement due to the serious threat it potentially poses to endangered species.<br><br>In addition, it is patently clear that simply adding more lanes does not reduce traffic, whereas other methods that have already been tested and proven, including but not limited to public transit and HOV lanes, would reduce both traffic and pollution.<br><br>I strongly oppose the current plan and I implore you to implement a lower-impact solution that would focus on making Austin better for the humans, animals, and plants who live here, instead of making it better for cars and worse for everything else.<br><br>Hoping you make the right choice<br><br>Innes Walker |

| | | |
|---|---|---|
| **4/26/2026** | Ingrid Gonzalez Featherston | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Ingrid Gonzalez Featherston |

| | | |
|---|---|---|
| **4/24/2026** | Irene Martinez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/20/2026** | Irene Pickhardt | Please do not move forward with this project which will bring additional traffic to MoPac and surrounding neighborhoods. Pollution of Barton Springs is a significant risk as well as risk to the flow and water levels.<br>Thank you,<br>Irene Pickhardt<br><br>Sent from my iPhone |

|---|---|---|
| **4/26/2026** | Iris Guzman | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| **4/21/2026** | Isaac Golf | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/21/2026** | Isaac Martin | I DO NOT want a wider highway. Expanding highways is an ineffectual, actively counterproductive measure. It will not improve traffic, it will not make anything safer, it will actively make Austin worse. I DO want Continuous pedestrian-bicycle paths along the project's length. This will do far more to improve traffic and transportation issues in the areas served by MOPAC than expansion. I WOULD SUPPORT converting an existing highway lane to a HOV/transit lane, Please invest in transit, walking, and biking—do not double down on highway expansion, it does worse than nothing. |
| **4/27/2026** | Isabel | I have lived in Austin for 12 years now and love the parks and Barton Springs. I chose to come to UT specifically because I loved the way the city preserves and respects their green spaces and how integrated they are in the urban landscape. Our water and green spaces are so important to our mental health and without them, Austin wouldn't be the same. They set Austin apart from so many growing cities. I strongly oppose the expansion of Mopac over Edwards Aquifer. I urge you to complete a full Environmental Impact Statement. |
| **5/3/2026** | Isabel Chavira | DO NOT BUILD THIS THING. do NOT ever do anything that could ever even potentially jeapardize Barton Springs. |

| | | |
|---|---|---|

| **5/3/2026** | Isabel Lemus | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Isabel Lemus |
| **5/3/2026** | isabel partida | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, isabel partida |

| | | |
|---|---|---|
| **5/3/2026** | Isabella Cruz | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Isabella Cruz |

| | | |
|---|---|---|
| **5/3/2026** | Isabella Cruz | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Isabella Cruz |

| | | |
|---|---|---|
| **4/27/2026** | Isabella Curtis | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Isabella Davis | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/27/2026** | Isabella L. | I do not support the South Mopac lane expansion, nor do I believe the environmental assessment done by CTRMA is accurate in its findings which state that the proposed lane expansion will have no environmental impact on Barton Springs or Edward’s Aquifer. Barton Springs is a beloved natural feature of Austin and has been for many decades. This proposal should be included in Austin’s next local election as a votable proposition. |

| | | |
|---|---|---|
| **5/3/2026** | Isabella Matamoros | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Isabella Matamoros |
| **4/27/2026** | Isabella Tapia | Please 🥵🥵 |
| **5/3/2026** | Isabella Townsel | There are other, more affordable, more efficient, and less harmful ways to reduce traffic in Austin. I do not stand for the construction and expansion of mopac or any other major highway in Austin. |

| | | |

|---|---|---|
| **5/3/2026** | Isabelle Staal | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Isabelle Staal |
| **5/1/2026** | Isabelle Sundquist | I, as well as many peers I have discussed this with, are opposed to this expansion project. Expanding MoPac will disrupt not only the natural ecosystem that makes Austin unique, it will disrupt thousands of Austinites lives. Proceeding with such a project will only degrade the city and the quality of life for its residents. |

| | | |

| **4/3/2026** | Ishrat Kundawala | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. I moved here in 1998 and Barton Springs is an important reason why I have stayed in Austin. There is no other place like our beloved greenbelt and springs. We must protect it.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Ishrat Kundawala |

| | | |
|---|---|---|
| **5/3/2026** | Ishrat Kundawala | Dear CTRMA Board Members, I am a decades long Austin resident writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. This is the place we call the soul of the city for a reason- it cannot be expressed how often its waters have saved us from summer heat waves, how many out of town visitors marvel at its existence and protection, how many residents and tourists enjoy its unique beauy. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. It's not a conclusion anyone with a base level understanding of environmental intersectionality can grasp. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Endangered species are more important than any traffic concerns. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most |

| **4/23/2026** | Ivey Kaiser | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/23/2026** | Ivey Kaiser | To whom it may concern,  I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource.  This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation.  Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| | | |
|---|---|---|
| **5/3/2026** | Ivy Firouzi | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, I don’t want more construction for the next 15 years & closing down all the trails - that’s a huge reason why I live here! The nature needs to be protected and seems like we need to figure out a better construction solution. I’m opposed to this expansion Ivy Firouzi |

| | | |
|---|---|---|
| **5/3/2026** | IVY PHAM | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, IVY PHAM |

| | | |
|---|---|---|
| **5/1/2026** | Ixel Aguilar | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | izabel cortinaa | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Izabel Seitz | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Izabel Seitz |

| | | |
|---|---|---|
| **4/26/2026** | Izabella Milton | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |

| | | Sincerely,<br><br>Izabella Milton |
| **5/3/2026** | Izabella Milton | Please do not build a highway over the aquifer!! |

| | | |
|---|---|---|
| **4/26/2026** | izadia buyce | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Izzy Spencer | I absolutely love the natural environments of Austin and it is what has drawn me to this city. This project would impact the places that make Austin, Austin! |
| **4/27/2026** | j muzacz | Please don’t develop anywhere remotely near to the springs or aquifer. Thank you for listening. |
| **3/28/2026** | J Perkins | Hello,<br><br>My comments after seeing the presentation at Bowie:<br><br>- I am against toll lanes. The low percentage of drivers who actually use them does not reduce the amount of non-tolled traffic enough to improve general traffic congestion. The toll lanes on North Mopac are a perfect example of this. We went through years of construction supposed to make mopac better and yet we still sit in the same (actually worse) traffic than we did before. Unless we're willing to pay over $6 one way when it's really bad.<br><br>-Please please please re-stripe the lanes now. Don't wait for this project which could take 10+ years. It's such a bottleneck southbound at William Cannon and there is room for another lane at least until Davis Lane. Also, at northbound Wm. Cannon, why does the right lane need to exit, only to have another lane restart immediately after? These small changes could make a big difference.<br><br>Thank you.<br>J Perkins |

| | | |
|---|---|---|
| **4/21/2026** | J Plummer | Dear CTRMA Officials and Stakeholders,<br><br>As an EverGreen Austin Board Member, I'm writing to encourage you to incorporate the following outlined mitigations before advancing the MoPac South expansion. We recognize the corridor's congestion demands action, and ask for the same level of effort exercised in SH 45 SW for MoPac South. We also recognize that action without environmental accountability produces infrastructure Austin will regret. This proposed roadway project impacts the City's Crown Jewels: Zilker Park, Barton Creek, Barton Springs, Dick Nichols Park, Volma Overton Sr., and Williamson Creek Greenbelt.<br><br>As stated in Ben Thompson's Community Impact article - "Austin Faces Diminished parks growth" dated 02.05.2026: "Austin already falls short: less than 18.5 acres of parkland per 1,000 residents — 77% of the residential goal, a gap of roughly 5,700 acres."<br><br>This project must not widen that deficit.<br><br>EGA requests these mitigations to be written in Section 8.0 Post Environmental Clearance Activities:<br><br>Trees. Preserve all trees 19" diameter or greater. Replace removed trees at 4:1 (native species only); trees 4"–19" at 3:1 (native species only) in the right-of-way and in parks. All terrestrial plantings must be native or regionally adapted, with a watering and maintenance plan ensuring 85% survival. (See Exhibit A.)<br><br>Parkland. Adjust alignments to avoid parkland encroachment. Require construction materials and trucks to stay beneath the highway near Zilker Park and the three other parks impacted. Where impacts are unavoidable, CTRMA should fund full restoration to previous conditions or better. Provide a Park Impact Assessment evaluation of the loss or impairment of park acreage, trees, park features, ecosystem services, recreational programming, and community access resulting from the change in use of parkland.<br><br>Capital Improvement Reimbursement. Funding for the implementation of infrastructure improvements to address construction-related displacements of park usage, including new sidewalks, bike paths, vehicle routing/parking areas and new access points, to replace existing vehicle and pedestrian infrastructure disrupted by the construction phase of the project.<br><br>Noise Walls. Hold a workshop with EGA and CTRMA designers on the design and placement of noise and aesthetic walls before finalizing plans. As part of this meeting, we will want to discuss the installation of high-performance concrete or |

| | | |
|---|---|---|
| | | transparent noise walls within Zilker Park boundaries to maintain visual connectivity where appropriate.<br><br>EGA also requests two Non-Required Mitigations:<br><br>Open Space Fund. Provide $35M in mitigation funding to be used exclusively for land acquisition located over the Barton Springs segment of the Edwards Aquifer Recharge and Contributing Zone. This initiative aims to protect water quality and quantity, safeguard groundwater, enhance flood and fire protection, support wildlife, and impacts from impervious cover.<br><br>Permanent Green Toll. Add a voluntary $0.10 to every toll transaction in perpetuity to fund ongoing land acquisition for environmental mitigation and green infrastructure. Over time these funds should also incorporate an escalation clause to compensate for traffic demands.<br><br>The stakes are real. Zilker Park has 2,000,000 annual visitors. The greatest impacts will be to the 160,000 visitors to Zilker Botanical Garden, 150,000 to the Austin Nature and Science Center, and 65,000 to the Rowing Dock. Mopac is less than one mile from Barton Springs Pool. CTRMA must ensure public health and safety for all of these park patrons at all times.<br><br>EGA commends the effort undertaken by CTRMA and partner agencies to evaluate mobility improvements along a highly congested corridor serving thousands of Central Texans each day. The public's active participation demonstrates the importance of this project to Austin's residents and underscores the need for thoughtful, transparent decision-making.<br><br>EGA is a strategic partner in this process. We will advocate within current political realities while holding firm on the protections Austin deserves. EGA urges CTRMA to include all recommended mitigations, thereby demonstrating that superior infrastructure and environmental stewardship are not in conflict.<br><br>Thank you for your consideration.<br><br>Evergreen Austin Board Member |

| | | |
|---|---|---|
| **4/29/2026** | J.R. Ellis | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |

| | | |
|---|---|---|
| **5/3/2026** | Jacey Zuniga | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Jacey Zuniga |
| **5/3/2026** | Jacinta Brondgeest | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Jacinta Brondgeest |
| **3/20/2026** | Jack | Widening highways is demonstrably ineffective. Anyone who thinks widening a highway will reduce traffic congestion is a complete moron. If you want to reduce traffic congestion, invest in transit and safe bike infrastructure. This is what works. Please, for the sake of our city, do not make stupid policy decisions based on vibes. |
| **4/17/2026** | Jack | How the hell are we still using highway expansion as a “solution” to congestion? Do you know of a single example of a highway expansion project reducing traffic congestion anywhere in the world? This was the same reasoning we got for adding the first “express” lane on Mopac years ago and that only made congestion worse, as anyone with a basic understanding of induced demand could’ve predicted. Why don’t you come up with a real solution that doesn’t involve wasting billions of dollars, poisoning the air, and trapping millions of people in a deadly, car dependent hellscape. If all you can come up with is “one more lane” please do our city a favor and resign because you have no idea what you’re doing. |
| **5/3/2026** | Jack Dena | Hi, my name is Jack Dena. I'm a resident of Austin. I've lived here for four years andI just wanted to say that there'sLots of roads in Austin lots of highways, but there is only one Barton Springsthere's only one Edwards aquifer and it was here before wenever existed and it will probably be here after Austin exists, butBut we should do everything that we can to make sure that's the case and ensure it'ssomething that's a protected natural resource and is really, I think, an important partof this community and what makes Austin Austin.So let's just make sure we're being very careful about the potential environmental impactsof this expansion project and whether that's just doing the full environmental impact studyOr even going further than that to ensure that this is a project that is gonnaBe overall a positive thing for Austin not just a positive thing for the flow of traffic for some folks. SoThat's it. Thanks. Bye |

| | | |
|---|---|---|
| **4/22/2026** | Jack Haley | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/22/2026** | Jack Haley | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Jack Haley |

| | | |
|---|---|---|
| **4/27/2026** | Jack Meyers | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. I live, work, and recreate in the Austin area Edwards Aquifer Recharge Zone and this expansion would negatively impact all aspects of life in and around Austin.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement. I would much rather money be spent on our public transportation services such as buses and trains to make our beautiful city a more enjoyable and walkable area<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Jack Meyers |

| | | |
|---|---|---|
| **5/3/2026** | jack strub | Dear CTRMA Board Members, CTRMA, Expanding our highways is an atrocious way to improve our city. Austinites come to this city for the blend of urban and natural escapes. Destroying the beauty of the nature in this city is soulless and diabolical. It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Jack Strüb |
| **3/19/2026** | Jack Subtle Kemp | This expansion would increase pollution, worsen sprawl, and deepen car dependency, while also encroaching on environmentally sensitive areas and putting Austin High School students' health at risk. Adding more lanes will not fix the problem, and you know it. |
| **5/3/2026** | Jack White | Barton Springs is unlike anywhere else in America - it makes Austin a unique, special place and provides a space for the community to connect with our city's vibrant nature in the heart of town. You know what DOESN'T make our city special? MoPac, and the terrible traffic that came with Kirk Watson's failure to properly see Austin's growth coming in the late 90's/early 00's. We can't "just one more lane" our way into a better highway, and approaching such an expansion without any regard for the impact on our waterways is putting Barton and our city's most sacred spaces at risk. Don't be stupid and inconsiderate for once! |
| **4/27/2026** | Jackie | Do not do an expansion of mopac without a proper environmental study of the impact on the spring water. |

| | | |
|---|---|---|
| **5/3/2026** | Jackie Reyes | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Jackie Reyes |

| | | |
|---|---|---|
| **5/3/2026** | Jackie Rodriguez | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Jackie Rodriguez |

| **4/20/2026** | Jackie Sharp | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Jackson Benavidez | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Jackson Benavidez |
| **3/28/2026** | Jackson Busenbark | Please add a 12’ shared use trail from the Meridian subdivision to Escarpmet Blvd. Thanks! |
| **3/19/2026** | Jackson Hotaling | Please do not expand MoPac! We need to invest in transit (rail, buses, etc.), and also rail for freight. NOT expanded highways. |
| **3/30/2026** | Jackson Hurst | I approve and support TxDOT's/CTRMA's MoPac South Environmental Study Project. I have reviewed the Draft Environmental Assessment for TDOT's/CTRMA's MoPac South Environmental Study Project and I approve and support the findings and recommendations in the Document. The alternative that I support for TxDOT's/CTRMA's MoPac South Environmental Study is Build Alternative 2C: Two Express Lanes with elevated ramps near Barton Skyway because this alternative has the least amount of environmental impacts while reducing travel times and improving safety on the MoPac Expressway/TX-1 from Slaughter Lane to Cesar Chavez Street/Lake Austin Boulevard. |

| **4/27/2026** | Jacob Allen | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. | | | Jacob Allen |
| **4/6/2026** | Jacob Barrett | I oppose the Mopac South toll project and it should not move forward in any capacity. The existing facility could be improved without adding travel lanes with improved transportation services such as frequent commuter bus service and reallocating the interior lane to provide reliable travel times which would induce transit demand, and improved bike and pedestrian connectivity along the corridor. The project cost and environmental impacts are not worth the travel time savings for single occupant vehicles. |

| | | |
|---|---|---|
| **4/23/2026** | Jacob Graybill | Dear CTRMA Board Members,<br><br>The proposed mopac south expansion has raised some serious concerns that I feel need to be addressed before any possible construction takes place. My three concerns are 1. The payoff of the project, 2. The environmental impacts, 3. The financial and social costs on our city.<br><br>First of all, is there any concrete evidence or case studies that you can provide to show that adding these additional lanes will have any positive affect on traffic times for daily commuters? Highway construction projects such as interstate 35, interstate 183, and the 23 lane highways of Houston show that adding additional lanes induces traffic demand and puts more cars on the road, actually lengthening the daily commutes of drivers. So what assurances can you give, and specific points can you provide to show that this will not happen for more added lanes on Mopac South.<br><br>Secondly, this project is directly over a federally protected watershed, and your organization has done no work to assure Austinites that this construction will not damage endangered species such as the Texas Blind Salamander and Barton Springs Salamander. Do you have any case studies to show that this construction project will not damage federally protected species in this area? Do you have any case studies or environmental surveys to show that this project will not negatively affect water quality? Can you guarantee that increased emissions from this project I will not give negative health impacts to pedestrians in the surrounding area? Can you please do an environmental impact assessment to assure any of my concerns?<br><br>Finally, can you give an accurate estimate on how long this project will take to fully complete? How many phases will this go through? How much money and from what taxes is this project being pulled from? Additionally, how will added toll lanes better the commute for any Austinite? Toll lanes fill up just as quickly as the rest of the highway, and best case scenario, this might lessen traffic by 2 minutes from Slaughter to Enfield. How will this better the daily lives of Austin commuters.<br><br>Thank you, and I am eager to hear your response to my concerns.<br><br>Respectfully, |

| | | |

| | | |
|---|---|---|
| **5/3/2026** | Jacob Nelson | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Jacob Nelson |

| | | |
|---|---|---|
| **5/3/2026** | Jacob Rubenstein | My name is Jacob, and as an Austin resident, I am writing to express my opposition to the MoPac South project in its current form. I strongly encourage CTRMA to complete a full Environmental Impact Statement before moving forward. Given the scope and expected timeline of this project, the existing Environmental Assessment does not adequately address the potential consequences. I have several key concerns: The planned construction cuts through the Edwards Aquifer recharge zone, posing a serious threat to Barton Springs and the region's water supply due to prolonged runoff and drilling activity. CTRMA's own findings indicate that eight endangered species — including the Barton Springs salamander — could be impacted. The project would also result in temporary closures of important public spaces such as parts of Zilker Park, the Butler Hike and Bike Trail, the Barton Creek Greenbelt, and the MoPac pedestrian bridge over Lady Bird Lake — all of which are heavily used by the community. Additionally, dynamic toll rates exceeding $18 per trip would create an unfair, two-tier transportation system that places a heavier burden on lower-income commuters. Lastly, increasing highway capacity has consistently been shown to lead to induced demand, drawing more drivers over time and ultimately bringing congestion levels back to where they started. A project of this magnitude warrants a more transparent and thorough evaluation of its long-term traffic effects. I stand with the unanimous resolutions passed by both the Austin City Council and the Travis County Commissioners Court calling for a more comprehensive review. I urge CTRMA to respect those decisions and complete a full Environmental Impact Statement before proceeding. |
| **3/19/2026** | Jacob Sheridan Estrada | Opposition: I do not support the proposed expansion of MoPac. Doubling down on highway infrastructure is a short-sighted approach that fails to address our modern transportation needs and actively works against our city's environmental goals. We need a MoPac that serves people, not just more vehicles. Recommendations: Safe Connectivity: I request the inclusion of a seamless, protected trail system for cyclists and pedestrians along the length of the project. Smarter Lanes: We should maximize our current footprint by designating existing lanes for carpools and buses. Multimodal Vision: I want to see CTRMA investments focused on transit-oriented TRAINS: You know like the the modern world uses. |
| **5/3/2026** | Jacob Smigel | Dear CTRMA Board Members, I live in Oak Hill and just experienced 4 years of highway expansion here. It IS faster... or perhaps will be faster to get downtown... but it was not worth the cost to the environment. I worry that the same mistake is going to be made with the MoPac South Expansion. It is far too sensitive an area to endure such chaos. Please listen to the people of Austin and explore other options that can be achieved without a major expansion of this scale. The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Jacob Smigel |

| | | |

| **4/21/2026** | Jacob Thornton | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/20/2026** | Jacob Vreeland | Expanding Mopac is a ridiculous and ineffective idea. It's been proven time and time again that widening roads will worsen traffic, not fix it. Why are we even considering investing and wasting years of resources on something that will worsen our city instead of investing in public transit? |
| **4/21/2026** | Jacob Wheatley | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Jacobi Alvarez | Dear CTRMA Board Members,  I do not support construction to expand mopac. It makes no sense to add lanes there. The traffic will be so bad during construction for years, all for what, just a short reduction in commute time and major economic destruction.<br /><br />  That area is special. Barton Springs needs to be protected, but expanding mopac would pollute it. Endangered salamanders, fragile karst aquifers, much more important than more lanes that wont do any good.  I live right in this neighborhood, and I dont want to put the fragile environment at risk.  You know what else? I dont trust yall, you need to put our "public" comments public.  Respectfully,  Jacobi Alvarez |

| | | |
|---|---|---|
| **5/3/2026** | Jacqueline Ardeno | My name is Jacqueline Ardeno and I am a citizen of Austin, Texas, a concerned citizen.I want to call to request a full environmental impact statement on the expansion of the MopacBridge that is going to devastate the environment, the endangered species, and our quality oflife and the recharge station for the aquifer.I've been coming to this space for, since 2008, almost every day.This is a place of healing.This place is sacred.This place is filled with nature that depend on this clean water.And this expansion is going to devastate this very fragile environment.Please conduct a full environmental impact statement. |
| **4/23/2026** | Jacqueline Burniske | Dear CTRMA Board Members,<br><br>I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.<br><br>The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.<br><br>This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.<br><br>Sincerely,<br><br>Jacqueline Burniske |

|---|---|---|
| **5/3/2026** | Jacqueline E Rambo | Hi, I would like this statement to be included in the public record:<br><br>We all know that population growth is inevitable, which means infrastructure must expand accordingly; however, we can certainly choose the areas best suited for this expansion. As a geologist, my mind is often focused on Earth's natural infrastructure and how humans fit within those existing constructs. My favorite example is I-35.<br><br>Due to the faulting that created the Balcones Escarpment, a plethora of natural springs emerged along the fault zone, allowing fresh groundwater to provide an oasis for fauna and flora alike. For early humans traveling from South to North Texas, these springs were critical stopping points. Thanks to the region's geology, a low-lying pathway naturally connected them. As a result, I-35 follows this ancient route, providing a fast and—geologically speaking—minimally invasive means of transportation. There is something fascinating about generations of Texans using the same paths to accomplish the same mission.<br><br>In contrast, the original MoPac project did not build upon existing paths. Instead, it sought to cut across geologic features that were never meant to be sliced through, failing to follow any natural path of least resistance. Unsurprisingly, this proposed project has been met with significant public resistance—much more than the I-35 expansion. It has also encountered geologic resistance, as engineers must accommodate uneven terrain, which undoubtedly increases construction costs. Connection is at the core of the human experience, but the affected public should have a say in where those connections are made and where they are best suited.<br><br>- Geobridge |
| **5/3/2026** | Jacqueline Guzman | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Jacqueline Guzman |

| | | |
|---|---|---|
| **4/18/2026** | Jacqueline May | Dear CTRMA Board Members,<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Jacqueline May |

| | | |
|---|---|---|
| **4/21/2026** | Jacqueline Steibly | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/19/2026** | Jacquelyn Ardeneaux | Dear CTRMA Board Members,<br><br>I strongly oppose the proposed MoPac expansion due to the risk it poses to the Edwards Aquifer and Austin's springs.<br><br>These waters are essential to our ecosystem, our drinking supply, and the identity of this city. Building over a sensitive recharge zone without a full Environmental Impact Statement puts them at unnecessary and irreversible risk.<br><br>There are smarter ways to address traffic that do not endanger our water, including public transit and targeted infrastructure improvements.<br><br>Protecting the springs is protecting Austin's future. I urge you to pause this project, complete a full Environmental Impact Statement, and choose solutions that safeguard our water and community.<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. |

| | | |
|---|---|---|
| | | *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Jacquelyn Ardeneaux |
| **5/3/2026** | Jacquelyn Butzen | I would like to leave a comment that I DO NOT want more highways built through Austin specifically the expansion project of MOPAC that would impact Zilker Park and Barton Springs. Not only would you be taking away the draw and appeal of this city, but you'd be disrupting what's left of the ecosystem that aids in cooking this already scorching hot state. Yall already ruined Rainey street with your skyscrapers, please quit while Austin still has some charm and sparkle left. |
| **3/19/2026** | Jacquelyn Fisk | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |

| | | |
|---|---|---|
| **4/21/2026** | Jacquelyn Ochoa | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| **5/3/2026** | Jacquelyn Wright | I ask for a fulll Environmental Impact Statement and a less harmful alternative to the current plan |

| | | |
|---|---|---|
| **5/2/2026** | Jacqui Schraad | I'm writing to express my strong opposition to the proposed Mopac South expansion. Proceeding with this project will cause irreversible damage to the natural treasures of our city and endanger wildlife. In every major planning document over many decades, preserving the natural beauty of our city has been a top priority of community input. We can't give just lip service to this value, sometimes it takes hard decisions and creative solutions to ensure our natural resources are guarded. Let's try harder, not simply proceed with the first instinct to build more lanes for traffic. I urge City leadership to undertake a Environmental ental impact statement immediately.<br><br>Regards,<br><br>Jacqui Schraad<br><br>Please XQs typos, sent from my mobile. |

| | | |
|---|---|---|
| **5/3/2026** | Jada Looney | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Jada Looney |

| | | |
|---|---|---|
| **4/18/2026** | jade robertson | Dear CTRMA Board Members,<br><br>Please, please don't do this project. AT this time in human history, we need to protect our green spaces, our trees, our nature, and the health of our younger generations that would be impacted by years of construction.<br><br>With so much of our nature being threatened in the current government, we need to protect what we can.<br><br>we have ENDANGERED SPECIES and very sensitive environmental treasures that are unique TO THE WORLD, that this project would damage, pave over, and fill with cement. plus<br><br>THERE ARE SO MANY PEOPLE THAT RELY ON THE AQUIFER FOR THEIR DRINKING WATER, which this project would threaten. Plus, it would create so much pollution and run off that would flow into our nature, rivers and springs.<br><br>LET'S BE SMARTER! WE DO NOT NEED THIS! We need to protect LIFE on this planet right now, not add more pavement!<br><br>plus, adding lanes does not actually reduce traffic, it makes it worse! There is evidence and research that backs this up. Look at what happened in Houston!<br><br>Sincerely,<br><br>jade robertson |

| **5/3/2026** | Jade Stoffey | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Jade Stoffey |

Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Jade Stoffey |
| **5/3/2026** | Jade Stoffey | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. |---|---|---|
| **5/3/2026** | Jager Montoya | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Jager Montoya |
| **4/20/2026** | Jaima Russell | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/23/2026** | Jaime Dexter | Dear CTRMA Board Members,<br><br>The proposed addition of 6 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways:<br><br>*Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin.<br><br>*Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge.<br><br>*As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets.<br><br>*There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management).<br><br>*The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass.<br><br>Respectfully,<br><br>Jaime Dexter |

| **3/19/2026** | Jakin Cordova | I DONT WANT: A wider highway. Expanding MoPac is an outdated and ineffective approach to transportation that would increase air pollution and emissions, undermining Austin's climate and mode-shift goals. I've been very disappointed by Mopac north's expansion, and the climate sensitive aquifer recharge zone of Mopac south would be even worse for our city's health. I DO WANT: Continuous pedestrian-bicycle paths along the project's length. Converting an existing highway lane to a HOV/transit lane. CTRMA to invest in transit, walking, and biking—not double down on highway expansion. |
| **4/21/2026** | Jakin Cordova | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| **4/3/2026** | James Doehring | I live in South Austin and commute on MoPac south to work. I support the No-Build Alternative. Protecting the environment of Barton Springs and preserving the green space that exists along MoPac South is very important. And public transit is the actual solution for traffic, not more lanes. Your study even points out: all that work to just save 4-5 mins in the general lanes? Not Worth It. |
| **4/23/2026** | JAMES Duane Rummer | Please conduct a full EIS. The current plan states there is no impact to the environment. This cannot be true. There will be noise, air issues, runoff of chemicals into Barton Creek Greenbelt, and destruction of acerage in the greenbelt. We don't support this project. |

| | | |
|---|---|---|
| **5/3/2026** | James Dyer | I live at - and regularly use the MoPac South corridor for commuting and recreation. This area is directly connected to the Barton Creek watershed, the Barton Springs recharge zone, and nearby Greenbelt trails that are vital to our community's environmental health and quality of life. Any expansion of MoPac South raises serious concerns about increased runoff, water pollution, and long-term impacts to Barton Springs and endangered species that depend on this ecosystem. These are not abstract concerns. This affects our drinking water, our recreation spaces, and the natural identity of Austin. In addition, increased highway capacity often leads to induced demand, resulting in more traffic over time rather than long-term relief. This means more congestion, more emissions, and more strain on nearby neighborhoods like mine. I strongly urge a full, transparent Environmental Impact Statement (EIS) before any decisions are made. The community deserves a thorough, science based evaluation of environmental, traffic, and public health impacts, not a limited review. Protecting Austin's water, green spaces, and community health must be prioritized over short term infrastructure expansion. |
| **5/3/2026** | James Dyer | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life Sincerely, James Dyer |

| | | |
|---|---|---|
| **4/29/2026** | James Dyess | Dear CTRMA Board-<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |
| **3/25/2026** | James Felan | Construct a turnaround bridge on Barton Skyway to allow southbound traffic to access northbound lanes. While the current ADT demand may be low, the alternative requires vehicles to pass through two signalized intersections to turn around, resulting in inefficiencies and potential congestion. A similar condition existed at St. Johns and IH 35, where ADT for the turnaround movement was also low; however, a turnaround bridge was still constructed to maintain network functionality and avoid neglecting the area. Providing a turnaround at Barton Skyway serves as low-cost insurance, ensuring operational flexibility in the event of accidents or increased traffic demand associated with Barton Creek Mall. |
| **4/27/2026** | James Grumbles | Barton Springs is the blood life of Austin, nothing and I mean nothing can be done to ruin that. Make a better plan. |
| **5/3/2026** | James Hafner | I am one of the people who would benefit from a shorter commute, but I am vehemently opposed to this project. Toll roads create inequality on the roads that we all pay for. In addition, the noise and the environmental destruction are not worth the few minutes of time saved on a commute. I hope this project does not move forward. |

| | | |
|---|---|---|
| **5/3/2026** | James Hull | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, James Hull |

|---|---|---|
| **5/3/2026** | James Jones | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | James Koji Bamba | I very much think this is a terrible idea.  We don't need it. |
| **5/3/2026** | James Limes | Hello. My name is James Limes. I am a 19 going on 20 year resident of Austin, and I categoricallyam against the expansion of MOPAC. And before any expansion happens, there should be andbe a complete thorough scientific environmental impact survey by outside organizations.This is going to impact Barton Springs.I have raised both of my daughters in the sacred waters of this city and we live ina drought-ridden state.It is incumbent upon us to care for the sacred waters that keep us alive, literally.And it is incumbent upon us to take care of the animals that live here and thrive andsurvive in these waters.Please do not do this and do not do it without a complete environmental review.My organization is myself and my family and the trees and the plants and the waters ofthis beautiful city.Thank you. |
| **4/29/2026** | James Mallory | I oppose the MoPac South expansion. Adding lanes will not solve anything. Please consider actual solutions that will improve our city such as: - Improved light rail - Improved regional rail |

| | | |
|---|---|---|
| **3/18/2026** | James McClain | Dear CTRMA Board Members,<br><br>I am a resident of South Austin, and I strongly oppose the Mopac South expansion and look into other means of achieving these same goals with a full Environmental Impact Statement. Austin has a very unique ecosystem and an even more unique aquifer and cave system; it also has a unique culture that is unlike other big(ger) cities in Texas. While many cities in Texas will increase lanes indefinitely, destroying the natural beauty of the landscape and with no long-term benefit. I moved to Austin specifically because of all the greenery and beauty around. Near Convict Hill road you can see the results of poor urban planning: multiple long-term construction with roads that simply make no sense at a cost of the beauty of the surrounding area. More lanes now means more cars on the road, which means more lanes will be added in the future when traffic is inevitably congested.<br><br>Austin needs to think of a better way instead of the hamfisted idea of just increasing lanes. Right now we're in a climate crisis, and every new mile of road and car on the road adds to this crisis. I'll add from personal experience that Austin right now is one of those cities that is on the cusp of becoming unlivable due to the summer heat. I urge the committee to look into other options such as public transportation. I've ridden public transportation for the last year, and I can say that there is plenty of room for improvement that could be used to increased ridership. For one, there isn't really any reason to even use the public transportation; you use the same roads as everyone else and ride a bulkier bus that gets lower priority to cars when changing lanes. There needs to be a reason for people to want to take public transportation: an HOV lane and increased pedestrian and bike infrastructure could all help more people get out of their cars and help ease congestion.<br><br>The proposed work will add unnecessary pollution, affecting the beauty and historic feel of Austin that we all love. Rush-hour traffic will always exist; let it exist while the committee thinks of a better solution. Thank you for your time and consideration.<br><br>Respectfully,<br><br>James McClain |

| | | |

| | | |
|---|---|---|
| **5/3/2026** | James Shuler | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution. CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, James Shuler |
| **4/20/2026** | James Talbot | CTRMA needs to prepare a full-scale Environmental Impact Statement for MoPac South before it proceeds any further and not ignore or downplays the effects that the MoPac South expansion will have on air and water quality, noise and light pollution, parks, endangered species, and neighboring communities. I am against this expansion. |

| | | |
|---|---|---|
| **4/25/2026** | James Wissinger | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>James Wissinger |

For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| **5/3/2026** | jamie | Nature conservation is a HUGE part of what makes Austin so iconic!! Protect our watersheds!!!! Protect the springs! PROTECT AUSTIN |
| **5/3/2026** | Jamie harvey | Please do not proceed with a project that impacts this iconic Austin staple- Barton Springs and all surrounding area. People will not come to this city for a roadway but they will come and visit the infamous Barton Springs. Save the Springs please! |

| | | |
|---|---|---|
| **5/3/2026** | Jamie Johannsen | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Jamie Johannsen |
| **5/3/2026** | Jamie Lay | There are a wide variety of low cost congestion relief measures that could improve the South Mopac Corridor and reduce peak time congestion without expansion that should be explored and tested before proposing expansion. These strategies include lengthening entry and exit ramps, restriping, HOV lane at peak times, park and ride facilities, transit routes, addressing surface and connector road congestion that backs up onto MoPac, among others. We should not be jumping into a $824 million dollar project without first exploring and testing low cost congestion relief measures that will help all roadway users before expansion. |
| **5/3/2026** | Jamie Rigdon | Please do not expand Mopac near Barton Springs! As a resident of Austin for 44 years, I'm more than fine waiting in traffic to protect what makes Austin so special!! |
| **4/20/2026** | Jamie Rodriguez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Jamie stafford | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Jamie stafford |
| **5/3/2026** | Jan M Milstead | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. | | | |
|---|---|---|
| **3/17/2026** | Jan Milstead | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. | **3/28/2026** | Jana Ryan | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |

| | | |
|---|---|---|
| **4/29/2026** | Janae Hoekstra | Dear CTRMA Board,<br><br>I write in strong support of the MoPac South Express Lanes project currently under public review.<br><br>MoPac Expressway south of Cesar Chavez Street is one of the most critical corridors in our regional transportation network. Carrying nearly 200,000 vehicles per day, this segment represents a significant and growing constraint on the region's economic competitiveness. Congestion along this corridor carries direct and negative economic impacts from delays in commercial activity, reduced workforce accessibility, and diminished quality of life for the employees and customers who depend on that corridor for reliable travel throughout the region.<br><br>Transportation infrastructure is foundational to economic development. A well-functioning MoPac corridor supports the employers, healthcare institutions, educational facilities, and commercial centers that line this corridor and depend on it for daily operations. As the Austin metro area continues to grow, the cost of inaction compounds — in lost productivity, in reduced site competitiveness, and in the strain placed on parallel arterials when MoPac fails to perform.<br><br>I commend CTRMA for conducting a thorough environmental study that accounts for the needs of drivers, transit riders, bicyclists, and pedestrians, and for the commitment to context-sensitive design that has characterized this process. I urge the CTRMA to move forward expeditiously toward project clearance.<br><br>I join the thousands of citizens and organizations who are committed partners in building a more connected, competitive Austin region. The MoPac South project is an investment in that future, and I stand ready to offer my full support for the advancement of this project through the next phases of development and financing. |

| | | |
|---|---|---|
| **5/3/2026** | janaina colomba | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, janaina colomba |

| **3/28/2026** | Jane Ferris | We bike the new trail daily from Carpenter Lane but need to stop where the trail runs out. Our children and grandchildren live in Meridian and completion of this trail will allow us to bike to them. We are very much looking forward to this new trail extension. Thank you , Jane Ferris |

| | | |
|---|---|---|
| **5/3/2026** | Jane Hallowell | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Jane Hallowell |
| **4/27/2026** | Jane Kurzawa Cravey | No expansion without a complete environmental impact statement.<br><br>The benefits of additional lanes are not worth the additional pollution (physical, noise, air) that the project would create.<br><br>I am a regular user of this section of Mopac and building additional lanes will NOT help with traffic flow in the long run. If you build more lanes, it just means more cars will fill the lanes/.<br><br>Jane Kurzawa Cravey |
| **5/1/2026** | Jane Louis | I do not support the plans for refashioning Mopac from Enfield to the south. The disruption of what is now a beautiful green and waterscape with high wire traffic lanes would be egregious. The minimal impact on auto traffic times does not warrant such disruption of our walking trails and park land. |
| **5/1/2026** | Janelle Borucki | I support a full EIS on this project as it would severely affect the environment, community and recreation areas. The reason people visit is exactly for spaces like Lady Bird Lake and surrounding areas. If you build more those places lose their charm and interest. Please consider what you'd be losing more than gaining, for the humans and for the wildlife. |

| | | |
|---|---|---|
| **3/30/2026** | Janet | This is Janet, I'm not affiliated with anybody except myself and I want to say that the idea of no change, no expansion in South Mopac is crazy. People are still going to drive there, they're still going to set in all of that traffic which makes all kinds of pollution from the cars sitting there.You've got air pollution and the things falling off of the cars while they're sitting, trying to get someplace. So that makes no sense at all. We need expansion down here.You give it to everybody else.You won't give us a bus that, well, buses don't work anyways.You don't give us anything. We don't get the commuter line.now you're trying not to give us a road because, oh,if there's no road, nobody will drive there. How does that? Oh, you've tried that all over town.You've taken away our roads. People are still driving on the roads. They're just driving slower or being frustratedand driving carelessly. We need the most lanes possible, the least amount of toll lanes.I've already done an environmental study to get what you have there, just building the same spotsthat you've already checked out. And get going on this instead of asking peoplethat don't drive down here and don't have skin in the gamewhat they think should happen. They shouldn't count. They don't have to put up with it. Thank you. |
| **4/26/2026** | Janet Allen | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/19/2026** | Janet cook | Do not expand I35.  Instead, put money into mass transit. |

| | | |
|---|---|---|
| **4/29/2026** | Janet Cook | Dear People:<br><br>* I OPPOSE expanding MoPac South.<br><br>* Instead, I SUPPORT regional rail and a world class bike/pedestrian network.<br><br>* I want a full Environmental Impact Statement (EIS), not an abbreviated Environmental Assessment (EA).<br><br>I use mass transit - bus - and want more and better of such.<br><br>I want cleaner skies, like we had when COVID shut down a lot of commuting.<br><br>Please do the right things.<br><br>Janet Cook |
| **5/2/2026** | Janet Harvey | Better environmental studies need to be done before this is approved. You are risking our beautiful parks, our aquifer, Barton springs pool and the salamanders. Stop paving over what makes this city special and beautiful! |

| | | |
|---|---|---|
| **4/20/2026** | Janet Lee | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Janet Leese | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Janet Leese |

| | | |
|---|---|---|
| **5/3/2026** | Janet Odom | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Janet Odom |

| | | |
|---|---|---|
| **5/3/2026** | Janett Guerrero | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. I will also like to add my own personal opinion, and we really gotta start focusing on what actually benefits citizens of Austin. <br />Adding lanes is just a lazy bandaid to a bigger problem: Austin is growing fast so we need to fund for more public transportation options, like expanding the train route, train more bus drivers, offer rentable bikes (not e-bikes as those are highly dangerous), add bike lanes in roads there aren't (which are many). <br />I know America values Oil over everything, but we Austinites want to minimize our carbon footprint, we want to enjoy our nature in its NATURAL state, we want to be |

| | | |
|---|---|---|
| | | able to go around town without even more construction CAUSING traffic, this project will only waste our tax dollars because it's not something we want. And as City of Austin Council, you people should be representing us, and protect our best interests. <br />And at the very least, VERY LEAST, you can do is conduct a full Environmental Impact Study. <br />Especially if you move forward with this project, Austinites NEED to know the full impact of this project. So we can act accordingly, by protesting if we must. For the love of water in Central Texas, Janett Guerrero |

| | | |

| **4/26/2026** | Janette Delgado | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Janice Lee | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Janice Lee |
| **3/28/2026** | Janie Boersma | I support the planned shared-use paths along the South MoPac corridor and appreciate the investment in safe, connected infrastructure for pedestrians and cyclists. I strongly encourage TxDOT and CTRMA to include funding for the 1.2-mile shared-use path along Hwy 45 connecting Meridian to Escarpment Blvd. This connection would provide safe access for more than 3,000 residents to the regional trail system via Circle C and the future MoPac pathway near Slaughter Lane. Currently, many cyclists and pedestrians are forced to use the narrow shoulder of Hwy 45, creating significant safety concerns. This proposed connection would address that risk while enhancing connectivity across Southwest Austin. The Austin City Council (District 8) has already allocated $117,000 toward the design of this path, reflecting clear community need and support. Funding this segment would ensure that existing and planned infrastructure is fully connected and accessible. Thank you for your consideration. |

| | | |
|---|---|---|
| **4/22/2026** | Janie Goodspeed | CTRMA Board members,<br>It is unacceptable for the Central Texas Regional Mobility Authority (CTRMA) to continue disregarding the significant environmental and community impacts of widening and elevating portions of MoPac South through the neighborhoods of Austin, Rollingwood, and West Lake Hills. The porposed highway expansion directly over the Edward Aqufier Recharge Zone, threatens water quality and endangers the alread precarious survivial of four federally listed endangered species, including the Barton Springs and Austin Blind Salamanders. Furthermore, the expansion will exacerbate localized air quality concerns, near sensitve areas like Austin High School, where students and teachers will bear the brunt of increased air pollution.<br><br>Without a full Environmental Impact Statement (EIS), CTRMA is risking irreversible environmental harm, years of disruptive construction, and the permanet loss of endangered species; all for a project that may fail to deliver the minscule, promised traffic benefits. The Austin community rejects the proposed "finding of no significant impact" and demands that the CTRMA, as part of a full EIS, prioritize meaningful community engagement to develop modern, sustainable alternatives that address congestion without sacrificing environmental protections or public health.<br><br>Please listen to the community. I agree with all the above statements. I moved to Austin in 1981 and had intented to leave after 2 years. But when I saw the beauty of the town lake and Barton Springs, and I learne dhow high quality our water is, I stayed. I do not want to risk our aquifer safety, our water safety, our pllution potential if the project is done. I understand the project will be $ 1 billion and may only save communities 5 mins. In addition, I cannot afford tolls. I think Mopac is okay as is.<br><br>Also, CTRMA has said this project will have no significant environmental impact. How do you know? You didn't do a full EIS. And this project would drastically increase the number of cars traveling over the aquifer. Studies show that chemical pollution increases substantially, the higher number of cars that travel over the area. |

| | | |
|---|---|---|
| **5/3/2026** | Janis | May 3, 2026<br><br>Greetings,<br><br>I oppose the MoPac South expansion. Please focus on better solutions available, which should be considered more vigorously.<br><br>If it does go forward, this project deserves a full Environmental Impact Statement (EIS) before further action is taken. The EIS is the way transportation engineers present the project details to the public and receive public input before any contracts are let. This important step should not be bypassed or overlooked.<br><br>I support better planning and funding for Cap Metro and area / regional bus transit instead. It will not help to build more MoPac lanes and turn the existing roadway into a wider parking lot. There must be more lanes and ways to exit efficiently, or else the vehicles will still be stuck in the highway lanes.<br><br>The Austin area has long needed better ways for local drivers to enter and leave the city limits of Austin and reach their work or home destinations in Hays and Williamson counties. Bus traffic for 40 commuting passengers could take 40 vehicles off the road. Multiplying that by a greater number of buses shows an even bigger impact. Bus routes and schedules can be changed much more readily than rail options. What we need requires a big-picture look at strategic and flexible solutions other than creating more traffic lanes. |

| | | |
|---|---|---|
| | | Please reconsider this expansion of South MoPac, and work diligently to create more effective transit solutions. |

| | | |
|---|---|---|
| **5/3/2026** | janise alvarez | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  janise alvarez |
| **3/19/2026** | Janna Bentley | Please reconsider these plans, a wider mopac is not going to improve traffic flow and is a massive waste of money and valuable land that could be used to further public transit and create more housing. Studies time and time again show that widening highways only results in induced demand therefore creating even worse traffic at the exits. This funding should instead find a way to be reallocated to either public transit or to make the roads and highways safer. |
| **3/19/2026** | Jansen Derr | I don't want the additional construction and pollution coming from an expanded highway. We need to prefer other modes of transportation. |
| **5/3/2026** | Jared Driscoll | Hello, my name's Jared Driscoll.I'm calling about the proposed expansion of MOPAC in the Edwards Aquifer near Barton Springs.I think it's a terrible plan.It seems like there wasn't a real study done.There wasn't a full environmental impact study and it seems kind of crazy.I mean, this is a very sensitive area with a lot of endangered species, some very cool animals,some ringtails, axolotls, and you know, Bond Springs is kind of the heart of Austin onemay say, and this is kind of an essential recharge zone for the Green Belt, a lot of waterways,and a lot of the best natural spaces in our city. So, it's kind of deeply upsetting that they wouldto build a highway there that could potentially destroy one of the most beautiful things thatwe collectively have as Austinites. So I would appreciate if y 'all did not do any of thatAnd, you know, just prioritize nature, and prioritize life, and green spaces.Thank you, thank you. |

| | | |
|---|---|---|
| **5/3/2026** | Jared Driscoll | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  <p data-start="2198" data-end="2385"><br />there has been plenty of construction, and by the time this proposed project would be done, there will be so many more people it will not change a thing. Efficient public transportation is better in the long run. Don't ruin the unique beauty of this area and the importance of the spring/aquifer. <br /><br />  <p data-start="2198" data-end="2385">let's find a way to get cars OFF the road!  Sincerely,  Jared Rosenacker |
| **5/3/2026** | Jared Sheets | No expansion! This is detrimental to our environment and quality of life |
| **4/20/2026** | Jared Shult | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration.<br>I understand we want to help<br>Mitigate traffic but we have to keep Austin Austin! |

| | | |
|---|---|---|
| **5/3/2026** | Jared Sisson | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Jared Sisson |
| **5/3/2026** | Jaselle Valdez | Why am I constantly having to submit comments or petitions asking people to not damage or cause environmental harm to this beautiful city? Expanding mopac is not necessary. It's common sense. |
| **4/24/2026** | Jaslyn Solis | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Jasmin Hallett | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Jasmin Hallett |

| | | |

| **5/2/2026** | Jasmin Love | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Jasmine Donoso | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Jasmine Donoso |

| **5/3/2026** | Jason Bryant | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Jason Bryant |

| | | |

| **5/2/2026** | Jason Cantu | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **3/28/2026** | Jason Christa | With the planned improvements to the South Mopac corridor, I understand paved paths will be added. Since 2020, my neighborhood, Meridian, has been asking for a paved path along Hwy 45 to Escarpment Blvd, just 1.2 miles, to connect over 3,000 residents to the rest of Austin. This would let cyclists and walkers travel through Circle C and access the paved path starting on Slaughter Lane. Right now, people risk using the narrow shoulder of Hwy 45, which is very dangerous. City Council, District 8 has allocated $117,000 for the path's design, recognizing its importance for safety and connectivity. Our neighborhood committee is dedicated to this effort. |
| **4/21/2026** | Jason Clayton | The biggest impediment to traffic flow on both north and southbound traffic along Mopac south of Lady Bird Lake is the bottlenecks created. Specifically the bottleneck south near Wm Cannon. Mopac goes from 2 lanes to 3 as the westbound traffic from Ben White is let out onto Mopac along with the onramp from the feeder. Then after you cross Wm Cannon going south it inexplicably goes from 3 to 2 lanes (even though there is quite a bit of ROW for a third lane) and then you get more cars entering Mopac from an entrance off the feeder just in front of Costco. It would not take much new lane construction to keep Mopac 3 lanes from Wm Cannon all the way to Slaughter where it can go to 2 lanes because a lot of traffic exits Davis or Slaughter. Going northbound the biggest impediment to flow is again the bottleneck at the Wm Cannon exit. It goes from 3 lanes to 2 along with the exit and then goes right back to 3. A simple re-paint keeping it 3 lanes while allowing those in the right lane a choice of exiting or staying on mopac would suffice. After Wm Cannon it really should stay 3 lanes each direction to and from Lady Bird Lake. This might involve some extra construction over Ben White if the current width can't accommodate 3 lanes. |
| **5/3/2026** | Jason Katims | The public is extremely dissatisfied with the way that the state has dictated transportation choices to the people of this region. We don't want toll roads and we certainly don't want the corrupt administrative boondoggle that they've turned out to be. Not only is the use of toll payer (tax payer) funds to lobby TxDOT on behalf of more tolls a legally dubious use of public funds, but our entire billing structure likely violates the negative commerce clause of the US constitution because it effectively amounts to an out-of-towner tax to generate additional revenue off non-local, interstate traffic. It would be extremely risky dedicating public dollars to a project built on such legally questionable foundation that could be invalidated before its repayment timeline. We have some of the most expensive toll roads in the country and they are basically unusable because they are largely single lane and so the slowest user gets to dictate the speed for everyone else. |
| **3/27/2026** | Jason Law | Restripe. No tolls. And for the love of all that is holy, NO WALLS! |

| | | |
|---|---|---|
| **4/17/2026** | Jason Mckenzie | Dear CTRMA Board Members,<br><br>Here:<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| **4/29/2026** | Jason Qunell | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |

| | | |
|---|---|---|
| **5/3/2026** | Jason Sugg | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. Thank You for listening to your neighbors, Jason Traweek |
| **5/3/2026** | Javier Love | It is acknowledged construction may impact ground water near a known Austin Blind salamander habitat. Ground water should be protected in general, and especially when an endagered species could be adversely impacted. The summary of the ground water study conducted even acknowledeged "Due to the presence of salamander habitat downstream of the project, additional measures should be incorporated into the project to prevent or otherwise minimize the impact of drilling on groundwater resources." Buffer zones near water collection points are important to act as natural filters to prevent toxins from entering the water ways. Ponds were proposed as the primary way to mitigate these pollutants from migrating into the groundwater supply. Flooding events are more common now in Austin than ever before, and these floods have the potential to overwhelm the pool collection methods proposed to filter the project runoff. This stress to the enviornment would come at a time when there are already more pollutants in groundwater tributaries in general from runoff of the surrounding area. This area of Austin is the heart of the recharge zone, which can be seen on maps such as one produced by WGI, and more needs to be done to protect this area from additional impact of construction and potential roadway runoff. This document was preparred by TXDOT and only options for additional paved structures were presented as possible options for addressing the need of additional tranportation needs of the city. Expansion of the rail system voters approved and has work propsed up to the Oltorf area (which is around a mile south of the northern part of this project). What if this connection was considered instead to lessen the environmental impact of paved roads and increase the use of the rail system to lessen the burden on the roads. |
| **4/29/2026** | Javier Motta-Mena | This project does not solve the problem it intends to. Adding more lanes will simply add more vehicles, rather than reduce travel times like it purports. Additionally, the environment risk is not clearly and thoroughly understood. The impact and damage that can come from this far outweigh whatever alleged benefit it intends to provide. |
| **5/3/2026** | Javier Valles | I do not support further expansion of Mopac tollway. We need a diverse transportation system, not more highways. How long before this expansion needs further expansion? A high frequency commuter rail line would serve the community better than further expansion. |

| | | |

| | | |
|---|---|---|
| **5/3/2026** | Jay V | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Jay V |
| **4/20/2026** | Jaya Torres | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| **5/3/2026** | Jayce Putzig | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Jayce Putzig |
| **4/28/2026** | Jayd Alvarez | Do a full environmental study. The city doesn’t need more pavement. Barton’s and the greenbelt is one of the reasons I moved to Austin. No more highways no more concrete. Residents care MUCH more about protecting the natural space and ecosystems here. |

| | | |
|---|---|---|
| **4/22/2026** | Jayna Burgdorf | I am writing to respectfully request that the CTRMA provide mitigation activities and/or funds to address the ecological and community impacts of the MoPac South expansion on Zilker Park. This 351-acre park is a vital public resource visited by over 3 million people a year and it lies within the critical recharge zone for the Barton Springs segment of the Edwards Aquifer. The construction, impervious cover, noise, and disturbance threaten the aquifer, our tree canopy, and the peaceful experience of all who enjoy Zilker Park. I urge CTRMA to commit to meaningful mitigation efforts to protect this precious community resource. This includes: —Fund and construct an elevated bridge over Barton Springs Road East of MoPac to provide a safe crossing at a dangerous intersection. —Replace displaced trees and expand the tree canopy for future generations. —Implement advanced light shielding and full-cutoff fixtures to reduce light trespass within Zilker Park. —Adjust alignments, construction methods and parking areas to minimize parkland encroachment. Fund full mitigation measures when impacts are unavoidable. —Ensure continued access to all organizations and businesses within Zilker Park whose parking or sidewalk access will be impacted by the construction. —Provide a reimbursement fund for new sidewalks, bike paths, vehicle routing/parking areas, and access points to replace infrastructure disrupted during construction. —Install noise barriers within Zilker Park boundaries to protect the sanctity of the Park. —Create an open space fund to support ongoing conservation. Thank you for your commitment to the public health and safety of the Austin community and to the sanctity of our most treasured green space. |

| **5/3/2026** | Jazmine Bartlett | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Jazmine Bartlett |
| **5/3/2026** | Jazmine Cortez | Leave our rivers/lakes/watershed alone! |
| **4/21/2026** | Jazmyn Mora | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| **4/28/2026** | Jean A McArthur | Dear CTRMA Board Members,<br><br>I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>Key Water Concerns:<br><br>* Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer.<br><br>* Post-construction ponds will not protect water quality during construction, when the greatest harm occurs.<br><br>* Tree removal and vegetation loss eliminate natural filtration.<br><br>* Warmer runoff will reduce oxygen in streams and promote algae blooms.<br><br>* Karst features and caves supporting unique ecosystems will be destroyed.<br><br>* Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.<br><br>CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>Thank You for listening to your neighbors,<br><br>Jean A McArthur |

| | | |
|---|---|---|
| **3/27/2026** | Jean Hopkins | CTRMA Board Members,<br><br>I'm writing to express my deep concerns about the proposed MoPac South expansion project. My husband and I live less than a block from Town Lake and regularly walk and bike the Butler Hike and Bike trail for recreation, exercise and to access downtown, Auditorium Shores, and the Congress Avenue bridge. We are ardent fans of Barton Springs, which we consider to be the crown jewel of the city. I row with a competitive team 4 mornings a week, on the Lake.<br><br>The project as proposed will directly threaten the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life.<br><br>As a retired environmental professional, I am familiar with NEPA, what triggers it, and what consitutes a meaningful cumulative impact assessment. Given its scope, enormous footprint, and potential for significant and irreperable environmental damage, the proposed project indisputably requires a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems.<br><br>I urge CTRMA to listen to your neighbors and conduct a careful and thorough analysis of this project.<br><br>Thank You,<br><br>Jean Hopkins |
| **5/3/2026** | Jean Leider | I vehemently oppose this project which which have a huge environmental footprint. Who needs a bunch more lanes on Mopac. This just lines the pockets of the builders while destroying habitat, adding more noise and air pollution. Dont need it. Don’t want it. |
| **5/3/2026** | Jean Leider | Dont need this. Dont want it. It will have a negative environmental impact and add noise and air pollution. It only benefits the builders/developers and Big Oil not Austin residents. |

| | | |
|---|---|---|
| **5/3/2026** | Jean Wagner-Rosenblatt | Dear CTRMA Board Members, I am concerned about the MoPac South expansion and its potential impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, endangered species, and our city's beloved Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The presumed traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This proposed highway expansion compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Jean Wagner-Rosenblatt |
| **5/3/2026** | Jean Warneke | Oppose the Mopac expansion |
| **5/3/2026** | Jeana Hurley | Dear CTRMA Board Members, Please hear the voices or fundamental reason!!! It is not worth the long term cost to our ecosystem and community mental health for the MoPac South expansion without fully addressing that the project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, Jeana Hurley |

| | | |
|---|---|---|
| **5/3/2026** | Jeanette Jordan | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Jeanette Jordan |

| | | |
|---|---|---|
| **5/3/2026** | Jeanette Jordan | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Jeanette Jordan |

| | | |
|---|---|---|
| **3/18/2026** | Jeanne Ringe | Dear CTRMA Board Members,<br><br>Today I am writing to you to strongly oppose the proposed MoPac South expansion, and to urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>Here's why. It's BS. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Here are the details.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

|---|---|---|
| **4/20/2026** | Jeannelle Ramirez | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/25/2026** | Jeannette Massey | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/2/2026** | Jeff | Hi, my name is Jeff, I was calling to say that I think that there should be a full environmentalimpact study done before the MOPAC bridge and expansion gets green-lighted by the city. |
| **4/29/2026** | Jeff Coddington | Dear CTRMA: Thank you for your work to improve MoPac South in a comprehensive manner. These proposed improvements are critical to handle the projected 85% population growth in Travis and Hays counties over the next 20 years. I write in support of the draft Environmental Assessment's finding that no significant environmental impacts would result from the MoPac South project. The execution of this project is essential to the future of Central Texas. |
| **3/28/2026** | Jeff Lim | Please extend the hike and bike path along Hwy 45 from Escarpment to Meridian Park Blvd. We'd love to connect with the rest of the trail rather than enduring the shoulder of Hwy 45 or loading bikes into cars to park at the Hwy 45/ toll parking, which suffers many burglaries. Thank you |

| | | |
|---|---|---|
| **5/3/2026** | Jeff Lioon | Dear CTRMA Board Members,  I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin.  The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers.  This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city.  Sincerely,  Jeff Lioon |
| **3/27/2026** | Jeff Nelson | Build this ASAP. Can’t believe environmental study has taken 13 years. We need this so bad. Takes an hour to go 7 miles some days |
| **4/22/2026** | Jeff Pike | Mass transit not more roads! |

| | | |
|---|---|---|
| **4/7/2026** | Jeff Wachhorst | Dear CTRMA Board Members,<br><br>In a nutshell: PLEASE reconsider the MoPac South expansion. First, we absolutely CANNOT endanger the Edwards Aquifer Recharge Zone. Messing with a water supply in Austin is a vote for suicide. We all know that water is only going to get scarcer in the coming years.<br><br>Second, the rapid growth occurring in Austin and surrounding areas is already deeply concerning because honestly, there is a limit to how many people the land can support, and looking around, I can't help but suspect that the growth that is going on turns a blind eye to the capacity of that support.<br><br>What jumped out at me in the form letter below:<br><br>"The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals."<br><br>Endangering the Barton Springs salamander and the Austin Blind salamander shows a reckless disregard for life, including our own.<br><br>"Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment." This suggests to me that the project has not been adequately thought through. Proceeding without full knowledge of the consequences is a ticket to permanent regret.<br><br>"Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt." Let's keep Austin a place where we and our children WANT to live. |

| | | |
|---|---|---|
| | | "..our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project (MoPac South expansion) has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves."<br><br>We can't manufacture more water.<br><br>"Austin’s water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it’s gone forever."<br><br>Let's please not go wrong here.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you,<br><br>Jeff Wachhorst<br><br>----------<br><br>The form letter:<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. |

| | | |
|---|---|---|
| | | The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin’s most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin’s most heavily used public spaces and recreational corridors. |

| | | |
|---|---|---|
| | | Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration.<br><br>Respectfully,<br><br>Jeff Wachhorst |

| | | |
|---|---|---|
| **4/23/2026** | Jeff Webster | Dear CTRMA Board Members,<br><br>I oppose the proposed plan to add 6-8 new lanes to South MoPac. The cost far exceeds the benefit of a projected six minute reduction in commute to Slaughter Lane. The project will degrade the vulnerable recharge zone of the Edwards Acquifer -- where we get our water. The horrendous traffic delays and pollution during construction to achieve a miniscule reduction in commute -- a rounding error-sized reduction -- simply is not worth the long-term harm that it will cause. Such a proposal requires a thorough and full environmental impact study and a transparent and good faith effort to listen to the community. As a regular bike rider, the loss of the pedestrian/bike bridge during construction will disrupt any attempt I make to ride around the lake. As a tax payer, as a user of water, as a commuter, and as a user of the Butler Trail, I urge you to reject this proposal.<br><br>Thank you for this opportunity to provide feedback.<br><br>Jeff Webster |

| | | |
|---|---|---|
| **4/21/2026** | Jeffery Bowen | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration.<br>There are several minor corrections and inside lane "INFILLS" on the existing lanes between Hwy 290 and Lacrosse Ave that will improve the traffic flow.<br>The existing South bound exit at WM Cannon and 290 West Off Ramp has not worked properly since the flyover was completed. That area needs a ramp rework with a WM Cannon ramp to the feeder without the mass merging cluster.<br>Southbound inside merge at WM Cannon needs to be extended pass the Convict Hill Overpass. This will help with the traffic coming on from WM Cannon.<br>The short section between Convict Hill to Davis (inside grass) should be infilled as another lane. Both overpass bridges are wide enough. That lane extension could be extended to Just Past Slaughter.<br>Add a feeder from Davis to Slaughter on both North and South to remove traffic from cutting through neighborhoods. |
| **3/10/2026** | Jeffrey | Please tell me more about project |
| **3/19/2026** | Jeffrey A Gensler | Restripe Mopac Southbound at William Cannon NOW while you contemplate the rest of this plan. This can be done immediately with existing pavement for minimal cost, disruption, and effort. Probably in a week! NEVER terminate and merge the fast lane! Even better add a few hundred feet of pavement where it stops and restarts TWICE to make 3 lanes go almost all the way to Davis. Northbound already has 3 lanes over Latta and William Cannon so no excuses about structural capacity. This will smooth the merge from 290 flyover, WC SB exit ramp, and entrace by Chuys. The rest of the plan is nice but will disrupt traffic for years and provide incremental benefit for the money vs simply restriping. 31 year resident whos been driving this daily for decades. Thank you |
| **3/24/2026** | Jeffrey L Bowenk | 1. How is this a public hearing? Why label this presentation as such?<br>2. Restripe existing south bound inside lane to MoPac between WM cannon and Convict Hill/so past convict hill.<br>3. Continue new lane (SB) past Slaughter to end between Slaughter and La Crosse. To provide less back up at La Crosse.<br>4. Presentations- one drawing showing mixmaster at 290/71 and MoPac showing West bound 290 to south MoPac ramp connections. That is a massive bottleneck.<br>How about West 290 flyover to MoPac an overpass connecting to feeden for those getting off to WM Cannon. Several staff not familiar with existing connections and cannot understand questions from local that uses Mopac as our main travel route.<br>More info on "Shared Path" and if connected to existing Violet Crown Trails. Environmental concerns-lots. |
| **4/28/2026** | Jeffrey Mays | I oppose the south mopac expansion project on the grounds that it will occupy too much money and construction disruption for too little improvement to commuters |

| | | |
|---|---|---|
| **3/29/2026** | Jeffrey Primeaux | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival.<br><br>• Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin’s most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin’s outdoor life. |

| | | |
|---|---|---|
| | | • Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas,<br><br>Jeffrey Primeaux |

| **5/3/2026** | Jen Hilman | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Jen Juniel | Dear CTRMA Board Members, The proposed addition of 5 to 7 new lanes, 4 of them tolled, extending 8.8 miles from Enfield Road to Slaughter Lane, will have significant negative impacts in, at least, the following ways: *Five to seven years of construction will do major harm to traffic flows on Mopac, adjacent crossing streets, and access to and from Austin High School, Zilker Park, and downtown Austin. *Five to seven years of construction will cut off use of Lady Bird Lake by rowers, boaters, and others, and shut down the use of the Lake trail hike and bike bridge. *As admitted, adding five to seven new lanes will increase noise and light pollution and harm endangered species and their habitats;; air pollution will harm public health at Austin High; water pollution will harm Barton Springs; and traffic congestion will only be shifted to bottlenecks on north Mopac, Cesar Chavez and other streets. *There is no evaluation of less harmful, more affordable options that should be done first, including removing the southbound 2-lane bottleneck just north of William Canon, providing rush hour HOV lanes on the existing inside lanes; and enhancing traffic demand technology (including telecommuting and system flow management). *The proposed project must be evaluated together with the TxDOT proposal to connect the south end of Mopac to I35, converting Mopac to a western I35 bypass. Respectfully, Jen Juniel |
| **4/20/2026** | Jen Moulton | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

|---|---|---|
| **5/3/2026** | Jenee Ovitt | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. I live in Austin because of Barton Springs, where I swim often and my husband swims every single morning. If you do not regurarly swim at Barton Springs, you may not fully understand what a magical place it truly is. Too many magical spaces like this are being pushed aside for profit and this must stop before none are left. If Barton Springs becomes too polluted to swim in (which is very likely from this proposal and if it is not then a full transparent EIS is no problem), Austin will never be the same. The tourism will never be the same. It really is the soul of the city. Please, I beg you, do not expand Mopac and endanger this jewel. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. |---|---|---|
| | | respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Jenee Ovitt |
| **5/3/2026** | Jeneen Schloz | I am a native Austinite who has lived within 5 minutes of Barton Springs pool and Zilker park for over 50 years. The proposed expansion of Mopac is NOT a solution for our traffic problems. Absolutely NONE of my neighbors or friends are for this, and I have many! A full environmental study and assessment has not been done - I wonder why. I think we all know the answer. Please STOP trying to mess with the CROWN JEWEL and HEART of this city. Barton Springs pool is a sacred place that brings our community together and heals us and it needs our love and protection. NO to more vehicle emissions. NO to loud and constant traffic noise. NO to degrading our air and water quality and the experience of our amazing hike & bike trail. No to blocking out the sun on the pedestrian bridge. No to the runoff and construction that would put this area's beloved ecosystem at risk. Please STOP trying to ruin everything that makes this town special. |
| **4/27/2026** | Jenelle Glenn | No more construction |

| **4/21/2026** | Jeni Brazeal | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **5/3/2026** | Jeni Brazeal | Dear CTRMA Board Members,  It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.  *Key concerns include:  *Minimal Traffic Benefit:  The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species:  Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality:  Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution:  VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees:  Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts:  Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.  Sincerely,  Jeni Brazeal |

| | | |
|---|---|---|
| **3/26/2026** | Jeni Wimberly | Dear CTRMA Board Members,<br><br>Dear Decision Makers:<br><br>I'm a South Austin resident who LOVES our cycling and hiking trails. The only recently completed Violet Crown Trail passes under MoPac in 5-7 locations, depending on your route, and side trails connecting to Circle C trails near the Veloway. There is no way to expand MoPac without destroying sections of the Violet Crown Trail, and closing the currently continuous trail for months if not years during construction of this proposed project. There would be similar disruptive destruction and closures of the continuous Butler trail around Town (Lady Bird) Lake.<br><br>Not only would these bicycle trail closures be a big blow to me personally, because I rely on them for exercise and restoring my mental health in the beauty of nature, but they would also reduce the income of our family owned and operated South Austin neighborhood bicycle shop, BIKEALOT. Our customers LOVE our trails as much or more as we do, and we hope you will hear from many of them during this comment period.<br><br>Several of our customers use the Violet Crown Trail to commute by bicycle from South Austin to Central Austin. Closing that crown jewel trail for 6-7 estimated years of construction would be cutting off one of the precious few active transportation arteries we have in South Austin. This would go completely counter to the overwhelming support of Austin citizens (67%!) who voted for MORE, not less, active transportation with 2020's Prop B. The irony is painful that the trail closures would be to create more lanes for polluting car traffic over our priceless and irreplaceable drinking water recharge zone, all during a record shattering drought caused by rapidly intensifying climate change. This is the EXACT WRONG DIRECTION for our community.<br><br>My family and I are in the bicycle business because we are serious environmentalists. It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully and meaningfully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone with serious pollution, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin’s parks and natural spaces.<br><br>Key concerns include:<br><br>Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this very minor improvement. Furthermore, this minor imrovement would be erased within just a few years by induced demand.<br>Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders’ external gills make them highly vulnerable to sediment and pollution.<br>Water Quality: Over 110 acres of new pavement will increase runoff pollutants into the Edwards Aquifer meaning every time it rains, our precious drinking water aquifer will be inundated with motor oil, tire debris, and litter. The proposed post-construction ponds will do nothing to prevent pollution during YEARS of construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br>Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br>Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, our prized and only recently completed Violet Crown Trail, and the Butler Town Lake Trail, causing intermittent closures, permanent damage, tree removal, and reduced |

| | | |
|---|---|---|
| | | canopy cover.<br>Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life.<br><br>Thank you for your time in seriously considering my comments.<br><br>Sincerely,<br><br>Jeni Wimberly |

| | | |
|---|---|---|
| **4/15/2026** | Jeni Wimberly | Dear CTRMA Staff,<br><br>I've been reviewing the info on the https://www.mopacsouth.com/ website, and I cannot find any references to the anticipated impacts on Austin's treasured Violet Crown Trail, which crosses underneath MoPac, and runs parallel to the freeway in multiple locations between 290 and Slaughter Lane. Can you please direct me to your plans to minimize disruptions to this vital multi-use recreational and active transportation trail?<br><br>Thank you,<br><br>Jeni Wimberly |
| **4/22/2026** | Jenn Marroquin | I think it's ridiculous that at a time when most Americans are suffering economically that CTRMA would even consider creating any kind of roadway that could put extra financial pressure on the thousands of central Texans that use this roadway everyday. Please stop considering any options which would require any kind of toll or increase in property taxes to pay for this. No one in this area is asking for this and if you listened to your constituents instead of trying to ram this through you would understand this. |
| **5/3/2026** | Jenn Wood | This project is an environmental disaster. Honestly, I am struggling to understand why anyone would think that we an afford to destroy more of our precious resources. We needed light rail 30 years ago, and now need to focus on mass transit, not more roads. People are going yo be priced out of driving in the next 3 years, and we're already running out of water. Whoever is supporting this should be ashamed. |
| **4/30/2026** | Jenna Anderson | I'm writing to express my support for the proposed improvements along the MoPac South corridor. This stretch of roadway plays a huge role in how people move through the city, and right now it's clearly under strain. Delays here don't just affect drivers, they ripple out to businesses, employees, and the surrounding road network. When a corridor like this isn't functioning well, it creates inefficiencies that impact the entire area. Addressing this isn't just about reducing traffic it's about improving reliability. People need to be able to count on consistent travel times, whether they're commuting, running a business, or accessing services across the city. It's encouraging to see a thoughtful process behind this project, especially one that considers different types of users and long-term growth. Planning ahead like this is critical if we want to avoid falling further behind demand. I support moving this project forward and appreciate the effort that's gone into getting it to this stage. |

| | | |

| | | |
|---|---|---|
| **4/23/2026** | Jenna Lentz | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

|---|---|---|
| | | Jenna Lentz |

| | | |
|---|---|---|
| **4/23/2026** | Jenna Weiler | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone.<br><br>The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city.<br><br>The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself.<br><br>The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals.<br><br>The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion.<br><br>Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as |

| | | |
|---|---|---|
| | | thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day.<br><br>The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day.<br><br>Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves.<br><br>A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline.<br><br>Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever.<br><br>I respectfully ask the CTRMA Board to listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less.<br><br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| | | Respectfully,<br><br>Jenna Weiler |
| **4/29/2026** | Jenne Todd | The springs are an essential part to Austin. They bring beauty and peace together. It's a place everyone can be without judgement amend have great joy. |
| **5/1/2026** | Jennie Glass | As a parent of a student at Austin High School, this project would directly impact my child's daily environment and our family's commute. I am deeply concerned about the long-term consequences of expanding this corridor without a full Environmental Impact Statement. The risks to air quality, the Edwards Aquifer, and endangered species are significant and deserve a more thorough, updated analysis — not one based on data from over a decade ago. It's hard to justify years of disruptive construction and environmental harm for only a few minutes of projected travel time savings. Our community deserves solutions that protect our water, our air, and our students' health — not ones that compromise them |

| | | |
|---|---|---|

| **5/3/2026** | Jennifer Banister | I am writing as an Austin resident to formally oppose the MoPac South expansion as currently proposed, and to urge that the project be subjected to a full Environmental Impact Statement (EIS) rather than the Environmental Assessment (EA) released in February. Zilksr park is incredible benefit to the city and to myself. I love going swimming nights during the summer. Don't take away this Austin's Jewel. The scale and sensitivity of this project demand the more rigorous review. The corridor crosses the Edwards Aquifer recharge zone — Austin's drinking water source — and habitat for federally listed endangered species including the Barton Springs salamander, Austin blind salamander, and Tooth Cave spider. It would require construction in Zilker Park, the Barton Creek Greenbelt, and over Lady Bird Lake. By any reasonable standard, these are exactly the conditions a full EIS exists to evaluate. Comparable Austin-area transportation projects have received full EISs. The I-35 Capital Express project required one. Project Connect required one. There is no defensible reason an $825 million, 8-mile expansion through some of the most ecologically sensitive land in the region should receive a less thorough review. The Austin City Council and the Travis County Commissioners Court have both unanimously passed resolutions making this same request. A finding of "no significant impact" is not credible without the full analysis an EIS would provide. I urge CTRMA and TxDOT to stop. |
| **5/3/2026** | Jennifer Blossom | I've lived in Austin 27 years & love deeply our quality of life. We need to protect Austin's water, air, wildlife, schools, neighborhoods, and quality of life. We need a full Environmental Impact Statement (EIS) and less harmful alternatives to the proposed mopac expansion plan. |

| | | |
|---|---|---|
| **5/3/2026** | Jennifer Blossom | Dear CTRMA Board Members, I oppose the MoPac South highway expansion project. This expansion directly threatens the Edwards Aquifer Recharge Zone and the clean water of Barton Springs. Construction and increased traffic will increase polluted runoff, sediment, and impervious cover, further warming stormwater and stressing aquatic ecosystems. Over 110 acres of new pavement will intensify the urban heat island effect, raising local temperatures and further impacting water quality and aquatic life. -*Key Water Concerns: Impervious surfaces increase runoff of oil, heavy metals, and chemical pollutants into the aquifer. Post-construction ponds will not protect water quality during construction, when the greatest harm occurs. Tree removal and vegetation loss eliminate natural filtration. Warmer runoff will reduce oxygen in streams and promote algae blooms. Karst features and caves supporting unique ecosystems will be destroyed. *Endangered species, including salamanders with sensitive external gills, are highly vulnerable to sediment and pollution.*CTRMA must prioritize a full Environmental Impact Statement and design alternatives that protect our water, streams, and aquifer ecosystems. Thank You for listening to your neighbors, Jennifer Blossom |
| **4/21/2026** | Jennifer Borneman | Dear CTRMA,<br><br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br><br>I respectfully urge you to include the following measures in the project scope:<br><br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br><br>Thank you for your time and consideration |

| | | |
|---|---|---|
| **5/3/2026** | Jennifer Feiste | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Jennifer Feiste |

| **4/2/2026** | Jennifer Ferante | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/2/2026** | Jennifer Ferrante | I understand that paved paths are planned as part of the South MoPac corridor improvements, and I urge you to prioritize the 1.2-mile connection along Highway 45 from Meridian to Escarpment Boulevard. For our neighborhood of 3,000+ residents, this path would provide safe access to the broader Austin trail network. Currently, cyclists and pedestrians must use the narrow shoulder of Highway 45, creating a serious safety risk. City Council District 8 has already allocated $117,000 for design, recognizing the importance of this project. Completing this connection would significantly improve both safety and connectivity for our community. My family would use it often! Thank you for your consideration. |
| **4/29/2026** | Jennifer Flores | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>The expansion is absolutely devastating, and destroying Austin.<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **3/31/2026** | Jennifer Glass | I live very close to MoPac, and the proposed expansion of MoPac south will increase ambient air pollution in both Old Enfield and Clarksville neighborhoods to unhealthy levels. Already we face traffic noise, air and soil pollution, and increased arterial traffic because of MOPAC, but this expansion is especially harmful to the community because of its proximity to the Johnson Creek trail system, Zilker Park, and Barton Springs, all of which are local treasures that positively impact the quality of life of Austin residents.The proposed plan will add significant concrete expansion, increased traffic, and threats to water quality throughout the Barton Springs recharge zones. When MoPac was first planned, residents were promised that it would NEVER become a shortcut to Hays County or alternative to I-35 for large truck and commercial vehicle traffic. Yet plan after plan is proposed that would do precisely that -- increase the availability of MoPac to southern expansion for developers on the outskirts of Travis County, rather than "infill" development more densely in Central Austin. The promotion of mass transit becomes much more difficult when people are encouraged to live further and further out with the continued expansion of freeway lanes. The research is clear -- highway expansion almost always encourages urban sprawl and never delivers the promised reductions in traffic time for residents using private transportation. Just look at Houston, Dallas, or Chicago for clear illustrations of this. As a demographer at UT, I can tell you plainly that future patterns of commuting will assuredly change given the reality of remote work, and future growth in Texas cities will slow as birth rates decline and the population ages. I urge CTMA to curtail any plans that involve increasing lanes in aerial loops or expanding traffic lanes rather than streamlining existing entry and exit ramps that are dysfunctional and poorly conceived. The current plans simply envision a future for Austin that will probably not exist; especially if the Barton Creek recharge zone degrades, and the availability and quality of water reaching the city further declines. These are concerns I see nowhere in the planning documents for this project. I would be interested to learn the assumptions and techniques used to demonstrate the claimed time savings of the 7 year disruption of central Austin to build extra tolled concrete lanes on south MoPac. These are nowhere divulged in the materials available to the public. I believe open, transparent, and honest debate about the consequences of any expansion of MoPac south should continue until we are sure that taxpayer money, time, and quality of life are not being compromised for a quick, dirty, and ineffective solution to a complex problem. |
| **5/3/2026** | Jennifer Godsea | Please save the life-waters of this city. The heart that makes everything beautiful, living here worthwhile. Please save the sacred waters of the indigenous stewards who came before us. Please try to enact some of their ethos- to think about not just yourself, but the generations whom come after you. Let’s leave some beauty and magic for those who come after us. Let’s honor all of the creatures who live in these waters, and all of the beautiful and fragile ecosystems these waters maintain |

| | | |
|---|---|---|
| **5/1/2026** | Jennifer Harris | I am writing to oppose the proposed Mopac South expansion project. As a long-time resident of southwest Austin, I am well aware of the traffic and transportation challenges facing our community, including along the southern portions of Mopac. As a long-time Republican primary voter and former staffer for state elected and appointed officials, I would hope you would consider every comment from every constituent and organizations with a collective interest in our neighborhoods, environment, natural resources, and economic prosperity. All to say, as a center-right voter, I'm standing in solidarity with a wide-ranging coalition from the left, right, and center to oppose this project. There are many reasons this project should not move forward, notably: - The questionable environmental assessment and a broader lack of transparency about the comments and criticisms of the project. - The threat to the Karsts and Edward's Aquifer, which at a time when Texas's water resources are being rapidly depleted by drought, data centers, commercial development, and population growth could create an untenable crisis for reliable clean water for families. - The proposal asserts how necessary this is for alleviating congestion yet the proposed changes seem mostly to line the pocketbooks of the CTRMA toll road authority and only save drivers 5-6 minutes across the full 8-mile stretch of redevelopment and expansion. That's hardly an ROI or a real solution to the traffic concerns are community and the region face. - The project, along with the parallel development of IH-35, stand to make traffic even worse for the larger Austin community as these projects risk overlapping and/or following on close heels of one another. - This project puts pavement over people -- creating a massive assault on nearby parks, public schools, waterways, businesses, and homes. The financial cost is tremendous, but the real costs will be felt for decades to follow when access to quality, safe drinking water is threatened and when Mopac is transformed into a parallel highway to IH-35, bringing newfound threats to public safety and increased traffic that will further burden the area. I urge you to reject this proposal; however, I'm skeptical given the composition of the members of the board that this will happen. Please prove me wrong and at the least pause this project for further environmental evaluation and a thoughtful, meaningful discussion of alternatives to address the city's critical infrastructure needs. I would much prefer to see resources dedicated to alternative forms of transportation, including rail, hike and bike lanes, pedestrian bridges. I would also prefer the encouragement of business and community solutions to address traffic woes, including innovative policies at the city and county level to encourage more telecommuting, staggered openings or shift times for larger employers to moderate the flow of traffic on Mopac, and improved bus and rideshare options for commuters. Please tap the breaks on this project. And truly reimagine something more than pavement as the solution. Thank you, Jennifer Harris |

| | | |
|---|---|---|
| **5/3/2026** | Jennifer Hill | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. Construction tied to new bridges and roadway widening would impact the Butler hike-and-bike trail, the Roberta Crenshaw pedestrian bridge, and the broader trail network connecting Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are not simply recreational amenities; they are part of the daily life of the city—used by walkers, cyclists, runners, students, and families from across Austin. Years of construction, closures, noise, and disruption in this corridor would fundamentally alter access to the lake and trails that thousands of residents rely on every day. Austin residents have been engaged in this issue for more than a decade. In 2016, overwhelming public opposition led to the cancellation of an earlier version of this project. The risks today are even higher, as our aquifer faces drought, overdevelopment, and mounting water pressures, and yet this project has resurfaced without the comprehensive environmental analysis that a place of such ecological and community importance deserves. A full Environmental Impact Statement would provide the transparent, comprehensive analysis required under federal environmental law to fully evaluate cumulative impacts, examine reasonable alternatives, and allow meaningful public participation. For a highway expansion proposed directly above one of Texas's most iconic springs and one of the most biologically unique aquifer systems in the country, that level of review is required and should be the minimal baseline. Austin's water, wildlife, and quality of life are too important to gamble on incomplete analysis. The springs have flowed here for tens of thousands of years, and the decision in your hands will shape whether future generations experience them as we do now. There is only ONE Barton Springs, and once it is gone, it's gone forever. I respectfully ask the CTRMA Board to |

| | | |
|---|---|---|
| | | listen to the voices of this community and direct staff to prepare a full Environmental Impact Statement before advancing this project further. Barton Springs and the Edwards Aquifer deserve nothing less. Thank you for your time and consideration. Respectfully, Jennifer Hill |

| | | |
|---|---|---|
| **4/24/2026** | Jennifer Jamisom | Dear CTRMA Board Members,<br><br>I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project.<br><br>The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review.<br><br>• Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction.<br><br>• More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration.<br><br>• Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer.<br><br>• Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer.<br><br>• Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. |

| | | |
|---|---|---|
| | | • Highway widening could reach 13–18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors.<br><br>• Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air.<br><br>• Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life.<br><br>• Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition.<br><br>The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation.<br><br>For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion.<br><br>For the love of water in Central Texas, |

| | | |
|---|---|---|
| | | Jennifer Jamisom |
| **5/3/2026** | Jennifer Leeper | As a federally permitted biologist for the endangered Golden-cheeked Warbler, I have conducted numerous surveys along Barton Creek, where this Songbird flourishes, as well as other native songbirds, wlidlife, and a diversity of plants. With that said, I strongly oppose the Mopac expansion project. There is also the endangered Barton Springs salamander and Barton Springs that will be impacted negatively by this project. It will also diminish the value of this unique area and what attracts so many tourist and other visitors to Austin. An Environmental Impact Statement (EIS) and less harmful alternatives must occur. This project will change the landscape of Austin in a significantly negative way. |

| | | |
|---|---|---|
| **5/3/2026** | Jennifer Looez | Dear CTRMA Board Members, I am writing to strongly oppose the MoPac South expansion as proposed. I urge you to proceed with a full Environmental Impact Statement (EIS) for the proposed 8.77-mile widening across the Edwards Aquifer Recharge Zone. The creeks, recharge lands, and Greenbelt that sustain Barton Springs are the living heart of Austin, a landscape that has nurtured people and communities for thousands of years and continues to define the character and spirit of our city. We are called to this region because of that rare relationship between water, geology, and community. We come to Barton Springs to cool off in the summer heat, walk the Greenbelt with family and friends, paddle on Lady Bird Lake, and experience the remarkable caves, trails, and outdoor spaces this area contains right in the heart of a city. The Draft Environmental Assessment concludes that the MoPac South expansion will result in no significant impacts to communities, endangered species, or water quality. For many of us who live here, work here, and understand the fragile nature of this landscape, that conclusion is difficult to reconcile with the facts presented in the assessment itself. The project corridor lies directly over the Edwards Aquifer Recharge Zone, a karst landscape where rainfall and surface runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. The Environmental Assessment acknowledges that karst features were identified within the project area, and that multiple creeks intersect the corridor, including Barton Creek, Eanes Creek, Skunk Hollow Creek, and many unnamed tributaries that ultimately flow into Barton Springs Pool. The EA provides little-to-no protections of these natural features while exposed to construction. Substantially expanding pavement will inevitably increase stormwater runoff and introduce pollutants such as sediment, hydrocarbons, tire particles, and heavy metals. The document also recognizes that suitable habitat exists near the project area for the endangered Barton Springs salamander and the Austin Blind salamander, both species that depend entirely on the health and stability of the aquifer. The Austin Blind salamander exists only in the Barton Springs segment of the Edwards Aquifer, at the springs themselves. It requires exceptionally stable water conditions, clear, well-oxygenated spring flow within a small temperature range, with dissolved oxygen levels around 6 milligrams per liter. Even small changes in sediment load, groundwater chemistry, or flow patterns can threaten the delicate balance that allows these animals to survive. The same is true for the Barton Springs salamanders found at Barton Springs and other springs immediately harmed by the highway expansion. Beyond the scientific concerns, the project raises significant community impacts that are not adequately addressed in the Environmental Assessment. As proposed, the expansion would widen the existing MoPac corridor up to as many as thirteen to eighteen lanes total in places, paving nearly the entire right-of-way as it passes over Lady Bird Lake and alongside Austin High School. This massive expansion would bring additional pavement, elevated roadway structures, and greatly increased noise and air pollution to the immediate surroundings, including one of Austin's most historic public high schools and the students who learn there every day. The proposal would also directly affect some of Austin's most heavily used public spaces and recreational corridors. | **3/28/2026** | Jennifer Luongo | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. As it is right now, we have cyclists and pedestrians who brave the narrow shoulder of Hwy 45 which is very dangerous. City Council, District 8 has now allocated $117,000 to the design of this path as they too recognize the important need for it for safety and connectivity. Our Meridian neighborhood has a committee dedicated to this request and I can provide further information including graphics. Thank you. |

| | | |
|---|---|---|
| **4/20/2026** | Jennifer Mintz | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |
| **4/20/2026** | Jennifer Mushtaler | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **4/3/2026** | Jennifer Pennington | Dear CTRMA Board Members,<br><br>Here:<br><br>It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces.<br><br>Key concerns include:<br><br>* Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.<br><br>* Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague "optional measures." Salamanders' external gills make them highly vulnerable to sediment and pollution.<br><br>* Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.<br><br>* Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.<br><br>* Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.<br><br>* Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption.<br><br>Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. |

| | | |
|---|---|---|
| | | Sincerely,<br><br>Jennifer Pennington |

| **4/18/2026** | Jennifer Vickers | Thank you in advance for your consideration of our position on this issue.<br><br>Jennifer Vickers<br><br>Board Member EverGreen Austin<br><br><br><br><br><br>Jennifer Vickers<br><<Attachment>> |
| **4/6/2026** | Jennifer Voss | I am against this proposed plan. A full Environmental Impact Statement should be done! Citizens want to protect our water, wildlife, and neighborhoods. Federal law requires a full Environmental Impact Statement for projects with potentially significant effects, and the draft EA's own findings make the case for a deeper, more rigorous review. Express Lanes already built on Mopac have not resulted in decreases in traffic congestion. Even the express lanes get backed up, bottleneck is worse, people cannot afford the outrageous toll costs. Smart solutions can be used with existing infrastructure and paved areas. Commuting trends have changed dramatically since COVID-19. The Texas Transportation Institute (TTI) calls this the new "post-pandemic normal," with more people "working from home, long an underappreciated solution to resolve traffic congestion. This plan will not decrease congestion and will do irreparable harm. The following negative results will happen if this plan is implemented: CTRMA's design plans restrict or severely complicate local access to Mopac and the proposed "express" toll lanes. MoPac will be overwhelmed with interstate and regional traffic, including heavy trucks, turning it into a dangerous, high-speed thoroughfare instead of a local commuter route. proposed project would worsen traffic congestion on Enfield Road, Cesar Chavez, Bee Cave Road, and Barton Springs Road. The only projected benefit from the project is the potential for commuters to save 5 minutes of their rush hour commute —that is, if they travel the entire 8-mile stretch. CTRMA admits that the projected travel time savings for drivers are negligible (reporting a 5–minute travel time reduction during peak hours compared to the No Build scenario). Impacts to Barton Springs, Edwards Aquifer, Lady Bird Lake, and other creeks and waterways. Impacts to Zilker Park and other parkland Budget/Cost incurred/CTRMA Transparency Increased traffic, construction impacts, or lowered neighborhood access Impacts to public health/air quality Threats to endangered species Impacts to Austin High School teachers and students. |

| | | |
|---|---|---|
| **4/2/2026** | Jennifer Wei | I understand that paved paths will be built along with the improvements to the South Mopac corridor. My neighborhood, Meridian, has had an ask since 2020 to complete a paved path from our neighborhood along Hwy 45 to Escarpment Blvd (it's only 1.2 miles). This would allow connectivity for more than 3,000 residents to the rest of Austin as cyclists and walkers would be able to proceed through Circle C and access the paved path that will start on Slaughter Lane. Our Meridian neighborhood has a committee dedicated to this request, and I can provide further information, including graphics. Thank you! |
| **5/3/2026** | jennifer weitz | Dear CTRMA Board Members, It is unacceptable that CTRMA continues to advance the MoPac South expansion without fully addressing the environmental and community impacts. The project threatens the Edwards Aquifer Recharge Zone, imperils federally endangered species, increases traffic-related air pollution, and risks long-term degradation of Austin's parks and natural spaces. *Key concerns include: *Minimal Traffic Benefit: The full 8.77-mile corridor is projected to save only ~5 minutes after years of construction. The cost in disruption, emissions, and ecological damage far outweighs this minor improvement.*Endangered Species: Construction jeopardizes the Barton Springs Salamander, Austin Blind Salamander, and karst-dwelling species. Their fragile habitats, including aquifer-fed springs and cave systems, cannot be mitigated through vague “optional measures.” Salamanders' external gills make them highly vulnerable to sediment and pollution.*Water Quality: Over 110 acres of new pavement will increase runoff into the Edwards Aquifer, with post-construction ponds insufficient to prevent pollution during construction. Increased impervious surface also worsens urban heat island effects, further impacting water temperatures and aquatic ecosystems.*Air Pollution: VMT will rise by 331 million, increasing PM 2.5 and other pollutants near schools and neighborhoods. Reliance on speculative cleaner vehicle technology is insufficient to protect public health.*Parks and Trees: Construction threatens Zilker Park, Barton Creek Greenbelt, and the Butler Trail, causing permanent damage, tree removal, and reduced canopy cover.*Noise & Community Impacts: Elevated lanes and construction will bring chronic noise, traffic spillover, and neighborhood disruption. Without a full Environmental Impact Statement (EIS) and meaningful community engagement, this project risks irreversible harm to Austin's environment, public health, and community life. Sincerely, jennifer weitz |
| **4/30/2026** | Jennifer Wiebrand | Not in favor of where this project is headed. This project should be required to perform a full federal environmental impact review. The needs of enhanced vehicle flow should NOT be held higher than all other needs of a growing city - clean water, open and public green space, trails, bicycle networks, preserved aquifer recharge zones, etc. Unless this project can demonstrate that it is not smashing through all other civic priorities it should be stopped and re-imagined. |

| **5/3/2026** | Jennifer Wimberly | To CTRMA:<br><br>My husband and I own BIKEALOT, an independent bicycle shop in South Austin, and the Edwards Aquifer is the source of our family's home water supply. I am strongly opposed to the proposed MoPac expansion for several good reasons:<br><br>1 - Our aquifer is sensitive to pollution, and this proposed expansion is likely to harm the caves and karsts that feed the aquifer, putting the drinking water for MILLIONS of Texans at risk.<br><br>2 - Endangered species live in the impacted area, and since we humans sit at the top of a precarious food chain of intertwined species, it behooves us to care about and protect every single species in that chain.<br><br>3 - Our springs emerge from the Edwards Aquifer, meaning our springs are just as much at risk of environmental degradation at the aquifer itself.<br><br>4 - CTRMA's Draft Environmental Assessment is woefully inadequate to understand the full impacts on the Edwards Aquifer, the associated springs, and the endangered species in the area. This project must not be allowed to move forward without a full Environmental Impact Study, complete with plans for how to protect these sensitive environmental features and endangered species.<br><br>5 - Many of our parks and recreation areas, which are of unquantifiable importance to the people of Austin, would be forever degraded by this epic expansion project. Whereas the supporting documents go into some detail about how the Butler Hike and Bike Trail around Lady Bird Lake would be prioritized for minimal interruptions and complete restoration, no such assurances are provided for the only recently completed Southern section of the Violet Crown Trail (VCT). The VCT only gets one mention for "partial restoration" near Dick Nichols Park. That is insufficient! The VCT cost Austin taxpayers millions to build and it is a beloved and much used active transportation for walkers, families, and cyclists in South Austin. Failing to preserve public access to the VCT during and after construction would harm our economy and harm the physical and mental health of the people who use the trail for exercise, recreation, and transportation.<br><br>6 - I, along with countless other Austinites, suffer from asthma, and adding more polluting car traffic to the roads will exacerbate air pollution and thus harm public health.<br><br>7 - It would be a mistake of huge proportions and ramifications for CTRMA to have MoPac South under expansion construction during the same decade+ that I-35 is under expansion construction. It would hurt the economy because so many people would be late for work, meetings, and appointments. Traffic accidents would increase, some undoubtedly and tragically being fatal. Incidents of road rage would increase. It would make Austin a terrible and dangerous place to live and drive.<br><br>8 - All of these negative impacts are NOT worth it in order to save an estimated 5 minutes for drivers in the non-tolled lanes. We don't need more Lexus lanes for those who can afford to leave poorer people in their dust. It's inexcusable, in this day and age of Artificial Intelligence, that CTRMA won't even come up with a way to let cars with 2+ occupants use the "express" lanes either without a fee or with a fixed fee in order to encourage carpooling. This makes me think CTRMA is motivated more by profits than finding meaningful transportation solutions for our region.<br><br>9 - Austin voters have shown time after time that we want mass public transit solutions for our traffic problems. I implore CTRMA to seriously consider building a rail transit system next to or above the existing lanes of MoPac South instead. |

| | | |
|---|---|---|
| | | Make the railcars big enough for people to bring their bicycles, scooters, strollers, and the like so we can use active transportation means to get to the trains and to our destinations in town. We have room along MoPac South for park and rides and stations, and people would most likely embrace this as an alternative to adding toll lanes because it would be so much better for the people and our environment!<br><br>In conclusion, I vehemently oppose this proposed toll expansion for water quality, environmental, economic, human and other species health reasons. I strongly encourage CTRMA to go back to the drawing boards and dream up a rail based public transit system solution for the MoPac South region instead.<br><br>Thank you for your time and consideration, Jennifer Wimberly |

| **5/3/2026** | Jennifet Birn | Dear CTRMA Board Members, I am deeply concerned about the MoPac South expansion and its impacts on our communities, our waters, and the natural spaces that define Austin. This project threatens Barton Springs, the Edwards Aquifer, federally endangered species, and our city's cherished Barton Creek Greenbelt. It will disrupt neighborhoods, increase air pollution, and degrade the unique ecosystems that sustain life in and around Austin. The promised traffic benefit is only about five minutes across the full corridor, a gain that does not justify the destruction it describes. The draft EA says as much, without fully explaining how to mitigate this destruction. Salamanders with fragile external gills, karst-dwelling invertebrates, and countless plants and animals rely on clean water and intact ecosystems. Over 110 acres of new pavement will increase impervious cover, contributing to higher temperatures and warmer water, compounding harm during our already long, hot summers. This highway expansion proposal compels me to speak up for our wildlife, our waterways, and the nearby communities that work, live, and go to school here. I urge CTRMA to conduct a full Environmental Impact Statement, engage meaningfully with the community, and pursue alternatives that genuinely protect water, wildlife, and neighborhoods. Austin deserves solutions that reflect our values and preserve the ecological and community heritage of our city. Sincerely, Jennifet Birn |
| **5/3/2026** | Jenny De Wulf Smith | I am deeply concerned about the 8.8-mile tollway and its potential impacts to air and water quality and endangered species habitats. We don't need another I-35. We DO need a full Environmental Impact Statement (EIS) and real alternatives that avoid irreversible damage to our water, wildlife, and public health. |
| **4/21/2026** | Jenny Everett | Dear CTRMA,<br>I am writing in support of the mitigation requests put forward by EverGreen Austin regarding the MoPac South Expansion project.<br>I respectfully urge you to include the following measures in the project scope:<br>- Trees and expanded tree planting<br>- Avoid parkland encroachment<br>- Capital improvement reimbursements for affected community assets<br>- A noise wall workshop with meaningful community input<br>- An open space fund dedicated to long-term preservation and restoration<br>- A permanent green fund to support ongoing environmental mitigation<br>Thank you for your time and consideration. |

| | | |
|---|---|---|
| **5/3/2026** | Jenny Medel | Dear CTRMA Board Members, I am writing to strongly oppose the proposed MoPac South expansion and urge you to require a full Environmental Impact Statement (EIS) before moving forward with the 8.77-mile widening project. The Draft Environmental Assessment concludes the project will have “no significant impacts,” yet the document itself raises serious environmental and community concerns that warrant a far more rigorous review. Project cut through the Edwards Aquifer Recharge Zone. The expansion runs directly across the Edwards Aquifer Recharge Zone, where rainfall and runoff move rapidly through caves, fractures, and sinkholes into the aquifer with very little natural filtration. Numerous karst features that drain into the Edwards Aquifer are documented within the project corridor, making the aquifer highly vulnerable to contamination and disturbance during highway construction. More pavement means more polluted runoff. Expanding pavement by approximately 110 acres and increasing roadway capacity will increase stormwater runoff carrying sediment, tire particles, oil, heavy metals, and other pollutants into recharge features that feed Barton Springs and our already stressed and vulnerable watershed. Contaminants entering these waterways can move rapidly through the karst aquifer system and reach Barton Springs with limited natural filtration. Multiple creeks flow directly to Barton Springs. The corridor crosses Barton Creek, Eanes Creek, Skunk Hollow Creek, and numerous unnamed tributaries that drain into the Barton Springs segment of the Edwards Aquifer. Endangered salamanders depend on aquifer stability. The Environmental Assessment acknowledges suitable habitat for the Barton Springs salamander and the Austin Blind salamander, both federally endangered species dependent on the health of the aquifer. Austin Blind salamander exists nowhere else. The Austin Blind salamander occurs only within the Barton Springs segment of the Edwards Aquifer and their external lungs are very sensitive to contamination, sedimentation and disruption to their water habitat. Studies have shown these species are extremely vulnerable and that small water quality changes threaten survival. These species require clear, well-oxygenated water and consistent spring flow due to their neotenic features. Even small changes in sediment levels, groundwater chemistry, or flow patterns can threaten their survival. >Highway widening could reach 13-18 lanes. The proposal could expand MoPac to as many as 13 to 18 total lanes in some areas, dramatically increasing pavement over sensitive recharge lands. Additional lanes and elevated structures would increase noise, air pollution, and stormwater runoff in one of Austin's most environmentally sensitive corridors. Impacts near Lady Bird Lake and Austin High School. The project would pass directly over Lady Bird Lake and alongside Austin High School, exposing students and surrounding neighborhoods to increased traffic and noise, and namely air pollution. Young people especially are susceptible to developing asthma and heart issues from exposure to increased PM 2.5 in the air. *Disruption to major public trails and parks. Construction and widening would impact the Butler Hike-and-Bike Trail, blocking out the sunlight on the Roberta Crenshaw Pedestrian Bridge, and closures on trail connections linking Lady Bird Lake, Zilker Park, and the Barton Creek Greenbelt. These trails are used daily by thousands of residents, students, cyclists, runners, and families and are central to Austin's outdoor life. *Previous expansion was halted due to public opposition. A similar MoPac South expansion proposal was withdrawn in 2016 after widespread public opposition. *The Edwards Aquifer now faces greater stress from drought, rapid population growth, and expanding development, which is yet another reason why a full and thorough environmental review is needed. A full Environmental Impact Statement is necessary to evaluate cumulative impacts to the Edwards Aquifer and Barton Springs, assess risks to endangered species, examine less damaging alternatives, and ensure meaningful public participation. For many of us who live here, Barton Springs, the greenbelt, the parks and schools nearby, and the Edwards Aquifer as it's underground beating heart are part of the daily life and identity of Austin. These places are where families gather, where people cool off on hot summer days, and where generations have come to experience the rare beauty of clear spring water flowing in the middle of a bustling city. I respectfully urge the CTRMA Board to require a full Environmental Impact Statement before advancing the MoPac South expansion. For the love of water in Central Texas, Respectfully, Jenny Medel |
